DO NOT REMOVE FROM FILE	

Public Service Company of New Hampshire
Delivery Service Tariff Filing
Docket No. DE 09-935

AFFIDAVIT OF TIMOTHY J. GRIFFIN

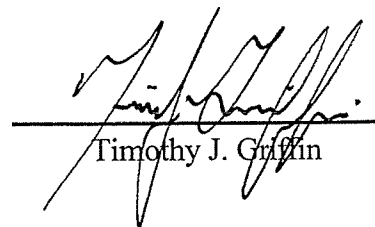

Timothy J. Griffin, being duly sworn, deposes and says as follows:

My name is Timothy J. Griffin. My business address is 107 Selden Street, Berlin, Connecticut; I am the Assistant Controller – Corporate Accounting of Public Service Company of New Hampshire ("PSNH"). I am an accounting officer of PSNH.

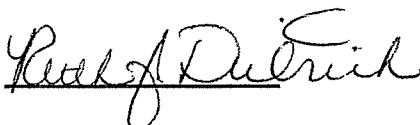

I affirm, based on my personal knowledge, information and belief, that the cost and revenue statements and the supporting data submitted, which purport to reflect the books and records of PSNH, do in fact set forth the results shown by such books records and that all differences between the books and the test year data and any changes in the manner of recording an item on PSNH's books during the test year ending December 31, 2008, have been expressly noted.

Further the Affiant Sayeth Not.

Date: June 15, 2009

Timothy J. Griffin

Subscribed to and sworn before me this 15 day of June, 2009

Notary Public 

My Commission Expires: 1/31/2010

Puc 1604.01 (a) (2) Annual reports to stockholders and statistical supplements,
if any, for the most recent 5 years;

Response: On April 3, 2009, the Commission granted PSNH a waiver for
for this filing requirement on the basis that PSNH has been
supplying the relevant data to the Commission as part of the
ongoing Monitoring Docket IR 90-218.

The Company's Annual Report to Stockholders was mailed
to the Commission as part of the SEC Form 10K in accordance
with Order No. 23,122, Docket IR 90-218, dated February 1,
1999 (PSNH/NU Monitoring Docket) for the years 2004, 2005,
2006, 2007, and 2008. The Company does not prepare
a statistical supplement.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

Puc 1604.01 (a) (3) Federal income tax reconciliation for the test year;

Response: On April 3, 2009, the Commission granted PSNH a waiver for this filing requirement on the basis that the Company filed its 2008 federal income tax reconciliation by incorporation by reference. The requested information is included by incorporating by reference page 261 of the 2008 FERC Form 1, "Reconciliation of Reported Net Income with Taxable Income on Federal Income Taxes". The PSNH 2008 FERC Form 1 report was filed with the Commission on April 17, 2009.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

Puc 1604.01 (a) (4) A detailed computation of New Hampshire and federal income tax factors on the increment of revenue needed to produce a given increment of net operating income;

Response: Computation of New Hampshire and federal income tax factors on the increment of revenue needed to produce a given increment of net operating income.

New Hampshire Business Profit Tax Rate	N
State Tax Rate	$S = N$ $S = .085$
Federal Income Tax Rate	$F = .35 (1-S)$ $F = .320250$
Combined Tax Rate	$C = F + S$ $C = .405250$
Tax factor which should be applied to change in net operating income to produce a required revenue change.	$T = 1 / (1 - C)$ $T = 1.681379$

000006

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

- Puc 1604.01 (a) (5) A detailed list of charitable contributions charged in the test year showing donee and the amount according to the following guidelines:
- a. If the utility's annual gross revenues are less than \$100,000, all contributions shall be reported;
 - b. If the utility's annual gross revenues are \$100,000 or are between \$100,000 and \$10,000,000, all contributions of \$1,000 and more shall be reported;
 - c. If the utility's annual gross revenues are \$10,000,000 or are between \$10,000,000 and \$100,000,000, all contributions of \$2,500 and more shall be reported;
 - d. If the utility's annual gross revenues are \$100,000,000 or are in excess of \$100,000,000, all contributions of \$5,000 and more shall be reported; and
 - e. For utilities in categories b., c. and d. above, the reporting thresholds for a particular charity shall be on a cumulative basis, indicating the number of items comprising the total amount of contribution.

Response: Please see the attached.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

Puc 1604.01 (a) (7) The utility's most recent cost of service study;

Response: Please see the attached Technical Statement, Cost of
Service studies, and supporting documentation.

EXHIBIT 1

Embedded Cost of Service Methodology

Introduction

The Company has employed an embedded cost of service methodology in performing its Per Book and Proforma cost of service studies. In concept, this methodology is used to allocate the Company's embedded (i.e., accounting) costs to rate classes. The embedded cost studies submitted in this filing provide a cost based determination of the amount of PSNH's distribution revenue requirement attributable to each retail rate class.

Overview

The following exhibits have been developed for the Cost of Service Study ("COSS") submitted as part of the Standard Filing Requirements (SFR's) for this rate case:

Exhibit 2 – COSS at Current Rates (Per Book)

Exhibit 3 – COSS at Current Rates (Proforma)

Exhibit 4 – Detailed Classification at Account Level (Proforma)

Exhibit 5 – Details and Value of External Allocators (Proforma)

Exhibit 6 – Details and Value of Internal Allocators (Proforma)

Exhibit 7 – COSS Input, Allocation Factors, and Classification (Per Book/Proforma)

The Company has provided its Per Book and Proforma studies in Exhibits 2 and 3. Each study provides a detailed allocation of the Company's distribution rate base, expense and revenue items to each retail rate class.

The COSS is presented in table form. An itemized list of the Company's costs to serve its customers by FERC account is listed down the left side of each page and the allocation of each of these costs among rate classes is shown across the columns of each page.

The development of the COSS begins with rate base and continues with revenues, operating expense, taxes, and the development of the labor allocators "OH" and "LABOR" by using only the labor portion of expenses.

The method of allocation for each account is accomplished in two steps, for each cost item. First, each account is analyzed and classified as direct assignment, customer, demand or revenue-related. An appropriate allocator is then assigned to each classified cost in order to allocate that cost among the various rate classes.

Since the costs related to the distribution functions are not directly related to a particular time of day or time of year, Non Coincident Peak ("NCP") Demand for each rate class is used to allocate demand related cost components of the primary and secondary system. The number of customers, absolute or weighted based on the type of account, are used to allocate the customer component. The customer component for the Company's primary and secondary system is determined using the minimum size methodology. The customer component of the primary system is assigned to all customers using the primary voltage system, while the secondary customer component is assigned only to the rate classes served at the secondary voltage levels. Plant investment associated with the services and meters is allocated based on weighted customer counts and fully assigned to customer component. Line transformer is assigned to both customer and demand components based on the weighted customers count and direct assignments to demand category. The summary of classification of distribution plant is shown in the following table.

CLASSIFICATION PROCEDURE FOR DISTRIBUTION INVESTMENT

<u>ACCOUNT NO.</u>	<u>DESCRIPTION</u>	<u>CLASSIFICATION</u>
360	Land and Land Rights	Demand-NCP
361	Structures & Improvements	Demand-NCP
362	Station Equipment	Demand-NCP
364	Poles Towers & Fixtures	Customer Demand-NCP
365	Overhead Conductors & Devices	Customer Demand-NCP
366 & 367	Underground Conduit	Customer Demand-NCP

368	Line Transformers	Customer Demand-NCP
369	Services	Customer
370	Meters	Customer
371	Installation on Customer Premises	Customer – Rate OL
373	Street Lighting & Signal Systems	Customer – Rate OL

Summary of COSS Exhibits

Exhibit 2 provides a detailed allocation of the Company's per book distribution rate base, expenses and revenue items to retail rate classes.

Exhibit 3 is similar to Exhibit 2, except that the data is proformed. Additionally, the revenue requirement at the requested Rate of Return (ROR) is included in the summary Table 1B.

Exhibit 4 follows the same account order and report structure as Exhibits 2 and 3. However, where Exhibit 2 and 3 display the account information by total company and by rate class, Exhibit 4 displays the account information with the classification details by categories for each account in a more detailed format. For example, Exhibit 2 displays Rate Base (RB) as a company total in the far left column, and as the allocated rate totals moving from left to right across the page. Exhibit 4 takes the same RB company total and rate totals and classifies them into either Customer or Demand components.

Allocators are provided in this filing package separately in two exhibits: namely Exhibit 5, Exhibit 6.

Exhibit 5 provides the values for all the externally determined allocators used in the COSS. These allocators are calculated outside of the study using Company data or employing special studies. The allocators are grouped into three categories: Demand, Customer and Revenue. Each allocator is presented by total company and by rate class in absolute amount and also expressed as a percentage. When the appropriate rate percentages for an allocator are applied to a company total which uses that allocator, the result is the calculation of each rate class's proportionate share of that specific total account value. In this exhibit, page 4 provides details about the plant classification and the external allocator's classification that are used in the study.

Exhibit 6 provides values for all of the internally generated allocators used in the COSS. These allocators are the result of previous account or total allocations which may be applied later to other accounts or totals for allocation. For example, many expense accounts can be allocated to the rate classes based on their associated plant account allocation. Plant Account 370, Meters, is used to allocate accounts 586 and 597, Operation and Maintenance of Meters, respectively. Additionally, the last part of this exhibit provides the classification detail for all internally generated allocators presented in Exhibit 6.

COSS Naming Conventions

The COSS uses a hierarchical naming convention that is applied to all items so that the model can recognize the inputs and handle them appropriately within the program in order to generate meaningful totals and sub-totals. This convention is much like an accounting system convention, in which a short, simple name is used to represent a total category of costs. Each subset of this total will use the simple, short category name and add more characters to add specificity to the particular account. For example RB is used for Rate Base. RB itself is made up of Plant accounts as well as Rate Base Additions and Rate Base Deductions. In this instance the COSS would use RB_PLT, RB_ADD and RB_DED, respectively. An account within RB_PLT is 364: Poles, Towers and Fixtures. Here, the COSS would name the original cost for Account 364 as RB_PLT_O_364. The Accumulated Depreciation associated with Account 364 would be designated RB_PLT_D_364. The net investment for this account equals the original cost less the accumulated depreciation and is expressed as RB_PLT_?_364. This naming approach would be applied to all COSS inputs (see Exhibit 7).

COSS Organization

The Company's test year (i.e., per book) COSS results are displayed in Exhibit 2 and the proforma test year COSS results are displayed in Exhibit 3. Both exhibits are formatted as described above. An Index is provided at the beginning of each study. Exhibit 2 and 3 consists of fourteen (14), two page tables. Each table is presented and explained below.

Table 1: Summary of Results

This table summarizes the COSS results. As such, it provides cost items for the total company, on the left side of the page, and the allocation of these totals to the residential rate classes (specifically, Rate R: Total, Power and Light, QR, CWH and LCS/COPE), and general service rate classes (specifically, Rate G: Total, Power and Light, QR, CWH and LCS/COPE), moving from left to right across the page. The second page repeats the total company cost items and displays the allocations to Rates GV, LG, B, OL, and EOL.

Since this table pulls data from other locations within the study, a column is provided in which each entry has a table and line number reference indicating the place where each bit of information can be found. In addition to this data other columns provide such information as the COSS name of each total amount, and its corresponding description.

Also, Table 1 provides the rates of return for the total company and for each rate class. In Exhibit 3, this table is identified as table 1A and the next table as 1B which calculates the revenue requirement at the requested ROR .

Table 2: Gross Plant in Service

Table 2 provides detailed allocations for gross (i.e., original) plant in service. Intangible plant and general plant are allocated using the LABOR allocator, which is an “internal allocator” derived using the results of payroll allocations shown in Table 14, line 19 (see discussion of Table 13 & 14 below). In this table, and in all the other remaining COSS tables, the source column discussed in Table 1 is replaced by the “Allocator” column which indicates the specific allocator applied to the company total in order to appropriately spread the total dollars among the rate classes. This column lies between the list of itemized costs and the numerical data.

Within Table 2 totals are derived for all the major categories of plant, including intangible (RB_PLT_I_O), distribution (RB_PLT_D_O), general (RB_PLT_G_O) and grand total gross plant (RB_PLT_?_O). The question mark tells the COSS model to include all values whose names follow the RB_PLT_ _O format. These values are examples of internal allocators which are then applied elsewhere in the study to allocate other total amounts.

Table 3: Accumulated Depreciation

Table 3 provides a detailed allocation of accumulated depreciation reserve for each of the plant items allocated in Table 2. Allocations for depreciation reserve cost items follow the methodology described for cost items in Table 2. The Accumulated Depreciation allocated in this table is combined with the Gross Plant allocated in Table 2. The result is Net Plant represented by Company total and by rate class. This value is carried over to the next Rate Base table (Table 4).

Table 4: Rate Base Deductions and Additions

As mentioned above in Table 3, the calculated Net Plant result is carried over to Table 4, and is the first data line entry. Table 4 provides the set of rate base adjustments and their allocation to rate classes using the internal allocators listed beside each account in the “Allocator” column. Total Rate Base (RB) is the last entry on Table 4 and includes Net Plant, Rate Base Additions and Rate Base Deductions.

Table 5: Operating Revenues

Table 5 provides Sales and Other revenue by rate class. Sales revenue represents total delivery revenue and associated unbilled adjustments, per the Company's tariff and as reported for each rate class. Detailed allocations of the various components of Other revenues are provided in this table. Sales and Other revenues are combined to show Total Revenues and are provided as the last data line entry on this table.

Table 6: Operation and Maintenance Expense

Table 6 provides a listing of distribution operation and maintenance (O&M) expense by FERC account. Most distribution O&M expenses are allocated on the basis of their corresponding plant account allocators. Two exceptions to this general rule are Street lighting and Supervision & Engineering. Street lighting O&M is allocated using "AST_LUM" which is based on the number of luminaries. The Supervision and Engineering expenses are allocated using the "LABOR" allocator.

Table 7: Customer Expenses

Table 7 provides an allocation of customer-related expenses (Customer Accounts expense, Customer Service and Information expenses and Customer Education and Advertising expenses). Allocators for many of these expenses are derived using various "weighting" methodologies.

Table 8: Administration and General

Table 8 provides the allocation of total company administrative and general (A&G) expenses to the appropriate rate classes. This A&G Total Company and rate class data is then combined with the Total Company and rate class data at the bottom of Table 6 (Operation and Maintenance Expense) and the Total Company and rate class data at the bottom of Table 7 (Customer Expenses), to produce the Total O&M Expense (EXP_O&M) value at the Company and rate class levels.

Table 9: Depreciation Expense

Table 9 provides allocations of intangible, distribution and general plant depreciation expense using corresponding plant account allocators. Amortization of Regulatory Asset, a relatively small expense account value, is also included in this table.

Table 10: Taxes Other than Income Tax

Table 10 provides the allocation of payroll and miscellaneous taxes on the basis of the LABOR allocator. Property taxes are allocated using the total, original cost of gross plant allocator developed and described in Table 2 (RB_PLT_?_O)

Table 11: Income Taxes

Table 11 provides the calculation of income taxes. The rate base and overhead allocators shown in the table are applied as indicated to apportion the various categories of costs associated with timing and permanent differences among the various rate classes. These timing and permanent differences are deferrals that are components of the tax calculation. Total federal and state income tax by Company total and by rate class is displayed at the bottom of this table.

Table 12: Deferred Income Taxes

Table 12 provides the allocations of deferred income taxes. All of these taxes are allocated using total net plant (RB_PLT) as determined in Table 3 and described above.

Table 13 and 14: Payroll-Operations/Maintenance/Customer/Admin. & Gen.

Table 13 and 14 provide the allocation of payroll expense. These dollars represent the labor portion of the operation, maintenance and customer-related expense accounts and in fact use those accounts as the allocators for this payroll piece, except for the Supervision and Engineering (S&E) account allocation. The S&E account value is allocated based on the total allocation of all the other accounts within a given category. For example, Account L580 (Operations S&E), is allocated based on the total allocation of all other Operations labor accounts (LABOR_O). Similarly Account L590 (Maintenance S&E), is allocated based on the total allocation of all other Maintenance labor accounts (LABOR_M). Meter reading expense (Account 902) is allocated on the basis of gross meter investment. All remaining accounts (903-912) are allocated on an account specific basis using account 903, 904 and account 908 weightings. The payroll expense accounts are allocated based on their corresponding A&G expense allocation. This total A&G labor expense is combined with the Operations/Maintenance/Customer Labor expense found in Table 14, to result in the total "LABOR" allocator, while excluded in developing the "OH" allocator.

Proforma - Cost of Service Study
SUMMARY**

The Public Service Company of New Hampshire
Proforma - Cost of Service Study
Twelve Months Ending December, 2008

Index

TABLE NO.	PAGE
SUMMARY OF RESULTS	
1A. Rate of Return.....	1-2
1B. Revenue Requirement.....	3-4
RATE BASE	
2. Gross Plant	5-6
3. Accumulated Depreciation	7-8
4. Rate Base	9-10
REVENUES	
5. Distribution and Other.....	11-12
EXPENSES	
6. Operation and Maintenance.....	13-14
7. Customer Accounts.....	15-16
8. Administration & General.....	17-18
9. Depreciation & Amortization.....	19-20
10. Taxes other than Income Taxes.....	21-22
11. Income Taxes.....	23-24
12. Deferred Income Taxes & ITC Credit.....	25-26
PAYROLL	
13. Operation, Maint., & Customer.....	27-28
14. Administration & General	29-30

Public Service Company of New Hampshire

Puc 1604.01 (a) (9) The utility's chart of accounts, if different from the uniform system of accounts established by the commission as part of Puc 300, Puc 400, Puc 500, Puc 600 and Puc 700;

Response: The Chart of Accounts used by NU system companies, including PSNH, is voluminous and therefore has been filed separately. Copies have been filed with the Commission and the Office of Consumer Advocate.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

Puc 1604.01 (a) (10) The utility's Securities and Exchange Commission
10K forms and 10Q forms, for the most recent 2 years;

Response: On April 3, 2009, the Commission granted PSNH a
waiver for this filing requirement on the basis that PSNH
has been supplying the relevant data to the Commission
as part of the ongoing Monitoring Docket IR 90-218.

The Company's SEC Forms 10K, and 10Q were mailed
to the Commission in accordance with Order No. 23,122,
Docket IR 90-218, dated February 1, 1999 (PSNH/NU
Monitoring Docket) as noted below.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

Puc 1604.01 (a) (12) A list of any management audit and depreciation studies performed within the last 5 years, specifying whether same are on file with the commission;

Response: There have been no management audits performed within the last 5 years.

PSNH last filed a depreciation study as part of the DE 03-200 Delivery Rate filing in December, 2003.

While PSNH has not prepared a depreciation study for this rate filing, it is proposing changes in its depreciation calculations. PSNH is proposing to change depreciation rates based on a technical update to PSNH's Capital Recovery Calculation (CRC). This technical update was based on the methodology directed by the Commission in DE-03-200.

Accordingly, PSNH is providing the following in support of its request:

(1) E-25 Report of Proposed Changes in Depreciation Rates, calculations supporting the pro forma adjustments to depreciation expense as a result of the CRC

(2) A Technical Statement prepared by NUSCO Plant Accounting explaining the basis for changes in the CRC.

Puc 308.08 E-25 Report of Proposed Changes in Depreciation Rates

E-25--Page 1 of 3

(a) Each utility shall file form E-25 when it proposes any change in depreciation rates.

(b) Each utility shall include on form E-25:

(1) A caption identifying the report;

(2) The name of the utility filing the report;

(3) Date;

(4) Account number and title;

(5) Estimated life, both present and proposed, in years;

(6) Net salvage, both present and proposed, by percentage;

(7) Depreciation rate, both present and proposed, by percentage;

(8) Net annual change in dollars;

(9) Justification and supportive documentation; and

(10) The full name, title and signature of the utility employee who supervised the preparation of the report

(1) See above

(2) Public Service Company of New Hampshire

(3) June 30, 2009

(4) Column A and Column B (see page 2 of 3)

(5) Column C (see page 2 of 3)

(6) Column G and K (see page 2 of 3)

(7) Column E and Column J (see page 2 of 3)

(8) Column O (see page 2 of 3)

(9) See disclosures below, page 2 of 3, and Technical Statement

(10) See Technical Statement

Note the depreciation expense is based upon the following modifications:

-asset balances used to generate the depreciation rate and expense are net of overaged assets;

-the asset and net salvage reserve are net of the impact of overaged assets;

-the net reserve has been redistributed within the three functions.

-the reserve imbalance has been amortized over the period set by the Commission. Note that in this instance intangible assets are amortized over the General Plant parameter rather than the Distribution Plant parameter.

The asset balances noted here are the balances at year end 2008 and are inclusive of the overaged assets balances.

The depreciation rate has been derived as follows:

Note that in respect of historic (2008 depreciation) the depreciation data was extracted from Powerplan via the 1033 report. Powerplan does not have asset data on a subaccount basis. Due to this the 2008 depreciation expense for the account has been allocated based upon the 2008 year end (2009 opening) asset balance (see E-25, page 3 of 3).

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 1 of 24

Overview

The forecast depreciation expense for the 2009 rate filing, for Public Service of New Hampshire (PSNH) prior to recognizing 2009 asset activity, is \$37.2 million. Added to this is the depreciation expense of \$1.5 million for the forecast 2009 asset activity. The total forecast 2009 depreciation expense to \$38.7 million.

The depreciation rates used to derive the filed depreciation expense are the result of a Capital Recovery Calculation (CRC) which is a technical update that was done at the start of 2009 and is reviewed in more detail below.

The Assets in Service

In Decision DE-03-200 the Commission specified the asset parameters and procedures that were to be used by PSNH to account for and depreciate the assets in service. PSNH fully implemented this directive and the procedures now in place are in full compliance with the Commissions directive. Specifically:

- Decision DE-03-200 required that PSNH account for the assets on a whole life basis. PSNH has implemented this.
- The IOWA curves in use are as per Decision DE-03-200.
- Decision DE-03-200 specified, by asset account, the average service life that was to be used for each asset account.
 - The asset lives of PSNH assets are in compliance with Decision DE-03-200.
- Decision DE-03-200 specified, by asset account, the net salvage parameter that was to be used for each asset account.

000214

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 2 of 24

- The net salvage parameters of the PSNH assets are in compliance with Decision DE-03-200
- Decision DE-03-200 specified the amortization period that was to be used in respect of the amortization of the reserve imbalance.
 - PSNH is in full compliance with Decision DE-03-200 by amortizing the distribution assets reserve imbalance over a ten year period and general plant assets reserve imbalance over a seven year period.
 - The amortization of the intangible plant assets reserve imbalance was not addressed in Decision DE-03-200. In order to comply with the intent of Decision DE-03-200, PSNH is amortizing the reserve imbalance over a seven year period.

2009 Depreciation Rates

A CRC was run at the start of 2009. The depreciation rates used to produce the 2009 forecast depreciation expense are from the 2009 CRC. The factors underlying the 2009 CRC are as follows:

- The CRC is based upon the asset parameters in place at the end of 2008.
 - A CRC does not change either the average service life of the asset account or the net salvage parameter. Rather the CRC determines what the accumulated depreciation balance and net salvage balance should have been, for the assets in service at year end 2008 (based upon the parameters as specified by the Commission in Decision DE-03-200).

000215

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 3 of 24

- The determination of what the accumulated depreciation should be is an actuarial computation based upon the IOWA curve for the asset account. The exact process to determine what the accumulated depreciation balance should be is as follows:
 - A table is constructed that lists, by vintage year, the surviving asset balances.
 - The age of each vintage year as a percentage of the average service life of the asset account is then calculated.
 - The determination of what the accumulated depreciation should be for each vintage year is then done by referring to published IOWA curve tables. These tables list what the Calculated Accumulated Depreciation (CAD) should be based upon the age of the vintage year as a percentage of the average service life.
- The reserve imbalance is the difference between what the accumulated depreciation should be for the assets in service at a specific point in time and the actual accumulated depreciation balance. The difference between what the accumulated depreciation should be and what it is, is the reserve imbalance.
 - A positive reserve imbalance is where the actual accumulated depreciation is lower than it should be. The recovery of the difference between the actual accumulated depreciation and what

000216

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 4 of 24

the accumulated depreciation should be is done by increasing the depreciation rate by the amount necessary to recover the imbalance over the set period specified by the Commission in Decision DE-03-200 (ten years for distribution assets and seven years for general plant and by extension intangible plant assets).

- Conversely a negative reserve imbalance is where the actual accumulated depreciation is higher than what it should be based upon the age of the assets in service. The surplus is returned to the rate payer by decreasing the depreciation rate by the amount necessary to return the imbalance over the set period specified by the Commission.
- The 2009 depreciation rate is then the whole life rate of the asset account (being the inverse of the asset lifespan of the account i.e. $1/\text{average service life}$) modified by rate necessary to amortize the reserve imbalance over the set amortization period.

The Reserve Imbalance

As noted, a CRC determines what the accumulated depreciation should be. The difference between what the accumulated depreciation should be and the actual accumulated depreciation is the reserve imbalance.

There are numerous factors that underlie a reserve imbalance including:

- Assets are depreciated over the projected service life of the assets making up the asset account. The net book value of the asset is then the balance of the asset that is yet to be recovered from the rate payer.

000217

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 5 of 24

- Where an asset retires earlier than forecast a positive (unrecovered) net book value exists. At the point of retirement this unrecovered asset balance is due from the rate payer. However, recovering the undepreciated portion of assets that retired earlier than forecast would prevent rate stability for the rate payer.
- In theory an asset retiring later than forecast would result in a negative net book value. At the point of retirement the over-recovered asset balance is due to the rate payer. However, returning the over-depreciated portion of assets retiring later than forecast would also prevent rate stability for the rate payer.
- Rate stability is ensured by not recognizing the net book value of the asset at the point of the assets retirement.
- The asset account is reduced (credited) by the capitalized cost of the asset. In turn the accumulated depreciation is also reduced (debited) by the full capitalized cost of the asset being retired.
- The net book value of the asset at the point of retirement (either positive or negative) is then charged to the accumulated depreciation for the assets in question. The variance caused by this will be detected at the point a CRC is done (and will be amortized over the specified period).
- The major factor underlying the reserve imbalance is where assets retire with a net book value. Other factors that can impact a reserve imbalance are:

000218

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 6 of 24

- net salvage received is different than the net salvage accrued over the life of the asset;
- cost of removal incurred is different than the amount recovered over the life of the asset;
- depreciation parameters of the asset account are changed;
- Assets are transferred between asset accounts.

CRC Process

The Reserve Redistribution

Three separate CRC's were run for the 2009 filing. These Capital Recovery Calculations were:

- distribution assets;
- general plant assets;
- intangible assets.

An aspect of the PSNH CRC process was to redistribute the accumulated depreciation among assets making up the CRC. The redistribution was done to facilitate the preservation of rate stability for the rate payer. With reserve redistribution the reserve imbalance, expressed as a proportion of the actual accumulated depreciation (for each asset account within the function) is the same. This helps smooth the impact of the reserve imbalance on the depreciation rate for all the assets making up the function.

000219

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 7 of 24

Overall there are three asset groups that make up the PSNH distribution function. They are assets in the physical distribution of power (distribution assets), assets that support the distribution function (general plant assets) and assets that support the distribution function but without physical substance (i.e. software assets labeled intangible assets).

Generally speaking, the same forces of mortality are in place for the assets making up a function (for example distribution assets are usually located outside and are subject to the same freeze/thaw cycles, lightening strikes, flooding and so on). While each asset account is subject to the mortality factors specific to the asset itself, they are nonetheless still subject overall to the same forces or mortality as other assets performing a similar function.

Due to this shared mortality, an aspect of the CRC was to redistribute the accumulated depreciation of the assets making up the function. This was accomplished by:

- calculating what the accumulated depreciation should be for each asset account.
- summing the calculated accumulated depreciation for each asset account within the function.
- Determining the proportion of the calculated accumulated depreciation for each asset account in respect to the total calculated accumulated depreciation for all the assets making up the function.

000220

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 8 of 24

- Multiplying the total actual accumulated depreciation for all the assets making up the function by the proportion of the calculated accumulated depreciation for that account to the total calculated accumulated depreciation for all the asset accounts making up the function.
- An example of the redistribution of the accumulated depreciation is found in Depreciation Table 1.
 - For this example there are three asset accounts: Account 100, 200 and 300.

Depreciation Table 1					
Step	Action	Account 100	Account 200	Account 300	Total
1.0	Calculated Accumulated Depreciation	200	250	300	750
2.0	Proportion Calculated Accumulated Depreciation to Total	26.67%	33.33%	40.00%	100.00%
3.0	Actual Accumulated Depreciation	160	300	80	540

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 9 of 24

4.0	Redistribution of A/D	$(200/750)*540=$ 144	$(250/750)*540=$ 180	$(300/750)*540=$ 216	540
5.0	Reserve imbalance	56	70	84	210
6.0	Amortization Period	10	10	10	
7.0	Recovery of Imbalance per Annum	5.6	7.0	8.4	
8.0	Imbalance as a percentage of Accumulated Depreciation (redistributed)	$(56/144)=38.89\%$	$(70/180)=38.89\%$	$(84/216)=38.89\%$	

As shown in step 8 of Depreciation Table 1 the reserve imbalance of each asset account is the same value (as percentage of the redistributed reserve). By redistributing the accumulated depreciation among the assets the reserve imbalance portion of the depreciation rates is smoothed so that the variability among the depreciation rates making up the function is minimized.

000222

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 10 of 24

Treatment of Fully Aged Assets

Under a whole life approach to the depreciation of assets the depreciation rate is made up of two parts, the whole life rate and the amortization of the reserve imbalance rate (note that while this discussion is limited to the depreciation rate what is noted here also applies to the net salvage rate). The whole life aspect of the rate is the application of a depreciation rate based upon the average service life of the assets making up the group. No modification is made to the rate to take into consideration the age of the assets making up the group or the accumulated depreciation of those assets to date.

The other aspect of the rate is the amortization of the reserve imbalance which is the amount required to bring the actual accumulated depreciation into balance with what the accumulated depreciation balance should be for the assets in service. The combination of these two factors produces the depreciation rate.

The issue with the whole life approach is that while the reserve imbalance aspect of the rate is retrospective and corrects for past activity; the whole life aspect of the rate does not take into consideration the age of the assets making up the asset account.

For assets that are still in service but are fully depreciated (based upon the age of the asset as a percentage of the asset service life) no further depreciation should be taken.

The reserve imbalance computation takes into consideration the impact of any past depreciation taken on an asset that is fully depreciated and reduces (proportionately) the depreciation rate accordingly. However, under a whole life

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 11 of 24

approach depreciation will be taken on the asset that is fully aged every year until that asset is retired. The depreciation taken is quite literally a reserve imbalance as the asset is, based upon its age, fully depreciated. Any additional depreciation taken must be returned to the rate payer (and will be once a CRC is run).

Depreciation taken on fully aged assets increases the current cost of power that is consumed by the rate payer.

Based upon this, PSNH has modified the CRC process to remove the impact of fully aged assets in the determination of the 2009 forecast depreciation rate. This was effected as follows:

- Utilizing the IOWA curve tables, the vintage year where the asset was fully aged (that is where the calculated accumulated depreciation ratio equals 1.0) was determined. All assets of that vintage year or older are considered to be fully aged.
- The fully aged assets were not included in the value of the assets in the CRC.
- The actual accumulated depreciation for each asset account was reduced by the value of the fully aged assets (as these assets are fully aged then they are fully depreciated).
- The actual net salvage reserve was reduced by the impact of value of the fully aged assets. As these assets are fully aged then it follows that the net salvage has been fully collected.

000224

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 12 of 24

- The CRC was run net of the impact of the fully aged assets and associated reserve.
- In order to operationalize the CRC depreciation rates the following was put into place:
 - The forecast depreciation expense for each asset account, based upon the 2009 CRC rate that was applied to the 2009 opening asset balance (net of fully aged assets) was determined.
 - The forecast 2009 depreciation expense was divided by the complete 2009 asset balance (which included the fully aged assets) to produce the operational 2009 CRC depreciation rate.

The approach taken produced a depreciation rate that can be applied to the full asset balance in place at the start of the filing period (2009) but is reduced by the impact of those assets that, while still in service, are fully aged. This modification to the whole life rate approach was done so as to ensure that costs flowed through to the rate payer are fair and reasonable.

2009 Depreciation Expense

The 2009 forecast depreciation expense on assets in service as at year end 2008, is \$8.4 million higher than the 2008 depreciation expense. The \$8.4 million increase is made up of two parts as detailed in Depreciation Table 2 .

000225

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 13 of 24

Depreciation Table 2 (\$millions)		
Factors making up the difference in the depreciation expense from 2008 to 2009		
	Depreciation Expense	Percentage of Total Depreciation Expense
2008 depreciation expense	28.84	77.54%
Full years depreciation on the 2008 year end asset balance	2.59	6.98%
Impact of the CRC depreciation rate changes	5.76	15.48%
2009 forecast depreciation expense	37.19	100.00%

Analysis of the increase in the 2009 depreciation expense

Full year's depreciation on the 2008 asset balance

The change in depreciation expense resulting from taking full years depreciation in 2009 using the depreciation rates in place in 2008 is \$2.59 million. Of the total forecasted increase of \$8.4 million almost one third of the increase (31.06%) is due to ongoing asset activity that occurred in 2008.

Depreciation Table 3 details, by asset account, the depreciation taken on 2008 asset activity as well as the 2009 depreciation expense for the 2008 asset activity.

17.0	393	(.6)	(.1)	(.7)	0	(.7)
18.0	394	(95.6)	(5.5)	(101.1)	(3.3)	(104.5)
19.0	395	21.5	.2	21.7	.8	22.5
20.0	397.1	(13.6)	(.2)	(13.8)	1.6	(12.3)
21.0	397.2	(4.0)	(.1)	(4.1)	.5	(3.6)
22.0	398	(19.5)	(11.4)	(30.9)	(5.1)	(36.0)
23.0	Subtotal General Plant			1,246.8	196.1	1,442.9
24.0	303.92	1,188.2	101.2	1,289.9	(419.0)	870.9
25.0	303.93	314.3	872.2	1,186.5	1,534.3	2,720.8
26.0	Subtotal Intangible Plant			2,476.4	1,115.3	3,591.7
27.0	Total Distribution			28,837.1	2,594.6	31,431.8

Based upon the ongoing asset activity necessary for the continuing distribution of power the depreciation of assets in service at the start of 2009 has increased from the expense booked in 2008 of \$28.8 million to \$31.4 million.

The impact of the 2009 CRC

A CRC was conducted for each of the three asset groups (functions) making up the distribution plant (being: distribution assets, general plant assets and intangible plant assets).

The CRC was based upon the asset and accumulated depreciation balances as at year end 2008 (but excluded assets that had been fully depreciated as at year end 2008). The accumulated depreciation was re-distributed within the function.

The changes resulting from the CRC are required in order to ensure that the assets are depreciated and accounted for over the parameters in place (being asset lives, net salvage and the IOWA curves). A CRC does not change or amend existing

000228

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 16 of 24

parameters. As well, the reserve imbalance was amortized over a period of ten years for distribution assets and seven years for general plant and intangible plant assets.

The Impact of Fully Aged Assets

In order to ensure that the rate payer is charged appropriately, PSNH has excluded, from the CRC, the impact of assets that, at the time of the CRC, have been fully depreciated.

The impact of this is detailed in Depreciation Table 4.

Depreciation Table 4 (\$millions)			
Reduction of Depreciation Expense for the Rate Payer by Excluding Fully Aged Assets From the CRC			
Function	Forecast Depreciation with Fully Aged Assets	Forecast Depreciation without Fully Aged Assets	Reduction of Depreciation Charged to the Rate Payer
Distribution	30.34	30.26	.08
General Plant	3.70	3.01	.69
Intangible	3.93	3.93	0.0
Total	37.97	37.20	.77

The PSNH proposed modification of the whole life approach will result in a current year savings to the rate payer of \$770 thousand (than if the whole life approach was not modified to exclude fully aged assets).

000229

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 17 of 24

The Distribution function CRC

At the outset it should be noted that, for presentation purposes, the asset and net salvage values are combined into a single value. The actual CRC computations separate out the asset and net salvage values.

The depreciation rate is made up of the whole life component and a rate necessary to amortize any reserve imbalance. The whole life component of the rate is fixed as the inverse of the average service life. The focus of the CRC was the determination of what the accumulated depreciation should be for the assets in service at the time that the CRC was done (net of fully aged assets).

Depreciation Table 5 presents the reserve imbalance value calculated by the CRC.

Depreciation Table 5	
Distribution Function Reserve Imbalance Distribution (000's)	
Calculated Accumulated Depreciation	330,248.1
Accumulated Depreciation at year end 2008 (net of over aged assets)	330,266.2
Reserve Imbalance	(18.1)
Amortization Period	10 years
Impact on whole life depreciation per annum	(1.8)

At the end of 2008, once the impact of fully aged assets has been removed, the CRC determined what the accumulated depreciation should be for the assets in service.

000230

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 18 of 24

Based upon this analysis the depreciation rates that should be in place for 2009 are (with immaterial modifications) the whole life rates.

The General Plant function CRC

Depreciation Table 6 presents the reserve imbalance value calculated by the CRC for general plant assets.

Depreciation Table 6	
Distribution Function Reserve Imbalance General Plant (000's)	
Calculated Accumulated Depreciation	28,275.9
Accumulated Depreciation at year end 2008 (net of over aged assets)	31,570.1
Reserve Imbalance	(3,294.2)
Amortization period	7 years
Impact on whole life depreciation per annum	(470.6)

At the end of 2008 the CRC calculated that the accumulated depreciation recovered to date, for the assets in service, exceeds the amount that should have been recovered by \$3.3 million. Amortization of this amount over a seven year period reduces the whole life depreciation expense by \$471 thousand per year.

The Intangible Plant function CRC

Depreciation Table 7 presents the reserve imbalance value calculated by the CRC for the intangible plant assets..

000231

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 19 of 24

Depreciation Table 7	
Distribution Function Reserve Imbalance Intangible Plant (000's)	
Calculated Accumulated Depreciation	6,148.5
Accumulated Depreciation at year end 2008 (net of over aged assets)	3,768.2
Reserve Imbalance	2,380.3
Amortization period	7 years
Impact on whole life depreciation per annum	340.0

At the end of 2008 the CRC calculated that the accumulated depreciation recovered to date, for the assets in service, is less than the amount that should have been recovered by \$2.4 million. Amortization of this amount over a seven year period increases the whole life depreciation expense by \$340 thousand per year.

2009 Depreciation in Comparison to 2008

The depreciation rates used in 2008 were the result of an analysis that was completed in 2007 (based upon 2006 year end asset and accumulated depreciation data). As is the case with the 2009 CRC, the whole life aspect of the depreciation rate was known and was not open to change or revision. The analysis that was conducted in 2007 focused on a determination of the reserve imbalance and the impact that the reserve imbalance would have on the annual depreciation rates. This analysis replicated, in its entirety, the approach taken to derive the reserve imbalance in Decision DE-03-200.

The approach taken in Decision DE-03-200, as well as the analysis in 2007, produced reserve imbalance values different than what would be produced by a

000232

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 20 of 24

more traditional CRC (which is what has been used for the derivation of the 2009 depreciation rates). However, replication (in the analysis done in 2007) of the approach taken in 2003 ensured that PSNH remained in compliance with not only the intent but the methodology underlying the Commission's direction in Decision DE-03-200.

The CRC approach used by PSNH in the 2009 rate filing is in keeping with the technical update approach used throughout the utility industry (with the exception of the exclusion of overaged assets). The depreciation rates produced by the 2009 CRC will ensure that the costs of assets used to distribute the power consumed by the rate payer are fully and completely flowed through to the rate payer and, are in compliance with the intergenerational equity concept.

Historic Review and Analysis of the Reserve Imbalance for the Period 2004 to 2008

In order to support the 2009 depreciation expense an analysis was conducted of the reserve imbalance for the period of 2004 to 2008. The basis of this analysis is as follows:

- For each of the years 2004, 2005, 2006, 2007 and 2008 a CRC was conducted. The CRC was based upon:
 - The actual asset and reserve balances at the year end of the previous year (i.e. the 2004 CRC was based upon the asset and reserve balances in place as at year end 2003).
 - The asset lifespans, net salvage parameters, IOWA curves and reserve imbalance amortization periods are as set forth in DE-03-200.

000233

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 21 of 24

- CRC's were conducted for each of the three functions (distribution plant, general plant and intangible plant)
- The reserve was redistributed within the function.

Review and Analysis of the Reserve Imbalance for the Period 2004 to 2008

The CRC's that were run calculated the reserve imbalance that existed at the start of each fiscal year. Depreciation Table 8 provides detail of the calculated reserve imbalances' for the years 2004 to 2008

Depreciation Table 8				
Reserve Imbalance Analysis 2004 to 2008 (\$000's)				
A	B	C	D	E
				(C-D)
Line	Year	Calculated Reserve	Actual Reserve	Reserve Imbalance
1.0	2004	250,705.3	284,814.0	(34,109.1)
2.0	2005	303,290.7	336,123.5	(32,832.8)
3.0	2006	320,973.5	350,821.1	(29,847.6)
4.0	2007	346,856.8	370,907.2	(24,050.4)
5.0	2008	353,386.9	350,642.7	2,744.2

At the start of year 2004 the accumulated depreciation in place exceeded the accumulated depreciation that should have existed for the assets in service by \$34.1 million.

000234

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 22 of 24

CRC's that were done for this analysis show that at the start of 2005, 2006 and 2007 the actual accumulated depreciation continued to be higher than the accumulated depreciation that should have been in place but that for each year the reserve imbalance, as an absolute value, was less than the value of the year previous. Indeed, from the period of 2004 to 2007 the CRC determined that the negative reserve imbalance declined by 29.49%. This was effected by amortizing the reserve imbalance over the period of ten years for distribution assets and seven years for general plant and intangible plant assets.

During 2007 substantial asset retirements took place. The CRC run at the start of 2008 determined that the reserve imbalance was now a positive reserve imbalance. This shift to a positive reserve imbalance was primarily due to the retirements that took place in 2007.

000235

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 23 of 24

Depreciation Table 9 summarizes the value of asset retirements by year for the period of 2004 to 2008.

Depreciation Table 9		
Asset Retirements 2004 to 2008 (\$000's)		
A	B	C
Line	Year	Asset Retirement
1.0	2004	7,285.0
2.0	2005	6,775.3
3.0	2006	(1,600.6)
4.0	2007	31,416.9
5.0	2008	3,091.0

As was noted above, the 2008 depreciation rates were the result of an analysis that was conducted in 2007 utilizing 2006 asset balances (and at which point in time the reserve imbalance was negative).

The CRC conducted for 2009 (based upon year end 2008 asset balances) determined the existence of a positive reserve imbalance. The annualized magnitude of the reserve imbalance is relatively immaterial in respect of the whole life depreciation amount. Effectively, the increase in the depreciation expense between 2008 and 2009 (other than the amount for the full year's depreciation on 2008 asset activity) is due to the implementation of the whole life depreciation rate without the material modification of a reserve imbalance component.

E25 Report of Proposed Changes in Depreciation Rates;
Technical Statement in Support of the Proposed Depreciation Rate Changes

Page 24 of 24

Conclusion

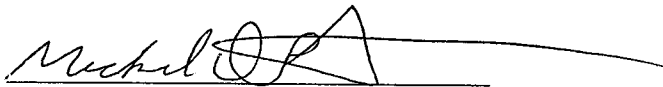

The forecast 2009 depreciation expense ensures that the depreciation passed to the rate payer is fair and reasonable and is in accordance with intergenerational equity. PSNH has conducted a detailed CRC process that has calculated the amount of depreciation expense (as filed) that is necessary to ensure that the cost of the assets now in service are recovered over the life of the assets.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

Puc 1604.01 (a) (13) Copies of any audits or studies referred to in (12) above
which the utility has not submitted to the commission;

Response: Please see the response to Puc 1604.01 (a) (12).

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

Puc 1604.01 (a) (14) A list of officers and directors of the utility and their compensation for the last 2 years;

Response: A listing of officers and directors is prepared on an annual basis as part of the year-end filing requirements with the SEC and the FERC. A listing of officers and directors for NU and PSNH are included in their respective Annual Reports on Form 10-K. In addition, PSNH provides a listing of its officers and directors in its FERC Form 1 Annual Report. NU does not prepare a FERC Form 1.

PSNH will be filing separately, under a motion for protective order, the required information for those individuals whose compensation is not disclosed in regulatory filings. This filing will be consistent with the requirements established by the Commission in its ruling in docket DE 03-200.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

Puc 1604.01 (a) (15) Lists of the amount of voting stock of the utility categorized as follows:
a. Owned by an officer or director individually;
b. Owned by the spouse or minor child of an officer or director; or
c. Controlled by the officer or director directly or indirectly;

Response: All PSNH stock is held by the parent company. All stock issued and held is NU common stock. Some of the information requested is prepared on an annual basis as part of year-end filing requirements with the SEC and included in the Annual Reports on Form 10-K for NU and PSNH. Copies of these documents have been filed with the Commission and are hereby incorporated into this response by reference.

PSNH will be filing separately, under a motion for protective order, the required information for those individuals whose stock ownership is not disclosed in regulatory filings. This filing will be consistent with the requirements established by the Commission in its ruling in docket DE 03-200.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

- Puc 1604.01 (a) (16) A list of all payments to individuals or corporations for contractual services in the test year with a description of the purpose of the contractual services, as follows:
- a. For utilities with less than \$100,000 in annual gross revenues, a list of all payments in excess of \$1,000; and
 - b. For utilities with annual gross revenues of \$100,000 or between \$100,000 and \$10,000,000, a list of all payments in excess of \$10,000;
 - c. For utilities with annual gross revenues of \$10,000,000 or between \$10,000,000 and \$100,000,000, a list of all payments in excess of \$50,000;
 - d. For all utilities with annual gross revenues of \$100,000,000 or in excess of \$100,000,000, a list of all payments in excess of \$100,000; and
 - e. For utilities in categories b., c. and d. above, the reporting thresholds for a particular entity shall be on a cumulative basis, indicating the number of items comprising the total amount of expenditure.

Response: Please see the attached.
