**Subject:** C&I Rebate Program

Debra,

As architects we are pleased to see the specifics of the rebate program come forward. We do a lot of work with public and non profit entities who are extremely motivated to pursue PV and SHW installations. They are extremely limited in their options for incentives and/or rebates which are largely tax based or limited to single family residential projects. We would hope that the Commission would take that into consideration in their evaluation and look particularly favorably on public and non-profit applications.

In addition, we also had a non-profit client last fall who was hoping the program would have been up and running earlier as they knew the rules were coming out. They had to make a decision and ended up installing a 14.4KW PV array. We would encourage the consideration of retroactive awards that would award projects done after the law was passed but before the rules were able to be issued.

Appreciate your consideration.

Dennis
