Re: DE 10-309 and DE 10-316, New Hampshire Electric Cooperative, Inc.
Certification Applications for Class II Eligibility Pursuant to RSA 362-F on
behalf of homeowners Kirk Plender and Adam Peaslee

Dear Mr. McNeil:

On November 24, 2010 and December 2, 2010, you submitted applications on behalf of homeowners Kirk Plender and Adam Peaslee requesting certification of customer-sited photovoltaic rooftop arrays as eligible to produce Class II renewable energy certificates (RECs) pursuant to RSA 362-F, New Hampshire's Electric Renewable Portfolio Standard law. Staff has reviewed the applications and recommended approval noting that the first application was completed on November 24, 2010 and the second application was completed on December 2, 2010.

Class II eligibility requires that a facility began operation after January 1, 2006 and that it produces electricity from solar technologies. The applications indicate that the facilities are customer-sited photovoltaic rooftop arrays located in New Hampshire and that they began operation in 2010. The details for each facility are listed in the table on the following page.

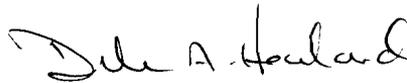

Commission Assigned Docket #	Facility Owner	Facility Location	Operation Date ¹	Total kW listed in application (DC Arrays)	Effective Date to Produce RECs	NH Certification Code
DE 10-309	Kirk Plender	Glenn, NH	11/16/10	4.935	11/24/10	NH-II-10-118
DE 10-316	Adam Peaslee	Ctr Sandwich, NH	11/15/10	4.730	12/02/10	NH-II-10-119

Since the facilities are customer-sited sources, their output is not recorded in the New England Power Pool Market Settlement System and, as a result, their output must be monitored and verified by an independent monitor. The applications state that NHEC will monitor the facilities' output as required by N.H. Code of Administrative Rules Puc 2505.08 and 2505.09. These facilities' total output will also be included in the *NHEC Class II Aggregation's* total output reported to the NEPOOL Generation Information System as approved by the Commission on April 9, 2010.

Based on Staff's recommendation, the Commission has determined that NHEC has provided all the necessary information to demonstrate that the facilities are eligible for certification as Class II facilities. Therefore, the Commission hereby certifies the Kirk Plender facility as eligible for Class II RECs effective November 24, 2010 and the Adam Peaslee facility as eligible effective December 2, 2010.

The New Hampshire Renewable Portfolio Standard certification codes for the above mentioned solar photovoltaic facilities are listed in the previous table.

Sincerely,

Debra A. Howland
Executive Director

cc: Docket File

¹ NHEC considers the operation date listed in the table above, and in Appendix E of each application, to be the date on which NHEC inspected the facility and installed a revenue quality meter to record the electricity that will be eligible for Class II RECs. The date listed in each interconnection application pertains to the installation and interconnection of the facility and may be different than the operation date listed in the above table.
