Subject: Comment on DE 10-326

I would like to urge the Commission to respond to the request from Granite State/National Grid for part-night lighting fees (DE 10-326) by requiring that the company permit payment of fees for changing to part-night fixtures over a period of years and that they make a greater number of lighting options available (especially LED). Their current proposal is unlikely to achieve as many environmental and energy-saving benefits as could be achieved with more affordable payment schedules and more efficient lighting fixtures than they propose to make available.

Thank you.
