Subject: RE: DE 13-298 Renewable Energy Incentive Program for Commercial And Industrial Bulk Fuel-Fed Wood Pellet Central Heating Systems

Here it is Barbara. I took the liberty to mark up a couple of other bits, but tried to stay away from what was discussed at the meeting for the most part. Of the changes that you may not be expecting, the primary suggestion is that the word "central" be removed. It looks as though the state is offering a rebate for the company, "Central Boiler". The word central is used even though there really is no need of it.

Gracias! I greatly appreciate the reminder. I've attached the draft that was used for the session – it does not yet reflect the changes discussed at the hearing.

Good morning Barbara,

Don't forget to send me the word version of part one if you can.

As for the idea of putting a threshold on the rebate program so that some installations are ineligible for the program and thus eligible for any RFP process, I think we need to think in terms of what will get the largest numbers of units installed in the short and long term. My best guess as to a job price that will make this happen is \$200,000. In other words, pellet boiler installations with a total installed cost of under \$200,000 should be eligible. Larger installations should not be eligible.
