Subject: Fwd: Dartmouth College's website update

Dear Director Howland,

Following is a comment re: DG 16-852. Thank you in advance for posting it.

When Dartmouth College was informed that at the June 15 Technical Session their website was cited as evidence of their possible continued interest in being a natural gas customer, they quickly updated the site: http://energy.dartmouth.edu/?page_id=235

Previously, the website said: 2017

The Future of Energy at Dartmouth

For the future, Dartmouth is considering plans to convert the plant to natural gas, a fuel that produces 30% fewer emissions than #6 oil. Meanwhile, our innovative Energy Initiatives will continue to drive down energy demand as we meet and exceed our carbon reduction goals.

It now says : 2017

The Future of Energy at Dartmouth

On Earth Day, 2017, President Hanlon announced a Sustainability Road Map that provides specific recommendations for Dartmouth to play a leadership role in improving global sustainability and overcoming the challenges of climate change. One energy-related commitment is to “transition the campus heating system from No. 6 fuel oil to renewable sources by 2025”.

Thank you for your attention,

Ariel Arwen
