

To Whom It May Concern,

I would like to add my voice in encouraging you (the NH PUC, et al) to include Thermal as part of the RPS. New Hampshire, and the entire Northeast for that matter, needs to find a way to get off fossil fuel based heating solutions, and this could be a way to help nudge things in the right direction. Providing guidance (from the State level) is a great way to promulgate and encourage the use of clean-burning, efficient woody biomass driven heating systems. I not only heat with wood, I am a retailer who has been educating the public about these matters for the past four years.

Thank You for your thoughtful consideration on this matter.

Kindest regards,

Pablo Fleischmann
