I. Introduction and Purpose

Q. Please state your names, positions and business addresses.

A. My name is Charles R. Goodwin. My business address is 107 Selden Street, Berlin, Connecticut. I am Director of Rates and Forecasting for Northeast Utilities Service Company, which provides centralized services to the Northeast Utilities operating subsidiaries, including Public Service Company of New Hampshire (PSNH), The Connecticut Light and Power Company, Yankee Gas Services Company, Western Massachusetts Electric Company, and NSTAR Gas and Electric Companies.

A. My name is Stephen R. Hall. My business address is PSNH Energy Park, 780 North Commercial Street, Manchester, New Hampshire. I am the New Hampshire Revenue Requirements Manager for PSNH.
Q. Have you testified previously before the Commission?

A. Yes, we have both testified previously before the Commission.

Q. What is the purpose of your testimony?

A. The purpose of our testimony is to provide comments on and/or rebuttal to the combined testimonies of Daniel W. Allegretti on behalf of the Retail Energy Supply Association (“RESA”), Taff Tschamler on behalf of North American Power and Gas, LLC (“NAPG”), and Kevin Dean on behalf of Electricity NH, LLC (“ENH”). We will provide general comments on the testimony and will also provide specific comments to some of the allegations made in individual testimony.

Q. Please summarize ENH’s testimony.

A. ENH describes the level of costs it has incurred for the Selection Charge and maintains that since the selection is accomplished through an EDI transaction, there is little or no cost to PSNH. ENH also describes the cost it has incurred for billing and payment service and for collection service, and notes that other utilities with which it does business do not assess those specific charges (though they may assess other charges). It recommends that all of the charges be suspended indefinitely and that to the extent the charges are found to be unjust or unreasonable PSNH be required to refund any amounts already collected.
Q. Please summarize NAPG’s testimony.

A. NAPG maintains that the charges are not based on a sound policy rationale, do not apply established utility ratemaking and cost of service principles, and undermine the law requiring competition. It recommends removing the charges from PSNH’s tariff as soon as possible, and that PSNH be required to refund the amount of charges recovered to date, or place the money in a special dedicated fund for other purposes. NAPG also states that it believes the appropriate manner for recovering the costs of billing, collection and switching is to include the costs in distribution rates paid by all customers.

Q. Please summarize RESA’s testimony.

A. RESA maintains that the charges were never cost justified and that the Commission should determine whether they act as a barrier to the development of the competitive market in New Hampshire. It recommends that the charges be revisited and that PSNH should bear the burden of demonstrating that they are cost justified.

Q. What are your general comments to the suppliers’ testimonies?

A. PSNH is not surprised by the suppliers’ position, although we do not agree with their recommendations. Initially, PSNH notes that the Commission’s order of notice stated that one of the issues to be examined was “whether it is useful for the Commission to conduct a review of the reasonableness of the approved tariff
charges separate from a review of PSNH’s revenue requirements in the context of
a future rate case.” Order of Notice at 4. Though they advocate for the reduction
or elimination of these charges, the suppliers do not offer any support for
reviewing these charges outside the context of a rate case. PSNH, however, states
that it has no issue with a reexamination of the charges, provided that such an
examination is performed in the context of a rate case. Interestingly, the party
who filed the petition initiating this docket, PNE Energy Supply, agrees with
PSNH on this point. In its objection to PSNH’s motion to dismiss in this docket,
PNE stated:

“PNE’s Petition does not seek to engage in single issue ratemaking, or
seek a declaratory ruling. In its order of Notice, the Commission correctly
noted that ‘PNE said that it is not seeking a rate adjustment in this
proceeding and that any rate adjustment that resulted from the
Commission’s review would take place in a subsequent PSNH general rate
case.’ Accordingly, PNE is not proposing any change to PSNH’s present
or future allowed revenue level. PNE is simply proposing that the revenue
associated with the current supplier charges not be recovered from
competitive suppliers because they impede the development of a
competitive market for small customers, rather than enhancing the
development of a competitive market.”

Clearly, it’s not possible to simply eliminate various charges to suppliers in this
proceeding without changing PSNH’s revenue level. However, the suppliers who
sponsored testimony are recommending exactly that.

If the Commission were to eliminate or substantially reduce the charges to
suppliers, it would constitute an exogenous event under the settlement approved
in PSNH’s last distribution rate case, thus warranting an increase in PSNH’s
distribution revenue level. Thus, suppliers are essentially asking the Commission
to eliminate the charges to improve their bottom lines and to require all customers
(even those who do not take service from a competitive supplier) to pick up the
tab by moving the costs into distribution rates. They are also asking the
Commission to take deliberate action to cause an exogenous event to occur.
Finally, suggestions that the Commission may retroactively adjust tariffed rates
outside of a rate case proceeding and order refunds of amounts lawfully collected
are unfounded and should be rejected out of hand.

Q. Please describe the Exogenous Events provision contained in the settlement
in Docket No. DE 09-035.

A. The Exogenous Events provision of the rate case settlement allows PSNH to
adjust its distribution rates upward or downward for certain defined events if the
total revenue impact of all such events exceeds $1,000,000 in any calendar year.
One of those events is a “State Initiated Cost Change” which is defined, in part, as
follows:

“any externally imposed changes in…other precedents governing income
[or] revenue,… which impose new obligations, duties or undertakings, or
remove existing obligations, duties or undertakings, and which
individually decrease or increase PSNH’s distribution costs, revenue, or
revenue requirement.”

Since the suppliers’ proposals to eliminate or reduce the charges would result in a
decrease in PSNH’s revenue, a Commission order granting those proposals would
qualify as an exogenous event. The amount of revenue from all of the charges at
issue was approximately $500,000 in calendar year 2012, and over $1 million for the 12-month period ending May 31, 2013. Thus far in 2013 (through May), the charges have totaled over $800,000.

If the Commission were to accept the suppliers’ position prospectively, PSNH’s distribution rates would need to be increased on July 1, 2014 to recover the revenue shortfall resulting from the policy change, assuming there are no offsetting changes elsewhere.

Q. How are the revenues from the charges treated during a distribution rate case?

A. For ratemaking purposes, the revenues PSNH receives from the charges are credited to PSNH’s distribution revenue requirement, thus decreasing distribution rates. Therefore, the assertion of ENH that the existence of the charges creates a “profit center” for PSNH and NAPG’s assertion that distribution rates already fully recover the costs of billing and collection services do not accurately reflect the full story. The revenues from these charges are applied during a distribution rate case to offset the cost of providing service, thus reducing rates for distribution customers.
Q. Hasn’t the amount of revenue from the charges increased in recent years resulting in an “overrecovery” of costs?

A. The revenues have increased in recent years due to increased migration, and a concomitant increase in billing and collection services requested by suppliers. However, while the revenue from the charges has increased, there is no “overrecovery”. The revenue PSNH receives from the application of the charges is treated in identical fashion to all other expenses and revenues that determine PSNH’s distribution revenue requirement. To the extent that such costs and revenues change from the test year level, PSNH is at risk for any such change. There is no doubt that many costs have increased since the last rate case, yet PSNH’s rates are not being adjusted to reflect those increases, other than for the items specified in the rate case settlement. The fact that PSNH is not earning its allowed rate of return supports the conclusion that there is no “overrecovery” occurring. Suppliers want the Commission to focus on a single component of the revenue requirement and change that component, while ignoring all other components. This “single issue ratemaking” is not the Commission’s long standing ratemaking policy.¹

¹ Recall that PSNH discussed this issue in its Motion to Dismiss filed in Docket No. DE 12-093:
In addition, the Petition asks the Commission to engage in single-issue ratemaking, which is clearly disfavored. In Re Statewide Low-Income Electric Assistance Program, 87 NHPUC 349 (2002); see also In Re Connecticut Valley Elec. Company, 86 NHPUC 947 (2001). In the Connecticut Valley Electric case, the Commission has described the reasons why this is disfavored:
  Single-issue rate cases are frowned upon in utility ratemaking because the objective of ratemaking is not to ensure recovery dollar for dollar of every
Q. **ENH maintains that since the charges for billing and collection are based on embedded costs, it creates an “unreasonable subsidization of PSNH’s distribution services by competitive suppliers”. Do you agree with this statement?**

A. No, we do not. ENH is correct in stating that PSNH’s charges for such services were based on embedded costs – as were all other distribution charges. However, there is no “subsidization” since, as discussed above, the revenue received from the application of the charges is credited to PSNH’s revenue requirement during a distribution rate case. Therefore, suppliers are paying PSNH on an equivalent basis to what customers pay through distribution rates.

ENH proposes that the Commission require the charges to be determined based on incremental cost, presumably to eliminate the alleged subsidization. Reducing or eliminating the charges would result in suppliers being subsidized by all customers, even those customers who do not purchase energy from a competitive supplier. RESA, Constellation, and other suppliers argued stridently against the imposition of a nonbypassable charge on customers in Docket No. DE 10-160.

---

Expenditure made by a utility, but rather to ensure that the company has a reasonable opportunity to earn a reasonable overall return on investments dedicated to public utility functions. In order to make this ultimate determination, it is necessary to match ordinary and necessary expenses with income from the same period, and determine whether the net income is sufficient to provide a reasonable return on allowable rate base. Single-issue rate cases do not allow for this determination of overall net income. They focus on the change in a single expense (or revenue) item since the last rate case, ignoring completely what changes may have taken place in the other factors of net income.

Investigation into the Effects of Customer Migration, yet they are urging the
Commission in this docket to impose such a nonbypassable charge on customers
in the form of higher distribution rates to the benefit of their bottom lines. This
type of arrangement would be unfair to customers. It would create an unlevel
playing field for customers if the Commission were to reduce or eliminate the
charges, since suppliers would then be charged for the costs based on incremental
costs (or would be charged nothing for the services), yet customers are charged
for the costs based on embedded cost.

Q. NAPG states that the current billing charge is based on 1998 costs and
therefore should be eliminated, and that there is no cost justification for the
charge for collection services. Please comment on these allegations.

A. PSNH provided cost justification for the billing and collection services charges as
part of the restructuring docket. NAPG apparently believes that because such
analysis is dated, it is now somehow no longer valid. That’s not the case. While
costs may have changed in the interim, the analysis is fundamentally sound.
NAPG is essentially complaining that since the marginal cost of providing service
is low, the charges should be reduced or eliminated. As stated above, this would
run counter to the Commission’s precedent of using embedded costs in approving
distribution rates.
Even if one assumes that the charges need to be updated to reflect current costs, they should not be based on incremental cost, since that would create an unlevel playing field for customers, as discussed above. Moreover, with regard to billing and collection services, those services are optional and suppliers can always avoid the charges by performing the services on their own or contracting with another entity for the services. We will discuss this in more detail later in this testimony.

Q. **Was there a cost analysis performed for the selection charge at the time of restructuring?**

A. No, there was not, as suppliers have noted in their testimony. If the Commission wishes to fully examine this charge, it should be done in the context of a distribution rate case so that PSNH can account for it as part of a cost of service study. The Commission should not, however, create an exogenous event by simply eliminating the charge.

Q. **Suppliers maintain that there is very little incremental cost associated with switching customers, since the switching is done electronically through EDI transactions. Are their contentions accurate?**

A. As a general rule, when viewed on an incremental cost basis, yes. With a “normal” transfer of a customer to or from competitive supply or from one supplier to another, the incremental cost is low. However, suppliers conveniently
ignore the initial costs PSNH incurred to program its billing systems to accomplish switching of customers, and the ongoing maintenance and upgrading of those systems. Those costs are included in distribution rates (net of any revenue from selection charges) and are paid for by all customers. As part of a cost of service study, such costs would be appropriately allocated to various classes of customers and/or to suppliers in the form of a selection charge calculation. The suppliers’ argument that they should not be charged anything due to the very low incremental cost is akin to a UPS customer arguing that it should not have to pay anything for delivery of a package to its premises, since the marginal cost of delivering a package to them is very low if the delivery truck is going to be in the neighborhood anyway.

Suppliers also have ignored the potential for PSNH to incur significant costs for switching in unusual situations, such as the situation that occurred in February following the default of PNE Energy Supply. PSNH incurred significant costs associated with transferring customers as required by ISO-NE, and it withheld payment to PNE to cover those costs plus the selection charges. In a separate proceeding, PNE is seeking recovery of the withheld amounts plus damages and PSNH faces the risk that it may not be able to recover the costs it incurred to switch customers as required by ISO-NE. Basing a selection charge on incremental cost would ensure that PSNH would incur a significant loss if such a situation were to occur in the future. Further, PNE has also contended to the Commission that PSNH is not authorized to recoup the costs of carrying out the
responsibilities of a host utility (such as assuming the load of a defaulting
supplier) under the ISO-NE rules. Thus, in initiating this docket, PNE has
contended that certain charges relating to suppliers should be eliminated, and it
has now also contended that PSNH is not permitted to recover other supplier-
related costs. It appears that regardless of whether the costs are based upon
PSNH’s embedded or marginal costs, suppliers believe that PSNH, or all
customers, regardless of whether they use a competitive supplier, should bear all
of the costs of accommodating suppliers’ businesses.

As stated earlier, PSNH has no objection to a full examination of the selection
charge or the other charges at issue in this docket, as long as such examination is
done as part of a distribution rate case and charges are adjusted in concert with
distribution rate setting.

Q. **What type of analysis would be necessary to determine the appropriate level of each charge?**

A. To determine cost-based pricing for supplier services, the traditional embedded
distribution cost of service study model would need to be modified to add
suppliers as a service category. Further, the costs of all supplier-related and
competitively supplied customer-related rate base and expenses would need to be
identified and segregated from the overall distribution revenue requirement. Such
costs would then need to be allocated, or directly assigned, to competitive
suppliers and/or the competitively supplied customers as either a fixed cost, a cost
per bill cost, or a cost per transaction. These costs would include PSNH’s proportional share of any billing system applications that were built or modified by Northeast Utilities to accommodate competitive energy service, other supplier related billing and transactional systems, related labor costs, and related administrative and general costs.

Q. Would this analysis comport with established ratemaking principles?

A. Yes, it would. The Commission has historically based distribution rates on embedded costs, and only used marginal cost pricing in situations where embedded cost pricing would result in a loss of revenue (or no realization of new revenue). NAPG’s argument that such pricing does not follow established utility ratemaking and cost of service principles is simply wrong. NAPG and the other suppliers are requesting specialized treatment for these particular charges outside the context of a rate case. They are doing so in order to enhance their bottom lines rather than to benefit customers.

Q. Wouldn’t a reduction of suppliers’ costs result in significant benefit to customers, and a corresponding boost to the competitive market?

A. No, it would not. Initially, PSNH makes clear that it is mindful that the Commission has stated that this docket is intended “to investigate whether PSNH’s charges for customer selection, billing and collection are just and reasonable” and not to “examine the effects of the charges on the development of
the competitive market, or the effect of the charges on the profitability of

competitive suppliers.” Public Service Company of New Hampshire, Order No.

25,528 (June 25, 2013) at 5. However, the suppliers themselves have contended

that these charges are harmful to the competitive market, and, by extension,

customers. See, e.g., NAPG Testimony at 15 (contending that PSNH’s charges

should be reduced to “minimize harms to suppliers and consumers” during any

investigation) and RESA Testimony at 4 (questioning whether the charges act as a

barrier to market developments). Furthermore, the Commission has previously

stated that:

In determining just and reasonable rates, “[w]e must balance the
consumers’ interest in paying no higher rates than are required
with the investors’ interest in obtaining a reasonable return on their
investment.” Appeal of Eastman Sewer Company, Inc., 138 N.H.
221, 225 (1994). The protection of investors’ interests, however,
must be secondary to the Commission’s primary concern of
protecting the consuming public.

Public Service Company of New Hampshire, Order No. 22,784, 82 N.H. P.U.C.

787, 796 (Nov. 6, 1997). Thus, to determine whether the charges are just and
reasonable the Commission must balance the interests of the Company and
customers and must know whether there would be a significant benefit to
customers, rather than to suppliers, from the elimination of the charges.

Accordingly, it is necessary to put the level of charges into perspective and
compare those charges to the energy service rates paid by customers.
In its response to Staff 1-1 (Attachment 1 hereto) NAPG provided a calculation of the charges as a percent of total revenue. That calculation shows that the charges amount to only 2.2% of total energy revenue. If one assumes that the energy price charged to customers is 7.5¢ per kWh (as assumed in the attachment), then the charges are approximately 0.17¢ per kWh (or a little over one dollar per month for the average residential customer). Even if we were to assume that suppliers would flow through 100% of the benefit to customers, it’s hard to imagine that a 0.17¢ reduction per kWh would have a meaningful impact on the competitive market, or would influence a customer’s decision to take service from a competitive supplier. Thus, PSNH questions any claims that the charges meaningfully impact the competitive market, or that their elimination would “minimize harms” to consumers. Moreover, for those suppliers who currently perform their own billing and collection services, reducing or eliminating the billing or collection charges would have no impact at all.

Q. Do suppliers value the billing and collection services provided by PSNH?

A. Yes, they do. In response to discovery requests (ENH responses to PSNH 1-8 and 1-21, NAPG responses to PSNH 1-6 and 1-18, and RESA response to PSNH 1-7 and 1-16, all included as Attachment 2) all three witnesses stated that they receive value from the billing and collection services PSNH provides.

---

2 RESA stated that its members “would expect to receive some value from PSNH collection activities”. 
Notwithstanding the value that they receive, the witnesses still maintain that the
service should be provided by PSNH at no charge. They are asking the
Commission to force PSNH, a regulated for-profit entity, to continue to provide
those valuable services (which can be obtained in the competitive marketplace),
yet charge them nothing for the services.

Q. Are there any provisions of New Hampshire law that suggest that free service
from a regulated entity runs contrary to the notion of free and fair
competition?

A. Yes, there are many. First, providing a valuable service for free – in addition to
being contrary to good business practice – is contrary to New Hampshire law.
See RSA 378:14 (“No public utility shall grant any free service, nor charge or
receive a greater or lesser or different compensation for any service rendered to
any person, firm or corporation than the compensation fixed for such service by
the schedules on file with the commission and in effect at the time such service is
rendered.”). Further, in its findings in House Bill 1392 in the 1996 session, the
general court found that “market forces can now play the principal role in
organizing electricity supply for all customers instead of monopoly regulation.”
New Hampshire’s state constitution requires that “free and fair competition in the
trades and industries is an inherent and essential right of the people and should be
protected against all monopolies and conspiracies which tend to hinder or destroy
it.” And RSA 374-F:3, VII states that “Choice for retail customers cannot exist
without a range of viable suppliers. The rules that govern market activity should apply to all buyers and sellers in a fair and consistent manner in order to ensure a fully competitive market.”

Apparently, counsel for RESA agrees that the state’s policy is to discourage monopoly service and government intervention in the private marketplace. In testimony before the Commission filed on January 12, 2006 in Docket No. DW 04-048, RESA’s witness, Douglas Patch, stated:

“Our state has a history of encouraging free enterprise and of avoiding government intervention in and government operation of what are traditionally private functions unless it is absolutely necessary. This philosophy is reflected in the New Hampshire Constitution, Part II, Article 83, which the New Hampshire Supreme Court has said ‘declares our fundamental preference for free enterprise.’ Appeal of Omni Communications, Inc. 122 N.H. 860, 862 (1982). As the Omni court noted, referring to the Commission: ‘The role and duty of such a commission is to oversee and regulate those few necessary monopolies so that the constitutional rights of free trade and private enterprise are disrupted as little as possible.’ [emphasis added] 122 N.H. at 862, 863.”

Further, in its January 17, 2013 Objection to PSNH’s Motion to Strike Portions of RESA’s Pre-filed Testimony in Docket No. DE 12-097, RESA maintained:

“Such efforts are what NH's founding fathers recognized in part II. Article 83 of the NH Constitution, cited in the purpose clause of the restructuring statute (RSA 374-F:1,l) where it says: ‘Free and fair competition in the trades and industries is an inherent and essential right of the people and should be protected against all monopolies and conspiracies which tend to hinder or destroy it.’ RSA 374-F:3,VII says: ‘Choice for retail customers cannot exist without a range of viable suppliers. The rules that govern market activity should apply to all buyers and sellers in a fair and consistent manner in order to ensure a fully competitive market.’”

The point of all of the above is to demonstrate that New Hampshire law clearly tilts toward a preference for market forces providing competitive services rather
than monopolies providing competitive services. Billing and collection services are competitive services that are available in the marketplace. It’s remarkable that in this docket, competitive suppliers want the Commission to force a regulated utility to provide competitive services for free, in contravention of New Hampshire law.

Q. Is there a legal mandate for PSNH to provide billing services?
A. No, there is not. The requirement for PSNH to provide billings services was included in the Commission’s Order No. 22,875 in Docket No. DR 96-150. In that order, the Commission ruled:

“With respect to billing, we clarify that distribution companies will retain the responsibility to bill all customers for distribution services. Competitive suppliers, or their designated agent(s), will assume the responsibility for billing customers for the energy services they provide. However, for the convenience of the customers, we will require distribution companies to offer competitive suppliers the option of including their unbundled energy charges on a single consolidated bill, prepared by the distribution company. Again, the distribution company would be compensated for this billing service pursuant to a Commission approved tariff.”

Electric Utility Restructuring, Order No. 22,875, 83 NH PUC 126 (Mar. 20, 1998)

at 17-18. As a result of this order, PSNH offers billing service as an option to competitive suppliers and is compensated for it pursuant to a Commission approved tariff. However, in view of the existence of competitive providers of billing and collection services and the vibrant competitive market that has emerged for energy services, the time has come to remove this requirement from utilities, or at least to allow utilities to price such services at market rather than at
cost. In fact, suppliers could avoid the “tax” that ENH alleges exists by performing these services themselves or by purchasing such services from the competitive market today.

As a provider of default energy service, PSNH’s role is to provide a safety net for customers. That role should not include performing services for competitive suppliers at little or no cost.

Q. What is your proposal for the Commission in this docket?

A. First, in response to the Commission’s concern as expressed in the order of notice, the Commission should not alter any of the supplier charges outside of a distribution rate case, due to the impact on PSNH’s distribution revenue, the interplay between the revenue PSNH receives for supplier services and PSNH’s distribution revenue requirement, the risk of establishing a precedent for single-issue ratemaking, and the fact that such action would constitute an exogenous event. If the Commission wishes to conduct a detailed examination of the cost of providing the services at issue in this docket, a detailed cost study would be required as part of the next rate case. Any such examination should include a policy determination of whether billing and collection services should be provided at a market price if that price is greater than PSNH’s cost of providing the service. Notwithstanding PSNH’s recommendation above, if the Commission agrees with suppliers that the charges for the services should be reduced or eliminated, PSNH proposes that it then be relieved of any requirement to perform billing and
collection services for suppliers. Relieving PSNH of this burden would level the
playing field for all competitive suppliers of billing and collection services, and
would completely eliminate the issues raised in this docket regarding the pricing
of those services. It would also eliminate the “tax” and “subsidization” that
suppliers allege currently exists, since suppliers would either no longer purchase
such services from PSNH or would do so through a negotiated contract for those
services.

Q. Does this complete your testimony?

A. Yes, it does.
