P R O C E E D I N G S

1
2 CHAIRMAN HONIGBERG: Good morning,
3 everybody. Please be seated. We are here
4 this morning in Docket 17-128, which is
5 Pennichuck East Utilities' rate case, hearing
6 on the merits. We have a settlement that has
7 been filed. We're here to consider that.

8 Before we do anything else, let's
9 take appearances.

10 MR. HEAD: Thank you. Richard Head
11 from Rath, Young & Pignatelli, on behalf the
12 Company. Also with me at counsel table are
13 Larry Goodhue and Don Ware. And also here
14 from the Company we have Carol Ann Howe and
15 Jay Kerrigan.

16 MR. BUCKLEY: Good morning, Mr.
17 Chairman and Commissioners. My name is Brian
18 D. Buckley. I am a staff attorney with the
19 New Hampshire Office of the Consumer
20 Advocate. To my left is Mr. James Brennan,
21 director of finance with the Office of
22 Consumer Advocate. We are here representing
23 the interests of residential ratepayers.

24 MS. ROSS: Good morning,

1 Commissioners. Anne Ross for Commission
2 Staff. And with me today is Jayson Laflamme,
3 who's the assistant director of the Gas &
4 Water Division.

5 MR. RANALDI: Michael Ranaldi. I'm
6 representing myself.

7 CHAIRMAN HONIGBERG: Refresh my
8 memory, Mr. Ranaldi. Did you intervene in
9 the case, or did you --

10 MR. RANALDI: I did intervene on
11 the case.

12 CHAIRMAN HONIGBERG: Okay.

13 MR. RANALDI: I tried to get a
14 representative of Locke Lake, but they
15 refused to show up, so I decided to show up
16 independently. And you agreed that would be
17 okay, that I can represent myself and it
18 would be helpful to the other customers, the
19 8,000 customers.

20 CHAIRMAN HONIGBERG: Understood.
21 Thank you.

22 How are we proceeding this morning?

23 MR. HEAD: For the Company, we'll
24 have one witness on the panel, Mr. Goodhue;

1 and for Staff, Jayson will be the witness for
2 the Staff. I believe that's the panel.

3 CHAIRMAN HONIGBERG: Are there any
4 preliminary matters we need to deal with?

5 MR. HEAD: We have marked as an
6 exhibit the settlement, which will be
7 Exhibit 3.

8 **(The documents, as described, were**
9 **premarked as Exhibits 3 for**
10 **identification.)**

11 MR. HEAD: There is pending, also,
12 a Motion for Waiver as part of the settlement
13 relative to the effective date of the
14 settlement. So that Motion for Waiver is
15 also pending as part of the settlement
16 agreement.

17 I also have, just for convenience,
18 within the settlement agreement there's an
19 Exhibit 3 to Appendix A. We'll be
20 referencing it through the testimony. And I
21 thought, just as a demonstrative, so you'd
22 have it in front of you, I have a separate
23 copy of it so you don't have to flip back and
24 forth.

1 CHAIRMAN HONIGBERG: If there's
2 nothing else, then the witnesses should
3 probably move into the witness box.

4 I guess for the order of
5 questioning, what we'll do is have those who
6 are on the settlement do the questioning of
7 the witnesses, and then, Mr. Ranaldi, you can
8 ask whatever questions you have before we ask
9 our questions.

10 You can swear them in.

11 **(WHEREUPON, LARRY GOODHUE AND JAYSON**
12 **LAFLAMME were duly sworn and cautioned**
13 **by the Court Reporter.)**

14 CHAIRMAN HONIGBERG: Mr. Head,
15 before you start, will you be marking the
16 original filing and the testimony that was
17 included there?

18 MR. HEAD: You know, I guess I
19 hadn't planned on it. But I certainly can if
20 that's the better protocol.

21 CHAIRMAN HONIGBERG: You guys know
22 the case better than we do. If that
23 testimony is necessary for our understanding
24 of the request in the settlement, then --

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 MR. HEAD: I don't believe so. I
2 think we're going to -- Mr. Goodhue will be
3 testifying here today as to the essential
4 elements that were in his original testimony
5 in the filing. So I don't think it's
6 necessary from that perspective.

7 CHAIRMAN HONIGBERG: Okay. You may
8 proceed.

9 MR. HEAD: Thank you, Mr. Chairman.

10 **DIRECT EXAMINATION OF LARRY GOODHUE**

11 **BY MR. HEAD:**

12 Q. Mr. Goodhue, starting generally with your
13 background, can you describe your role with
14 Pennichuck East Utilities?

15 A. (Goodhue) Yes. I am the CEO of Pennichuck
16 Corporation and all of its subsidiaries. I
17 assumed that role on November 6th, 2015.
18 Prior to that, I was the CFO of the
19 corporation from April 2012, and I still
20 actually hold that title. Prior to that, I
21 was the comptroller of the Company from
22 December 2006 through April 2012. I
23 currently hold the titles of CEO, CFO and
24 treasurer for Pennichuck Corporation and all

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 of its subsidiaries.

2 Q. And in terms of just a general description,
3 what does that mean as to your job duties?

4 A. (Goodhue) I'm responsible for the overall
5 financing, management and operations of the
6 Company, along with our management team. I
7 report directly to the board of directors of
8 Pennichuck Corporation and each of its
9 subsidiaries.

10 Q. And you had referenced the subsidiaries of
11 Pennichuck Corporation. Can you just briefly
12 describe the subsidiaries of Pennichuck
13 Corporation and their role relative to the
14 regulatory environment?

15 A. (Goodhue) Yes. There are five wholly-owned
16 subsidiaries of Pennichuck Corporation, three
17 of which are regulated water utilities in the
18 state of New Hampshire: Pennichuck Water
19 Works, Inc.; Pennichuck East Utility, Inc.,
20 which this case is for, and Pittsfield
21 Aqueduct Company, as well as two unregulated
22 subsidiaries, Pennichuck Water Service
23 Company and the Southwood Corporation. The
24 Pennichuck Water Service Company contract

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 operates other water systems for small
2 systems owned by others and/or
3 municipalities, and the Southwood Corporation
4 is a real estate holding company that holds
5 land in the state of New Hampshire.

6 Q. And as we know, the City of Nashua is the
7 sole shareholder of Pennichuck Corporation.
8 Can you describe very briefly how the City's
9 acquisition affected the way in which PEU
10 operates as a utility?

11 A. (Goodhue) Yeah. The acquisition by the City
12 of Nashua of Pennichuck Corporation affected
13 Pennichuck East Utility, or PEU, in much the
14 same way it affected Pennichuck Water Works
15 and the other subsidiaries. The
16 modifications basically are that -- the
17 corporation as a whole does not have access
18 to the equity markets any longer. It is a
19 debt-funded operation for any operations and
20 infrastructure; and as such, the
21 modifications we are seeking through this
22 settlement for PEU are consistent with the
23 changes that were requested and authorized
24 for PWW in its ratemaking methodology in

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Docket DW 16-806.

2 Q. Given the similarities between the settlement
3 agreement in this case and the settlement
4 agreement in Docket 16-806, can you describe
5 some of the important similarities in the way
6 that the City's acquisition of Pennichuck
7 Corporation affected those two utilities in a
8 way that's similar?

9 A. (Goodhue) Yes. As I mentioned, we no longer
10 have access to the private equity markets
11 like an investor-owned utility would have,
12 where they could access capital through both
13 debt and equity. This is strictly
14 debt-financed at this point. So, no longer
15 is a desirable 50/50 debt-equity ratio not
16 only [sic] available, which would be optimal
17 for the Company, as far as the ability to
18 raise funds, but also it has within it an
19 elevated cost to customers relative to the
20 cost of equity. After the acquisition, both
21 PEU and PWW, as well as PAC, are expected to
22 finance their ongoing capital needs entirely
23 through the issuance of debt.

24 Q. And how does that affect PEU's customers?

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 A. (Goodhue) One of the things that it does is
2 it lowers the overall weighted cost of
3 capital for PEU on its capital structure.
4 Prior to the acquisition by the City of
5 Nashua, PEU had an ROE on an after-tax basis
6 of 9.75 percent related to about 50 percent
7 of its capital structure. Now you're looking
8 at an overall cost of capital that is far
9 below that because it's a debt-only financed
10 structure, something south of 5 percent.

11 Q. So, going back to Pennichuck Water Works and
12 the 16-806 docket and the rate methodology
13 that was approved in that case, can you just
14 briefly give an overview of that rate case
15 and then talk about that how that applies to
16 PEU?

17 A. (Goodhue) Yes. In that rate case, what we
18 sought was further modification to the rate
19 structure that was authorized under DW
20 11-026, when Pennichuck Corporation
21 acquired -- was acquired by the City of
22 Nashua. That was already an alteration from
23 traditional ratemaking. In this case, we are
24 seeking a similar methodology for PEU, where

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 the rate structure is directly tied to cash
2 flow and the cost of operating the company
3 and cost of building infrastructure covering
4 operating expenses and paying PEU's
5 obligations under its CBFRR, city bond fixed
6 revenue requirement, which are the dollars
7 that are necessary to pay up to the City of
8 Nashua in order to service the debt that was
9 used to acquire the corporation.

10 Q. And when the 16-806 settlement for PWW was
11 approved, was it anticipated at that time
12 that the methodology would be transferred to
13 the other subsidiaries?

14 A. (Goodhue) Yes. In the testimony in the final
15 hearing for PWW, it was explained by myself
16 and other parties that the facets of that
17 modified methodology were intended to be
18 applied to the sister subsidiaries of
19 Pennichuck East Utility and Pittsfield
20 Aqueduct in their next prosecuted case.

21 Q. Before we get into the details of the new
22 methodology for PEU, what do you believe the
23 changes that we're about to describe, how
24 will that affect PEU and its customers?

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 A. (Goodhue) There's a few things. One is we
2 feel that it's going to allow for more
3 favorable rates over time for customers, as
4 we'll have access to debt at lower rates of
5 interest relative to this methodology. We'll
6 have a rate structure that will go up ratably
7 over time rather than with specific spikes at
8 each rate case filing. It will adequately
9 provide EBITDA, earnings before interest
10 taxes depreciation and amortization, to meet
11 covenant requirements on its debt; so,
12 basically, the cash-basis proxy for net
13 income which is required when you're
14 borrowing money from the debt holders, that
15 they have a minimum threshold that they would
16 seek to expect relative to securitizing that
17 debt. It will also provide adequate cash to
18 continue to meet the operating needs of the
19 Company. And finally, the rate structure
20 would be tied to cash flow and not to the
21 generation of excess profits, and would allow
22 for coverage relative to variations in
23 consumption patterns specifically tied to
24 weather anomalies in the summer months.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Q. And using 16-806 as the base, but
2 understanding that that same methodology will
3 be applied to PEU under this settlement, can
4 you briefly describe how federal taxes are
5 accounted for under the methodology that
6 we're going to be talking about?

7 A. (Goodhue) Sure. Because our regulated
8 utilities, PWW, PEU, PAC, will no longer have
9 an effective ROE component out of DW 11-026,
10 that rate methodology is determined without
11 any adjustment for tax cost factors. There's
12 no -- and as such, there's no impact on
13 rates. And any impact on the BPT, that's
14 considered to be immaterial.

15 Because there's no ROI component under
16 the 16-806 rate methodology which is being
17 pursued in this case, tax costs are not
18 included in either the MOERR, the NOERR
19 component, and certainly not in the DSRR or
20 the CBFRR components of the rate -- the
21 allowed revenue calculation. As such, they
22 don't include or factor in any component of
23 income taxes.

24 Q. And are there some potential future impacts

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 that may arise out of the tax code changes
2 relative to PEU?

3 A. (Goodhue) There are. One specifically is the
4 new tax legislation passed by the Federal
5 Government putting in place an interest
6 expense deduction limitation for both
7 individuals and for corporations. And so
8 we're still evaluating what that impact is
9 going to be. There is a particular section
10 under the IRS code that does allow for a
11 waiver of that interest expense deduction
12 limitation for regulated utilities, which is
13 a positive. The one thing it is silent on at
14 this point in time is how that can be truly
15 utilized in a situation where you have a
16 consolidated group that includes regulated
17 utilities with a non-regulated parent
18 corporation.

19 Our corporation filed a consolidated tax
20 return at the Pennichuck Corporation level
21 for Pennichuck Corporation and all five of
22 the subsidiaries, regulated and unregulated.
23 As a good portion of our interest expense is
24 outside of the regulated utilities, it is

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 still undetermined right now what that full
2 impact is going to be. As of yesterday
3 morning, I convened with our tax consultants
4 once again to see if there had been any
5 further guidance and interpretation issued by
6 the IRS relative to the new tax law and how
7 that particular provision could be applied,
8 and there is nothing at this point in time
9 specific. In fact, I was told by them that
10 there's a great many areas of the tax code
11 where they're waiting for interpretations
12 from the IRS that have not yet been released.

13 The first real impact of this is going
14 to show itself to us when we have to file our
15 2018 tax return in late 2019. So we're very
16 hopeful that guidance will come to bear prior
17 to that filing.

18 Q. In terms of the methodology that we're
19 seeking approval of today, do those future
20 tax consequences affect the methodology that
21 we're talking about today?

22 A. (Goodhue) They do not affect the methodology
23 as it is today. There may be a future impact
24 should there be a taxation that is levied

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 because of this interest expense deduction,
2 for which we may need to collect cash in
3 order to pay those taxes.

4 Q. Okay. So let's turn to the settlement
5 agreement and briefly go through the terms
6 and conditions as they are outlined in the
7 settlement agreement.

8 Skipping over the first couple pages
9 where it has the procedural history and the
10 background of the Company -- and when I'm
11 talking page numbers in my questions here
12 today, I'll be referring to Bates page
13 numbers in the settlement agreement.

14 On Page 7, Section III.A.1, there's a
15 description of the revenue requirement. Can
16 you both describe the total revenue
17 requirement that's described there without,
18 though, in this case, consideration of the
19 NCCRS, the North Country cost recovery
20 surcharge?

21 A. (Goodhue) The total revenue requirement
22 without consideration of the North Country
23 capital recovery surcharge is a total revenue
24 requirement of \$8.276,261 million. That's

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 comprised of a permanent rate increase of
2 \$1,304,272, or 18.97 percent. It also is
3 inclusive of a step increase of \$97,973, or
4 1.43 percent for 2017 used and useful capital
5 additions.

6 Q. And briefly, can you describe what are some
7 of the primary cost drivers to the revenue
8 requirement that's being sought in this
9 settlement?

10 A. (Goodhue) PEU had its last promulgated rate
11 case for test year 2012. So, this case
12 represents four years' worth of activity
13 since that last filed rate case. The rate
14 increase is comprised of a number of factors,
15 inclusive of capital additions for fixed
16 assets for the years '13, '14, '15, '16, and
17 inclusive of the step addition '17, as well
18 as inflationary increases in operating
19 expenses for the four years since the last
20 test case, as well as there has been some
21 customer growth within the Pennichuck East
22 Utility subsidiary, most specifically in the
23 later years relative to this case, relative
24 to some addition of customers in some of the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 systems we operate. Specifically, over 400
2 customers were added in the town of
3 Litchfield alone during the last couple of
4 years relative to the PFOA mitigation
5 efforts, where our water system has been
6 expanded through the payment of that
7 expansion by a responsible party, but now we
8 have operating costs and provide provision of
9 water to those additional customers. That
10 alone represented almost a 15 percent
11 increase in customer base.

12 Q. Just to clarify on that, the cost of that
13 construction itself was borne by the
14 responsible party?

15 A. (Goodhue) one hundred percent, yes.

16 Q. So that's not part of this cost driver?

17 A. (Goodhue) It is not. However, what happens
18 is that you've got now the cost of providing
19 the water to those folks, the cost of
20 treating the additional water, the additional
21 cost of property taxes related to that
22 property. That was paid for by somebody
23 else, but now owned by us.

24 Q. So those costs going forward will be borne by

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 the Company?

2 A. (Goodhue) That is correct.

3 Q. Also within the structure of PEU is a
4 management fee allocation; is that correct?

5 A. (Goodhue) That is correct.

6 Q. And can you describe what that is and how
7 that's determined?

8 A. (Goodhue) Yes. Our management fee allocation
9 is based on a formulaic approach first put in
10 place, I believe in 2002, and it is applied
11 on a regular basis in a very formulaic
12 approach. It is comprised of a number of
13 tiers of expenses, and it's based on a number
14 of underlying factors. It's the allocation
15 of certain costs that are borne just at the
16 Pennichuck Corporation level, which are
17 actually fairly immaterial at this point in
18 time, which were much more material when we
19 were a publicly-traded company, and then a
20 great deal of expenses at the Pennichuck
21 Water Works Corporation level, where
22 100 percent of our employees and 100 percent
23 of our fleet is there. So all of those
24 assets and manpower assets are used in

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 support of sister subsidiaries.

2 The formulaic approach looks at all of
3 those actual costs and allocates them based
4 on this formula. Some of the bases for the
5 allocation is assets, pro rata assets,
6 overall assets between the subsidiaries, pro
7 rata customers, pro rata work order activity,
8 which is a direct cost relative to operating
9 activities within those subsidiaries.

10 Q. What are those work order activities like
11 relative to PEU?

12 A. (Goodhue) Based on the fact that PEU is a
13 water company that is geographically
14 dispersed within the state, we represent or
15 serve 19 different communities geographically
16 spaced within the state. Those work order
17 costs are related to maintenance activities
18 and other water-testing activities on a very
19 specific basis, including travel time to
20 those various sites where that activity is
21 taking place.

22 Q. And I don't remember you mentioning it, so I
23 apologize if this is repeating. How do
24 property taxes affect the driver of the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 costs?

2 A. (Goodhue) Our property taxes have gone up at

3 or above inflation during that period of

4 time. Property taxes for our regulated

5 utilities include both the statewide utility

6 tax, as well as local property taxes levied

7 by the communities that we serve. To the

8 extent property taxes go up

9 disproportionately, we do have a process of

10 regularly filing abatements relative to

11 those. We are successful on some, not as

12 successful on others. If they're very

13 material, we've actually approached

14 litigation on those. We actually had a case

15 in our town of Litchfield where we got to the

16 threshold of actually litigating a case and

17 actually went through an arbitration

18 settlement on those taxes during the last

19 year.

20 Q. Moving on through the settlement. On Page 8,

21 the North Country capital recovery surcharge

22 reduction, just describe what are the three

23 North Country systems that we're talking

24 about here.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 A. (Goodhue) There are three North Country water
2 systems: One is Locke Lake in Barnstead, New
3 Hampshire; another is Birch Hill in North
4 Conway, New Hampshire; and the third is
5 Sunrise Estates in Middleton, New Hampshire.

6 Q. And actually, I forgot. Before we get to the
7 NCCRS, in the temporary settlement there
8 was the -- that included an elimination of
9 the 4 CCF minimum that had previously been
10 applied to those three North Country systems.
11 Does the settlement that we're talking about
12 here today continue or alter that?

13 A. (Goodhue) It does not alter that. It does
14 continue the elimination of the 4 CCF minimum
15 that was approved in the temporary rates
16 settlement, so it's continuous and consistent
17 with that.

18 Q. And then going back to the NCCRS, the North
19 Country capital recovery surcharge, how was
20 that treated in the settlement agreement?

21 A. (Goodhue) In the settlement agreement, it
22 permanently implements the temporary rates
23 settlement, whereby the NCCRS for both Locke
24 Lake and Birch Hill would be reduced. They

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 were reduced consistent with an approved
2 refinancing of existing intercompany loans
3 that Pennichuck East Utility had with
4 Pennichuck Corporation under Docket
5 DW 17-157. It does not apply to any
6 reduction to Sunrise Estates, as any
7 alteration relative to that refinancing would
8 have caused a surcharge on those customers to
9 increase, which we felt was contrary to our
10 overall intent in that process.

11 Q. And what is the -- why are you unable to
12 completely eliminate that surcharge at this
13 stage?

14 A. (Goodhue) We're unable to completely
15 eliminate that surcharge at this time because
16 the resulting negative impact on all of PEU's
17 customers would have been significant.

18 Q. So, before we had talked about the revenue
19 requirement without the NCCRS. Can you
20 describe the revenue total, overall revenue
21 requirement now including the NCCRS?

22 A. (Goodhue) Yes. The overall revenue
23 requirement, inclusive of the NCCRS, is
24 \$8,455,176, a net increase of \$1,281,175, or

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 17.86 percent.

2 Q. And then you had also described in the
3 revenue requirement the step increase. And
4 this is on Page 8 of the settlement
5 agreement. Can you describe that step
6 increase and what goes into that?

7 A. (Goodhue) It is for 2017, used and useful
8 capital additions. Prior to implementation,
9 it will be audited by Staff. In fact, the
10 audit of those assets has already been
11 scheduled between the PUC Audit Staff and the
12 Company staff relative to the audit of that.

13 If the audit report reveals a material
14 difference, an adjustment to the step
15 increase will be recommended to the
16 Commission for approval.

17 Q. Okay. And then going on to Page 9 of the
18 settlement agreement, it describes the
19 proposed effective date of the permanent
20 rate. Can you describe what we're -- what
21 the settlement proposes relative to the
22 revenue requirement for an effective date?

23 A. (Goodhue) Yes. The effective date revenue
24 requirement of 1,304,272. We are requesting

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 it be effective for the bills-rendered basis
2 on or after January 8, 2018.

3 Q. There's a motion pending to seek a waiver of
4 PUC Rule 1203 in order to implement those
5 bill -- or the effective date of the
6 bills-rendered process. What's your view as
7 to why that is in the customers' best
8 interest to waive that rule?

9 A. (Goodhue) Two primary bases, or benefits, and
10 that is: No. 1, it is far less confusing for
11 our customers when you implement a rate
12 change on a bills-rendered basis. The entire
13 bill that is impacted is now calculated for
14 that rate increase. When it's on a
15 service-rendered basis, you have calculations
16 that bifurcate that rate increase within that
17 bill, and it is extremely confusing for
18 customers relative to how that has been
19 implemented and whether it's been correctly
20 calculated. So this is done in an effort,
21 No. 1, to make it much more appealing and
22 favorable for our customers, and it also
23 actually has a reduced cost for the Company
24 because the direct or indirect cost of

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 implementing that, as well as explaining that
2 to our customers, is something that we can
3 eliminate by using it on a bills-rendered
4 basis.

5 Q. And relative to the step increase, what is
6 the proposed effective date of the step
7 increase?

8 A. (Goodhue) Within 30 days after the order, a
9 calculation of the temporary/permanent
10 revenue recoupment will be recommended to the
11 Commission, and the step increase will be
12 effective as of the date of the Commission's
13 order on this settlement.

14 Q. And can you describe the impact on the
15 increases that are being proposed in the
16 settlement agreement on average customers?
17 And I'll just note this is also described in
18 Exhibit 2 of the settlement agreement.

19 A. (Goodhue) I'll describe it in four different
20 subsets.

21 For any of our non-North Country
22 residential customers -- so, for the 16
23 different communities that we serve outside
24 of those -- an average customer uses 7.29

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 CCFs, or 100 cubic feet of water per month.
2 Their bill would increase from an average of
3 \$62.68 per month to \$75.47 per month,
4 inclusive of the step adjustment, or a \$12.79
5 increase per month, or on an annual basis,
6 \$153.48.

7 For our Locke Lake customers in
8 Barnstead, New Hampshire, using an average of
9 3.5 CCFs, their bill would increase from
10 \$58.51 per month to \$59.79 per month, a net
11 increase \$1.28 per month, or \$15.36 per year.

12 For our customers in Birch Hill, North
13 Conway, New Hampshire, again, a customer
14 using an average of 3.5 CCFs per month, their
15 bill would go from \$88.20 per month down to
16 \$59.79 per month, or a decrease of \$28.41 per
17 month, or \$340.92 per year.

18 And lastly, for our customers in
19 Middleton, New Hampshire, at Sunrise Estates,
20 again using an average of 3.5 CCFs per month,
21 their bill would go from \$52.89 per month to
22 \$57.72 per month, or an increase of \$4.83 per
23 month, or \$57.96 per year.

24 Q. So let's turn to the modifications to the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 methodology that are included within the
2 settlement which begins on Page 11 of the
3 settlement agreement, or Section III.C.
4 Briefly describe for the Commission why the
5 settlement proposes to modify the ratemaking
6 methodology that is currently in place.

7 A. (Goodhue) Number one, the modified ratemaking
8 methodology is consistent with the
9 methodology that was approved in PWW's last
10 rate case of DW 16-806. The basis for that
11 was explained in that case, and we talked at
12 that time about seeking that implementation
13 for the other subsidiaries. One of the key
14 drivers is that PEU currently has lender
15 covenants in place that it cannot meet under
16 its existing rate structure and fully recover
17 its cash flow obligations. The primary
18 driver there is that depreciation lives of
19 the fixed assets of the corporation are well
20 in excess of its debt instrument lives. So
21 the cash flow that can be provided under
22 existing rate methodology from depreciation
23 is not sufficient to cover the principle
24 repayments on the underlying debt.

{DW 17-128} [PENNICHTUCK EAST UTILITY, INC.] {07-25-18}

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Additionally, the new methodology is intended
2 and is needed to provide adequate EBITDA
3 coverage for PEU, as it relates to its
4 covenant requirements.

5 It also will provide adequate cash flows
6 from revenues to pay debt service, PEU's
7 share of the CBFRR, as well as its operating
8 expenses, and it will provide adequate
9 support funds in the form of the RSF accounts
10 being established to provide for cash funding
11 during times of revenue shortfalls and
12 expense growth above inflationary levels
13 between rate case filings.

14 And I guess, lastly, most importantly,
15 if PEU was to continue operating just under
16 the rate methodology as established under
17 DW 11-026, the Company will become
18 financially insolvent relative to the ability
19 to pay its debts and obligations.

20 Q. In the PWW settlement, the five-year trailing
21 average was adopted in that methodology. Can
22 you explain, one, whether that's also
23 requested in this methodology for PEU in the
24 settlement agreement, and how it differs from

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 what we saw in the PWW settlement?

2 A. (Goodhue) Yes. Consistent with the PWW
3 settlement, the calculation of the five-year
4 trailing average is consistent, and that is
5 based on average consumption determined.
6 It's based on the four calendar years
7 immediately preceding the designated test
8 year. So inclusive of the test year, it's a
9 five-year trailing set of data. All direct
10 test-year expenses which are affected by the
11 differences in consumption are included in
12 that calculation, including, but not limited
13 to, purchased water, electricity and chemical
14 treatment expenses. And so those are pro
15 forma as a part of that calculation.

16 (Court Reporter interrupts.)

17 A. (Goodhue) The one fundamental difference
18 between what we are requesting in this case
19 versus what we requested in the DW 16-806
20 case for PWW is that we would not fully
21 implement the five-year trailing average
22 totally within this case. We are
23 recommending -- or we filed for, and the
24 settlement agreement includes, phasing that

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 in over two rate cases.

2 Q. And why is that?

3 A. (Goodhue) When we looked at implementing it
4 fully within this rate case, we felt that the
5 impact was overly onerous of customers in one
6 rate case, and as such, by phasing it
7 50 percent in this case and the remaining
8 50 percent in the next rate case was the
9 proper thing to do. Had we phased it in
10 100 percent in this rate case, it would have
11 represented approximately an additional
12 2.5 percent increase in customer rates.

13 Q. Looking to the structure of the new
14 methodology and using Exhibit 3, Appendix A
15 to that, which is on Page 37 of the
16 settlement agreement, I just want to briefly
17 talk through the structure of the settlement
18 agreement -- or of the new methodology. And
19 do you have that in front of you?

20 A. (Goodhue) I do.

21 Q. So, going left to right on what is Bates
22 Page 37, Appendix A, can you describe,
23 starting with the CBFRR, what that is?

24 A. (Goodhue) Yes. So the CBFRR which was

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 originally authorized in DW 11-026, and then
2 further supported in DW 16-806, is a revenue
3 component tied to each of our three regulated
4 utilities' portion of their revenue
5 requirement in order to cash flow and fund
6 the repayment of money to the City of Nashua
7 to meet their obligations to repay the debt
8 service on the promissory note, the bonds
9 that they floated in order to purchase
10 Pennichuck Corporation in 2012.

11 Q. And then moving to the right, to the OERR,
12 operating expense revenue requirement, can
13 you describe that?

14 A. (Goodhue) That is the portion of the allowed
15 revenue requirement that is tied to the cash
16 flow needed to provide for the payment of
17 allowed operating expenses for the
18 corporation.

19 Q. And what are the buckets associated with
20 that?

21 A. There are two buckets: The material
22 operating expense revenue requirement and the
23 non-material operating expense revenue
24 requirement. I'll speak to the second one

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 first.

2 The non-material operating expense
3 requirement identifies a select number of
4 operating expenses that are inclusive in a
5 case relative to their prudence for that test
6 year, but are not supported by a rate
7 stabilization fund backing them up. In this
8 case, the NOR -- NOERR expenses for PEU are
9 inclusive of outside services, public
10 relations, meals and charitable
11 contributions. The MOERR covers the balance
12 of the PEU's operating and maintenance
13 expenses, property taxes and all the other
14 operating expenses of the Company.

15 Q. And by virtue of an expense being listed, the
16 NOERR, the non-material, does that preclude
17 the Company from seeking recovery of those in
18 a future rate case?

19 A. (Goodhue) It does not. But they would be
20 included in the test-year operating expenses
21 as pro forma, be subject to PUC audit, and
22 tested for prudence in those cases.

23 Q. And then moving to the third bucket, the
24 DSRR, can you describe that and what falls

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 under that?

2 A. (Goodhue) The DSRR component of revenues is
3 comprised of two subsets as well. One is the
4 DSRR 1.0, the other is the DSRR 0.1. The
5 DSRR 1.0 is the portion of the revenue
6 requirement that is tied to the actual cost
7 of debt service for debt already in place for
8 the Company during the test year. The 0.1 is
9 a collection of revenue at 10 percent above
10 what that is -- or that factor is, related to
11 the ability to cover actual debt service, but
12 also meet certain covenants in cash flow
13 requirements for the corporation relative to
14 its debt covenants.

15 Q. And, again, very briefly describe how those
16 buckets will be drawn from and replenished as
17 the Company uses them.

18 A. (Goodhue) They will operate in the same
19 manner as PWW under the 16-806 settlement.
20 Cash will be transferred weekly into the
21 revenue requirement bank accounts, specific
22 bank accounts, based upon their pro rata
23 shares of cash collections during each week.
24 At the end of each month, the Company's

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 revenue performance will be tested based on
2 actual versus allowed levels in order to
3 transfer additional funds into the RSF
4 accounts, or bring funds back from the RSF
5 accounts into the Company's main operating
6 account. And then as payments are made
7 weekly and monthly, quarterly, semi-annually,
8 relative to the various buckets from those
9 revenue requirement bank accounts, if funds
10 are deficient, they will be transferred from
11 the main operating account, and if in excess,
12 they will be transferred back into the main
13 operating account.

14 So, again, it's the same operation in
15 theory that was established under 11-026 and
16 then reaffirmed but bifurcated under 16-806
17 for PWV.

18 Q. And the three rate stabilization funds that
19 would exist under the new methodology, how do
20 those get initially funded in the settlement
21 agreement?

22 A. (Goodhue) Under DW 11-026, a rate
23 stabilization fund was funded and established
24 at \$5 million. It was actually established

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 by money borrowed by the City of Nashua and
2 actually put in place into that structure.
3 Initially, that entire fund was one fund
4 under the PWW subsidiary. Under the
5 DW 16-806 case, we include in the settlement
6 agreement and petition to take and bifurcate
7 that fund, not only into separate buckets for
8 PWW, but to actually bifurcate and hold to
9 the side a sum of that money for further
10 allocation and distribution to PEU and PAC.

11 Of the original \$5,000,000, \$3.92
12 million was retained by PWW, with \$1,080,000
13 being held aside for PEU and PAC. Of that
14 \$1,080,000, \$980,000 was being held for PEU
15 and \$100,000 for PAC. Of the \$980,000 for
16 PEU, based on an analysis included in the
17 settlement agreement schedules, further
18 analyzes how that \$980,000 will be broken
19 down into its component parts, with \$31,000
20 being allocated to the CBFRR RSF; \$898,000 to
21 the MOERR RSF; and \$51,000 to the DSRR 1.0
22 RSF.

23 Q. And without going into the specifics, does
24 that allocation fully fund those three RSFs?

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 A. (Goodhue) We do not feel that it does fully
2 fund those, based on those numbers. It is an
3 allocation of the 980,000 currently available
4 for the RSF. But the settling parties agree
5 that additional funds may be required in
6 order to ensure that the value of these three
7 RSF accounts are at appropriate levels in
8 order to sufficiently account for
9 inflationary increases which may incur until
10 PEU's next rate case, when new permanent
11 rates will become effective.

12 Q. And are the estimates of the fully funded
13 amounts in those RSFs described on Page 19 of
14 the settlement agreement?

15 A. (Goodhue) They're included in the settlement
16 agreement, also as Exhibit 5 within that
17 agreement.

18 Q. Okay. The settlement agreement also
19 incorporates the QCPAC process that was first
20 approved for PWV in 16-806. Can you just
21 briefly describe what that QCPAC process is?

22 A. (Goodhue) The QCPAC process creates for PEU
23 an ongoing annual surcharge between rate
24 cases based upon essentially all of the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 capital projects undertaken and used and
2 useful by PEU each year. It avoids rate
3 shock to customers, in that you would have
4 ratable increases based on capital
5 expenditures on an annual basis rather than
6 waiting until the next rate case.

7 It has three components: It's a
8 surcharge based on the previous year's used
9 and useful completed projects; it requests
10 preliminary approval of the current year's
11 capital project; and for information purposes
12 only, the preliminary budget or plan for the
13 next two years' worth of projects succeeding
14 that.

15 Q. So, taking those three briefly, just
16 separately, what is the process that goes
17 into determining the previous year's used and
18 useful projects that goes into the QCPAC?

19 A. (Goodhue) That process involves not only the
20 finance department for PEU, but all of the
21 line managers and project managers within the
22 Company working on these projects. And it's
23 part of the year-end closing of the Company's
24 books and records. Projects are analyzed for

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 completeness and accumulation of costs, and
2 for the timing of their transfer from CWIP to
3 used and useful capital projects. Reports
4 are prepared by the Company to supply or
5 submit in compliancy with the timing and
6 requirements of the QCPAC filing process, and
7 those reports are ready for review by the PUC
8 Staff, and the underlying asset records are
9 ready for audit by the PUC Audit Staff based
10 on that process.

11 Q. And then the QCPAC filing also would have the
12 current year's preliminary budget; is that
13 right?

14 A. (Goodhue) That is correct.

15 Q. And what goes into determining that
16 preliminary budget for the current year?

17 A. (Goodhue) Pennichuck Corporation and all of
18 its subsidiaries go through a very
19 comprehensive budgeting process on an annual
20 basis. Along with the other companies in the
21 Pennichuck consolidated group, a detailed
22 capital budget on an annual basis is prepared
23 and presented to our board of directors, and
24 it's approved by the end of January of each

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 year. The capital budgets are prepared on a
2 detailed basis, and certain large projects
3 are identified in a specific manner as it
4 relates to timing and the overall estimated
5 cost to complete those projects.

6 Other projects relate to "run rate"
7 types of capital projects based upon historic
8 trends and data as it relates to reactionary
9 projects that the Company may have to fund in
10 that budget year. For example: If a pump
11 fails at one of our booster stations, we have
12 to replace that. We have to supply water.
13 If a hydrant fails, we have to replace that.
14 If a meter fails, we have to replace that.
15 So, again, we budget based on "run rate" and
16 historical information, but we know that
17 that's never going to be 100 percent
18 accurate. It's based on a prediction of what
19 we think may occur. But when something like
20 that occurs, they need as a regulatory
21 utility to be able to provide water to our
22 customers. We must undertake that capital
23 project at that time.

24 And so other projects related to the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Company's ongoing main replacement program --
2 (Court Reporter interrupts.)

3 A. (Goodhue) Alterations may occur in the budget
4 year relative to those projects, as certain
5 projects are re-prioritized or substituted
6 for other projects as it relates to perhaps
7 operational issues; it may relate to road
8 projects that are going on in the communities
9 that we serve, and it may relate to basically
10 the availability of contractors in order to
11 provide and complete those projects within a
12 budget year.

13 Q. When the board of directors approves the
14 budget, are they necessarily approving each
15 project and saying that those projects have
16 to occur, or are they approving an overall
17 budget?

18 A. (Goodhue) They're approving an overall
19 budget. The one exception is if we've got
20 certain large, identifiable projects, we do
21 spend more time focusing on those. So they
22 are looking at those in the nature of is this
23 a project we're pursuing or is this a project
24 worth pursuing. However, even with those

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 projects, the dollars approved in the budget
2 may still be just a best guesstimate at that
3 time relative to completion of the design,
4 implementation of that project, and/or all of
5 our projects of a material nature go out
6 through a bid process. And so despite the
7 fact that we may have an engineering estimate
8 that is based on good data and based on the
9 best knowledge that we have, once we go out
10 to bid, the actual dollar value of that
11 project will be determined.

12 Q. So is it fair to say when the QCPAC is filed
13 at the beginning of the year, there's a fair
14 amount of flux that exists in that budget
15 relative to the specific projects that will
16 occur later on that year?

17 A. (Goodhue) That is correct.

18 Q. Okay. Does the QCPAC, given that flux and
19 that variability, does the QCPAC provide a
20 process for updating the Commission through
21 the year as those projects progress?

22 A. (Goodhue) It does. We provide, actually,
23 updates in the process at periodic times
24 throughout the year, on August 15th,

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 November 15th and January 15th, relative to
2 actual costs incurred relative to capital
3 projects for the periods ending June 30,
4 September 30, and November 30 of each year.

5 Q. And the QCPAC, in addition to the used and
6 useful from the prior year, the estimated
7 projects for the current year also provides
8 for information the following two years'
9 worth of capital projects. How certain are
10 those and what goes into that process?

11 A. (Goodhue) Those are done, again, as a part of
12 our annual budgeting process as a forecast of
13 the run rate of capital investments that the
14 Company is planning to make over succeeding
15 two years, again giving specific
16 identification to material projects and the
17 horizons that we feel need to be approached,
18 and/or run rate capital needs are done for a
19 few reasons. One is, as we're procuring debt
20 with our lenders, sometimes we're procuring
21 the ability to access funds on a multi-year
22 basis, and as such, we need to have
23 visibility towards what the overall magnitude
24 of those dollars needed may be, and also

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 relative to the planning for specific
2 opportunities. Sometimes a project may take
3 several years to actually fully come to bear.
4 We have a project going on right now in
5 Locke Lake where we're needing to create
6 additional source of supply of water for that
7 system there in response to a corrective
8 action plan that we're working on with the
9 DES. That project is almost two years old at
10 this point in time, and it's probably going
11 to be another two years before it's
12 completed. Relative to looking at actions
13 and response to that corrective action plan,
14 relative to what the alternatives are,
15 relative to that additional source of water,
16 we've done investigative work as to sites of
17 property that might be able to have a well or
18 source of water, where those geographically
19 are located, are they available, are they
20 geologically available to us, and what are
21 the other alternatives that we need to
22 evaluate relative to that whole study.
23 Q. And under the current methodology, does PEU
24 have a mechanism for step increases for

{DW 17-128} [PENNICHUCK EAST UTILITY, INC.] {07-25-18}

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 capital projects, or is this new to the PEU?

2 A. (Goodhue) This is brand new. In PWW, the
3 QCPAC process was really a migration from the
4 former WICA process that PWW had prior to
5 that. Prior to this case, PEU has had no
6 mechanism like this, so the QCPAC process is
7 new to PEU with this case.

8 Q. And in the PWW 16-806 docket, when the final
9 order was issued, the Commission ordered that
10 an interim QCPAC be filed at the end of that
11 year. As a result the Company's experience
12 with the 16-806, did the Company learn
13 anything that may be useful to the Commission
14 relative to that interim filing as compared
15 to the first full QCPAC filing?

16 A. (Goodhue) Yes. As I previously described,
17 while the total budget may be voted on by our
18 board, individual projects cannot all
19 accurately be predicted at the beginning of
20 any calendar year. If an interim QCPAC
21 petition is filed before the end of the year,
22 there will inevitably be differences between
23 the projects described in that interim
24 petition and projects that will be described

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 in its first full QCPAC petition filed in
2 early 2019. Thus, when the full QCPAC
3 petition is filed, it will accurately
4 describe all the projects from the prior
5 year, but only provide an estimate of the
6 projects for the current and future years.
7 At that time, the Commission Staff and OCA
8 can then seek out the details of the prior
9 year's projects to ensure that the projects
10 are just and reasonable and in the public
11 interest. And then, as to future projects,
12 however, the process would then -- should
13 only be allowed to evolve as the projects
14 become better defined throughout that year.

15 Q. So, you know, that describes sort of the
16 overall methodology that is proposed in this
17 settlement. What does the settlement
18 describe on Page 24 relative to when a new
19 rate case would be triggered for PEU under
20 this agreement?

21 A. (Goodhue) In accordance with what's included
22 in the settlement agreement, when the total
23 amount of funds held in all of the Company's
24 RSF funds -- so, the CBFRR RSF, the MOERR RSF

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 and the DSRR RSF -- grow to be materially
2 greater than the target for each of those
3 funds, as most recently established in a rate
4 case, then that would trigger an activity.
5 And how it's defined is when the average
6 amounts of cash held in the combination of
7 those RSFs on 13-month prior ending period,
8 as of December 31st of each year, is greater
9 than 150 percent of the combined target
10 amounts, then the Company, within six months
11 following that year, shall file a rate case
12 with the Commission.

13 Q. And does the settlement also provide for the
14 recovery of rate case expenses as described
15 on Page 25 of the agreement?

16 A. (Goodhue) It does. The settlement allows PEU
17 to recover its reasonable rate case expenses
18 for this proceeding through a surcharge. PEU
19 agrees to file its final rate case expense
20 request, pursuant to PUC 1905.02, no later
21 than 30 days from the date of the
22 Commission's order approving this settlement
23 agreement. Staff, OCA and the intervenor
24 will then have an opportunity to review the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 rate case expenses and provide
2 recommendations to the Commission for
3 approval.

4 Q. Turning to one of the reasons why the
5 intervenor, Mr. Ranaldi, opted not to sign
6 this settlement agreement. During the
7 discussions that led up to this settlement,
8 was there a proposal to incorporate an annual
9 major operating expense, the MOE inflation
10 surcharge?

11 A. (Goodhue) There was. There was a proposal to
12 measure inflationary increases in certain
13 major operating expenses to the Company based
14 upon known and measurable changes to the
15 12/31/2018 test-year-ending MOE expenses. It
16 included a defined number of expenses in
17 production, distribution, customer accounts
18 and collections, and admin and general
19 expenses. So those defined number of
20 expenses that were to be included and
21 analyzed each year relative to the prudence
22 of the surcharge to be approached on an
23 annual basis.

24 Q. Essentially would it have created another

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 step in the process?

2 A. (Goodhue) That is correct.

3 Q. And very briefly, can you describe why this
4 proposal was not adopted into this settlement
5 agreement?

6 A. (Goodhue) Sure. First off, the concept was
7 discussed in connection with the question
8 from the OCA about other ways to reduce
9 costs. Because future cost increases due to
10 inflation are not built into current rates,
11 these inflationary costs wind up being funded
12 through debt, and as such, with the greatest
13 pressure for inflation upon the operating
14 expenses of the Company in the MOERR portion
15 of the revenue requirement, that's why we
16 were looking at this. When you look at the
17 CBFRR component of revenues, it's a fixed
18 amount, and will be a fixed amount for the
19 next 24 years.

20 The DSRR component has an allowed
21 revenue component, and it has the QCPAC
22 process to basically layer on a surcharge '
23 annually for incremental debt. So, both of
24 those really have proper mechanisms in place

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 to support them for any increases between
2 rate cases or relative to their overall
3 needs.

4 Absent means to increase the needed
5 MOERR rate stabilization funds in support of
6 those operating expenses, the Company would
7 have to borrow these funds through the
8 issuance of debt, and that incremental debt
9 service cost now would need to be funded
10 through revenue and rate increases, including
11 the cost of interest on those funds. The
12 parties to the settlement agreement discussed
13 the possibility of avoiding these incremental
14 costs through a surcharge, but it was
15 determined that the proposal was raised too
16 late in the process for this case for it to
17 be adequately vetted, and thus the parties
18 agreed that, while it has merit, it should be
19 raised in the next full rate case to allow
20 for discovery and analysis.

21 Q. Do you anticipate this might be an idea that
22 does get built into a future rate case?

23 A. (Goodhue) Yes.

24 Q. And before we wrap up your testimony, in your

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 opinion, is the settlement that is marked as
2 Exhibit 3, and the subject of your testimony,
3 is that just and reasonable and in the public
4 interest?

5 A. (Goodhue) I do feel so.

6 Q. And why do you think that?

7 A. (Goodhue) PEU's request seeks some
8 modifications to the methodology approved in
9 the 2011 settlement. It also has changes
10 that are consistent with the changes that
11 were approved by the Commission for PWU in
12 16-806. The changes we are seeking will
13 allow us to obtain financing at better terms
14 and rates. And combined with the benefits of
15 not having an equity ownership structure, we
16 believe that the benefits in this temporary
17 rate agreement and these permanent rates are
18 in the public's interest. And under this
19 settlement, the Company will be in a superior
20 financial position, and the overall benefits
21 of PEU's ownership structure can then
22 continue to be passed on to its customers.
23 And lastly, the continuation of a rate
24 structure under 11-026 procedure and

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 authorization would lead eventually to
2 insolvency for the Company and an inability
3 to provide cash flow to cover all its needs.

4 Q. Thank you.

5 MR. HEAD: With that, that would
6 conclude Mr. Goodhue's direct testimony.

7 CHAIRMAN HONIGBERG: Ms. Ross,
8 questions for Mr. Laflamme?

9 MS. ROSS: Yes, I do. It is going
10 to take a while. Does the Commission wish to
11 have a break before we go into this witness,
12 or should we proceed?

13 CHAIRMAN HONIGBERG: How much do
14 you think you have?

15 MS. ROSS: I probably have 20
16 minutes.

17 CHAIRMAN HONIGBERG: Okay. We can
18 go 20 minutes. Go ahead. Proceed.

19 MS. ROSS: Go ahead? Okay.

20 **DIRECT EXAMINATION OF JAYSON LAFLAMME**

21 **BY MS. ROSS:**

22 Q. Mr. Laflamme, could you turn to Pages 7 and 8
23 of the settlement agreement, Section III.A,
24 and explain in a little more detail what's

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 being proposed as a revenue requirement for
2 PEU in this case.

3 A. (Laflamme) Yeah. And I guess I would draw
4 the Commissioners' attention to Page 28 of
5 the settlement agreement, which is identified
6 as Exhibit 1 which provides a breakout of how
7 the revenue requirement was determined and
8 details the three components of the revenue
9 requirement that's being presented today.

10 Overall, as Mr. Goodhue explained, the
11 overall revenue requirement being sought or
12 proposed is eight thousand [sic] four hundred
13 fifty-five thousand one hundred and
14 seventy-six dollars. That consists of a
15 permanent component, as well as a step
16 increase. The permanent component is in the
17 light gray box on the left, and the inclusion
18 of the step increase is included in the
19 darker gray box on the right.

20 Q. Just a moment ago you referred to "eight
21 thousand," but you meant "eight million."

22 A. (Laflamme) Eight million. Sorry. Eight
23 million four fifty-five one seventy-six.

24 The three components of the revenue

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 requirement are the city bond fixed revenue
2 requirement of \$926,309; the operating
3 expense revenue requirement for permanent
4 rates, that was \$5,812,873; with the step,
5 that's \$5,851,582. That component is further
6 detailed in Attachment JPL-1 at the back of
7 the settlement agreement, on Schedule 3, 5Y
8 average in Schedule 3 - Step.

9 The last component, the debt service
10 revenue requirement for permanent rates, is
11 \$1,308,278; principle and interest payments
12 multiplied by the 1.1 debt service coverage
13 requirement, resulting in a debt service
14 revenue requirement of \$1,439,106; and
15 inclusive of the step, the debt service is
16 \$1,362,154, multiplied by the debt service
17 coverage requirement at 1.1, resulting in a
18 debt service revenue requirement of
19 \$1,498,369. The calculated revenue
20 requirement for permanent rates is 8,178,288,
21 and including the step it's 8,276,261. And
22 if you add the North Country capital recovery
23 surcharge revenues of \$178,915, the total
24 proposed revenue requirement being proposed

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 is 8,357,203 for permanent rates; including
2 the step, it's 8,455,176.

3 Q. Could I stop you for a minute. And this is
4 just a background question on this North
5 Country capital recovery surcharge.

6 How long is that surcharge likely to
7 exist, if you know?

8 A. (Laflamme) I believe it's a 30-year loan.
9 And Mr. Goodhue is nodding in agreement.

10 Q. Okay. Thank you for that clarification.

11 Have you covered how the revenue
12 requirement was calculated as you walked
13 through this table with us do you think?

14 A. (Laflamme) Basically there's a separate
15 calculation for each of the three components,
16 and that's all further detailed in Attachment
17 JPL-1. And so the three components are
18 summed together in order to derive the total
19 proposed revenue requirement.

20 Q. Okay. And what do you see as the most
21 significant drivers leading to the proposed
22 rate increase?

23 A. (Laflamme) I think it's as Mr. Goodhue
24 alluded to in his testimony. Between the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 years 2012, which was the test year in PEU's
2 last rate proceeding, and 2016, which is the
3 test year in this rate proceeding, the
4 Company experienced significant increases in
5 its operating expenses. Specifically, these
6 increases were in the areas the Company's
7 management agreement, which increased
8 approximately \$450,000 between 2012 and 2016,
9 or 33 percent, and this is mainly due to
10 increases in salaries and benefits paid to
11 employees of PWW. The management agreement
12 also includes a lease of the facility, the
13 Company's facility on Manchester Street, as
14 well as other charges.

15 There was also a significant increase in
16 the Company's property tax expense between
17 2012 and 2016 of approximately 200,000, or a
18 24 percent increase. And there was also an
19 increase in the Company's source of supply
20 expenses, specifically purchased water, which
21 increased by approximately \$280,000, or
22 38 percent.

23 Overall, the Company's operating
24 expenses between 2012 and 2016 increased by

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 approximately a million dollars, or
2 18 percent. In addition to that, the
3 Company's utility plant in service increased
4 by \$11 million -- over \$11 million in that
5 same period of time, or an approximate
6 23 percent increase.

7 Q. Did Staff audit these various expenses?

8 A. (Laflamme) Yes, they did.

9 Q. And so in signing the settlement agreement, I
10 assume you've determined that they are actual
11 and reasonable costs?

12 A. (Laflamme) Yes.

13 Q. Could you briefly summarize the pro forma
14 adjustments which were made by both the
15 Company and Staff that are reflected in the
16 proposed revenue requirement.

17 A. (Laflamme) Yes. A significant amount of the
18 pro forma adjustments by both the Staff and
19 the Company dealt with the Company's
20 operating expenses, particularly in the area
21 of compensation and benefits, as well as
22 insurance. There were also a number of pro
23 forma adjustments relative to property taxes
24 expense. And the adjustment for property tax

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 expense both created increases and decreases
2 in the Company's property tax expense. And
3 they included -- the Company actively pursues
4 abatements in their property tax expense.
5 There were certain abatements that were
6 included in the Company's filing. And
7 additionally, during the course of discovery,
8 a decision came down in favor the Company, I
9 believe the Town of Litchfield, which reduced
10 the Company's property tax expense by an
11 additional \$32,000.

12 In addition to that, based on the Audit
13 Staff's investigation of the Company, there
14 were also a number of adjustments made based
15 on the report that was filed by the Audit
16 Staff in this case.

17 Q. Would you like a drink of water?

18 A. (Laflamme) Got one.

19 Q. You're getting a little hoarse.

20 Just a clarifying question. Do you know
21 whether Audit Staff audits the money in and
22 out of the RSF accounts when they do an audit
23 of the Company? I know there was testimony
24 earlier by Mr. Goodhue about the fact that

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 there are a number of transfers that are made
2 throughout the year in and out of those RSF
3 accounts.

4 A. (Laflamme) Yeah, the Audit Staff does take a
5 look at the activity in the RSF accounts,
6 based on the documentation that's included in
7 the settlement agreement. And I know that
8 is -- they haven't obviously done that in
9 terms of PEU because the RSF accounts will be
10 new to PEU. But they have investigated the
11 ins and outs with regard to PWW.

12 Q. Thank you for that clarification.

13 Does the revenue requirement presented
14 in the settlement agreement include a
15 provision for income tax expense? I know we
16 had some discussion by Mr. Goodhue, but I
17 would like Staff's view on the impact of
18 changes to the income tax laws.

19 A. (Laflamme) Right. You know, hopefully I'll
20 echo what Mr. Goodhue indicated this morning.

21 But, no, the revenue requirement does
22 not include a provision for income tax
23 expense. For purposes of ratemaking, PEU has
24 virtually no equity investment; therefore,

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 there's no return on equity and no profit, no
2 income tax, no income tax expense. The
3 modified ratemaking model is based
4 essentially on the Company's cash flows;
5 therefore, there is no provision for federal
6 and state income taxes included in the
7 revenue requirement.

8 Q. Could I ask for further clarification. It's
9 a cash flow model. So let's assume that
10 there's excess cash in an account at the
11 close of the year, and this may have to go
12 back to the Company. But isn't that
13 considered income? So wouldn't there
14 actually be some income to the Company? And
15 if you want, we can hold that question for
16 later for Mr. Goodhue, if that would be
17 helpful.

18 A. (Laflamme) I think Mr. Goodhue is in a better
19 position to answer that.

20 Q. Okay. We'll come back to that.

21 CHAIRMAN HONIGBERG: Wait, wait,
22 wait. Why do you want to come back to it?
23 You've got him right there.

24 MS. ROSS: Oh, okay.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 BY MS. ROSS:

2 Q. Mr. Goodhue, could you just comment on excess
3 cash. If there's a net excess overall in
4 your accounts at year end, how that would be
5 treated for income tax purposes.

6 A. (Goodhue) Yeah. Under the rate methodology
7 that we're talking about, not only under DW
8 11-026, DW 16-806 and now this case, excess
9 cash that is collected actually over-funds
10 the rate stabilization funds since they're
11 ready to go back to ratepayers.

12 When you look at how the tax code works,
13 however, and if you look at a GAAP basis
14 application towards taxes, even though we
15 look at positive EBITDA, the corporate
16 structure is set up towards pre-tax income
17 that is negative. So, any cash is going to
18 the rate stabilization fund, but does not
19 create a taxable value that would create an
20 income tax burden. The Company is currently
21 on a corporate consolidated basis and in a
22 net operating loss position, and will be for
23 several years into the future. So that is
24 really the basis for that.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Q. And let me, if I could clarify. So a rate
2 stabilization fund is treated as if it's a
3 debt that you're repaying? Is that why it's
4 not --

5 A. (Goodhue) No, it's a cash account. So you
6 almost have to divorce cash flow from actual
7 operating or taxable income. So,
8 depreciation is, you know, part of the
9 accumulation of cash, in that you would have
10 funded those capital expenditures in the past
11 and now pay back debt. Relative to that,
12 your interest expense is a component and
13 deductions for income taxes. But
14 depreciation, which is the amortization or,
15 you know, periodic de-valuing of those
16 assets, is allowed as a deduction for both
17 GAAP purposes and for tax purposes.

18 Q. And so the RSF serves as sort of a
19 depreciation substitute? Is that what you're
20 suggesting?

21 A. (Goodhue) Not really. What I guess I'm
22 saying is any excess cash we accumulate isn't
23 the Company's cash, but it's there to either
24 backstop the revenue requirements and/or to

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 be refundable to customers. But, you know,
2 even if we generate excess cash, based on our
3 rate structure, because we're not like an IOU
4 that has an ROE component, we don't produce
5 enough excess profitability to create a tax
6 burden.

7 Q. Okay. Thank you. Thank you for the
8 clarification.

9 Does Staff believe that all of the
10 Company's fixed plant reflected on its books
11 at the end of the 2016 test year was in
12 service, used and useful at that time?

13 A. (Laflamme) Yeah, based upon an examination of
14 the Company's filing by the Staff, which
15 included the examination by the Audit Staff
16 relative to this proceeding, Staff believes
17 that all the plant reported on the Company's
18 books at 12/31/16 was in service, and used
19 and useful.

20 Q. Thank you.

21 With regard to the proposed step
22 adjustment, can you give a little more detail
23 about what it's based on?

24 A. (Laflamme) Yeah, the step adjustment is based

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 on the Company's fixed plant additions during
2 2017. And these fixed plant additions are
3 detailed on Schedule 7 of Attachment JPL-1,
4 which is Page 95, which I believe is the very
5 last page of the settlement. And you'll see
6 in that schedule there's a column of numbers,
7 and it indicates -- the heading is "Estimated
8 Investment Dollars Sought In Step Increase."
9 And the total of that column is \$765,577. As
10 a result of that, PEU's required annual debt
11 service will increase by \$53,876. And that's
12 indicated on Schedule 1C - Step of Attachment
13 JPL-1, which is Page 59 of Attachment JPL-1,
14 in the settlement agreement. And there, in
15 the middle of that schedule, you'll see the
16 addition of \$765,577 of debt related to the
17 2017 additions. And then you take your
18 finger and you go right across the page to
19 the right side of the page, and you'll see
20 the increase in the debt service resulting
21 from that additional debt, which is \$53,876.
22 And when that amount is multiplied by the 1.1
23 debt service coverage requirement, it becomes
24 essentially an addition to the DSRR of

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 \$59,264.

2 Additionally, going back to Page 95, the
3 additional fixed plant that was placed in
4 service in 2017 will result in additional
5 property tax expense increase of \$17,485,
6 which is indicated in the very last column on
7 the right-hand side of the page for the 2017
8 additions.

9 And lastly, in addition to the
10 additional debt service, the property taxes,
11 there was also additional amortization
12 expense included in the step increase,
13 amounting to \$21,224, which primarily
14 pertains to legal costs that were incurred by
15 the Company in obtaining the property tax
16 abatements that it filed for.

17 In total, if you add those numbers
18 together, the total amount is \$97,973, which
19 is the step increase component of the total
20 overall revenue requirement.

21 Q. And will the plant additions associated with
22 this proposed step adjustment be subject to
23 New Hampshire PUC audit?

24 A. (Laflamme) Yes, and I believe that audit is

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 taking place presently.

2 Q. And turning our attention to Section III.B on
3 Page 9 through 11 of the settlement
4 agreement, what are the effective dates for
5 the proposed rates to be implemented?

6 A. (Laflamme) The permanent rate increase of
7 \$1,304,272, or 18.97 percent, will be
8 effective on a bills-rendered basis on or
9 after January 8, 2018, which is in accordance
10 with the temporary rate settlement which was
11 approved by Commission Order 26,136. The
12 step adjustment increase in rates of 967,973,
13 or 1.43 percent, will be effective as of the
14 date of the Commission's order approving this
15 settlement agreement.

16 Q. Will there be a recoupment of the difference
17 in revenues under the temporary and permanent
18 rates approved in this case?

19 A. (Laflamme) Yes. Under Section III.B.2 of the
20 settlement agreement, which is on Pages 9 and
21 10, it states that within 30 days of a
22 Commission order approving the settlement
23 agreement, the Company will make a filing
24 calculating the difference between temporary

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 and permanent rates during the temporary rate
2 period, as well as its recommendation for
3 customer surcharge for the difference.
4 Staff, the OCA and the intervenor, after
5 reviewing the PEU's calculations and
6 recommendations, will have the opportunity
7 themselves to make a recommendation to the
8 Commission with regard to the Company's
9 filing, and then the Commission will issue an
10 order with regard to PEU's temporary rate
11 recovery request.

12 Q. And what does the settlement agreement
13 propose with regard to the recovery of rate
14 case expenses in this case?

15 A. (Laflamme) Yeah, on Page 25, under the
16 section identified as "D," the settlement
17 agreement makes a recommendation that the
18 Commission approve PEU's prudently-incurred
19 rate case expenses relative to this rate
20 proceeding. PEU will file a request for
21 recovery of rate case expenses within 30 days
22 of the Commission order approving this
23 settlement. Again, Staff, the OCA and the
24 intervenor will have the opportunity to

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 review the Company's filing request and make
2 a recommendation to the Commission, and then
3 the Commission will issue an order regarding
4 recovery of rate case expenses.

5 Q. And I believe we heard from Mr. Goodhue about
6 the specific customer impacts. But could you
7 reference the location of that information.

8 A. (Laflamme) Yeah, Mr. Goodhue detailed those,
9 and that's found on Pages 10 and 11 of the
10 settlement agreement.

11 Q. Does Staff believe that the settlement
12 agreement being presented today results in
13 just and reasonable rates?

14 A. (Laflamme) Yes, and the reason is the
15 ratemaking mechanism presented in this
16 settlement agreement upon which the proposed
17 rates are based is essentially the same as
18 that approved by this Commission for PWW in
19 its last rate proceeding, DW 16-806. As is
20 presently the case for PWW, this settlement
21 agreement proposes moving to a cash flow
22 model for purposes of rate setting, similar
23 to municipal systems. However, the
24 settlement agreement accomplishes this in a

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 way that avoids Construction Work In Progress
2 issues by requiring that all assets upon
3 which rates are based must be complete and in
4 service to customers. Moving to a cash flow
5 model is necessary for the Company, as its
6 sole source of capitalization is presently
7 debt financing. There is virtually no equity
8 in this company. As such, in the revenue
9 requirement being proposed, principle and
10 interest payments have taken the place of
11 return on rate base and depreciation expense
12 under the traditional ratemaking model. This
13 is meant to give assurance to lenders that
14 PEU will be able to meet its debt obligations
15 and loan covenant requirements. Further
16 assurance is given to lenders through the
17 creation of the various rate stabilization
18 funds as a means to backstop the respective
19 components of PEU's overall revenue
20 requirement -- the CBFRR, the OERR and the
21 DSRR -- should the Company experience down
22 years in terms of revenues or rapidly
23 increasing expenses, or both. This assurance
24 given to lenders provides PEU with the debt

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 financing it needs at favorable terms for
2 making capital improvements necessary to
3 provide safe and adequate water service to
4 its customers at the lowest possible cost.

5 The QCPAC mechanism proposed in this
6 settlement agreement is similar to that which
7 is presently in place for PWW. The QCPAC
8 mechanism will assist PEU in maintaining the
9 balance between making necessary capital
10 expenditures in order to provide safe and
11 adequate service to customers and the ability
12 to pay for such expenditures during the
13 intervening years between general rate
14 proceedings.

15 As was the case for PWW, overall this
16 settlement agreement attempts to balance
17 PEU's cash outflows, its expenditures and
18 debt service with its cash inflows, its
19 rates. Therefore, it is Staff's opinion that
20 the chances of PEU over-earning as a result
21 of this settlement agreement are remote.
22 However, the settlement agreement also
23 contains safeguards against any potential
24 over-earning on the part of PEU.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 First, on Page 24, as Mr. Goodhue
2 indicated in his testimony, Page 24 of the
3 settlement agreement, PEU would be required
4 to file a full rate case within six months if
5 the 13-month average if the amounts held in
6 the combined RSFs exceed 150 percent of the
7 combined targeted amount for those accounts.

8 Q. Excuse me for interrupting. Where do you
9 find the combined targeted amount for those
10 accounts? Where would that be?

11 A. (Laflamme) That would be Exhibit 5.

12 A. (Goodhue) Bates 46.

13 Q. Thank you.

14 A. (Laflamme) Also, there is no language
15 contained in the settlement agreement whereby
16 the Commission relinquishes any of its
17 ability to oversee this utility; secondly, to
18 assure that PEU's expenditures are prudent;
19 and thirdly, to ensure that the rates charged
20 to PEU's customers are just and reasonable.

21 And most importantly, on Page 25 of the
22 settlement agreement, under the paragraph
23 identified as "E," contains essentially the
24 same language as was contained in the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 settlement agreement approved for PWW in DW
2 16-806. Specifically, the language in this
3 section makes it very clear that the settling
4 parties re-affirm that which was agreed upon
5 and understood coming out of the DW 11-026
6 Nashua acquisition settlement, whereby there
7 will be no revenues collected from customers
8 for the purpose of providing a special
9 dividend or other distribution to the City of
10 Nashua for reimbursement of eminent domain
11 costs or for, quote, any other purpose
12 whatsoever, unquote.

13 Given that, one, there is no equity
14 investment on the part of the city in PEU,
15 secondly, PEU's customers reside outside of
16 the city of Nashua, and thirdly, PEU is
17 moving to a cash flow model for rate setting,
18 Staff sees this provision as the key
19 safeguard against over-earning on the part
20 the Company.

21 MS. ROSS: Thank you. I have no
22 further questions for the witnesses.

23 CHAIRMAN HONIGBERG: All right.

24 We're going to take a 10-minute break. When

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 we come back, Mr. Buckley and Mr. Ranaldi and
2 Commissioners will have questions for the
3 panel.

4 (Brief recess was taken at 11:32 a.m.,
5 and the hearing resumed at 11:50 a.m..)

6 CHAIRMAN HONIGBERG: Mr. Buckley.

7 MR. BUCKLEY: Thank you, Mr.

8 Chairman. I think I can start by offering an
9 expression of gratitude to counsel for the
10 Company and Staff for their rather detailed
11 examination of the panel. It's safe to say
12 that the list of questions I have before me
13 has greatly diminished, so I should only be
14 another two or three minutes, I think.

15 CROSS-EXAMINATION

16 **BY MR. BUCKLEY:**

17 Q. The first question I would pose here is for
18 Mr. Goodhue. I think I heard you say on
19 direct examination, as expressed in the
20 settlement agreement, that one of the primary
21 purposes of moving to this methodology for
22 ratemaking, the 16-806 methodology primarily
23 in this case, is to be able to procure debt
24 at a lower cost of capital. Given that fact,

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 we've now, in the case of PWW, had something
2 like eight months, I think, to see if that
3 has had the desired impact. Can you give me
4 some indication of whether moving to the new
5 ratemaking methodology has had that desired
6 impact and how that's going with PWW?

7 A. (Goodhue) Sure, I can do that. Actually,
8 since the completion of the 16-806 case with
9 PWW on April 4th of this year, we did do a
10 bond issuance for PWW. As part of that
11 process, we have to go before the rating
12 agency -- and in that case, Standard &
13 Poor's -- to have a re-evaluation of the
14 credit rating of Pennichuck Water Works. And
15 in that review, there was very a favorable
16 response in the diligence process that we
17 went through with Standard & Poor's relative
18 to what that rate structure was. It did not
19 immediately create a percentage rate
20 differential, but what it did do was reaffirm
21 the A-plus stable rating for Pennichuck Water
22 Works.

23 What we further discovered in that, the
24 only down side to the rate structure that we

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 had there, was just the overall value of the
2 rate stabilization funds as they are existing
3 to support the revenue buckets, which is kind
4 of an interesting development given the
5 discussion we had earlier about the potential
6 for an MOES surcharge going forward, which we
7 feel that, coupled with those rate
8 stabilization funds, we'd take that one issue
9 off the table relative to the overall
10 adequacy of those funds and actually could
11 create an incremental increase in the rating
12 for PWV, which would directly relate to a
13 reduction in interest expense. So that's
14 what we did discover on the PWV side.

15 Q. And just to follow up here, the MOES
16 surcharge, that's something that you
17 mentioned in your earlier testimony that the
18 Office of the Consumer Advocate was
19 supportive of, but it didn't quite make it
20 into the settlement agreement?

21 A. (Goodhue) That is correct. And what was
22 agreed by the parties is that we would pursue
23 that in an upcoming rate case. And most
24 preferably it will be pursued in the next PWV

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 rate case, which would be the most -- which
2 would be the next case to be filed on behalf
3 of the corporation and its consolidated
4 group, and actually would be a good acid test
5 for that bond rating process.

6 Q. And could you imagine in a scenario outside
7 of this very unique ratemaking structure that
8 we've adopted here for PWW, PEU and
9 potentially PAC, how that type of, I guess
10 you might almost call it an "escalator,"
11 could be concerning for, if let's say a
12 strictly investor-owned utility that doesn't
13 have this type of ratemaking methodology were
14 to ask for its adoption?

15 A. (Goodhue) Yeah. In the case of a traditional
16 investor-owned utility, like PWW, PEU and PAC
17 were prior to 2012, you have that entire
18 component of the return on equity, and you're
19 looking at generally a 50/50 debt-equity
20 contribution. So, when a corporation like
21 that is running a utility, you've got the
22 opportunity to fund your infrastructure,
23 basically underlying overall asset costs with
24 either debt or equity. So you've got the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 opportunity to seek funds in both of those
2 marketplaces with those relative returns.
3 So, you know, an MOES surcharge like
4 that, it's not necessarily needed there, No.
5 1, because of that equity return. And, you
6 know, that helps cover the rate -- I'm going
7 to say "rate lag" relative to operating
8 expense increases relative to that. The
9 reason that we would look for it in this
10 company is all based on the structure, that
11 our structure is directly tied to specific
12 cash flow coverage. It's tied to specific
13 dollars needed for the CBFRR, specific
14 dollars needed for the DSRR, and specific
15 dollars needed for the OERR, and as a result,
16 because there isn't any over-cover relative
17 to those, that's where inflationary impact
18 can have a much greater impact on a company
19 such as us.

20 Q. And let's just say, hypothetically, if such a
21 surcharge were adopted, would that lower
22 costs relative to things like the frequency
23 of bond issuances or your line of credit
24 approvals?

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 A. (Goodhue) In all likelihood, it would
2 accomplish a couple things. It might reduce
3 the frequency in which full rate cases need
4 to be prosecuted because you'd have these
5 ratable increases that are tied to
6 inflationary increases over time. The cost
7 of promulgating a case, both from the Company
8 perspective and from the Commission
9 perspective is quite costly. So if you can
10 defer that and spread those out over a longer
11 period of time, that's beneficial to
12 customers.

13 Secondly, the MOEs, if that was put in
14 place and you didn't have to borrow that
15 money -- so, to borrow money to pay operating
16 expenses just seems a bit illogical to me.
17 It would be like me as an individual going
18 out and borrowing debt for 30 years to pay
19 for groceries. Doesn't make as much sense as
20 it would appear to.

21 Q. I think I just have one final line of
22 questioning, and that relates to the DSRR.1
23 account.

24 So, at Bates 36, I think it is, of the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 settlement attachments, there's an
2 explanation of how funds that are accumulated
3 under that account will preferably be
4 utilized. Can you just summarize how that
5 works for the individuals in the room today?

6 A. (Goodhue) Sure. The .1 revenues are
7 collected in a bank account throughout the
8 year, and by the end of the year they're
9 there for defined purposes. Under DW 16-806,
10 it was spoken about in that settlement
11 agreement in that case about those being used
12 as, for lack of a better term, the "seed
13 money" for capital expenditures in the next
14 year.

15 One of the things that we've learned
16 since 16-806, especially when it comes to,
17 you know, used and useful projects, some
18 projects require engineering and design study
19 work to be done prior to a project even being
20 able to be put in the ground or bid. So some
21 of those costs are borne, and they are not
22 used and useful, but they are truly costs
23 that are expended. They're absolutely
24 necessary in the process relating to those

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 projects. And so when we look at the use of
2 that money, that's what we talked about, the
3 basis for how those monies will be utilized.

4 I think you said it was Page 36?

5 Q. I believe so. Yes.

6 (Witness reviews document.)

7 A. (Goodhue) Yeah, and so what we say there is
8 upon approval, those funds... I guess I'm not
9 seeing the exact reference on that. So I
10 apologize. But basically, those funds would
11 be used for engineering studies or those
12 intangibles relative to projects and then
13 "seed money" relative to capital projects.

14 Q. And do you now have an understanding of
15 whether, for PWW, this has had a chance to
16 occur as of yet?

17 A. (Goodhue) As far as the use of those funds?
18 No, we are in the first year of actually
19 collecting those funds this year, based on
20 when that order was received. The order for
21 DW 16-806 was not received until November 7th
22 of this prior year. So we're in the first
23 year of truly collecting those .1 funds.

24 Q. Can you think of any factors that might

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 preclude accumulation of revenues in the
2 DSRR.1 account?

3 A. (Goodhue) Sure. If our actual revenues were
4 below our allowed revenue levels, then you
5 would not have excess collections there. I
6 mean, you would have collection of funds, but
7 they're going to be much lower than they
8 would be if they were to be allowed at those
9 levels.

10 Q. So, essentially, not necessarily guaranteed
11 that there will be further funding to plow
12 into those initial investments in capital
13 investments in the early part of the year.

14 A. (Goodhue) Yeah, and I guess the way to say it
15 is there will always be some dollars
16 collected because they are a component of the
17 actual revenues, but the actual dollars
18 collected could be far less than what they
19 were anticipated to be, as far as that
20 component of the overall allowed revenue
21 requirement.

22 MR. BUCKLEY: No further questions.

23 CHAIRMAN HONIGBERG: Mr. Ranaldi.

24 MR. RANALDI: Yes, thank you.

CROSS-EXAMINATION

BY MR. RANALDI:

Q. Mr. Goodhue, this is the second time you're using this new methodology; is that correct?

A. (Goodhue) That is correct. We applied it under DW 16-806 for PWW.

Q. Okay. When you sent out notices to the customers, the notice to the customers said 21.24 percent increase to be expected. But the methodology, according to your testimony earlier, has pushed a certain percentage to the next rate hike. So the methodology you're using is actually 23, 24 percent. Am I correct in that?

A. (Goodhue) When we did the original notice, as is the normal process, we have to file an Order of Notice in a timely manner so that we can preserve our rights as to when the new permanent rates can go into effect. We do our best efforts in looking at the overall structure and the components of the dollars that comprise those rates and in order to establish a high water mark for what is

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 allowed in the case.

2 So that 21.24 percent, I believe is the
3 number you quoted, Mr. Ranaldi, was based on
4 our analysis of the numbers at that time and
5 the rate structure at that time, but was
6 inclusive of a phase-in of the five-year
7 methodology in two phases, and inclusive of
8 all of the components in the rate case
9 filing. As this case is further prosecuted
10 and the PUC Staff and Audit Staff goes
11 through and reviews all of the pro formas
12 that we have completed, there will be some
13 alteration of those numbers, and/or
14 perfection of certain numbers that are
15 estimates that become actual numbers in the
16 case. And as I understand the regulations,
17 that 21.24 percent that we would have
18 established in that Order of Notice sets a
19 high water mark for what we can collect. The
20 rate case could be maximized at that, but it
21 could be somewhat less once all of the actual
22 numbers are brought together in the case.

23 Q. So now that we are no longer involved with
24 equity, just debt, to try to go three to four

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 years -- actually four years, and trying to
2 get some type of number so that those
3 reserves that you named are very important so
4 you don't have to borrow money, you have to
5 come up with a number that would be higher so
6 to get to that third or fourth year so you
7 don't have to borrow; is that correct?

8 A. (Goodhue) That is correct. When you look at
9 the rate stabilization funds, there is one
10 number under the CBFRR, which is a fixed
11 number for many years into the future.
12 There's also a fund that's behind the DSRR,
13 which is based on known and measurables in
14 the test year. And then with the QCPAC, it's
15 layered on relative to revenues that are tied
16 to incremental debt that is incurred between
17 rate cases. But when it comes to the OERR
18 component of revenues, there is inflationary
19 pressure upon those operating expenses, and
20 sometimes some of those operating expenses
21 increase above inflationary levels. A good
22 example is in property taxes, where we have
23 seen increases above inflationary levels. To
24 the extent that we can get those abated, we

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 do.

2 Now, what happens with inflation is it's
3 not just a simple calculation, but it's a
4 compounding calculation between rate cases,
5 so as such, there is dollar pressure on that
6 rate stabilization fund for operating
7 expenses.

8 Q. And that just doesn't relate to property.
9 I'm talking chemicals. Because I notice a
10 few years you had problems with chemicals
11 skyrocketing well above the inflation; is
12 that correct?

13 A. (Goodhue) Yes. And, you know, when you look
14 at all the chemicals that are used to process
15 water, in many cases those products are
16 byproducts of other things. One of the
17 chemicals we use, ferric chloride that we use
18 in our water-processing system, is a
19 byproduct of the steel production industry.
20 So, supply and demand in the steel production
21 industry can determine fluctuation of a
22 material nature in the cost of acquiring
23 those chemicals. So there are a great many
24 variables, I guess you might say, in that

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 process. When you look at purchased water,
2 it's not just the cost of purchasing water
3 per gallon, but how many gallons do we need
4 to procure. And it's based on the fact that
5 you've got an abnormally dry year versus an
6 abnormally wet year and however those water
7 resources are being deployed.

8 Q. Well, that's the other part of the problem I
9 have with the four-year test year.

10 On the revenue side, revenue can
11 fluctuate quite a bit in the water based on
12 what's going on. So why not go a year over
13 year? Why go four years? I mean, I
14 understand that today you did mention you
15 want to do something about that. As a
16 customer, how would that be for a customer,
17 as far as reflecting -- I believe there was
18 some people from Bow the first day that we
19 met who were very concerned over the
20 20 percent increase.

21 If it was year-over-year rate hikes,
22 would we still be looking at 20 percent,
23 22 percent increases, or would there be a
24 better leveling-off so people from Bow don't

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 get into a panic every three or four years?

2 A. (Goodhue) If we had annual increases in our
3 overall revenues are you saying, Mr. Ranaldi,
4 or in our operating expenses only?

5 Q. Well, somewhere -- right now you have people
6 there on fixed income. And I am one of
7 those. And our costs are going to be going
8 up. We have to be careful what we're doing.
9 Now, when you go two years, three years not
10 getting nothing, then all of a sudden you get
11 whacked 20 percent, whether it be just
12 operating or overall, I mean, if you do it by
13 step, just operating and then see how that
14 works, then maybe the Commission can make
15 that, and you can do even more to make it
16 easier for those customers that have to watch
17 their wallets. I'm just saying, would they
18 be better off?

19 A. (Goodhue) The one advantage to what you're
20 speaking about is that it would be ratable
21 and much smaller increments on an annual
22 basis, Mr. Ranaldi, versus having to have a
23 rate increase that is based on a compounding
24 factor for a number of years. So, would the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 overall increase be the same? I guess the
2 dollars at the end of the day would be the
3 same. But the way in which those are earned
4 over time would be less based on the fact
5 that it kind of mitigates that compounding
6 factor in the overall equation.

7 Q. And finally, on the Company's side, if you're
8 able to use actual numbers year over year,
9 based on trying to go three or four years
10 out, how would that help the Company?

11 A. (Goodhue) Well, as I mentioned earlier, one
12 of the advantages of that process is the
13 frequency with which we promulgate a full
14 rate case would probably extend, you know, if
15 not by a significant amount, by an amount.
16 Rather than promulgating a case every two or
17 three or four years, it might be four, five,
18 six years. And there's a cost associated
19 with that. There's also the regulatory lag,
20 because when it comes to promulgating a case,
21 it takes 12 to 18 months to complete a case
22 from the time you start and finish it. So
23 the immediacy of earning those revenues would
24 be helpful, and the elimination of the cost

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 promulgating those full cases on as frequent
2 a basis would be beneficial.

3 MR. RANALDI: That's all. Thank
4 you.

5 CHAIRMAN HONIGBERG: Commissioner
6 Bailey.

7 **INTERROGATORIES BY COMMISSIONERS:**

8 **BY COMMISSIONER BAILEY:**

9 Q. Good morning. Can we start with Exhibit 3
10 that was handed out as a separate attachment?
11 It says it's Bates Page 37 in the settlement
12 agreement.

13 The city bond fixed revenue requirement,
14 as you said, that's a fixed number for many
15 years. Has that increased as a result of
16 this restructuring of how you collect your
17 money?

18 A. (Goodhue) It did increase slightly, because
19 under DW 11-026, the actual funding of the
20 initial rate stabilization fund was not
21 included in the CBFRR calculation for any of
22 the three regulated utilities. So there was
23 already a modification for PWW in 16-806
24 relative to that and in this case for PEU

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 relative to that.

2 Q. So is that the \$31,000 in the RSF?

3 A. (Goodhue) No, it is not.

4 Q. So explain to me why the fixed revenue
5 requirement increased.

6 A. (Goodhue) And I believe if you refer to
7 Exhibit 4 on Bates 45, it speaks to the very
8 precise calculation relative to that. And I
9 can probably answer part of this, and Mr.
10 Laflamme might want to weigh in as well.

11 But I believe, going back to that
12 calculation in DW 11-026 originally, it did
13 not include the \$5 million for the rate
14 stabilization fund in the overall calculation
15 of the -- in the middle of the page, the
16 \$926,309. That number was \$898,000 and
17 change. I don't remember the exact number
18 for PEU relative to the original calculation
19 of that in that case. This 926,309 now just
20 trues up the inclusion of the \$5 million rate
21 stabilization fund in the overall calculation
22 of the CBFRR and the overall structure that
23 we have. So this 926,309 would remain fixed
24 until 2042.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Q. So you're adding the \$980,000 of the original
2 \$5 million that has been allocated to PEU to
3 the loan, and then you're spreading it out
4 over the RSFs? Is that basically what's
5 going on?

6 A. (Goodhue) There's really kind of a divorce
7 between the RSF calculation and the CBFRR.
8 The CBFRR is part of the allowed revenue
9 calculation. The 31,000 is based on the
10 allocation of the rate stabilization fund
11 dollars that are needed to backstop the
12 revenue requirement for the CBFRR in our
13 allowed revenues.

14 Q. I get that. So if the CBFRR is 31,000 and
15 the MOERR RSF is 890,000, and the debt
16 service reserve is 59,000, that's 980,000.

17 A. (Goodhue) Correct.

18 Q. And you have added 980,000 on Exhibit 4,
19 Page 45, to the CBFRR for PEU.

20 A. (Goodhue) You want to speak to that, Mr.
21 Laflamme?

22 A. (Laflamme) No, the amount calculated on
23 Exhibit 4 is our revised -- is the revised
24 CBFRR component.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Originally, before this case, coming out
2 of 11-026 that amount was calculated as
3 \$898,863. And as Mr. Goodhue has explained,
4 the original calculation did not include the
5 \$5 million original RSF. That was because
6 that -- those monies were being recovered
7 through PWW's rate base calculation. PWW no
8 longer has rate base, so now the \$5 million
9 needs to be added to the CBFRR component
10 calculation. And so adding that \$5 million,
11 and taking into account the allocation to
12 Pennichuck East, the CBFRR only increases by
13 \$27,446 from what it was coming out of 11-026
14 and what's being proposed today.

15 Q. So, the CBFRR on Page 45 that is PEU's pro
16 rata share plus the \$980,000, that 15,844,176
17 number, is that what the CBFRR requirement
18 was before this case?

19 A. (Goodhue) The CBFRR requirement for PEU prior
20 to this case, I believe, if I look back at
21 that schedule, would have been the 14,864,176
22 for PEU alone, because the \$5 million, as Mr.
23 Laflamme spoke about a moment ago, was
24 included only for PWW, as a component of the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 return on rate base for PWW.

2 Moving to the 16-806 methodology and the
3 elimination of return on rate base requires
4 the \$5 million to be supported by CBFRR
5 dollars that are shared between PWW, PEU and
6 PAC. PWW has 3,920,000 of that obligation;
7 PEU has 980,000 of that obligation, and PAC
8 will have \$100,000 of that obligation in
9 their next rate case.

10 Q. Right. So you added 980,000 to your CBFRR
11 requirement in this case.

12 A. (Goodhue) In this case.

13 Q. So now your CBFRR payments are based on
14 15,844,000 --

15 A. (Goodhue) 176.

16 Q. -- 176.

17 A. (Goodhue) That is correct.

18 Q. So part of the reason that this CBFRR
19 increases is because you added \$980,000 to
20 that.

21 A. (Goodhue) Yes, ma'am.

22 Q. But you're also collecting that amount in the
23 RSFs.

24 A. (Goodhue) Collecting that amount in the RSFs?

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Q. Well, I asked you if you effectively
2 collected -- added the 980,000 to the
3 CBFRR --

4 A. (Goodhue) The basis of the calculation. Yes,
5 ma'am.

6 Q. -- and then you funded the RSFs with that
7 borrowed money, and you said, no, that's not
8 what you did.

9 A. (Goodhue) That money is actually not borrowed
10 money, it's allocated from PWW, which was
11 originally borrowed by the City of Nashua in
12 the acquisition. So, PEU has not borrowed
13 that money. That money was borrowed by the
14 City of Nashua as part of their overall
15 bonding of \$150,570,000. And that \$5 million
16 used to reside totally on PWW's books, and
17 980,000 has been allocated from that \$5
18 million borrowed by the City of Nashua over
19 to PEU.

20 Q. And that affects the revenue requirement that
21 PEU has --

22 A. (Goodhue) It does.

23 Q. -- because it increased the city bond's
24 revenue requirement --

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 A. (Goodhue) It does.

2 Q. -- by \$980,000.

3 A. (Goodhue) That is correct.

4 Q. Isn't that kind of like a loan?

5 A. (Goodhue) I guess the CBFRR, yeah, was
6 technically a loan in total, yeah, under
7 11-026.

8 Q. Okay.

9 A. (Goodhue) Sure.

10 Q. And now you've allocated that 800 -- I mean
11 that 980,000 to the RSF accounts.

12 A. (Goodhue) Yes, ma'am, to fund those accounts.

13 Q. To fund those accounts.

14 A. (Goodhue) Yes, ma'am.

15 Q. So you've put the \$980,000 in the CBFRR -- or
16 you've -- sorry. You haven't put it. It's
17 been allocated to you in the CBFRR. So your
18 CBFRR payment is higher?

19 A. (Goodhue) It is.

20 Q. So we're going to fund those RSFs with money
21 that is in the CBFRR?

22 A. (Goodhue) Correct. And those accounts are
23 restricted cash accounts for that very
24 designated purpose of backstopping the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 components of allowed revenues.

2 Q. I understand that, yeah. Thank you.

3 All right. Let's talk about
4 operating -- so let's talk about operating
5 expenses.

6 Mr. Laflamme, I believe you testified,
7 but I think you can corroborate this, that
8 there was a \$200,000 property tax increase.
9 And is that -- is your obligation \$200,000
10 more in 2016? What was the test year, 2017?

11 A. (Goodhue) 2016.

12 Q. So your property taxes are \$200,000 more than
13 in 2016 than they were in 2012?

14 A. (Goodhue) That is correct.

15 Q. And the same with the amount of money that
16 you have to spend to purchase water?

17 A. (Goodhue) That is correct, ma'am.

18 Q. That's a cumulative number -- well --

19 A. (Goodhue) It's a period number. I mean, it's
20 the dollars incurred in those particular
21 years. I guess you could say the property
22 taxes are cumulative, in that they go up over
23 time based on existing property or
24 incremental property. As a regulated utility

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 in the state, we're not just taxed for real
2 property, as you know, but also for personal
3 property, utility and assets. So, as we have
4 made investments in capital within the
5 Company, that increases the base of those, as
6 well as the rates have increased in tax rates
7 within the various communities or their
8 appraised values of our existing or new
9 property.

10 Q. Okay. Let's talk about the \$280,000 increase
11 in water, purchased water cost. Can you show
12 me what that -- where those increases came
13 from?

14 A. (Goodhue) Again, the PEU system serves water
15 to part of 19 different communities within
16 the state. They're community water systems,
17 some of which are through interconnections,
18 mains, where we're buying water from other
19 water companies -- i.e., the City of
20 Manchester or other entities -- and some of
21 them are based on large or community wells.
22 And depending on whatever the conditions
23 might be within a given year and/or the
24 consumption patterns, we may have to purchase

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 water because the adequacy of supply from our
2 wells may not be sufficient to meet the basic
3 needs required by the DES relative to our
4 supply of water to our customers. 2016, as
5 you know, was a particularly problematic year
6 relative to drought conditions and things
7 like that. But also, it's based on
8 consumption patterns of people for water. So
9 that can vary greatly, depending on the
10 system and/or the particular customers and
11 their consumption patterns relative to the
12 purchased water. We've got some systems
13 where purchased water occurs on a more
14 frequent basis, or has had to, especially in
15 2016, relative to their consumption patterns.

16 Q. So, 2016 was a high purchase year. But this
17 increase of \$280,000 is an average, or is it
18 just the comparison between 2012 and 2016?

19 A. (Goodhue) It was a comparison between those.
20 So the dynamics there can be: What are the
21 consumption patterns, what are the rate of
22 purchasing water, what are the number of
23 customers. You know, we've had significant
24 customer growth actually in our Pennichuck

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 East Utility. The Town of Litchfield alone,
2 by adding 400-plus customers, represented
3 almost a 15 percent increase in our customer
4 base for PEU.

5 Q. And a 15 percent increase in your revenue --

6 A. (Goodhue) Yes, ma'am.

7 Q. -- a commensurate amount.

8 A. (Goodhue) And an increase proportionately in
9 our property taxes.

10 Q. Is it reasonable to use a 2016 -- the
11 difference between 2012 and 2016 if 2016 was
12 an outlier?

13 A. (Goodhue) Well, one of the things in this
14 case and in 16-806 methodology is the
15 five-year trailing average that we talked
16 about. So we're not just looking at a spike
17 in revenues. We're looking at an average of
18 those revenues over five years.

19 Q. But we're talking about cost here.

20 A. (Goodhue) I understand. But to further add
21 on to that, in that analysis is also an
22 analysis of those costs directly related to
23 water, including purchased water, relative to
24 not just looking at a spike, but looking at

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 an average of those tied to those revenues as
2 well. So there's a number of operating
3 expenses that we look at relative to that
4 revenue requirement based on the five-year
5 trailing average that doesn't just look at
6 the water revenues, but looks at certain of
7 the direct costs, including purchased water,
8 so that you're not just looking at a spike in
9 expense, but you're looking at an average
10 over five years relative to that expense.

11 Q. That sounds like a different answer than the
12 first time I asked the question, which was is
13 the \$280,000 the difference between 2012
14 purchased water cost and 2016, and you said
15 yes.

16 A. (Goodhue) And that is the correct answer.
17 That 280,000 is the difference between the
18 expense in those years. But what I'm
19 indicating here is in the five-year trailing
20 average calculation is a metric in there that
21 mitigates the overall impact of that spike
22 relative to both revenues and those direct
23 costs.

24 Q. But your expenses -- what I thought -- I'm

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 trying to understand why the increase in
2 rates -- or the increase in your revenue
3 requirement is 20 percent. And so what I
4 heard was one of the big things was a
5 \$280,000 increase in your purchased water
6 costs. And you're saying, well, yeah, there
7 was -- it was \$280,000 more in 2016 than it
8 was in 2012, but somehow the five-year
9 rolling average is going to mitigate that.
10 So then it's not really a \$280,000 increase.

11 A. (Goodhue) Correct. I mean --

12 Q. So what is it?

13 A. (Goodhue) There's two answers there. I mean,
14 if you're just looking at the expense in 2016
15 versus 2012 and compare those numbers,
16 there's a mathematical answer. But in the
17 overall revenue requirement, that is tempered
18 by the five-year trailing average component
19 of the revenue requirement.

20 CHAIRMAN HONIGBERG: So the revenue
21 requirement calculated here is not the pure
22 280. It's the five-year trailing average, of
23 which 280 is one component.

24 WITNESS GOODHUE: Correct. And it

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 tempers that.

2 One of the things to focus on in
3 our overall operating expenses for PEU from
4 2012 to 2016, the average annual increase in
5 operating expenses was 3.84 percent, okay.

6 So that's in total relative to that.

7 BY COMMISSIONER BAILEY:

8 Q. Each year?

9 A. (Goodhue) That's the average annual increase,
10 yes. So when you look at a 20-percent
11 increase and you have that 3.84 percent in
12 there for four years, that explains a great
13 amount of the percentage increase. That, in
14 addition to the fact that we've got debt
15 service on over \$11 million worth of new
16 capital that was not included in our revenue
17 requirement in 2012, that is part of our
18 revenue requirement in 2016, in that we had
19 to debt-fund those capital improvements and
20 had to repay both the principle and the
21 interest on that. Those are the two major
22 components relative to that.

23 Q. Okay. Under this rate structure, what
24 incentive does the Company have to contain

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 cost increases?

2 A. (Goodhue) Well, No. 1, any -- let me rephrase
3 my answer here.

4 What incentive do we have? No. 1, we're
5 still held to a prudence standard by the
6 Commission, No. 1. Our QCPAC process on an
7 annual basis requires a review of the
8 prudence of our expenses.

9 Q. Those are capital.

10 A. (Goodhue) I understand that.

11 And then as far as operating expenses
12 are concerned, there is an annual review of
13 the annual reports that we file relative to
14 the operating expenses of the Company.

15 Q. And that just shows what the numbers are.

16 A. (Goodhue) Right. But we have to explain any
17 material modifications or variations on a
18 year-on-year basis relative to the prudence
19 of those operating expenses.

20 Q. But as long as you can explain them, it's
21 okay, it sounds like.

22 And Jayson, do you -- or Mr. Laflamme,
23 do you have any ideas on how -- what
24 incentive the Company has to contain cost

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 increases, operating cost increases?

2 A. (Laflamme) I think part of it is just the
3 very nature of the new paradigm that they're
4 operating under. This is a company that
5 relies solely on debt financing, and
6 therefore they are enslaved to their cash
7 flow. And over the last number of years
8 since 11-026, the Company has been very
9 cognizant of the fact that their cash flow is
10 limited. And so I think the Company has done
11 a very good job over the last number of years
12 in controlling their costs, simply due to the
13 fact that they don't have access to equity
14 markets anymore, that their sole source of
15 financing is debt service, and so they really
16 have to watch their dollars. And then,
17 secondly, this company is still -- as I
18 indicated, this company is still under the
19 purview of the Commission, that every time
20 they come in for rates, they are subject to
21 audit, which includes a finding of prudence.
22 And if there's any items which are deemed to
23 be imprudent or excessive, then those costs
24 are disallowed.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 CHAIRMAN HONIGBERG: Can we be
2 explicit here, Mr. Laflamme? Are you
3 satisfied that the costs that the Company's
4 incurred that are reflected in the rate
5 filing in this settlement were prudently
6 incurred?

7 WITNESS LAFLAMME: Yes.

8 BY COMMISSIONER BAILEY:

9 Q. Do you know what the average increase year
10 over year for other water companies is for
11 operating expense? Mr. Goodhue, you
12 testified that, you know, they had about a
13 3.84 increase year over year. Do you know
14 how that compares to other utilities?

15 A. (Goodhue) Not precisely, no.

16 Q. Is it in the ballpark, or do you know?

17 A. (Laflamme) It doesn't sound unreasonable.

18 A. (Goodhue) Could I respond more to your
19 question, too? If you look at the modified
20 rate structure we're talking about here,
21 98 percent of our revenues, a little over
22 98 percent is tied to the three revenue
23 buckets that are supported by our rate
24 stabilization fund. If we have revenues that

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 are above the allowed revenues, those excess
2 revenues go in to fill those rate
3 stabilization funds. They are not used to
4 pay for operating expenses. So we basically
5 have a revenue structure that's based on
6 test-year operating expenses. So if we have
7 those extra revenues and we don't have the
8 cash to pay for operating expenses above the
9 allowed revenues, we have to borrow those.
10 Our bank -- the only backstop we have for
11 that is a working capital line of credit of
12 \$4 million at Pennichuck Corporation that is
13 used specifically to backstop working capital
14 activities for the regulated utilities. But
15 it has an annual out of 30 days. It must be
16 repaid in full every year within 30 days.
17 So, if we imprudently incur operating
18 expenses, we would not have the cash
19 collected for revenues to pay for those.
20 We'd have to borrow them from the bank. And
21 then we would not subsequently have the
22 revenues to repay the bank in compliance with
23 our debt obligation. So we have no driving
24 need to imprudently incur operating expenses,

{DW 17-128} [PENNICHUCK EAST UTILITY, INC.] {07-25-18}

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 and we have no funding mechanism to
2 imprudently incur operating expenses.

3 Q. Okay. How about the \$450,000 increase in
4 management cost?

5 A. (Goodhue) So, the corporation has a
6 cost-sharing agreement that was actually
7 brought to the Commission, you know, like I
8 said, I think it was 2002. It's very
9 formulaic in its approach. And the increase
10 in operating expenses there are based on the
11 underlying factors of those costs.

12 What would those costs be? In the last
13 four years, we've had wage increases on an
14 annual basis. We've had the cost of benefits
15 go up over those years, the cost of insurance
16 go up over these years, work order costs.
17 All of our work force in our fleet is in
18 Pennichuck Water Works. So any work that is
19 done for maintenance of those water systems
20 in PEU are based on direct costs from
21 maintenance within those systems. So, those
22 are the bases for those things. The work
23 orders are directly related to operational
24 activities. The other costs, and there's a

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 bunch of them -- it's a very formulaic
2 approach -- are based on those costs
3 elevating. But they're also based on a tier,
4 formulaic approach based on allocation of pro
5 rata share of revenues, pro rata share of
6 customer, pro rata share of assets, pro rata
7 share of square footage, employees, the like.

8 One of the driving factors in the
9 elevation of the management fee for PEU is,
10 No. 1, the increase in those costs with
11 inflationary movement over the last four
12 years. No. 2 is actually the fact that their
13 asset base has grown faster than their sister
14 subsidiaries. We've invested more capital
15 additions in PEU pro rata to their base than
16 we have in PWW or PAC. And more customers
17 have been added in PEU pro rata than in PWW
18 or PAC. Our customer growth in PWW is less
19 than 1 percent, whereas our customer growth
20 in PEU is in excess of 15 percent. So, as a
21 result, not only do you have the bases of
22 dollars increasing, but the attraction of
23 their pro rata share has increased because
24 they have grown faster than the others

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 sharing in those shared costs.

2 Q. Mr. Laflamme, did you look at the allocation
3 from -- is it from Penn Corp, Mr. Goodhue?

4 A. (Goodhue) It's both, Penn Corp. and PWW. The
5 Penn Corp. costs are very immaterial now that
6 are shared. When we were a public company,
7 they were very material. They're very
8 immaterial now. The lion's share of them are
9 shared costs from Pennichuck Water Works.

10 Q. Okay. So what I think you just said is that
11 the allocation of the shared --

12 A. (Goodhue) Shared costs.

13 Q. -- overhead costs basically have increased to
14 PEU because you've increased your customer
15 base and you've increased your capital
16 investment --

17 A. (Goodhue) Correct.

18 Q. -- more than PWW.

19 A. (Goodhue) Pro rata. That is correct, ma'am.

20 Q. Mr. Laflamme, is that reasonable? Is that
21 still a reasonable way to do it?

22 A. (Laflamme) Yes. And I brought with me today
23 a copy of the allocation agreement that
24 was -- that the Pennichuck utilities have

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 been operating under, and it was -- actually,
2 it was filed on January 6, 2006. And that
3 was docketed as DW 06-004. And so it was --
4 and I believe, if memory serves me correctly,
5 at the time that it was filed, I think there
6 was some concern relative to how costs were
7 being allocated amongst the subsidiary
8 utilities. And in response to that,
9 Pennichuck utilities revamped their
10 allocation methodology, which was -- and it
11 was culminated in this filing in DW 06-004.
12 And since that time, that allocation formula
13 has -- is one of the areas specifically
14 reviewed by both the Staff and the Audit
15 Staff relative to whether the costs included
16 in it are prudent and accurate. And so in
17 every rate case for PWW, PEU and PAC, that
18 allocation is reviewed.

19 Q. And when you say "reviewed," do you mean you
20 look at the formula and make sure they did it
21 right according to the formula?

22 A. (Laflamme) Yes. And we look at -- and also
23 the Audit Staff looks at the costs that that
24 formula is based upon. And in fact, in the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 PWW case, the Audit Staff made a finding
2 whereby the PWW was -- there was an
3 over-allocation to PWW in the neighborhood of
4 \$200,000. There wasn't any such finding in
5 this case, but it is looked at pretty
6 closely.

7 Q. Mr. Goodhue, what was the rate increase for
8 PWW customers? Was it about 10 percent?

9 A. (Goodhue) I'm thinking it was 10.81 percent.
10 But don't hold me to that. I think if my
11 memory serves me correctly.

12 Q. And they get allocated more of these costs --
13 well, they get allocated proportionately.

14 A. (Goodhue) They do get a larger share. Yes,
15 ma'am.

16 Q. But they have a lot more customers to spread
17 it over.

18 A. (Goodhue) That's correct.

19 Q. So do you think that it would make sense at
20 some point in the future to see if the
21 allocation formula is still reasonable?

22 A. (Goodhue) You know, I think that prudence
23 review is always a good thing. I will say
24 that one of the benefits of maintaining a

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 formula that is based on, I'm going to say
2 "pure numbers" versus "arbitrary allocations"
3 is a good thing. You know, I mean, there's a
4 share of these costs not just borne by our
5 regulated utilities, but by our unregulated
6 subsidiaries as well, you know. So there's
7 revenues that are helping to pay for some of
8 those costs. The accountant in me likes the
9 fact that you've got something that is
10 reliable, consistent and predictable and
11 regular. The fact that we've actually
12 invested a considerable amount of money into
13 PEU and we have a considerable amount of
14 activities going on to support those systems
15 is consistent with actually operating that
16 company. If PEU had its own work force and
17 it was now driving people all over the state
18 to serve 19 different geographically
19 dispersed communities, there would be a cost
20 of doing that. And I think the management
21 fee allocation actually replicates that cost
22 pretty accurately, in that when you've got
23 work order activity that tracks the actual
24 cost of going out to service those systems,

{DW 17-128} [PENNICHUCK EAST UTILITY, INC.] {07-25-18}

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 that's the right thing to do.

2 One of the advantages, however, to our
3 group is that our aggregate purchasing power
4 for PEU is preferential to if they were a
5 stand-alone organization. When you combine
6 the purchasing power for PWW, PEU and PAC all
7 into one, we've got the ability to purchase
8 and incur expenses at a level that is lower
9 than it would be if PEU was a stand-alone.

10 So, would a prudency review be in order?

11 Yes. But I'm not so certain that I
12 necessarily would support changing the
13 methodology, because I think the basis for
14 which it's established upon and how it's, you
15 know, managed is appropriate.

16 Q. Okay. What was the wage increase that you
17 mentioned? What percentage?

18 A. (Goodhue) Oh, okay. Our wage increase for
19 our non-union staff was 3 percent this last
20 year. And for our union Staff, we've got
21 about 45 percent of our work force is union.
22 So when you look at the average cost of wage
23 increases, I'd have to remember exactly each
24 year. It's somewhere between 2-1/2 to

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 3 percent.

2 One of the things the Company does on an
3 annual basis is we also do a very in-depth
4 analysis of national, regional and local wage
5 studies, to make sure that our wage scales
6 are in line with the market. And so we do
7 that on an every-year basis. We have to
8 support that to our compensation benefits
9 committee on an annual basis. One of the
10 things we have to maintain and that we
11 reiterate is that we maintain a work force
12 that is both skilled and qualified. One of
13 the things I stress with our employees is
14 that we're not a company that can be here
15 today and gone tomorrow. We provide a
16 necessary service for customers that has to
17 go on well beyond our lifetimes. So, making
18 sure that we are paying market wages, not
19 above, not below, but market wages to make
20 sure we can maintain and attract qualified
21 employees to serve our customers is
22 important.

23 Q. So the union employees get about 2-1/2 to
24 3 percent each year. Is that the same with

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 management?

2 A. (Goodhue) Yes. Exactly, yes. So we look at
3 both. There's a union contract that dictates
4 what that is, and then there's a non-union
5 wage increase that occurs on an annual basis.
6 Yes, ma'am.

7 Q. Okay. I think Commissioner Giaimo had a
8 follow-up?

9 COMMISSIONER GIAIMO: I have a
10 question on this. You said you use a survey?

11 WITNESS GOODHUE: We use a number
12 of different surveys.

13 COMMISSIONER GIAIMO: A number of
14 different surveys that survey what?
15 Mid-size --

16 (Goodhue) We look at some that --
17 we use a survey, actually, that's through
18 American Water Works Association. We look at
19 some data through the New England Water Works
20 Association. We look at some wage studies
21 that cut across different industries for size
22 of company, location, geographics. So we try
23 to triangulate several different data points
24 as to what is appropriate.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 COMMISSIONER GIAIMO: Thank you.

2 CHAIRMAN HONIGBERG: Let's go off
3 the record for a minute.

4 *(Lunch recess taken at 12:45 p.m., and*
5 *the hearing resumed at 1:33 p.m.)*

6 CHAIRMAN HONIGBERG: Commissioner
7 Bailey.

8 COMMISSIONER BAILEY: Thank you.

9 **BY COMMISSIONER BAILEY:**

10 Q. All right. On the non-material operating
11 expenses --

12 A. Yes, ma'am.

13 Q. -- you said there were four things, and I
14 missed one. Outside services, meals,
15 charitable contributions?

16 A. (Goodhue) Yes, I'm turning to it. Bear with
17 me one moment because I don't recall them off
18 the top of my head as well. Outside
19 services, public relations, meals and
20 charitable contributions.

21 Q. Okay. And why do you need to do public
22 relations?

23 A. (Goodhue) Public relations, really, if you
24 look at the National Water Chart of

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Accounts --

2 (Court Reporter interrupts.)

3 A. That's where, if you had certain
4 notifications that we had to put out to
5 customers relative to, you know, water
6 monitoring or different things, that those
7 costs would be included in there. So I guess
8 it's not public relations in the traditional
9 sense of what you would consider public
10 relations. It's really about what has got to
11 go in there according to the chart of
12 accounts relative to our communications with
13 our customers and compliancy with the
14 regulations.

15 Q. Okay. And do you know how much that is,
16 roughly?

17 A. (Goodhue) Off the top of my head, no, I
18 don't.

19 Q. Is it 10,000 or 100,000?

20 MR. WARE: The overall account --

21 MR. HEAD: I can get you the
22 exhibit for that.

23 COMMISSIONER BAILEY: Okay. All
24 right.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 A. (Goodhue) And just to let you know, too, as
2 far as meals and charitable contributions,
3 those are, in essence, really kind of zero
4 amounts. As a corporation, since 2012, any
5 charitable contribution work that we would do
6 for the corporation is all paid for out of
7 our non-regulated subsidiaries. So there are
8 no dollars that go through there.

9 Q. That was going to be my next question.

10 A. (Goodhue) Yeah. And as far as meals are
11 concerned, it's really a zero-dollar account
12 as well. Again, that would be either outside
13 at the non-regulated subsidiary or the parent
14 corporation. So we put them there because
15 they are on our chart of accounts. But in
16 actuality, they're zero-value dollar
17 accounts.

18 The one that's really a material item
19 potentially is the outside services. So that
20 has to do with certain legal expenses. For
21 the most part, it's legal expenses relative
22 to that company.

23 MR. HEAD: For the record, on
24 Page 44 is the listing of those accounts.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 COMMISSIONER BAILEY: Thanks.

2 BY COMMISSIONER BAILEY:

3 Q. Legal expenses for things other than rate
4 cases.

5 A. (Goodhue) Yes, ma'am. And other than things
6 that might be pertaining to, say, financing.
7 If we do a financing, the cost of issuance
8 and the legal costs there winds up being put
9 on the books as debt-issuance costs that are
10 amortized over the life of that debt. So
11 that would not be in those period expenses.

12 Q. Okay. Thank you. And I see from this
13 exhibit that the total is only 8,000.

14 A. (Goodhue) Yes, it's fairly immaterial.

15 Q. Okay. Thank you.

16 All right. Let's move to debt service
17 and capital expense. So, is there -- can you
18 point to me in this settlement agreement, is
19 there a list of capital additions for 2013
20 through 2017?

21 A. (Goodhue) I don't believe there is a listing
22 for the full four-year slate within the
23 settlement agreement of capital additions,
24 no.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Q. Okay. Are we being asked to decide that
2 those capital additions are prudent?

3 A. (Laflamme) I guess, to the extent that
4 they're supported by debt service, the
5 capital additions themselves, there's no rate
6 base in the Company, so it's really the debt
7 service associated with those capital
8 additions that are going into rates. So...

9 Q. So, yeah, we have to -- we do have to make a
10 prudence finding.

11 A. (Laflamme) To the extent -- yeah. Right.

12 Q. Can either of you tell me what the difference
13 is between "in service" and "used and
14 useful," and whether the investment was
15 "prudent"? Well, I'll stop my question.

16 A. (Goodhue) The difference between "in
17 service," "used and useful," I guess is after
18 you would have a prudency evaluation, that
19 hopefully any capital that we're investing in
20 is prudent. It's because it's required
21 relative to the replacement of aging
22 infrastructure, the failure of a capital
23 item -- i.e., a hydrant fails or a pump
24 fails. So, you know, from the Company's

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 perspective, that would be prudent investment
2 we had to make in order to provide water and
3 service to our customers.

4 Q. So you have to show us that that was prudent;
5 right?

6 A. (Goodhue) Sure.

7 Q. Okay.

8 A. (Goodhue) And then --

9 Q. How do we know?

10 A. (Goodhue) I guess I don't know how to answer
11 that.

12 A. (Laflamme) Well, as part of -- in the past,
13 you know, we had a water engineer who looked
14 at the prudence of those items. And with the
15 QCPAC for PWW at least, we have had a water
16 engineer look at those, do a high-level view
17 of the proposed capital additions. And that
18 will continue.

19 Q. But for this case, we're being asked to put a
20 certain amount -- to collect a certain amount
21 of capital expense through debt for all the
22 projects that have been put in service from
23 2013 to 2017.

24 A. (Goodhue) That is correct.

[WITNESS PANEL: GOODHUE | LAFLAMME]

1 Q. And we have to determine that those were
2 prudent. And I don't even know if it was a
3 fire hydrant or bullet-proof glass for your
4 customer service collection window.

5 A. (Goodhue) Yeah, that capital improvement was
6 not in PEU, the one you specifically
7 referenced there. I mean, when you look at
8 the capital expenditures within PEU, they
9 would be for water main replacements, water
10 treatment replacements. They would be for
11 pumps, for hydrants, would be for meters.
12 You know, it really has to do with the
13 distribution of water, the treatment of water
14 and the supply of water, perhaps
15 reconditioning a well because that well is
16 now no longer producing the capacity that it
17 needed to in compliance with DES regulations
18 and standards.

19 A. (Laflamme) A number of the loans that PEU has
20 are SRF loans, and so those -- the projects
21 which those loans finance need to be reviewed
22 by DES.

23 A. (Goodhue) Yes.

24 Q. But we have to make a prudency finding.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Usually when we approve those SRF loans, we
2 even say we're not making a prudency finding,
3 that that will be determined in a rate case,
4 I think.

5 Maybe I could ask you to do this: Could
6 you put together for a list for me of all
7 your capital additions for the years that are
8 included in those loans and a little
9 explanation of why they were needed --

10 A. (Goodhue) Sure.

11 Q. -- and how much they cost?

12 A. (Goodhue) Sure.

13 CHAIRMAN HONIGBERG: So that's
14 going to be a record request?

15 COMMISSIONER BAILEY: I think it
16 has to be.

17 CHAIRMAN HONIGBERG: And the next
18 exhibit is 4.

19 You understand the question,
20 Mr. Head?

21 MR. HEAD: I do. Thank you.

22 **(Exhibit 4 reserved for record request**
23 **as described.)**

24 BY COMMISSIONER BAILEY:

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Q. Okay. Is one of the reasons for this
2 necessary increase in revenue requirement
3 because you've changed the way that you repay
4 capital expenses?

5 A. (Goodhue) Yes.

6 Q. And I think what I understand is that the way
7 it used to happen was based on depreciation
8 expense. And the service lives are 40 to 80
9 years of these investments, but you can't get
10 a loan for more than 20 years.

11 A. (Goodhue) Exactly, Commissioner. When we
12 talk about the overall increase, part of that
13 increase is because of the migration from
14 11-026 methodology to this new methodology.
15 As I mentioned in my testimony earlier, the
16 11-026 methodology is not sustainable
17 relative to our ability to repay our debt --

18 Q. So, basically you sped up the depreciation
19 expense.

20 A. (Goodhue) In essence, to make sure that the
21 cash flow is there in order to repay the
22 principle in total on a timely basis.

23 Q. Is there any other way that you could do it?
24 Could you refinance the loan at the end of 20

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 years so that you pay off the assets at the
2 same, you know, at the same schedule that
3 their lives are expected to --
4 A. (Goodhue) As Mr. Laflamme mentioned a moment
5 ago, probably 50 to 60, maybe more,
6 percentage of loans are SRF loans. And so
7 the SRF program would be this is the project.
8 It's an authorized and eligible project under
9 those rules, and it must be paid off in this
10 amount of time, 20 years or whatever. If we
11 went to refinance it, we're not going to be
12 able to refinance it with the SRF. We have
13 to refinance it with another lending
14 institution. And, you know, could you do
15 that? Perhaps you could. It really comes
16 down to whether there's another lending
17 institution that's willing to do that and
18 what their covenants might require relative
19 to that. The SRF does not come with covenant
20 requirements. It just comes down to repay
21 the loan. You know, the only two sources of
22 funding for PEU currently are the SRF for
23 those loans, and/or if it happens to be
24 migrated over to the drinking water and

[WITNESS PANEL: GOODHUE | LAFLAMME]

1 groundwater trust fund, now it's a joint
2 application that you put in for. It can come
3 out of either one of those. Same set of
4 rules, basically. And/or Co-Bank is the
5 other lender that we're able to acquire
6 funding for, for PEU. And they have certain
7 requirements relative to covenants and lives
8 of loans. So, would they have an appetite to
9 take something that was fully paid off and
10 now give you the money for it? Because all
11 of our loans are fully amortizing, so you
12 don't have an amount to refinance. It's paid
13 off. So, in essence, you're going to borrow
14 money not based on hard assets, but based on
15 a working capital need. So I'm not so
16 certain they would be inclined to make that
17 lending to us.

18 Q. Okay. It seems like your capital structure
19 is all debt, so your costs should have
20 decreased because you don't have a return on
21 equity. You have economies of scale from
22 PWV. There were a couple of other reasons
23 why you said that the acquisition was really
24 a great idea. But it seems like the rates

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 have -- I mean, a 20 percent rate increase to
2 me is a lot. Is there anything that you can
3 do to mitigate that size rate increase,
4 something that -- did you consider anything
5 that you discounted or didn't implement?

6 A. (Goodhue) You know, we really worked
7 diligently at trying to bring it down to that
8 number. You know, actually offering up the
9 two-part phase-in and a five-year trailing
10 average was a movement in that regard.
11 Looking to reduce the North Country capital
12 recovery surcharge by getting approval to
13 refinance those intercompany loans was all
14 done to try and minimize the rate increase
15 that we were seeking to recover.

16 You know, we do -- when it comes to
17 operating expenses, one of the biggest
18 operating expense we have is property taxes.
19 We are diligent in trying to do everything we
20 can to reduce those property taxes. There's
21 a number of movements underfoot here in
22 Concord relative to how utility property is
23 being valued. We don't know where that's
24 going to go and, you know, what that result's

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 going to be. But, you know, absent that, we
2 take and tackle that on an individual basis.

3 Now, one of the pushes on that is it
4 costs a certain amount of money to actually
5 promulgate it. Filing an abatement doesn't
6 cost you any money. If they approve the
7 abatement, you get the relief. If they don't
8 approve the abatement and we still feel we've
9 got a justified case, we've now got to pursue
10 that through legal means. And unfortunately,
11 the cost of promulgating a tax case is quite
12 expensive. And so there is really kind of a
13 balancing act there as to what the benefit is
14 you're going to derive versus what is the
15 cost you're going to incur to derive that
16 benefit. But, you know, we evaluate that on
17 an annual basis. You know, we go out and
18 competitively bid all of our operating
19 expenses that can be bid on an annual basis:
20 Our chemical costs, our power -- we negotiate
21 contracts to lock in rates for our power. So
22 we take every opportunity that we can to
23 attempt to do that.

24 You know, there is a certain basic

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 operation for a water system. The fact that
2 we're in 19 different communities, and in the
3 state of New Hampshire personal property can
4 be taxed as real property, that's a detriment
5 to our customers, to be very honest with you.
6 A good portion of our revenue is truly, and
7 really, though it doesn't show that way, a
8 pass-through property tax through us to our
9 customers. And that's unfortunate. But that
10 is the reality that we live with. And so,
11 you know, again, we did take some strokes in
12 this case to say what can we do to reduce
13 this, and that's why we came up with the some
14 of elements in this case that we proposed
15 because we do take it very seriously that we
16 want to maintain as low rates as possible.

17 Now, the one thing to be said, and I
18 don't have the numbers here in front of me,
19 is we've done the analysis before as if we
20 were still a publicly-traded company, what
21 would that revenue requirement be at this
22 time versus what it is now. And maybe
23 Mr. Head has that in -- no? But I think that
24 is part of -- it is lower than what it would

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 have been had we still been a publicly-traded
2 company.

3 Q. I think Commissioner Giaimo has a follow-up.

4 COMMISSIONER GIAIMO: I have a
5 follow-up.

6 **BY COMMISSIONER GIAIMO:**

7 Q. So what I heard you say is you took "strokes"
8 to keep costs down.

9 A. (Goodhue) As much as possible, yeah.

10 Q. As much as possible. And I think the word
11 you used is you worked "diligently" to get to
12 20 percent to mitigate the risk and the cost.

13 So I think you mentioned the 50 percent
14 of the five-year consumption as a method
15 which you used.

16 A. (Goodhue) Yes.

17 Q. Just so I understand this right, on Page 13,
18 Bates 13, the last sentence says, "By
19 reflecting only 50 percent of the five-year
20 consumption average in the instant rate
21 proceeding, the total rate increase sought is
22 approximately 2-1/2 percent less than it
23 would have been by using 100 percent of the
24 five-year consumption average."

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 A. (Goodhue) That is correct.

2 Q. So just to rephrase that, absent only using
3 50 percent of the five-year average, the
4 request could have been the 2-1/2 percent?

5 A. (Goodhue) Yes, sir.

6 Q. Okay. And while talking about this, the
7 2-1/2 percent is effectively not being
8 collected? We will see that in the next rate
9 case?

10 A. (Goodhue) Correct.

11 COMMISSIONER GIAIMO: Okay.

12 Thanks.

13 **BY COMMISSIONER BAILEY (CONT'D):**

14 Q. What was the original request? When you
15 filed the case originally, what did you ask
16 for?

17 A. (Goodhue) Was 21.24 percent, I believe.
18 Counsel is looking that up.

19 Q. It was somewhere between what you settled and
20 what you could have had if you used the
21 five-year rolling average?

22 A. (Goodhue) But that was all inclusive of the
23 step when I'm saying that number.

24 MR. HEAD: It's in the Factual

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Background. I just need to find it.

2 COMMISSIONER BAILEY: Maybe on
3 Page 3?

4 MR. HEAD: Yes.

5 BY COMMISSIONER BAILEY:

6 Q. So you requested an overall permanent
7 increase of 1.26 million. And what was the
8 settlement number?

9 (Witness reviews document.)

10 A. (Goodhue) If I see this without consideration
11 for the North Country capital surcharge, it'd
12 be 1 million -- all inclusive, I guess,
13 1,281,175.

14 Q. And where is that? Is that in the
15 settlement? Let's see if we can --

16 A. (Laflamme) Exhibit 1.

17 A. (Goodhue) Yeah, Exhibit 1, Page 28.

18 Q. Exhibit 1? The settlement?

19 A. (Laflamme) Yeah.

20 Q. Okay. And what's the number on Bates Page 7,
21 in the second sentence under A.1?

22 A. (Laflamme) That is the permanent rate
23 increase, exclusive of the North Country
24 capital recovery surcharge.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 MR. HEAD: I think there's a
2 disconnect here somewhere. I apologize.
3 I've got to find it.

4 BY COMMISSIONER BAILEY:

5 Q. Was the number on Bates Page 3, the
6 1.26 million, inclusive or exclusive of the
7 North Country surcharge?

8 (Witness reviews document.)

9 A. (Goodhue) I don't have the filing schedule in
10 front of me. But based on what I read in the
11 sentence following those numbers, it appears
12 that that number is exclusive of North
13 Country capital recovery surcharge.

14 MR. HEAD: Can I read from the
15 original filing?

16 CHAIRMAN HONIGBERG: Sure.

17 MR. HEAD: "As set forth in the
18 filing" --

19 CHAIRMAN HONIGBERG: Slowly.

20 COMMISSIONER BAILEY: And with the
21 microphone on, please.

22 MR. HEAD: "As set forth in the
23 filing, PEU seeks an increase in its annual
24 gross operating revenues, exclusive of the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 NCCRS and any adjustments thereto, of
2 1,339,075, or 20.35 percent over its revenues
3 for the test period ending December 31,
4 2016."

5 COMMISSIONER BAILEY: And how does
6 that compare to the number in the settlement
7 on Page 3?

8 (Witness reviews document.)

9 MR. HEAD: You're talking about,
10 just to make sure, the 1.26 million?

11 COMMISSIONER BAILEY: Yes.

12 MR. HEAD: Got to find that.

13 BY COMMISSIONER BAILEY:

14 Q. Do you know, Mr. Goodhue?

15 A. (Goodhue) I don't have that answer right here
16 in front of me. I'm looking.

17 (Pause in proceedings)

18 MR. HEAD: I believe, if I'm
19 getting this right, the \$1.26 million is the
20 total less the surcharge and less the step
21 increase.

22 COMMISSIONER BAILEY: I mean, the
23 sentence says it doesn't include the step
24 increase, which was estimated at 80,000.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 MR. HEAD: I think if I'm getting
2 the math here right, the rest of it is the
3 surcharge that's dropped out of it.

4 BY COMMISSIONER BAILEY:

5 Q. And by "surcharge dropped out," Mr. Goodhue,
6 does that mean you refinanced the North
7 Country surcharge, so you get less revenue --
8 no. Explain that to me.

9 A. (Goodhue) The debt obligation on that
10 refinanced debt has been reduced, and as
11 such, that reduced obligation is passed
12 through on that North Country capital
13 recovery surcharge. So there's a direct
14 link. On the refinancing, the debt service
15 on those intercompany loans was reduced, and
16 that direct reduction was passed through at a
17 reduction in the surcharge.

18 Q. So that reduced your revenue requirement?

19 A. (Goodhue) Overall, including the capital
20 recovery surcharge, because that surcharge is
21 only for the customers in those three North
22 Country water systems.

23 Q. Okay. So the number that Attorney Head gave
24 me that you originally asked for was

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 1.339,075 million. And that excluded the
2 North Country surcharge. So what does that
3 mean? Does that mean that that 1.339 million
4 number was a revenue requirement that had
5 accounted for the refinance and the reduced
6 revenue requirement?

7 A. (Goodhue) I've got to imagine, based on the
8 value of that number, that that number was an
9 all-inclusive number. And I know they're
10 thumbing through some schedules over there,
11 the million 339, relative to everything added
12 together. And I'm looking to my team over
13 here that has schedules in front of them. I
14 don't have any in front of me.

15 Q. Maybe they can point you to a schedule to
16 answer the question.

17 (Discussion among Commissioners off the
18 record.)

19 Q. Yeah. All right. While they're thinking
20 about that, did PEU ever pay any income taxes
21 after the acquisition?

22 A. (Goodhue) After the acquisition, no. So,
23 again, we have a consolidated tax return.
24 And after the acquisition, one of the things

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 there is, on the consolidated return,
2 including in the deductions that are
3 allowable for federal taxes is the interest
4 on the note payable from Pennichuck
5 Corporation to the City of Nashua, New
6 Hampshire; as such, the consolidated
7 corporation has a net operating loss position
8 they've had since 2012.

9 Q. Did the consolidated corporation ever pay any
10 income taxes, or is the answer to that --

11 A. (Goodhue) Not since 2012.

12 Q. Because they have a net operating loss?

13 A. (Goodhue) Yes, ma'am.

14 Q. You mentioned in response to a question
15 earlier that, if you had excess cash, it
16 would be refundable to customers.

17 A. (Goodhue) How the rate stabilization funds
18 were constructed under 16-806, is that, if
19 those funds were over-funded in the next
20 pending rate case, the over-funding would be
21 refunded to customers over the succeeding
22 three years after that new permanent rate
23 structure is put in place. To the extent
24 that they are deficient from their allowed

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 levels, that deficiency would be collected in
2 the succeeding three years to refill them to
3 their impressed levels.

4 Q. Okay. And the target amount is that \$980,000
5 that we talked about.

6 A. (Goodhue) In the aggregate. Yes, ma'am.

7 Q. If it goes 50 percent above that --

8 A. (Goodhue) We have to file a rate case --

9 (Court Reporter interrupts.)

10 Q. That requires you to file a rate case?

11 A. (Goodhue) Yes, ma'am.

12 Q. And that's when you would refund the money to
13 customers.

14 A. (Goodhue) Once that rate case that was filed
15 resulted in a permanent rate change, included
16 in that permanent rate change is the cost of
17 refunding to customers that excess.

18 Q. Okay.

19 A. (Goodhue) Yes.

20 **BY COMMISSIONER GIAIMO:**

21 Q. So that 150 percent number, is that
22 150 percent of \$980,000 or \$5 million?

23 A. (Goodhue) \$980,000, because now the \$5
24 million was originally a rate stabilization

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 fund just for Pennichuck Water Works. As
2 it's been bifurcated and given to the
3 individual customers, it's on that granular
4 level.

5 Q. It becomes granular.

6 A. (Goodhue) Yes.

7 Q. Okay. So, basically if the fund gets over
8 about -- approaches 1.5 million, that's when
9 you come in for another rate case.

10 A. (Goodhue) That's when we would be mandated to
11 do that. That is correct. Chances are, we
12 would probably be filing a rate case before
13 that, depending on where our operating
14 expenses go. And based on the status of the
15 rate stabilization funds with that filing,
16 that still may result in a refund to
17 customers or a collection from customers
18 based on the impressed value.

19 Q. And why the 150 and not 125 or 120?

20 A. (Goodhue) That was just a target that was
21 discussed between the Staff, the OCA and the
22 Company.

23 COMMISSIONER GIAIMO: Okay. Thank
24 you.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 **BY COMMISSIONER BAILEY:**

2 Q. I guess, you know, my last kind of question
3 is what is the difference between what you
4 originally asked for and what you achieved in
5 the settlement agreement. And part of that
6 may have to do with the answer of what --

7 (Court Reporter interrupts.)

8 Q. -- the attorney is trying to locate.

9 A. (Goodhue) My understanding, and they're
10 pulling the data together, is that the
11 request we have in total is less than what
12 our original request was in the overall
13 revenue requirement relative to a percentage
14 increase. But we need to grab some numbers
15 here to clarify that for you.

16 COMMISSIONER BAILEY: Okay. All
17 right.

18 CHAIRMAN HONIGBERG: Mr. Head, can
19 you clarify this now, or do you need a few
20 more minutes?

21 MR. HEAD: I need to clarify I
22 think the "150 percent" answer, just to make
23 sure that's accurate on the record.

24 CHAIRMAN HONIGBERG: Okay. You can

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 do that on redirect. But I guess in terms of
2 what Commissioner Bailey's trying to track
3 down --

4 MR. HEAD: Let me just check with
5 Mr. Ware.

6 CHAIRMAN HONIGBERG: I mean,
7 Commissioner Giaimo has questions he can ask
8 while you continue to work on that.

9 MR. HEAD: Right. Thank you.

10 **BY COMMISSIONER GIAIMO:**

11 Q. Good afternoon.

12 A. (Goodhue) Good afternoon.

13 Q. All right. So I'm going to go to Bates
14 Page 10 of the settlement, Paragraph 4. And
15 help me understand this because I'm not sure
16 it's a fair apples-to-apples comparison being
17 drawn. And I appreciate some of the caveats
18 you put in your initial testimony, but let me
19 make sure I understand this right.

20 For non-North Country residents, we're
21 going to assume a 7.29 CCF number, and then
22 there are other examples of other customers.
23 Locke Lake, we have 3.5. All right. Then
24 Birch Hill, 3.5, and all the rest is 3.5.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Can you explain to me why we're using 3.5
2 here?

3 A. (Goodhue) That's actually based on historical
4 averages of their consumption patterns.

5 Q. Okay. Fair enough. But now I'm struggling
6 with understanding how this is an
7 apples-to-apples comparison when they use
8 half as much water every month, but we seem
9 to be comparing the customers. So I guess
10 what I'm saying is the actual annual increase
11 on an apples-to-apples comparison for Locke
12 Lake is not \$15 a year, it would be \$30 a
13 year; is that correct?

14 A. (Goodhue) No. The average customer there
15 uses 3.5 CCFs. Their average bill has been
16 \$58.51. And based on the permanent increase,
17 the reduction of the North Country capital
18 recovery surcharge and the step increase --
19 or actually, this is -- yeah, it's inclusive
20 of it -- their bill will go to \$59.79. So
21 this is based on looking at their actual bill
22 history for the average customer in that
23 water system.

24 Q. Okay. But in comparison to the non-North

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Country residents, in order to get an
2 apples-to-apples comparison of not their
3 monthly bill, but -- if you compare the same
4 amount of water withdrawal, you would need to
5 double the 3.5.

6 A. (Goodhue) Understood. And I guess perhaps
7 our intent here was just to give the basis
8 for the calculation. But to explain the
9 dollar impact for these customers based on
10 their own consumption patterns, you know,
11 rather than to normalize those, it's to say
12 this is what they have been consuming, this
13 is what they have been paying, and this is
14 what the impact would be of the rate
15 increase.

16 Q. Okay. Thanks for that distinction. I think
17 I just needed to make sure that I was
18 understanding it properly. And in order to
19 get -- as opposed to the monthly bill, but to
20 get a true apples-to-apples comparison, you
21 would need to double the consumption for
22 non-North Country --

23 A. (Goodhue) Correct.

24 Q. All right. Thanks.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 I'll give you the opportunity to maybe
2 re-answer a question that you answered
3 already, say it a different way. Is there a
4 more -- getting to the question the
5 Commissioner asked.

6 Is there a more equitable way to blend
7 these rates so that one subset of the same
8 customers don't have a 40 percent decrease
9 and the other percent see a 20 percent
10 increase?

11 A. (Goodhue) The history on the North Country
12 systems is that they are originally water
13 systems that were included in our Pittsfield
14 Aqueduct Company. And I believe it was the
15 2009 test-year case that, had they remained
16 with Pittsfield Aqueduct, the amount of
17 subsidy from the residents of Pittsfield to
18 those water systems, because of the
19 disproportionate amount of capital
20 investments that we had to make to those
21 systems, was going to be overly onerous. I'm
22 remembering a number like 243 percent
23 increase. It was to that magnitude.

24 Q. Okay.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 A. (Goodhue) So, in settlement of that case, it
2 was agreed between the parties, and approved
3 by the Commission, to move those water
4 systems from PAC to Pittsfield, but that the
5 customers in PEU should also not be
6 subsidizing that pre-existing capital, and as
7 such, the capital recovery surcharge came
8 over with them. So that was the reason for
9 that. Other than the North Country capital
10 recovery surcharge, they do all share the
11 same, common rates.

12 Q. Okay. Would your answer be similar if you
13 were suggesting blending of Penn Corp. as
14 opposed to -- you just talked about PEU --

15 A. (Goodhue) And PAC, yes.

16 Q. And PAC. Now, if we were to say to blend
17 them over the larger Penn Water --

18 A. (Goodhue) Pennichuck Water Works?

19 Q. Yes.

20 A. (Goodhue) It would be the same kind of thing.
21 In fact, there would not be an advantage at
22 this time to actually merge PEU in with PWW
23 because of the amount of subsidization. PWW
24 would be an incredible amount based on the

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 disparities.

2 Q. Same as --

3 A. (Goodhue) Yes.

4 Q. The logic is the same as --

5 A. (Goodhue) Exactly.

6 (Court Reporter interrupts.)

7 Q. The logic to the question was the same.

8 **BY COMMISSIONER BAILEY:**

9 Q. Aren't the PWW rates a lot lower than the PEU
10 rates?

11 A. (Goodhue) They are lower, but, you know, that
12 has to do with the broadness of their
13 customer base and the capital that's employed
14 there, yes.

15 Q. And are all the customers in PWW residents of
16 the City of Nashua?

17 A. (Goodhue) No, they are not. There's 11
18 communities served.

19 COMMISSIONER BAILEY: Okay.

20 Thanks.

21 **BY COMMISSIONER GIAIMO:**

22 Q. Has the Company done any analysis with
23 respect to what the rates would look like if
24 it was just done on inflation? From your

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 prior rate case from 2013 to 2018, would it
2 look similar? Would it be a 20 percent
3 increase if it was just inflation-based?

4 A. (Goodhue) Without a modification of the rate
5 methodology? Is that what you're saying?

6 Q. Right.

7 A. (Goodhue) I think we did do that analysis,
8 yes. The one caution there is, even with
9 that, I mean, there would be a rate increase,
10 but it would not be at a level that would
11 support our ability to meet our covenants and
12 our debt.

13 Q. Okay.

14 A. (Goodhue) And actually, Mr. Laflamme just
15 passed this to me.

16 (Witness reviews document.)

17 A. (Goodhue) Let me see. It would have been I
18 think this number right here.

19 (Witness reviews document.)

20 A. (Goodhue) Unfortunately, a case takes so
21 long, that you're familiar with schedules
22 initially and then you've got to re-address
23 and re-familiarize yourself. Bear with me
24 one moment if you could.

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 (Witness reviews document.)

2 A. (Goodhue) Yes, we were looking at a
3 23 percent increase if that was the case.

4 Q. So the actual delta between the two is
5 significant, 20 as opposed to 23 percent;
6 right?

7 A. (Goodhue) Correct.

8 COMMISSIONER GIAIMO: Okay.

9 Thanks.

10 **BY CHAIRMAN HONIGBERG:**

11 Q. I just have one thing, or one area I wanted
12 to ask about following up on Mr. Ranaldi's
13 questions.

14 He hypothesized the situation where
15 you'd have annual rate increases instead of
16 one rate increase after a number of years.
17 To do annual rate cases, you already talked
18 about how long that takes; right?

19 A. (Goodhue) That is correct.

20 Q. It's also colossally expensive; is it not?

21 A. (Goodhue) It is. I think what Mr. Ranaldi
22 was referring to was the discussion we had
23 about material operating expense, annual
24 surcharge --

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 Q. And that's something that counsel asked you
2 about on direct; right?

3 A. (Goodhue) That's correct --

4 Q. But in addition to that possibility, you all
5 have agreed to put this, what you all call a
6 "QCPAC," but I like to call a "Quick PAC"
7 system in place, and that helps to smooth out
8 the increases as well; does it not?

9 A. (Goodhue) That's correct. If you look at --
10 and I appreciate the "Quick PAC." I've quoted
11 you to other people, by the way. It's a
12 great acronym.

13 The three buckets of revenue -- the
14 CBFRR, again, is a fixed revenue component
15 going forward. The debt service revenue
16 requirement with the QCPAC really does take
17 care of increases in debt service between
18 rate cases. Fantastic. And what it leaves
19 to the side is the OERR portion, which is
20 what Mr. Ranaldi was speaking to.

21 CHAIRMAN HONIGBERG: That's all I
22 had.

23 Mr. Head, have you got the numbers
24 worked out?

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 MR. HEAD: I do.

2 CHAIRMAN HONIGBERG: How do you
3 want to do this? Is it something you, as a
4 lawyer, can point us to in the exhibits, or
5 do you want to ask questions of the witness?

6 MR. HEAD: I think it's easier if I
7 just identify where the numbers are coming
8 from in the documents.

9 CHAIRMAN HONIGBERG: Okay.

10 MR. HEAD: I may have to mark the
11 original filing, as you originally suggested,
12 if the record needs to be clean. I'll say
13 what it says.

14 CHAIRMAN HONIGBERG: Okay.

15 MR. HEAD: So in the original
16 filing, on Bates Page 37, the Company was
17 asking for annual revenue of approximately
18 1,380,060, or 20.08 percent.

19 Looking at the settlement agreement
20 on Bates Page 3, where we were talking about
21 where did the 1.26 million come from, or
22 17.55 percent, if you take the annual revenue
23 total request that I read from Page 37 of the
24 filing, subtract the 121,070 on Bates Page 3,

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 you get the 1.26 million that's on Bates
2 Page 3. So then you would compare the -- in
3 the original filing, the 1,380,060 --
4 sorry -- to the settlement, Bates Page 7,
5 where the settlement dollar amount is
6 1,304,272, or 18.97 percent. Oops, that's
7 wrong. Sorry. Wrong one. No, that's right.

8 MS. ROSS: What was the second
9 reference to, page what?

10 MR. HEAD: Seven.

11 MS. ROSS: Page 7 of the
12 settlement?

13 MR. HEAD: Yeah.

14 I want to cross-check one thing.
15 Sorry. Yeah, that's right.

16 COMMISSIONER BAILEY: So the
17 difference between the number that you
18 settled on and the number that you asked for
19 is the difference between \$1,380,060 and
20 \$1,304,272.

21 MR. HEAD: In percentages, it would
22 be, in the original filing, 20.08 percent,
23 and in the settlement, 18.97 percent.

24 COMMISSIONER BAILEY: Or about

[WITNESS PANEL: GOODHUE | LAFLAMME]

1 \$76,000.

2 MR. HEAD: Or about \$76,000, yes.

3 COMMISSIONER BAILEY: Okay. Thank

4 you.

5 CHAIRMAN HONIGBERG: All right.

6 Mr. Head or Ms. Ross, do you have any

7 redirect for the panel?

8 MR. HEAD: Thank you, Mr. Chairman.

9 **REDIRECT EXAMINATION OF MR. GOODHUE**

10 **BY MR. HEAD:**

11 Q. I have one question, I believe, on the issue
12 of 150 percent. When a new rate case comes
13 up -- Mr. Goodhue, can you turn to Page 24 of
14 the settlement.

15 A. (Goodhue) Yes.

16 Q. And in that Paragraph C on Page 24 of the
17 settlement, it talks about the target of the
18 combined PEU rate stabilization funds. Do
19 you see that?

20 A. (Goodhue) I do.

21 Q. And that the 150 percent is 150 percent of
22 the combined target amount; is that correct?

23 A. (Goodhue) That is correct.

24 Q. So, in terms of what that 150 percent

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 reference is, it's the target of the funds
2 most recently established by the Commission.
3 If you look on Page 19, that has the listing
4 of what is the initial funding and the
5 estimated adequate funding. And in that
6 first paragraph below, it says that if PEU
7 determines that the levels of its RSF
8 accounts become inadequate relative to the
9 operating requirements, the Company will
10 submit a financing petition to request
11 approval to issue debt for the purpose of
12 obtaining funds necessary to fully provide
13 for the RSFs. And I just wanted to clarify.

14 When you said the "150 percent"
15 reference, the 980, the total amount that's
16 in the total RSFs, that could change in the
17 future if the Commission decided that that
18 amount should increase.

19 A. (Goodhue) That is correct.

20 Q. Okay. But as of today in the settlement, it
21 would be 980.

22 A. (Goodhue) Yes.

23 Q. Thank you.

24 In terms of PEU and the system, when --

[WITNESS PANEL: GOODHUE|LAFLAMME]

1 how was it that Pennichuck ultimately took
2 over that system? And what were the issues
3 in that system that are driving some of these
4 current costs?

5 A. (Goodhue) One of the key differences between
6 PEU and Pennichuck Water Works is Pennichuck
7 Water Works is, I'm going to say, the
8 "historical Pennichuck system," been owned
9 since 1852, and it's grown organically and
10 then has added some community water systems.
11 PEU really came out of a number of activities
12 with the Pennichuck Corporation, really in
13 response to certain requests from the DES,
14 participated in taking over certain troubled
15 water system that began with the acquisition
16 of a number water systems of consumers'
17 water, and then when the DES had certain
18 deficient system in the state, they used to
19 come to us and look to us to were we willing
20 to acquire a system. The three North Country
21 water systems are prime examples of that
22 situation. And the good news is we've
23 provided water to customers for many years
24 there. There bad news is that some of those

{DW 17-128} [PENNICHUCK EAST UTILITY, INC.] {07-25-18}

1 required really some material capital
2 investments, and continue to do so.

3 MR. HEAD: Thank you. No other
4 questions.

5 CHAIRMAN HONIGBERG: Ms. Ross, did
6 you have any other questions?

7 MS. ROSS: No further direct.
8 Thank you.

9 CHAIRMAN HONIGBERG: All right,
10 gentlemen. Thank you. You can return to
11 your seats.

12 There are no other witnesses;
13 correct?

14 MR. HEAD: That's correct.

15 CHAIRMAN HONIGBERG: Without
16 objection, we'll strike I.D. in Exhibit 3.
17 We're going to be holding the record open for
18 Exhibit 4, which is a record request that was
19 made.

20 If there's nothing else, it's time
21 for the parties to sum up and basically tell
22 us what you think we should do.

23 Mr. Ranaldi, do you understand?

24 It's basically a closing statement. Are you

1 willing to go first, or would you prefer to
2 hear somebody else go before you?

3 MR. RANALDI: Up to you, sir. I'll
4 go first.

5 CHAIRMAN HONIGBERG: In the normal
6 course, you would go first.

7 CLOSING STATEMENTS

8 MR. RANALDI: Okay. I'm in total
9 agreement with the numbers, per se. Just
10 looking forward, I want to make sure that the
11 operating expenses that seems to be very
12 volatile --

13 (Court Reporter interrupts.)

14 MR. RANALDI: I understand that the
15 bond reserves are all fixed. The debt, as
16 far as paying off capital expenditures were
17 all fixed. It's the operating costs, that
18 that could be year over year so that we're
19 not faced with 20 percent increases. That
20 really is a problem here.

21 My other concern is if you have to
22 borrow money just to help pay this off,
23 that's additional costs to us, especially if
24 you have to pay the principle, the interest,

1 plus the cost of getting the loan from the
2 banks. So, any way that monies can be
3 stretched out so that it helps those who are
4 on fixed income would be appreciated.

5 As far as the 20 percent, I have
6 heard the numbers going through the tech
7 sessions. They did a great job, as far as
8 I'm concerned. And I wish there was a
9 magical way to have it lowered. But when you
10 can't even depend on how much money you're
11 going to get in revenue, that's why I brought
12 that up also, on year over year -- I remember
13 looking at certain documents where there was
14 a very big drop in the amount of volume, as
15 far as profit was coming in. And to try to
16 stretch that out over three or four years I
17 think is -- we don't have equity anymore.
18 It's very dangerous. So that's all I have to
19 say. Thank you.

20 CHAIRMAN HONIGBERG: Thank you, Mr.
21 Ranaldi.

22 Mr. Buckley.

23 MR. BUCKLEY: Thank you, Mr.

24 Chairman. The Office of Consumer Advocate

1 sees the rates as set forth within the
2 settlement agreement as just and reasonable.
3 We would request the opportunity to also
4 review the record request posed by
5 Commissioner Bailey relative to the various
6 capital additions. We do recommend the
7 Commission's approval of this settlement
8 agreement.

9 And I would just add that we are
10 sympathetic to the concerns expressed by Mr.
11 Ranaldi regarding the magnitude of this
12 specific rate increase and would very much be
13 willing to explore opportunities to allow for
14 a more frequent way to account for various
15 cost increases that we know are likely to
16 occur. I think in some instances we referred
17 to it as the "operating expense revenue
18 requirement surcharge," or I think I referred
19 to it as a "operating expense cost
20 escalator." But we do believe that a change
21 in ratemaking structure of that magnitude is
22 something that should probably be submitted
23 to the Commission within the original
24 petition in whatever rate case that's filed.

1 And we would look forward to reviewing such a
2 change, without prejudice, within a future
3 case from this company.

4 CHAIRMAN HONIGBERG: Thank you, Mr.
5 Buckley.

6 Ms. Ross.

7 MS. ROSS: Thank you. As you know,
8 Staff has signed the settlement, supports the
9 settlement, and believes it would be in the
10 public interest for the Commission to approve
11 it. And we note that this is a company that
12 has been operating under Commission
13 regulation for many years, has experienced
14 staff. There have not been significant
15 issues when the books and records of this
16 company have been audited. And Staff
17 believes the new ratemaking mechanism is
18 appropriate and does not create any unusual
19 burdens on Staff. But Staff will be
20 monitoring, both through Audit Staff and
21 through Water Staff, both PWW and PEU, as
22 they move forward under this new ratemaking
23 regime. And if issues begin to emerge, they
24 will certainly make the Commission aware of

1 that. But at this point, Staff believes this
2 is an appropriate arrangement with PEU.

3 Thank you.

4 CHAIRMAN HONIGBERG: Thank you,
5 Ms. Ross.

6 Mr. Head.

7 MR. HEAD: Thank you, Mr. Chairman,
8 members of the Commission. Obviously, we
9 seek approval of the settlement. The
10 methodology that's outlined in the settlement
11 would prevent insolvency, as you heard the
12 testimony of PEU; allow for annual step
13 adjustments through the QCPAC process, which
14 does not exist in any form now with this
15 company, which would avoid rate shock; places
16 PEU in a better position relative to
17 financial covenants in their lending and
18 potentially the overall total borrowing costs
19 associated with the debt; move towards a
20 stronger cash flow model, as the testimony
21 described; and provides RSF accounts as a
22 backstop to PEU's revenue requirements.

23 The Company certainly recognizes
24 and appreciates the concerns relative to the

1 percentage increase in what is being sought
2 in this case. It is four years of activity
3 in which there's not been any adjustments to
4 the rates over those four years, with
5 significant capital investments that have
6 been occurring as a result of just the
7 quality of the capital needs for this
8 particular system. The Company did describe
9 its own efforts to try to reduce the overall
10 financial impact on its customers, including
11 only applying 50 percent to the five-year
12 averaging, eliminating the four CCF minimum,
13 which was done on the temporary rates. So
14 that was done early on in this process as
15 opposed to waiting for the permanent rates
16 and also the reduction in the North Country
17 capital recovery surcharge. And, again,
18 those were all being done with the goal,
19 ultimately, of reducing the overall impact.
20 But unfortunately in order for the costs to
21 be recovered, we believe that the request is
22 fair and reasonable and in the public
23 interest relative to the needs of this
24 company and would ask that the settlement

1 approval be approved.

2 We will certainly follow up with
3 the request that was made relative to the
4 capital improvements and have them for the
5 Commission review.

6 CHAIRMAN HONIGBERG: Thank you,
7 Mr. Head.

8 We will leave the record open for
9 Exhibit 4. Otherwise, we'll adjourn the
10 hearing and take the matter under advisement
11 and issue an order as quickly as we can.
