

DG-17-198
3/9/18

Dear Executive Director:

i oppose the Granite Bridge Pipeline because I believe the real costs of this gas pipeline expansion far outweigh any potential benefit NH residents might realize. The risks associated with underground pipelines threaten the safety and health of our citizens and our environment. I feel that the damaging impacts on the climate from the increased use of natural gas warrant restrictions on such development.

It would make more sense both economically and environmentally to use existing LNG storage, repair leaks in existing infrastructure (even if 'acceptable' leaks) invest in energy efficiency measures, and in developing renewable energy options for NH residents.

Sincerely,

Nancy Kelley-Gillard
