

Dear PUC Commissioners,

You have an awesome responsibility. You can ease our transition to saving energy and reducing the crushing costs of climate change and fossil fuel use to our ratepayers and society. Please do not throw out the agreement achieved by the utilities and stakeholders to improve energy efficiency over the coming three years.

Every step we take now to prolong investments in inefficient fossil fuel infrastructure digs us deeper into the hole that we will pay dearly to get out of. Studies show that our fossil fuel habit inflicts health costs and suffering greater than the cost of transitioning to clean energy.

How will you explain your vote to your grandchildren when they are old enough to know what you have done?
