6. Switched Access Service

6.3 Description of Switched Access Services

6.3.3 800 Data Base Access Service	
A. (Continued)	
5.	855
6.	866
7.	877
8.	888
B.	800 database access service is a LATA-wide offering utilizing originating trunk side switched access service. The service provides for the forwarding of end user dialed 800+NXX-XXXX calls to a Telephone Company switching point which will initiate a query to the database to perform the carrier identification function. The customer has the option of having the dialed 800 number (i.e., 800-NXX-XXXX) or if the 800 to POTS number translation feature is specified, a translated ten digit POTS number (i.e., NPA-NXX-XXXX) is delivered to the customer premises switch capable of performing the carrier identification function. Based on the NXX, the call is forwarded to the appropriate IC.
C.	No access code is required for 800 database access service. When a 1+800+NXX-XXXX call is originated by an end user, the Telephone Company will perform the carrier identification function based on the dialed digits to determine the IC location to which the call is to be routed. The carrier identification function will be available at suitably equipped end offices or access tandem switches. If the call originates from an end office switch not equipped to provide the carrier identification function, the call will be routed to the nearest office at which the function is available. Once carrier identification has been established, the call will be routed to the IC. Calls originating from an end office to which the IC has not ordered 800 database access service, will not be completed.
D.	The provision of 800 database access service requires direct access by the customer or other authorized party, to the 800 SMS.
E.	The manner in which 800 database access service is provisioned is dependent on the status of the end office from which the service is provided, and/or the status of the customer (i.e., MTS/WATS provider or MTS/WATS type provider). 800 database access service is provisioned as FGD.
1.	Unless prohibited by technical limitations (e.g., different dialing plans), the IC's 800 database access service traffic may, at the option of the IC, be combined in the same trunk group arrangement with the IC's non-800 access service traffic. When required by technical limitations, a separate trunk group must be established for 800 database access service.

(D)

6. Switched Access Service

6.3 Description of Switched Access Services

6.3.3 800 Data Base Access Service

- F. 800 traffic carried over direct end office routed trunks is available only at end offices equipped with 800 access SSP functionality. 888 traffic carried over direct end office routed trunks is available only at end offices equipped with 888 access SSP functionality. All such traffic originating from end offices not equipped with the appropriate SSP function must be routed via an access tandem at which the function is available and the 800 access service must be ordered accordingly. SSP locations are identified in the NECA Tariff FCC No. 4.

(D)

6. Switched Access Service

6.7 Application of Rates and Charges

6.7.1 General

- | | |
|----|---|
| A. | Local transport termination, local transport facility, tandem switching, interconnection charge and local switching rates are applied to all minutes of use measured as specified in Section 6.4.4. |
| B. | As specified in the PUC's Order No. 20,077, switched access originating and/or terminating charges apply to all intrastate messages which make use of switched access subject to this tariff. |

6.7.2 CCSA Rates

- | | |
|----|--|
| A. | CCSA rates are applied as detailed in The FairPoint Telephone Companies Tariff FCC No. 1, Section 6.1.3. |
|----|--|

6.7.3 Reserved for Future Use

		(C)
		(D)
		(D)

6.7.4 Local Transport Rates

- | | |
|----|--|
| A. | Rate regulations for DS3 switched access entrance facilities are specified in The FairPoint Telephone Companies Tariff FCC No. 1, Section 6.7.1. For all other switched access entrance facilities, the rate applies on a recurring monthly basis for the capacity of the entrance facility (i.e., DS1, VG) ordered. |
| B. | The local transport termination rate is applied per minute of use. |
| C. | The local transport facility rate is applied per mile, per minute of use. When the local transport facility mileage is zero (i.e., the end office switch or WSO, as appropriate, and the customer's serving wire center are collocated), the local transport facility rate does not apply. |
| D. | The tandem switching rate is applied per minute of use. |
| E. | The interconnection charge is applied per minute of use. |
| F. | For direct trunked transport, the channel mileage applies on a fixed and per mile monthly basis. When the channel mileage is zero (i.e., the end office switch or WSO, as appropriate, and the customer's serving wire center are located in the same building) the channel mileage rates do not apply. |

Issued: May 28, 2021

Effective: July 1, 2021
