Eligibility shall be based on the reasonable discretion of the Company and subject to verification of heating usage. U.S. Department of Labor Standard Industry Classification Code will determine eligibility for this tariff. Dual fuel customers may be required to sign annual contracts with minimum usage requirements in order to qualify for service under this tariff.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

14 COMMERCIAL/INDUSTRIAL SERVICE: MEDIUM ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-52

Availability
This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 10,000 therms and less than or equal to 100,000 therms and a Winter Period usage less than 67% of annual usage as determined by the Company's records and procedures.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter: $5.3197~~4.8360~~ per day or $159.59~~145.08~~ per 30 day month

Winter Period:	First 1000* therms per 30 day month at $0.2739~~2052~~ per therm
	All over 1000 therms per 30 day month at $0.1897~~1367~~ per therm
Summer Period:	First 1000* therms per 30 day month at $0.2155~~1487~~ per therm
	All over 1000 therms per 30 day month at $0.1192~~0845~~ per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74 of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities~~ Commission ~~(NHPUC)~~. The delivery charge presented above is exclusive of these charges. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly, daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

15 COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, LOAD FACTOR LESS THAN 90% RATE
CLASSIFICATION NO. G-53

Availability
This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 100,000 therms, a Winter Period usage less than 67% of annual usage, and a 12 month average usage less than 90% of the average usage of December, January and February as determined by the Company's records and procedures.

Character of Service
Natural gas or equivalent will be supplied at a heat content value of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge ;

Customer Charge Per Meter:$23.4937~~21.3580~~ per day or $704.81~~640.74~~ per 30 day month

Winter Period: All therms per 30 day month at $0.1741~~1434~~ per therm

Summer Period: All therms per 30 day month at $0.0835~~0688~~ per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74 of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities~~ Commission ~~(NHPUC)~~. The delivery charge presented above is exclusive of these charges. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly,

daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

16 COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, LOAD FACTOR GREATER THAN 90% RATE CLASSIFICATION NO. G-54

Availability
This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 100,000 therms, a Winter Period usage less than 67% of annual usage, and a 12 month average usage greater than or equal to 90% of the average usage of December, January and February as determined by the Company's records and procedures.

Character of Service
Natural gas or equivalent will be supplied at a heat content value of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter: $23.4937~~21.3580~~ per day or $704.81~~640.74~~ per 30 day month

Winter Period: All therms per 30 day month at $0.0667~~0547~~ per therm

Summer Period: All therms per 30 day month at $0.0362~~0297~~ per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74 of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities~~ Commission ~~(NHPUC)~~. The delivery charge presented above is exclusive of these charges. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly,

daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

17 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-55

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-51.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$2.4097~~0956~~ per day or $72.29~~62.87~~ per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.4498~~3107~~ per therm
	All over 100 therms per 30 day month at $0.2678~~2019~~ per therm
Summer Period:	First 100* therms per 30 day month at $0.4498~~3107~~ per therm
	All over 100 therms per 30 day month at $0.2678~~2019~~ per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74-A of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities~~ Commission ~~(NHPUC)~~. The delivery charges presented above are exclusive of these charges. Refer to Page 74-A of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is made in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00

Terms and Conditions

Eligibility shall be based on the reasonable discretion of the Company and subject to verification of heating usage. U.S. Department of Labor Standard Industry Classification Code will determine eligibility for this

tariff. Dual fuel customers may be required to sign annual contracts with minimum usage requirements in order to qualify for service under this tariff.

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Commercial/Industrial Rate G-51.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

18 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: MEDIUM ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-56

Availability
This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-52.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter: $6.9157~~6.2868~~ per day or $207.47~~188.60~~ per 30 day month

Winter Period:	First 1000* therms per 30 day month at $0.3561~~2668~~ per therm
	All over 1000 therms per 30 day month at $0.2466~~1777~~ per therm
Summer Period:	First 1000* therms per 30 day month at $0.2802~~1933~~ per therm
	All over 1000 therms per 30 day month at $0.1550~~1099~~ per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74-A of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

21 OUTDOOR GAS LIGHTING

Availability

This rate is available for residential outdoor gas lighting where such service is provided from the Company's existing delivery system to a standard gas light fixture or fixtures, located on the customer's premises, and when it is not feasible to meter such service along with other gas used on the premises and bill the same under the rate in effect for all other services. Service under this rate is available at those locations which were receiving service hereunder as of July 1, 2015, and which have continuously received service hereunder since that date.

Rate Per Light Per Month	$11.34

The above rates shall be adjusted to reflect the recovery of all applicable taxes.

Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a location, an account charge is incurred in addition to all other charges. The account charge is $20.00 when the visit to the location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Meters are read and bills are presented monthly.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

Mid Period Adjustment - December 1, 2014			($0.2427)
Mid Period Adjustment - January 1, 2015			($0.0718)
Revised Non-Fixed Price Option Cost of Gas Rate - Effective January 1, 2015 (per therm)			$1.3924
Pursuant to tariff section 17(d), the Company may adjust the approved cost of gas rate upward on a monthly basis to the following rate:			
Maximum Cost of Gas Rate - Non-Fixed Price Option (per therm)			$2.1336

29 CALCULATION OF FIRM TRANSPORTATION COST OF GAS RATE

II. RATE SCHEDULES
Calculation of Firm Transportation Cost of Gas Rate
PERIOD COVERED: WINTER PERIOD, NOVEMBER 1, 2016 THROUGH APRIL 30, 2017
(Refer to text in Section 16(Q) Firm Transportation Cost of Gas Clause)

(Col 1)	(Col 2)		(Col 3)		(Col 4)
ANTICIPATED COST OF SUPPLEMENTAL GAS SUPPLIES:					
PROPANE	$ 283,609				
LNG	1,513,890				
TOTAL ANTICIPATED COST OF SUPPLEMENTAL GAS SUPPLIES	1,797,499				
ESTIMATED PERCENTAGE USED FOR PRESSURE SUPPORT PURPOSES	9.9%				
ESTIMATED COST OF LIQUIDS USED FOR PRESSURE SUPPORT PURPOSES	$ 177,952				
PROJECTED FIRM THROUGHPUT (THERMS):					
FIRM SALES	90,536,024		64.4%		
FIRM TRANSPORTATION SUBJECT TO FTCG	50,086,696		35.6%		
TOTAL FIRM THROUGHPUT SUBJECT TO COST OF GAS CHARGE	140,622,721		100.0%		
TRANSPORTATION SHARE OF SUPPLEMENTAL GAS SUPPLIES	35.6%	x	$ 177,952	=	$ 63,383
PRIOR (OVER) OR UNDER COLLECTION					(33,912)
NET AMOUNT TO COLLECT FROM (RETURNED TO) TRANSPORTATION CUSTOMERS					$ 29,471
PROJECTED FIRM TRANSPORTATION THROUGHPUT					50,086,696
FIRM TRANSPORTATION COST OF GAS					$0.0006

30 ENVIRONMENTAL SURCHARGE – MANUFACTURED GAS PLANTS

	Environmental Surcharge - Manufactured Gas Plants		
Manufactured Gas Plants			
Required annual Environmental increase	$2,893,504		
DG 10-17 Base Rate Revision Collections	$0		
Environmental Subtotal	$2,893,504		
Overall Annual Net Increase to Rates	$2,893,504		
Estimated weather normalized firm therms billed for the twelve months ended 10/31/17 - sales and transportation	186,909,214	therms	
Surcharge per therm	$0.0155	per therm	
Total Environmental Surcharge	$0.0155		

31 RATE CASE EXPENSE FACTOR CALCULATION

Liberty Utilities (Energy North Natural Gas) Corp. d/b/a Liberty Utilities		
Local Distribution Adjustment Charge (LDAC) decrease due to Rate Case Expense and Recoupment		
For LDAC effective November 1, 2016 - December 31, 2016		
Docket No. DG 14-180		
1	August 1, 2016 Balance of Acct. 8840-2-0000-10-1930-1745	$46,132
2	Estimated August 2016 - October 2016 Recovery	($292,028)
3	Estimated August 2016 - October 2016 Interest	($761)
4		
5	Estimated Balance November 1, 2016	($246,658)
6	Estimated November 2016 - December 2016 Interest	($791)
7		
8	Estimated Remaining Recovery	($247,449)
9		
10	Estimated November 2016 - December 2016 Sales (therms)	34,894,997
11		
12	RCE rate per therm November 2016 - December 2016	($0.0071)

DATED: April 28, 2017 ISSUED BY: /s/James M. Sweeney
James M. Sweeney
EFFECTIVE: July 1, 2017 TITLE: President

Authorized by NHPUC Order No. xx,xxx dated Month Day,Year, in Docket No. DG 17-048

III. DELIVERY TERMS AND CONDITIONS

1 RATES AND CHARGES

1.1 The Company shall apply this tariff on a non-discriminatory and non-preferential basis to all Customers who obtain service from the Company, except as this tariff is explicitly modified by order of the NHPUC. The provisions of Part III Section 20 of this tariff will specifically apply to all entities designated by the Customer as set forth in Section 20.5 to supply Gas to a Designated Receipt Point for the Customer's account.

1.2 The Company reserves the right to impose reasonable fees and charges pursuant to the various provisions of this tariff.

1.3 In the event that the Company incurs minimum bill, inventory, transition, take or pay, imbalance, or any other charges associated with the provision of Delivery Service to Customers, the Company may impose an additional charge on the Suppliers serving said Customers as approved by the NHPUC.

2 DEFINITIONS

Adjusted Target Volume ("ATV)	The volume of Gas determined by the Company using a Consumption Algorithm and required to be nominated and delivered each Gas Day by the Supplier on behalf of Customers taking non-daily metered Delivery Service.
Aggregation Pool	One or more Customer accounts whose Gas Usage is served by the same Supplier and aggregated pursuant to Section 20.6 of this tariff for operational purposes, including but not limited to nominating, scheduling, and balancing Gas deliveries to Designated Receipt Point(s) within the associated Gas Service Area.
Annual Reassignment Date	Five (5) Business Days prior to November 1 of each year when the Company reassigns Capacity to Suppliers pursuant to Section 11.6 of this tariff.
Assignment Date	Five (5) Business Days prior to the first Gas Day of each month when the Company assigns Capacity to Suppliers pursuant to Section 11.4 of this tariff.
Authorization Number	A number unique to the Customer generated by the Company and printed on the Customer's bill that the Customer must furnish to the Supplier to enable the Supplier to obtain the Customer's Gas Usage information pursuant to Section 20.4, and to initiate or terminate Supplier Service as set forth in Section 20.5 of this tariff.
Btu	One British thermal unit; i.e., the amount of heat required to raise the temperature of one pound of water one degree Fahrenheit at sixty degrees (60°) Fahrenheit.
Business Day	Monday through Friday excluding holidays recognized by the Company. Where relevant, a Business Day shall consist of the hours during which the Company is open for business with the public. ***If any performance date referenced in this Tariff is not a Business Day, such performance shall be the next succeeding Business Day***.
Capacity	Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity as defined in this tariff.

Capacity Allocators	The estimated proportions of the Customer's Total Capacity Quantity that comprise Pipeline Capacity, Storage Withdrawal Capacity and Peaking Capacity.
Capacity Mitigation Service	The service available to Suppliers in accordance with Section 11.10.
City Gate	The interconnection between a Delivering Pipeline and the Company's distribution facilities.
Commodity	See Gas.
Company	Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities
Company Gas Allowance	The difference between the sum of all amounts of Gas received into the Company's distribution system (including Gas produced by the Company) and the sum of all amounts of Gas delivered from the Company's distribution system divided by said amount of Gas received. Such difference shall include but not be limited to Gas consumed by the Company for its own purposes, line losses, and Gas vented and lost as a result of force majeure, excluding Gas otherwise accounted for.
Company-Managed Supplies	Capacity and Supply contracts held and managed by the Company and made available to the Supplier pursuant to Section 11.9 of this tariff including Supply-sharing contracts and load-management contracts.
Consumption Algorithm	A mathematical formula used to estimate a Customer's daily consumption.
Critical Day	In accordance with Section 16 of this tariff, a day declared at any time by the Company in its reasonable discretion when unusual operating conditions may jeopardize operation of the Company's distribution system.
Customer	The recipient of Delivery Service whose Gas Usage is recorded by a meter or group of meters at a specific location and who is a customer of record of the Company.
Daily Baseload	The Customer's average usage per Gas Day that is assumed to be unrelated to weather.
Daily Index	The mid-point of the range of prices as published by Gas Daily under the heading "Daily Price Survey, Midpoint, Citygates, Tennessee/Zone 6 (delivered)" for the relevant Gas Day listed under "Flow date(s)". In the event that the Gas Daily index becomes unavailable, the Company shall apply its daily marginal cost of Gas as the basis for this calculation until such time that the NHPUC approves a suitable replacement.
Dekatherm	Ten Therms.
Delivery Point	The interconnection between the Company's facilities and the Customer's facilities.
Delivery Service	The distribution of Gas by the Company on any Gas Day from the Designated Receipt Point to the Customer's Delivery Point and related Customer services.
Design Peak Season	The forecasted Peak Season during which the Company's system experiences the highest aggregate Gas Usage.

Designated Receipt Point — For each Customer, the Company designated interconnection between a Transporting Pipeline and the Company's distribution facilities at which point, or such other point as the Company may designate from time to time for operational purposes, the Supplier will make deliveries of Gas for the Customer's account.

Designated Representative — The designated representative of the Customer, who shall be authorized to act for, and conclusively bind, the Customer regarding Delivery Service in accordance with the provisions of Section 21 of this tariff.

Gas — Natural Gas that is received by the Company from a Transporting Pipeline at the Designated Receipt Point and delivered by the Company to the Delivery Point for the Customer's account. In addition, the term shall include amounts of vaporized liquefied natural Gas and/or propane-air vapor that are introduced by the Company into its system and made available to the Customer as the equivalent of natural Gas that the Customer is otherwise entitled to have delivered by the Company.

Gas Day — A period of twenty-four (24) consecutive hours beginning at 10:00 a.m., E.T., and ending at 10:00 a.m., E.T., the next calendar day, or other such hours used by the Transporting Pipeline.

Gas Service Area — An area within the Company's distribution system as defined in Section 4 of this tariff, for the purposes of administering Capacity assignments, Nominations, balancing, imbalance trading, and Aggregation Pools.

Gas Usage — The actual quantity of Gas used by the Customer as measured by the Company's metering equipment at the Delivery Point.

Heating Degree Day — A measure used to estimate weather-sensitive Gas consumption calculated by subtracting the average temperature for each day from the number 65. Each degree day that represents a degree below 65 is considered a Heating Degree Day.

Heating Factor — The Customer's estimated weather-sensitive Gas consumption per Heating Degree Day.

MMBtu — One million Btus.

Maximum Daily Peaking Quantity ("MDPQ") — The portion of a Customer's Total Capacity Quantity identified and allocated as Peaking Capacity, such that the maximum daily amount of Gas that can be withdrawn from a Supplier's Peaking Service Account pursuant to Section 14 of this tariff shall be equal to the sum of the MDPQs for all Customers in that Supplier's Aggregation Pool.

Month — A calendar month of Gas Days.

Monthly Index — The average of the Daily Index numbers for all Gas Days in a Month.

NHPUC — The New Hampshire Public Utilities Commission.

Nomination — The notice given by the Supplier to the Company that specifies, in accordance with the Standard Nomination Form attached as Attachment A, an intent to deliver a quantity of Gas to the Designated Receipt Point(s) on behalf of one or more Customers, including the volume to be received, the Designated

	Receipt Point(s), the Transporting Pipeline, the delivering contract(s), the shipper, and other such non-confidential information as may be reasonably required by the Company.
Off-Peak Season	The consecutive months of May to October, inclusive.
Operational Flow Order (“OFO”)	The Company’s instructions to the Supplier to take such action as conditions require including, but not limited to, diverting Gas to or from the Company’s distribution system pursuant to Section 16 of this tariff.
Peak Day	The forecasted Gas Day during which the Company’s system experiences the highest aggregate Gas Usage.
Peak Season	The consecutive months of November to April, inclusive.
Peaking Capacity	Capacity in addition to upstream pipeline and underground storage Capacity normally used by the Company to meet daily requirements during a Design Peak Season and acquired specifically for the Peak Season.
Peaking Service	A Company-managed resource consisting of Peaking Capacity and Peaking Supply.
Peaking Service Account	An account whose balance indicates the total volumes of Peaking Service resources available to a Supplier, where the maximum balance in the account shall equal the Peaking Supply assigned to the Supplier pursuant to this tariff.
Peaking Service Rule Curve	A system of operational parameters associated with the use of the Company’s Peaking Capacity including, but not limited to, indicators of the necessary levels of Peaking Supply that must be maintained in Suppliers’ Peaking Service Accounts in order for the Company to meet system demands under Design Peak Season conditions. The Company will communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Peaking Service Rule Curve as identified in Section 14 of this tariff.
Peaking Supply	The aggregate amount of Supply in excess of upstream pipeline and underground storage Supply required to meet the Company's forecasted Supply needs during a Design Peak Season and acquired specifically for the Peak Season.
Peaking Supply Allocator	An allocation factor that represents the proportion of a Customer’s estimated Gas Usage during the Design Peak Season that is generally served with Peaking Service supplies.
Pipeline Capacity	Transportation capacity on interstate pipeline systems normally used for deliveries of Gas to the Company’s city gates, exclusive of Storage Withdrawal Capacity.
Pre-Determined Allocation	Instructions from the Supplier to the Company for the method allocation of discrepancies in confirmed Nominations among the Supplier’s Aggregation Pools and/or Customers as set forth in the Supplier Service Agreement.
Rate Schedule	The schedule of rates included in this tariff.
Reference Period	A period of at least twelve (12) months for which a Customer’s Gas Usage information is typically available to the Company.

Sales Service	Commodity service provided on a firm basis to a Customer who is not receiving Supplier Service, in accordance with the provisions set forth in this tariff. The provision of Sales Service shall be the responsibility of the Company and shall be provided to the Customer by the Company or its designated Supplier pursuant to law or regulation.
Seasonal Storage Capacity	Contracts for Capacity in off-system storage facilities used to accumulate and maintain Gas inventories for re-delivery to the Company's city gates normally during the Peak Season.
Storage Withdrawal Capacity	Capacity for the withdrawal of Gas inventories maintained in off-system storage facilities, as well as the Pipeline Capacity used to deliver such Gas to the Company's city gates.
Supplier	Any entity that has met the Company's requirements set forth in Section 20 of this tariff and that has been designated by a Customer to supply Gas to a Designated Receipt Point for the Customer's account; provided, however, that a Customer may act as its own Supplier in accordance with Section 5.2 of this tariff.
Supplier Service	The sale of Gas to a Customer by a Supplier.
Supplier Service Agreement	An agreement, substantially in the form set forth in Attachment A, which must be executed by the Company and a Supplier in order for the Supplier to serve Customers on the Company's system.
Supply	See Gas.
Therm	An amount of Gas having a thermal content of 100,000 Btus.
Total Capacity Quantity	The total amount of Capacity assignable to a Supplier on behalf
("TCQ")	of a Customer.
Transporting Pipeline	The interstate pipeline company that transports and delivers Gas to the Designated Receipt Point.

3 CHARACTER OF SERVICE

3.1 All rates within Part II Rate Schedule are predicated upon service to a Customer at a single Delivery Point and metering installation, except as otherwise specifically provided by a given rate. Where service is supplied to a Customer at more than one Delivery Point or metering installation, each single Delivery Point or metering installation shall be considered to be a separate Customer for purposes of applying the Rate Schedule, except when a Customer is served through multiple points of delivery or metering installations for the Company's own convenience.

3.2 The Company may refuse to supply service to loads of unusual characteristics which, in its sole reasonable judgment, might adversely affect the quality of service supplied to other Customers, the public safety or the safety of the Company's personnel. In lieu of such refusal, the Company may require a Customer to install any necessary regulating and protective equipment in accordance with the requirements and specifications of the Company.

4 GAS SERVICE AREAS AND DESIGNATED RECEIPT POINTS

4.1 There shall be 1 Gas Service Area defined for purposes of administering Capacity assignments, Nominations, balancing, imbalance trading, and Aggregation Pools pursuant to this tariff. Each such Gas Service Area shall be defined to include the municipalities listed within each such Gas Service Area, as follows:

(1) Area 1: Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities.
The area authorized to be served by the Company and to which this tariff applies are the following cities and towns: Allenstown, Amherst, Auburn, Bedford, Belmont, Berlin, Boscawen, Bow, Concord, Derry, Franklin, Gilford, Goffstown, Hollis, Hooksett, Hudson, Laconia, Litchfield, Londonderry, Loudon, Manchester, Merrimack, Milford, Nashua, Northfield, Pelahm, Pembroke, Sanbornton, Tilton, Windham, and part of Canterbury.

4.2 For each Aggregation Pool as set forth by Section 20.6, the Company will designate at least one specific interconnection between a Transporting Pipeline and the Company's distribution facilities, at which point, or such other point as the Company may designate from time to time, the Supplier will make deliveries for the Aggregation Pool. The interconnections that the Company may assign as the Customer's Designated Receipt Point for the Aggregation Pool are as follows:

(1) *Name Transporting Pipeline: Tennessee Gas Pipeline*
Names of City Gates/Meter Numbers:

Nashua/Milford	#020132
Manchester	#020133
Hooksett	#020254
Concord/Laconia	#020426
Suncook	#020451
Londonderry	#020632

(2) *Name Transporting Pipeline: Portland Natural Gas Transmission System*
Names of City Gates/Meter Number

Berlin	#020260

5 CUSTOMER REQUEST FOR SERVICE FROM COMPANY

5.1 Application for Delivery Service, Sales Service, or any other service offered by the Company to a Customer will be received by any duly authorized representative or agent of the Company.

5.2 Before any service from the Company may commence, the Customer must request such service. -A Customer applying for Delivery Service only must also arrange for Supplier Service with a Supplier pursuant to Section 20. A Customer may act as its own Supplier provided it meets all of the Supplier requirements delineated in Section 20.

6 QUALITY AND CONDITION OF GAS

6.1 Gas delivered to the Company by or for the Customer shall conform, in all respects, to the Gas quality standards of the Transporting Pipeline. All Gas tendered by a Supplier at a Designated Receipt Point shall be of merchantable quality and shall be interchangeable with Gas purchased by the Company from its Suppliers. The Company reserves the right to refuse non-conforming Gas.

6.2 In no event shall the Company be obligated to accept and deliver any Gas that does not meet the quality standards of the Transporting Pipeline.

6.3 The Company reserves the right to commingle Gas tendered by a Supplier at a Designated Receipt Point with other Gas, including liquefied natural Gas and propane-air vapor.

6.4 Gas tendered by a Supplier at a Designated Receipt Point will be at a pressure sufficient to enter the Company's distribution system without requiring the Company to adjust its normal operating pressures to receive the Gas. The Company has no obligation to receive Gas at a pressure that exceeds the maximum allowable operating pressure of the Company's distribution system at the Designated Receipt Point.

7 POSSESSION OF GAS

7.1 Gas shall be deemed to be in the control and possession of the Company after such Gas is delivered to the Designated Receipt Point and until the Gas is delivered to the Customer at the Delivery Point. The Company shall not be responsible for the Gas when the Gas is not in the Company's control and possession.

7.2 The Company shall not be liable to the Supplier or the Customer for any loss arising from or out of Delivery Service, including loss of Gas in the possession of the Company or for any other cause, except for the negligence of the Company's own employees or agents.

8 COMPANY GAS ALLOWANCE

8.1 The amount of Gas tendered by the Supplier to the Designated Receipt Point will be reduced, upon delivery to the Customer's Delivery Point, by the Company Gas Allowance. The Company Gas Allowance shall be in effect from November 1 through October 31. Such adjustment shall be recalculated prior to the Company's Peak Season cost of Gas filing with the NHPUC.

9 DAILY METERED DELIVERY SERVICE

9.1 Applicability

Section 9 of this tariff shall be applicable in the following conditions:

9.1.1 All Customers whose service may be interrupted at any time during the year shall be required to take daily metered Delivery Service.

9.1.2 Any Customer, regardless of annual Gas Usage, may elect daily metered Delivery Service.

9.1.3 Customers under Rate Schedules G-43, G-46, G-53, G-54, G-57, and G-58 wishing to take Delivery Service are required to take Daily Metered Delivery Service. In addition, the Company may require a Customer to take daily metered Delivery Service if the Company determines that the daily Gas Usage characteristics of the Customer cannot be accurately modeled using the Company's Consumption Algorithm or if the volumes reasonably anticipated by the Company to be used by the Customer are of a size that may materially affect the integrity of the Company's distribution system.

9.2 Delivery Service Provided

This service provides delivery of Customer purchased Gas from the Designated Receipt Point to the Delivery Point on any Gas Day. For Customers taking Delivery Service under Rate Schedules ***G-43, G-46, G-53, G-54, G-57, and G-58*** this service provides firm, year-round delivery of Customer purchased Gas from the Designated Receipt Point to the Delivery Point.

9.3 Nominations and Scheduling of Service

9.3.1 The Supplier is responsible for nominating and delivering to the Designated Receipt Point(s) every Gas Day an amount of Gas that equals the aggregated Gas Usage of Customers in the Aggregation Pool plus the Company Gas Allowance in accordance with Section 8 of this tariff.

9.3.2 Nominations shall be communicated to the Company by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means.

9.3.3 Nominations for the first Gas Day of a Month shall be submitted to the Company no later than two (2) hours prior to the deadline for first of the Month Nominations of the Transporting Pipeline or such lesser period as determined by the Company. The Company will make available, from time to time, a schedule of Nomination due dates. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

9.3.4 The Supplier may make daily Nominations including, but not limited to, changes to existing Nominations, within a given Month no later than two (2) hours prior to the deadline for daily Nominations of the Transporting Pipeline for the Gas Day on which the Nomination is to be effective, or such lesser period as determined by the Company. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

9.3.5 The Supplier may make intra-Gas Day Nominations, including but not limited to changes to existing Nominations, within a given Gas Day no later than two (2) hours prior to the intra-Gas Day Nomination deadline for the Transporting Pipeline on which the Nomination is to be effective, or such lesser period as determined by the Company. Intra-Gas Day Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

9.3.6 Nominations will be conditionally accepted by the Company pending confirmation by the Transporting Pipeline. The Company will attempt to confirm the nominated volume with the Transporting Pipeline. In the event of a discrepancy between the volume nominated to the Company by the Supplier and the volume nominated by the Supplier to the Transporting Pipeline, the lower volume will be deemed confirmed. The Company will allocate such discrepancy based on a predetermined allocation method set forth in the Supplier Service Agreement. If no predetermined allocation method has been established prior to the event of such discrepancy, the Company will allocate the discrepancy on a pro rata basis.

9.3.7 Nominations may be rejected, at the sole reasonable discretion of the Company, if they do not satisfy the conditions for Delivery Service in effect from time to time.

9.4 Determination of Receipts

9.4.1 The quantity of Gas deemed received by the Company for the Supplier's Aggregation Pool at the Designated Receipt Point(s) will equal the volume so scheduled by the Transporting Pipeline(s).

9.4.2 The Company Gas Allowance will be assessed against receipts pursuant to Section 8 of this tariff.

9.5 Metering and Determination of Deliveries

9.5.1 The Company shall furnish and install, at the Customer's expense, telemetering equipment and any related equipment for the purpose of measuring Gas Usage at each Customer's Delivery Point. Telemetering equipment shall remain the property of the Company at all times. The Company shall require each Customer to install and maintain, at the Customer's expense, reliable telephone lines and electrical connections that meet the Company's operating requirements. The Company may require the Customer to furnish a dedicated telephone line. If the Customer fails to maintain such telephone lines and electrical connections for fourteen (14) consecutive days after notification by the Company, the Company may discontinue service to the Customer.

9.5.2 Should a Customer or a Supplier request that additional telemetering equipment or a communication device be attached to the existing telemetering equipment in addition to that provided pursuant to Section 9.5.1, the Company shall install, test, and maintain the requested telemetering equipment or communication device; provided that such telemetering equipment or communication device does not interfere with the operation of the equipment required for the Company's purposes and otherwise meet the Company's requirements. The Customer or Supplier shall provide such telemetering equipment or communication device, unless the Company elects to do so. The Customer or Supplier shall bear the cost of providing and installing the telemetering equipment, communication device, or any other related equipment, and shall have electronic access to the Customer's Gas Usage information. Upon installation, the telemetering equipment or communication device shall become the property of the Company and will be maintained by the Company. The Company shall bill the Customer or Supplier after installation.

9.5.3 The Company shall complete installation of telemetering equipment and communication devices, if reasonably possible, within sixty (60) days of receiving a written request from the Customer or Supplier provided that the Customer completes the installation of any required telephone or electrical connections within ten (10) days of such request.

9.5.4 The Company may, at its sole discretion, bill the Customer on a calendar month or cycle month basis.

9.6 Balancing

9.6.1 The Supplier must maintain a balance between daily receipts and daily Gas Usage within the following tolerances:

Off-Peak Season: The difference between the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area and the aggregated Gas Usage of Customers in the Aggregation Pool shall be within 15% of said receipts. The Supplier shall be charged 0.1 times the Daily Index for all differences not within the 15% tolerance.

Peak Season: The difference between the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area and the aggregated Gas Usage of Customers in the Aggregation Pool shall be within 10% of said receipts. The Supplier shall be charged 0.5 times the Daily Index for all differences not within the 10% tolerance.

Critical Day(s): The Company will determine if the Critical Day will be aggravated by an under-delivery or an over-delivery, and so notify the Supplier when a Critical Day is declared pursuant to Section 16.

Critical Day That Will Be Aggravated by Under-delivery.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by under-delivery shall be charged 5 times the Daily Index for the aggregated Gas Usage of Customers in the Aggregation Pool that exceeds 102% of the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by under-delivery shall be charged 0.1 times the Daily Index to the extent that the difference between the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area and the aggregated Gas Usage of Customers in the Aggregation Pool exceeds 20% of said receipts [(Receipts - Usage) > (20% x Receipts)].

Critical Day That Will Be Aggravated by Over-delivery.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by over-delivery shall be charged 0.1 times the Daily Index to the extent that the difference between the Supplier's aggregated Gas Usage of Customers in the Aggregation Pool exceeds 120% of the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by over-delivery shall be charged 5 times the Daily Index to the extent that the difference between the Supplier's actual receipts on the Transporting Pipeline to each Gas Service Area and the Supplier's aggregated Gas Usage of Customers in the Aggregation Pool exceeds 2% of said receipts [(Receipts - Usage > (2% x Receipts)].

Point Specific Balancing: In the event that the Transporting Pipeline requires its customers to balance on a point-specific basis, the Supplier must balance pursuant to this Section at each Designated Receipt Point.

9.6.2 If the Supplier has an accumulated imbalance within a Month, the Supplier may nominate to reconcile such imbalance, subject to the Company's approval, which approval shall not be unreasonably withheld.

9.6.3 In addition to the charges set forth in Section 9.6.1, the Company shall flow through to the Supplier any pipeline imbalance penalty charges attributable to the Supplier.

9.6.4 If, as a result of the Company interrupting or curtailing service pursuant to Section 17 of this tariff, the Supplier incurs a daily imbalance penalty due to over delivery, the Company will waive such penalty for the First Day of the interruption or curtailment period. If the Company has issued notice of an interruption or curtailment in service and the Supplier is unable to change its Nomination, or if the Supplier's Gas has been delivered to the Designated Receipt Point, then the Company will credit such Gas against the Supplier's imbalance.

9.6.5 The Supplier will maintain a balance between receipts at the Designated Receipt Point(s) and the aggregated Gas Usage of Customers in each Aggregation Pool. If the Transporting

Pipeline posts notice on its electronic bulletin board that its customers will be required to adhere to a maximum hourly flow rate, the Supplier will be deemed to have notice that maximum hourly flows will be in effect on the Company's distribution facilities as of the same time and for the same period as maximum hourly flows are in effect on the Transporting Pipeline. The Supplier's maximum hourly flow will be established based on an allocation of even hourly flows of daily receipts of Gas scheduled in the relevant period in accordance with the applicable transportation tariff of the Transporting Pipeline. All Gas Usage in excess of the Supplier's maximum hourly flow rate shall be subject to an additional charge of 5 times the Daily Index for each Dekatherm in excess of the Supplier's maximum hourly flow. The Company will notify the Supplier of the Supplier's maximum hourly flow.

9.6.6 If, during any fifteen (15) consecutive Gas Days, the Supplier delivers an amount less than 70% of the sum of the aggregated Gas Usage of Customers in the Aggregation Pool in said Gas Days, the Company may declare the Supplier ineligible to nominate Gas for the following thirty (30) Gas Days. The Supplier shall have the opportunity to cure the imbalance with the demonstration of verifiable imbalance trades or otherwise within twenty-four (24) hours of notification by the Company. If the Supplier is declared ineligible to nominate Gas for such 30 Gas Days, the Supplier may be reinstated at the end of the 30 Gas Days, provided it posts security equal to the product of: (1) the maximum aggregate daily Gas Usage of Customers in the Aggregation Pool expressed in MMBtu and (2) $300. If, within twelve (12) months of the first offense, such Supplier is declared ineligible to nominate Gas pursuant to this Section, the Supplier will be disqualified from service under this tariff for one (1) full year from the time of the second disqualification. If the Supplier defaults on its obligations under this tariff, the Company shall have the right to use such security to satisfy the Supplier's obligations. Such security may be used by the Company to secure Gas, transportation, and storage, and to cover other related costs incurred as a result of the Supplier's default. The security may also be used to satisfy any outstanding claims that the Company may have against the Supplier including imbalance charges, cash-out charges, pipeline penalty charges, and other charges.

9.7 Cash Out

For each Aggregation Pool, the Supplier must maintain total Monthly receipts within a reasonable tolerance of total Monthly Gas Usage. Any differences between total Monthly receipts for an Aggregation Pool and the aggregated Gas Usage of Customers in the Aggregation Pool, expressed as a percentage of total Monthly receipts, will be cashed out according to the following schedule:

Imbalance Tier	**Over-deliveries**	**Under-deliveries**
0% ≤ 5%	The average of the Daily Indices for the relevant Month.	The highest average of seven consecutive Daily Indices for the relevant Month
> 5% ≤ 10%	0.85 times the above stated rate.	1.15 times the above stated rate.
> 10% ≤ 15%	0.60 times the above stated rate.	1.4 times the above stated rate.
> 15%	0.25 times the above stated rate.	1.75 times the above stated rate.

For purposes of determining the tier at which an imbalance will be cashed out, the price will apply only to volumes within a tier. For example, if there is a 7% under-delivery on a Transporting Pipeline, volumes that make up the first 5% of the imbalance are priced at the highest average of the seven (7) consecutive Daily Indices. Volumes making up the remaining 2% of the imbalance are priced at 1.15 times the average of the seven (7) consecutive Daily Indices.

10 NON-DAILY METERED DELIVERY SERVICE

10.1 Applicability

Section 10 of this tariff applies to Customers taking Delivery Service under Rate Schedules G-41, G-42, G-51, G-52 and their Suppliers.

10.2 Delivery Service Provided

This service provides firm, year-round delivery of Customer purchased Gas from the Designated Receipt Point to the Delivery Point on any Gas Day for Customers, without the requirement of recording Gas Usage at the Delivery Point on a daily basis. Daily Nominations are calculated by the Company on the basis of a Consumption Algorithm and the Supplier is obligated to deliver to the Designated Receipt Point(s) such quantities.

10.3 Nominations and Scheduling of Service

10.3.1 The Supplier is obligated to nominate and deliver the Adjusted Target Volume ("ATV"), as determined in Section 10.3.2, to the Designated Receipt Points on every Gas Day for each Aggregation Pool.

10.3.2 The Company shall determine the ATV for each Aggregation Pool of Customers taking non-daily metered Delivery Service for each Gas Day using a Consumption Algorithm. The ATV shall include the Company Gas Allowance. On each Business Day, the Company will communicate, electronically, by facsimile, or by other agreeable alternative means, the forecasted ATV to the Supplier for at least the subsequent four (4) Gas Days. The ATV in effect for any Gas Day shall be the most recent ATV for that Gas Day communicated to the Supplier by the Company. The ATV for a given Gas Day shall not be effective unless it has been communicated to the Supplier at least two (2) hours prior to the Company's Supplier Nomination deadline for that Gas Day, which shall be at least two (2) hours prior to the deadline for nominations on the Transporting Pipeline, or such lesser period as determined by the Company.

10.3.3 Nominations will be communicated to the Company electronically, by facsimile, or other agreeable alternative means.

10.3.4 Nominations for the first Day of a Month shall be submitted to the Company no later than two (2) hours prior to the deadline for first of the Month nominations of the Delivering Pipeline or such lesser period as determined by the Company. The Company will make available, from time to time, a schedule of nomination due dates. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

10.3.5 The Supplier shall provide an intra-Month nomination no later than two (2) hours prior to the deadline of the Delivering Pipeline for the next Gas Day, or such lesser period as determined by the Company. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

10.3.6 Nominations will be conditionally accepted by the Company pending confirmation by the Transporting Pipeline. The Company will attempt to confirm the nominated volume with the Transporting Pipeline. In the event of a discrepancy between the volume nominated to the Company by the Supplier and the volume nominated by the Supplier to the Transporting Pipeline, the lower volume will be deemed confirmed. The Company will allocate such discrepancy based on a predetermined allocation method set forth in the Supplier Service Agreement. If no predetermined allocation method has been established prior to the event of such discrepancy, the Company will allocate the discrepancy on a pro rata basis. The Company will not confirm any volume nominated by the Supplier in excess of the ATV.

10.3.7 In the event that the Supplier is unable to deliver a confirmed ATV Nomination, the Supplier may make intra-Gas Day Nominations relating to changes to existing Nominations within a given Gas Day no later than two (2) hours prior to the intra-Gas Day Nomination deadline for the Transporting Pipeline on which the Nomination is to be effective, or such lesser period as determined by the Company; provided, however, that the Nomination must be in conformance with the requirements of and must be permitted by the Transporting Pipeline. Intra-Gas Day Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized by the Company for its own operations. The Company shall not adjust the ATV applied for the Gas Day.

10.3.8 Nominations may be rejected if they do not satisfy the conditions for Delivery Service in effect from time to time.

10.3.9 All quantities of Gas over-delivered or under-delivered to the Company's system in violation of an Operational Flow Order ("OFO") declared by the Company pursuant to Section 16 will be subject to the Critical Day provisions of Section 10.6.1 of this tariff, and the delivered quantity specified in the OFO will replace the ATV.

10.4 Determination of Receipts

10.4.1 The quantity of Gas deemed received by the Company for the Supplier's Aggregation Pool at the Designated Receipt Point(s) will equal the volume so scheduled by the Transporting Pipeline(s).

10.4.2 The Company Gas Allowance will be assessed against receipts pursuant to Section 8 of this tariff.

10.5 Metering and the Determination of Deliveries

The Company shall record the Customer's Gas Usage at the Delivery Point by making actual meter reads on a monthly [or bi-monthly] basis. In the event that the Customer's Gas Usage is metered on a bi-monthly basis, the Company shall make available to the Supplier estimates of the Customer's Gas Usage for each of the two billing months.

10.6 Balancing

10.6.1 Any difference between the Supplier's ATV for an Aggregation Pool and the receipts on the Transporting Pipeline to the appropriate Designated Receipt Point(s) will be cashed out by the Company according to the following:

Off-Peak Season: For receipts less than the ATV, the Supplier shall be charged 1.1 times the Daily Index for the difference. For receipts greater than the ATV, the Supplier shall be charged 0.8 times the Daily Index for the difference.

Peak Season: For receipts less than the ATV but greater than or equal to 95% of the ATV, the Supplier shall be charged 1.1 times the Daily Index for the difference. For receipts less than 95% of the ATV, the Supplier shall be charged 1.1 times the Daily Index for the first 5% difference, and the Supplier shall be charged two (2) times the Daily Index for the remaining difference. For receipts greater than the ATV, the Supplier shall be charged 0.8 times the Daily Index for the difference.

Critical Day(s) The Company will determine if the Critical Day will be aggravated by an under-delivery or an over-delivery, and so notify the Supplier when a Critical Day is declared pursuant to Section 16.

Critical Day That Will Be Aggravated by Under-delivery.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by under-delivery shall be charged five (5) times the Daily Index for the difference between the ATV and actual receipts.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by under-delivery shall be charged the following amounts for all receipts in excess of the ATV:

(a) up to 25% in excess of the ATV, the Supplier shall be charged the Daily Index for the difference.

(b) for receipts in excess of 25% above the ATV, the Supplier shall be charged 0.8 times the Daily Index for the difference.

Critical Day That Will Be Aggravated By Over-delivery.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by over-delivery shall be charged 0.4 times the Daily Index for receipts greater than the ATV.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by over-delivery shall be charged the following amounts--for receipts less than the ATV but greater than or equal to 75% of the ATV, the Supplier shall be charged the Daily Index for the first 25% difference, and the Supplier shall be charged 1.1 times the Daily Index for the remaining difference.

10.6.2 In addition to the charges set forth in Section 10.6.1, the Company shall use a daily balancing charge calculation to account for balancing costs it incurs in serving each Aggregation Pool due to differences in forecast versus actual Heating Degree Days. The daily balancing charge shall be based on the sum of the absolute values of the daily differences between the Aggregation Pool's ATV and the recalculated ATV value described in Section 10.7.1 below. Such charge shall be billed to the Supplier monthly and shall reflect the cost of resources used by the Company to balance such differences for each Gas Day of the Month. The Company shall calculate such charge annually in its Winter Season Cost of Gas filing according to a formula as set forth in Attachment B.

10.6.3 In addition to the charges set forth in Section 10.6.1, the Company shall use a daily balancing charge calculation to account for balancing costs it incurs in serving each Aggregation Pool due to differences in forecast versus actual Heating Degree Days. The daily balancing charge shall be based on the sum of the absolute values of the daily differences between the Aggregation Pool's ATV and the recalculated ATV value described in Section 10.7.1 below. Such charge shall be billed to the Supplier monthly and shall reflect the cost of resources used by the Company to balance such differences for each Gas Day of the Month. The Company shall calculate such charge annually in its Winter Season Cost of Gas filing according to a formula as set forth in Attachment B.

In the event that the Transporting Pipeline requires its customers to balance on a point-specific basis, the Supplier must balance pursuant to this Section at each Designated Receipt Point.

10.6.4 In addition to the charges set forth in Sections 10.6.1 and 10.6.2, the Company shall flow through to the Supplier any pipeline imbalance penalty charges attributable to the Supplier.

10.7 Cash Out

10.7.1 The Company shall use a daily cash out calculation to account for imbalances due to differences in forecast versus actual Heating Degree Days. Using a Consumption Algorithm, the Company will recalculate the ATV for each Aggregation Pool for each Gas Day of the Month, substituting actual Heating Degree Days for forecast Heating Degree Days. Daily recalculations shall be compared to the Aggregation Pool's daily ATV, and the difference shall be cashed out at 100% of the Daily Index.

10.7.2 During the billing months of both June and December, the Company shall use a six-month cash-out calculation to account for differences in forecast usage versus billed Gas Usage. The Company may cash-out differences in forecast usage versus billed usage at intervals that are less than six months as provided by the Supplier Service Agreement.

(1) In the billing month of June, using the recalculated ATV values described in Section 10.7.1, the Company will compare the sum of the recalculated ATV values for each Aggregation Pool for the six-month period of November 1 through April 30 to the sum of billed usage volumes used by each Aggregation Pool for that same period. The differences shall be cashed out at 100% of the average of the Daily Index weighted by actual Heating Degree Days over the same period. The Winter period cash-out shall be calculated and provided to Suppliers within 60 days of the month ending April 30.

(2) In the billing month of December, using the recalculated ATV values described in Section 10.7.1, the Company will compare the sum of the recalculated ATV values for each Aggregation Pool for the six-month period of May 1 through October 31 to the sum of the billed usage volumes used by each Aggregation Pool for that same period. The differences shall be cashed out at 100% of the average of the Daily Index over the same period. The Off-Peak period cash-out shall be calculated and provided to Suppliers within 60 days of the month ending October 31.

10.7.3 The Company shall allow Suppliers to trade seasonal differences. Prior to the seasonal cash-out, the Company shall make available a list of Suppliers. Aggregation Pools affected by the transaction must be located within the same Gas Service Area as defined in Section 4, unless waived by the Company. All trades must be communicated to the Company within three (3) Business Days following receipt of the list.

10.7.4 If, during any fifteen (15) consecutive Gas Days, the Supplier delivers an amount less than 70% of the sum of the ATVs of the Aggregation Pool in said Gas Days, the Company may declare the Supplier ineligible to nominate Gas for the following thirty (30) Gas Days. The Supplier shall have the opportunity to cure the imbalance with the demonstration of verifiable imbalance trades or otherwise within twenty-four (24) hours of notification by the Company. If the Supplier is declared ineligible to nominate Gas for such 30 Gas Days, the Supplier may be reinstated at the end of the 30 Gas Days, provided it posts security equal to the product of: (1) the Supplier's estimated maximum aggregate daily Gas Usage of Customers in the Aggregation Pool expressed in MMBtu and (2) $300. If, within twelve (12) months of the first offense, such Supplier is declared ineligible to nominate Gas pursuant to this Section, the Supplier will be disqualified from service under this tariff for one (1) full year from the time of the second disqualification. If the Supplier defaults on its obligations under this tariff, the Company shall have the right to use such security to satisfy the Supplier's obligations. Such security may be used by the Company to secure Gas, transportation, storage, and to cover other related costs incurred as a result of the Supplier's default. The security may also be used to satisfy any outstanding claims that the Company may have against the Supplier including imbalance charges, cash-out charges, pipeline penalty charges, and other charges.

11 CAPACITY ASSIGNMENT

11.1 Applicability

Section 11 of this tariff applies to all Suppliers that have enrolled one or more Customers into one or more Aggregation Pools and shall include Customers acting as their own Supplier. The Company shall assign and the Supplier shall accept each Customer's pro-rata share of Capacity, if any, as established in accordance with this Section.

11.2 Identification of Capacity for Assignment

11.2.1 On or before September 15 of each year, the Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Capacity to be made available for assignment to Suppliers on each of twelve Assignment Dates beginning in October.

11.2.2 The Company shall identify, by Gas Service Area, the specific contracts and resources for assignment to Suppliers based on the Company's Capacity and resource plans. Such identified contracts and resources shall be used to determine the pro-rata shares of Capacity assignable to a Supplier on behalf of the Customers enrolled in its Aggregation Pool.

11.2.3 Capacity assigned by the Company may include Company-Managed Supplies that effectuate, at maximum tariff rates, the assignment of certain Capacity contracts including Canadian, Federal Energy Regulatory Commission, 15 U.S.C. § 717(c) or Section 7(c) [Part 157 of the FERC regulations (18 C.F.R. part 157)] and other contracts that are not assignable to third-parties due to governing tariffs.

11.3 Determination of Pro-Rata Shares of Capacity

11.3.1 The Company shall establish a Total Capacity Quantity ("TCQ") for each Customer taking Delivery Service. The TCQ represents the total amount of Capacity assignable to a Supplier on behalf of a Customer.

11.3.2 For a Customer receiving Sales Service on or after March 14, 2000, the TCQ shall be the Customer's estimated Gas Usage on the Peak Day as determined by the Company each October prior to the Customer's enrollment into Supplier Service. The Company shall derive such estimate using a Daily Baseload and a Heating Factor based upon the Customer's historic Gas Usage during the Reference Period, or the best estimates available to the Company should actual Gas Usage information be partially or wholly unavailable.

11.3.3 For a Customer that was either receiving Supplier Service (or the equivalent form of service at the time) on March 14, 2000, or had an executed contract for firm transportation service (i.e., the equivalent of Delivery Service) on file with the Company on or before March 14, 2000, the TCQ shall be zero.

11.3.4 A Customer that was either receiving Supplier Service (or the equivalent form of service at the time) on March 14, 2000, or had a written request on file with the Company on or before March 14, 2000 may elect for its Supplier to accept assignment of its pro-rata share of Capacity as determined by the Company in accordance with Section 11.2 and, subject to availability, as determined by the Company in its sole reasonable discretion. In order to make such election, the Customer must have submitted to the Company, on or before ten (10) days prior to the first Assignment Date prior to the original effective date of this tariff, a completed application for Capacity that is signed by both the Customer and Supplier. All assignments of Capacity made on behalf of such electing Customer shall be executed in accordance with Sections 11 and 14 of this tariff as if the Customer had been receiving Sales Service on or after March 14, 2000

11.3.5 For a new Customer taking Supplier Service as its initial service after March 14, 2000, the TCQ shall be zero except in cases where the Customer is a new Customer of record at a meter location where a former Customer of record received firm service from the Company any time during the preceding twenty-four (24) months, in which case the TCQ established by the Company for the former Customer shall become the TCQ for the new Customer. The Company may reduce said TCQ value for the new Customer, if, in its sole reasonable discretion, the Company determines that the old Customer's TCQ exceeds the new Customer's estimated future consumption on the Peak Day. In the event that Sales Service is provided at a new meter location for Gas Usage associated with new construction, the TCQ shall be zero, provided that the Customer initiates Supplier Service upon the completion of said new construction in accordance with Section 20.5 of this tariff

11.3.6 Once the Company establishes a TCQ for a Customer pursuant to this Section 11.3, it shall remain in effect for the purpose of determining the Customer's pro-rata shares of Capacity until such time that the Customer returns to Sales Service. The Company shall establish a new TCQ value for the Customer pursuant to Section 11.3.2 if the Customer again elects to take Supplier Service after returning to Sales Service, unless otherwise established herein..

11.3.7 The Company shall determine the pro-rata shares of Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity assignable to a Supplier on behalf of a Customer as the product of the Customer's TCQ times the applicable Capacity Allocators. The Capacity Allocators for each class of Customers billed under the Company's Rate Schedule shall be set forth annually in Attachment C to this tariff.

11.3.8 The Company shall determine the pro-rata share of Seasonal Storage Capacity assignable to a Supplier on behalf of a Customer consistent with the tariffs governing the associated Storage Withdrawal Capacity.

11.3.9 The Company shall determine the pro-rata shares of Peaking Supply assignable to a Supplier in accordance with Section 14 of this tariff.

11.4 Capacity Assignments

11.4.1 On each Assignment Date, the Company will assign to the Supplier the pro-rata shares of Capacity on behalf of each Customer as determined by the Company in accordance with Sections 11.2, 11.3 and 11.7.

11.4.2 The total amount of Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity assigned to the Supplier on behalf of the Customers in an Aggregation Pool shall be at least equal to the cumulative sum of the pro-rata shares of Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity for all Customers enrolled in said Aggregation Pool as of Five (5) Business Days prior to the Assignment Date.

11.4.3 Storage Withdrawal Capacity shall be subject to Operational Flow Orders that are issued by the Company pursuant to Section 16 of this tariff, in the event that the Company requires the Supplier to deliver or to store quantities of Gas for the purposes of managing system imbalances and maintaining Delivery Service. Whenever the Company assigns incremental Storage Withdrawal Capacity to the Supplier, the Company shall also assign to that Supplier additional Seasonal Storage Capacity pursuant to Section 11.8.

11.4.4 The Peaking Capacity assigned to the Supplier shall establish the Maximum Daily Peaking Quantity (“MDPQ”) for the Aggregation Pool in the Supplier’s Service Agreement. In the event that the Company increases a Supplier’s MDPQ, the Company shall also assign to that Supplier additional Peaking Supply pursuant to Section 14.

11.4.5 The Company shall execute Capacity assignments in increments of 200 MMBtus. The Supplier shall accept an initial increment of Capacity on the first Assignment Date when the sum of the pro-rata shares of Capacity assigned to the Supplier pursuant to Section 11.4.1 exceeds 150 MMBtus. The Supplier shall accept additional increments of Capacity on the following Assignment Dates commensurate with any cumulative increase in the sum of pro-rata shares of Capacity assigned to the Supplier, as rounded to the nearest 200 MMBtus. Each increment of Capacity accepted by the Supplier shall comprise Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity in proportion to the cumulative increase of the pro-rata shares of assigned Capacity as established in accordance with Section 11.4.1. Section 11.4.2 shall not apply to a Customer that is acting as its own Supplier.

11.4.6 If a Customer is acting as its own Supplier, the Company shall assign Capacity to the Customer in an amount equal to the Customer's TCQ, as established pursuant to Section 11.3.

11.5 Release of Contracts

11.5.1 With the exception of Company-Managed Supplies and Peaking Capacity, Capacity contracts shall be released by the Company to the Supplier, at the maximum tariff rate or lesser rate paid by the Company and including all surcharges, through pre-arranged Capacity releases, pursuant to applicable laws and regulations and the terms of the governing tariffs.

11.5.2 Capacity contracts released to a Supplier on an Assignment Date shall be released for a term beginning on the first Gas Day of the Month following the Assignment Date through the expiration date of the respective capacity contract being assigned. and ending on October 31. For example, contracts assigned to a Supplier on April 25 of a given year shall be released for a term beginning on May 1 of that year and ending on October 31 of that year.

11.5.3 The Company reserves the right to adjust releases of Storage Withdrawal Capacity in the event that fifty percent (50%) or more of the total Storage Withdrawal Capacity serving a Gas Service Area has been assigned to Suppliers. Such adjustments may include, but are not limited to, the reassignment of certain Storage Withdrawal Capacity as Company-Managed Supplies in order for the Company to maintain operational control over Capacity resources associated with system balancing, and/or the retention of specific Capacity resources associated with system balancing and the implementation of a balancing charge to offset the associated costs.

11.6 Annual Reassignment of Capacity

11.6.1 On each Annual Reassignment Date, the Company shall adjust the Capacity assignments previously made to a Supplier to conform with the Company's resource and requirements plans. Such previously assigned Capacity shall be replaced by the assignment to the Supplier of the pro-rata shares of the same or similarly situated Capacity on behalf of the Customers enrolled in the Supplier's Aggregation Pools (as of the first Gas Day of the Month following the Annual Reassignment Date).

11.6.2 If the reassignment of Storage Withdrawal Capacity requires adjustments to the Seasonal Storage Capacity previously assigned to a Supplier, the Company shall reassign Seasonal Storage Capacity to such Supplier, and the Company and the Supplier shall address any associated increments and decrements to inventories in place pursuant to Section 11.8 of this tariff.

11.6.3 If the reassignment of Peaking Capacity requires adjustments to the MDPQ for the Supplier's Aggregation Pool, the Company shall reassign Peaking Supply to such Supplier, and the Company and the Supplier shall address any associated increments and decrements to supplies pursuant to Section 14 of this tariff.

11.7 Recall of Capacity

11.7.1 If the pro-rata shares of Capacity assignable to a Supplier decline because one or more of the Supplier's Customers has returned to Sales Service, the Company shall have the right, but not the obligation, to recall from the Supplier the pro-rata shares of Capacity previously assigned to the Supplier on behalf of such Customers. The decision on whether to exercise its Capacity-recall rights shall be made by the Company in its sole reasonable discretion. If the Company elects to recall Capacity from a Supplier pursuant to this Section, such recall shall be made on the Assignment Date following the effective date of the Customer's return to Sales Service. Notwithstanding the foregoing, in the following circumstances the Company shall be required to recall Capacity associated with Customers returning to Sales Service:

(a) The Supplier returning the Customers to Sales Service certifies that it is ceasing all business operations in New Hampshire;

(b) The Supplier returning the Customers to Sales Service certifies that it will no longer offer service to a particular market sector (e.g., small commercial and industrial Customers) and, therefore, once such Customers are returned to Sales Service, the Supplier is not eligible to re-enroll Customers of that type; or

(c) The Supplier demonstrates that it has provided Supplier Service to the Customer for a 12-month period, and for a period of no less than any 12-month increment, prior to the Customer's return to Sales Service.

11.7.2 If the Company elects to recall Storage Withdrawal Capacity from the Supplier pursuant to this Section, the Company shall reduce the Seasonal Storage Capacity associated with the affected Aggregation Pool in accordance with Section 11.8 of this tariff. If the Company elects to reduce the MDPQ in the Supplier Service Agreement, the Company shall reduce the Peaking Supply associated with the affected Aggregation Pool in accordance with Section 14 of this tariff.

11.7.3 In the event that a Customer in a Supplier's Aggregation Pool switches to another Supplier, the Company shall recall from the former Supplier said Customer's pro-rata shares of Capacity for reassignment to the new Supplier pursuant to Section 11.4. There shall be no change in the Customer's TCQ used to determine the Customer's pro-rata shares of Capacity for reassignment to the new Supplier. The recall of such Capacity from the Customer's former Supplier and the assignment of Capacity to the new Supplier shall be made on the Assignment Date following the effective date of the Customer's switch in Suppliers.

If the Company recalls Storage Withdrawal Capacity from the Customer's former Supplier, the Company shall reduce the Seasonal Storage Capacity associated with the affected Aggregation Pool in accordance with Section 11.8 of this tariff. If the Company reduces the MDPQ in the Customer's former Supplier's Service Agreement, the Company shall also reduce the Peaking Supply associated with the affected Aggregation Pool in accordance with Section 14 of this tariff.

11.7.4 The recall of Capacity by the Company shall entail the recall of released contracts pursuant to governing tariffs and/or the reduction in assigned quantities set forth in the Supplier Service Agreement. The recall of Capacity shall be executed in decrements of 200 MMBtus, commensurate with the cumulative reduction in the pro-rata shares of Capacity assigned to the Supplier, rounded to the nearest 200 MMBtus. Each decrement of Capacity assigned to the Supplier shall comprise Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity in proportion to the cumulative decrease in the pro-rata shares of Capacity recalled from the Supplier.

In the event that a Supplier is declared ineligible to nominate Gas for thirty (30) Gas Days pursuant to Sections 9.6.6 or 10.7.4 of this tariff, the Company shall have the right to recall any or all Capacity assigned to said Supplier. If the Supplier is reinstated at the end of such 30 Gas Days, the Company shall reassign Capacity to the Supplier on the next Assignment Date pursuant to Sections 11.4 and 11.5. There shall be no change in the TCQ values used to determine the Supplier's Customers' pro-rata shares of Capacity for reassignment.

11.7.5 In the event that a Supplier is disqualified from service for a one (1) full year pursuant to Sections 9.6.6 or 10.7.4 of this tariff, the Company shall have the right to recall any or all Capacity assigned to said Supplier. If the Supplier is reinstated at the end of such period, the Company shall reassign Capacity to the Supplier on the next Assignment Date pursuant to Sections 11.4 and 11.5. There shall be no change in the TCQ values used to determine the Supplier's Customers' pro rata shares of Capacity reassignments.

11.7.6 In the event that the Supplier fails to meet the applicable registration and licensing requirements established by law or regulation, fails to satisfy the requirements and practices as set forth in Section 20.3 of this tariff, fails to be and remain an approved shipper on the upstream pipelines and underground storage facilities on which the Company will assign capacity, fails to make timely payment under the assigned contracts, or fails to comply with or perform any of the obligations on its part established in this tariff or in the Supplier Service Agreement, the Company shall have the right to recall permanently any or all Capacity assigned to said Supplier. This section shall also apply to a Customer acting as its own Supplier.

11.7.7 The Supplier shall forfeit its rights to Capacity recalled by the Company pursuant to this Section. Such forfeiture shall be effected in accordance with applicable laws and regulations and the governing tariffs. In the event of Capacity forfeiture pursuant to this Section, the Supplier shall be responsible to compensate the Company for any payments due under the contracts prior to forfeiture, as well as any interest due thereon. The Company will not exercise discretion in the application of the forfeiture provisions of this Section. This section shall also apply to a Customer acting as its own Supplier.

11.8 Seasonal Storage Capacity

11.8.1 On each Assignment Date, the Company shall release Seasonal Storage Capacity to a Supplier that accepts the assignment of Storage Withdrawal Capacity pursuant to Section 11.4. The Company shall assign such Seasonal Storage Capacity consistent with the tariffs governing the release of the associated Storage Withdrawal Capacity.

11.8.2 If the Company assigns Seasonal Storage Capacity to a Supplier pursuant to Section 11.8.1 above, the Company shall transfer in-place Gas inventories to the Supplier. The quantity of inventories to be transferred from the Company to the Supplier shall be determined by multiplying the incremental Seasonal Storage Capacity assigned to the Supplier on the Assignment Date times the applicable storage inventory percentage described in Section 11.8.5. The Supplier shall be charged the Company's weighted average cost of inventories in off-system storage facilities for each Dekatherm transferred from the Company to the Supplier. The Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Company's weighted average cost of inventories, by Gas Service Area, at least two Business Days prior to each Assignment Date.

11.8.3 In the event that the Company recalls Storage Withdrawal Capacity from the Supplier pursuant to Section 11.7, the Company shall also recall Seasonal Storage Capacity from the Supplier. The Company shall determine the total Seasonal Storage Capacity to be recalled from the Supplier in accordance with the tariffs governing the Storage Withdrawal Capacity returned to the Company.

11.8.4 If the Company recalls Seasonal Storage Capacity from a Supplier pursuant to Section 11.8.3, the Supplier shall transfer in-place Gas inventories to the Company. The quantity of inventories to be transferred from the Supplier to the Company shall be determined by multiplying the decremental Seasonal Storage Capacity times the applicable storage inventory percentage described in Section 11.8.5. The Supplier shall be reimbursed at the Company's weighted average cost of inventories in off-system storage facilities as of the Assignment Date, for each Dekatherm transferred from the Supplier to the Company. The Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Company's weighted average cost of inventories, by Gas Service Area, at least two (2) Business Days prior to each Assignment Date.

11.8.5 Seasonal storage inventory percentages shall represent the amount of Seasonal Storage Capacity in each assigned storage resource that is assumed to be filled with inventories as of the first Gas Day of the month following the Assignment Date. Each September, the Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the storage inventory percentages for each resource that shall be applied to incremental or decremental Seasonal Storage Capacity assignments executed on each of the twelve (12) Assignment Dates beginning in October.

11.9 Company-Managed Supplies

11.9.1 The Company shall provide access to and ascribe cost responsibility for the pro-rata shares of certain Capacity contracts including Canadian, Federal Energy Regulatory Commission, 15 U.S.C. § 717(c) or Section 7(c) [Part 157 of the FERC regulations (18 C.F.R. part 157)], and other contracts that are not assignable to third-parties.

11.9.2 The Supplier's Service Agreement shall set forth the quantity of each Company-Managed Supply assigned to the Supplier pursuant to Sections 11.4 and 11.8.

11.9.3 The Company shall notify the Supplier of the conditions and/or restrictions on the use of Company-Managed Supplies pursuant to the tariffs governing the resources.

11.9.4 The Company shall invoice the Supplier for its pro-rata shares of the demand charges for Capacity contracts assigned to the Supplier as Company-Managed Supplies. The Company shall also flow through to the Supplier all costs, including Supply costs, incurred from the utilization of Company-Managed Supplies on behalf of the Supplier.

11.9.5 The Company shall nominate quantities to the Transporting Pipeline and/or other interstate pipelines and off-system storage operators on behalf of Suppliers to which the Company has assigned Company-Managed Supplies, provided that the requested Nomination conforms to the tariffs governing the resource. The Supplier shall communicate its desired Nomination quantities to the Company subject to the provisions in Sections 9.3 and 10.3 of this tariff.

11.10 Capacity Mitigation Service

11.10.1 Capacity Mitigation Service is available to Suppliers that have been assigned Capacity pursuant to Section 11 of this tariff. Such Suppliers shall have the option to take Capacity Mitigation Service from the Company for contracts that would otherwise be released to the Supplier in accordance with this tariff.

11.10.2 Within five (5) Business Days prior to the Annual Reassignment Date, the Supplier must designate those contracts that would otherwise be released to the Supplier pursuant to Section 11.5, as contracts to be managed by the Company for cost mitigation in accordance with the Company's Capacity Mitigation Service. Such designation will be effective for the period November 1 through October 31. Such notice shall be communicated in accordance with the Supplier's Service Agreement.

11.10.3 The Supplier shall pay to the Company the maximum-tariff rate or lesser rate paid by the Company, including all surcharges, for the Capacity contracts that are retained and managed by the Company. The Company shall bill the Supplier monthly for such charges.

11.10.4 The Company will market Capacity contracts designated by Suppliers for mitigation through the Capacity Mitigation Service. The Supplier shall receive a credit on its bill for Capacity Mitigation Service equal to the pro-rata share of the proceeds earned from the Company in exchange for such contract management. Such credit shall be determined on a contract-specific basis at the end of each Month and will be included in the bill sent to the Supplier in the following Month.

12 BILLING AND SECURITY DEPOSITS

12.1 The Customer shall be responsible for all charges for service furnished by the Company under the Company's applicable rates, as filed from time to time with the NHPUC, from the time service is commenced until it is terminated. The Company shall provide a single bill, reflecting unbundled charges, to Customers for Sales Service.

12.2 The Company shall offer two billing service options to Customers taking only Delivery Service: standard complete billing service and standard pass-through billing service. The Supplier shall inform the Company of the selected billing option in accordance with the provisions set forth in Section 20.5

12.2.1 Standard Complete Billing Service

The Customer shall receive a single bill from the Company for both Delivery Service and Supplier Service. The Company shall use the rates supplied by the Supplier to calculate the Supplier's portion of the single bill and integrate this billing within a single mailing to the Customer. The Company may charge a fee to the Supplier for providing this billing service as approved by the NHPUC.

The Supplier shall adhere to the Customer classes and rate structure as specified in the Company's then current Rate Schedule on file with and approved by the NHPUC. The Company shall reasonably accommodate, at the Supplier's expense, different Customer classes or rate structures as agreed to by the Company and the Supplier in the Supplier Service Agreement.

The Company shall provide an electronic file to the Supplier that will, in addition to the usage being billed, contain the calculated Supplier billing amounts for the current billing cycle. Customer revenue due the Supplier shall be transferred to the Supplier in accordance with the Supplier Service Agreement. Upon receipt of Customer payments, the Company shall provide a file for the Supplier summarizing all revenue from Supplier sales which have been received and recorded that day.

If a Customer pays the Company less than the full amount billed, the Company shall apply the payment first to Delivery Service, and if any payment remains, it shall be applied to Supplier Service.

12.2.2 Standard Pass-through Billing Service

The Customer taking Delivery Service shall receive two (2) bills: the Company shall issue one bill for Delivery Service and the Supplier shall issue a second bill for Supplier Service.

The Supplier shall be responsible for the collection of amounts due to the Supplier from the Customer. Customer payment responsibility with Suppliers shall be governed by the particular Customer/Supplier contract.

Within three (3) Business Days following the end of the Customer's billing cycle, the Company shall provide an electronic file for the Supplier that will contain the Customer's usage being billed including the current and previous meter readings.

12.2.3 The Company shall inform a Customer when Supplier Service has been initiated by a Supplier along with information on how the Customer may file a complaint regarding an unauthorized initiation of Service. This information shall be included on the first bill rendered to the Customer after such initiation.

12.2.4 A Customer acting as its own Supplier will be subject to the billing and payment requirements in Section 20.8 of this tariff.

12.2.5 Readings taken by an automated meter reading device will be considered actual readings for billing purposes.

13 SALES SERVICE

13.1 Sales Service is the Commodity service provided by the Company for Customers not electing to subscribe to Supplier Service and shall be provided by the Company, or its designated Supplier, in accordance with this tariff. Each Customer receiving Sales Service shall receive one bill from the Company reflecting delivery and Commodity charges.

13.2 A Customer receiving Sales Service on March 14, 2000 shall continue to receive Sales Service unless the Customer elects to take Supplier Service and until such time that Supplier Service is initiated for the Customer in accordance with Section 20.5 of this tariff. If the Customer terminates Supplier Service, if a Supplier terminates service to the Customer, or if the Customer's designated Supplier becomes ineligible to serve the Customer pursuant to Sections 9.6.6, 10.7.4, or 20.3 of this tariff, the Company will provide Sales Service to the Customer. Pursuant to Section 20.5 of this tariff, the Company will initiate Sales Service for the Customer and will provide Sales Service to the Customer until such time that Supplier Service is initiated for the Customer by a new Supplier.

13.3 Any Customer whose Supplier has been assigned Capacity on behalf of said Customer pursuant to Section 11 of this tariff may elect to return to Sales Service if the Customer is no longer receiving Supplier Service. If necessary, the Company will initiate Sales Service for the Customer pursuant to Section 20.5 of this tariff and will provide the Customer with Sales Service until such time that Supplier Service is initiated for the Customer by a new Supplier. The Company will provide Sales Service to said Customer up to a maximum daily level of Gas Usage not to exceed the Total Capacity Quantity ("TCQ") of recallable Capacity assigned to the Customer's former Supplier.

13.4 In the event that a Supplier that has been assigned Capacity on behalf of a Customer pursuant to Section 11 of this tariff terminates Supplier Service to the Customer, the Customer may select another Supplier. If necessary, the Company will initiate Sales Service for the Customer pursuant to Section 20.5 of this tariff and will provide the Customer with Sales Service until Supplier Service is initiated for the Customer by a new Supplier. The Company will provide Sales Service to the Customer up to a maximum daily level of Gas Usage not to exceed the TCQ of recallable Capacity assigned to the Customer's former Supplier.

13.5 In the event that a Supplier that has been assigned Capacity on behalf of a Customer pursuant to Section 11 of this tariff becomes ineligible to serve the Customer pursuant to Sections 9.6.6, 10.7.4, or 20.3 of this tariff, the Company will provide the Customer with Sales Service up to a maximum daily level of Gas Usage not to exceed the TCQ of recallable Capacity assigned to the Customer's Supplier.

13.6 The Company shall be under no obligation to provide Sales Service to a Customer at a maximum daily level in excess of the TCQ of recallable Capacity assigned to a Supplier on behalf of the Customer. The Company may elect to provide Sales Service to the Customer if, and to the extent that, adequate system Capacity and Supplies are available and upon the same terms and subject to the same conditions as any new Customer seeking to take Sales Service.

14 PEAKING SERVICE

14.1 Applicability

Section 14 of this tariff applies to all Suppliers, and to all Customers acting as their own Supplier, that have been assigned, or have elected to be assigned, Capacity on behalf of themselves or Customers in their Aggregation Pools pursuant to Section 11 of this tariff.

14.2 Character of Service

14.2.1 Peaking Service shall be provided by the Company subject to an executed Supplier Service Agreement that sets forth the Maximum Daily Peaking Quantity (“MDPQ”) and the assigned Peaking Supply for each of the Supplier’s Aggregation Pools.

14.2.2 The Company shall provide quantities of Gas, at the Supplier’s request, from the Supplier’s Peaking Service Account as established in accordance with Section 14.4. Such quantities shall be deemed delivered by the Company and received by the Company at the Designated Receipt Point(s) for the Aggregation Pool. Peaking Service shall be firm and available to the Supplier each Gas Day in accordance with the balance of the Supplier’s Peaking Service Account and the parameters of the Company’s Peaking Service Rule Curve.

14.3 Rates and Charges

14.3.1 The applicable rates for Peaking Service shall be established in the Company’s tariff. The Supplier shall pay a peaking demand charge based on its MDPQ of assigned Peaking Capacity as billed by the Company for the Peak Season. Such unit demand charge shall be equal to the total Capacity costs and other fixed costs associated with the Company’s peaking resources, excluding costs collected through Delivery rates, divided by the estimated peaking resources needed to meet the Company’s total system Peak Day requirement.

14.3.2 The Supplier shall pay a Commodity charge equal to the estimated weighted average cost of peaking supplies, including fuel retention and carrying charges. The Company shall communicate electronically, by facsimile or by other agreeable alternative means the Company’s estimated weighted average cost of peaking supplies by the 15th of the month preceding the next Assignment Date. The Commodity charge will be multiplied by the volumes of Peaking Service Gas nominated by the Supplier during each Month.

14.4 Peaking Supply

14.4.1 The Customer’s portion of the Peaking Supply that shall be assigned to the Supplier on behalf of the Customer shall be equal to the Peaking Supply multiplied by the ratio of the Customer’s MDPQ to the aggregate MDPQ of the total system.

14.4.2 On each Assignment Date, the Company shall assign Peaking Supply to a Supplier whose MDPQ has been increased pursuant to Section 11.4. If the Company assigns incremental Peaking Supply to a Supplier, the Company shall credit the balance of the Supplier’s Peaking Service Account for volumes available through October 31 in accordance with the

Peaking Service Rule Curve. The amount credited to the Supplier's Peaking Service Account shall be determined by multiplying the incremental Peaking Supply by the peaking inventory percentage described in Section 14.4.5.

14.4.3 On each Assignment Date, the Company shall recall Peaking Supply from a Supplier whose MDPQ has been decreased pursuant to Section 11.7. The Company shall determine the Supplier's total Peaking Supply for recall to be equal to the difference between the cumulative total Peaking Supply assigned to the Supplier as of the previous Assignment Date and the total Peaking Supply that is assignable to the Supplier in accordance with Section 14.4.1 above.

14.4.4 If the Company recalls Peaking Supply from a Supplier pursuant to Section 14.4.3, the Company shall debit the balance of the Supplier's Peaking Service Account for volumes available through October 31 in accordance with the Peaking Service Rule Curve. The amount debited from the Supplier's Peaking Service Account shall be determined by multiplying the decremental Peaking Supply by the peaking inventory percentage described in Section 14.4.5.

14.4.5 The peaking inventory percentage shall represent the level of Peaking Supply assumed to be available to a Supplier in its Peaking Service Account as of the first Gas Day of the Month following the Assignment Date for incremental and decremental assignments of Peaking Supply. Each September, the Company shall communicate electronically, by facsimile or by other agreeable alternative means the Peaking Inventory Percentages that shall be applied to incremental or decremental Peaking Supply assignments executed on each of the twelve (12) Assignment Dates beginning in October.

14.4.6 On each Annual Reassignment Date, the Company shall reset the balance in the Supplier's Peaking Service Account to equal the total Peaking Supply assignable to the Supplier on behalf of Customers enrolled in its Aggregation Pool (as of the first Gas Day of the Month following the Annual Reassignment Date) as determined in accordance with Section 14.4.1 above.

14.5 Nomination of Peaking Service

14.5.1 The Supplier shall nominate with the Company the quantity of Peaking Supply, not in excess of the amount determined pursuant to Section 14.4.2, that the Supplier desires to be provided from its Peaking Service Account for the applicable Gas Day. For an Aggregation Pool of Customers taking daily metered Delivery Service, the notice given by the Supplier to the Company for an applicable Gas Day shall be made in accordance with Section 9.3 of this tariff. For an Aggregation Pool of Customers taking non-daily metered Delivery Service, the notice given by the Supplier to the Company for an applicable Gas Day shall be made in accordance with Section 10.3 of this tariff.

14.5.2 In response to a valid Nomination for Peaking Service, the Company shall provide the requested quantity of Gas, which shall be deemed to be delivered by the Company and received by the Company at the Designated Receipt Point(s) of the Supplier's Aggregation Pool, subject to the limitations herein. Nominated quantities shall be included in the determination of receipts at the Designated Receipt Point(s) for the Supplier's Aggregation Pool which factors into the daily balancing provisions set forth in this tariff.

14.5.3 The Company may reject a Supplier's Nomination for Peaking Service if the nominated quantity would cause the balance of the Supplier's Peaking Service Account to fall to a level that is 10% or more below the minimum allowable account balance for the Month in which the Nomination is requested, as computed in accordance with the Peaking Service Rule Curve. Under such circumstances, the Company shall require the Supplier to nominate the pipeline and/or storage resources, within the contract entitlements assigned to the Supplier under Section 11, required to maintain the Supplier's Peaking Service Account above the minimum allowable account balance described above. The balance of the Supplier's Peaking Service Account may not in any event fall below zero (0).

14.5.4 The Company shall provide Peaking Service supplies to the Supplier only when the volumes in the Peaking Service Account for the Aggregation Pool are greater than zero (0).

14.6 Peaking Service Critical Day Provisions

14.6.1 In the event that the volumes in a Supplier's Peaking Service Account for an Aggregation Pool are reduced to a level below the minimum allowable account balance as computed in accordance with the Company's Peaking Service Rule Curve, the Company may issue an OFO to such Supplier pursuant to Section 16 of this tariff.

14.6.2 In the event that the total volumes of all Peaking Service Accounts within one or more of the Company's Gas Service Areas are reduced to levels below the total minimum allowable account balances as computed in accordance with the Company's Peaking Service Rule Curve, the Company may declare a Critical Day and issue a blanket OFO pursuant to Section 16 of this tariff.

14.6.3 If, on a Critical Day, the Company projects, based on the Supplier's Nominations, that the Supplier's scheduled deliveries to the Designated Receipt Point(s) of an Aggregation Pool are less than the maximum feasible volumes for deliveries on the Transporting Pipeline, the Company may issue an OFO to the Supplier in accordance with Section 16 of this tariff.

15 DISCONTINUANCE OF SERVICE

15.1 The Company shall notify a Customer's Supplier of record that it has initiated any applicable billing and termination procedures as prescribed by the NHPUC. In the event that the Company discontinues Delivery Service to a Customer in accordance with the provisions set forth above, the Company shall provide electronic notification to the Customer's Supplier of record upon final billing to the Customer. The Company shall not be liable for any revenue loss to the Supplier as a result of any such disconnection.

16 OPERATIONAL FLOW ORDERS AND CRITICAL DAYS

16.1 In the event of a material and significant threat to the operational integrity of the Company's system, the Company may declare a Critical Day.

16.2 Circumstances constituting a threat to the operational integrity of the system that may cause the Company to declare a Critical Day shall include, but not be limited to: (1) a failure of the Company's distribution, storage, or production facilities; (2) near-maximum utilization of the Company's distribution, storage, production, and Supply resources; (3) inability to fulfill firm service obligations; and (4) issuance of an OFO or similar notice by upstream transporters.

16.3 In the event that the Company has declared a Critical Day, the Company will have the right to issue an Operational Flow Order ("OFO") in which the Company may instruct Suppliers to take such action as conditions require, including, but not limited to, diverting Gas to or from the Company's distribution system, within the contract entitlements, if any, assigned to the Supplier under Section 11 hereof. An OFO may be issued on a pipeline or point-specific basis. An OFO may be issued by the Company as a blanket order to all Suppliers or to an individual Supplier whose actions are determined by the Company to jeopardize system integrity. -The Company may issue an OFO to an individual Supplier if the Company faces Gas cost exposure in excess of daily cashout or imbalance penalties as set forth in Sections 9.6, 9.7, 10.6, and 10.7 for any under-deliveries or over-deliveries caused by that Supplier.

16.4 The Company will provide the Supplier with as much notice as is reasonably practicable of the issuance and removal of a Critical Day or an OFO; under most circumstances, the Company intends to provide at least twenty-two (22) hours' notice prior to the start of the Gas Day for the issuance of the Critical Day or OFO. Notification of the issuance and removal of a Critical Day or an OFO will be made by means as established in the Supplier Service Agreement. The Supplier will be responsible for coordinating with its Customers any change to the Customer's quantity of Gas Usage. An OFO or Critical Day will remain in effect until its removal by the Company.

16.5 All quantities of Gas over-delivered or under-delivered to the Company's system in violation of an OFO will be subject to the Critical Day provisions of Sections 9.6 and 10.6 of this tariff.

17 FORCE MAJEURE AND LIMITATION OF LIABILITY

17.1 Neither the Company nor the Supplier will be liable to the other for any act, omission, or circumstance occasioned by or in consequence of any event constituting force majeure, and unless it is otherwise expressly provided herein, the obligations of the Company and the Supplier then existing hereunder will be excused during the period thereof to the extent affected by such event of force majeure, provided that reasonable diligence is exercised to overcome such event. As used herein, force majeure will mean the inability of the Company or the Supplier to fulfill its contractual or regulatory obligations: as a result of compliance by either party with an order, regulation, law, code, or operating standard imposed by a governmental authority; by reason of any act of God or public enemy; by reason of storm, flood, fire, earthquake, explosion, civil disturbance, labor dispute, or breakage or accident to machinery or pipeline (which breakage or accident is not the result of the negligence or misconduct of the party claiming force majeure); by reason of any declaration of force majeure by upstream Transporting Pipelines; or by reason of any other cause, whether the kind enumerated herein or otherwise, not within the control of the party claiming force majeure and which by the exercise of reasonable diligence such party is unable to prevent or overcome. Notwithstanding the foregoing, the Customer's and the Supplier's obligation to make any payments required under this tariff will in no case be excused by an event of force majeure. Nor will a failure to settle or prevent any labor dispute or other controversy with employees or with anyone purporting or seeking to represent employees be considered to be a matter within the control of the party claiming excuse. The party claiming force majeure will, on request, provide the other party with a written explanation thereof and of the remedy being undertaken.

17.2 The Company shall be liable only for direct damages resulting from the Company's conduct of business when the Company, its employees, or agents have acted in a negligent or intentionally wrongful manner. In no event shall the Company be liable to any party for any indirect, consequential, or special damages, whether arising in tort, contract, or otherwise, by reason of any services performed, or undertaken to be performed, or actions taken by the Company, or its agents or employees, under this tariff or in accordance with or required by law, including, without limitation, termination of the Customer's service.

17.3 If the Company is unable to render firm Delivery Service to the Customer taking such service as contemplated by this tariff as a result of force majeure and such inability continues for a period of thirty (30) Gas Days, the Customer may provide written notice to the Company of its desire to terminate Delivery Service at the expiration of thirty (30) Gas Days from the Company's receipt of such notice, but no sooner than sixty (60) Gas Days following the outset of the force majeure. If the Company has not restored Delivery Service to the Customer at the end of such notice period, the Customer's Delivery Service will terminate and both parties will be released from further performance hereunder, except for obligations to pay sums due and owing as of the date of termination.

17.4 The Company and the Supplier shall indemnify and hold the other and their respective affiliates, and the directors, officers, employees, and agents of each of them (collectively, "affiliates") harmless from and against any and all damages, costs (including attorney's fees), fines, penalties, and liabilities, in tort, contract, or otherwise (collectively, "liabilities"), resulting from claims of third parties arising, or claimed to have arisen, from the acts or omissions of either party in connection with the performance of the indemnifying party's obligations under this tariff. The Company and the Supplier shall waive recourse against the other party and its affiliates for or arising from the non-negligent performance by such other party in connection with the performance of its obligations under this tariff.

18 CURTAILMENT

18.1 Whenever the integrity of the Company's system or the Supply of the Company's Customers taking Sales Service or Delivery Service is believed to be threatened by conditions on its system or upon the systems with which it is directly or indirectly interconnected, the Company may, in its sole reasonable judgment, curtail or interrupt Gas service or reduce pressure as set out in Section 18, Supply and Capacity Shortage Allocation Policy of this tariff. Such action shall not be construed to constitute a default nor shall the Company be liable therefor in any respect. The Company will use efforts reasonable under the circumstances to overcome the cause of such curtailment, interruption, or reduction and to resume full performance.

18.2 The Company shall communicate notice of curtailment as soon as practicable to the Suppliers of affected Customers by means as specified in the Supplier Service Agreement.

18.3 The Company shall take reasonable care in providing regular and uninterrupted service to its firm Customers, but whenever the Company deems that the situation warrants any interruption or limitation in the service to be rendered, such interruption or limitation shall not constitute a breach of the contract and shall not render the Company liable for any damages suffered thereby by any person, or excuse the Customer from further fulfillment of the contract.

18.4 In any case where the Company determines in its judgment that a curtailment or interruption of firm services is necessary, the Company will curtail and/or interrupt firm Delivery Service and Sales Service Customers on a nondiscriminatory basis.

19 TAXES

19.1 In the event a tax of any kind is imposed or removed by any governmental authority on the distribution of Gas or on the gross revenues derived from the distribution of Gas at retail (exclusive, however, of taxes based on the Company's net income), the rate for service herein stated will be adjusted to reflect said tax. Similarly, the effective rate for service hereunder will be adjusted to reflect any refund of imposition of any surcharges or penalties applicable to service hereunder which are imposed or authorized by any governmental or regulatory authorities.

19.2 The Customer will be responsible for all taxes or assessments that may now or hereafter be levied with respect to the Gas or the handling or subsequent disposition thereof after its delivery to the

Delivery Point. However, if the Company is required by law to collect and/or remit such taxes, the Customer will reimburse the Company for all amounts so paid. If the Customer claims exemption from any such taxes, the Customer will provide the Company in writing its tax exemption number and other appropriate documentation. If the Company collected any taxes or assessments from the Customer and is later informed by the Customer that the Customer is exempt from such taxes, it shall be the Customer's responsibility to obtain any refund from the appropriate governmental taxing agency.

19.3 The Supplier will be responsible for all production, severance, ad valorem, or similar taxes levied on the production or transportation of the Gas before its delivery to the Designated Receipt Point. The Supplier will also be responsible for sales taxes imposed on Gas delivered for the Customer's account. However, if the Company is required by law to remit such taxes to the collecting authority, it will do so and invoice the Supplier for such taxes paid on the Supplier's behalf.

20 SUPPLIER TERMS AND CONDITIONS

20.1 Applicability

The following terms and conditions shall apply to every Supplier providing Supplier Service in the State of New Hampshire, to every Customer doing business with said Suppliers, and to Customers acting as their own Supplier.

20.2 Obligations of Parties

20.2.1 Customer

Unless otherwise agreed to by the Company and the Customer, a Customer shall select one Supplier for each account at any given time. A Customer electing Supplier Service must provide the selected Supplier with its applicable Authorization Number. A Customer may choose only a Supplier who meets the terms described in Sections 20.2.3 and 20.3 below and who meets any applicable registration requirements established by law or regulation.

20.2.2 Company

The Company shall deliver Customer purchased Gas from the Designated Receipt Point to the Delivery Point in accordance with the service selected by the Customer pursuant to this tariff and, among other things, shall:

(a) Provide Customer service and support, including call center functions, for services provided by the Company under this tariff;

(b) Respond to service interruptions, reported Gas leaks, and to other Customer safety calls;

(c) Handle connections, curtailments, and terminations for services provided by the Company under this tariff;

(d) Read meters;

(e) Submit bills to Customers for Delivery Service and if contracted by the Supplier, for Supplier Service in accordance with Section 12.2.1.

(f) Address billing inquiries for Delivery Service;

(g) Answer general questions about Delivery Service;

(h) Provide to Suppliers, on request, the data format and procedures for electronic information transfers and funds transfers;

(i) Arrange for or provide Sales Service to the Customer at the request of the Customer in accordance with the Company's tariff; and

(j) Provide information regarding, at a minimum, rate tariffs, billing cycles, Capacity assignment methods, and Consumption Algorithms.

20.2.3 Supplier

The Supplier shall act on behalf of the Customer to acquire Supplies and to deliver them to the Designated Receipt Point pursuant to the service selected by the Customer and the requirements of this tariff.

The Supplier is responsible for enrolling Customers pursuant to Section 20.5 of this tariff.

The Supplier must request, complete and sign a Supplier Service Agreement to act as a Supplier on the Company's system, satisfy the Supplier requirements and practices as set forth in Section 20.3 of this tariff, be and remain an approved shipper on the upstream pipelines and underground storage facilities on which the Company will assign Capacity, if any, under Section 11, and be and remain eligible to provide service to Customers in New Hampshire.

The Supplier is responsible for completing all transactions with the Company and for all applicable charges associated with Customer enrollment and changes in the Customer's service as set forth in Section 20.5 and Attachment B.

20.3 Supplier Requirements and Practices

20.3.1 The Company shall have the right to establish reasonable financial and non-discriminatory credit standards for qualifying Suppliers. Accordingly, in order to serve Customers on the Company's system, the Supplier shall provide the Company, on a confidential basis, with audited balance sheet and other financial statements, such as annual reports to shareholders and 10-K reports, for the previous three (3) years, as well as two (2) trade and two (2) banking references. To the extent that such annual reports to shareholders are not publicly available, the Supplier shall provide the Company with a comparable list of all corporate affiliates, parent companies, and subsidiaries. The Supplier shall also provide its most recent reports from credit reporting and bond rating agencies. The Supplier shall be subject to a credit investigation by the Company. The Company shall review the Supplier's financial position periodically.

20.3.2 The Supplier shall also confirm in the Supplier Service Agreement that:

(a) The Supplier is not operating under any chapter of bankruptcy laws and is not subject to liquidation or debt reduction procedures under state laws, such as an assignment for the benefit of creditors, or any information creditors' committee agreement.

(b) The Supplier is not aware of any change in business conditions which would cause a substantial deterioration in its financial conditions, a condition of insolvency, or the inability to exist as an ongoing business entity.

(c) The Supplier has no delinquent balances outstanding for services previously provided by the Company, and the Supplier has paid its account according to the established terms and not made deductions or withheld payment for claims not authorized by contract.

(d) No significant collection lawsuits or judgments are outstanding which would materially affect the Supplier's ability to remain solvent as a business entity.

(e) The Supplier's New Hampshire business advertising and marketing materials conform to all applicable state and federal laws and regulations.

20.3.3 In the event the Supplier has not demonstrated to the Company's satisfaction that it has met the Company's credit evaluation standards, the Company shall require the Supplier to provide one of the following at the Maximum Financial Liability as calculated below:

(a) Advance deposit;

(b) Letter of credit;

(c) Surety bond; or

(d) Financial guaranty from a parent company that meets the creditworthiness criteria.

The Company shall base the Supplier's maximum financial liability as two (2) times the highest month's aggregated Gas Usage of all Customers currently served by the Supplier at the highest Monthly Index in the preceding twenty-four (24) Months. This amount may be updated continuously, and at minimum, whenever the aggregated Gas Usage of all Customers served by the Supplier changes by more than 25%. The Supplier agrees that the Company has the right to access and apply the deposit, letter of credit, or bond to any payment of any outstanding claims that the Company may have against the Supplier, including imbalance charges, cash-out charges, pipeline penalty charges, and other amounts owed to the Company, or to secure additional Gas supplies, including payment of the costs of the Gas supplies themselves, the cost of transportation storage, and other related costs incurred in bringing those Gas supplies into the Company's system. The Supplier shall continue its obligation to maintain its financial security instrument until it has satisfied all of its outstanding claims with the Company. The Supplier's financial security as established above must be in place no later than five (5) Business Days prior to the first day of each calendar month in order for the Supplier to maintain its eligibility to provide service to Customers.

20.3.4 The Supplier shall warrant that it has or will have entered into the necessary arrangements for the purchase of Supplies which it desires the Company to transport to its Customers, and that it has or will have entered into the necessary upstream transportation arrangements for the delivery of these Gas supplies to the Designated Receipt Point.

20.3.5 The Supplier shall warrant to the Company that it has good title to or lawful possession of all Gas delivered to the Company at the Designated Receipt Point on behalf of the Supplier or the Supplier's Customers. The Supplier shall indemnify the Company and hold it harmless from all suits, actions, debts, accounts, damages, costs, losses, taxes, and expenses arising from or out of any adverse legal claims of third parties to or against said Gas.

20.3.6 The Supplier shall be responsible for making all necessary arrangements and securing all required regulatory or governmental approvals, certificates, or permits to enable Gas to be delivered to the Company's system.

20.3.7 By agreeing to provide service under this tariff, the Supplier acknowledges that adherence to any applicable law regarding unfair trade practices, truth in advertising law, or law of similar import is required. Any Supplier found by a court of competent jurisdiction to have willfully or repeatedly violated the New Hampshire Consumer Protection Act, N.H.R.S.A. Ch. 358-A; the Federal Trade Commission Telemarketing Sales Rules, 16 C.F.R. Part 310; or the regulations promulgated pursuant to the Federal Trade Commission Act, 15 U.S.C. § 45 (a) (1), may be suspended or disqualified from acting as a Supplier on the Company's system.

20.3.8 If the Supplier fails to comply with or perform any of the obligations on its part established in this tariff or in the Supplier Service Agreement (e.g., failure to deliver Gas or late payment of bills rendered or failure to execute a capacity assignment), the Company maintains the right to terminate the Supplier's eligibility to act as a Supplier on the Company's system. Written notice of such an intent to terminate the Supplier's eligibility shall be given to the Supplier, its Customers, and the NHPUC. Notification to the Supplier shall be via Registered U.S. Mail - Return Receipt Requested or other means of documented delivery. Upon issuance of such written notice, the Company shall have the right to terminate the Supplier's eligibility to act as a Supplier on the Company's system at the expiration of ten (10) Gas Days after the giving of such notice, unless within such ten (10) Gas Day period the Supplier shall remedy to the full satisfaction of the Company such failure. Termination of such Supplier eligibility for any such cause shall be a cumulative remedy as to the Company, and shall not release the Supplier from its obligation to make payment of any amount or amounts due or to become due from the Supplier to the Company under the Company's applicable tariffs. Customers whose Supplier's deliveries have been terminated will be placed on Sales Service pursuant Section 13 of this tariff.

20.4 Access to Usage History and Current Billing Information

The Supplier shall be responsible for obtaining the necessary Authorization Number from each Customer prior to requesting the Company to release the Company's historic usage information specific to that Customer to such Supplier.

The Company shall be required to provide the most recent twelve (12) months of a Customer's historic usage data to a Supplier, provided that the Supplier has received the appropriate authorization as set forth above.

20.5 Enrollment, Cancellation, and Termination of Supplier Service

20.5.1 The Supplier shall be responsible for obtaining the necessary Authorization Number from each Customer prior to initiating Supplier Service to the Customer.

20.5.2 The Supplier must provide the Company with the following minimum information in the Company's predetermined format prior to the commencement or termination of service by the Supplier pursuant to Section 20.5 of this tariff:

(a) The Customer's name and current Authorization Number;

(b) The name of the Supplier;

(c) The Customer's billing option (for commencement of service);

(d) The type of change in Supplier Service (e.g., commencement of service, termination of service, or cancellation of service due to the rescission of an agreement with the Supplier by the Customer); and

(e) Any additional information reasonably required by the Company.

The Company shall determine whether each Customer's enrollment request as provided by a Supplier is complete and accurate, and matches the Customer's account record. In the event that the enrollment request is incomplete, inaccurate, or does not match the Customer's account record, then the Company will notify the Supplier so that the Supplier can resolve any discrepancies.

20.5.3 A change in Supplier Service will normally be made on a monthly metering and billing cycle basis, with changes taking effect on the date of the Customer's next scheduled meter read. Enrollment forms must be transmitted no less than ten (10) Business Days prior to the Customer's next scheduled meter read. If more than one Supplier submits a Supplier Service transaction for a given Customer during the monthly billing cycle, the first completed transaction that is received during the cycle shall be accepted. All other transactions shall be rejected. Rejected transactions may be resubmitted after the Customer's next scheduled meter read.

20.5.4 If the Supplier submits information to the Company to terminate Supplier Service to a Customer less than ten (10) Gas Days before the next scheduled meter read, Supplier Service shall be terminated on the date of the Customer's subsequent scheduled meter read. The Company shall confirm the termination date for Supplier Service.

20.5.5 In those instances when a Customer who is receiving Supplier Service from an existing Supplier initiates such service with a new Supplier, the Company shall send the date for the Customer's change in Supplier Service to the existing Supplier. To terminate Supplier Service with a Supplier and to initiate Sales Service, a Customer shall so inform the Company and the Supplier. Supplier Service shall be terminated on the date of the Customer's next scheduled meter read provided that the Company receives notice of such termination no less than ten (10) days in advance of the next scheduled meter read. Where such notice is received by the Company in less than ten (10) days in advance of the next scheduled read, the termination shall be effective as of the date of the following scheduled read. The Company shall send the Customer's termination date for Supplier Service to the Supplier.

20.5.6 A Customer who moves within the Company's service territory shall have the opportunity to notify its existing Supplier that it seeks to continue Supplier Service with said Supplier. Upon such notification, the Supplier may enroll the Customer pursuant to the provisions set forth in this Section in order to initiate Supplier Service for the Customer at the new location. The Company shall make the necessary adjustments to the Supplier's affected Aggregation Pools, including but not limited to, changes to Designated Receipt Points, and quantities of Capacity for assignment, if any, pursuant to this tariff and the Supplier's Service Agreement with the Company. In the event that the existing Supplier does not enroll the Customer for Supplier Service at the new location, the Company shall arrange for or provide Sales Service to the Customer.

20.5.7 In those instances when a new Customer moves to the Company's service territory, the Customer's Supplier must enroll the Customer pursuant to the provisions set forth in this Section in order to initiate Supplier Service for the Customer. Otherwise, the Customer shall receive Sales Service in accordance with Section 13.

20.5.8 The Company may charge fees to the Supplier for processing the transactions described in this Section, as approved by the NHPUC. These fees are included in Attachment D.

20.6 Aggregation Pools

20.6.1 The aggregation of Customer accounts into an Aggregation Pool is limited by the Delivery Service of the respective Customers. Non-daily metered Customers subscribing to Delivery Service under Rate Schedules G-41, G-42, G-51 and G-52 must be aggregated in a separate pool from Customers subscribing to daily metered service under Rate Schedules G-43, G-53, and G-54.

20.6.2 Non-daily metered Customers taking Delivery Service pursuant to Section 10 of this tariff shall be combined by a Supplier into a single Aggregation Pool within each of the Company's designated Gas Service Areas.

20.6.3 Daily metered Customers taking Delivery Service pursuant to Section 9 of this tariff shall be combined by a Supplier into a single Aggregation Pool within each of the Company's designated Gas Service Areas.

20.6.4 A separate Supplier account will be established for each Supplier Aggregation Pool.

20.6.5 The election of any service from the Company by the Supplier shall apply to the entire Aggregation Pool and not just an individual customer in the Aggregation Pool.

20.6.6 The Company may charge a monthly fee to the Supplier for each Aggregation Pool pursuant to Attachment B.

20.7 Imbalance Trading

20.7.1 Prior to the imposition of imbalance charges, the Supplier may engage in trading daily and monthly imbalances for the previous Month, provided that daily imbalance trades are communicated to the Company within three (3) Business Days upon the Company's provision of information on Supplier imbalances for said Month.

20.7.2 The Company will make available a list of Suppliers by Gas Service Area making deliveries during the previous Month.

20.7.3 Aggregation Pools affected by the transaction must be located within the same Gas Service Area as defined in Section 4, unless waived by the Company.

20.7.4 Daily imbalance trades must be point-specific on those Gas Days when the Transporting Pipeline required the Company to balance on a point-specific basis.

20.8 Billing and Payment

20.8.1 By the tenth (10th) Business Day of the calendar month, the Company shall render to the Supplier a statement of the quantities delivered and amounts owed by the Supplier for the prior Month. The Company will provide Suppliers with their Customers' consumption data based on estimated or actual meter readings at the appropriate cycle read dates for each Customer in the Aggregation Pool pursuant to Section 12 of this tariff. This data will be provided on a rolling basis as readings or estimates are made.

20.8.2 Calculation of the charges applicable to the Aggregation Pool will be based on aggregated Gas Usage and other such indicators of all Customers in the Aggregation Pool. Billing for charges applicable to an Aggregation Pool, including but not limited to imbalance charges, credits or penalties, shall be billed to the Supplier on a calendar month basis.

20.8.3 The Supplier shall have ten (10) Business Days from the date of such statement to render payment to the Company. The Supplier shall render payment by means of electronic funds transfer to the Company. The late payment rate will apply to all amounts outstanding after ten (10) days.

20.8.4 If the correctness of the Company's bill to the Supplier is questioned or disputed by the Supplier, an explanation should be promptly requested from the Company. If the bill is determined to be incorrect, the Company shall issue a corrected bill. In the event that the Supplier and the Company fail to agree on the amount of the bill, the Supplier may file a complaint with the Commission to resolve such complaint.

21 CUSTOMER DESIGNATED REPRESENTATIVE

21.1 The Customer may appoint a Designated Representative to satisfy or undertake the Customer's duties and obligations; including, but not limited to submitting and/or receiving notices, making nominations, arranging for trades of imbalances, and performing operational and administrative tasks; provided, however, that under no circumstances will the appointment of a Designated Representative relieve the Customer of the responsibility to make full and timely payment to the Company for all Delivery Service provided under this tariff.

21.2 A request by a Designated Representative to the Company that contains the Customer's Authorization Number will be deemed to be confirmation that the Customer has designated such person or entity as a Designated Representative. A Customer may appoint only one (1) Designated Representative per account.

21.3 Under any agency established hereunder, the Company shall rely upon information concerning the applicable Customer's Delivery Service that is provided by the Designated Representative. All such information shall be deemed to have been provided by the Customer. Similarly, any notice or other information provided by the Company to the Designated Representative concerning the provision of Delivery Service to such Customer shall be deemed to have been provided to the Customer. The Customer shall rely upon any information concerning Delivery Service that is provided to the Designated Representative as if that information had been provided directly to the Customer.

21.4 The Customer shall agree to indemnify the Company and hold it harmless from any liability (including reasonable legal fees and expenses) that the Company incurs as a result of the Designated Representative's negligence or willful misconduct in its performance of agency functions on the Customer's behalf.

GAS SUPPLIER SERVICE AGREEMENT

This Agreement made this **[day]** day of **[month]**, 20**[xx]**, between Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities, a New Hampshire Corporation with a principal place of business at 15 Buttrick Road, Londonderry, NH 03053 (the "Company") and **[name of supplier]**, a **[state]** company with a principal place of business at **[address]** ("Supplier"). The Company and the Supplier is also individually referred to herein as a "Party" or collectively as the "Parties."

BASIC UNDERSTANDINGS

Whereas, the Company operates as a natural gas local distribution company and provides firm transportation of third- party gas on its distribution system; and

Whereas, the Company's Tariff (the "Tariff") on file with, and approved by, the New Hampshire Public Utilities Commission (the "NHPUC") permits delivery service customers to assign their rights of nominating and scheduling delivery of gas for transportation on the Company's system to a third-party natural gas supplier; and

Whereas, Supplier seeks to nominate and schedule delivery of gas for distribution on the Company's system on behalf of one or more customers taking delivery service from the Company; and

Whereas, the Company's Tariff, Part III, Section 20.2.3, requires Supplier to enter into this Supplier Service Agreement (the "Agreement") with the Company prior to the initiation of Supplier Service, as defined therein; and

Now therefore, the Parties hereto, each in consideration of the agreement of the other, do hereby agree as follows:

I. SCOPE AND APPLICATION

1.0 This Agreement shall be subject to the Company's Tariff as on file with the NHPUC and in effect from time to time. The Company's Tariff and applicable Rate Schedules are hereby incorporated by reference as though directly set forth herein. In the event the terms of this Agreement conflict with the Company's Tariff, the Tariff shall control.

1 of 14

Field Cod

1.1 This Agreement is intended for use between the Company and natural gas suppliers providing service to customers on the Company's distribution system, and may not be waived, altered, amended, or modified, except as provided herein.

1.2 Exhibits A and B, attached hereto and incorporated herein by reference, include additional terms that are a part of this Agreement.

II. DEFINITIONS

2.0 Any capitalized terms used in this Agreement and not defined herein shall be as defined in the Tariff or as stated in the NHPUC's regulations.

III. TERM

3.0 This Agreement shall become effective on the date hereof (the "Effective Date") and shall continue in full force and effect from month to month unless terminated by either Party by written notice given no less than thirty (30) days prior to the desired termination date, or unless otherwise agreed by the Parties. Notwithstanding the foregoing, the Parties agree to abide by all terms of this Agreement until any transactions that are outstanding at the time of termination are completed, including, but not limited to, the payment by Supplier to the Company of any and all outstanding balances.

3.1 Notwithstanding anything to the contrary elsewhere in this Agreement or in the Company's Tariff, any Party, by written notice to the other Party (the "Breaching Party") may terminate this Agreement, in whole or in part, with respect to such Breaching Party or suspend further performance without terminating this Agreement upon the occurrence of any of the following:(a) the Breaching Party terminates or suspends doing business; (b) the Breaching Party becomes subject to any bankruptcy or insolvency proceeding under federal or state law (unless removed or dismissed within sixty (60) days from the filing thereof), or becomes insolvent, becomes subject to direct control of a transferee, receiver or similar authority, or makes an assignment for the benefit of creditors; or (c) the Breaching Party commits a material breach of any of its obligations under this Agreement or the Tariff and has not cured such breach within fifteen (15) days after receipt of a written notice from the other Party specifying the nature of such.

Field Cod

3.2 Consistent with the provisions of Part III, Section 20.3.8 of the Company's Tariff, the Company also maintains the right to terminate the Supplier's eligibility to act as a Supplier. on the Company's system in the event that Supplier fails to comply with or perform any of the obligations on its part established in the Tariff or in this Agreement, including but not limited to, failure to deliver gas or to make payment of amounts due to the Company.

3.3 Notwithstanding the Effective Date, Supplier acknowledges and agrees that the Company is obligated to provide services pursuant to this Agreement only upon full satisfaction, or the Company's express written waiver, of the Conditions Precedent set forth in Article IV of this Agreement.

3.4 No delay by either Party in enforcing any of its rights hereunder shall be deemed a waiver of such rights, nor shall a waiver of one default be deemed a waiver of any other or subsequent default.

3.5 The enumeration of the foregoing remedies shall not be deemed a waiver of any other remedies to which either Party is legally entitled.

IV. CONDITIONS PRECEDENT

4.0 The following requirements shall be conditions precedent to the Company's obligations hereunder:

(a) Supplier shall provide the Company with all information requested in Exhibits A and B attached hereto and incorporated herein;

(b) Pursuant to Part Ill, Section 20.3.1 of the Company's Tariff, the Company shall confirm the Supplier's creditworthiness. In the event that Supplier has not demonstrated to the Company's satisfaction that it has met the Company's credit evaluation standards, the Company will identify such deficiencies to the Supplier, and the Supplier shall provide financial assurances as required by the Company consistent with the provisions of Part III, Section 20.3.3;

(c) Pursuant to Part Ill, Section 20.2.3 of the Company's Tariff, Supplier shall register with the NHPUC and provide evidence of such to the Company on an annual basis;

Field Cod

(d) Pursuant to Part III, Section 20.2.3 of the Company's Tariff, Supplier shall demonstrate to the Company that it is an approved shipper on the upstream pipelines and underground storage facilities on which the Company will assign capacity;

(e) Pursuant to Part III, Section 12.2.1 of the Company's Tariff, where Supplier elects to utilize the Standard Complete Billing Services from the Company, Supplier shall furnish to the Company a complete schedule of its relevant rates and rate pricing options for Supplier Service in written form or in an electronic format reasonably acceptable to the Company, at Company's option, no less than ten (10) Business Days prior to initial Customer enrollment for any such rate or prior to a change in Supplier's existing rates or five (5) Business Days prior to a change in rate pricing options.

(f) Prior to Customer Enrollment, Supplier shall successfully complete testing of the business-transaction communication protocols established by the Company, which may include communication by fax or telephone, electronic transactions as specified by the Company, or any other applicable communication requirements set forth by the Company.

V. SUPPLIER CERTIFICATION

5.0 In addition to the requirements listed in Section IV of this Agreement, and pursuant to Part III, Section 20.3.2 of the Company's Tariff, the Supplier hereby affirms the following:

(a) Supplier is not operating under any chapter of bankruptcy laws and is not subject to liquidation or debt reduction procedures under state laws, such as an assignment for the benefit of creditors, or any information creditors' committee agreement.

(b) Supplier is not aware of any change in business conditions that would cause a substantial deterioration in its financial conditions, a condition of insolvency, or the inability to exist as an ongoing business entity.

(c) Supplier has no delinquent balances outstanding for services previously provided by the Company, and Supplier has paid its account according to the established

Field Cod

terms and not made deductions or withheld payment for claims not authorized by contract.

(d) No significant collection lawsuits or judgments are outstanding that would materially affect Supplier's ability to remain solvent as a business entity.

(e) Supplier's New Hampshire business advertising and marketing materials conform to all applicable New Hampshire state and federal laws and regulations.

5.1 Supplier shall promptly notify Company of any material change in its financial condition as it relates to Supplier's creditworthiness or solvency as a business enterprise.

5.2 In the event that the NHPUC enacts regulations whereby Supplier must register with the NHPUC, Supplier shall notify Company within twenty-four (24) hours in writing in the event that its registration as a Competitive Supplier is acted upon by the NHPUC in such a way that it materially affects Supplier's performance under this Agreement, including but not limited to suspension, revocation, modification, or non-renewal. Consistent with Part III, Section 20.3.8 of the Company's Tariff, revocation or non-renewal of Supplier's registration shall be grounds for immediate termination of this Agreement by Company.

VI. <u>NOMINATIONS AND SCHEDULING</u>

6.0 The Company and Supplier, pursuant to the Company's Tariff on file with the NHPUC and the terms of this Agreement, agree to exchange and act on information regarding the nomination and scheduling of gas for transportation on behalf of Supplier's customers.

6.1 Supplier acknowledges and agrees that its transportation rights under this Agreement are solely those that have been assigned to it by the Customer pursuant to the Company's Tariff. Supplier further agrees that the Company shall have no obligation to honor any nomination or scheduling request from Supplier that, in the Company's sole judgment, exceeds the scope of Supplier's assigned rights or where such nominations or requests could be reasonably refused, directly or indirectly, based on the terms of this Agreement or the Company's Tariff.

6.2 Pursuant to Part III, Sections 9.3.2 and 10.3.3 of the Company's Tariff, nominations will be communicated to the Company in accordance with the terms of this Agreement as set forth in Exhibit A.

Field Cod

6.3 In the event of a discrepancy between the volume nominated to the Company by Supplier and the volume confirmed by the Company, the discrepancy shall be allocated between and among Supplier's Aggregation Pools and/or Customers in accordance with the Pre-Determined Allocation Method set forth in Exhibit B, attached hereto. In the event that the Supplier has not provided the Company with a Pre-Determined Allocation Method, the discrepancy will be allocated consistent with the provisions of the Company's Tariff.

VII. CAPACITY ASSIGNMENTS

7.0 The Supplier's Maximum Daily Peaking Quantity ("MDPQ") may be modified during the calendar year in accordance with the provisions of Part Ill, Sections 11.0 and 14.0 of the Company's Tariff. Company will notify Supplier prior to the effective date of such changes.

7.1 Pursuant to Part III, Section 11.9.2 of the Company's Tariff, the quantity of each Company Managed Supply assigned to Supplier may be modified during the calendar year in accordance with Part III, Sections 11.4 and 11.8 of the Company's Tariff. Company will notify Supplier prior to the effective date of such changes.

7.2 In accordance with Part Ill, Sections 11.0 and 14.0 of the Company's Tariff, the quantity of Capacity assigned to Supplier may be modified during the calendar year. In addition, the Company shall have the right to adjust a Customer's total capacity quantity C'TCQ") if the Company determines that the TCQ calculation is in error or is otherwise not calculated in accordance with the provisions of Part Ill, Sections 11.3.2.

7.3 Pursuant to Part Ill, Section 11.10.2 of the Company's Tariff, Supplier shall provide notice to the Company of its designation of contracts to be managed by the Company for cost mitigation purposes by the means set forth in Exhibit 8.0.

VIII. LEFT BLANK INTENTIONALLY (RESERVED FOR FUTURE USE)

IX. BILLING AND PAYMENT

9.0 Bills, fees and charges for services provided by the Company, including, but not limited to, monthly cashouts, monthly imbalance charges, daily imbalance charges, and any other applicable charges set forth in the Tariff or in this Agreement, shall be

Field Cod

rendered to Supplier on a monthly basis and shall be due upon receipt of said bill, unless otherwise specified in Exhibit A.

In addition to any other right or remedy available to the Company, Supplier's failure to make payment within ten (10) days of the posting date on the bill shall result in the addition of interest on any unpaid balance calculated at the maximum monthly rate allowable by the Company's Tariff. Interest shall accrue commencing from the date said bill was posted. The posting date is the date the bill is transmitted to Supplier. The bill may also be transmitted electronically if agreed to between the Parties in Exhibit A.

9.1 The Company shall have the right to deduct any amounts owed by Supplier to the Company for such services, which are thirty (30) days or more past due, from any amounts collected in the normal course of business by the Company on the Supplier's behalf. Amounts subject to a good faith dispute will not be subject to deduction.

9.2 The Parties agree to cooperate and provide each other with necessary documentation relating to any transactions resulting hereunder, including but not limited to, applicable sales or other tax exemptions. The Parties agree that Supplier's failure to comply with the provisions of this Article IX shall constitute default of payment under the Tariff and expose Supplier to liability thereunder as well as under this Agreement.

9.3 Consistent with the provisions of Part III, Sections 20.3.1 and 20.3.3 of the Company's Tariff, Supplier shall satisfy the creditworthiness standards established by the Company. In the event the Supplier has not demonstrated satisfaction of the Company's creditworthiness standards, the Supplier shall provide, upon ten (10) days written notice from the Company, financial assurance in the form of an advance deposit, letter of credit, surety bond or financial guaranty from a parent company, as reasonably determined by the Company. The amount of any such financial assurance required by the Company shall be calculated in accordance with the provisions of Part III, Section 20.3.3 of the Company's Tariff. The Company shall review Supplier's satisfaction of the Company's creditworthiness standards every twelve (12) months during the term of this Agreement giving consideration to Supplier's payment history

Field Cod

in the preceding twelve-month period. Upon the request of Supplier, the Company shall exercise its sole reasonable discretion to determine whether a change in the form of financial assurance is warranted. In the event that the Company requires financial assurances in the form of a deposit, such deposits shall accrue interest in accordance with the Company's Tariff. Such deposit shall be returned to Supplier within thirty (30) days of the expiration or termination of this Agreement, provided that Supplier is not in default under this Agreement. The Company may deduct from the deposit any amount payable to the Company by Supplier under this Agreement, which has not been paid by the Supplier when due, unless such non-payment relates to a documented billing dispute between Supplier and the Company. Such deduction may be taken by the Company without notice or demand of any kind and the Company may, in its sole discretion, apply such deposit against any amount then due and payable. In the event that Company applies all or any portion of such deposit, Supplier shall deposit such sums as are necessary to replenish the security deposit to its maximum amount, within ten (10) days' notice of such deduction and application.

X. REPRESENTATIONS

10.0 Each Party represents that it is and shall remain in compliance with all applicable laws, tariffs, and NHPUC regulations during the term of this Agreement.

10.1 Each person executing this Agreement for the respective Parties represents and warrants that he or she has authority to bind that Party.

10.2 Each Party represents that (a) it has the full power and authority to execute, deliver, and perform this Agreement; (b) the execution, delivery, and performance of this Agreement have been duly authorized by all necessary corporate or other action by such Party; and (c) this Agreement constitutes that Party's legal, valid and binding obligation, enforceable against such Party in accordance with its terms.

10.3 Each Party shall exercise all reasonable care, diligence and good faith in the performance of its duties pursuant to this Agreement, and carry out its duties in accordance with applicable recognized professional standards.

Field Cod

XI. NONDISCLOSURE

11.0 Neither Party may disclose any Confidential Information obtained pursuant to this Agreement to any third Party, including affiliates of such Party, without the express prior written consent of the other Party. As used herein, the term "Confidential Information" shall include, but not be limited to, all business, financial, and commercial information pertaining to the Parties, Customers of either or both Parties, Suppliers for either Party, personnel of either Party; any trade secrets; and other information of a similar nature; whether written or in intangible form that is marked proprietary or confidential with the appropriate owner's name.

11.1 Confidential Information shall not include information known to either Party prior to obtaining the same from the other Party, information in the public domain, or information obtained by a Party from a third party who did not, directly or indirectly, receive the same from the other Party to this Agreement or from a Party who was under an obligation of confidentiality to the other Party to this Agreement, or information developed by either Party independent of any Confidential Information. The receiving Party shall use the higher of the standard of care that the receiving Party uses to preserve its own Confidential Information or a reasonable standard of care to prevent unauthorized use or disclosure of such Confidential Information. Each receiving Party shall, upon termination of this Agreement or at any time upon the request of the disclosing Party, promptly return or destroy all Confidential Information of the disclosing Party then in its possession.

11.2 Notwithstanding the preceding, Confidential Information may be disclosed to any governmental, judicial or regulatory authority requiring such Confidential Information pursuant to any applicable law, regulation, ruling, or order, provided that: (a) such Confidential Information is submitted under any applicable provision, if any, for confidential treatment by such governmental, judicial or regulatory authority; and (b) prior to such disclosure, the other Party is given prompt notice of the disclosure requirement so that it may take whatever action it deems appropriate, including intervention in any proceeding and the seeking of any injunction to prohibit such disclosure.

Field Cod

11.3 No provision of this Agreement shall prohibit the Company from communicating to its Customers and prospective customers, information regarding Supplier's eligibility to conduct business on the Company's distribution system. In addition, obligations under this Article XI shall survive the termination or expiration of this Agreement.

XII. LIABILITY AND INDEMNIFICATION

12.0 The Parties acknowledge and agree that the Force Majeure provisions set forth in Part III, Section 17 of the Company's Tariff are incorporated by reference as if set forth herein.

12.1 The Parties acknowledge and agree that the liability and indemnification provisions in Part III, Section 17 of the Company's Tariff are incorporated by reference as if set forth herein.

12.2 For purposes of such liability and indemnification, however, the Parties acknowledge and agree that nothing in such Tariff prohibits one Party from impleading the other Party as a third-party defendant, whether or not one or both Parties are named as defendants in the initial claim of a third party. The third-party claim shall be stayed pending resolution of any dispute regarding liability and indemnification under this Agreement. Such resolution shall be final and binding upon the Parties only after agreement between the Parties or after entry of a final judgment, after any further appeals of a court of competent jurisdiction to which any appeal may have been taken from the determination of the arbitrator(s).

12.3 The Parties acknowledge and agree that for purposes of Part III, Section 17 the Company's Tariff, a Party seeking recovery from the other Party in connection with the performance of its obligations of the Tariff shall not be entitled to recovery where its own negligent acts or omissions contribute to or cause such damages, costs, fines, penalties or liabilities.

12.4 The Parties expressly acknowledge and agree that the dispute resolution provision in Article XIII of this Agreement shall apply to any and all disputes arising under this Article, including, without limitation, those disputes that arise as a result of either of

Field Cod

the Parties being named as a defendant in the primary action or being named as a third-party defendant by a defendant in the primary action.

12.5 Notwithstanding anything in this Agreement or the Tariff to the contrary, in no event shall any Party hereto be liable to any other Party hereto for indirect, consequential, punitive, special, or exemplary damages under any theory of law that is now or may in the future be in effect, including without limitation: contract, tort, N.H.R.S.A. Ch. 358-A, strict liability, or negligence.

12.6 Notwithstanding the availability of other remedies at law or in equity, either Party hereto shall be entitled to specific performance to remedy a breach of this Agreement by the other Party.

12.7 Supplier further agrees that it shall indemnify, defend and hold harmless the Company with respect to any claim, suit, damages or costs of any kind arising from any action or inaction of the Company in reliance upon the nominations, scheduling instructions or other communications from Supplier. The Parties agree that reliance on such instructions and communications shall be deemed reasonable and shall not constitute negligence.

12.8 The provisions of this Article XII shall survive the termination of this Agreement.

XIII. DISPUTE RESOLUTION

13.0 Disputes hereunder shall be reduced to writing and referred to the Parties' representatives for resolution. The Parties' representatives shall meet and make all reasonable efforts to resolve the dispute. Pending resolution, the Parties shall continue to fulfill their obligations under this Agreement in good faith, unless this Agreement has been suspended or terminated. If the Parties fail to resolve the dispute within thirty (30) days, they may mutually agree to pursue mediation or arbitration to resolve such issues.

13.1 The interpretation and performance of this Agreement shall be in accordance with and controlled by the laws of the State of New Hampshire, without regard to the doctrines governing choice of law. All disputes arising hereunder shall be brought either before the NHPUC or the state courts of the State of New Hampshire.

Field Cod

XIV. COMMUNICATIONS

14.0 Except as otherwise provided herein, any notices given under this Agreement shall be in writing and shall be delivered to the Company as set forth in Exhibit A, by hand or sent by (a) certified mail, return receipt requested, first class postage prepaid, (b) telecopy, or (c) a nationally recognized courier service. Notices and other communications to Supplier shall also be addressed as shown on Exhibit A. Notices given hereunder shall be deemed to have been given upon receipt or any refusal to accept; telecopied notices shall be deemed to have been given upon confirmation of their receipt.

14.1 All communications required by the Company's Tariff shall be made in accordance with the schedule listed in Exhibit A. Information on active Company fax numbers and e-mail addresses shall be posted on the Company's Internet Website at http://www.libertyutilities.com/east/gas/business_partners/index.html

XV. ENFORCEABILITY

15.0 In the event that any portion or part of this Agreement is deemed invalid, against public policy, void or otherwise unenforceable by a court of law, the validity and enforceability of the remaining portions thereof shall otherwise be fully enforceable.

15.1 No waiver by any Party of any one or more defaults by the other Party in the performance of any provision of this Agreement shall operate or be construed as a waiver of any other present or future default, whether of a like or different character. No delay by either Party in enforcing any of its rights hereunder shall be deemed a waiver of such rights.

XVI. ASSIGNMENT AND DELEGATION

16.0 Any entity that shall succeed by purchase, merger or consolidation to the assets and properties, substantially or as an entity, of either Party hereto shall be entitled to the rights and shall be subject to the obligations of its predecessor in interest under this Agreement.

16.1 Either Party may, without relieving itself of its obligations under this Agreement, assign any of its rights or obligations hereunder to an affiliated entity, but otherwise no assignment of this Agreement or any of the rights or obligations hereunder shall

Field Cod

be made unless there first shall have been obtained the written consent of the other Party. No assignment by Supplier shall take effect until the assignee has met the requirements of Article IV hereunder. No assignment of this Agreement shall relieve the assigning Party of any of its obligations under this Agreement until such obligations have been assumed by the assignee.

16.2 The restrictions on assignment contained herein shall not in any way prevent either Party from pledging or mortgaging its rights as security for its indebtedness.

16.3 In addition, either Party may subcontract its duties under this Agreement to a subcontractor provided that the subcontracting Party shall remain fully responsible as a principal and not as a guarantor for performance of any subcontracted duties, and shall serve as the point of contact between its subcontractor and the other Party, and the subcontractor shall meet the requirements of any applicable laws, rules, regulations, and Tariff. The assigning or subcontracting Party shall provide the other Party with thirty (30) calendar days' prior written notice of any such subcontracting or assignment, which notice shall include such information about the subcontractor as the other Party shall reasonably require.

XVII. MISCELLANEOUS

17.0 This Agreement, all Exhibits and attachments hereto and all documents referenced herein, constitute the entire agreement between the Parties and supersedes all other agreements, communications, and representations. Paragraph headings are for convenience only and are not to be construed as part of this Agreement.

17.1 Unless otherwise provided herein, no modification of, or supplement to, the terms and provisions stated in this Agreement shall be or become effective without the written consent of both Parties.

17.2 This Agreement may be executed simultaneously in two or more counterparts, each of which shall be deemed to be an original but all of which shall constitute one and the same document.

DATED: April 28, 2017 ISSUED BY: /s/James M. Sweeney
James M. Sweeney

EFFECTIVE: July 1, 2017 TITLE: President

Authorized by NHPUC Order No. xx,xxx dated Month Day,Year, in Docket No. DG 17-048

Public Utilities Commission

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

Docket No. DG 17-048

Agreement Regarding Permanent Rates

This Agreement Regarding Permanent Rates (the "Agreement") is entered into this 27th day of February, 2018, by Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities ("Liberty" or the "Company") and the Office of the Consumer Advocate ("OCA") (together, the "Settling Parties"). This Agreement resolves all issues between the Settling Parties in this proceeding, the approval of which would discharge the Commission's duty to "be the arbiter between the interests of the customer and the interests of the regulated utilities." RSA 363:17-a.

I. INTRODUCTION

On March 28, 2017, Liberty filed its notice of intent to file rate schedules seeking an increase in its annual distribution revenues. The Company filed its proposed rate schedules on April 28, 2017, seeking, as updated later in the proceeding and through its rebuttal testimony, a $14.5 million permanent increase in annual distribution revenues and a $5.2 million step increase to recover an annual revenue deficiency based on additional net rate base of approximately $252 million for the twelve-month period ending December 31, 2017. The Company requested approval of a 10.3% return on equity (ROE), and a capital structure consisting of 50% equity and 50% debt. Liberty also proposed consolidating the Keene Division's distribution rates into EnergyNorth's distribution rates (while maintaining a separate cost of gas ("COG") rate for Keene) and implementing a full decoupling mechanism to sever the connection between sales and revenue. The Company supported its filing with the direct testimony of a number of witnesses from the Company and expert consultants. The Commission suspended the rate schedules by Order No. 26,015 (May 8, 2017).

The OCA notified the Commission that it would participate in the docket on behalf of residential customers consistent with RSA 363:28. No party sought intervention.

The Company's filing also included a request for a temporary rate increase of $7.8 million. The Settling Parties and Staff reached a settlement as to temporary rates, and the Commission approved the agreed $6.75 temporary rate increase, effective July 1, 2017. Order No. 26,035 (June 30, 2017). The order provides that any permanent rates approved by the Commission would be fully reconcilable back to the July 1, 2017, effective date of temporary rates.

Following the temporary rate order, the Company responded to numerous sets of data requests from the parties, the Commission's Audit Staff reviewed the Company's filing and issued its audit report, and the OCA and Staff filed testimony.

Staff's testimony recommended the following: (1) an ROE of 8.55%; (2) a capital structure of 49.85% long term debt, 0.95% short term debt, and 49.21% equity; (3) a permanent increase to distribution revenue of $4.045 million; (4) a step increase of $4.1 million for 2017 capital additions and recovery of certain costs related to pensions, benefits, and 2017 degradation fees; (5) that the Commission deny the Company's request to consolidate the Keene Division's distribution rates with the rest of the Company; and (6) a limited decoupling mechanism to account only for energy efficiency gains, as opposed to the Company's (and OCA's) proposed "full" decoupling proposals that remove all incentives for the Company to encourage higher sales per customer.

The OCA's testimony recommended an ROE of 8.4%, a 50/50 capital structure, a permanent increase to distribution revenue of $9.2 million, a separate rate proceeding for the Keene Division, and a full "real time" decoupling proposal that adjusts each customer's bill based on their actual use and actual heating degree days during the current billing month and periodically adjusts for other decoupling variables.

The Company conducted discovery on Staff's and OCA's testimony, and the Company filed rebuttal testimony. The parties then engaged in settlement discussions that resulted in this Agreement, which is intended to resolve all issues in this case as between the OCA and Liberty. The Settling Parties recommend and request that the Commission approve this Agreement without modification.

II. TERMS OF AGREEMENT

A. Revenue Requirement, Rate Base, Rate of Return

The Settling Parties agree and recommend that the Commission authorize an annual distribution revenue increase of $10.3 million effective May 1, 2018, based on an overall cost of capital of 6.85%. The overall cost of capital was calculated utilizing a cost of equity of 9.4%, the actual weighted average cost of long-term debt, and a capital structure of 0.945% short-term debt, 49.845% long-term debt, and 49.209% common equity capital, which is the Company's proforma capital structure based on the recent long-term debt issuance and short-term debt approved in Order No. 26,084 (Dec. 15, 2017). The calculation of the overall cost of capital is as follows:

Description	Capital Structure	Cost of Capital	Weighted Cost of Capital
Common Stock	49.21%	9.40%	4.63%
Long-Term Debt	49.85%	4.42%	2.20%
Short-Term Debt	0.95%	2.49%	0.02%
	100.00%		6.85%

The Settling Parties agree that the above distribution revenue increase represents a reasonable compromise of all the issues relating to the revenue requirement pending before the Commission for the purpose of permanent rates, as itemized below. Because the above revenue increase is the result of compromise and settlement, it is a liquidation of all revenue requirement issues. The Settling Parties agree that the revenue requirement recommended to the Commission in this Agreement results in permanent rates for Liberty's customers that are just and reasonable. The permanent rate increase described in this Section A shall be reconcilable to the effective date of temporary rates in this case, July 1, 2017, per Order No. 26,035, in accordance with Section C below.

The liquidated revenue requirement in this Agreement reflects consideration, negotiation, and resolution as between the Settling Parties of all the issues raised by the OCA and by Staff in their direct testimony that impacted the revenue requirement. Some of the more significant topics are discussed below.

1. Prepayments Included in Cash Working Capital

The Company included prepayments of certain costs (mostly property taxes and insurance) in its cash working capital calculation. Staff recommended that the Company remove all prepayments claiming those costs were double counted because they were included in rate base and were also used to determine cash working capital. The Company acknowledged that there may be some double-counting in theory, but it did not warrant a dollar-for-dollar offset as Staff testified. The Settling parties have negotiated and compromised this issue in reaching this Agreement.

2. Materials and Supplies

Staff recommended that Liberty move $3.66 million in "materials and supplies" (which consists of fuel supply inventories) from rate base and instead recover the associated revenue requirement through the Company's COG rate. The Settling Parties agree with this adjustment and these costs were removed from the distribution revenue requirement.

3. Concord Training Center

The Training Center located on the Company's property in Concord has been in use since March 2015. The facility provides a centralized location for simultaneous training of multiple employees in a controlled environment and has been and is being used to, among other things, train and test gas field workers and supervisors whose Operator Qualification requirements continue to increase, train electrical field workers and supervisors, and train office staff so they may better perform their jobs (e.g., training call center employees on the basics of the Company's gas and electric systems makes them better able to respond to customer questions) The Training Center also serves as a call center back-up facility, has been used for industry training in conjunction with other utilities, has been used to host meetings with first responders, and for other related purposes. With respect to electric training, the Company currently receives revenue from its affiliate, Granite State Electric, pursuant to a lease agreement that is on file with the Commission in Docket No. DA 16-560, which docket was consolidated into the current docket. The Settling Parties agree that the lease should continue under its existing terms and conditions.

The revenue requirement in this Agreement allows the Training Center costs and revenues to be included in the determination of the revenue requirement, but also reflects consideration and compromise of the issues related to the Training Center raised by Staff and the OCA in their testimony.

4. **Depreciation and Amortization**

a. The depreciation and amortization rates to be used by Liberty on a going-forward basis are the rates set forth in Attachment A.

b. The depreciation and amortization rates applied to the assets for EnergyNorth and the Keene Division will be aligned so they conform with the rates in Attachment A.

c. Plant assets for the Keene Division will become subject to group depreciation.

d. As a housekeeping matter, certain EnergyNorth plant assets that are currently recorded in transmission-related plant accounts will be reclassified to distribution-related plant accounts.

e. The depreciation reserve variance is an under-recovery of $8.9 million, and will be amortized over a five-year period, resulting in annual amortization of $1,780,000.

f. As part of its next rate case, Liberty will prepare an updated analysis of the status of the depreciation reserve variance, with determination of the disposition of the updated variance and the appropriate amortization period to be determined in that proceeding.

5. iNATGAS

In Docket No. DG 14-091 the Commission approved a special contract with iNATGAS, which included the construction of a CNG facility in Concord. The Company ultimately built a larger facility, at greater cost, essentially accelerating the construction of Phase 2. Staff recommended that the Company not recover some of the costs of the facility because, in Staff's view, it was not appropriate to build Phase 2 so soon, because the actual costs exceeded the original budget, and because the current revenue from the project did not support the costs. Liberty explained how the higher costs were reasonable, that it was more cost effective to complete Phase 2 early, and that iNATGAS is now buying CNG from the facility at a rate that exceeds the minimum take-or-pay amounts in the Special Contract so as to support all the direct costs of the facility.

The revenue requirement in this Agreement reflects a compromise of these issues related to iNATGAS.

6. Keene Production Costs and Emergency Response Costs

The Settling Parties agree that the emergency response costs related to the December 2015 incident and the Keene production costs should be recovered through the Keene specific COG rates over five years during the winter COG period, and beginning November 1, 2018.

B. Step Increase

The Settling Parties agree that the Company shall be permitted to implement a step increase to its distribution revenue, as calculated in Attachment B, effective May 1, 2018, to recover the following items:

1. The revenue requirement associated with 2017 non-growth related capital additions placed in service as of December 31, 2017;

2. The increase to operating expenses resulting from the Financial Accounting Standards Board's ("FASB") issuance in March 2017 of Accounting Standards Update No. 2017-07 ("ASU 2017-07");[1] and
3. The costs incurred during 2017 for degradation fees paid to the City of Manchester and legal costs incurred by the Company associated with a lawsuit that began in 2012 against the Cities of Concord and Manchester to challenge the "degradation fees" that the cities charged Liberty to dig in municipal streets.
4. Certain "carryover' costs related to the Company's Cast Iron/Bare Steel replacement program as discussed during the hearing in Docket No. DG 17-063.[2]

The 2017 non-growth related capital additions referenced in Section B.1. above and included in Attachment B are based on Liberty's 2017 capital budget. On or before March 30, 2018, Liberty will submit its actual capital costs for its 2017 non-growth related capital additions and update Attachment B. In the event that the resulting revenue requirement is lower than $5,044,835, the lower amount will be used for the step adjustment. If the updated calculation of the revenue requirement exceeds $5,044,835, the revenue requirement will be limited to $5,044,835.

C. Effective Date for Permanent Rates and Recoupment

The permanent rate increase agreed to in Section II.A shall be effective for all service rendered on and after May 1, 2018. The difference between the distribution revenues obtained

[1] Among other things, ASU 2017-07 amended the accounting for pension and OPEB costs, effective January 1, 2018, to limit the components of net periodic pension and postretirement benefit costs that are eligible for capitalization to only the service costs component. Previously, all components of net periodic pension and postretirement benefit costs (i.e., service cost, interest cost, expected return on plan assets, etc.) were eligible to be capitalized. The result of the accounting changes prescribed in ASU 2017-07 is that the portions of the costs that are no longer eligible to be capitalized increase the Company's operating expenses as compared to prior accounting.
[2] *See* transcript of June 19, 2017 hearing in Docket No. DG 17-063 at 41, et seq.

from the rates prescribed in the temporary rate order, Order No. 26,035, and the distribution revenues that would have been obtained under the rates finally determined, if applied during the period such temporary rate order was in effect, shall be recovered from customers over a period of twenty months, beginning with service rendered as of May 1, 2018. The total estimated amount of recoupment is $3,590,667 as shown on Attachment C, and shall be recovered through a uniform charge per therm through the Local Delivery Adjustment Clause (LDAC) of the Company's tariff. The estimated amount of recoupment has been calculated using actual billing data for July 1, 2017, through December 31, 2017, and estimated billing data for January 1, 2018, through April 30, 2018. On or before June 30, 2018, Liberty will file with the Commission, for its review and approval, the actual recoupment amount based on actual billing data for the period July 1, 2017, through April 30, 2018. Any difference between the actual recoupment amount and the estimated amount shown on Attachment C will be reconciled through the operation of the reconciling mechanism in the LDAC.

D. Rate Case Expenses

Subject to adjustment for the difference between estimated and actual expense, the Company shall recover $530,000 in rate case expenses over a period of twenty months commencing with service rendered as of May 1, 2018. Details of the actual and estimated rate case expenses are included in Attachment D. The Company agrees to submit by June 30, 2018, an accounting of its rate case expenses, with appropriate supporting documentation, for review by the parties and approval by the Commission. The Company shall recover its just and reasonably incurred rate case expenses through the LDAC in the same manner as it recovers the temporary rate recoupment. Once the final amount of actual, just and reasonable rate case expenses is determined, any difference between the amount recovered commencing May 1, 2018, and the final amount shall be recovered through the operation of the reconciling mechanism in the LDAC. Rate case expenses shall be recovered through uniform charge per therm in accordance with the provisions of the LDAC.

E. Revenue Allocation and Rate Design

The permanent and step increases will be allocated to each class on a proportional basis by increasing each class' revenue responsibility by the same percentage.

For residential rate design, the R-3 customer charge and the R-1 customer charge will both be set at $14.88 per month, which is $2.00 per month lower than the currently effective customer charge for Rate R-1. Any revenue shortfall resulting from the reduction to the customer charges, plus the increase resulting from the permanent and step increases, will be recovered through the volumetric delivery per therm rates. In addition, the volumetric head and tail block delivery per therm rates for R-3 will be set at the same level.

The distribution rates for the R-4 Low Income Residential Heating rate class were calculated by multiplying the R-3 proposed base distribution rates by 40 percent to reflect a 60 percent discount. This resulted in a customer charge of $5.95 (i.e., $14.88 x 40%) and a volumetric delivery per therm rate of $0.2400 (i.e., $0.6000 x 40%).

Rates for commercial and industrial rate classes will be increased proportionally for each billing rate component (e.g., customer charge and volumetric delivery rate) to recover the allocated revenues for that class. The resulting rates are effective May 1, 2018, and continue without modification to rate design until the Company's next rate proceeding.

F. Decoupling

The Settling Parties agree that the Company should implement a "full" decoupling mechanism that contains the following elements: (1) real-time weather normalization, calculated at the individual customer level; (2) revenue per customer design, with accrual calculations at the rate class level and billing rates aggregated into two rates – Residential and C&I; (3) Managed Expansion Program customers are subject to decoupling, but the expansion surcharge dollars (i.e., the 30% distribution premium) are excluded from the decoupling calculation; and (4) special contract customers are not subject to decoupling and will be excluded entirely from the decoupling calculation.

The real-time weather normalization adjustment is calculated as the difference between actual distribution revenue billed to each customer in each billing cycle for each month, and what distribution revenue for each customer's bill would have been based on normalized therm deliveries. The resulting charge or credit will be added to or subtracted from each customer's bill at the time the bill is rendered (i.e., "real time").

The annual revenue per customer adjustment will be determined by calculating the difference between actual annual distribution revenue per customer and approved annual distribution revenue per customer for two groups of customers: (a) the residential classes and (b) the commercial and industrial classes. Approved annual distribution revenue per customer for each of these two groups will be based on the approved distribution revenues and test year average customer counts for each group. The difference in total distribution revenues is calculated using this revenue per customer variance multiplied times the actual average annual customer count. This amount will be recovered from or refunded to each group over the subsequent 12-month period through a uniform charge per therm for each group.

The Settling Parties agree that the Company may recover up to $50,000 in costs incurred to upgrade its billing system and related software to implement this decoupling mechanism. Any costs above $50,000 will be absorbed by the Company.

The Settling Parties agree that the decoupling mechanism shall take effect beginning on November 1, 2018. On that date, decoupling will replace the Lost Revenue Adjustment Mechanism established in Order No. 25,932 (Docket No. DE 15-137), and the Company will cease any and all recovery of lost revenues attributable to energy efficiency programs outside of the decoupling mechanism.

G. Keene Consolidation

The Settling Parties agree that Keene Division customers will pay the same distribution rates and be served under the same terms and conditions as all other Liberty customers, effective May 1, 2018.

Liberty will not commence construction on any phase of its proposed Keene expansion unless a discounted cash flow ("DCF") analysis of the revenue requirement of the direct cost versus the incremental revenue of the additional load for that phase shows a positive value over a 10-year period.

Liberty agrees to a target amount of additional revenue due to growth in excess of the revenue requirement associated with the direct cost of the investment. If the cumulative excess revenue is less than $200,000 annually, Liberty will reduce its revenue requirement in its next rate case by the difference between $200,000 and the excess revenue. Excess revenue shall be based on actual load added as of the effective date of permanent rates following the end of the next rate case, plus reasonably anticipated revenue based on customer commitments to take service, both pro-formed for one year following the effective date of permanent rates in the next rate case. This provision is conditioned on Liberty's receipt of the Safety Division's authorization to commence construction of Phase I no later than May 1, 2018, and on acquiring appropriate authorization to construct a permanent compressed natural gas ("CNG")/liquefied natural gas ("LNG") facility by May 1, 2019.

Keene customers will begin paying the LDAC as of May 1, 2018.

Keene shall have a separate COG, which will include: (1) propane purchases; (2) CNG/LNG purchases; (3) production costs; (4) revenue requirement associated with CNG/LNG facilities; and (5) revenue requirement associated with fuel inventory.

H. Impact of Tax Reform

Separate from the revenue requirement described in this Agreement, Liberty will reduce annual distribution revenues by $2,394,065 to account for the reduction in federal tax rates included in the Tax Cuts and Jobs Act of 2017 ("2017 Tax Act") that was passed by the United States Congress in December 2017 and a reduction to New Hampshire tax rates, and which reduction will be part of the rate adjustments that occur on May 1, 2018. The calculation of this adjustment is shown in Attachment E. In addition, the tax law changes included in the 2017 Tax Act, including the elimination of bonus depreciation for tax purposes, have been taken into account in the calculation of the step adjustment described in Section B above.

The Settling Parties recommend that the Commission find that this provision fully satisfies the Company's obligations with respect to Order No. 26,096 (January 3, 2018) in Docket No. IR 18-001.

I. Bill Impacts

Bill impacts for the various rate classes resulting from the adjustments to revenue and rate design as described above are provided in Attachment F.

J. Tariff Changes

Liberty will file revised tariff language to add Keene as a service territory served by Liberty Utilities (EnergyNorth Natural Gas) Corp., and to add a Keene COG tariff specific to Keene customers, as described above.

Liberty will cancel the Keene Division tariff as of May 1, 2018.

K. Residential Low Income Assistance Program

The Settling Parties agree that the Commission should open a generic proceeding to address changes to the Residential Low Income Assistance Program.

L. Next Distribution Rate Case

Liberty shall file its next distribution rate case using a test year ending no later than December 31, 2020.

III. CONDITIONS

This Agreement is expressly conditioned on the Commission's acceptance of all its terms, without change or condition. If the Commission does not accept this Agreement in its entirety, without change or condition, or if the Commission makes any findings that go beyond the scope of this Agreement, and either of the Settling Parties notifies the Commission within five business days of its disagreement with any such changes, conditions, or findings, the Agreement shall be deemed to be withdrawn, in which event it shall be deemed to be null and void and without effect, shall not constitute any part of the record in this proceeding, shall not be relied on by any party to this proceeding or by the Commission for any other purpose.

The Settling Parties agree that the Commission's approval of this Agreement will not constitute continuing approval of, or precedent for, any particular principle or issue related to the revenue requirement, but such acceptance does constitute a determination that the adjustments and provisions stated in their totality are just and reasonable and consistent with the public interest and that the revenues contemplated will be just and reasonable under the circumstances.

The discussions that produced this Agreement have been conducted on the understanding that all offers of settlement and settlement discussions relating to this docket shall be confidential, shall not be admissible as evidence in this proceeding, shall be without prejudice to the position of any party or participant representing any such offer or participating in any such discussion, and are not to be used in connection with any future proceeding or otherwise.

As between the Settling Parties, the information and testimony previously provided in this proceeding are not expected to be subject to cross-examination by the Settling Parties, which would normally occur in a fully litigated case. The Settling Parties agree that they shall not object to the admission as full exhibits of their respective direct and rebuttal testimony and supporting documentation. The Settling Parties' agreement to admit all testimony without challenge does not constitute agreement by the Settling Parties that the content of the written testimony is accurate or what weight, if any, should be given to the views of any witness. The identification of the resolution of any specific issue in this Agreement does not indicate any of the Settling Parties' agreement to that resolution for purposes of any future proceeding, nor does the reference to any other document bind the Settling Parties to the contents of, or recommendations in, that document for purposes of any future proceeding. The Commission's approval of the recommendations in this Agreement shall not constitute a determination or precedent with regard to any specific adjustments to the revenue requirement, but rather shall constitute only a determination that the revenue requirement and rates resulting from, and other specific conditions stated in this Agreement are just and reasonable. The Settling Parties agree to forego cross-examining each others' witnesses regarding their pre-filed testimony and, therefore, the admission into evidence of any such witness's testimony or supporting documentation shall not be deemed in any respect to constitute an admission by any party to this Agreement that any allegation or contention in this proceeding is true or false, except that the sworn testimony of any witness shall constitute an admission by such witness.

This Agreement may be executed by facsimile and in counterparts, each of which shall be deemed to be an original, and all of which, taken together, shall constitute one agreement binding on all Settling Parties.

Liberty Utilities (EnergyNorth Natural Gas) Corp.
Docket No. DG 17-048
Calculation of Recoupment Amount

	(A)	(B)
1. Settlement Permanent Rate Increase	$10,300,000	
2. Temporary Rate Increase	$6,750,000	
3. Annual Recoupment		$3,550,000
4. divided by: TY Weather Normal Deliveries (th)*		159,761,663
5. Recoupment per Therm		$0.0222
6. Times: Actual/Estimated Jul-Apr Deliveries (th)**		161,741,745
7. Recoupment		$3,590,667

* Test Year Delivery data from initial filing Schedule Rates-2, p.6
** Time Difference is number of months that Temporary Rates were in effect.
Due to colder than normal temperatures, actual therms for the recoupment period exceeded the annual weather normalized sales.

Liberty Utilities (EnergyNorth Natural Gas) Corp.

Docket No. DG 17-048

Actual/Estimated Deliveries (th) for Recoupment Calculation

	Month	Deliveries	*

STATE OF NEW HAMPSHIRE
PUBLIC UTILITIES COMMISSION

DG 17-048

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

Petition for Permanent and Temporary Rates

Order Approving Permanent Rates

ORDER NO. 26,122

April 27, 2018

APPEARANCES: Michael J. Sheehan, Esq., on behalf of Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities; the Office of the Consumer Advocate by D. Maurice Kreis, Esq., on behalf of residential ratepayers; and Paul B. Dexter, Esq., and Alexander F. Speidel, Esq., on behalf of Commission Staff.

In this order, the Commission approves, for the first time in New Hampshire, a decoupling mechanism which allows rate adjustments for weather, energy efficiency, economic effects, and other variables and allows Liberty to earn distribution revenues on a per customer basis, thus eliminating substantial revenue risks. Paired with this innovative decoupling mechanism is a modified rate design that lowers fixed customer charges. The reduction in risk leads to a return on equity of 9.3 percent, which represents a 10 basis point reduction in the return on equity agreed to by Liberty, the OCA, and Staff.

With respect to the numerous revenue and expense issues, the Commission grants a permanent rate increase for Liberty Utilities (EnergyNorth Natural Gas) Corp., effective May 1, 2018, of $8,060,117 in distribution rates, with a step increase effective the same date estimated to be $4,729,953, for certain non-revenue-producing investments made during 2017, offset by a $2,394,065 reduction due to tax reform. The Commission also consolidates the Keene Division with Liberty's other operating areas for distribution rate purposes, and all

Liberty customers will pay the same distribution rates. A Liberty residential customer (except those in the company's Keene Division) who uses 760 therms per year, is expected to see a total annual bill increase of approximately $85 (or 7.8 percent) as a result of the rate changes. A Liberty residential customer in Keene who uses 693 therms per year will see a decrease of approximately $73 (or 4.6 percent).

I. PROCEDURAL HISTORY

Liberty Utilities (EnergyNorth Natural Gas) Corp. (Liberty or the Company) currently operates two gas divisions in New Hampshire, its EnergyNorth Division, where it serves over 90,000 customers in southern and central New Hampshire and Berlin, and its Keene Division, where it serves approximately 1,200 propane air customers in the City of Keene. On April 28, 2017, Liberty filed a Petition for Permanent and Temporary Rates. The petition and subsequent docket filings, other than any information for which confidential treatment is requested of or granted by the Commission, are posted to the Commission's website at http://www.puc.nh.gov/Regulatory/Docketbk/2017/17-048.html.

Liberty's petition requested that the Commission grant: (1) a permanent increase in Liberty's distribution rates effective with service rendered on or after July 1, 2017, designed to yield an increase of $13,749,361 in annual revenues; (2) temporary rates effective with service rendered on or after July 1, 2017, designed to yield an increase of $7,778,497 in annual revenues for its EnergyNorth Division, pending the Commission's final determination on the Company's request for a permanent rate increase; and (3) a step adjustment in rates designed to yield an increase of $6,071,562 in annual revenues (to recover costs associated with approximately $41 million of capital expenditures projected to be made during 2017) to be effective no earlier than January 1, 2018. Liberty proposed that the new permanent rates apply to customers in both its EnergyNorth Division and its Keene Division; that is, the Company sought to consolidate its two divisions for purposes of distribution rates.

Liberty's filing included direct testimony and exhibits in support of the proposed rates, and related supplemental information, including the proposed tariff, in accordance with N.H. Code Admin. Rules Puc 1600. By letter dated April 3, 2017, the Office of Consumer Advocate (OCA) indicated that it would be participating in the proceeding pursuant to RSA 363:28.

In Order No 26,015, dated May 8, 2017, the Commission suspended the effectiveness of the permanent rate pending investigation. In Order No. 26,035, dated June 30, 2017, the Commission authorized a temporary rate increase for customers in the EnergyNorth Division designed to collect $6,750,000 on an annual basis. No temporary rates were requested for the Keene Division. Pursuant to RSA 378:29, the permanent rates authorized in this case will be reconciled back to the effective date of the temporary rates, July 1, 2017.

The Commission held a pre-hearing conference in this matter on May 26, 2017, followed by a technical session. Subsequently, the Staff of the Commission (Staff) and the OCA issued several sets of data requests, which Liberty answered. Liberty, Staff, and the OCA met in technical sessions on August 23, August 24, November 1, and November 2, 2017. On November 30, Staff submitted testimony recommending a rate increase for the EnergyNorth Division of $4.0 million annually, effective May 1, 2018, and a step increase effective that same day of $4.3 million. Staff proposed that no change be made to Keene Division rates at this time. The OCA recommended a rate increase of $9.2 million annually for the EnergyNorth Division. Like Staff, the OCA recommended no change to Keene Division rates at this time. Both Staff and the OCA recommended against the proposed consolidation of Keene into EnergyNorth for purposes of distribution rates, because the consolidation would create a subsidy of the Keene customers by the EnergyNorth customers.

On January 25, 2018, Liberty filed rebuttal testimony wherein it revised its requested revenue deficiency to $14.5 million. On February 27, 2018, Liberty filed a settlement signed by Liberty and the OCA, which if adopted would resolve all issues in this proceeding. The settlement called for a rate increase of $10.3 million effective May 1, 2018, with a step adjustment of $5.0 million effective the same day. The settlement would establish a return on equity of 9.4 percent. It would also consolidate the rates for the EnergyNorth and Keene Divisions and adopt a decoupling mechanism. Staff opposed adoption of the settlement stating that, in its view, the settlement would not result in just and reasonable rates, although Staff supported the settlement return on equity of 9.4 percent and certain other terms as reasonable.

Below, we review the record, including the settlement agreement signed by Liberty and the OCA, and make the findings required to support the rate increases and changes approved in this order. Before doing that, however, we address a request for confidentiality of certain records.

II. STAFF'S MOTION FOR CONFIDENTIAL TREATMENT

Staff filed a motion for confidential treatment of certain information contained in a report from The Liberty Consulting Group (LCG) entitled "Recommendations Verifications of Liberty Utilities." On November 30, 2017, Staff filed the LCG report with two redacted data points, as requested by Liberty, concerning Customer Care Department employee engagement scores. Subsequent to filing the report, Staff noted two additional unredacted scores. Consistent with Liberty's initial position (Data Response Staff 6-38), Staff argued that confidential treatment is required because the data points pertain to "internal personnel practices and otherwise confidential information." RSA 91-A:5, IV. Neither Liberty nor the OCA objected to the motion. At a hearing held on March 6, 2018, the Commission stated that it would treat the information as confidential but, would review the motion in more detail and rule after the hearing.

We first address whether the employee engagement scores should be exempt from public disclosure because such information constitutes confidential personnel data. The New Hampshire Right-to-Know Law provides each citizen with the right to inspect all public records in the Commission's possession. RSA 91-A:4, I. Exceptions include "records pertaining to internal personnel practices." RSA 91-A:5, IV. Both Staff and Liberty stated that the employee engagement scores are a record of internal personnel practices, thus requiring confidential treatment.

The New Hampshire Supreme Court, agreeing with the United States Supreme Court, interpreted "personnel ... when used as an adjective, refers to human resources matters." *Clay v. City of Dover*, 169 N.H. 681, 686 (2017) (citations omitted). The data points at issue in this case relate to an employee engagement survey, which gauges Liberty's efforts to bolster employee retention. The Commission finds that these data points pertain to overall employee satisfaction and this falls under the category of human resource matters. Thus, these data points relate to internal personnel practices, and are exempt from the New Hampshire Right-to-Know Law. Accordingly, we hereby grant Staff's Motion. *See Hounsell v. North Conway Water Precinct,* 154 N.H. 1, 3 (2006); *Union Leader v. Fenniman,* 136 N.H. 624, 627 (1993) (customary balancing of interests not required with regard to personnel practices exemption).

III. LIBERTY/OCA SETTLEMENT

The settlement filed by Liberty and the OCA calls for rates (which would be paid by both the EnergyNorth and Keene Division customers) that would increase revenues by $10.3 million annually, with a step adjustment effective May 1, 2018, of $5.0 million. The settlement contains a 9.4 percent return on equity.

The settlement increase of $10.3 million, while not itemized, was intended to resolve all revenue requirement issues raised in the case. By its own terms, the settlement states that it reflects resolution of many such issues, including weighted average cost of capital, capital structure, return on equity, prepayments, materials and supplies, the Concord training center, depreciation and amortization, investments to serve iNATGAS, Keene production costs, and Keene emergency response costs. Other revenue requirement issues that were raised by Staff in this case and that would be resolved by the settlement (although not specifically identified in the settlement) include customer count for purposes of calculating revenues, payroll expense related to vacancies, incentive-based pay and severance pay, and test year consulting services.

The settlement also includes important non-revenue provisions, including consolidation of the rates charged by the Keene Division and the EnergyNorth Division, as well as a decoupling plan under which revenue per customer targets would be established for each rate class. Each month, and again at the end of each year, rates would be adjusted up or down to allow the Company to collect the established revenue per customer targets. The monthly adjustments would account for changes in weather. In months when temperatures were colder than normal, customers would receive a credit on their bill to return the increased revenues that Liberty would have collected due to higher usage during the colder than normal temperatures. During warmer months, customers would pay a charge to make up for the reduced revenues attributable to the warmer temperatures. The annual adjustments would account for changes other than weather, such as decreased revenues due to energy efficiency, increased revenues due to favorable economic conditions, and other changes in revenues. Under the settlement, customer charges for residential customers would be reduced and existing declining rate blocks would be flattened.

IV. COMMISSION ANALYSIS

In this case, the Commission is presented with an unusual situation where it is asked to approve a settlement that is supported by the applicant (Liberty) and the OCA, but not by Staff. Staff's position is that the Commission should reject the settlement because it will not produce just and reasonable rates.

The Commission's process for reviewing a settlement is well established. Under RSA 541-A:31, V(a), informal disposition may be made of any contested case at any time prior to the entry of a final decision or order, by stipulation, agreed settlement, consent order, or default. N.H. Code Admin. Rules Puc 203.20(b) requires the Commission to approve the disposition of a contested case by settlement if it determines that the settlement results are just and reasonable and serve the public interest. In general, the Commission encourages parties to attempt to reach a settlement of issues through negotiation and compromise, as it is an opportunity for creative problem solving, allows the parties to reach a result more in line with their expectations, and is often a more expedient alternative to litigation. *EnergyNorth Natural Gas, Inc. d/b/a National Grid NH,* Order No. 25,202 at 17 (March 10, 2011). Even where all parties join a settlement agreement, however, the Commission cannot approve it without independently determining that the result comports with applicable standards. *Id.* at 18. In this case, where Staff has testified that the settlement will not produce just and reasonable rates, our independent review of the settlement terms is of even greater importance than usual.

We are mindful of Section III of the settlement, which contains typical settlement language that the settlement is expressly conditioned on the Commission's acceptance of all of its terms, without change or condition. The central issue of this case is the rate increase request. As indicated, the latest request, as set out in Liberty's rebuttal testimony, is for a rate increase of $14.5 million (and a request for approval to consolidate EnergyNorth and Keene Division rates). Staff's updated recommended revenue increase (applicable only to the EnergyNorth Division) was $5.7 million. Exh. 53 at 6. The settlement revenue requirement increase is $10.3 million. Exh. 29 at 3.

Given the wide divergence of these amounts, the Commission undertook a review of the various issues raised in the case concerning the appropriate revenue requirement in order to test the just and reasonableness of the settlement rate increase of $10.3 million. That review is detailed in the pages that follow. It concludes that a reasonable revenue requirement deficiency for Liberty in this case is $8,060,117 on a consolidated basis (*i.e.*, applicable to EnergyNorth and Keene customers under consolidated rates). Because that amount is significantly different from the settlement revenue deficiency, we conclude the best course of action is to reject the settlement in its entirety and instead order a rate increase of $8,060,117 based on our resolution of the underlying issues. In addition, we address the various other issues raised in this case that do not directly affect revenue deficiency, such as rate design and decoupling.

In the following sections, unless otherwise noted, Liberty's positions are taken from a combination of its original filing, and when appropriate, its rebuttal testimony and exhibits. The OCA's positions are taken from its original filing. For many of the issues discussed below, the settlement did not specifically address the issue. Instead, the settlement purported to resolve all issues raised by Staff and the OCA. To the extent the settlement discussed an issue, we describe the settlement position separately.

A. Revenues – Year-End Customer Count vs. Average Customer Count

Liberty. Liberty based its revenue deficiency calculation on test year (2016) revenues with certain adjustments to, among other things, reflect normal weather, annualize for special contract revenues that were not fully reflected in the test year revenues, and reflect a mid-year increase in cast iron and bare steel replacement revenue. Exh. 3 at 47. Liberty did not adjust test year revenues to reflect revenues from customers that were added during the test year.

OCA. The OCA took no position on the revenue adjustments proposed by Liberty.

Staff. Staff accepted the revenue adjustments proposed by Liberty and proposed an additional adjustment designed to reflect increased revenue from customers added during the test year. Staff's adjustment takes year-end customer counts and calculates a revenue adjustment by multiplying the difference in customer bills at year end by average customer usage, by rate class. The adjustment adds $929,551 to test year revenues, and thus reduces Liberty's requested revenue increase by the same amount. Exh. 40. In support of this adjustment, Staff stated that many inputs to a utility's revenue requirement calculation are adjusted for known and measurable changes during and beyond the test year. Rate base is calculated using year-end, plant balances. Many operation and maintenance (O&M) expenses, including payroll, pensions, property taxes, and the PUC assessment are adjusted for post-test year amounts. 3/14/18 AM, Tr. at 34-36. Further, Staff argued, absent this adjustment, the plant used to serve a customer added during the test year would be in rate base at full value, while only a portion of that customer's revenues would be reflected in the revenue deficiency. 3/14/18 AM, Tr. at 31-34.

Ruling. The Commission finds that Staff's revenue adjustment is reasonable. As Staff noted, many aspects of the revenue deficiency calculation in this case have been updated to reflect known and measurable changes during and beyond the test year. Staff's adjustment better matches plant investments with the revenues realized from those investments and therefore produces a more accurate picture of Liberty's revenues in the period when rates will be in effect.

B. O&M Expenses, Payroll – Vacancies

Liberty. Liberty's revenue requirement calculation included payroll costs for a full complement of employees as of December 31, 2017, one full year after the test year. Exh. 3 at 14-15 and 48. The payroll amount was estimated when Liberty filed its case in May 2017, and the amount was updated in Staff Tech 1-1, filed November 21, 2017. Exh. 17 at 83. Liberty stated that it needs a full complement of employees to perform its necessary tasks. To the extent that a position was vacant during the test year, the tasks of that position were done by temporary employees and/or permanent employees working overtime.

OCA. The OCA took no position on the revenue adjustments related to vacancies proposed by Liberty.

Staff. Staff proposed a reduction in payroll expenses to reflect the equivalent of 3.5 vacancies of a workforce of over 300, which is the average of two historical data points for vacancies: three at January 1, 2016 (the start of the test year), and four as of November 1, 2017, just before Staff's testimony was filed. *Id.* at 21. Staff's position is that vacancies recur and should be reflected in a ratemaking payroll amount that is based on budgeted figures. Further, Staff notes that to the extent the duties of vacated positions were performed by temporary workers, the costs associated with those workers would have been reflected in test year O&M expenses, as outside services. Finally, according to Staff, absent the adjustment, Liberty's proposed payroll expense would be 5.3 percent above test year levels, which is almost twice the average of actual annual payroll increases of 2.7 percent over the past three years. *Id.* at 21-22.

Ruling. Liberty's presentation of rate case payroll is difficult to assess. The Commission prefers a more traditional approach where a utility develops a reasonable test year payroll amount and then applies known and measurable percentage payroll increases to that normalized test year amount. We find Staff's proposed adjustment reasonable. Vacancies are a fact of doing business and should be accounted for when calculating a payroll figure for ratemaking purposes that includes a level of employees that is adjusted beyond the test year, as is the case here. A vacancy level of 3.5 out of a total of over 300 positons is about a 1 percent vacancy rate, which we find reasonable, if not unrealistically low. Furthermore, Staff's adjustment is a smaller reduction than would have been warranted under a more traditional approach to calculating a ratemaking payroll amount, and therefore is reasonable for purposes of this case. Exh. 17 at 21-22.

C. <u>O&M Expenses, Payroll - Incentive Based Pay</u>

Liberty. Liberty's rate request included payroll costs associated with its long-term incentive plan. According to Liberty, incentive compensation pay is a common method of compensating employees and is necessary to attract and retain employees. Exh. 23 at 16.

OCA. The OCA took no position on the questions of incentive based compensation.

Staff. Staff recommended that the Commission deny recovery of $52,000 of Liberty's compensation amount because it was tied to incentives designed to benefit shareholders, but not necessarily customers. Exh. 17 at 60. Staff's adjustment represented approximately five percent of Liberty's requested incentive-based compensation. Exh. 3 at 48. In Staff's view, incentives that reward net income or return on investments are focused on benefits to shareholders. *Id.* at

27. Employees seeking to achieve those targets could do so at the expense of customer service; for example, a reduction in vegetation management (for an electric company) would increase earnings, but could result in a degradation of customer service. 3/21/18, Tr. at 120-121. To remove that possible incentive, Staff recommended that compensation resulting from such incentive targets be excluded from the Company's revenue requirement.

Ruling. The Commission appreciates both the Company's position that incentive-based payroll is standard in today's utility industry and may be required to attract and retain quality employees, and Staff's position that payroll tied to earnings could provide incentives that might result in degradation of customer service. There is no solid evidence, however, that either of those hypotheses is actually valid in the case of EnergyNorth. Because the amount of compensation tied to earnings-based incentives is quite small ($52,000 out of a total company payroll expense of $14,518,000 (Exh. 17 at 83)), the Commission finds Staff's adjustment unnecessary. If the percentage of compensation based on net earnings or stock price were higher, we would take a harder look at the amounts to be included.

D. <u>O&M Expenses, Payroll - Severance Pay</u>

Liberty. Liberty's requested revenue requirement in this case included $144,130 of severance pay, of which $78,000 was related to employees who resigned. Exh. 42; Exh. 17 at 65. Liberty stated that all of the resignations were involuntary and may have involved situations in which the employees granted a release from liability. 3/14/18 AM, Tr. at 46-47,67. Liberty argued that such costs should be included in rates for a number of reasons: (a) severance pay is a normal cost of doing business, (b) not allowing recovery of severance pay could result in higher costs because severance pay can be the least expensive means to resolve an employee dispute, and (c) disallowing severance pay would be substituting the Commission's judgment for the

Company's, which would be particularly inappropriate in this instance where the Commission does not know the specific circumstances under which the severance payments were made. Exh. 23 at 20.

OCA. The OCA took no position on the issue of severance pay.

Staff. Staff believes ratepayers should not pay for costs of removing employees. Ratepayers will have already borne the cost of paying all of the Company's employees to perform. If circumstances are such that employees are being "asked" to resign, ratepayers should not bear the costs. Shareholders should carry the costs of bad hiring decisions, and if the least cost means of removing employees is severance pay, then Liberty should take that course to reduce its costs to shareholders. 3/21/18, Tr. at 129-130.

Ruling. The Commission is persuaded by Staff's position that ratepayers should bear the expense of payroll for services provided, but should not bear severance costs related to employees who resign to avoid being fired. Layoffs (where Staff did not recommend disallowance of related severance pay) could involve reductions in work force where the saved payroll expense would find its way into lower rates. Involuntary resignations, on the other hand, may involve subpar performance, and customers should not be required to bear an underperforming employee's payroll and the severance cost incurred to remove that same employee.

E. <u>Expenses - Consulting Services</u>

Liberty. During the test year, Liberty incurred $43,000 in consulting fees to analyze the proposed Northeast Direct Pipeline (NED) project, which was to bring additional gas supplies to Liberty's service area. The NED project was ultimately abandoned by its developer. Liberty's revenue requirement included full recovery of the $43,000 in rates. Liberty opposed any reduction in this amount because, in the Company's view, consulting fees are an ongoing cost of doing business. While this particular project may have been cancelled, other similar consulting arrangements are likely to be needed every year and thus should be reflected in rates. Exh. 23 at 14-15.

OCA. The OCA took no position on Liberty's consultant expenses.

Staff. Staff recommended that the NED consulting costs be amortized over a three-year period, the effect of which would be that only one third of the expense ($14,000) would be reflected in the rates established in this case. Staff's opinion is that consulting expenses are non-recurring and thus amortization of the NED expense is appropriate so that ratepayers do not pay for the full amount each year. Exh. 17 at 20.

Ruling. The Commission finds that modest consulting costs, like those at issue here, are an ongoing part of a regulated utility's business and should not be amortized. Therefore, the full $43,000 may be included in Liberty's revenue requirement. If the consulting costs were much more significant, amortization might be appropriate.

F. <u>Expenses, Depreciation – Average Service Lives</u>

Liberty. Liberty presented a full depreciation study that was prepared and presented by Paul Normand, who performed EnergyNorth's last depreciation study. Mr. Normand recommended that the average service lives (ASL) of many asset groups be changed from the last study. For example, for account 380.00 – Services, which makes up over 30 percent of the Company's total plant, Mr. Normand recommended that the ASL be increased from 40 years to 45 years. Exh. 10 at 447. For Account 367 – Mains (which makes up almost 50 percent of total company plant), Mr. Normand recommended that the ASL remain at 60 years. *Id.* at 445. Mr. Normand based his recommendations on the results of a recognized and commonly used depreciation model when he considered the model results reasonable. When the model results did not produce results that in his opinion were reasonable, he looked for other information on which to base his conclusions. For example, in the case of account 303.03 – Capitalized Software, Mr. Normand stated that the model results were not reasonable. Exh. 69 at 2-4 (labeled p. 25-27 of 36); Tr. 3/26/18 at 149-152. In that instance, Mr. Normand requested specific information from Liberty regarding the ASLs of the Company's various software packages and used those ASLs in his study results. Exh. 10 at 436; 3/26/18, Tr. At 151-155. In general, in situations where the plant had a communication function, such as automated meters, Mr. Normand relied on his professional judgment in arriving at a shorter ASL due to shortened lives of technology. 3/26/18, Tr. at 156-157.

OCA. The OCA took no position on ASLs.

Staff. Staff agreed with many of the changes to ASLs based on the model results. *See*, *e.g.*, Exh. 18 at 31, Account 320.10 – Other Equipment – Production; Exh. 10 at 440 where Liberty proposed to lengthen the existing ASL from 30 years to 35 years and Staff agreed. When Staff deemed Mr. Normand's study results unreliable, Staff recommended that the last authorized ASLs be used. 3/26/18, Tr. at 198-202. *See, e.g.,* Exh. 18 at 31, Account 303.00 – Capitalized Software. In addition, in the case of meters, where the study analyzed this plant category at the sub-account level for the first time, Staff recommended a more gradual approach. Exh. 18 at 5-6. For example, concerning sub-account 381.20 – Meters – ERTS, Liberty recommended changing the existing life from 35 years to 15 years, while Staff proposed 25 years. Exh. 18 at 5-6 and 32; 3/26/18, Tr. at 203.

Ruling. The Commission is persuaded that Mr. Normand has developed appropriate ASLs for Liberty in this matter. We find his use of extra-study data appropriate in the case of capitalized software and preferable to Staff's reliance on Liberty's prior study. Similarly, we agree with Mr. Normand's judgment that a shorter ASL is appropriate for plant items with significant electronic components such as Meters – ERTS. The approved ASLs are set forth on Appendix 6 attached to this order.

G. Expenses, Depreciation - Amortization of Reserve Deficiency

Liberty. Liberty's depreciation study shows a per books reserve for depreciation as of December 31, 2016, equal to $155,247,000. Mr. Normand calculated a theoretical reserve as of that same date of $165,194,000, leaving a variance of $9,947,000. Exh. 10 at 464. Liberty proposed to amortize this variance over three years. Because the per books reserve is lower than the theoretical reserve, the amortization would result in an increase to rates of $3,316,000 per year. Exh. 3 at 52. Mr. Normand initially recommended that the variance be amortized over two depreciation cycles, or 12 years. Exh. 10 at 405. Mr. Mullen testified that Mr. Normand's 12-year recommendation was based on the depreciation study in isolation and that a broader view would point to a shorter amortization period. Specifically, Mr. Mullen stated that the deficiency itself had accumulated in part due to a 13-year amortization period for a reserve excess from a prior rate case. According to Mr. Mullen, extending the amortization another 12 years would cause inter-generation equity issues. Exh. 72. At the hearing, Mr. Normand testified that while the typical approach would be to amortize a reserve variance over two depreciation cycles, this did not account for Liberty's unusually high investments in mains. 3/26/18, Tr. At 183-184. Mr. Mullen and Mr. Normand agreed that if a shorter amortization period were used, the variance should be looked at in the next rate case (in advance of the next full depreciation study). Exh. 72; 3/26/18, Tr. At 184.

OCA. The OCA took no position on the amortization of the reserve balance.

Settlement. The settlement calls for amortization of the reserve deficiency over five years and a re-examination of the reserve imbalance in Liberty's next rate case.

Staff. Staff recommended a 12-year amortization, consistent with the current amortization, which is passing funds back to customers. Staff noted that depreciation deals with long-lived assets (up to 60 years for mains, which is the largest portion of EnergyNorth's plant) and thus reserve imbalances should be amortized over relatively long periods of time. Exh. 18 at 6-7. Staff sees no reason why reserve shortfalls should be recovered from customers four times quicker than excesses are returned to customers (three years versus twelve years). 3/26/18, Tr. At 208-210. Further, the reserve deficiency at hand is about 6 percent of the total theoretical reserve and Mr. Normand stated that it would be reasonable to amortize reserve variances only when they exceed a 5-10 percent range. *Id.* at 207; Exh. 71. Based on that opinion, Staff asserted that if no amortization is one option, then certainly an accelerated amortization (three years) is not warranted.

Ruling. The Commission's primary goal in addressing this issue is to achieve a result whereby the utility customers pay through rates a level of depreciation that fairly reflects the assets on Liberty's books, and that will result in as minimal a reserve variance as possible at the time of the next rate case. While the Commission approved a 12-year amortization period in the settlement in DG 08-009 (EnergyNorth's last rate case in which a depreciation study was done), that amortization appears to have gone on too long. The Company has gone from a significant reserve excess ($12.4 million) to a reserve shortfall almost as large ($9.9 million). Exh.72; Exh.10 at 464. A three-year amortization period and, to a lesser extent, the five-year period provided in the settlement, may be an over-reaction to the long amortization period from

DG 08-009. The Commission supports the idea of re-examining this reserve variance in EnergyNorth's next rate case (and this is based in large part on Mr. Normand's testimony that a reserve variance review would be a significantly less complicated and less costly task than a full depreciation study – 3/26/18, Tr. at 196). Thus, we approve a six-year amortization period of the existing test year-end balance and direct the Company to prepare and present in its next rate case, a review of the reserve imbalance, a thorough explanation of the cause of any imbalance, and a proposal for amortizing that reserve imbalance.

H. Rate Base - Prepayments

Liberty. Liberty's rate case presentation included $2,705,000 of prepayments in rate base. That figure represented an average test year amount of which $2,431,000 was for property taxes and $274,000 was for other prepayments. Exh. 3 at 71. Liberty also included a $2,636,000 working capital component added to rate base. In response to Staff's assertion that the two rate base components (prepayments and working capital) overlap, Liberty maintained that any overlap is not dollar for dollar and that prepayments should be left in rate base while working capital could be reduced to remove the expenses related to prepayments. No specific adjustment was proposed by Liberty, but Mr. Mullen testified that an adjustment or allowance of some sort was reflected in the settlement. 3/6/18 AM, Tr. at 24-27.

OCA. The OCA took no position on the issue of including prepayments in rate base.

Staff. Staff examined Liberty's lead/lag study and found that every property tax invoice Liberty paid was included. As part of that study, the tax period covered by each invoice, and the number of days from that tax period until each invoice was paid, was quantified and reflected. Exh. 9 at 389-390. Staff thus concluded that there was no need to also include prepaid property taxes in rate base because all cost of money or working capital required for property taxes is precisely reflected in Liberty's lead/lag study. Exh. 17 at 13-15. Staff's adjustment removes prepayments from rate base to eliminate a double count of the working capital associated with prepaid property taxes. *Id.* Staff also removed other, non-property tax prepayments from rate base on the same theory; i.e., that those items were covered in the lead/lag study as O&M expense – Non-Labor. Exh. 9 at 378-381; Exh.17 at 13-15.

Ruling. The Commission finds that the detailed lead/lag study captures all the working capital requirements related to property taxes and other prepaid expenses. To also include prepayments in rate base would be allowing for a double recovery of the working capital related to those items. Consequently, prepayments may not be included in rate base.

Rate Base - Training Center

Liberty. Liberty included in rate base a net plant value of $3,456,000 for its training center at 10 Broken Bridge Road in Concord. Exh. 17 at 55. The facility was placed in service and booked to plant in 2015, one year prior to the test year at a full cost of approximately $3.8 million. 3/6/18 AM, Tr. at 79. Liberty's proposed rate base cost of service also reflected the test year level of operation and maintenance associated with the training center, as well as rent received from Liberty's New Hampshire electric utility, Granite State Electric Company, pursuant to a lease agreement. Exh. 3 at 57. The training center is approximately 6,000 square feet in size and includes 3,000 square feet of indoor lab space. It includes two classrooms, an outdoor gas leak field, an outdoor pole line, an indoor manhole, live gas appliances, and live electric transformers, switch gear, and meters. Exh. 13 at 23.

According to Liberty, the facility is used and useful. Liberty's view is that the training center represents the most efficient means for it to perform various training exercises, because the environment is controlled and safe, and Liberty owns the facility so it can schedule the facility's use. Exh. 13 at 24. Liberty stated that it explored the possibility of training at other utilities' facilities, but found that was not an available option. *Id.* at 20-21. Similarly, Liberty considered on-the-job-training but determined it would not provide adequate training. *Id.* In addition to using the facility for training, Liberty has located a backup call center in the building. Exh. 18 at 73.

Concerning the cost of the training center, Liberty relied on an audit performed by the Commission's Audit Division, which reviewed all the training center costs and recommended only minor exclusions of costs (approximately $300,000-$400,000). Liberty agreed to exclude approximately $167,000. 3/6/18 PM, Tr. at 91; Exh. 26A at 137. Liberty also noted that LCG reviewed all the training cost expenditures and did not recommend any rate base exclusions. 3/6/18 PM, Tr. at 91. Concerning increases from the original cost estimates, Liberty conceded that its initial cost estimates were "outdated and lacking in several ways." Exh. 13 at 18. Liberty maintained that training center costs were controlled and its investment was cost-effective. *Id.* at 16; Exh. 26A at 136. Liberty disputed Staff's position that the Company's training costs have increased significantly since the training center was built. 3/6/18 PM, Tr. at 27-30.

OCA. The OCA's original position was that all costs associated with the training center be removed from rates based on imprudent planning and mismanagement of the project. *See* Exh. 16 at 228-237.

Settlement. The settlement agreement included the costs of the training center in Liberty's rate base and, according to its terms, reflected in the revenue requirement consideration and compromise of the issues raised by Staff and the OCA. Exh. 29 at 6.

Staff. Staff recommended full exclusion of the training center from rate base and exclusion of the revenues and O&M expenses from Liberty's cost of service on the grounds that

Liberty did not perform adequate analysis of the costs and benefits of building the training center. Staff noted that Liberty's decision to build the training center was based on a business case dated January 24, 2014, in which Liberty stated that its cost would be $1,028,100, and the payback would be less than three years due in large part to $400,000 per year in avoided outside training costs. Exh. 18 at 50. Liberty's senior management approved that business case. 3/6/18 AM, Tr. at 81-82. Staff observed that over half of the $400,000 savings were related to trainer costs, which would not be saved if the training center were built, because Liberty would need to hire two full-time trainers. 3/6/18 AM, Tr. at 89-91; Exh.18 at 58.

According to Staff, Liberty did not perform a quantitative assessment of the efficiencies it expected to achieve by building the training center versus performing on-the-job training. Staff also criticized Liberty for never issuing a Request For Proposals for training services. Exh.18 at 21-22. Staff observed that, even when the projected cost of the facility had doubled (to $2.3 million) and that cost increase was brought to senior management for review in an Over Expenditure Spending Request Form, no quantitative assessment of alternatives to completing the training center was performed. Exh. 31 at 5; 3/6/18 PM, Tr. at 14-15.

Staff asserted that the initial estimate of $1,028,100 did not include site work and was prepared without the benefit of a contractor. Exh. 30. Staff also noted that even after a construction contract was later signed with North Branch Construction, there were many additional items that were not included in the estimate, including costs associated with environmental consulting, overheads/burdens, and Allowance For Funds Used During Construction (AFUDC). 3/6/18 AM, Tr. at 112; Exh. 31 at 3.

Staff suggested that a reasonable utility executive should have known about the various construction and training costs that were either not estimated or were underestimated when the project was first reviewed and approved by Liberty's senior management. Staff maintains that, when the significant cost increases were presented to senior management in the Over Expenditure Spending Request Form, Liberty should have re-examined its options for training instead of making unsupported claims that alternatives were "expensive" and "not feasible." Exh. 31 at 4-5; 3/6/18 PM, Tr. at 14-15. Staff believes that if proper analyses were performed then Liberty would have decided against building the training center. Exh. 18 at 19-25. Because such analyses were not performed, Staff maintains that no training center related costs should be charged to customers. Staff also noted that the costs of training have increased significantly since the training center was built. *Id.*

Ruling. Many prior Commission decisions give guidance as to the appropriate standard to apply when evaluating the prudence of a utility's investment. Pursuant to RSA 378:28, the Commission shall not include in permanent rates any return on any plant, equipment, or capital improvement which has not first been found by the Commission to be prudent, used, and useful. *Pittsfield Aqueduct Company, Inc.,* Order No. 25,051 at 13 (December 11, 2009). When reviewing whether a utility has been prudent in its decision making, we "may reject management decisions when inefficiency, improvidence, economic waste, abuse of discretion or action inimical to the public interest are shown." *Public Service Company of New Hampshire,* Order 25,565 at 20 (August 27, 2013) (citing *Appeal of Easton*, 125 N.H. 205, 215 (1984)). "One of the critical prudence considerations when evaluating actions and decisions, is not to apply the perspective of hindsight, but rather to consider the actions in light of the conditions and circumstances as they existed at the time they were taken." *Public Service Company of New Hampshire,* Order No. 24,108 at 26 (December 31, 2002).

The record in this case indicates that Liberty's senior management decided to construct the training center based on the business case dated January 24, 2014, (Exh. 18 at 48-51), which showed its projected cost as $1,028,100 and its projected savings as $400,000, resulting in a three-year payback. Based on those parameters, as Staff noted, the decision to proceed with the project could be found to be prudent. Prior to commencing construction, however, the Commission expects a reasonable utility executive to make certain that projected costs are accurate and reasonable and have been appropriately evaluated.

Concerning projected costs, the record demonstrates that the $1,028,100 was not a reasonable estimate. First, it did not include site work (defined by Liberty as excavation, surveying, and related work – 3/6/18 AM, Tr. at 100), which is essential to any project being built from the ground up, as this project was. Site work proved to be significant in this case, (estimated at $328,000 by North Branch consulting) and there is no explanation as to why this item should have been excluded from the business case analysis. In addition, the business case was prepared without the benefit of a contractor bid, despite the fact that the estimated contractor costs of $439,000 made up over 40 percent of the total projected costs of $1,028,100. A reasonable decision maker would have sought bids for this significant cost element before proceeding. Again, contractor costs proved very significant. A September 2014 contract with North Branch called for over $2 million in costs - nearly five times the amount built into the original estimate. Further, when the contract with North Branch was signed, all parties involved knew that additional costs would be involved. 3/6/18 AM, Tr. at 112. Such costs included basic building components like architectural fees, civil engineering fees, security costs, burdens (overhead), other contractor costs, environmental consulting costs, AFUDC, and others which ultimately totaled over $1.2 million. Exh. 56 at 95-96. A reasonable decision maker, knowing that additional costs were not covered in the contractor bid, would have sought to have those costs estimated and included in the evaluation process.

In August 2014, after construction had begun on the training center, Liberty's senior management was presented with an Over Expenditure Spending Request Form seeking approval of an additional $1.2 million, bringing the projected cost of the center to $2,347,000. Exh. 31 at 4. That Form identified wetlands, soil conditions, and drainage issues as the primary reasons for the additional costs. *Id.* At that time, Liberty was aware of its obligation to rebuild Broken Bridge Road, and to extend the municipal water system to the facility, yet those costs were not mentioned or reflected in the Over Expenditure Spending Request Form. Exh. 33 at 5; 3/14/18 PM, Tr. at 40-41. In fact the municipally-imposed costs were not reflected until June 2015, one year after Liberty knew of those obligations. Exh. 56 at 95. Given this increase in the estimated costs – more than double – a reasonable executive would have performed an extensive, detailed analysis of the costs to complete the project and the cost of any alternatives to completion.

Concerning the projected savings contained in the January 24, 2014, business case, Staff correctly noted that over half of the projected savings were for trainer costs that would not be avoided if training were brought in house because trainers would need to be hired.

While Liberty discussed economic and non-economic reasons for pursuing the training center, and resulting efficiencies, the Company made no attempt to evaluate those factors in a systematic, complete format. Exh. 18 at 56-57, 62, 68 and 72. Such an analysis is fundamental to ensure that a significant investment is prudent. Other than the flawed three-year payback analysis presented with the January 24, 2014, business case, Liberty performed no financial analysis of this project. We believe that Liberty should have performed a robust financial analysis of this project at its outset, and should have examined the project when costs began to increase significantly shortly after its initial estimate.

Liberty appears to rely on the used and useful portion of the prudence standard to support its request for full recovery of the training center investment. Staff advocates for full exclusion of the training center costs from rates, on the basis of imprudence. We reject both Liberty's and Staff's positions because, although arguably imprudent, the center, now constructed and in use, provides value to Liberty and its ratepayers for training and for its use as a back-up call center. These functions support the Company's delivery of safe and adequate service. Therefore, we will allow the inclusion of some of the Company's investment in the training center in its rate base.

We find that Liberty can place in rate base and recover the cost of the training center as presented in the August 2014 Over Expenditure Spending Request Form, or $2,347,000. This figure is close to the North Branch contractor estimate of $2,042,000 which included many essential elements that were overlooked in the original business case estimate of $1,028,100. The amount in the August 2014 Form bears some reasonable relation to what an independent contractor thought the building could be built for, and allows additional funds for contingencies and items that were not covered by the contract. Liberty failed to demonstrate that costs beyond the $2,347,000 were prudently incurred, and we will not permit those costs to be included in rates. We will allow all test year operation and maintenance expenses related to the center, because we recognize that those costs will not diminish based on our rate base exclusion and are needed for successful operation of the facility. We find this result appropriately balances the various aspects of our prudent, used and useful standard. *See Boston Gas Co.*, Mass. Dep't of Telecommunications and Energy, DTE 03-40 (2003) wherein the Department made several rate base exclusions of capital project cost overruns because the decisions to incur the over-expenditures were not supported by record evidence.

I. Rate Base - iNATGAS

Liberty. Liberty's proposed rates reflected full inclusion of the $4,816,000 investment Liberty made to provide service pursuant to a special contract with Innovative Natural Gas (iNATGAS), a seller of bulk compressed natural gas (CNG) for transport and for vehicle refueling located on Broken Bridge Road in Concord. The special contract included lease payments to Liberty for land, minimum (take-or-pay) payments for CNG, and volumetric payments to Liberty for CNG. This special contract was reviewed and approved by the Commission in *Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities,* Order No. 25,694 (July 15, 2014), issued in Docket No. DG 14-091. At that time, Liberty's level of investment in the facility was projected to be $2,245,000. The lease was projected to produce different revenue streams under various possible scenarios. The net present values (NPV) of the revenue streams, analyzed over 15 years, were: $1,767,000 under a minimum take-or-pay revenue scenario; $4,732,000 under a baseline scenario of revenues; and $5,541,000 under an accelerated sales assumption level. Exh. 38 at 2.

The final installed cost of Liberty's investment was $4,816,000. 3/6/18 PM, Tr. at 101. The first vehicle fuel sales were made in early 2017 and the first bulk sale to a tractor-trailer customer took place in December 2017. *Id.* Liberty maintains that this arrangement provides benefits to customers, when analyzed over a 15-year period using current costs, excluding an allowance for funds used during construction (AFUDC), at all three revenue scenarios. Liberty forecasts that the facility has the potential to provide significant additional benefits to customers in the future. Liberty claims that its decision to enter into the project was prudent, the plant is used and useful, and thus the cost of the plant and the resulting revenues should be reflected fully in rates. Exh. 24 at 72. In addition, Liberty states that the arrangement provides benefits to existing firm customers in the form of interstate pipeline capacity credits, based on iNATGAS's peak day load. *Id.* at 71-72. According to Liberty, the costs of the facility were reviewed by the Commission's Audit Division and LCG and neither recommended excluding any portion of the facility from rate base. 3/14/18 PM, Tr. at 86.

OCA. The OCA took no position on the iNATGAS investment.

Settlement. The settlement agreement states that the revenue requirement reflects a compromise of the issues raised by Staff related to iNATGAS.

Staff. Staff recommended that Liberty be allowed to recover the revenue requirement associated with the cost of the facility as presented in DG 14-091 ($2,245,000), and that Liberty be required to bear all costs beyond that level, at least until Liberty's next rate case, at which time the project could be re-evaluated using actual sales numbers and costs. Staff did not request a full denial of cost recovery of Liberty's investment to serve iNATGAS, because the project has the potential to provide net benefits to rate payers, over time, depending on the CNG market. Staff maintained that Liberty knew, or should have known, that its cost estimates were too low and that had more accurate estimates of costs and revenues been presented in DG 14-091, Staff might not have recommended approval of the special contract. Exh. 56 at 19-25.

Staff asserted that because the Accelerated Sales Assumption Level has the same maximum annual sales volumes as the Baseline Assumption Scenario, even the baseline scenario could not have been met using the investment figures that were presented in DG 14-091. 3/22/18 PM, Tr. at 97-100. Staff also noted that two of the three revenue scenarios presented could not have been achieved with the level of investment reflected in the analysis, and that the one remaining analysis shows a negative NPV over 15 years when AFUDC, a real cost of the project, is included in the analysis. Exh. 46 at 2.

Staff questioned Liberty's assertion that the arrangement provides benefits to existing firm customers in the form of interstate pipeline capacity credits, based on iNATGAS's peak day load. Staff noted that if additional capacity has to be acquired to serve iNATGAS, the cost of that capacity could exceed iNATGAS capacity credits. Staff did not request a full denial of cost recovery of Liberty's investment to serve iNATGAS, because the project has the potential to provide net benefits to rate payers, over time, depending on the CNG market.

Ruling. The record demonstrates that Liberty's initial analysis of its investment of $2,245,000 was incomplete. That analysis formed the basis of senior management's approval of the project. Exh. 43 at 2-5. First, the initial cost estimate of $2,245,000 did not include AFUDC, although Liberty agreed that AFUDC would be incurred if the project were completed, 3/6/18 PM, Tr. at 108, and it is indisputable that AFUDC could be substantial if the project timeline were extended. Ultimately, AFUDC on this project totaled $436,000.

Second, Liberty's cost estimate included only $865,000 for "piping, meter set, survey, etc." Because the only other costs estimated were $1,000,000 for compressors, $200,000 for land, and $180,000 for contingencies, it is reasonable to conclude that the "piping, meter set, survey, etc." category was intended to cover all other costs of the project (except AFUDC). Liberty was not able to break down the $865,000 among piping, meter set, and other items, beyond noting that the figure would have included surveying, tree removal, more than half of the asphalt and concrete ultimately installed, pump canopies, the connection of the compressors, and perhaps additional items. 3/14/18 PM, Tr. at 30-33. Liberty stated that 4 or 6 inch steel piping was installed with a maximum allowable operating pressure of 750 pounds per square inch. *Id.*

at 34. Liberty also stated that the labor involved in installing the compressors was not included in the compressor figure of $1,000,000. *Id.* at 29. When the actual figures were reviewed, the items that were projected at $865,000 actually cost $3,080,000, an almost fourfold increase. *Id.* at 32.

The first major driver of the increase was the decision to construct a full capacity facility instead of a phased facility, as had been planned and presented to the Commission for review in DG 14-091. Liberty, at a cost of $600,000 to $700,000, accelerated the buildout due to anticipated increased demand, high spot market natural gas prices, and high oil and propane prices following the very cold winter of 2014/2015. Exh. 24 at 68-71. Liberty stated that the additional investments were needed to build the facility necessary to reach the Accelerated Sales Assumption Level presented to the Commission in DG 14-091. *Id.* Exh. 38 at 2. Liberty agreed that the cost of the full buildout should have been included in the 2014 NPV analysis, in order for the accelerated sales scenario to be accurate. 3/14/18 PM, Tr. at 13. Second, Liberty attributed $600,000 of the cost increases to requirements placed by the City to repave Broken Bridge Road and to install a new water main for 2,500 feet. Liberty knew of the City's requirements in mid-June 2014, well before the Commission order approving the special contract was issued on July 15, 2014, yet no update of the DCF analysis was provided to the Commission to reflect this $600,000 cost increase. 3/14/18 PM, Tr. at 41. Third, Liberty attributed $835,000 of the cost increase to design changes involving additional canopies and buildings to protect the various pieces of equipment from weather, and moving the meter closer to the interstate pipeline and further from the CNG facility. Liberty did not explain why those design changes were made after the Commission reviewed the special contract, rather than before. 3/14/18 PM, Tr. at 76-77.

We find it troubling that the analysis Liberty presented to us in 2014, under a request for fast track review of the proposed special contract (3/22/18 AM, Tr. at 27-28) omitted so much material cost information. The fact that this same analysis was also presented to senior management for review and approval of the project brings into question the prudence of Liberty's decision to proceed with the project. Again, prudence is judged on what a reasonable utility executive knew or reasonably should have known when making a decision.

The record demonstrates that the 2014 DCF analysis was flawed and that many costs were missed or underestimated. Including revenues from sales scenarios, while omitting the investment needed to realize those revenues, is a serious mistake. Liberty's inability to breakdown its estimate of "piping, meter set, survey, etc." into its component parts is not acceptable. The notion that the "etc." in this lump sum figure was sufficient to cover tree removal, asphalt, concrete, canopies, and the labor needed to connect the compressors is not credible. A reasonable utility executive being asked to sign off on the $2 million-plus venture would have, or should have, required more detail.

Further, it appears that follow-up review of this project was minimal and was not performed early enough to be of any use. The record contains an Over Expenditure Application dated March 2016 that shows updated costs and updated payback and internal rate of return analyses. That application states that Liberty had already spent 70 percent of required project costs when the report was provided to management. Liberty knew about the municipal requirement for street work and water main extensions totaling $600,000 (25 percent of the total projected cost) in June 2014, almost two years earlier. Liberty should have re-examined the project in 2014.

Liberty was on notice in DG 14-091 that its investments in the project would be subject to prudence review in a future rate case. Exh. 56 at 19. This case, however, was filed with little detail about the iNATGAS investment.

Full exclusion of the cost of the facility would be justified under a strict prudence examination, which focuses on the facts that were known or should have been known at the time of the decision to undertake the project. That said, we are mindful that the iNATGAS facility, like the training center, is in service and appears to be used and useful. In addition, the iNATGAS facility has the potential to provide net benefits to customers in the future, and therefore a complete exclusion of recovery may not be the best overall remedy.

Liberty testified that the winter 2017/2018 revenues were approaching the baseline scenario. 3/14/18 PM, Tr. at 60. Under the baseline scenario, using $4.8 million, the actual costs of the facility, including AFUDC, a NPV of $2.9 million is projected to be returned to customers through base rates over the 15-year study period. Exh. 46 at 2; 3/14/18 PM, Tr. at 4-5. Liberty testified that those projections would be higher if the scenario were re-calculated using updated tax rates and return on equity percentages. 3/14/18 PM, Tr. at 7-8. Liberty also stated that pipeline capacity cost savings will accrue from the project and those savings were not included in the NPV analyses. Exh. 24 at 71-72. The Commission approved the special contract when it was presented as a $2,245,000 investment with $4,732,000 projected to be returned to firm customers through base rates, under a baseline revenue scenario. Exh. 38 at 2. It is doubtful that we would have approved a $4.8 million investment to return $2.9 million to firm customers over 15 years, if we had been presented with such a scenario.

Nevertheless, the plant has been built and, for purposes of the base rates set in this case, we will allow recovery of the plant up to the level of costs presented in DG 14-091 ($2,245,000) plus related O&M expense. We will re-evaluate this investment in Liberty's next rate case and may consider putting more of the investment in rate base at that time. The remedy fashioned here will put ratepayers in the position they were in when this project was approved. Accordingly, we adopt Staff's proposed adjustment.

K. Keene Division Matters

Liberty. In its initial rate case filing, Liberty, proposed that the Keene Division distribution rates be consolidated into the general EnergyNorth distribution rates applicable throughout the sState, pointing out there is no material difference between distribution service to its customers in Keene and elsewhere. Exh. 3 at 22-23. Liberty calculated the revenue deficiency for the Keene Division during the test year to be $712,403. In support of its request, Liberty said consolidation would limit rate case expenses and administrative costs for the Keene Division's small customer base of approximately 1,200 customers. Exh. 3 at 22-23.

The revenue deficiency included a three-year amortization of $201,000 of emergency response costs related to a December 2015 incident at the propane-air plant[1] and $148,410 of production costs that were formally recognized in the Cost of Gas. Exh. 3 at 26 and 63. Liberty proposed maintaining a separate Keene Division Cost of Gas (COG) ratemaking structure, even with the planned conversion to a Compressed Natural Gas/Liquefied Natural Gas (CNG/LNG) fuel structure for the Division. *Id.* at 23-24.

In its rebuttal testimony, Exh. 24, the Company provided additional arguments in support of its concept of rate consolidation for the Keene Division. Liberty opposed Staff's contention, discussed below, that significant cost-shifting would result from rate consolidation, with Liberty

[1] The December 2015 Keene incident involved a failure of the blower system at the Keene production plant that caused the release of carbon monoxide and unburned propane, and necessitated shutdown of the Keene system. The emergency response personnel directed by the City of Keene assisted Liberty in visiting each home to check on occupants and re-light appliances. *See* 3/27/18 Tr. at 119-123.

pointing to an expected monthly bill impact on general Liberty residential distribution rate customers of 37 cents assuming a revenue requirement of $14.7 million. Exh. 24A at 49-50. In response to questioning about the settlement agreement, Mr. Hall testified the monthly impact on general Liberty residential customers would be 26 cents based on the agreed revenue requirement of $10.3 million. 3/21/18, Tr. at 197.

Liberty also pointed to what, in its view, were similar instances of Commission approval of inter-divisional rate consolidations. Exh. 24 at 51. Liberty argued that, in all likelihood, failure to consolidate rates would result in a failure to expand its system, due to Liberty and customer uncertainties regarding the likely costs of expanded service. Eventually, the Keene system would have to be abandoned, due to rate shocks related to Keene-specific distribution revenue requirement shortfalls. Liberty stated that current efforts to convert a small portion of the Keene system to CNG were being done for safety and reliability and to avoid the need for 24-hour coverage at the propane-air plant during the winter months, and is not being done for rate consolidation purposes, nor for growth, although the conversion could lead to additional growth. *Id.* at 52-62. Liberty also presented certain data request responses, schematics, and schedules that delineated Liberty's planned multi-phase approach to distribution-system expansion for Keene. *See* Exh. 24, 73-91.

In its closing statement, Liberty argued that response costs for the December 2015 incident were reasonable and required under RSA 154:8-a. Following the 2015 incident, Liberty decided that the risk of an extreme event was still possible, although unlikely, which justified the 24-7 manned coverage during the winter months. *See* 3/27/18 Tr. at 119-123.

Liberty supported the provisions of its settlement agreement with the OCA pertaining to the Keene Division (discussed below). Liberty also expanded on its points in favor of rate consolidation presented in its direct and rebuttal testimony through oral testimony at hearing. *See* 3/27/18 Tr. at 114-123; *see also* 3/21/18 Tr. at 141-207.

OCA. The OCA's original position was that consolidation at this time was not appropriate, and that revenues associated with the Keene Division should be dealt with in a separate docket.

Settlement. Liberty and the OCA agreed in their settlement that the emergency response costs related to the December 2015 incident and the Keene production costs should be recovered through the Keene Division COG rates over five years during the Keene Division COG winter period, and beginning November 1, 2018. Exh. 29 at 7. They also agreed that Keene Division customers would pay the same distribution rates and be served under the same terms and conditions as all other Liberty customers, effective May 1, 2018. *Id.* at 12.

Under the terms of the settlement agreement, Liberty also agreed to a target amount of additional revenue due to growth in excess of the revenue requirement associated with the direct cost of the investment; if the cumulative excess revenue is less than $200,000 annually, Liberty would reduce its revenue requirement in its next rate case by the difference between $200,000 and the excess revenue. "Excess revenue" would be based on actual load added as of the effective date of permanent rates following the end of the next rate case, plus reasonable anticipated revenue based on customer commitments to take service, both pro-formed for one year following the effective date of permanent rates in the next rate case. This provision was conditioned on Liberty's receipt of the Safety Division's authorization to commence construction of Phase 1 no later than May 1, 2018, and on acquiring appropriate authorization to construct a permanent CNG/LNG facility by May 1, 2019. *Id.* at 12-13. The settlement agreement also specified that Keene customers would begin paying the LDAC as of May 1, 2018, and that the

Keene Division would continue having a separate COG, which would include: (1) propane purchases; (2) CNG/LNG purchases; (3) production costs; (4) revenue requirement associated with CNG/LNG facilities; and (5) revenue requirement associated with fuel inventory. *Id.* at 13.

Staff. Staff opposed the consolidation of the Keene Division's distribution rates with those of EnergyNorth. Exh. 56 at 5. Staff argued that "[c]onsolidating rates at this time will result in cost shifting and cause financial harm to [EnergyNorth's] ratepayers through higher rates to subsidize the Keene [Division] operations." *Id.* Staff agreed with Liberty that the Keene Division does not collect enough revenue to cover its costs, but opposed the approach of rate consolidation as the appropriate remedy.

Staff argued that the order approving the acquisition of the Keene Division in Docket No. DG 14-155 established a "no net harm test" that militates against uneconomic cost shifts resulting from rate consolidation. Exh. 56 at 9, 14-15. Staff argued that such harm to EnergyNorth customers would indeed occur if consolidation were to be approved. *Id.* As the appropriate remedy, Staff recommended that Liberty should either file a separate Keene Division rate filing requesting a distribution rate increase for the Division; a rate plan that would lead to consolidated rates based on a comprehensive business plan and financial analysis that demonstrates a quantifiable benefit for all Liberty customers, or at the very least no net harm; or to discontinue service by demonstrating that continued service can only be provided at a loss and that Keene Division customers can be conveniently converted to an alternate fuel source and utility plant safely abandoned. *Id.* at 9-10.

Staff noted in its testimony that Liberty failed to provide a comprehensive business plan for its originally 4-phased planned expansion for the Keene Division system. The Discounted Cash Flow (DCF) analysis provided during discovery by Liberty fell far short, in Staff's view, of a comprehensive business plan, and provided little or no support regarding the cost and revenue projections used in the DCF analysis. *Id.* at 10. In particular, Staff pointed out that the Liberty DCF analysis for Phase 1 of the planned Keene Division expansion did not include the $418,384 cost of land (for the planned CNG/LNG production facility) that is currently classified as "Property Held For Future Use" and is therefore not eligible for rate recovery. According to Staff, the Phase 1 planned expansion makes use of that land. The land would become used and useful when placed into service and should be included as a conversion cost. *Id.* Staff concluded that, for the Keene Division, Liberty planned to undertake a CNG/LNG conversion and expansion intended to increase capacity and lower rates, but Liberty's filing provided no details as to whether, or how, that conversion/expansion effort would impact the cost to serve Keene and if the Keene Division customer base can support that cost. *Id.* at 11.

Staff raised concerns regarding certain categories of costs that Liberty included in its calculation of the Keene Division revenue deficiency for the test year. Specifically, Staff alleged that Liberty included costs that were outside the test year, and may not have been prudently incurred. Staff noted that it filed a memorandum in Docket No. DG 16-812, the Keene Division 2016-2017 Winter COG proceeding, recommending that certain Keene propane-air gas production costs not be recovered through COG rates, because production costs are reflected in Keene Division's delivery rates, and the costs of manning the Keene production plant on a 24-7 basis may have been imprudent, in Staff's view. *Id.* at 11-13; 35-43. Staff also raised concerns about the appropriateness for recovery, through Liberty's calculated Keene Division revenue requirement, of personnel costs arising from the December 2015 incident.

Staff also concurred, to a certain extent, with Liberty's assessment of a potential "death spiral" if the calculated Keene Division revenue deficiency were recovered solely from Keene

Division customers, which would drive an adverse rate impact. As noted, however, Staff did not endorse the approach of rate consolidation as proposed by Liberty to ameliorate this problem. Exh. 56 at

14-15; *See also* 3/22/18 AM, Tr. at 42-59; 3/27/18 Tr. at 71-75

Ruling. Unreasonable cross-subsidization of expansionary business by an existing utility, or of one class or locality of utility customers by the general customer base of a utility, is to be avoided. *See Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities*, Order No. 26,109 at 15-22 (March 5, 2018); *In re: Concord Steam Corporation Non-Governmental Customers*, Order No. 26,017 at 11-12 (May 11, 2017); *see also C. Julian Tuthill El Al. v. Plaistow Electric Light & Power Company*, 8 N.H.P.S.C. 509, 510 (1922). This precedent is undergirded by RSA 378:10, "[n]o public utility shall make or give any undue or unreasonable preference or advantage to any person or corporation, or to any locality, or to any particular description of service in any respect whatever or subject any particular person or corporation or locality, or any particular description of service, to any undue or unreasonable prejudice or disadvantage in any respect whatever." On the other hand, under RSA 378:11, "The provisions of RSA 378:10 shall not require absolute uniformity in the charges made and demanded by public utilities when the circumstances render any lack of uniformity reasonable." The Commission has discretion in balancing the need for fairness in avoiding cross-subsidization with ensuring the overall public interest.

In this instance, evidence has been presented that, barring consolidation of the Keene Division's distribution rates with those of EnergyNorth, the Keene Division's rates will begin to escalate and make service in the City of Keene increasingly uneconomic. Furthermore, Liberty made an argument that any expansion of gas service in the City of Keene, utilizing new

CNG/LNG installations and associated distribution lines, will not be feasible if consolidation of distribution rates is not allowed. Further, there is evidence that consolidation will reduce administrative costs and provide an opportunity for revenue growth in Keene that, if successful, will benefit all Liberty customers. We are persuaded that there will not be an unreasonable cost-shifting by consolidating Keene with EnergyNorth's distribution customers. Such consolidation is consistent with precedent where other smaller utilities acquired by larger utilities are consolidated. *See, e.g., Pennichuck Waterworks Inc.*, Order No. 22,883 (March 25, 1998) (Commission determined an increase of $1.00 a month to Pennichuck's Nashua customers was not unreasonable as part of rate consolidation with smaller companies).

Moreover, we see little difference between consolidating the Keene Division and adding a new franchise territory like Hanover and Lebanon which we have authorized to be included in Liberty's general distribution rates under certain conditions. *See Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities*, Order No. 26,109 (March 5, 2018). We note Liberty's testimony that "prior to completing the business plan, [Liberty] will need to perform a detailed engineering design for the distribution system and supply facility that will be used to plan the construction and expansion of the system." Exh. 24 at 59. Given the unknowns regarding the economic viability and cost structure of Liberty's Keene Division expansion plans, we will apply the risk-sharing provisions imposed on Liberty within the context of its Hanover and Lebanon CNG/LNG expansion effort outlined in Order No. 26,109. We apply those more robust provisions, with some modification, in preference to the settlement agreement's provisions.

Therefore, we will permit the consolidation of Keene Division distribution rates with those of EnergyNorth, subject to the following conditions designed to protect EnergyNorth's distribution customers from potential over- capitalization that could lead to cross subsidization (Keene Division COG rates will remain a separate ratemaking structure):

1. For any of the expansionary Phases planned by Liberty within the City of Keene, prior to beginning construction of any Phase, Liberty must secure a customer commitment level that will produce at least 50 percent of the revenue requirement associated with the new facilities from those customers in 10 years, as calculated in present value terms;

2. Liberty must reduce its revenue requirement by 50 percent of any revenue shortfall in the first distribution rate case filed within five years following construction of each Phase and by 100 percent of any revenue shortfall in the second distribution rate case filed within the five years following the construction of each Phase;

3. In the case of Keene, the revenue requirement to be considered in this analysis would include both production costs and distribution costs, with production costs recovered in the separate Keene COG rate to be applied to Keene customers including the cost of land on which the new Keene CNG/LNG production plant is located, the cost of the current effort to convert a small portion of the system to CNG, the direct costs of the production facilities, propane purchases, CNG/LNG purchases, the revenue requirement associated with CNG/LNG facilities, and the revenue requirement associated with fuel inventory;

4. The direct cost of the Keene distribution system is to be recovered through Liberty distribution rates applicable to all Liberty distribution rate customers;

5. Customer commitment requirements apply to the revenue requirement reflected in both the Keene COG and Liberty distribution rates. Revenue reductions under the risk-sharing conditions set forth in this order will apply to both the Keene COG and Liberty distribution rates based on the Keene investment costs reflected in each;

6. Liberty will file updated DCF analyses at the in-service date of each of the Phases of the Keene expansion project, and annually thereafter, until ordered otherwise. The initial and annual reports will include the following:

i. A comparison of the original and updated DCF analyses;

ii. A comparison of the original annual projected residential and C&I customer conversions and gross profit margins, by fuel type, with the actual annual conversions and gross profit margin; and

iii. A Current Heating Fuel Value table comparing the annual average residential heating rate calculated using the Keene Division bill impact schedule in its COG filing and the cost of alternative fuels in effect at the time as reported by the New Hampshire Office of Strategic Initiatives.

7. Liberty's obligation to meet, pursuant to RSA 374:1, 374:3, and 374:4, the inspectional and operational requirements of the Commission's Safety Division, and to satisfy the Safety Division regarding those requirements, remains in place indefinitely. *See* Order No. 26,065 (October 20, 2017);

8. The risk-sharing condition we impose will terminate following the date on which Keene customers have produced at least 100 percent of the revenue requirement associated with the new facilities for each phase, provided Liberty petitions the Commission to terminate the applicable risk-sharing provision and submits the necessary documentation to demonstrate that the condition for termination has been met.

With respect to the December 2015 incident, we find that the emergency response costs of $201,000 were prudently incurred, and that amortizing recovery of those costs over three years is reasonable.

As for the Keene production costs of $148,410, we find that Liberty failed to justify those costs in this proceeding. Liberty made many significant enhancements to address the risk of a similar event and did not provide evidence that the incremental costs of manning the plant were reasonable or justified. Accordingly, we deny recovery of those costs.

Because we find around-the-clock staffing of the Keene production plant is not just and reasonable, we reject the Company's argument that the current cost of converting a small portion of the Keene system to CNG is necessary for reliability and safety reasons or is economically justified on its own terms. Furthermore, Liberty testified that the conversion could lead to additional growth, and it is therefore appropriate to include the cost of the initial conversion to CNG in the risk sharing mechanism delineated above.

L. Cost of Capital

Liberty. In its initial filing in this matter, Liberty proposed rates based on a weighted average cost of capital (WACC) of 7.36 percent which included a return on equity (ROE) of 10.30 percent and a capital structure consisting of 50 percent common equity and 50 percent long-term debt. Exh. 3 at 69. Liberty did not revise its position in its rebuttal testimony filed in January 2018. Exh. 23 at 26.

OCA. In its initial filing in this case, the OCA recommended a WACC of 6.41 percent, calculated using an ROE of 8.4 percent. Exh. 16 at 238; Exh. 15 at 195.

Settlement. In the settlement, Liberty and the OCA agreed to a WACC of 6.85 percent, an ROE of 9.4 percent, and a capital structure consisting of 49.21 percent common stock, 49.85 percent long-term debt, and 0.95 percent short-term debt. Exh. 29 at 4. The settlement states that this capital structure reflects recently approved long- and short-term debt changes. *Id.* at 3.

Staff. Staff proposed that rates be calculated using a WACC of 6.42 percent, which included an ROE of 8.55 percent and a capital structure consisting of 49.21 percent common equity, 49.85 percent long-term debt, and 0.95 percent short-term debt. Exh. 20 at 77. Staff later agreed that the settlement ROE of 9.4 percent and settlement WACC of 6.85 percent were reasonable for setting rates in this case. 3/6/18 AM, Tr. at 11-12.

Ruling. In light of agreement among Liberty, the OCA, and Staff (parties with strongly different views on many aspects of this rate case), we find the WACC of 6.85 percent and the ROE of 9.4 percent reasonable with one important change. We are approving a decoupling mechanism in this case, which reduces the risk that Liberty will not recover its authorized revenue requirement. In addition, the stabilized cash flow should improve the Company's credit rating and thus its access to lower cost debt.

We reject Liberty's claim that its reduced risk associated with decoupling is already reflected in its recommended ROE (and therefore, presumably, the settlement ROE). Liberty claims that the proxy group of utilities Liberty used to determine its requested ROE already had decoupling. In drawing this conclusion, Liberty does not differentiate between straight fixed-variable rate design, LRAMs, and a weather normalization clause. Instead, Liberty lumps them all under the heading of "decoupling" and states that the proxy group already reflects decoupling. The Commission does not consider rate designs and LRAMs to be comparable to the decoupling provision approved herein in terms of risk of recovery of costs, primarily because the decoupling mechanism we adopt will shield Liberty from swings in weather while rate design changes and LRAMs are unrelated to and unaffected by weather. Most of the companies with decoupling do not include monthly weather normalization.

Accordingly, to account for the decrease in risk Liberty will experience under the approved decoupling mechanism, we will set the ROE in this case at 9.3 percent, resulting in a WACC of 6.8 percent. That ROE is 10 basis points lower than the ROE contained in the settlement.

M. <u>Decoupling</u>

Liberty. Liberty proposed what it termed a full decoupling mechanism, based on revenues per customer. The mechanism was designed to sever the link between Liberty sales and revenues to remove the Company's disincentive to promote energy conservation that is inherent in traditional ratemaking. Liberty's distribution revenue per customer targets would be set based on test year information and then, going forward, rates would be adjusted twice annually (up or down) to allow the Company to collect its target revenue, calculated using actual customer counts. By using a revenue-per-customer mechanism, Liberty has an incentive to add customers and to control costs. The mechanism would shield Liberty from changes in sales due to conservation (both utility sponsored and other) as well as weather swings and economic factors. Exh. 8 at 282-290.

Liberty proposed that the decoupling mechanism be administered to three groups of customers: residential non-heat, residential heat, and all C&I. *Id.* at 320. Liberty also proposed an annual 5 percent cap (based on distribution revenues) on any one adjustment, with provisions for collecting adjustments that went beyond the 5 percent cap. *Id.* at 324. In rebuttal testimony, Liberty proposed administering the mechanism at the rate class level, rather than the three groups identified in its original proposal. Exh. 27 at 178.

OCA. The OCA originally proposed a decoupling mechanism calculated at the total company revenue level (in contrast to Liberty's proposal of a revenue per customer mechanism) that would incorporate weighted historic weather data where more recent years are given more weight. The OCA proposed that decoupling be implemented on what it characterized as a "real-time" basis to improve customer and company cash flows and so that customers see the impact of weather on the bills as it is experienced. The OCA calculated that under its proposed decoupling mechanism, customers would pay significantly less than under the currently approved LRAM, based on recent historical sales (and reflecting recent actual weather). Exh. 14 at 10-22.

Settlement. The settlement decoupling mechanism combined Liberty's revenue per customer target approach with the OCA's monthly weather adjustment. The settlement decoupling mechanism calls for annual adjustments for any additional differences between target and actual revenues per customer (i.e., those not related to weather) calculated for two groups – residential customers and C&I customers. The decoupling mechanism would begin November 1, 2018, at which time Liberty would cease collecting lost revenues attributable to energy efficiency programs, currently collected through a lost revenue adjustment mechanism (LRAM). The settlement also allows Liberty to recover up to $50,000 in costs incurred to upgrade its billing system and related software to implement decoupling. Exh. 29 at 10-12.

Staff. Staff proposed a decoupling mechanism similar to what Liberty initially proposed, but without a weather component. Staff supported adjusting revenues once per year to account for reduced sales from energy efficiency and all other factors, except weather. Staff stated that utilities have always borne the risk and reward for sales deviations due to weather swings and that this risk is unrelated to energy efficiency. Staff proposed that the decoupling adjustment be calculated by rate class. Exh. 18 at 10-14. Staff opposed the settlement decoupling proposal because shielding Liberty from weather impacts was not a stated goal of the Commission's recently adopted Energy Efficiency Resource Standard (EERS) and is unrelated to energy efficiency. Staff believed that the bill credits customers would receive in cold months, when they presumably used more gas, would send anti-conservation price signals. Further, Staff said the administration of the monthly weather adjustment would be complicated and the results would be difficult to audit. 3/26/18 AM, Tr. at 9.

Ruling. All participants in the case propose decoupling mechanisms. Except for the issue of weather, we see little significant difference between the various decoupling mechanisms proposed. Traditionally, gas utility rates are set assuming normal weather and any fluctuations in revenues due to abnormal weather are absorbed by the Company until its next rate case.

The Commission's order in the EERS docket set the stage for utilities to propose decoupling mechanisms to replace the LRAM. The LRAM was intended to be a temporary measure to remove the disincentive for utilities to undertake energy efficiency programs. We applaud Liberty for proposing a decoupling mechanism to replace the LRAM.

We acknowledge the Company's and the OCA's strong support for monthly weather normalization and agree that it would stabilize cash flow for Liberty. We note Staff's point that providing customers a small distribution rate reduction in a month where cold weather causes them to use more gas may send a small counter-intuitive price signal. We are persuaded, however, that the impact will be significantly diminished by the fact that customers' bills in total will be higher during colder months than during warmer months, even with this adjustment, which only affects one portion of the customer's bill.

Accordingly, we approve the settlement decoupling proposal in concept. We also provide the following for clarity and to facilitate implementation. Decoupling may not be used to compensate Liberty for revenue lost due to reduced customer counts. Because decoupling is slated for November 1, Liberty is directed to file within 45 days of this order illustrative tariffs demonstrating the rates, terms, and conditions required to implement decoupling in conformance with existing law. Due to the novelty of the decoupling process in New Hampshire, Liberty must also submit at the same time customer notice and educational materials for review and approval by the Commission.

The settlement would have required Liberty to file its next rate case using an historic test year no later than December 31, 2020, to reset test year revenues in light of the decoupling mechanism. 3/6/18 AM, Tr. at 57. We agree that such a reset is well advised and we adopt such a requirement in this order. Further, to assist the Commission in evaluating Liberty's decoupling, we require the Company to report in its next rate case on the following: (1) the amount of revenue collected or passed back through this mechanism, by year; (2) an account of any measurable impacts decoupling had on Liberty's utility sponsored energy efficiency programs; (3) a detailed list of all efforts the Company made to promote its own energy efficiency programs, and to promote other energy efficiency measures such as lobbying for stricter building/energy codes; (4) an account of efforts taken to educate builders about energy efficiency; (5) a detailed list of meetings with state and local officials and associations to promote energy efficiency; (6) customer feedback resulting from decoupling as implemented through the rate design; and (7) any changes in the Company's credit rating.

The above list is not intended to be exhaustive. In short, we require the Company to demonstrate that decoupling has allowed the Company to "remain an effective champion of energy efficiency" and has unlocked its "ability to enthusiastically support energy efficiency policy goals." Exh. 8 at 282, 286.

N. Rate Design

Liberty. In its original filing, Liberty proposed significant increases to all its customer charges, based on the results of its marginal cost study and bill impact considerations. Under the proposal, a residential non-heating customer (R-1) would see a 40.8 percent customer charge increase ($6.23 per month) as part of a plan to increase customer charges over three rate cases. Residential heating customers (R-3) and residential low income customers (R-4) would see 15.4 percent increases ($3.40 per month). Commercial and Industrial customer charge increases were based on considerations of marginal costs, rate continuity and customer impacts. Proposed C&I increases were: for rate classes G-41 and G-51 (low annual use customers) 15 percent and for rate classes G-42, G-43, G-53 and G-54 (medium and high annual use customers) 10 percent. Exh. 7 at 210-213. Concerning volumetric rates, Liberty proposed to continue its current use of declining block rates for all classes. *Id.* at 213-214.

OCA. The OCA originally proposed reducing customer charges for all classes and flattening, or eliminating, any existing declining rate block structures. Exh. 14 at 106.

Settlement. The rates in the settlement are significantly different than the rates in Liberty's initial proposal. Customer charges for residential non-heating and heating customers would be set at $14.88 per month, which is $2.00 lower than the current R-1 amount and more than $9.00 lower than the current R-3 charge. For R-3 customers, the head and tail block volumetric rates would be set at the same level. R-4 rates would be set at 40 percent of the R-3 rates. All C&I rate components would be increased proportionally. Exh. 29 at 10 and 25. The OCA supported the settlement rate design because it would promote energy efficiency.

Staff. Staff did not recommend changes to Liberty's proposed customer charges. Staff proposed to set the head and tail blocks at the same level and to allocate any decoupling refunds to the head block and any decoupling surcharges to the tail block. Staff proposed this approach for all rate classes to promote energy conservation, because under decoupling, Liberty has an enhanced opportunity to recover its fixed costs. Exh. 18 at 16-18.

Ruling. Given that we approve the settlement decoupling mechanism, it follows that we approve the settlement rate design. We agree with Staff that decoupling greatly increases the Company's ability to recover its fixed costs and therefore, we are comfortable with the significant decreases to the residential customer charges contained in the settlement. Similarly, we support the flat rate block structure for residential customers, which we agree should encourage conservation. Accordingly, we approve the settlement rate design.

O. Tax Act Impacts

During the course of this proceeding, the federal Tax Cuts and Jobs Act of 2017 (2017 Tax Act) was enacted, effective for tax year 2018. The 2017 Tax Act reduced the corporate income tax rate from 35 percent to 21 percent, which reduces a utility's required annual revenues. On January 3, 2018, the Commission opened Docket No. IR 18-001 to investigate how the 2017 Tax Act will affect the expenses of New Hampshire public utilities. *See Investigation to Determine Rate Effects of Federal and State Corporate Tax Reductions,* Order No. 26,096 (January 3, 2018)[2].

The settlement filed in this case calculated the revenue requirement effect of the 2017 Tax Act as $2,394,065, which would have been subtracted from the settlement agreement revenue deficiency of $10.3 million. Exh. 29 at 23. Staff questioned Liberty's methodology and thus, the accuracy of this figure. Recognizing that the Commission would be reviewing the impact of the 2017 Tax Act in a separate investigation, for purposes of this case, Liberty, Staff,

[2] In Order 26,096, the Commission also ordered an investigation of the impacts of the reductions to the New Hampshire Business Enterprise Tax and the Business Profits Tax.

and the OCA agreed that this figure of $2,394,065 should be subtracted from the revenue deficiency ultimately approved in this case. The adjustment may be subject to further adjustment pending the outcome of the separate tax investigation. 3/21/18 PM, Tr. at 45-52.

Ruling. The Commission adopts this approach as reasonable and will use a separate docket to refine the figure of $2,394,065 and make rate adjustments accordingly. In addition, because the final rates will be reconciled back to the effective date of the temporary rates granted in this docket (July 1, 2017), and the difference will be recouped, the recoupment calculation will need to address the difference in the tax rates in 2017 and 2018. Reconciliation of any differences will be addressed in the separate docket established to deal with tax adjustments.

P. <u>Residential Low Income Assistance Program</u>

Liberty. Liberty did not propose a change to the Residential Low Income Assistance Program (RLIAP) in this docket. In response to Staff's proposed change, Liberty stated that any changes to the program should be addressed in a generic docket where the other affected New Hampshire utilities could be involved, so that any changes would be uniform across the utilities.

OCA. The OCA took no position on the RLIAP.

Settlement. The settlement states that the Commission should open a generic docket to address changes to the RLIAP. Exh. 29 at 14.

Staff. Staff recommended that the RLIAP be restructured so that the discount would be calculated on a residential customer's total bill, rather than the base rate portion of the bill as it is currently done. Staff recommended the change so that the discount offered to participants would be closer to the program goals established by the Commission. Staff stated that the change was needed because the base rate portion of a customer's gas bill has increased in recent years while the cost of gas potion has decreased, and thus the total discounts given were trending higher than planned. Exh. 56 at 25-29.

Ruling. We decline to make any changes to the RLIAP in this case and will open a separate docket to consider changes to the RLIAP.

Q. Step Adjustment

Liberty. Liberty proposed one step adjustment effective May 1, 2018, to recover the costs associated with plant investments made during 2017. It sought an increase in base rates of $5,921,000 for the EnergyNorth division, based on $41,438,000 of plant investments, and $151,000 for Keene division investments of $745,000. Exh. 3 at 28-29 and 76-77.

Liberty updated the proposed step adjustment in its rebuttal testimony, where the step increase in rates would recover $5,095,000 on plant investments of $27,465,000, covering both the EnergyNorth and Keene Divisions. Exh. 23 at 39. This figure represents estimated investments for 2017. Liberty proposed to update this figure to reflect actual investments. The amount of $5,095,000 would act as a cap on the proposed step adjustment. The $5,095,000 amount in the rebuttal testimony also reflected an additional $419,600 in O&M expenses related to pension and benefit costs that had previously been capitalized and now needed to be charged to expense due to Financial Accounting Standard (FAS) Update No. 2017-17. Exh. 23 at 22. Liberty stated that it estimated the FAS 2017-17 effect based on 2017 actuarial assumptions and capitalization percentages. *Id.* The figure also included $173,000 in legal fees incurred in 2017 in connection with litigation Liberty undertook in an effort to reduce fees charged by the cities of Concord and Manchester for claimed road degradation, as well as $186,000 in degradation fees incurred during 2017. *Id.* at 39.

OCA. The OCA took no position on the step adjustment.

Settlement. The settlement agreement contained a step adjustment equal to $5,044,835 based on plant investments of $27,955,000 and the same pension/benefit costs, legal fees and degradation fees as the rebuttal testimony. Exh. 29 at 18.

Staff. Staff supported the step adjustment in concept but raised two issues. First, Staff stated that the pension/benefits amount should be updated for 2018 actuarial assumptions when available. 3/6/18 AM, Tr. at 13. Second, Staff disagreed with the inclusion of the full amount of the 2017 legal fees and degradation fees in the step increase and instead recommended that legal fees be amortized over three years, and degradation fees be amortized over 20 years. Exh. 54; 3/21/18 Tr. at 67-76, 137-139.

Ruling. Based on the agreement of the parties, we approve a step increase effective May 1, 2018, estimated at $4,729,953 and limited to $5,044, 835, and reflecting pension and benefit numbers using the latest available actuarial information. Regarding amortization of legal fees and degradation fees, we agree with Staff that to include the full 2017 amount for those items in permanent rates would mean that customers would be paying that full amount each year. We find that a three-year amortization of legal fees and a 20-year amortization of degradation fees is consistent with how Liberty originally proposed to treat those test year costs, is more reflective of what customers would pay in a single year, and is thus more appropriate.

R. <u>Recoupment</u>

The Commission approved a temporary rate increase effective July 1, 2017, in the amount of $6,750,000. The permanent rate increase of $8,060,117 approved in this order is to be effective as of May 1, 2018. Pursuant to RSA 378:29, Liberty may collect an amount equal to what would have been collected if the permanent rate increase had been effect during the temporary rate period. For clarity, the step increase is not reconciled with temporary rates and is effective May 1, 2018.

The settlement includes a recoupment calculation using the settlement revenue deficiency of $10.3 million and provides for collection through the LDAC, with reconciliation. Exh. 29 at 9, 20. We adopt that calculation and recovery method, but modify the amounts for the revenue deficiency approved herein of $8,060,117. *See* Appendix 5 to this Order.

S. Rate Case Expenses

We will provide for the recovery of just and reasonable rate case expenses through the LDAC, using the method outlined in the settlement. Exh. 29 at 9-10. Those costs are currently estimated to be $530,000, subject to review and approval. *Id.* at 22.

V. CONCLUSION

As we observed above, this is an unusual situation. Under New Hampshire law, the rates originally proposed by Liberty were suspended until April 28, 2018, while we investigated the request. Liberty and the OCA reached an agreement that would have resolved all of the issues in the case, but Staff did not join the settlement. Therefore, at the hearing on the merits, Liberty presented neither its full original case, nor its rebuttal position, except as a way to argue for the reasonableness of the settlement. That approach made sense in the context of the hearing, as the settlement did not itemize adjustments to Liberty's original request to arrive at the agreed-upon revenue deficiency. Instead, the "compromise" total revenue figure reflected, in Liberty's view, allowances for the contrary positions taken by the OCA and Staff in their original submissions.

Our choices, therefore, are that we could approve the settlement, accept Liberty's rate request, or set rates based on the record. Given that reality and the way the case was presented, we approached our deliberations using the entire evidentiary record. We went through the areas where Staff identified problems or issues with Liberty's original or rebuttal positions, and resolved those disputes based on governing law, precedent, ratemaking principles, and our collective judgment. The disputes ranged across every aspect of the case. They included revenue and expense issues like the proper time to count customers, payroll, prepayments of obligations like property taxes, and multiple aspects of the depreciation of assets; and they included determinations about the prudence of certain of Liberty's large capital investments, like the construction and use of the Concord training center and the iNATGAS facility. As explained above, the result of all of the decisions we had to make led to a conclusion that we could not approve Liberty's request or the settlement offered by Liberty and the OCA, because neither would have produced just and reasonable rates. Instead, we compiled the effects of the various decisions and calculated a revenue deficiency that will produce rates we find are just and reasonable.

This case also presented significant matters that do not affect the Company's revenue requirement. The two most significant were the proposed consolidation of the rates of the Keene Division with rates charged by the EnergyNorth Division; and the proposed decoupling of rates with monthly weather normalization.

The decision on consolidation presented a number of conflicting objectives, as argued well by the Company and Staff. On balance, we concluded that consolidation is necessary to the continued viability of the Keene Division and is consistent with the approach we approved for the Company's other recent expansions, and determined that the modest shifts of costs to the rest of Liberty's customers are not unreasonable.

Decoupling, as approved in this order, represents a significant change in how Liberty operates. Liberty, the OCA, and Staff all agreed that some measure of decoupling was appropriate for the Company at this time. Decoupling eliminates certain perverse incentives for the Company to encourage usage of gas by its customers, by adjusting rates to ensure a certain level of recovery by Liberty. Including monthly weather normalization, which was championed by the OCA and agreed to by Liberty in its settlement with the OCA, was opposed by Staff. Monthly weather normalization will further reduce risks to Liberty by reducing fluctuations in revenue caused by changes in the weather. If decoupling is implemented successfully, customers should see enhanced opportunities for cost-effective energy efficiency measures to reduce consumption and lower their energy costs.

The decision to authorize decoupling with weather normalization leads to two other decisions. First, it allows the reduction in fixed customer charges, a traditional part of any utility's rate structure. Because decoupling reduces the risk that the utility will not receive its expected revenue, it allows fixed charges to be reduced. It also makes variable charges, based on usage, a larger part of a customer's bill and thus encourages conservation and efficient use. Second, the risk reduction allows for a small reduction in the appropriate return on equity. While the settlement called for that a return on equity of 9.4 percent, a figure Staff agreed would be appropriate, the reduction in risk associated with decoupling leads us to reduce the return on equity to 9.3 percent.

We recognize that this order calls for major changes to the way Liberty interacts with its customers, and we applaud Liberty for bringing forward a number of innovative proposals. As set forth in the body of the order, we will be monitoring the situation in Keene, including the effects of the rate consolidation on the rest of Liberty's customers, and the implementation and effects of decoupling closely in the next few years. In its next rate case, which Liberty must file with a test year no later than 2020, we will require Liberty to demonstrate its efforts to increase energy efficiency in its service territories. We expect Liberty to be in close contact with Staff to ensure smooth transitions and eliminate surprises going forward.

Based upon the foregoing, it is hereby

ORDERED, that Liberty's Petition for Permanent Rates filed on April 28, 2017, is hereby denied; and it is

FURTHER ORDERED, that the Liberty Agreement Regarding Permanent Rates filed by Liberty and the OCA on February 27 and as revised on March 1, 2018, is hereby denied; and it is

FURTHER ORDERED, that Liberty be permitted to increase its base distribution rates effective with service rendered on and after May 1, 2018, by $8,060,117 on an annual basis; and it is

FURTHER ORDERED, that Liberty be permitted to increase base rates for a step adjustment currently estimated to be $4,729,953, said adjustment to be updated for actual figures but such increase to be capped at $5,044,835, effective with service rendered on and after May 1, 2018; and it is

FURTHER ORDERED, that Liberty shall decrease its base rates by an amount equal to $2,394,065 to reflect the impacts of the 2018 Tax Act, said figure to be reviewed and updated in a proceeding established pursuant to DG 18-001 and any adjustment to this number to be made through the LDAC; and it is

FURTHER ORDERED, that effective with service rendered on and after May 1, 2018, customers in Liberty's EnergyNorth and Keene divisions will pay the same distribution rates; and it is

FURTHER ORDERED, that, subject to review, adjustment, and final approval, Liberty is authorized to begin recovery of $530,000 of rate case expenses, through the LDAC effective May 1, 2018, and it is

FURTHER ORDERED, that any adjustments following review and final approval of rate case expenses shall be recovered through the LDAC; and it is

FURTHER ORDERED, that Liberty is authorized to begin recovery of the difference between the authorized annual temporary and permanent rates, through the LDAC effective May 1, 2018; and it is

FURTHER ORDERED, that Liberty shall file its next distribution rate case using a test year ending no later than December 31, 2020, and that rate case shall include a report on the effects of decoupling as detailed above; and it is

FURTHER ORDERED, that Liberty shall file illustrative tariffs and draft customer notices detailing the rates, terms, and conditions associated with decoupling within 45 days from the date of this order; and it is

FURTHER ORDERED, that Staff's Motion for Confidential Treatment filed on January 8, 2018, is hereby granted; and it is

FURTHER ORDERED, that Liberty shall file tariffs conforming with this Order within 15 days of the date of this order, in accordance with N.H. Code Admin. Rules Puc 1603.02(b).

By order of the Public Utilities Commission of New Hampshire this twenty-seventh day of April, 2018.

Commission Proforma Adjustment for iNATGAS Revenue Requirement (Projected minus Actual) **(400,391)**

Staff Proposed Capital Structure/ROR

	Ratio	Rate	Weighted Rate	Tax Rate	Pre Tax
Long Term Debt	49.85%	4.42%	2.20%		2.20%
Short Term Debt	0.95%	2.49%	0.02%		0.02%
Common Equity	49.21%	9.30%	4.58%	39.41%	7.55%
	100.01%		6.80%		9.78%

* Property tax rate reflects actual calendar year 2016 ratio of municipal tax expense to average net plant in service

DG 17-048
Impact of Tax Act

	Description	
1	Permanent rate increase	10,300,000
2	Original gross-up	1.6504
3	Increase before gross-up (line 1 * line 2)	6,240,911
4	Gross-up with new tax rates	1.3789
5	Revised Gross-up increase (line 3 * line 4)	8,605,593
6	Difference in Gross-up (line 5 - line 1)	(1,694,407)
7	Excess DIT ($27,321,620 /39.05 years)*	(699,657)
8	Total annual amount to return to customers (line 6 + line 7)	(2,394,065)

* Revaluing the existind deferred tax assets and liabilities at the lower tax rates resulted in a net amount of excess deferred tax liaiblity of $27,321,620 which will be amortized and returned to customers over the average remaining life of the underlying assets which is 39.05 years.

Re: DG 17-048; Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities Distribution Service Rate Case Compliance

Dear Ms. Howland:

In compliance with Commission Order No. 26,122 dated April 27, 2018, enclosed for filing please find Liberty Utilities' illustrative tariff (see Attachment A) and draft customer notice detailing the rates, terms, and conditions associated with decoupling (see Attachment B). The notice also includes educational material that provides a definition of decoupling, a description of how the mechanism will work, and the changes customers can expect to see on their monthly bills. The Company plans to work directly with Staff and the OCA to further develop this communication and educational material following their initial review of the enclosed information, as shown in the attached timeline for customer communications (see Attachment C).

Included with this filing is the LDAC section of the Company's tariff (Section 17). The Proposed Revenue Decoupling Mechanism is detailed under the LDAC section of the Company's tariff. The Revenue Decoupling Adjustment Clause (RDAC) includes detail regarding the RDAC purpose, effective date, applicability, definitions, the underlying calculations and formulas, application to customer bills, and reporting requirements.

Liberty will contact the Commission Staff and the OCA in the next few weeks to commence discussion on the enclosed material and to begin refining the informational and educational material on decoupling.

Thank you for your attention to this matter. Please do not hesitate to call if you have any questions.

Sincerely,

David B. Simek

David B. Simek

Enclosures
cc: Service List

17 LOCAL DISTRIBUTION ADJUSTMENT CLAUSE

A. Purpose. The purpose of the Local Distribution Adjustment Clause ("LDAC" or this "Clause") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its delivery charges in order to recover Conservation Charges ("CC"), Revenue Decoupling Adjustment Clause ("RDAC") charges , Winter Period Surcharges ("WPS"), Environmental Surcharges ("ES") including the Relief Holder Surcharge ("RHS") and the Manufactured Gas Program Surcharge ("MGP"), rate case expenses ("RCE"), Residential Low Income Assistance Program costs ("RLIAP") and any other expenses the NHPUC may approve from time to time.

B. Applicability. This Clause shall be applicable in whole or part to all of the Company's firm sales service and firm delivery service customers as shown on the table below. The application of this clause may, for good cause shown, be modified by the NHPUC. See Section 17(K) "Other Rules."

Applicability	CC 17(C)	RDAC 17(D)	ES 17(E)	RCE 17(F)	RLIAP 17(G)
Residential Non-Space Heating – R-1, R-5	1	1	X	1	X
Residential Space Heating – R-3, R-4, R-6, R-7	1	1	X	1	X
Small C&I – G-41, G-51, G-44, G-55	1	1	X	1	X
Medium C&I – G-42, G-52, G-45, G-56	1	1	X	1	X
Large C&I – G-43, G-53, G-54, G-46, G-57, G-58	1	1	X	1	X

Notes:
N/A Not applicable
X Applicable to all
1 As ordered by the NHPUC

C. Conservation Charges Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Conservation Charge, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers costs and lost margins associated with its energy efficiency management programs.

2. Applicability: A conservation charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the NHPUC as determined in accordance with the provision of this rate schedule. Such conservation charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.

3. Calculation of Conservation Charge: The Company will properly assign expenses for forecasted conservation expenditures to the applicable rate categories for a future twelve (12) month period commencing November 1 of each year. The total of such conservation expenditures plus any prior period reconciling adjustments shall be divided by therm sales as forecasted by the Company for the same annual period and rounded to the nearest hundredth of a cent. The resulting conservation charge shall be included in the Company's Local Distribution Adjustment Charge and applied to

actual therms sold or transported for the following twelve (12) month period starting November 1, and ending October 31.

4. Reporting: The Company shall submit annual reports to the Commission reconciling any difference between the actual conservation expenditures and actual revenues collected under this rate schedule. The difference whether positive or negative will be carried forward into the conservation charge for the next recovery period. Upon completion of the conservation program(s), any over or under collection may be credited or charged to the deferred Winter Period cost of gas account, subject to Commission approval.

5. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the CC applicable to each Rate Category during the next subsequent twelve-month period commencing with the calendar month of November.

6. Reconciliation Adjustment: Account 1163-1755 shall contain the cumulative difference between the sum of the DSM expenditures incurred by the Company plus the sum of the DSM repayments and the revenues collected from customers. The Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.

D. Revenue Decoupling Adjustment Clause

1. Purpose: The purpose of the Revenue Decoupling Adjustment Clause ("RDAC") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its rates for firm gas sales and firm transportation service in order to reconcile Actual Base Revenue per Customer with Benchmark Base Revenue per Customer. The Company's RDAC eliminates the link between volumetric sales and Company revenue in order to align the interests of the Company and customers with respect to changing customer usage.

2. Effective Date: The RDAC shall take effect beginning on November 1, 2018, and replace the Lost Revenue Adjustment Mechanism (LRAM) established in Order No. 25,932 (Docket No. DE 15-137).

3. Applicability: The Revenue Decoupling Adjustment Factor shall apply to all of the Company's firm tariff Rate Schedules, subject to the jurisdiction of the Commission, as determined in accordance with the provisions of this RDAC.

4. Definitions: The following definitions shall apply throughout the RDAC:

   a. Actual Base Revenue is the actual revenue derived from the Company's distribution rates for a given Decoupling Year for a Customer Class. The Company will use monthly distribution revenues and Actual Number of Customers to determine the Monthly Actual Base Revenue per Customer.

   b. Actual Number of Customers is the actual number of Equivalent Bills for the applicable Customer Class for the applicable month of the Decoupling Year.

   c. Billing Year is the 12-months commencing November 1 immediately following the completion of the Decoupling Year.

   d. Customer Class is the group of all customers taking service pursuant to the same Rate Schedule.

e. Customer Class Group is the group of Rate Schedules combined for purposes of calculating the Revenue Decoupling Adjustment billing rates. The two Customer Class Groups are as follows:

Residential Customer Class Group (CG1): defined as both Residential Non-Heating Customer Class and Residential Heating Customer Class, shall consist of all customers taking service pursuant to the Company's residential rate schedules. CG1 shall include customers taking service under rate schedules R-1, R-3, R-4, R-5, R-6 and R-7.

The Commercial and Industrial Customer Class Group (CG2): shall consist of all customers taking service pursuant to one of the Company's general service rate schedules, G-41, G-42, G-43, G-44, G-45, G-46, G-51, G-52, G-53, G-54, G-55, G-56, G-57 and G-58.

f. Decoupling Year. The first Decoupling Year shall be the 10-month period from November 1, 2018 to August 31, 2019. Each subsequent Decoupling Year shall be the twelve months commencing September 1 through August 31.

g. Equivalent Bill. The number of days in the billing period of each customer's bill divided by 30.

h. Real-time weather normalization adjustment is the difference between actual distribution revenue billed to each customer in each billing cycle for each month or portion thereof during the Winter Period, and what distribution revenue for each customer's bill would have been based on normalized therm deliveries for the same period. The resulting charge or credit will be added to or subtracted from each customer's bill at the time the bill is rendered (i.e., "real time").

i. Benchmark Base Revenue per Customer is the monthly allowed distribution revenue per Equivalent Bill for a given Decoupling Year for a given Customer Class, reflecting the distribution revenue level and approved equivalent bills from the Company's most recent rate case or other proceeding that results in an adjustment to base rates. Benchmark Base Revenue per Customer will be calculated for each month based on the distribution rates in effect at the start of the Decoupling Year and the calculation will be revised for the remaining months of each Decoupling Year if there is a distribution rate change that occurs following the beginning month of each Decoupling Year.

j. Winter Period. The time period from November 1 of a given year through April 30 of the following year.

5. Calculation of Revenue Decoupling Adjustment

a. Description of Revenue Decoupling Adjustment

At the conclusion of each Decoupling Year, the Company shall calculate a Decoupling Revenue Adjustment to be used to determine the RDAF for the next Billing Year, effective November 1.

The Revenue Decoupling Adjustment shall be determined by calculating the monthly difference between the Benchmark Base Revenue per Customer times the actual number of Equivalent Bills for the applicable Customer Class and the Actual Base Revenue for that month. The sum of these monthly Revenue Decoupling Adjustments in the Decoupling Year shall be divided by forecasted Billing Year sales to derive the volumetric rate per therm to be applied to customers' bills in the Billing Year. The Revenue Decoupling Adjustment shall also include a reconciliation component for the previous Decoupling Year, which represents the difference between the accrued decoupling amount in the Decoupling Year compared to the actual revenues billed in the billing Year.

b. Revenue Decoupling Adjustment Formulas

$$RD_T = \sum_{CG=1}^{CG=2} \left[\left(BRPC_{T-1}^{CG} \, x \, ACUSTS_{T-1}^{CG} \right) - AR_{T-1}^{CG} \right) \right]$$

And:

$$RDAF = \frac{RD + DEF_{bal}}{P\!: Thru_T}$$

Where the terms in the above equation have the following meanings:

$ACUSTS_{T-1}^{CG}$:	The Actual Number of Equivalent Bills for the applicable Customer Class for the most recently completed Decoupling Year (T-1)
AR_{T-1}^{CG}:	The Actual Base Revenue for the applicable Customer Class for the most recently completed Decoupling Year, (T-1), as defined in Section 4(D). For purposes of calculating the Actual Base Revenue, base revenues for Low Income rate class R-4, shall be determined based on non-discounted rate R-3.
$BRPC_{T-1}^{CG}$:	The Benchmark Base Revenue Per Equivalent Bill for the applicable Customer Class as determined in accordance with Section 4 (D) for the most recently completed Decoupling Year, stated on a monthly basis (T-1).
cg	Customer Class Groups as defined in Section 4(D).
DEF_{bal}	The balance of the unrecovered deferrals inclusive of associated interest using the prime lending rate.
P: Thru:$_T$	Forecast Throughput Volumes inclusive of all firm tariff throughput for the Billing Year.
RD	The Revenue Decoupling adjustment to revenues, representing the sum of the monthly Revenue Decoupling Adjustments in the Decoupling Year.
$RDAF_T$:	The Revenue Decoupling Adjustment Factor for the Billing Year.

6. <u>Calculation of the RDAC Reconciliation Adjustments</u>

Account 1163-1756 shall contain the accumulated difference between annual revenues and the Revenue Decoupling Adjustment, as calculated by multiplying the RDAF times firm sales and transportation throughput, and the Revenue Decoupling Adjustment allowed revenues annually, plus carrying charges on the average monthly balance using the prime lending rate.

7. Application of the RDAC to Customer Bills

   a. The RDAF ($ per therm) shall be calculated annually for each Customer Group and shall be truncated at the nearest one one-hundredth of a cent per therm. The annual calculated Customer Group RDAF will be applied to the monthly firm tariff throughput for each customer in that particular Customer Group, effective November 1 of the given year.

   b. The real-time weather normalization adjustment is calculated as the difference between actual distribution revenue billed to each customer in each billing cycle for each month or portion thereof during the Winter Period, and what distribution revenue for each customer's bill would have been based on normalized therm deliveries for the same period. The resulting charge or credit will be added to or subtracted from each customer's bill at the time the bill is rendered (i.e., "real time").

8. Information to be Filed with the Commission

   Information pertaining to the RDAC will be filed annually with the Commission consistent with the filing requirements of all costs and revenue information included in the LDAC. Such information shall include:

   a. The calculation of the applicable revenue decoupling revenue dollar adjustment for the Decoupling Year.

   b. The calculation of the revenue decoupling reconciliation dollar adjustment for the previous Decoupling Year.

   c. The calculation of the proposed decoupling rate per therm for each customer class group to be applied in the Billing Year.

   d. The calculation of the monthly Benchmark Base Revenue per Customer, to be utilized in the upcoming Decoupling Year. If distribution rates change during the Decoupling Year, the monthly Benchmark Base Revenue per Customer for the remaining months of the Decoupling Year will be revised and filed with the Commission.

E. Environmental Surcharges ("ES") Allowable for LDAC.

1. Purpose: In order to recover expenditures associated with former manufactured gas Programs, there shall be an ES Rate applied to all firm volumes billed under the Company's delivery service charges.

2. Applicability: An annual ES Rate shall be calculated effective every November 1 for the annual period of November 1 through October 31. The annual ES Rate shall be filed with the Company's Winter season Cost of Gas Clause ("COG") filing and be subject to review and approval by the Commission. The annual ES Rate shall be applied to firm sales and to firm delivery throughput as a part of the LDAC. Special contract customers are exempt from the ES.

3. Costs Allowable: All approved environmental response costs associated with manufactured gas Programs may be included in the ES Rate

   The total annual charge to the Company's customers for environmental response costs during any annual ES recovery period shall not exceed five percent (5%) of the Company's total revenues from firm gas sales and delivery throughput during the preceding twelve (12) month period ending June 30. The total annual charge shall represent the ES expenditures reflected in the calculation of the ES Rate to be in effect for the upcoming twelve-month period, November 1 through October 31. If this recovery limitation results in the Company recovering less than the amount that would otherwise be recovered in a particular ES Recovery Year, then the Company would defer this unrecovered amount, with interest, calculated monthly on the average monthly balance, until the next recovery period in which this amount could be recovered without violating the 5% limitation. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

4. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the ES applicable to all firm sales and firm delivery service throughput for the subsequent twelve-month period commencing with the calendar month of November.

5. Definitions:

   Environmental Response Costs shall include all costs of investigation, testing, remediation, litigation expenses, and other liabilities relating to manufactured gas Program sites, disposal sites, or other sites onto which material may have migrated, as a result of the operating or decommissioning of New Hampshire gas manufacturing facilities. These cost shall include the costs of the closure of the Relief Holder and pond at Gas Street, Concord, NH. The ES shall also include the expenses incurred by the Company in pursuing insurance and third-party claims and any recoveries or other benefits received by the Company as a result

6. Reconciliation Adjustments: Prior to the Winter Period COG, the Company shall calculate the difference between (a) the revenues derived by multiplying firm sales and delivery throughput by the ES Rate, and (b) the historical amortized costs approved for recoveries in the prior November's Annual ES Recovery Period. Account 1920-1863 shall contain the cumulative difference and the Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

7. Calculation of the ES: The ES Rate calculated annually consists of one-seventh of actual response costs incurred by the Company in the twelve-month period ending June 30 of each year until fully amortized (over seven years). Any insurance and third-party recoveries or other benefits for the twelve month period ending June 30 shall be applied to reduce the unamortized balance, shortening the amortization period. The sum of these amounts is then divided by the Company's forecast of total firm sales and delivery throughput for the upcoming twelve months of November 1 through October 31.

8. Application of ES to Bills: The annual ES Rate shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

F. Expenses Related to Rate Cases/Temporary Rate Reconciliation Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates for the recovery of NHPUC-approved rate case expenses and the reconciliation of temporary rates.

2. Applicability: The Rate Case Expenses/Temporary Rate Reconciliation (“RCE”) shall be applied to all firm tariffed customers. The RCE will be determined by the Company, as defined below.

3. Rate Case Expenses Allowable for LDAC: The total amount of the RCE will be equal to the amount approved by the Commission.

4. Effective Date of Rate Case Expense Charge: The effective date of the RCE will be determined by the NHPUC in an individual rate proceeding.

5. Definition: The RCE includes all rate case-related expenses approved by the NHPUC. This includes legal expenses, costs for bill inserts, costs for legal notices, consulting fees processing expenses, and other approved expenses. The temporary Rate reconciliation will include the variance between the delivery revenues obtained from the rates prescribed in the temporary rate order and the delivery revenues obtained from the final rates approved by the NHPUC.

6. Rate Case Expense/Temporary Rate Reconciliation (RCE) Factor Formulas: The RCE will be calculated according to the Commission Order issued in an individual proceeding to establish details including the number of years over which the RCE shall be amortized and the allocation of recovery among rate classes. In general, the RCE Factor will be derived by dividing the annual portion of the total RCE, plus the RCE Reconciliation Adjustment, by forecast firm annual throughput.

7. Reconciliation Adjustments: Account 1930-1745 shall contain the accumulated difference between revenues toward Rate Case Expenses as calculated by multiplying the Rate Case Expense Factor ("RCEF") times the appropriate monthly volumes and Rate Case Expense allowed, plus carrying charges added to the end-of-month balance. The carrying charges shall be calculated beginning on the first month of the recovery period by applying the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates to the average monthly balance.

   At the end of the recovery period, any under or over recovery will be included in an active LDAC component, as approved by the Commission.

8. Application of RCE to Bills: The RCE ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

9. Information to be Filed with the NHPUC: Information pertaining to the RCE will be filed with the NHPUC consistent with the filing requirements of all cost and revenue information included in the LDAC. The RCE filing will contain the calculation of the new RCE and will include the updated RCE reconciliation balance.

G. Recoverable Residential Low Income Assistance Program Costs.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to recover the revenue shortfall (costs) associated with customers participating in the Residential Low Income Assistance Program ("RLIAP"). Such costs, as well as, associated administrative and marketing costs shall be recovered by applying an RLIAP rate to all firm sales and transportation service throughput.

2. Applicability: The RLIAP Rate shall be applied to all firm sales and transportation tariff customers. The RLIAP Rate shall be filed with the Company's Winter season Cost of Gas Clause filing and shall be determined annually by the Company and be subject to review and approval by the Commission.

3. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the

RLIAP Rate applicable to all firm sales, delivery and transportation service throughput for the subsequent twelve-month period commencing with the calendar month of November.

4. RLIAP Costs Allowable for LDAC: The costs to be recovered through the RLIAP Rate shall comprised of the revenue shortfall calculated by forecasting the number of customers enrolled in the RLIAP and the associated volumetric billing determinants for the upcoming annual recovery period and applying those billing determinants to the difference between the regular and reduced low income residential base rates, plus administrative, marketing and startup costs. The RLIAP Rate shall be calculated by dividing the resulting costs, plus any prior period reconciling adjustment, by the forecast of annual firm sales and transportation service throughput.

5. RLIAP Factor Formula

$$RLIAPF = \frac{RLIAP + RA_{RLIAP}}{A: TPev}$$

where:

A: Tpev	Forecast Annual Throughput Volumes of all firm sales and transportation tariffed customers eligible to receive firm delivery-only service from the Company.
RLIAP	RLIAP costs comprising of the revenue shortfall associated with customer participation, plus administrative, marketing, IT and start-up costs.
RA_{RLIAP}	RLIAP Reconciliation Adjustment - Account 1169-1756, inclusive of the associated Account 1169-1756 interest, as outlined in Section 17(G)(6).

6. Reconciliation Adjustments: Prior to the Company's Winter season Cost of Gas filing, the Company will calculate the difference between (a) the revenue derived by multiplying the actual firm sales and delivery service throughput by the RLIAP Rate through October 31st, and (b) the actual costs of the program which consists of (1) the revenue shortfall calculated by applying the actual billing determinants of the RLIAP classes to the difference in the regular and reduced residential base rates in effect for the annual reconciliation period and (2) the start-up, administrative and marketing costs associated with the implementation of the program, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates. The combined costs will then be recorded in the deferred RLIAP account 1169-1756. The Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

H. Effective Date of Local Distribution Adjustment Clause. The LDAC shall be filed annually and become effective on November 1 of each year pursuant to NHPUC approval. In order to minimize the magnitude of future reconciliation adjustments, the Company may request interim revisions to the LDAC rates, subject to review and approval of the NHPUC.

I. Local Distribution Adjustment Clause Formulas. The LDAC shall be calculated on an annual basis, by customer, by summing up the various factors included in the LDAC, where applicable.

LDAC Formula

$$LDAC^{X} = CC^{X} + RDAC^{X} + ES + GREF^{x} + RCE + RLIAP$$

and:

$$ES^{X} = RHS + MGP$$

where:

$LDAC^{X}$ = Annualized class specific LDAC.

CC^X = Annualized class specific CC or EE Charge.

$RDAC^X$ = Annualized class specific RDAC.

ES = Total firm annualized ES.

RHS = Annualized charge to recover the costs of the closure of the Relief Holder at Gas Street, Concord, NH

MGP = Annualized charge to cover the remediation costs related to former manufactured gas plants.

$GREF^X$ = Total firm annualized class specific Gas Restructuring Expense Factor.

RCE = Rate Case Expense Factor.

RLIAP = Residential Low Income Assistance Program Rate

J. Application of LDAC to Bills. The component costs comprising the LDAC ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm sales and firm delivery service throughput in accordance with the table shown in Section 17(B).

K. Other Rules.

1. (1) The NHPUC may, where appropriate, on petition or on its own motion, grant an exception from the provisions of these regulations, upon such terms that it may determine to be in the public interest.

2. Such amendments may include the addition or deletion of component cost categories, subject to the review and approval of the NHPUC.

3. The Company may implement an amended LDAC with the NHPUC approval at any time.

4. The NHPUC may, at any time, require the Company to file an amended LDAC.

5. The operation of the LDAC is subject to all powers of suspension and investigation vested in the NHPUC.

L. Amendments to Uniform System of Accounts.

1163-1755 **Energy Efficiency Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the sum of DSM and/or EE Expenditures incurred by the Company plus the sum of DSM and/or EE Repayments and the revenues collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(C).

1920-1863 **Environmental Response Costs Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the revenues toward environmental response costs as calculated by multiplying the ES times monthly firm sales volumes and delivery service throughput and environmental response costs allowable per formula. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(E).

1930-1745 **Rate Case Expense/Temporary Rates Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the recovery and actual amounts of third-party incremental expenses associated with the Company's Rate Case initiatives and the difference between the final and temporary distribution rates. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(F).

1169-1756 **Residential Low Income Assistance Program Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the actual revenue derived from the actual sales and transportation service throughput multiplied by the RLIAP rate and the actual costs of the program, which consists of the revenue shortfall and all administrative and marketing costs, as outlined in the Local Distribution Adjustment Clause, 17(G).

1163-1756 **Revenue Decoupling Adjustment Factor:** This account shall be used to record the cumulative difference between the lost revenue of the Company and the revenue collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(D).

Draft Decoupling Message

Bill Insert

As part of the approval of Liberty Utilities' recent rate case, we will be implementing a change in the way we charge our customers for gas delivery service.

In April, the New Hampshire Public Utilities Commission issued a ruling on our rate case filing (DG 17-048). As part of the filing we requested revenue decoupling. Our request was granted and as a result you will see a change on your bill.

Revenue decoupling separates a utility's revenue from overall gas usage. If customers use more gas as a result of colder than normal temperatures, customers will receive a bill credit. Conversely, if customers use less gas as a result of warmer than normal temperatures, there will be an additional charge on customers' bills. This allows the company to more accurately set and meet budgets and removes the disincentive to promote energy efficiency programs. It also provides for more stability in bill amounts that would otherwise vary due to temperature extremes.

For a complete explanation of decoupling, please visit our website…

Website, etc.

What is Revenue decoupling? It's the disconnection or decoupling of a utility's revenue from customer usage. The Commission has determined a just and reasonable revenue level, based on the fixed costs to run and maintain a safe and reliable gas system. Under decoupling, this revenue will not be affected by customer usage that varies due to abnormal weather.

Why did Liberty ask for decoupling? This arrangement means the company can better budget and plan for expenses and revenues. It also means the company is not penalized when customers use less gas due to conservation and energy efficiency measures taken. Decoupling will also compensate for extreme weather events that put Liberty's revenue significantly above or below budget. The benefit to customers is less fluctuation in the distribution charges on their bills and further incentive to participate in energy efficiency programs.

Does this mean Liberty is guaranteed a profit regardless of how they manage their business? No. The company has an agreed level of revenue but not a guaranteed profit. The company still needs to control costs and make good business decisions in order to be profitable. Both of which are reviewed and regulated by the Commission.

How will decoupling work? Before decoupling, when we forecasted our budget, we predicted our revenue using several factors including historic trends based on weather. We know the typical amount of gas used in a "normal" month but sometimes a month can be colder or warmer than normal. If a month was colder than normal, the company made more money due to increased usage. If a month was warmer than normal, the company made less money due to decreased usage.

With decoupling we apply an adjustment to customers' bills in order to compensate for variations in expected weather during the customer's billing cycle. We calculate the difference between the typical (or normal) weather and the actual weather and apply a credit or a charge to customers' bills so that the revenue collected matches our forecast.

How will this affect my bill?

Each month you will see a new line item on your bill called Normal Weather Adjustment. This will show a credit or charge on your bill to compensate for a colder or warmer than normal month.

If the month is colder than normal, our customers will use more gas. This means we will collect more revenue than budgeted. The Normal Weather Adjustment would apply a credit to customers' bills to refund that over collection.

If a month is warmer than normal, customers will use less gas than expected and the company will fall short of its expected revenue. In this case the Normal Weather Adjustment will show up as a charge on customers' bills.

PLEASE NOTE that the Gas Supply Charge is based on market pricing. We purchase gas on the open energy market and pass those costs on to customers without a markup in price. Gas supply pricing can vary significantly. This is especially true when comparing summer to winter pricing. Decoupling will not affect the Gas Supply Charge on customers' bills.

Is my bill still based on how much gas I use? Yes, you are still charged based on the number of therms of gas you use.

Will my bill go up if I use less gas? No. Using less means you will be charged less for distribution charge, less for distribution adjustment and less for Gas Supply. Even in months where there is a normal weather adjustment charge, you will still see a reduction in your bill for using less energy.

What is the main purpose of decoupling?

The main purpose of decoupling is to promote energy efficiency. Customers who take advantage of energy efficiency measures will reduce their usage, lower bills and help the environment.

Separating a utility's revenue from overall customer usage means that the utility will have more incentive to promote energy efficiency programs, rather than selling more gas, because the utility will not incur a revenue loss as a result of energy efficiency measures utilized by customers.

Is decoupling a new concept?

Liberty Utilities is the first utility company in New Hampshire to make it part of their rate structure. While decoupling is a new concept in New Hampshire, the concept has been around for many years and is being used in over half the states in the country.

STATE OF NEW HAMPSHIRE
PUBLIC UTILITIES COMMISSION

Docket No. DG 17-048

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

Distribution Service Rate Case

<u>Response to September 24 Secretarial Letter</u>

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities ("Liberty" or the "Company"), through counsel, respectfully responds to the September 24, 2018, Secretarial Letter (the "Secretarial Letter"), answering the three questions posed by the Commission.

In support of this motion, the Company states as follows:

1. Order No. 26,122 (Apr. 27, 2018) (the "Order") resolved the merits of this rate case and approved the "settlement decoupling proposal." *Id.* at 45 ("we approve the settlement decoupling proposal in concept"); *see* Hearing Exhibit 29 (the Liberty-OCA *Agreement Regarding Permanent Rates*); Day 5 Transcripts of March 23, 2018, Morning Session, and March 23, 2018, Afternoon Session, containing the testimony of Dr. Johnson and Mr. Therrien.

2. Because of its relevance to the Secretarial Letter, below is the text of the decoupling proposal contained in the Liberty-OCA *Agreement Regarding Permanent Rates* as it relates to the tariff and customer bills:

> The Settling Parties agree that the Company should implement a "full" decoupling mechanism that contains the following elements: (1) real-time weather normalization, calculated at the individual customer level; (2) revenue per customer design, with accrual calculations at the rate class level and billing rates aggregated into two rates – Residential and C&I; (3) Managed Expansion Program customers are subject to decoupling, but the expansion surcharge dollars (i.e., the 30% distribution premium) are

> excluded from the decoupling calculation; and (4) special contract customers are not subject to decoupling and will be excluded entirely from the decoupling calculation.
>
> The real-time weather normalization adjustment is calculated as the difference between actual distribution revenue billed to each customer in each billing cycle for each month, and what distribution revenue for each customer's bill would have been based on normalized therm deliveries. The resulting charge or credit will be added to or subtracted from each customer's bill at the time the bill is rendered (i.e., "real time").
>
> The annual revenue per customer adjustment will be determined by calculating the difference between actual annual distribution revenue per customer and approved annual distribution revenue per customer for two groups of customers: (a) the residential classes and (b) the commercial and industrial classes. Approved annual distribution revenue per customer for each of these two groups will be based on the approved distribution revenues and test year average customer counts for each group. The difference in total distribution revenues is calculated using this revenue per customer variance multiplied times the actual average annual customer count. This amount will be recovered from or refunded to each group over the subsequent 12-month period through a uniform charge per therm for each group.
>
> * * *
>
> The Settling Parties agree that the decoupling mechanism shall take effect beginning on November 1, 2018. On that date, decoupling will replace the Lost Revenue Adjustment Mechanism established in Order No. 25,932 (Docket No. DE 15-137), and the Company will cease any and all recovery of lost revenues attributable to energy efficiency programs outside of the decoupling mechanism.

Hearing Exhibit 29, at 10-12.

3. In summary, the "settlement decoupling proposal" that the Commission approved is "a full decoupling mechanism, that is based on revenue per customer, and includes a real-time component for weather." Day 5 Transcript, morning session, at 28 (Therrien).

4. The Commission did not order changes to the Liberty-OCA decoupling proposal that are relevant here, but directed the Company to file illustrative tariffs and customer notification materials well in advance of the mechanism's November 1 implementation date to allow time for discussion with Staff and the OCA to fine tune the details:

> Because decoupling is slated for November 1, Liberty is directed to file within 45 days of this order illustrative tariffs demonstrating the rates, terms, and conditions required to implement decoupling in conformance with existing law. Due to the novelty of the decoupling process in New Hampshire, Liberty must also submit at the same time customer notice and educational materials for review and approval by the Commission.

Order at 46; *see* eleventh ordering clause, Order at 56 ("Liberty shall file illustrative tariffs and draft customer notices detailing the rates, terms, and conditions associated with decoupling within 45 days from the date of this order").

5. Liberty filed the illustrative tariffs and draft customer notices on June 11, 2018, along with a timeline of key dates related to the development, review, and issuance of customer informational materials.

6. Liberty contacted Staff a week later to arrange a meeting to discuss the compliance filing and obtain Staff's comments. After the first agreed meeting date had to be cancelled, Staff did not provide Liberty with additional dates on which it could meet. Over the succeeding months, Liberty asked Staff for status updates on Staff's review of the compliance filing, but received no substantive responses.

7. In order to meet the mandated November 1 implementation date for decoupling, Liberty did the following during the months of June through August:

   a. Liberty directed its billing vendor make the necessary changes to its software to implement the approved decoupling mechanism. As discussed during hearing, these software changes were substantial and required significant lead time to develop and test. *See, e.g.*, Day 5, morning session, at 35-40, 105-111; Day 5, afternoon session, at 4-16, 26-28, 49-54, 101-103. The computer changes have been completed and are now being tested.

   b. Liberty also directed its billing vendor make the necessary changes to the bill presentation so that it would include the "Normal Weather Adj" line that appears on the sample bill introduced as hearing Exhibit 61, a programming task that also required lead time to implement and test prior to November 1. No party objected to the appearance of Exhibit 61 during hearing, the Order did not comment on its appearance, and Staff made no suggested changes. That software change has also been completed and is being tested.

c. Liberty continued to work on, revise, and eventually finalize the customer notice that the Company will send to customers with October bills. The mailing had to be finalized in late August to allow for printing and shipping to the bill mailing vendor in September to be ready for inclusion in October bills.

d. Finally, the Company revised the decoupling Q&A that would be put on its website, prepared a separate web page for decoupling, and created a short video to be posted on the website and distributed through social media, all to be ready by October 1.

8. On September 11, 2018, three months after the Company's June 11 compliance filing and only three weeks before the start of formal customer notification, Staff informed Liberty for the first time that it had questions about the compliance filing, including the issues raised in the Secretarial Letter. Following are Staff's questions, which were included in an email setting the agenda for a previously scheduled meeting on another topic (the numbered paragraphs correspond to the issues also raised in the Secretarial letter):

> Staff has a number of topics it would like to address at our meeting on Friday 9/14, so I provide this email as an "agenda" of sorts.
>
> * * *
>
> **Draft Decoupling Tariff filed 6/11/18**
>
> [1] Regarding the Order at 46, which requires that the decoupling tariff be "in conformance with existing law". There are questions about how this tariff squares with the provisions of RSA 378:3 and Appeal of Pennichuck Water Works, 120 NH 562 – both of which, arguably, prohibit rate adjustments made after the service is provided, as is the case with the real-time weather adjustment.
>
> Staff believes that the decoupling tariff must show the calculation of the real-time weather normalization – so that customers can follow the calculation behind the new line item adjustment on their bill. What weather data will be used? How will the weather data and the corresponding effect on usage be calculated? For example, how will base load be isolated on a monthly basis so that only heat sensitive load will be adjusted.

> [2] Staff wishes to explore ways to make the formula at Section D.5.b on p. 4 easier to follow (especially by customers).
>
> [3] Staff wants to explore why the real-time weather normalization is only set up for winter months, when we recall that during the case it was presented as a year round event.
>
> Concerning Section D.8 – Staff believes the Commission should be provided with monthly (or perhaps daily) information as to how the real-time weather adjustment was derived for each billing cycle.
>
> Staff has comments on the customer write up, which we will try to finalize for the meeting.[1]

9. Staff, Liberty, and the OCA met on Friday, September 14, at which Liberty conveyed the information discussed in this Response, and more, and also agreed to modify the tariff language. Staff provided "high level" comments on the customer notification issues on September 17. Liberty responded to those comments on September 24, provided updated customer notifications, a link to the decoupling video, and answered other questions that Staff raised. The Secretarial Letter was also issued September 24.

Question 1 – Twelve Month versus Six Month WNA

10. The Secretarial Letter states that "*Liberty proposed* a real-time weather normalization adjustment that would be made year round. According to … the illustrative tariff, however, the adjustment will only be performed during the six winter months." (Emphasis added.) The Secretarial Letter directed Liberty to "provide the reasoning behind *its decision* to now propose an illustrative tariff that limits the adjustment to the six winter

[1] The Company did not receive these comments until September 17, they were described as "high level" suggestions, and they referenced the materials filed on June 11. The Company had independently made changes during its internal review that unknowingly anticipated Staff's comments.

months [and] to explain in detail any benefits and drawbacks to its customers from the change to a winter-only adjustment." (Emphasis added.)

11. First, the Commission did not approve Liberty's weather normalization adjustment ("WNA") mechanism. The Order approved the different proposal contained in the Liberty-OCA settlement, quoted above. Liberty's initial proposal did contain a WNA mechanism with separate summer and winter periods, *see* Exhibit 8, Direct Testimony of Gregg Therrien, at Bates 318, but the WNA mechanism in the Liberty-OCA settlement, which is the proposal that the Commission approved, did not propose for it to apply 12 months per year. The approved WNA mechanism is silent as to whether it would apply for six or 12 months.[2] The Company found nothing helpful in the hearing transcript.

12. Second, implementing a year round WNA mechanism would produce unintended and unacceptable results. A fundamental step in the WNA is to compute the percentage difference between the actual and normal heating degree days (HDDs) during the applicable billing period.[3] Because HDDs are much lower in the summer and shoulder months, the percentage difference between actual and normal can be large and variable while the absolute difference in the HDDs is small. Such large relative differences and variability may give rise to inappropriately large weather adjustments for certain highly weather sensitive customers for small actual differences in HDDs.

13. For example (and these are the actual numbers behind the sample bill discussed at hearing, Exhibit 61, a corrected copy of which is attached to this Response), if the normal

[2] The reference to "annual" in the third paragraph of the settlement proposal applies to the annual revenue-per-customer adjustment, not to the time over which the decoupling mechanism will be in effect.

[3] The WNA mechanism uses this percentage to reconcile the actual therms used for heat to the therms that would have been used for heat under normal weather.

HDDs for a billing period are 897 therms, but the actual HDDs for that period were 887 therms (warmer than normal), the 10 therm difference represents a variance from normal of only 1.1%. Since the WNA mechanism is largely driven by this percentage change in actual-to-normal HDDs, the upward adjustment in Exhibit 61 was only $0.50 (out of a total variable distribution charge of $80.93). Also attached is an example of bill that resulted in a $3.73 WNA credit, covering a period colder than normal. As with Exhibit 61, this sample is based on an actual bill.

14. There are fewer HDDs in the shoulder and summer months, so a relatively small change in actual weather can give rise to a large percentage change between actual and normal HDDs. For example (and this is actual data discussed with Staff and the OCA on September 27), during the billing period of May 24 through June 22, 2018, the actual HDDs were 43 and the normal HDDs were 78, resulting in an 81% difference. A percentage difference of this magnitude is not uncommon during the shoulder and summer months. And since this percentage change is an important driver in the WNA mechanism, its application would lead to a relatively large percentage adjustment to the variable distribution portion of a relatively small bill. Such a potentially large adjustment would not be appropriate and may send conflicting and confusing price signals. Such an adjustment does not accurately reflect changes in a customer's weather-related consumption, which is small or non-existent during the non-heating season.

15. Third, the Company's billing system currently performs a "base usage" calculation for all customers, which is each customer's average use during two consecutive June, July, and August periods. Base usage is assumed to be the customer's non-heating load, which is important information that the Company uses for various billing purposes, including for

the WNA mechanism. In order to capture the base usage, the Company must disable certain functions of the billing software that are otherwise necessary for the WNA mechanism. That is, the Company cannot calculate the base usage and the WNA mechanism at the same time, so it is impossible to implement the WNA mechanism over the three summer months.

16. Paragraphs 11 through 15 above constitute the "reasoning behind [the] decision to now propose an illustrative tariff that limits the [WNA] adjustment to the six winter months."

17. The Secretarial Letter also asked the Company "to explain in detail any benefits and drawbacks to its customers from the change to a winter-only adjustment."

18. The primary customer benefit is avoiding the inappropriate and confusing adjustments that the WNA mechanism would compute if implemented over the shoulder and summer months, as described above.

19. The Company does not see customer drawbacks to a winter-only WNA mechanism. To the extent customers will not have access to the mechanism's effect of smoothing the variation in distribution charges, that effect will be small during the summer (assuming away the anomalies discussed above) given the low usage during that period.

<u>Question 2 – Specific Tariff Language</u>

20. The Secretarial Letter states that the proposed tariff language, specifically Section 17.D.7.b, "falls short" of the transparency the Commission would like to see. The Company discussed this issue with Staff and the OCA during the September 14 meeting and again during a meeting on September 27. The Company agreed to revise the tariff language and is filing that revised language under separate cover. The revisions include specific formulae

for the revenue decoupling and for the WNA mechanism, with appropriate definitions and descriptions.

<u>Question 3 – "Compliance with Existing Law"</u>

21. The third question posed by the Secretarial Letter quotes the Order's statement that the decoupling tariff must be "in compliance with existing law" and states that Liberty's compliance filing "does not address this requirement." The Commission thus directed Liberty "to file a legal memorandum explaining how the real-time weather normalization portion of the tariff as filed is 'in compliance with exiting law,'" citing RSA 378:3 and *Appeal of Pennichuck Water Works,* 120 N.H. 562 (1980). This Response is Liberty's legal memorandum.

22. It is Liberty's position that the WNA mechanism as set forth in the tariff is "in compliance with existing law" for the following reasons.

<u>RSA 378:3</u>

23. First, the opening phrase of RSA 378:3 shields the WNA mechanism from any other alleged deficiencies that may exist under that statute. RSA 378:3 states, in full:

> 378:3 Change. Unless the commission otherwise orders, no change shall be made in any rate, fare, charge or price, which shall have been filed or published by a public utility in compliance with the requirements hereof, except after 30 days' notice to the commission and such notice to the public as the commission shall direct.

Regardless of how one interprets the required "notice" and the meaning of "any rate, fare, charge or price," discussed below, the opening phrase "unless the commission otherwise orders" must also be given full effect. *State Employees Ass'n of New Hampshire, SEIU,* *Local 1984(SEA) v. New Hampshire Div. of Personnel*, 158 N.H. 338, 345 (2009) ("We also note the 'elementary principle of statutory construction that all of the words of a statute must be given effect and that the legislature is presumed not to have used superfluous or redundant words'") (citation omitted). So, if the Commission were to approve a "change" in a "rate" without "30 days' notice to the commission," a change that would otherwise violate RSA 378:3, that change would nonetheless be "in compliance with existing law" because the "commission otherwise order[ed]" that change.

24. Here, the Commission knew that the WNA mechanism would adjust the customer's bill based on variation in HDDs during the immediately preceding billing period. That is, the Commission specifically understood that the WNA mechanism has a backward-looking function, a comparison of actual to normal HDDs, before it calculates the final bill.

> The real-time weather normalization adjustment is calculated as the difference between actual distribution revenue billed to each customer in each billing cycle for each month, and what distribution revenue for each customer's bill would have been based on normalized therm deliveries

Liberty-OCA Settlement, Hearing Exhibit 29, at 11.

> The settlement also includes important non-revenue provisions, including … a decoupling plan under which revenue per customer targets would be established for each rate class. Each month, and again at the end of each year, rates would be adjusted up or down to allow the Company to collect the established revenue per customer targets. The monthly adjustments would account for changes in weather. In months when temperatures were colder than normal, customers would receive a credit on their bill to return the increased revenues that Liberty would have collected due to higher usage during the colder than normal temperatures. During warmer months, customers would pay a charge to make up for the reduced revenues attributable to the warmer temperatures.

Order at 6-7.

25. With this knowledge that the WNA mechanism would apply a credit or charge based on the prior month's weather, and with presumed knowledge of RSA 378:3's notice

requirement, the Commission approved and ordered implementation of the WNA mechanism. Thus, the WNA mechanism is "in compliance with existing law" because the Commission "otherwise order[ed]" its implementation.

26. Second, even if the Commission disregarded the "otherwise orders" language, RSA 378:3 does not render WNA mechanism illegal because the mechanism does not change "any rate, fare, charge or price." As described above, the WNA reconciles the therms actually used to the therms that would have been used under normal weather. The WNA mechanism calculates a percentage difference between actual and normal usage and multiplies that by the approved rates, giving rise to dollar adjustment. There is no change in rates and all rate components on a customer's bill will be calculated at Commission-approved rates.

27. The WNA mechanism is simply a reconciling mechanism intended to true up the effects of weather: "Rate cases are premised on normal weather, and known and measurable adjustments are made in order to normalize the rate year. That does not change with decoupling. Decoupling is a reconciling mechanism after those base rates are established." Day 5, morning session, at 32 (Therrien).

28. Third, even if the "otherwise orders" language is ignored, and even if the WNA adjustment is a "change" in a "rate, fare, charge or price," the WNA mechanism still complies with RSA 378:3 because the revised tariff language, attached, provides "30 days' notice to the commission" of that change. The tariff language describes the formulae that will be used to calculate the WNA, which is similar to the notice currently given for other billing components and arrangements such as calculating the "therm factor" and budget billing.

<u>Appeal of Pennichuck</u>

29. The Secretarial Letter directed Liberty "to explain how the tariff complies … with the NH Supreme Court's ruling in *Appeal of Pennichuck Water Works*." *Pennichuck* stands for the well-known proposition that "the earliest date on which the PUC can order temporary rates to take effect is the date on which the utility files its underlying request for a change in its permanent rates." 120 N.H. at 567. More specifically, the Secretarial Letter cited *Pennichuck* as authority for the "customers right to rely on the rates in effect at the time they consume utility service," echoing the more specific statement in *Pennichuck*: "In no event may temporary rates be made effective as to *services rendered* before the date on which the permanent rate request is filed." *Id.* (emphasis in original).

30. Liberty does not dispute these established principles, but contends that they do not apply to the WNA mechanism for reasons similar to the discussion of RSA 378:3 above. First, the WNA mechanism does not change approved "rates." The use of the term "rates" in the temporary and permanent rate statutes, RSA 378:27 through 378:29, which were the statutes at issue in *Pennichuck*, is without ambiguity. The WNA mechanism only applies approved rates.

31. And second, *Pennichuck* held that a utility could not recover rate increases for services prior to the filing of the rate case, i.e., prior to notice of the proposed rate change. Even if the WNA mechanism was considered to change rates, customers *do* have notice of

those changes through the tariff language that describes how the WNA mechanism will operate.

32. Thus, the WNA mechanism does not run afoul of the holding in *Pennichuck*.

Conclusion

33. Liberty is concerned over the process that led to the Secretarial Letter and the need for this Response. The first two questions should have been vetted during the typical process of post-order tariff review among Staff, Liberty, and the OCA, with the result being either a Staff recommendation for approval or a more developed and focused disagreement to be resolved by the Commission. Despite the Company's efforts, that process did not occur. Rather, the issues Staff raised at the last moment became the subject of a Secretarial Letter – in effect a Commission order – without the opportunity for any input from the Company. This denial of an opportunity to be heard raises due process concerns. Indeed, in the case of Question 2, the Secretarial Letter was issued before Liberty could even produce the tariff changes it agreed to make.

34. The third question, a purely legal issue, should have been raised during hearing, not five months after the Order was issued and four months after it became final. Nothing prevented the issue from being raised earlier. The Commission did not invoke RSA 365:28 to reopen the hearing, which of course requires notice and hearing, and the issue is not akin to a jurisdictional issue that a court may raise at any time. The Commission has authority

and precedent to approve mechanisms that adjust bills without violating the principles of *Pennichuck*. Again, the "therm factor" adjustment is an example.[4]

35. The Company has responded to all questions in the Secretarial Letter and to all questions and issues otherwise raised by Staff. Liberty respectfully asks the Commission to approve the tariff provisions and compliance filing.

Respectfully submitted,
Liberty Utilities (EnergyNorth Natural Gas) Corp.
d/b/a Liberty Utilities

By its Attorney,

Certificate of Service

I hereby certify that on October 1, 2018, a copy of this response has been electronically forwarded to the service list.

By: ______________________________
Michael J. Sheehan

[4] The therm factor is a long accepted adjustment that converts the customer's "usage" into "therms" by a calculation that can only be done after the billing period when the Company knows the exact BTUs of the gas delivered during that month. The adjusted therms are multiplied by the approved rates, which is similar to the WNA adjustment discussed here. The therm factor adjustment has occurred without Commission concern for years.

The winter cost of gas rate will be applied to billings commencing with the first November revenue billing cycle; the summer cost of gas rate will be applied to billings commencing with the first May revenue billing cycle.

C. Calculation. The amount of the cost of gas rate is the anticipated unit cost of gas sold.

At the conclusion of each winter and summer period the Company will calculate the extent that cost of gas revenues are greater or less than actual unit costs of gas compared with the anticipated unit costs. The calculated difference (actual gas sales volumes multiplied by the difference between actual and anticipated unit costs) will be carried forward into the computation of the cost of gas rate for the corresponding winter or summer period.

Any excess revenue collected, as determined above, will earn interest as specified by the Commission.

D. Changes. The cost of gas rate may be adjusted without further Commission action based on the projected over-/under-collection of gas costs, the adjusted rate to be effective the first of the month. Any such rate adjustments may not exceed a maximum rate of 25 percent above the approved rate, but there is no limit on the amount of any rate reductions.

E. Refunds. When refunds are made to the Company by its suppliers that are applicable to increased charges collected under this provision, the Company will make appropriate refunds to its customers and as the Commission may direct.

F. Reporting. The Company shall submit to the Commission, at least 30 days prior to the effective date, the proposed winter and summer period cost of gas rate computation. Any monthly adjustments to the cost of gas rate must be filed five (5) business days prior to the first day of the subsequent month (the effective date of the new rate).

The cost of gas rate shall be computed to the nearest one hundredth cent per therm and shown on customers' bills.

G. Fixed Price Option Program. An alternative to the traditional winter period cost of gas rate mechanism may be elected by the customer pursuant to the Company's Fixed Price Option (FPO) Program. The Company may offer up to 50% of its expected firm sales for the winter period under the FPO Program. The cost of gas charge offered under the FPO Program will remain fixed for all winter period billings commencing November 1 and ending April 30 of the effective winter period. Once elected, customers must remain on the FPO Program for the duration of the winter period unless service is terminated. There are no maximum or minimum usage levels. Customers may enroll in this Program by contacting the Company between the October 1 and October 19 period immediately preceding the effective winter period.

17 LOCAL DISTRIBUTION ADJUSTMENT CLAUSE AND NORMAL WEATHER ADJUSTMENT

A. Purpose. The purpose of the Local Distribution Adjustment Clause ("LDAC" or this "Clause") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its delivery charges in order to recover Conservation Charges ("CC"), Revenue Decoupling Adjustment Clause ("RDAC"), Winter Period Surcharges ("WPS"), Environmental Surcharges ("ES") including the Relief Holder Surcharge ("RHS") and the Manufactured Gas Program Surcharge ("MGP"), rate case expenses ("RCE"), Residential Low

Income Assistance Program costs ("RLIAP") and any other expenses the NHPUC may approve from time to time. The purpose of the Normal Weather Adjustment ("NWA") is to establish procedures that allow the Company, subject to the jurisdiction of NHPUC, to calculate and apply, for each customer on a monthly basis, the Weather Normalization Factor ("WNF").

B. Applicability. This Clause shall be applicable in whole or part to all of the Company's firm sales service and firm delivery service customers as shown on the table below. The application of this clause may, for good cause shown, be modified by the NHPUC. See Section 17(K) "Other Rules."

Applicability	CC 17(C)	RDAC 17(D)	ES 17(E)	RCE 17(F)	RLIAP 17(G)
Residential Non-Space Heating – R-1, R-5	1	1	X	1	X

C. Conservation Charges Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Conservation Charge, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers costs and lost margins associated with its energy efficiency management programs.

2. Applicability: A conservation charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the Commission as determined in accordance with the provision of this rate schedule. Such conservation charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.

3. Calculation of Conservation Charge: The Company will properly assign expenses for forecasted conservation expenditures to the applicable rate categories for a future twelve (12) month period commencing November 1 of each year. The total of such conservation expenditures plus any prior period reconciling adjustments shall be divided by therm sales as forecasted by the Company for the same annual period and rounded to the nearest hundredth of a cent. The resulting conservation charge shall be included in the Company's Local Distribution Adjustment Charge and applied to actual therms sold or transported for the following twelve (12) month period starting November 1, and ending October 31.

4. Reporting: The Company shall submit annual reports to the Commission reconciling any difference between the actual conservation expenditures and actual revenues collected under this rate schedule. The difference whether positive or negative will be carried forward into the conservation charge for the next recovery period. Upon completion of the conservation program(s), any over or under collection may be credited or charged to the deferred Winter Period cost of gas account, subject to Commission approval.

5. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the CC applicable to each Rate Category during the next subsequent twelve-month period commencing with the calendar month of November.

6. Reconciliation Adjustment: Account 1163-1755 shall contain the cumulative difference between the sum of the DSM expenditures incurred by the Company plus the sum of the DSM repayments and the revenues collected from customers. The Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.

D Revenue Decoupling Adjustment Clause.

1. Purpose: The purpose of the Revenue Decoupling Adjustment Clause ("RDAC") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its rates for firm gas sales and firm transportation in order to reconcile Actual Base Revenue per Customer with Benchmarked Base Revenue per Customer. The Company's RDAC eliminates the link between volumetric sales and Company revenue in order to align the interests of the Company and customers with respect to changing customer usage.. The purpose of the NWA is to adjust each customer's bill for the difference in delivery charges caused by the variation in actual HDDs from normal HDDs during the Winter Period.

2. Effective Date: The RDAC and NWA shall take effect beginning on November 1, 2018, and replace the Lost Revenue Adjustment Mechanism (LRAM) established in Order No. 25,932 (Docket No. DE 15-137).

3. Applicability: The Revenue Decoupling Adjustment Factor and NWA shall apply to all of the Company's firm tariff Rate Schedules, subject to the jurisdiction of the Commission, as determined in accordance with the provisions of this RDAC and NWA.

4. Definitions: The following definitions shall apply throughout the RDAC and NWA:

   a. Actual Base Revenue is the actual revenue derived from the Company's distribution rates for a given Decoupling Year for a Customer Class. The Company will use monthly distribution revenues and Actual Number of Customers to determine the Monthly Actual Base Revenue per Customer.

   b. Actual Number of Customers is the actual number of Equivalent Bills for the applicable Customer Class for the applicable month of the Decoupling Year.

   c. Billing Year is the 12-months commencing November 1 immediately following the completion of the Decoupling Year.

   d. Customer Class is the group of all customers taking service pursuant to the same Rate Schedule.

e. Customer Class Group is the group of Rate Schedules combined for purposes of calculating the Revenue Decoupling Adjustment. The two Customer Class Groups are as follows:

Residential Customer Class Group (CG1): defined as both Residential Non-Heating Customer Class and Residential Heating Customer Class, shall consist of all customers taking service pursuant to the Company's residential rate schedules. CG1 shall include customers taking service under rate schedules R-1, R-3, R-4, R-5, R-6 and R-7.

The Commercial and Industrial Customer Class Group (CG2): shall consist of all customers taking service pursuant to one of the Company's general service rate schedules, G-41, G-42, G-43, G-44, G-45, G-46, G-51, G-52, G-53, G-54, G-55, G-56, G-57 and G-58.

f. Decoupling Year. The first Decoupling Year shall be the 10-month period from November 1, 2018 to August 31, 2019. Each subsequent Decoupling Year shall be the twelve months commencing September 1 through August 31.

g. Equivalent Bill. The number of days in the billing period of each customer's bill divided by 30.

h. Real-time normal weather adjustment is the difference between actual distribution revenue billed to each customer in each billing cycle for each month or portion thereof during the Winter Period, and what distribution revenue for each customer's bill would have been based on weather normalized therm deliveries for the same period. The resulting charge or credit will be added to or subtracted from each customer's bill at the time the bill is rendered (i.e., "real time").

i. Benchmark Base Revenue per Customer is the monthly allowed distribution revenue per Equivalent Bill for a given Decoupling Year for a given Customer Class, reflecting the distribution revenue level and approved equivalent bills from the Company's most recent rate case or other proceeding that results in an adjustment to base rates. Benchmark Base Revenue per Customer will be calculated for each month based on the distribution rates in effect at the start of the Decoupling Year and the calculation will be revised for the remaining months of each Decoupling Year if there is a distribution rate change that occurs following the beginning month of each Decoupling Year.

j. Winter Period. The time period from November 1 of a given year through April 30 of the following year inclusive.

k. Base Load Factor for each customer is the most recent two-year average daily delivered therms for actual bills rendered during the months of June through August for that customer. If a customer has less than two-year's billing history, then the customer's available history for the months of June through August will be used to calculate the average daily delivered therms; and if a customer has no billing history for the months of June through August, then the average daily delivered therms for the months of June through August for the rate schedule under which the customer is served will be used.

l. Base Usage for each bill is the current Base Load Factor times the number of days in billing period.

m. Heating Usage for each bill is the difference between the actual delivered therms for that bill less the Base Usage for that bill. If the calculated Heating Usage is less than zero, then the Heating Usage for that bill is set equal to zero.

n. Heating Degree Days (HDD) for each day is sixty-five (65) minus the average temperature in degrees Fahrenheit for that day. If the calculated HDD is less than zero, then the HDD for that day is set equal to zero.

o. Normal Heating Degree Days (Normal HDD) for each day is the thirty-year average HDD for that day.

p. Normal Weather Adjustment Slope (NWA Slope) for each bill is the Heating Usage divided by the sum of actual HDD during the billing period.

q. Normal Heating Usage for each bill is the NWA Slope times the sum of the Normal HDD for the billing period.

r. Normal Usage for each bill is the sum of the Base Usage and the Normal Heating Usage.

s. Normal Weather Normalization Factor (NWF) for each bill is

$$\mathrm{NWF} = \frac{\mathrm{DeliveryCharge_{Normal}}}{\mathrm{DeliveryCharge_{Actual}}} - 1$$

where Delivery Charge Normal is the calculated delivery charge for Normal Usage for the rate schedule applicable to that bill or portion thereof during the Winter Period and Delivery Charge Actual is the calculated delivery charge for actual delivered therms for the rate schedule applicable to that bill or portion thereof during the Winter Period.

5. Calculation of Revenue Decoupling Adjustment

a. Description of Revenue Decoupling Adjustment

At the conclusion of each Decoupling Year, the Company shall calculate a Decoupling Revenue Adjustment to be used to determine the RDAF for the next Billing Year, effective November 1.

The Revenue Decoupling Adjustment shall be determined by calculating the monthly difference between the Benchmark Base Revenue per Customer times the actual number of Equivalent Bills for the applicable Customer Class and the Actual Base Revenue for that month. The sum of these monthly Revenue Decoupling Adjustments in the Decoupling Year shall be divided by forecasted Billing Year sales to derive the volumetric rate per therm to be applied to customers' bills in the Billing Year. The Revenue Decoupling Adjustment shall also include a reconciliation component for the previous Decoupling Year, which represents the difference between the accrued decoupling amount in the Decoupling Year compared to the actual revenues billed in the billing Year.

b. Revenue Decoupling Adjustment Formulas

$$\mathrm{RD_{CG}} = \sum_{\mathrm{RC=1}}^{\mathrm{RC=n}} \left[\left(\mathrm{BRPC_{T-1}} \text{ x } \mathrm{ACUSTS_{T-1}}\right) - \mathrm{AR_{T-1}}\right)\right]$$

And:

$$\mathrm{RDAF_{CG}} = \frac{\mathrm{RD_{CG}} + \mathrm{CGDEF_{t-1}}}{\mathrm{FTV_{CG}}}$$

Where the terms in the above equation have the following meanings:

$ACUSTS_{T-1}$ — The Actual Number of Equivalent Bills for the applicable Customer Class for the most recently completed Decoupling Year (T-1)

AR_{T-1} — The Actual Base Revenue for the applicable Customer Class for the most recently completed Decoupling Year, (T-1), as defined in Section 4(D). For purposes of calculating the Actual Base Revenue, base revenues for Low Income rate class R-4, shall be determined based on non-discounted rate R-3.

$BRPC_{T-1}$ — The Benchmark Base Revenue Per Equivalent Bill for the applicable Customer Class as determined in accordance with Section 4 (D) for the most recently completed Decoupling Year, stated on a monthly basis (T-1).

cg — Customer Class Groups as defined in Section 4(D).

$CG\mathrm{DEF}$ — The balance of the unrecovered deferrals inclusive of associated interest using the prime lending rate.

FTV_{CG} — Forecast Throughput Volumes inclusive of all firm tariff throughput for the Billing Year.

rc — Rate Classes in a Customer Group.

RD_{CG} — The Revenue Decoupling adjustment to revenues, representing the sum of the monthly Revenue Decoupling Adjustments in the Decoupling Year.

$RDAF_{cg}$ — The Revenue Decoupling Adjustment Factor for the Billing Year.

6. Calculation of the RDAC Reconciliation Adjustments

Account 1163-1756 shall contain the accumulated difference between annual revenues and the Revenue Decoupling Adjustment, as calculated by multiplying the RDAF times firm sales and transportation throughput, and the Revenue Decoupling Adjustment allowed revenues annually, plus carrying charges on the average monthly balance using the prime lending rate.

7. Application of the RDAC to Customer Bills

The RDAF ($ per therm) shall be calculated annually for each Customer Group and shall be truncated at the nearest one one-hundredth of a cent per therm. The annual calculated Customer Group RDAF will be applied to the monthly firm tariff throughput for each customer in that particular Customer Group, effective November 1 of the given year.

8. Calculation of Normal Weather Adjustment

The Normal Weather Adjustment (NWA) for each bill is

$$\mathrm{NWA} = \mathrm{DeliveryCharge}_{\mathrm{Actual}} \times \mathrm{NWF}$$

where Delivery Charge Actual is the calculated delivery charge for actual delivered therms for the rate schedule applicable to that bill or portion thereof during the Winter Period.

9. Application of the NWA to Customer Bills

The NWA charge or credit will be separately stated, and added to or subtracted from each bill as applicable. Each bill will have a separate line titled "Normal Weather Adj.," which line will include the total variable distribution charges, the NWF percentage, and the resulting charge or credit.

10. Information to be Filed with the Commission

Information pertaining to the RDAC will be filed annually with the Commission consistent with the filing requirements of all costs and revenue information included in the LDAC. Such information shall include:

a. The calculation of the applicable revenue decoupling revenue dollar adjustment for the Decoupling Year by Customer Class Group.

b. The calculation of the revenue decoupling reconciliation dollar adjustment for the previous Decoupling Year by Customer Class Group.

c. The calculation of the proposed decoupling rate per therm for each customer class group to be applied in the Billing Year.

d. The calculation of the monthly Benchmark Base Revenue per Customer, to be utilized in the upcoming Decoupling Year. If distribution rates change during the Decoupling Year, the monthly Benchmark Base Revenue per Customer for the remaining months of the Decoupling Year will be revised and filed with the Commission.

E. Environmental Surcharges ("ES") Allowable for LDAC.

1. Purpose: In order to recover expenditures associated with former manufactured gas Programs, there shall be an ES Rate applied to all firm volumes billed under the Company's delivery service charges.

2. Applicability: An annual ES Rate shall be calculated effective every November 1 for the annual period of November 1 through October 31. The annual ES Rate shall be filed with the Company's Winter season Cost of Gas Clause ("COG") filing and be subject to review and approval by the Commission. The annual ES Rate shall be applied to firm sales and to firm delivery throughput as a part of the LDAC. Special contract customers are exempt from the ES.

3. Costs Allowable: All approved environmental response costs associated with manufactured gas Programs may be included in the ES Rate

The total annual charge to the Company's customers for environmental response costs during any annual ES recovery period shall not exceed five percent (5%) of the Company's total revenues from firm gas sales and delivery throughput during the preceding twelve (12) month period ending June 30. The total annual charge shall represent the ES expenditures reflected in the calculation of the ES Rate to be in effect for the upcoming twelve-month period, November 1 through October 31. If this recovery limitation results in the Company recovering less than the amount that would otherwise be recovered in a particular ES Recovery Year, then the Company would defer this unrecovered amount, with interest, calculated monthly on the average monthly balance, until the next recovery period in which this amount could be recovered without violating the 5% limitation. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

4. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the ES applicable to all firm sales and firm delivery service throughput for the subsequent twelve-month period commencing with the calendar month of November.

5. Definitions:

   Environmental Response Costs shall include all costs of investigation, testing, remediation, litigation expenses, and other liabilities relating to manufactured gas Program sites, disposal sites, or other sites onto which material may have migrated, as a result of the operating or decommissioning of New Hampshire gas manufacturing facilities. These cost shall include the costs of the closure of the Relief Holder and pond at Gas Street, Concord, NH. The ES shall also include the expenses incurred by the Company in pursuing insurance and third-party claims and any recoveries or other benefits received by the Company as a result

6. Reconciliation Adjustments: Prior to the Winter Period COG, the Company shall calculate the difference between (a) the revenues derived by multiplying firm sales and delivery throughput by the ES Rate, and (b) the historical amortized costs approved for recoveries in the prior November's Annual ES Recovery Period. Account 1920-1863 shall contain the cumulative difference and the Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

7. Calculation of the ES: The ES Rate calculated annually consists of one-seventh of actual response costs incurred by the Company in the twelve-month period ending June 30 of each year until fully amortized (over seven years). Any insurance and third-party recoveries or other benefits for the twelve month period ending June 30 shall be applied to reduce the unamortized balance, shortening the amortization period. The sum of these amounts is then divided by the Company's forecast of total firm sales and delivery throughput for the upcoming twelve months of November 1 through October 31.

8. Application of ES to Bills: The annual ES Rate shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

F. Expenses Related to Rate Cases/Temporary Rate Reconciliation Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates for the recovery of NHPUC-approved rate case expenses and the reconciliation of temporary rates.

2. Applicability: The Rate Case Expenses/Temporary Rate Reconciliation ("RCE") shall be applied to all firm tariffed customers. The RCE will be determined by the Company, as defined below.

3. Rate Case Expenses Allowable for LDAC: The total amount of the RCE will be equal to the amount approved by the Commission.

4. Effective Date of Rate Case Expense Charge: The effective date of the RCE will be determined by the NHPUC in an individual rate proceeding.

5. Definition: The RCE includes all rate case-related expenses approved by the NHPUC. This includes legal expenses, costs for bill inserts, costs for legal notices, consulting fees processing expenses, and other approved expenses. The temporary Rate reconciliation will include the variance between the delivery revenues obtained from the rates prescribed in the temporary rate order and the delivery revenues obtained from the final rates approved by the NHPUC.

6. Rate Case Expense/Temporary Rate Reconciliation (RCE) Factor Formulas: The RCE will be calculated according to the Commission Order issued in an individual proceeding to establish details including the number of years over which the RCE shall be amortized and the allocation of recovery among rate classes. In general, the RCE Factor will be derived by dividing the annual portion of the total RCE, plus the RCE Reconciliation Adjustment, by forecast firm annual throughput.

7. Reconciliation Adjustments: Account 1930-1745 shall contain the accumulated difference between revenues toward Rate Case Expenses as calculated by multiplying the Rate Case Expense Factor ("RCEF") times the appropriate monthly volumes and Rate Case Expense allowed, plus carrying charges added to the end-of-month balance. The carrying charges shall be calculated beginning on the first month of the recovery period by applying the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates to the average monthly balance.

   At the end of the recovery period, any under or over recovery will be included in an active LDAC component, as approved by the Commission.

8. Application of RCE to Bills: The RCE ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

9. Information to be Filed with the NHPUC: Information pertaining to the RCE will be filed with the NHPUC consistent with the filing requirements of all cost and revenue information included in the LDAC. The RCE filing will contain the calculation of the new RCE and will include the updated RCE reconciliation balance.

G. Recoverable Residential Low Income Assistance Program Costs.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to recover the revenue shortfall (costs) associated with customers participating in the Residential Low Income Assistance Program ("RLIAP"). Such costs, as well as, associated administrative and marketing costs shall be recovered by applying an RLIAP rate to all firm sales and transportation service throughput.

2. Applicability: The RLIAP Rate shall be applied to all firm sales and transportation tariff customers. The RLIAP Rate shall be filed with the Company's Winter season Cost of Gas Clause filing and shall be determined annually by the Company and be subject to review and approval by the Commission.

3. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the RLIAP Rate applicable to all firm sales, delivery and transportation service throughput for the subsequent twelve-month period commencing with the calendar month of November.

4. RLIAP Costs Allowable for LDAC: The costs to be recovered through the RLIAP Rate shall comprised of the revenue shortfall calculated by forecasting the number of customers enrolled in the RLIAP and the associated volumetric billing determinants for the upcoming annual recovery period and applying those billing determinants to the difference between the regular and reduced low income residential base rates, plus administrative, marketing and startup costs. The RLIAP Rate shall be calculated by dividing the resulting costs, plus any prior period reconciling adjustment, by the forecast of annual firm sales and transportation service throughput.

5. RLIAP Factor Formula

$$RLIAPF = \frac{RLIAP + RA_{RLIAP}}{A\text{: } TPev}$$

where:

A: Tpev Forecast Annual Throughput Volumes of all firm sales and transportation tariffed customers eligible to receive firm delivery-only service from the Company.

RLIAP RLIAP costs comprising of the revenue shortfall associated with customer participation, plus administrative, marketing, IT and start-up costs.

RA_{RLIAP} RLIAP Reconciliation Adjustment - Account 1169-1756, inclusive of the associated Account 1169-1756 interest, as outlined in Section 17(G)(6).

6. Reconciliation Adjustments: Prior to the Company's Winter season Cost of Gas filing, the Company will calculate the difference between (a) the revenue derived by multiplying the actual firm sales and delivery service throughput by the RLIAP Rate through October 31st, and (b) the actual costs of the program which consists of (1) the revenue shortfall calculated by applying the actual billing determinants of the RLIAP classes to the difference in the regular and reduced residential base rates in effect for the annual reconciliation period and (2) the start-up, administrative and marketing costs associated with the implementation of the program, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates. The combined costs will then be recorded in the deferred RLIAP account 1169-1756. The Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

H. Effective Date of Local Distribution Adjustment Clause. The LDAC shall be filed annually and become effective on November 1 of each year pursuant to NHPUC approval. In order to minimize the magnitude of future reconciliation adjustments, the Company may request interim revisions to the LDAC rates, subject to review and approval of the NHPUC.

I. Local Distribution Adjustment Clause Formulas. The LDAC shall be calculated on an annual basis, by customer, by summing up the various factors included in the LDAC, where applicable.

LDAC Formula

$$LDAC^{X} = CC^{X} + RDAC^{X} + ES + GREF^{x} + RCE + RLIAP$$

and:

ES^{X} = RHS + MGP

where:

$LDAC^{X}$ = Annualized class specific LDAC.

CC^{X} = Annualized class specific CC or EE Charge.

$RDAC^{X}$ = Annualized class specific RDAC.

ES = Total firm annualized ES.

RHS = Annualized charge to recover the costs of the closure of the Relief Holder at Gas Street, Concord, NH

MGP = Annualized charge to cover the remediation costs related to former manufactured gas plants.

$GREF^{X}$ = Total firm annualized class specific Gas Restructuring Expense Factor.

RCE = Rate Case Expense Factor.

RLIAP = Residential Low Income Assistance Program Rate

J. Application of LDAC to Bills. The component costs comprising the LDAC ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm sales and firm delivery service throughput in accordance with the table shown in Section 17(B).

K. Other Rules.

1. The NHPUC may, where appropriate, on petition or on its own motion, grant an exception from the provisions of these regulations, upon such terms that it may determine to be in the public interest.

2. Such amendments may include the addition or deletion of component cost categories, subject to the review and approval of the NHPUC.

3. The Company may implement an amended LDAC with the NHPUC approval at any time.

4. The NHPUC may, at any time, require the Company to file an amended LDAC.

5. The operation of the LDAC is subject to all powers of suspension and investigation vested in the NHPUC.

L. Amendments to Uniform System of Accounts.

1163-1755 **Energy Efficiency Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the sum of DSM and/or EE Expenditures incurred by the Company plus the sum of DSM and/or EE Repayments and the revenues collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(C).

1920-1863 **Environmental Response Costs Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the revenues toward environmental response costs as calculated by multiplying the ES times monthly firm sales volumes and delivery service throughput and environmental response costs allowable per formula. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(E).

1930-1745 **<u>Rate Case Expense/Temporary Rates Reconciliation Adjustment</u>:** This account shall be used to record the cumulative difference between the recovery and actual amounts of third-party incremental expenses associated with the Company's Rate Case initiatives and the difference between the final and temporary distribution rates. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(F).

1169-1756 **<u>Residential Low Income Assistance Program Reconciliation Adjustment</u>:** This account shall be used to record the cumulative difference between the actual revenue derived from the actual sales and transportation service throughput multiplied by the RLIAP rate and the actual costs of the program, which consists of the revenue shortfall and all administrative and marketing costs, as outlined in the Local Distribution Adjustment Clause, 17(G).

1163-1756 **<u>Revenue Decoupling Adjustment Factor</u>:** This account shall be used to record the cumulative difference between the lost revenue of the Company and the revenue collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(D).

18 SUPPLY & CAPACITY SHORTAGE ALLOCATION POLICY

A. <u>DEFINITIONS</u>

The following are definitions of terms used in this subsection and applicable only to this subsection:

1. <u>Residential</u>: Service to customers which consists of direct natural gas usage in a residential dwelling for space heating, air conditioning, cooking, water heating and other residential uses

B. <u>Commercial</u>: Service to customers engaged primarily in the sale of goods or services including institutions and local, state and federal government agencies for uses other than those involving manufacturing or electric power generation

C. <u>Industrial</u>: Service to customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power

D. <u>Large Volume</u>: Service to large commercial and industrial customers with an annual gas load greater than 200,000 therms

E. <u>Seasonal</u>: Service available from April 1 to October 31 to all customers using gas to replace some other fuel or gas for air conditioning purposes

F. <u>Firm Sales Service</u>: Service from schedules or contracts under which seller is expressly obligated to supply and deliver specific volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened

G. <u>Firm Transportation Service</u>: Service from schedules or contracts under which seller is expressly obligated to deliver specific third-party volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened.

H. <u>Plant Protection Gas:</u> Is defined as minimum volumes required to prevent physical harm to the plant facilities or danger to plant personnel, when such protection cannot be afforded through the use of alternate fuel. This includes the protection of such material in process as would otherwise be destroyed, but shall not

Formatted Table

The winter cost of gas rate will be applied to billings commencing with the first November revenue billing cycle; the summer cost of gas rate will be applied to billings commencing with the first May revenue billing cycle.

C. Calculation. The amount of the cost of gas rate is the anticipated unit cost of gas sold.

At the conclusion of each winter and summer period the Company will calculate the extent that cost of gas revenues are greater or less than actual unit costs of gas compared with the anticipated unit costs. The calculated difference (actual gas sales volumes multiplied by the difference between actual and anticipated unit costs) will be carried forward into the computation of the cost of gas rate for the corresponding winter or summer period.

Any excess revenue collected, as determined above, will earn interest as specified by the Commission.

D. Changes. The cost of gas rate may be adjusted without further Commission action based on the projected over-/under-collection of gas costs, the adjusted rate to be effective the first of the month. Any such rate adjustments may not exceed a maximum rate of 25 percent above the approved rate, but there is no limit on the amount of any rate reductions.

E. Refunds. When refunds are made to the Company by its suppliers that are applicable to increased charges collected under this provision, the Company will make appropriate refunds to its customers and as the Commission may direct.

F. Reporting. The Company shall submit to the Commission, at least 30 days prior to the effective date, the proposed winter and summer period cost of gas rate computation. Any monthly adjustments to the cost of gas rate must be filed five (5) business days prior to the first day of the subsequent month (the effective date of the new rate).

The cost of gas rate shall be computed to the nearest one hundredth cent per therm and shown on customers' bills.

G. Fixed Price Option Program. An alternative to the traditional winter period cost of gas rate mechanism may be elected by the customer pursuant to the Company's Fixed Price Option (FPO) Program. The Company may offer up to 50% of its expected firm sales for the winter period under the FPO Program. The cost of gas charge offered under the FPO Program will remain fixed for all winter period billings commencing November 1 and ending April 30 of the effective winter period. Once elected, customers must remain on the FPO Program for the duration of the winter period unless service is terminated. There are no maximum or minimum usage levels. Customers may enroll in this Program by contacting the Company between the October 1 and October 19 period immediately preceding the effective winter period.

17 LOCAL DISTRIBUTION ADJUSTMENT CLAUSE AND NORMAL WEATHER ADJUSTMENT

A. Purpose. The purpose of the Local Distribution Adjustment Clause ("LDAC" or this "Clause") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its delivery charges in order to recover Conservation Charges ("CC"), Revenue Decoupling ~~Lost Revenues~~ Adjustment Clause~~Mechanism~~ ("RDAC~~LRAM~~"), Winter Period Surcharges ("WPS"), Environmental Surcharges ("ES") including the Relief Holder Surcharge ("RHS") and the Manufactured Gas Program Surcharge ("MGP"), ~~recover gas restructuring expenses ("GRE"),~~ rate case expenses ("RCE"), Residential Low

Income Assistance Program costs ("RLIAP") and any other expenses the NHPUC may approve from time to time. The purpose of the Normal Weather Adjustment ("NWA") is to establish procedures that allow the Company, subject to the jurisdiction of NHPUC, to calculate and apply, for each customer on a monthly basis, the Weather Normalization Factor ("WNF").

B. Applicability. This Clause shall be applicable in whole or part to all of the Company's firm sales service and firm delivery service customers as shown on the table below. The application of this clause may, for good cause shown, be modified by the NHPUC. See Section 17(K) "Other Rules."

Applicability	**CC 17(C)**	**RDAC 17(D)**	**ES 17(E)**	**RCE 17(F)**	**RLIAP 17(G)**
Residential Non-Space Heating – R-1, R-5	1	1	X	1	X
Residential Space Heating – R-3, R-4, R-6, R-7	1	1	X	1	X
Small C&I – G-41, G-51, G-44, G-55	1	1	X	1	X

X Applicable to all
1 Applicable to Non-Managed Expansion Program Customers

C. Conservation Charges Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Conservation Charge, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers costs and lost margins associated with its energy efficiency management programs.

2. Applicability: A conservation charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the Commission as determined in accordance with the provision of this rate schedule. Such conservation charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.

2. Calculation of Conservation Charge: The Company will properly assign expenses for forecasted conservation expenditures to the applicable rate categories for a future twelve (12) month period commencing November 1 of each year. The total of such conservation expenditures plus any prior period reconciling adjustments shall be divided by therm sales as forecasted by the Company for the same annual period and rounded to the nearest hundredth of a cent. The resulting conservation charge shall be included in the Company's Local Distribution Adjustment Charge and applied to actual therms sold or transported for the following twelve (12) month period starting November 1, and ending October 31.

~~Income Assistance Program costs ("RLIAP") and any other expenses the NHPUC may approve from time to time.~~

~~B. Applicability. This Clause shall be applicable in whole or part to all of the Company's firm sales service and firm delivery service customers as shown on the table below. The application of this clause may, for good cause shown, be modified by the NHPUC. See Section 17(K) "Other Rules."~~

~~C. Conservation Charges Allowable for LDAC.~~

~~1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Conservation Charge, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers costs and lost margins associated with its energy efficiency management programs.~~

~~2. Applicability: A conservation charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the Commission as determined in accordance with the provision of this rate schedule. Such conservation charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.~~

3. ~~Calculation of Conservation Charge: The Company will properly assign expenses for forecasted conservation expenditures to the applicable rate categories for a future twelve (12) month period commencing November 1 of each year. The total of such conservation expenditures plus any prior period reconciling adjustments shall be divided by therm sales as forecasted by the Company for the same annual period and rounded to the nearest hundredth of a cent. The resulting conservation charge shall be included in the Company's Local Distribution Adjustment Charge and applied to actual therms sold or transported for the following twelve (12) month period starting November 1, and ending October 31.~~

4. Reporting: The Company shall submit annual reports to the Commission reconciling any difference between the actual conservation expenditures and actual revenues collected under this rate schedule. The difference whether positive or negative will be carried forward into the conservation charge for the next recovery period. Upon completion of the conservation program(s), any over or under collection may be credited or charged to the deferred Winter Period cost of gas account, subject to Commission approval.

5. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the CC applicable to each Rate Category during the next subsequent twelve-month period commencing with the calendar month of November.

6. Reconciliation Adjustment: Account 1163-1755 shall contain the cumulative difference between the sum of the DSM expenditures incurred by the Company plus the sum of the DSM repayments and the revenues collected from customers. The Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.

D Revenue Decoupling Adjustment Clause.

1. Purpose: The purpose of the Revenue Decoupling Adjustment Clause ("RDAC") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its rates for firm gas sales and firm transportation in order to reconcile Actual Base Revenue per Customer with Benchmark Based Revenue per Customer. The Company's RDAC eliminates the link between volumetric sales and Company revenue in order to align the interests of the Company and customers with respect to changing customer usage.. The purpose of the NWA is to adjust each customer's bill for the difference in delivery charges caused by the variation in actual HDDs from normal HDDs during the Winter Period.

2. Effective Date: The RDAC and NWA shall take effect beginning on November 1, 2018, and replace the Lost Revenue Adjustment Mechanism (LRAM) established in Order No. 25,932 (Docket No. DE 15-137).

3. Applicability: The Revenue Decoupling Adjustment Factor and NWA shall apply to all of the Company's firm tariff Rate Schedules, subject to the jurisdiction of the Commission, as determined in accordance with the provisions of this RDAC and NWA.

4. Definitions: The following definitions shall apply throughout the RDAC and NWA:

   a. Actual Base Revenue is the actual revenue derived from the Company's distribution rates for a given Decoupling Year for a Customer Class. The Company will use monthly distribution revenues and Actual Number of Customers to determine the Monthly Actual Base Revenue per Customer.

   b. Actual Number of Customers is the actual number of Equivalent Bills for the applicable Customer Class for the applicable month of the Decoupling Year.

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, … + Start at: 4 + Alignment: Left + Aligned at: 0.5" + Indent at: 0.75"

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, … + Start at: 4 + Alignment: Left + Aligned at: 0.5" + Indent at: 0.75"

Formatted: Numbered + Level: 1 + Numbering Style: a, b, c, … + Start at: 1 + Alignment: Left + Aligned at: 1" + Indent at: 1.25"

~~4. Reporting: The Company shall submit annual reports to the Commission reconciling any difference between the actual conservation expenditures and actual revenues collected under this rate schedule. The difference whether positive or negative will be carried forward into the conservation charge for the next recovery period. Upon completion of the conservation program(s), any over or under collection may be credited or charged to the deferred Winter Period cost of gas account, subject to Commission approval.~~

~~5. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the CC applicable to each Rate Category during the next subsequent twelve-month period commencing with the calendar month of November.~~

~~6. Reconciliation Adjustment: Account 1163-1755 shall contain the cumulative difference between the sum of the DSM expenditures incurred by the Company plus the sum of the DSM repayments and the revenues collected from customers. The Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.~~

~~C.1 Lost Revenue Adjustment Mechanism Allowable for LDAC.~~

~~1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Lost Revenue Adjustment Rate, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers lost revenue related to Energy Efficiency programs, pursuant to Order No. 25,932 in Docket DE 15-137, Energy Efficiency Resource Standard.~~

~~Applicability: A Lost Revenue Adjustment charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the New Hampshire Public Utilities Commission (the "Commission") as determined in accordance with the provision of this rate schedule. Such Lost Revenue Adjustment charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.~~

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, … + Start at: 4 + Alignment: Left + Aligned at: 0.5" + Indent at: 0.75"

~~Calculation of Lost Revenue Adjustment: The Lost Revenue Adjustment for each Rate Category will be derived by dividing the projected annual lost revenue, plus the reconciliation balance, by forecast firm annual throughput. The reconciliation balance shall reflect both actual and projected data, as necessary, through October of the prior rate period.~~

~~7. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the Lost Revenue Adjustment Rate applicable to each Rate Category during the next subsequent twelve-month period commencing with the calendar month of November.~~

~~8.~~5. ~~Reconciliation Adjustment: Account 1920-1863 shall contain the cumulative difference between the Lost Revenue Adjustment Rate revenues collected and actual costs, plus carrying charges. The~~

c. Billing Year is the 12-months commencing November 1 immediately following the completion of the Decoupling Year.

d. Customer Class is the group of all customers taking service pursuant to the same Rate Schedule.

e. Customer Class Group is the group of Rate Schedules combined for purposes of calculating the Revenue Decoupling Adjustment. The two Customer Class Groups are as follows:

Residential Customer Class Group (CG1): defined as both Residential Non-Heating Customer Class and Residential Heating Customer Class, shall consist of all customers taking service pursuant to the Company's residential rate schedules. CG1 shall include customers taking service under rate schedules R-1, R-3, R-4, R-5, R-6 and R-7.

The Commercial and Industrial Customer Class Group (CG2): shall consist of all customers taking service pursuant to one of the Company's general service rate schedules, G-41, G-42, G-43, G-44, G-45, G-46, G-51, G-52, G-53, G-54, G-55, G-56, G-57 and G-58.

f. Decoupling Year. The first Decoupling Year shall be the 10-month period from November 1, 2018 to August 31, 2019. Each subsequent Decoupling Year shall be the twelve months commencing September 1 through August 31.

g. Equivalent Bill. The number of days in the billing period of each customer's bill divided by 30.

h. Real-time normal weather adjustment is the difference between actual distribution revenue billed to each customer in each billing cycle for each month or portion thereof during the Winter Period, and what distribution revenue for each customer's bill would have been based on weather normalized therm deliveries for the same period. The resulting charge or credit will be added to or subtracted from each customer's bill at the time the bill is rendered (i.e., "real time").

i. Benchmark Base Revenue per Customer is the monthly allowed distribution revenue per Equivalent Bill for a given Decoupling Year for a given Customer Class, reflecting the distribution revenue level and approved equivalent bills from the Company's most recent rate case or other proceeding that results in an adjustment to base rates. Benchmark Base Revenue per Customer will be calculated for each month based on the distribution rates in effect at the start of the Decoupling Year and the calculation will be revised for the remaining months of each Decoupling Year if there is a distribution rate change that occurs following the beginning month of each Decoupling Year.

j. Winter Period. The time period from November 1 of a given year through April 30 of the following year inclusive.

k. Base Load Factor for each customer is the most recent two-year average daily delivered therms for actual bills rendered during the months of June through August for that customer. If a customer has less than two-year's billing history, then the customer's available history for the months of June through August will be used to calculate the average daily delivered therms; and if a customer has no billing history for the months of June through August, then the average daily delivered therms for the months of June through August for the rate schedule under which the customer is served will be used.

l. Base Usage for each bill is the current Base Load Factor times the number of days in billing period.

m. Heating Usage for each bill is the difference between the actual delivered therms for that bill less the Base Usage for that bill. If the calculated Heating Usage is less than zero, then the Heating Usage for that bill is set equal to zero.

c. Heating Degree Days (HDD) for each day is sixty-five (65) minus the average temperature in degrees Fahrenheit for that day. If the calculated HDD is less than zero, then the HDD for that day is set equal to zero.

d. Normal Heating Degree Days (Normal HDD) for each day is the thirty-year average HDD for that day.

~~Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.~~

~~D. Environmental Surcharges ("ES") Allowable for LDAC.~~

~~1. Purpose: In order to recover expenditures associated with former manufactured gas Programs, there shall be an ES Rate applied to all firm volumes billed under the Company's delivery service charges.~~

~~2. Applicability: An annual ES Rate shall be calculated effective every November 1 for the annual period of November 1 through October 31. The annual ES Rate shall be filed with the Company's Winter season Cost of Gas Clause ("COG") filing and be subject to review and approval by the Commission. The annual ES Rate shall be applied to firm sales and to firm delivery throughput as a part of the LDAC. Special contract customers are exempt from the ES.~~

~~3. Costs Allowable: All approved environmental response costs associated with manufactured gas Programs may be included in the ES Rate~~

~~The total annual charge to the Company's customers for environmental response costs during any annual ES recovery period shall not exceed five percent (5%) of the Company's total revenues from firm gas sales and delivery throughput during the preceding twelve (12) month period ending June 30. The total annual charge shall represent the ES expenditures reflected in the calculation of the ES Rate to be in effect for the upcoming twelve-month period, November 1 through October 31. If this recovery limitation results in the Company recovering less than the amount that would otherwise be recovered in a particular ES Recovery Year, then the Company would defer this unrecovered amount, with interest, calculated monthly on the average monthly balance, until the next recovery period in which this amount could be recovered without violating the 5% limitation. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.~~

~~4. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the ES applicable to all firm sales and firm delivery service throughput for the subsequent twelve-month period commencing with the calendar month of November.~~

~~5. Definitions:~~

~~Environmental Response Costs shall include all costs of investigation, testing, remediation, litigation expenses, and other liabilities relating to manufactured gas Program sites, disposal sites, or other sites onto which material may have migrated, as a result of the operating or decommissioning of New Hampshire gas manufacturing facilities. These cost shall include the costs of the closure of the Relief Holder and pond at Gas Street, Concord, NH. The ES shall also include the expenses incurred by the Company in pursuing insurance and third-party claims and any recoveries or other benefits received by the Company as a result~~

~~6.~~4. ~~Reconciliation Adjustments: Prior to the Winter Period COG, the Company shall calculate the difference between (a) the revenues derived by multiplying firm sales and delivery throughput by the ES Rate, and (b) the historical amortized costs approved for recoveries in the prior November's Annual ES Recovery Period. Account 1920-1863 shall contain the cumulative difference and the~~

p. Normal Weather Adjustment Slope (NWA Slope) for each bill is the Heating Usage divided by the sum of actual HDD during the billing period.

q. Normal Heating Usage for each bill is the NWA Slope times the sum of the Normal HDD for the billing period.

r. Normal Usage for each bill is the sum of the Base Usage and the Normal Heating Usage.

s. Normal Weather Normalization Factor (NWF) for each bill is

$$NWF = \frac{DeliveryCharge_{Normal}}{DeliveryCharge_{Actual}} - 1$$

where *DeliveryChargeNormal* is the calculated delivery charge for Normal Usage for the rate schedule applicable to that bill or portion thereof during the Winter Period and *DeliveryChargeActual* is the calculated delivery charge for actual delivered therms for the rate schedule applicable to that bill or portion thereof during the Winter Period.

5. Calculation of Revenue Decoupling Adjustment

a. Description of Revenue Decoupling Adjustment

At the conclusion of each Decoupling Year, the Company shall calculate a Decoupling Revenue Adjustment to be used to determine the RDAF for the next Billing Year, effective November 1.

The Revenue Decoupling Adjustment shall be determined by calculating the monthly difference between the Benchmark Base Revenue per Customer times the actual number of Equivalent Bills for the applicable Customer Class and the Actual Base Revenue for that month. The sum of these monthly Revenue Decoupling Adjustments in the Decoupling Year shall be divided by forecasted Billing Year sales to derive the volumetric rate per therm to be applied to customers' bills in the Billing Year. The Revenue Decoupling Adjustment shall also include a reconciliation component for the previous Decoupling Year, which represents the difference between the accrued decoupling amount in the Decoupling Year compared to the actual revenues billed in the billing Year.

b. Revenue Decoupling Adjustment Formulas

$$RD_{CG} = \sum_{RC=1}^{RC=n} [(BRPC_{T-1}\, x\, ACUSTS_{T-1}) - AR_{T-1})]$$

And:

$$RDAF_{CG} = \frac{RD_{CG} + CGDEF_{t-1}}{FTV_{CG}}$$

Where the terms in the above equation have the following meanings:

~~Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.~~

7. ~~Calculation of the ES: The ES Rate calculated annually consists of one-seventh of actual response costs incurred by the Company in the twelve-month period ending June 30 of each year until fully amortized (over seven years). Any insurance and third-party recoveries or other benefits for the twelve month period ending June 30 shall be applied to reduce the unamortized balance, shortening the amortization period. The sum of these amounts is then divided by the Company's forecast of total firm sales and delivery throughput for the upcoming twelve months of November 1 through October 31.~~

8. ~~Application of ES to Bills: The annual ES Rate shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.~~

E. ~~Expenses Related to Gas Restructuring.~~

1. ~~Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates on an annual basis for the recovery of NHPUC-approved costs associated with the Gas Restructuring Collaborative (Docket DE 98-124).~~

2. ~~Applicability: The Gas Restructuring Expenses ("GRE") shall be applied to all firm tariffed customers eligible to receive delivery service from the Company as determined in accordance with the provisions of Section 17(F) of this clause. The GRE shall be determined annually by the Company as defined below, subject to review and approved by the NHPUC as provided for in this clause.~~

3. ~~GRE Allowable for LDAC: Costs associated with the Gas Restructuring Collaborative (DE 98-124), including, but not limited to, any legal, consulting, customer focus group(s) and survey(s), customer education campaign(s), materials and advertising, subject to review and approval by the NHPUC.~~

4. ~~Effective Date of GRE Charge: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the GRE applicable to all consumption of tariffed customers eligible to receive delivery service for the subsequent twelve month period commencing with the calendar month of November.~~

5. ~~Definition: Gas Restructuring Initiatives are activities facilitating the development, design and implementation of unbundled services for all customers.~~

6. ~~GRE Factor Formula:~~

~~GREF = GRE + RAGRE~~
~~A: TPev~~

~~where:~~

~~A:Tpev~~ ~~Forecast Annual Throughput Volumes of all tariffed customers eligible to receive firm delivery-only service from the Company.~~

~~GRE~~ ~~Gas Restructuring Expenses as defined in Section 17(F).05.~~

$ACUSTS_{T-1}$	The Actual Number of Equivalent Bills for the applicable Customer Class for the most recently completed Decoupling Year (T-1)
AR_{T-1}	The Actual Base Revenue for the applicable Customer Class for the most recently completed Decoupling Year, (T-1), as defined in Section 4(D). For purposes of calculating the Actual Base Revenue, base revenues for Low Income rate class R-4, shall be determined based on non-discounted rate R-3.
$BRPC_{T-1}$	The Benchmark Base Revenue Per Equivalent Bill for the applicable Customer Class as determined in accordance with Section 4 (D) for the most recently completed Decoupling Year, stated on a monthly basis (T-1).
cg	Customer Class Groups as defined in Section 4(D).
$CGDEF$	The balance of the unrecovered deferrals inclusive of associated interest using the prime lending rate.
FTV_{CG}	Forecast Throughput Volumes inclusive of all firm tariff throughput for the Billing Year.
rc	Rate Classes in a Customer Group.
RD_{CG}	The Revenue Decoupling adjustment to revenues, representing the sum of the monthly Revenue Decoupling Adjustments in the Decoupling Year.
$RDAF_{cg}$	The Revenue Decoupling Adjustment Factor for the Billing Year.

6. Calculation of the RDAC Reconciliation Adjustments

Account 1163-1756 shall contain the accumulated difference between annual revenues and the Revenue Decoupling Adjustment, as calculated by multiplying the RDAF times firm sales and transportation throughput, and the Revenue Decoupling Adjustment allowed revenues annually, plus carrying charges on the average monthly balance using the prime lending rate.

7. Application of the RDAC to Customer Bills

The RDAF ($ per therm) shall be calculated annually for each Customer Group and shall be truncated at the nearest one one-hundredth of a cent per therm. The annual calculated Customer Group RDAF will be applied to the monthly firm tariff throughput for each customer in that particular Customer Group, effective November 1 of the given year.

8. Calculation of Normal Weather Adjustment

The Normal Weather Adjustment (NWA) for each bill is

$$\mathrm{NWA} = \mathrm{DeliveryCharge}_{\mathrm{Actual}} \times \mathrm{NWF}$$

where DeliveryChargeActual is the calculated delivery charge for actual delivered therms for the rate schedule applicable to that bill or portion thereof during the Winter Period.

ISSUED: October~~May~~ 0~~1~~8, 2018 ISSUED BY: /s/Susan L. Fleck
Susan L. Fleck

9. Application of the NWA to Customer Bills

~~RA_{GRE} Gas Restructuring Expense Reconciliation Adjustment - Account 1920-1744, inclusive of the associated Account 1920-1744 interest, as outlined in Section 17(E)(7).~~

~~7. Reconciliation Adjustments: Account 1920-1744 shall contain the accumulated difference between revenues toward Gas Restructuring Expenses as calculated by multiplying the Gas Restructuring Expense Factor ("GREF") times monthly volumes of customers eligible to receive firm delivery service and Gas Restructuring expenses allowed, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates, and then added to the end-of-month balance.~~

~~8. Application of GREF to Bills: The GREF ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.~~

~~9. Information to be Filed with the NHPUC: Information pertaining to the Gas Restructuring Expenses shall be filed with the NHPUC consistent with the filing requirements of all costs and revenue information included in the LDAC. An annual GREF filing shall be required on or before the first business day in September of each year. The GREF filing shall contain the calculation of the new annual GREF to become effective November 1 and shall include the updated annual Gas Restructuring Expense reconciliation balance.~~

~~F. Expenses Related to Rate Cases/Temporary Rate Reconciliation Allowable for LDAC.~~

~~1. Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates for the recovery of NHPUC-approved rate case expenses and the reconciliation of temporary rates.~~

~~2. Applicability: The Rate Case Expenses/Temporary Rate Reconciliation ("RCE") shall be applied to all firm tariffed customers. The RCE will be determined by the Company, as defined below.~~

~~3. Rate Case Expenses Allowable for LDAC: The total amount of the RCE will be equal to the amount approved by the Commission.~~

~~4. Effective Date of Rate Case Expense Charge: The effective date of the RCE will be determined by the NHPUC in an individual rate proceeding.~~

~~5. Definition: The RCE includes all rate case-related expenses approved by the NHPUC. This includes legal expenses, costs for bill inserts, costs for legal notices, consulting fees processing expenses, and other approved expenses. The temporary Rate reconciliation will include the variance between the delivery revenues obtained from the rates prescribed in the temporary rate order and the delivery revenues obtained from the final rates approved by the NHPUC.~~

~~6.~~10. ~~Rate Case Expense/Temporary Rate Reconciliation (RCE) Factor Formulas: The RCE will be calculated according to the Commission Order issued in an individual proceeding to establish details including the number of years over which the RCE shall be amortized and the allocation of recovery~~

The NWA charge or credit will be separately stated, and added to or subtracted from each bill as applicable. Each bill will have a separate line titled "Normal Weather Adj.," which line will include the total variable distribution charges, the WNF percentage, and the resulting charge or credit.

Formatted: Underline

a. The calculation of the applicable revenue decoupling revenue dollar adjustment for the Decoupling Year.

b. The calculation of the revenue decoupling reconciliation dollar adjustment for the previous Decoupling Year.

c. The calculation of the proposed decoupling rate per therm for each customer class group to be applied in the Billing Year.

d. The calculation of the monthly Benchmark Base Revenue per Customer, to be utilized in the upcoming Decoupling Year. If distribution rates change during the Decoupling Year, the monthly Benchmark Base Revenue per Customer for the remaining months of the Decoupling Year will be revised and filed with the Commission.

E. Environmental Surcharges ("ES") Allowable for LDAC.

1. Purpose: In order to recover expenditures associated with former manufactured gas Programs, there shall be an ES Rate applied to all firm volumes billed under the Company's delivery service charges.

2. Applicability: An annual ES Rate shall be calculated effective every November 1 for the annual period of November 1 through October 31. The annual ES Rate shall be filed with the Company's Winter season Cost of Gas Clause ("COG") filing and be subject to review and approval by the Commission. The annual ES Rate shall be applied to firm sales and to firm delivery throughput as a part of the LDAC. Special contract customers are exempt from the ES.

3. Costs Allowable: All approved environmental response costs associated with manufactured gas Programs may be included in the ES Rate

The total annual charge to the Company's customers for environmental response costs during any annual ES recovery period shall not exceed five percent (5%) of the Company's total revenues from firm gas sales and delivery throughput during the preceding twelve (12) month period ending June 30. The total annual charge shall represent the ES expenditures reflected in the calculation of the ES Rate to be in effect for the upcoming twelve-month period, November 1 through October 31. If this recovery limitation results in the Company recovering less than the amount that would otherwise be recovered in a particular ES Recovery Year, then the Company would defer this unrecovered amount, with interest, calculated monthly on the average monthly balance, until the next recovery period in which this amount could be recovered without violating the 5% limitation. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.~~among rate classes. In general, the RCE Factor will be derived by dividing the annual portion of the total RCE, plus the RCE Reconciliation Adjustment, by forecast firm annual throughput.~~

Formatted: Left, Indent: Left: 0.75", Space Before: 2 pt, After: 0 pt, Don't keep with next, Keep lines together

~~Reconciliation Adjustments: Account 1930-1745 shall contain the accumulated difference between revenues toward Rate Case Expenses as calculated by multiplying the Rate Case Expense Factor ("RCEF") times the appropriate monthly volumes and Rate Case Expense allowed, plus carrying charges added to the end-of-month balance. The carrying charges shall be calculated beginning on the first month of the recovery period by applying the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates to the average monthly balance.~~

~~At the end of the recovery period, any under or over recovery will be included in an active LDAC component, as approved by the Commission.~~

~~Application of RCE to Bills: The RCE ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.~~

~~Information to be Filed with the NHPUC: Information pertaining to the RCE will be filed with the NHPUC consistent with the filing requirements of all cost and revenue information included in the LDAC. The RCE filing will contain the calculation of the new RCE and will include the updated RCE reconciliation balance.~~

~~G. Recoverable Residential Low Income Assistance Program Costs.~~

~~Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to recover the revenue shortfall (costs) associated with customers participating in the Residential Low Income Assistance Program ("RLIAP"). Such costs, as well as, associated administrative and marketing costs shall be recovered by applying an RLIAP rate to all firm sales and transportation service throughput.~~

~~Applicability: The RLIAP Rate shall be applied to all firm sales and transportation tariff customers. The RLIAP Rate shall be filed with the Company's Winter season Cost of Gas Clause filing and shall be determined annually by the Company and be subject to review and approval by the Commission.~~

~~Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the RLIAP Rate applicable to all firm sales, delivery and transportation service throughput for the subsequent twelve-month period commencing with the calendar month of November.~~

~~RLIAP Costs Allowable for LDAC: The costs to be recovered through the RLIAP Rate shall comprised of the revenue shortfall calculated by forecasting the number of customers enrolled in the RLIAP and the associated volumetric billing determinants for the upcoming annual recovery period and applying those billing determinants to the difference between the regular and reduced low income residential base rates, plus administrative, marketing and startup costs. The RLIAP~~

4. *Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the ES applicable to all firm sales and firm delivery service throughput for the subsequent twelve-month period commencing with the calendar month of November.*

Formatted: Left, Space Before: 2 pt, After: 0 pt, Keep with next, Keep lines together

5. *Definitions:*

   Environmental Response Costs shall include all costs of investigation, testing, remediation, litigation expenses, and other liabilities relating to manufactured gas Program sites, disposal sites, or other sites onto which material may have migrated, as a result of the operating or decommissioning of New Hampshire gas manufacturing facilities. These cost shall include the costs of the closure of the Relief Holder and pond at Gas Street, Concord, NH. The ES shall also include the expenses incurred by the Company in pursuing insurance and third-party claims and any recoveries or other benefits received by the Company as a result

6. *Reconciliation Adjustments: Prior to the Winter Period COG, the Company shall calculate the difference between (a) the revenues derived by multiplying firm sales and delivery throughput by the ES Rate, and (b) the historical amortized costs approved for recoveries in the prior November's Annual ES Recovery Period. Account 1920-1863 shall contain the cumulative difference and the Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.*

7. *Calculation of the ES: The ES Rate calculated annually consists of one-seventh of actual response costs incurred by the Company in the twelve-month period ending June 30 of each year until fully amortized (over seven years). Any insurance and third-party recoveries or other benefits for the twelve month period ending June 30 shall be applied to reduce the unamortized balance, shortening the amortization period. The sum of these amounts is then divided by the Company's forecast of total firm sales and delivery throughput for the upcoming twelve months of November 1 through October 31.*

8. *Application of ES to Bills: The annual ES Rate shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.*

F. Expenses Related to Rate Cases/Temporary Rate Reconciliation Allowable for LDAC.

Formatted: Indent: Left: 0.31", No bullets or numbering

1. *Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates for the recovery of NHPUC-approved rate case expenses and the reconciliation of temporary rates.*

2. *Applicability: The Rate Case Expenses/Temporary Rate Reconciliation ("RCE") shall be applied to all firm tariffed customers. The RCE will be determined by the Company, as defined below.*

3. *Rate Case Expenses Allowable for LDAC: The total amount of the RCE will be equal to the amount approved by the Commission.*

~~Rate shall be calculated by dividing the resulting costs, plus any prior period reconciling adjustment, by the forecast of annual firm sales and transportation service throughput.~~

3. *Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the RLIAP Rate applicable to all firm sales, delivery and transportation service throughput for the subsequent twelve-month period commencing with the calendar month of November.*

4. *RLIAP Costs Allowable for LDAC: The costs to be recovered through the RLIAP Rate shall comprised of the revenue shortfall calculated by forecasting the number of customers enrolled in the RLIAP and the associated volumetric billing determinants for the upcoming annual recovery period and applying those billing determinants to the difference between the regular and reduced low income residential base rates, plus administrative, marketing and startup costs. The RLIAP Rate shall be calculated by dividing the resulting costs, plus any prior period reconciling adjustment, by the forecast of annual firm sales and transportation service throughput.*

5. *RLIAP Factor Formula*

$$RLIAPF = \frac{RLIAP + RA_{RLIAP}}{A: TPev}$$

where:

A: Tpev — Forecast Annual Throughput Volumes of all firm sales and transportation tariffed customers eligible to receive firm delivery-only service from the Company.

RLIAP — RLIAP costs comprising of the revenue shortfall associated with customer participation, plus administrative, marketing, IT and start-up costs.

RA_{RLIAP} — RLIAP Reconciliation Adjustment - Account 1169-1756, inclusive of the associated Account 1169-1756 interest, as outlined in Section 17(G)(6).

6. *Reconciliation Adjustments: Prior to the Company's Winter season Cost of Gas filing, the Company will calculate the difference between (a) the revenue derived by multiplying the actual firm sales and delivery service throughput by the RLIAP Rate through October 31st, and (b) the actual costs of the program which consists of (1) the revenue shortfall calculated by applying the actual billing determinants of the RLIAP classes to the difference in the regular and reduced residential base rates in effect for the annual reconciliation period and (2) the start-up, administrative and marketing costs associated with the implementation of the program, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates. The combined costs will then be recorded in the deferred RLIAP account 1169-1756. The Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.*

H. Effective Date of Local Distribution Adjustment Clause. The LDAC shall be filed annually and become effective on November 1 of each year pursuant to NHPUC approval. In order to minimize the magnitude of future reconciliation adjustments, the Company may request interim revisions to the LDAC rates, subject to review and approval of the NHPUC.

Formatted: Keep with next, Tab stops: Not at 0.75"

I. Local Distribution Adjustment Clause Formulas. The LDAC shall be calculated on an annual basis, by customer, by summing up the various factors included in the LDAC, where applicable.

LDAC Formula

$$LDAC^X = CC^X + RDAC^X + ES + GREF^x + RCE + RLIAP$$

and:

ISSUED: ~~May~~ October ~~18~~ 01, 2018 — ISSUED BY: /s/Susan L. Fleck, Susan L. Fleck

EFFECTIVE: ~~May~~ November 01, 2018 — TITLE: President

Authorized by NHPUC Order No. 26,122 dated April 27, 2018, in Docket No. DG 17-048

ES^X = RHS + MGP

where:

$LDAC^X$ = Annualized class specific LDAC.

CC^X = Annualized class specific CC or EE Charge.

$RDAC^X$ = Annualized class specific RDAC.

ES = Total firm annualized ES.

RHS = Annualized charge to recover the costs of the closure of the Relief Holder at Gas Street, Concord, NH

MGP = Annualized charge to cover the remediation costs related to former manufactured gas plants.

$GREF^X$ = Total firm annualized class specific Gas Restructuring Expense Factor.

RCE = Rate Case Expense Factor.

RLIAP = Residential Low Income Assistance Program Rate

H. Application of LDAC to Bills. The component costs comprising the LDAC ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm sales and firm delivery service throughput in accordance with the table shown in Section 17(B).

I. Other Rules.

18 SUPPLY & CAPACITY SHORTAGE ALLOCATION POLICY

A. DEFINITIONS

The following are definitions of terms used in this subsection and applicable only to this subsection:

1. Residential: Service to customers which consists of direct natural gas usage in a residential dwelling for space heating, air conditioning, cooking, water heating and other residential uses

B. Commercial: Service to customers engaged primarily in the sale of goods or services including institutions and local, state and federal government agencies for uses other than those involving manufacturing or electric power generation

C. Industrial: Service to customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power

D. Large Volume: Service to large commercial and industrial customers with an annual gas load greater than 200,000 therms

E. Seasonal: Service available from April 1 to October 31 to all customers using gas to replace some other fuel or gas for air conditioning purposes

F. Firm Sales Service: Service from schedules or contracts under which seller is expressly obligated to supply and deliver specific volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened

G. Firm Transportation Service: Service from schedules or contracts under which seller is expressly obligated to deliver specific third-party volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened.

H. Plant Protection Gas: Is defined as minimum volumes required to prevent physical harm to the plant facilities or danger to plant personnel, when such protection cannot be afforded through the use of alternate fuel. This includes the protection of such material in process as would otherwise be destroyed, but shall not

Re: DG 17-048, Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities
Petition for Permanent and Temporary Rates
Order on Rehearing

To the Parties:

In the rehearing phase of this proceeding, Liberty requested approval of base delivery rate changes and Local Delivery Adjustment Charge (LDAC) changes effective November 1, 2018. Liberty also requested approval of its proposed decoupling tariff effective November 1. These rate changes and the decoupling tariff were supported by Staff at the October 19, 2018 hearing in this matter.

The Commission is preparing an Order approving Liberty's requested rate changes and its decoupling tariff effective November 1, 2018. The Order is expected to be issued shortly.

In order to allow customer billing to proceed in the ordinary course, the Commission has approved the following in advance of issuing a more formal Order:

- Liberty shall decrease its LDAC effective November 1, 2018 to pass back to customers $280,147 for the adjustments detailed on Exh. 88.

- Liberty shall decrease its base delivery rates effective November 1, 2018 to pass back to customers $1,070,435 annually for the adjustment detailed on Exh. 81.

- Liberty's illustrative decoupling tariff, as updated in this proceeding, is hereby approved.

Sincerely,

Debra A. Howland
Executive Director

STATE OF NEW HAMPSHIRE
PUBLIC UTILITIES COMMISSION

DG 17-048

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

Petition for Permanent and Temporary Rates

Order on Rehearing

O R D E R N O. 26,187

November 2, 2018

APPEARANCES: Michael J. Sheehan, Esq., on behalf of Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities; the Office of the Consumer Advocate by D. Maurice Kreis, Esq., on behalf of residential ratepayers; and Paul B. Dexter, Esq., on behalf of Commission Staff.

This order resolves all pending issues raised on rehearing. In this order, the Commission approves lower distribution rates and lower LDAC rates for Liberty than were approved in Order No. 26,122. The lower rates result from new information and reductions in income tax expense following enactment of the "Tax Cuts and Jobs Act of 2017." Further, the Commission approves Liberty's decoupling tariff and customer education plan.

I. PROCEDURAL HISTORY

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities (Liberty or the Company) filed a Petition for Permanent and Temporary Rates on April 28, 2017. The petition and subsequent docket filings, other than any information for which confidential treatment is requested of or granted by the Commission, are posted to the Commission's website at http://www.puc.nh.gov/Regulatory/Docketbk/2017/17-048.html. The Commission approved temporary rates in Order No. 26,035 (June 30, 2017) effective July 1, 2017, increasing the Company's revenue by $6,750,000 annually. On April 27, 2018, the Commission issued Order

No. 26,122 (the April Order) approving a permanent rate increase of $8,060,117 and a step increase of $4,729,953, both for effect May 1, 2018. The April Order included approval of a new rate design with significant reductions in customer charges and corresponding increases in volumetric charges. It also approved a decoupling proposal applicable to all rate classes.

On May 25, 2018, Liberty filed a Motion for Rehearing to determine whether the April Order's rate design changes were intended to go into effect on May 1, 2018. Liberty claimed that, because it implemented the rate design changes on May 1, 2018, it would collect $3,079,391 less in 2018 than the Commission had approved. Liberty sought approval to recover this perceived shortfall through the Rate Case Temporary Rate Reconciliation component of the Local Delivery Adjustment Charge (LDAC) over an 18-month period commencing July 1, 2018.

In Order No. 26,149 (June 22, 2018) (the June Order), the Commission granted rehearing in part, and requested additional information to evaluate Liberty's claimed shortfall. *See* Order No. 26,149 at 7-9 and Appendix 1. In the June Order, the Commission clarified that Liberty would not (and should not have expected to) collect its full approved revenue requirement increase of $8,060,117 in calendar year 2018, because the recoupment provision (designed to collect the difference between temporary rates and permanent rates) extended through 2019. June Order at 7. The Commission also requested additional information to refine the recoupment calculation approved in the April Order at Appendix 5. June Order at 8-9 and Appendix 2. Liberty filed information on July 9, 2018. Hearing Exhibit (Exh.) 83. Those materials were updated several times. *See* Exh. 87 (concerning the claimed revenue shortfall); Exh. 80 and 86 (submitted July 17, 2018); and Updated Exhs. 80 and 86 (submitted October 10, 2018) (concerning recoupment).

On June 11 and October 19, 2018, Liberty filed customer education materials related to decoupling. Exh. 91. On August 9, 2018, Liberty filed a proposal to reflect the impacts of the tax law changes in its LDAC rates. Exh. 89.

The Commission held hearings on July 17, October 19, and October 22, 2018. At the hearing on October 19, Liberty presented (and Staff supported) a distribution rate reduction to correct an error that Liberty made in calculating the distribution rates it had put into effect on May 1, 2018. *See* Exh. 88; Hearing Transcript of October 19, 2018 (10/19/18 Tr.) at 25-32. Liberty also presented (and Staff supported) approval of reduced LDAC rates that reflected, among other adjustments, a refined recoupment calculation presented on Updated Exh. 86, and several other adjustments set forth on Exh. 88 related to recoupment and the treatment of Keene revenues, the distribution rate error, recovery of audit costs, and tax expense reductions.

II. POSITIONS OF THE PARTIES AND STAFF

A. Liberty

1. <u>Rates</u>

As stated above, in its Motion for Rehearing, Liberty requested approval to increase its LDAC to collect $3,079,391 over the remainder of 2018 and all of 2019 to address a perceived shortfall in 2018 income that Liberty believed would result from the timing of rate design changes approved in the April Order. At the July 17 hearing, Liberty reduced this claim to $2,171,000 acknowledging that the rate design impacts would be dampened when the months of November and December 2018 were included in the calculation, because the new rate design produces increased revenues in colder months**.** Hearing Transcript of July 17, 2018 (7/17/18 Tr.) at 60-62.

At the July 17 hearing, Liberty also presented a second rate design theory in support of its request to collect an additional $2 million (approximately) through the LDAC. The second theory focused on the refined recoupment calculation the Commission requested in the June Order. As directed, Liberty calculated the revenue that had been produced by the temporary rates that were in effect on July 1, 2017, through April 30, 2018, and compared that amount to the revenue that would have been received if the permanent rates had been in effect over that same period (assuming consistent billing determinants). Liberty submitted that analysis on July 9 (Exh. 80 and 83). The analysis attempted to demonstrate that Liberty would have collected $3,293,820 more in revenues had the permanent rates been in effect over the 10-month temporary rate period. Liberty compared that figure to the recoupment amount allowed in the April Order at Appendix 5 of $1,326,355 and concluded that the difference of $1,967,465 should be collected through the LDAC over the remaining months in 2018 and all of 2019. Liberty attributed the large difference in these two recoupment amounts to the rate design changes ordered in the April Order as well as other items that would require more study. 7/17/18 Tr. at 86 and 99-101.[1]

On October 10, Liberty provided updated versions of Exhibits 80 and 86. Updated Exh. 86 showed a refined recoupment amount of $1,661,022, compared to the recoupment amount in the April Order of $1,326,355 (an increase of $334,667), which Liberty stated should be recovered through the LDAC. 7/17/18 Tr. at 14.

At the October 19 hearing, Liberty proposed several other distribution rate reductions and LDAC reductions. 10/19/18 Tr. at 13-16. Regarding its distribution rates, Liberty discovered in the course of reconciling the two recoupment calculations (Exhibit 85) that it had over-stated the

[1] Liberty also expressed concern that the figures presented on Exhs. 79, 80, and by extension, 86, required corrections. The Commission directed Liberty to review those exhibits and provide updated versions, which Liberty did on October 10, 2018. 7/17/18 Tr. at 99-101.

rates that were charged effective May 1, 2018. The over-statement was caused by Liberty's failure to account for sales from the end of year customers adjustment, as required by the April Order at 10. Liberty proposed to reduce distribution rates effective November 1, 2018, by $1,070,435 (on an annual basis), and to refund $319,660 through the LDAC to refund the amount over-collected from May through October. Exhs. 81 and 88.

Liberty's other proposed adjustments to the LDAC were shown in Exh. 88. First, Liberty added $334,667 to the LDAC to reflect the difference between the two recoupment calculations. Second, Liberty added $160,208 to recover a portion of the costs Liberty incurred from a Commission mandated audit. Third, Liberty deducted $455,362 from the LDAC to ensure that Liberty did not also recoup from EnergyNorth customers the incremental revenues that Keene customers paid from July 1, 2017, through April 30, 2018, *i.e.*, the difference between Keene rates and EnergyNorth rates prior to the rate consolidation approved in the April Order at 38.

The net of the proposed adjustments to the LDAC was a reduction of $280,147 to be passed back to customers over a 12-month period beginning November 1, 2018. Liberty stated that if the Commission approved rates that reflected all the above adjustments, that approval would fully resolve the issues raised in Liberty's Motion for Rehearing. 10/19/18 Tr. at 58.

2. <u>Decoupling Tariffs</u>

On June 11, 2018, Liberty submitted an illustrative tariff to implement decoupling, including real-time weather normalization, as directed in the April Order at 45-46. Liberty submitted an updated version on October 22, after receiving input from Staff and the OCA. At the October 19 hearing, Liberty agreed to make additional changes suggested by the Commission.

3. Decoupling Customer Education Materials (including information on Customer Bills)

Also on June 11, Liberty filed draft customer notice and education materials related to decoupling; and Liberty filed additional materials on October 17, 2018. Exh. 91. At the October 22 hearing, Liberty indicated that, based on recent conversations with Staff, it had agreed to make certain changes to the materials (some of which were already made by the October 22 hearing). Liberty further stated that it had agreed to work with Staff to develop additional customer education materials for its website, such as heating degree day information, both current and normal, as well as other materials related to the normal weather adjustment and energy efficiency.

Liberty stated that it did not support putting customer specific base load usage on its bills at this time, due to a limited amount of space available on the bill and the time and expense of required computer programming. Similarly, Liberty did not support providing information on the bill to indicate whether the customer's billing month was colder or warmer than normal. Liberty agreed to work with Staff and the OCA to refine what useful information could be included on the bill and at what cost. Hearing Transcript of October 22, 2018 (10/22/18 Tr.) at 9-15, 33-39.

4. Decoupling Programming Costs

Liberty stated that it did not view the April Order as placing a $50,000 cap on the amount it could recover from customers related to programming costs. Liberty claimed that the $50,000 cap was part of a settlement that the Commission did not approve and does not apply. Liberty stated that it intended to seek full recovery of the decoupling-related programming costs in its next rate case. 10/19/18 Tr. at 62-66.

B. OCA

The Office of the Consumer Advocate (OCA) reiterated its support for decoupling and its expectation that Liberty would be a "champion of energy efficiency" as a result of decoupling. The OCA also cautioned against micro-managing the introduction of decoupling, which it views as Liberty's job to do prudently. The OCA stated its opinion that the $50,000 cap on recovery of decoupling programming expenses is in place, and requested that the Commission state in its order that the cap applies. 10/22/18 Tr. at 59-62.

C. Staff

1. Rates

As stated in the June Order, Staff opposed the original theory Liberty put forth on rehearing concerning the rate design impacts of the April Order. Staff maintained that the approved rates would produce the revenue intended ($8,070,112 annually, before considering tax reform) over the intended time period (12 months beginning May 1, 2018).

Concerning Liberty's second theory for additional recovery, Staff agrees the recoupment calculation on Updated Exh. 86 is more accurate. Staff also supports reducing the recoupment amount shown on Updated Exh. 86 by $455,362 to prevent Liberty from recovering from EnergyNorth customers the higher revenues that were collected from Keene customers during the temporary rate period.

Further, Staff supports a reduction in distribution rates of $1,070,435 on an annual basis to correct the error that Liberty made in calculating the rates that were implemented in May 2018. Staff agrees Liberty overstated rates because Liberty included the revenue from the end of the year customers adjustment but did not include corresponding sales volumes, as required by the April Order at 9-10; and supports the corollary LDAC reduction of $319,660 to reverse the over-charges that occurred from May 1 through October 31, 2018. Exh. 88.

Staff also supports Liberty's proposed reduction of $291,806 to distribution rates to pass back to customers the permanent portion of the reductions in income taxes. This reduction adjusts the tax placeholder amount of $2,394,065 used to calculate distribution rates put into effect on May 1, 2018. Exh. 89 at 14-17. Staff agrees with Liberty's assessment (Exh. 89 at 14) that the April Order contemplated that adjustments to the tax placeholder amount would be made through the LDAC, and supports Liberty's proposal to reflect the adjustments as changes in base rates, because they are recurring tax savings. Adjustments through the LDAC would need to be made annually. By handling these adjustments in base rates, only one set of changes is needed and thus this method is more efficient.

Finally, Staff supports Liberty's request to use $160,208 of the over-collection in tax expense between January 1 and April 30, 2018, to recover a portion of the costs Liberty incurred for the audit that followed its last rate case. Staff notes that 75 percent of the audit costs will be recovered in this fashion and the remaining 25 percent will be paid for by Liberty, and not passed on to its customers.

2. Decoupling

Staff indicated support for the decoupling tariffs filed on October 19, 2018, with the minor adjustments Liberty made to the tariff at the October 19 hearing. Exh. 92.

3. Decoupling Customer Education Materials (including information on Customer Bills)

Staff indicated general support for the customer education materials Liberty has provided so far. Staff has not yet seen other materials, including an energy efficiency awareness plan and a detailed web page on the Normal Weather Adjustment (NWA) calculation. Staff continues to recommend that Liberty include a statement on each customer's bill indicating how the weather in the recent billing period compared to normal weather.

4. Decoupling Programming Costs

Staff took no position on the $50,000 cap on decoupling programming costs.

III. COMMISSION ANALYSIS

A. Rates

We reject Liberty's first theory for recouping approximately $3 million (revised down to $2 million) through the LDAC to make up for shortfalls that it claimed it would experience in 2018. We remain unpersuaded that we should allow additional LDAC revenues in 2018 to offset the impact that rate design shifts may have on 2018 revenues. The revenue impact of revised utility rates should be evaluated by looking at the year immediately following the date of rate implementation (in this case the 12 months beginning May 1, 2018). We asked Liberty to perform such an analysis of the approved rates. Exhibit 87 confirms that the approved (corrected) rates implemented May 1, 2018, would produce $8,060,117 over 12 months, assuming no reduction in tax expense and assuming test year adjusted billing determinants. 10/19/18 Tr. at 59-60.

Concerning Liberty's second theory (additional LDAC recovery based on the refined recoupment method), we approve Liberty's proposal, as supported by Staff. The refined methodology more accurately calculates the revenues that would have actually been collected had the permanent rates been in effect during the temporary rate period. As such, the refined recoupment calculation accounts for the impact of the significant rate design changes that were implemented in the permanent rates. In addition, the refined recoupment calculation captures the impact of sales growth that occurred during the temporary rate period. 10/19/18 Tr. at 45-48.

We approve Liberty's proposal for handling tax reductions, including the changes to distribution rates for the permanent portion of the tax cuts (instead of LDAC reductions called for in the April Order). We agree that one permanent change is more efficient and less confusing to customers than a series of annual LDAC reductions.

Concerning the $1,070,435 annual reduction to underlying base rates that have been billed since May 1, we approve Liberty's approach, including the LDAC pass back of the one-time over-collection from May 1 through October 31, 2018, of $319,660, with a final reconciliation once October sales are known.

B. Decoupling Tariff

We reviewed Liberty's illustrative tariff filed on June 11 as well as the revised version filed October 22. We find that the October 22 tariff adequately describes the decoupling mechanism, including the real-time weather adjustment, and we approve it. We require Liberty to file a compliance version of this tariff within 15 days of this order.

C. Decoupling Education Plan

We reviewed Liberty's education materials filed on June 11 and the additional materials filed October 17, which included a bill insert, a newsletter, and links to a decoupling web page including Frequently Asked Questions and a video explaining decoupling. We approve the materials that have been presented to us to date. We direct Liberty to work with Staff to improve these education materials as the decoupling process unfolds over the next 12 months. In addition, we require Liberty to report back to the Commission's Director of Consumer Services and External Affairs on Liberty's and its customers' experience during the first 90 days of decoupling. The report shall be filed no later than February 28, 2019, and shall include an assessment of customer reaction to decoupling. At a minimum, the report should include a tally of all customer inquiries and complaints about decoupling and how Liberty responded to those inquiries and complaints. Liberty should also include any additional materials that were (or will be) developed to address those inquires and complaints.

At the October 22 hearing, Liberty admitted to distributing most of the materials (bill insert, newsletter, website, and video) to its customers without Commission approval, which we specifically required. *See* Order No. 26,122 at 46. Liberty cited a lack of response by Staff and the Commission to its June 11 filing of draft materials, and the impending November 1 deadline for implementing decoupling as its reasons for distributing the materials without the necessary approval. Liberty's attempt to shift blame for its failure to meet its obligation is inappropriate and is not a valid excuse for violating an order. It was Liberty's responsibility to obtain prior approval, and Liberty should have pursued that approval more vigorously if timing were an issue. We consider Liberty's actions to have been a direct, knowing, and purposeful violation of the April Order. RSA 365:41 allows for fines in situations where a utility violates an order of the Commission. Although we opt not to issue a fine in this first instance, we will not hesitate to impose fines should Liberty disregard any other Commission order.

At the October 22 hearing, we discussed two related, unresolved items. First, we expressed an interest in having Liberty display each customer's base usage on its bill. Base usage is needed for a customer to calculate the NWA, which will be on every customer's bill. Exh. 61. Second, we expressed a desire for Liberty to include a message on each bill indicating how weather during the past billing period compared to normal weather. While Liberty did not object in concept to adding this information to customers' bills, it cautioned that such changes would take time to develop and would be costly to implement. 10/22/18 Tr. at 13-15 and 33-39. Based on the testimony, we will not require Liberty to add this information to its bills, at this time. We believe, however, that this information is necessary for customers to be able to verify the accuracy of their bills. Accordingly, we require Liberty to work with Staff and the OCA to develop a method to make this information available on Liberty's website. Further, the next time Liberty updates its billing system or bill format, we direct Liberty to work with the Commission's Director of External Affairs and Consumer Services to determine the costs and benefits of including such information on its bills; and, if such information can be added cost effectively at that time, to do so. Prior to making such bill changes, Liberty shall report its plans to the Commission.

At the October 22 hearing, Liberty reviewed a list of decoupling communication efforts proposed by Staff and which it had agreed to undertake. The list included developing a web page to provide information about how the NWA works, including how base usage is calculated and how a customer could obtain the individualized usage needed to calculate the NWA. 10/22/18 Tr. at 12; Exh. 93. In addition to what Liberty has agreed to do, we require the Company to develop a calculator that will assist a customer in verifying that the NWA was calculated accurately. Also on the list, Liberty agreed to develop a web page showing current heating degree day information and 30 year historic (normal) information, for Keene and Manchester. We direct Liberty to indicate on this page, for each billing cycle, how the most recent monthly weather compared to normal. We direct Liberty to work with Staff to develop these web page additions and to make the additions a priority so that customers can use the information as soon as possible after decoupling goes into effect.

D. Decoupling Programming Costs

The cost of decoupling-related programming changes was raised at the October 22 hearing, which led to a discussion of whether Liberty's recovery of any such billing system upgrades and software costs was capped at $50,000 by the April Order. To the extent there was any question, we confirm that the cap was included in the Commission's approval of decoupling in the April Order. The Commission adopted and approved the decoupling proposal contained in the Liberty/OCA Settlement (Exhibit 29 at 11), which unambiguously contained that cap. Exh. 29 at 11 ("Any costs above $50,000 will be absorbed by the Company"); Order No. 26,122 at 44-45. The Liberty/OCA panel testified in detail that $50,000 should be enough to cover the programming costs if Liberty negotiates with its billing vendor, and that the cap would serve as a useful tool for helping Liberty minimize these costs. 3/23/18 AM Tr. at 49-50.

E. Auditing the NWA

To allow the Commission's Audit Division to verify that Liberty correctly calculates the NWA over its broad spectrum of customers, we require that Liberty, starting in December 2018 and continuing for 12-months, provide to the Audit Division two randomly selected residential bills and one randomly selected non-residential bill from each billing cycle for each of the 12 months. Liberty shall also provide sufficient information, such as base usage by customer, to allow the Audit Division to review these bills for accuracy.

Based upon the foregoing, it is hereby

ORDERED, that Liberty shall decrease its LDAC effective November 1, 2018, to pass back to customers $280,147 for the adjustments detailed on Exh. 88; and it is

FURTHER ORDERED, that Liberty shall decrease distribution rates effective November 1, 2018, to pass back to customers $1,070,435 annually for the adjustment detailed on Exh. 81; and it is

FURTHER ORDERED, that Liberty shall file compliance LDAC and distribution rate tariffs consistent with this Order within 15 days of this Order; and it is

FURTHER ORDERED, that Liberty's illustrative decoupling tariff, as updated in this proceeding, is hereby approved; and it is

FURTHER ORDERED, that Liberty shall file a compliance decoupling tariff consistent with this Order within 15 days of this Order; and it is

FURTHER ORDERED, that Liberty's decoupling educational materials submitted to date are hereby approved; and it is

FURTHER ORDERED, that Liberty shall continue to develop and disseminate decoupling educational materials as described on Exhibit 93; and it is

FURTHER ORDERED, that Liberty shall report back to the Commission's Director of Consumer Services and External Affairs about its first 90 days of decoupling, as discussed herein; and it is

FURTHER ORDERED, that, during the development of any updates to Liberty's billing system or bill format, Liberty shall work with the Commission's Director of External Affairs and Consumer Services to determine whether additional information related to base usage and weather can be added to the bill in a cost effective manner, Liberty shall report its determination to the Commission, and Liberty shall make such bill changes if it is cost-effective to do so; and it is

FURTHER ORDERED, that each month, for 12 months beginning in December of 2018, Liberty shall provide to the Commission's Audit Division two randomly selected residential bills and one randomly selected non-residential bill from each billing cycle for the previous month, as well as sufficient information to allow the Audit Division to review these bills for accuracy; and it is

FURTHER ORDERED, that Liberty work with Staff and the Office of Consumer Advocate to develop a web page to provide all necessary information for customers to understand and accurately verify their individual bills as described above; and it is

FURTHER ORDERED, that Liberty's obligations under IR 18-001 to file a proposal to address the effects of tax law changes have been satisfied; and it is

FURTHER ORDERED, that Liberty shall include in its next distribution rate case, a proposal for addressing the impact of tax law changes on its accumulated deferred income tax balances.

By order of the Public Utilities Commission of New Hampshire this second day of November, 2018.

Martin P. Honigberg Chairman	Kathryn M. Bailey Commissioner	Michael S. Giaimo Commissioner

The winter cost of gas rate will be applied to billings commencing with the first November revenue billing cycle; the summer cost of gas rate will be applied to billings commencing with the first May revenue billing cycle.

C. Calculation. The amount of the cost of gas rate is the anticipated unit cost of gas sold.

At the conclusion of each winter and summer period the Company will calculate the extent that cost of gas revenues are greater or less than actual unit costs of gas compared with the anticipated unit costs. The calculated difference (actual gas sales volumes multiplied by the difference between actual and anticipated unit costs) will be carried forward into the computation of the cost of gas rate for the corresponding winter or summer period.

Any excess revenue collected, as determined above, will earn interest as specified by the Commission.

D. Changes. The cost of gas rate may be adjusted without further Commission action based on the projected over-/under-collection of gas costs, the adjusted rate to be effective the first of the month. Any such rate adjustments may not exceed a maximum rate of 25 percent above the approved rate, but there is no limit on the amount of any rate reductions.

E. Refunds. When refunds are made to the Company by its suppliers that are applicable to increased charges collected under this provision, the Company will make appropriate refunds to its customers and as the Commission may direct.

F. Reporting. The Company shall submit to the Commission, at least 30 days prior to the effective date, the proposed winter and summer period cost of gas rate computation. Any monthly adjustments to the cost of gas rate must be filed five (5) business days prior to the first day of the subsequent month (the effective date of the new rate).

The cost of gas rate shall be computed to the nearest one hundredth cent per therm and shown on customers' bills.

G. Fixed Price Option Program. An alternative to the traditional winter period cost of gas rate mechanism may be elected by the customer pursuant to the Company's Fixed Price Option (FPO) Program. The Company may offer up to 50% of its expected firm sales for the winter period under the FPO Program. The cost of gas charge offered under the FPO Program will remain fixed for all winter period billings commencing November 1 and ending April 30 of the effective winter period. Once elected, customers must remain on the FPO Program for the duration of the winter period unless service is terminated. There are no maximum or minimum usage levels. Customers may enroll in this Program by contacting the Company between the October 1 and October 19 period immediately preceding the effective winter period.

17 LOCAL DISTRIBUTION ADJUSTMENT CLAUSE AND NORMAL WEATHER ADJUSTMENT

A. Purpose. The purpose of the Local Distribution Adjustment Clause (“LDAC” or this “Clause”) is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its delivery charges in order to recover Conservation Charges (“CC”), Revenue Decoupling Adjustment Factor (“RDAF”), Winter Period Surcharges (“WPS”), Environmental Surcharges (“ES”) including the Relief Holder Surcharge (“RHS”) and the Manufactured Gas Program Surcharge (“MGP”), rate case expenses (“RCE”), Residential Low

Income Assistance Program costs ("RLIAP") and any other expenses the NHPUC may approve from time to time. The purpose of the Normal Weather Adjustment ("NWA") is to establish procedures that allow the Company, subject to the jurisdiction of NHPUC, to calculate and apply, for each customer on a monthly basis, the Normal Weather Factor ("NWF").

B. Applicability. This Clause shall be applicable in whole or part to all of the Company's firm sales service and firm delivery service customers as shown on the table below. The application of this clause may, for good cause shown, be modified by the NHPUC. See Section 17(K) "Other Rules."

Applicability	CC 17(C)	RDAF 17(D)	ES 17(E)	RCE 17(F)	RLIAP 17(G)
Residential Non-Space Heating – R-1, R-5	1	1	X	1	X
Residential Space Heating – R-3, R-4, R-6, R-7	1	1	X	1	X
Small C&I – G-41, G-51, G-44, G-55	1	1	X	1	X
Medium C&I – G-42, G-52, G-45, G-56	1	1	X	1	X
Large C&I – G-43, G-53, G-54, G-46, G-57, G-58	1	1	X	1	X

Notes:
N/A Not applicable
X Applicable to all
1 Applicable to Non-Managed Expansion Program Customers

C. Conservation Charges Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Conservation Charge, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers costs and lost margins associated with its energy efficiency management programs.

2. Applicability: A conservation charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the Commission as determined in accordance with the provision of this rate schedule. Such conservation charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.

3. Calculation of Conservation Charge: The Company will properly assign expenses for forecasted conservation expenditures to the applicable rate categories for a future twelve (12) month period commencing November 1 of each year. The total of such conservation expenditures plus any prior period reconciling adjustments shall be divided by therm sales as forecasted by the Company for the same annual period and rounded to the nearest hundredth of a cent. The resulting conservation charge shall be included in the Company's Local Distribution Adjustment Charge and applied to actual therms sold or transported for the following twelve (12) month period starting November 1, and ending October 31.

4. Reporting: The Company shall submit annual reports to the Commission reconciling any difference between the actual conservation expenditures and actual revenues collected under this rate schedule. The difference whether positive or negative will be carried forward into the conservation charge for the next recovery period. Upon completion of the conservation program(s), any over or under collection may be credited or charged to the deferred Winter Period cost of gas account, subject to Commission approval.

5. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the CC applicable to each Rate Category during the next subsequent twelve-month period commencing with the calendar month of November.

6. Reconciliation Adjustment: Account 1163-1755 shall contain the cumulative difference between the sum of the DSM expenditures incurred by the Company plus the sum of the DSM repayments and the revenues collected from customers. The Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.

D Revenue Decoupling Adjustment Factor.

1. Purpose: The purpose of the Revenue Decoupling Adjustment Clause ("RDAF") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its rates for firm gas sales and firm transportation in order to reconcile Actual Base Revenue per Customer with Benchmarked Base Revenue per Customer. The Company's RDAF eliminates the link between volumetric sales and Company revenue in order to align the interests of the Company and customers with respect to changing customer usage.. The purpose of the NWA is to adjust each customer's bill for the difference in delivery charges caused by the variation in actual HDDs from normal HDDs during the Winter Period.

2. Effective Date: The RDAF and NWA shall take effect beginning on November 1, 2018, and replace the Lost Revenue Adjustment Mechanism (LRAM) established in Order No. 25,932 (Docket No. DE 15-137).

3. Applicability: The Revenue Decoupling Adjustment Factor and NWA shall apply to all of the Company's firm tariff Rate Schedules, subject to the jurisdiction of the Commission, as determined in accordance with the provisions of this RDAF and NWA.

4. Definitions: The following definitions shall apply throughout the RDAF and NWA:

   a. Actual Base Revenue is the actual revenue derived from the Company's distribution rates for a given Decoupling Year for a Customer Class. The Company will use monthly distribution revenues and Actual Number of Customers to determine the Monthly Actual Base Revenue per Customer.

   b. Actual Number of Customers is the actual number of Equivalent Bills for the applicable Customer Class for the applicable month of the Decoupling Year.

   c. Billing Year is the 12-months commencing November 1 immediately following the completion of the Decoupling Year.

   d. Customer Class is the group of all customers taking service pursuant to the same Rate Schedule.

e. Customer Class Group is the group of Rate Schedules combined for purposes of calculating the Revenue Decoupling Adjustment. The two Customer Class Groups are as follows:

Residential Customer Class Group (CG1): defined as both Residential Non-Heating Customer Class and Residential Heating Customer Class, shall consist of all customers taking service pursuant to the Company's residential rate schedules. CG1 shall include customers taking service under rate schedules R-1, R-3, R-4, R-5, R-6 and R-7.

The Commercial and Industrial Customer Class Group (CG2): shall consist of all customers taking service pursuant to one of the Company's general service rate schedules, G-41, G-42, G-43, G-44, G-45, G-46, G-51, G-52, G-53, G-54, G-55, G-56, G-57 and G-58.

f. Decoupling Year. The first Decoupling Year shall be the 10-month period from November 1, 2018 to August 31, 2019. Each subsequent Decoupling Year shall be the twelve months commencing September 1 through August 31.

g. Equivalent Bill. The number of days in the billing period of each customer's bill divided by 30.

h. Real-time normal weather adjustment is the difference between actual distribution revenue billed to each customer in each billing cycle for each month or portion thereof during the Winter Period, and what distribution revenue for each customer's bill would have been based on weather normalized therm deliveries for the same period. The resulting charge or credit will be added to or subtracted from each customer's bill at the time the bill is rendered (i.e., "real time").

i. Benchmark Base Revenue per Customer is the monthly allowed distribution revenue per Equivalent Bill for a given Decoupling Year for a given Customer Class, reflecting the distribution revenue level and approved equivalent bills from the Company's most recent rate case or other proceeding that results in an adjustment to base rates. Benchmark Base Revenue per Customer will be calculated for each month based on the distribution rates in effect at the start of the Decoupling Year and the calculation will be revised for the remaining months of each Decoupling Year if there is a distribution rate change that occurs following the beginning month of each Decoupling Year.

j. Winter Period. The time period from November 1 of a given year through April 30 of the following year inclusive.

k. Base Load Factor for each customer is the most recent two-year average daily delivered therms for actual bills rendered during the months of June through August for that customer. If a customer has less than two-year's billing history, then the customer's available history for the months of June through August will be used to calculate the average daily delivered therms; and if a customer has no billing history for the months of June through August, then the average daily delivered therms for the months of June through August for the rate schedule under which the customer is served will be used.

l. Base Usage for each bill is the current Base Load Factor times the number of days in billing period.

m. Heating Usage for each bill is the difference between the actual delivered therms for that bill less the Base Usage for that bill. If the calculated Heating Usage is less than zero, then the Heating Usage for that bill is set equal to zero.

n. Heating Degree Days (HDD) for each day is sixty-five (65) minus the average temperature in degrees Fahrenheit for that day. If the calculated HDD is less than zero, then the HDD for that day is set equal to zero.

o. Normal Heating Degree Days (Normal HDD) for each day is the thirty-year average HDD for that day.

p. Normal Weather Adjustment Slope (NWA Slope) for each bill is the Heating Usage divided by the sum of actual HDD during the billing period.

q. Normal Heating Usage for each bill is the NWA Slope times the sum of the Normal HDD for the billing period.

r. Normal Usage for each bill is the sum of the Base Usage and the Normal Heating Usage.

s. Normal Weather Factor (NWF) for each bill is

$$\text{NWF} = \frac{\text{DeliveryCharge}_{\text{Normal}}}{\text{DeliveryCharge}_{\text{Actual}}} - 1$$

where Delivery Charge Normal is the calculated delivery charge for Normal Usage for the rate schedule applicable to that bill or portion thereof during the Winter Period and Delivery Charge Actual is the calculated delivery charge for actual delivered therms for the rate schedule applicable to that bill or portion thereof during the Winter Period.

5. Calculation of Revenue Decoupling Adjustment

a. Description of Revenue Decoupling Adjustment

At the conclusion of each Decoupling Year, the Company shall calculate a Decoupling Revenue Adjustment to be used to determine the RDAF for the next Billing Year, effective November 1.

The Revenue Decoupling Adjustment shall be determined by calculating the monthly difference between the Benchmark Base Revenue per Customer times the actual number of Equivalent Bills for the applicable Customer Class and the Actual Base Revenue for that month. The sum of these monthly Revenue Decoupling Adjustments in the Decoupling Year shall be divided by forecasted Billing Year sales to derive the volumetric rate per therm to be applied to customers' bills in the Billing Year. The Revenue Decoupling Adjustment shall also include a reconciliation component for the previous Decoupling Year, which represents the difference between the accrued decoupling amount in the Decoupling Year compared to the actual revenues billed in the billing Year.

b. Revenue Decoupling Adjustment Formulas

$$\text{RD}_{\text{CG}} = \sum_{\text{RC}=1}^{\text{RC}=\text{n}} \left[\left(\text{BRPC}_{\text{T}-1} \text{ x ACUSTS}_{\text{T}-1}\right) - \text{AR}_{\text{T}-1}\right)\right]$$

And:

$$\text{RDAF}_{\text{CG}} = \frac{\text{RD}_{\text{CG}} + \text{CGDEF}_{\text{T}-1}}{\text{FTV}_{\text{CG}}}$$

Where the terms in the above equation have the following meanings:

$ACUSTS_{T-1}$ The Actual Number of Equivalent Bills for the applicable Customer Class for the most recently completed Decoupling Year (T-1)

$\mathrm{AR}_{\mathrm{T-1}}$ The Actual Base Revenue for the applicable Customer Class for the most recently completed Decoupling Year, (T-1), as defined in Section 4(D). For purposes of calculating the Actual Base Revenue, base revenues for Low Income rate class R-4, shall be determined based on non-discounted rate R-3.

$\mathrm{BRPC}_{\mathrm{T-1}}$ The Benchmark Base Revenue Per Equivalent Bill for the applicable Customer Class as determined in accordance with Section 4 (D) for the most recently completed Decoupling Year, stated on a monthly basis (T-1).

cg Customer Class Groups as defined in Section 4(D).

$CG\mathrm{DEF}$ The balance of the unrecovered deferrals inclusive of associated interest using the prime lending rate.

$\mathrm{FTV}_{\mathrm{CG}}$ Forecast Throughput Volumes inclusive of all firm tariff throughput for the Billing Year.

rc Rate Classes in a Customer Group.

$\mathrm{RD}_{\mathrm{CG}}$ The Revenue Decoupling adjustment to revenues, representing the sum of the monthly Revenue Decoupling Adjustments in the Decoupling Year.

$\mathrm{RDAF}_{\mathrm{cg}}$ The Revenue Decoupling Adjustment Factor for the Billing Year.

6. Calculation of the RDAC Reconciliation Adjustments

Account 1168-1823 shall contain the accumulated difference between annual revenues and the Revenue Decoupling Adjustment, as calculated by multiplying the RDAF times firm sales and transportation throughput, and the Revenue Decoupling Adjustment allowed revenues annually, plus carrying charges on the average monthly balance using the prime lending rate.

7. Application of the RDAC to Customer Bills

The RDAF ($ per therm) shall be calculated annually for each Customer Group and shall be truncated at the nearest one one-hundredth of a cent per therm. The annual calculated Customer Group RDAF will be applied to the monthly firm tariff throughput for each customer in that particular Customer Group, effective November 1 of the given year.

8. Calculation of Normal Weather Adjustment

The Normal Weather Adjustment (NWA) for each bill is

$$\mathrm{NWA} = \mathrm{DeliveryCharge}_{\mathrm{Actual}} \times \mathrm{NWF}$$

where Delivery Charge Actual is the calculated delivery charge for actual delivered therms for the rate schedule applicable to that bill or portion thereof during the Winter Period.

9. Application of the NWA to Customer Bills

The NWA charge or credit will be separately stated, and added to or subtracted from each bill as applicable. Each bill will have a separate line titled "Normal Weather Adj.," which line will include the total variable distribution charges, the NWF percentage, and the resulting charge or credit.

10. Information to be Filed with the Commission

Information pertaining to the RDAC will be filed annually with the Commission consistent with the filing requirements of all costs and revenue information included in the LDAC. Such information shall include:

a. The calculation of the applicable revenue decoupling revenue dollar adjustment for the Decoupling Year by Customer Class Group.

b. The calculation of the revenue decoupling reconciliation dollar adjustment for the previous Decoupling Year by Customer Class Group.

c. The calculation of the proposed decoupling rate per therm for each customer class group to be applied in the Billing Year.

d. The calculation of the monthly Benchmark Base Revenue per Customer, to be utilized in the upcoming Decoupling Year. If distribution rates change during the Decoupling Year, the monthly Benchmark Base Revenue per Customer for the remaining months of the Decoupling Year will be revised and filed with the Commission.

E. Environmental Surcharges ("ES") Allowable for LDAC.

1. Purpose: In order to recover expenditures associated with former manufactured gas Programs, there shall be an ES Rate applied to all firm volumes billed under the Company's delivery service charges.

2. Applicability: An annual ES Rate shall be calculated effective every November 1 for the annual period of November 1 through October 31. The annual ES Rate shall be filed with the Company's Winter season Cost of Gas Clause ("COG") filing and be subject to review and approval by the Commission. The annual ES Rate shall be applied to firm sales and to firm delivery throughput as a part of the LDAC. Special contract customers are exempt from the ES.

3. Costs Allowable: All approved environmental response costs associated with manufactured gas Programs may be included in the ES Rate

The total annual charge to the Company's customers for environmental response costs during any annual ES recovery period shall not exceed five percent (5%) of the Company's total revenues from firm gas sales and delivery throughput during the preceding twelve (12) month period ending June 30. The total annual charge shall represent the ES expenditures reflected in the calculation of the ES Rate to be in effect for the upcoming twelve-month period, November 1 through October 31. If this recovery limitation results in the Company recovering less than the amount that would otherwise be recovered in a particular ES Recovery Year, then the Company would defer this unrecovered amount, with interest, calculated monthly on the average monthly balance, until the next recovery period in which this amount could be recovered without violating the 5% limitation. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

4. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the ES applicable to all firm sales and firm delivery service throughput for the subsequent twelve-month period commencing with the calendar month of November.

5. Definitions:

   Environmental Response Costs shall include all costs of investigation, testing, remediation, litigation expenses, and other liabilities relating to manufactured gas Program sites, disposal sites, or other sites onto which material may have migrated, as a result of the operating or decommissioning of New Hampshire gas manufacturing facilities. These cost shall include the costs of the closure of the Relief Holder and pond at Gas Street, Concord, NH. The ES shall also include the expenses incurred by the Company in pursuing insurance and third-party claims and any recoveries or other benefits received by the Company as a result

6. Reconciliation Adjustments: Prior to the Winter Period COG, the Company shall calculate the difference between (a) the revenues derived by multiplying firm sales and delivery throughput by the ES Rate, and (b) the historical amortized costs approved for recoveries in the prior November's Annual ES Recovery Period. Account 1920-1863 shall contain the cumulative difference and the Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

7. Calculation of the ES: The ES Rate calculated annually consists of one-seventh of actual response costs incurred by the Company in the twelve-month period ending June 30 of each year until fully amortized (over seven years). Any insurance and third-party recoveries or other benefits for the twelve month period ending June 30 shall be applied to reduce the unamortized balance, shortening the amortization period. The sum of these amounts is then divided by the Company's forecast of total firm sales and delivery throughput for the upcoming twelve months of November 1 through October 31.

8. Application of ES to Bills: The annual ES Rate shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

F. Expenses Related to Rate Cases/Temporary Rate Reconciliation Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates for the recovery of NHPUC-approved rate case expenses and the reconciliation of temporary rates.

2. Applicability: The Rate Case Expenses/Temporary Rate Reconciliation (“RCE”) shall be applied to all firm tariffed customers. The RCE will be determined by the Company, as defined below.

3. Rate Case Expenses Allowable for LDAC: The total amount of the RCE will be equal to the amount approved by the Commission.

4. Effective Date of Rate Case Expense Charge: The effective date of the RCE will be determined by the NHPUC in an individual rate proceeding.

5. Definition: The RCE includes all rate case-related expenses approved by the NHPUC. This includes legal expenses, costs for bill inserts, costs for legal notices, consulting fees processing expenses, and other approved expenses. The temporary Rate reconciliation will include the variance between the delivery revenues obtained from the rates prescribed in the temporary rate order and the delivery revenues obtained from the final rates approved by the NHPUC.

6. Rate Case Expense/Temporary Rate Reconciliation (RCE) Factor Formulas: The RCE will be calculated according to the Commission Order issued in an individual proceeding to establish details including the number of years over which the RCE shall be amortized and the allocation of recovery among rate classes. In general, the RCE Factor will be derived by dividing the annual portion of the total RCE, plus the RCE Reconciliation Adjustment, by forecast firm annual throughput.

7. Reconciliation Adjustments: Account 1930-1745 shall contain the accumulated difference between revenues toward Rate Case Expenses as calculated by multiplying the Rate Case Expense Factor ("RCEF") times the appropriate monthly volumes and Rate Case Expense allowed, plus carrying charges added to the end-of-month balance. The carrying charges shall be calculated beginning on the first month of the recovery period by applying the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates to the average monthly balance.

   At the end of the recovery period, any under or over recovery will be included in an active LDAC component, as approved by the Commission.

8. Application of RCE to Bills: The RCE ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

9. Information to be Filed with the NHPUC: Information pertaining to the RCE will be filed with the NHPUC consistent with the filing requirements of all cost and revenue information included in the LDAC. The RCE filing will contain the calculation of the new RCE and will include the updated RCE reconciliation balance.

G. Recoverable Residential Low Income Assistance Program Costs.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to recover the revenue shortfall (costs) associated with customers participating in the Residential Low Income Assistance Program ("RLIAP"). Such costs, as well as, associated administrative and marketing costs shall be recovered by applying an RLIAP rate to all firm sales and transportation service throughput.

2. Applicability: The RLIAP Rate shall be applied to all firm sales and transportation tariff customers. The RLIAP Rate shall be filed with the Company's Winter season Cost of Gas Clause filing and shall be determined annually by the Company and be subject to review and approval by the Commission.

3. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the RLIAP Rate applicable to all firm sales, delivery and transportation service throughput for the subsequent twelve-month period commencing with the calendar month of November.

4. RLIAP Costs Allowable for LDAC: The costs to be recovered through the RLIAP Rate shall comprised of the revenue shortfall calculated by forecasting the number of customers enrolled in the RLIAP and the associated volumetric billing determinants for the upcoming annual recovery period and applying those billing determinants to the difference between the regular and reduced low income residential base rates, plus administrative, marketing and startup costs. The RLIAP Rate shall be calculated by dividing the resulting costs, plus any prior period reconciling adjustment, by the forecast of annual firm sales and transportation service throughput.

5. RLIAP Factor Formula

$$RLIAPF = \frac{RLIAP + RA_{RLIAP}}{A{:}\ TPev}$$

where:

A: Tpev	Forecast Annual Throughput Volumes of all firm sales and transportation tariffed customers eligible to receive firm delivery-only service from the Company.
RLIAP	RLIAP costs comprising of the revenue shortfall associated with customer participation, plus administrative, marketing, IT and start-up costs.
RA_{RLIAP}	RLIAP Reconciliation Adjustment - Account 1169-1756, inclusive of the associated Account 1169-1756 interest, as outlined in Section 17(G)(6).

6. Reconciliation Adjustments: Prior to the Company's Winter season Cost of Gas filing, the Company will calculate the difference between (a) the revenue derived by multiplying the actual firm sales and delivery service throughput by the RLIAP Rate through October 31st, and (b) the actual costs of the program which consists of (1) the revenue shortfall calculated by applying the actual billing determinants of the RLIAP classes to the difference in the regular and reduced residential base rates in effect for the annual reconciliation period and (2) the start-up, administrative and marketing costs associated with the implementation of the program, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates. The combined costs will then be recorded in the deferred RLIAP account 1169-1756. The Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

H. Effective Date of Local Distribution Adjustment Clause. The LDAC shall be filed annually and become effective on November 1 of each year pursuant to NHPUC approval. In order to minimize the magnitude of future reconciliation adjustments, the Company may request interim revisions to the LDAC rates, subject to review and approval of the NHPUC.

I. Local Distribution Adjustment Clause Formulas. The LDAC shall be calculated on an annual basis, by customer, by summing up the various factors included in the LDAC, where applicable.

LDAC Formula

$$LDAC^{X} = CC^{X} + RDAF^{X} + ES + GREF^{x} + RCE + RLIAP$$

and:

$ES^X = RHS + MGP$

where:

$LDAC^X$ = Annualized class specific LDAC.

CC^X = Annualized class specific CC or EE Charge.

$RDAF^X$ = Annualized class specific RDAF.

ES = Total firm annualized ES.

RHS = Annualized charge to recover the costs of the closure of the Relief Holder at Gas Street, Concord, NH

MGP = Annualized charge to cover the remediation costs related to former manufactured gas plants.

$GREF^X$ = Total firm annualized class specific Gas Restructuring Expense Factor.

RCE = Rate Case Expense Factor.

RLIAP = Residential Low Income Assistance Program Rate

J. Application of LDAC to Bills. The component costs comprising the LDAC ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm sales and firm delivery service throughput in accordance with the table shown in Section 17(B).

K. Other Rules.

1. The NHPUC may, where appropriate, on petition or on its own motion, grant an exception from the provisions of these regulations, upon such terms that it may determine to be in the public interest.

2. Such amendments may include the addition or deletion of component cost categories, subject to the review and approval of the NHPUC.

3. The Company may implement an amended LDAC with the NHPUC approval at any time.

4. The NHPUC may, at any time, require the Company to file an amended LDAC.

5. The operation of the LDAC is subject to all powers of suspension and investigation vested in the NHPUC.

L. Amendments to Uniform System of Accounts.

1163-1755 **Energy Efficiency Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the sum of DSM and/or EE Expenditures incurred by the Company plus the sum of DSM and/or EE Repayments and the revenues collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(C).

1920-1863 **Environmental Response Costs Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the revenues toward environmental response costs as calculated by multiplying the ES times monthly firm sales volumes and delivery service throughput and environmental response costs allowable per formula. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(E).

1930-1745 **Rate Case Expense/Temporary Rates Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the recovery and actual amounts of third-party incremental expenses associated with the Company's Rate Case initiatives and the difference between the final and temporary distribution rates. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(F).

1169-1756 **Residential Low Income Assistance Program Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the actual revenue derived from the actual sales and transportation service throughput multiplied by the RLIAP rate and the actual costs of the program, which consists of the revenue shortfall and all administrative and marketing costs, as outlined in the Local Distribution Adjustment Clause, 17(G).

1163-1756 **Revenue Decoupling Adjustment Factor:** This account shall be used to record the cumulative difference between the lost revenue of the Company and the revenue collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(D).

18 SUPPLY & CAPACITY SHORTAGE ALLOCATION POLICY

A. DEFINITIONS

The following are definitions of terms used in this subsection and applicable only to this subsection:

1. Residential: Service to customers which consists of direct natural gas usage in a residential dwelling for space heating, air conditioning, cooking, water heating and other residential uses

B. Commercial: Service to customers engaged primarily in the sale of goods or services including institutions and local, state and federal government agencies for uses other than those involving manufacturing or electric power generation

C. Industrial: Service to customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power

D. Large Volume: Service to large commercial and industrial customers with an annual gas load greater than 200,000 therms

E. Seasonal: Service available from April 1 to October 31 to all customers using gas to replace some other fuel or gas for air conditioning purposes

F. Firm Sales Service: Service from schedules or contracts under which seller is expressly obligated to supply and deliver specific volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened

G. Firm Transportation Service: Service from schedules or contracts under which seller is expressly obligated to deliver specific third-party volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened.

H. Plant Protection Gas: Is defined as minimum volumes required to prevent physical harm to the plant facilities or danger to plant personnel, when such protection cannot be afforded through the use of alternate fuel. This includes the protection of such material in process as would otherwise be destroyed, but shall not

I. RATE SCHEDULES

1 RESIDENTIAL NON-HEATING RATE: CLASSIFICATION NO. R-1

Availability

This rate is available to all residential customers who do not have gas space heating equipment, who consume less than 80% of their normal usage in the six winter months of November through April and whose usage does not exceed 100 therms in any winter month. Available for use which is separately metered and billed for each dwelling unit. Availability is limited to use in locations served by the Company's mains and for which the Company's facilities are adequate.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.5007 per day or $15.02 per 30 day month
Winter Period:	All therms per 30 day month at $0.3741 per therm
Summer Period:	All therms per 30 day month at $0.3741 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge

All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company’s Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days’ notice before discontinuance of service and is responsible for all charges through the end of the notice period.

2 RESIDENTIAL HEATING RATE: CLASSIFCATION NO. R-3

Availability
This rate is for all residential use for those domestic customers who use gas as the principal household heating fuel. Availability is limited to use in domestic locations which are separately metered and billed and which are served by the Company's mains and for which the Company's facilities are adequate.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.5007 per day or $15.02 per 30 day month
Winter Period:	All therms per 30 day month at $0.5502 per therm
Summer Period:	All therms per 30 day month at $0.5502 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company’s Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

3 LOW INCOME RESIDENTIAL HEATING RATE: CLASSIFICATION NO. R-4

Availability
This rate is for residential use for those domestic customers who use gas as the principal household heating fuel if any member of the household qualifies for a benefit through one of the programs listed below, subject to the qualification period described under the "Terms and Conditions" of this rate. Availability is limited to use in domestic locations which are separately metered and billed and which are served by the Company's mains and for which the Company facilities are adequate.

Qualified Programs:

a. Low Income Home Energy Assistance Program (LIHEAP)
b. Electric Assistance Program (EAP)
c. Supplemental Security Income Program
d. Women, Infants and Children Program
e. Commodity Surplus Foods Program (for women, infants and children)
f. Elderly Commodity Surplus Foods Program
g. Temporary Aid to Needy Families Program
h. Housing Choice Voucher Program (also known as Section 8)
i. Head Start Program
j. Aid to the Permanently and Totally Disabled Program
k. Aid to the Needy Blind Program
l. Old Age Assistance Program
m. Food Stamps Program
n. Any successor program of a-m

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.2003 per day or $6.01 per 30 day month
Winter Period:	All therms per 30 day month at $0.2201 per therm
Summer Period:	All therms per 30 day month at $0.2201 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery

4 MANAGED EXPANSION PROGRAM RESIDENTIAL NON-HEATING RATE: CLASSIFICATION NO. R-5

Availability
This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Residential Non Heating Rate R-1.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.6510 per day or $19.53 per 30 day month
Winter Period:	All therms per 30 day month at $0.4863 per therm
Summer Period:	All therms per 30 day month at $0.4863 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Residential Non Heating Rate R-1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

5 MANAGED EXPANSION PROGRAM RESIDENTIAL HEATING RATE: CLASSIFICATION NO. R-6

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program projects area who otherwise would have qualified for Residential Heating Rate R-3.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.6510 per day or $19.53 per 30 day month
Winter Period:	All therms per 30 day month at $0.7153 per therm
Summer Period:	All therms per 30 day month at $0.7153 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge

All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Residential Non Heating Rate R-3.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading an estimated bill will be rendered to the customer.

There is a $15.00 charge for each bad check tendered for payment.

6 MANAGED EXPANSION PROGRAM LOW INCOME RESIDENTIAL HEATING RATE: CLASSIFCATION NO. R-7

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Low Income Residential Heating Rate R-4.

Qualified Programs:

a. Low Income Home Energy Assistance Program (LIHEAP)
b. Electric Assistance Program (EAP)
c. Supplemental Security Income Program
d. Women, Infants and Children Program
e. Commodity Surplus Foods Program (for women, infants and children)
f. Elderly Commodity Surplus Foods Program
g. Temporary Aid to Needy Families Program
h. Housing Choice Voucher Program (also known as Section 8)
i. Head Start Program
j. Aid to the Permanently and Totally Disabled Program
k. Aid to the Needy Blind Program
l. Old Age Assistance Program
m. Food Stamps Program
n. Any successor program of a-m

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.2603 per day or $7.81 per 30 day month
Winter Period:	All therms per 30 day month at $0.2861 per therm
Summer Period:	All therms per 30 day month at $0.2861 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge

All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00

7 COMMERICAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, HIGH WINTER USE RATE
CLASSIFCATION NO. G-41

Availability

This rate is available for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage less than or equal to 10,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company’s records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$1.8560 per day or $55.68 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.4566 per therm
	All over 100 therms per 30 day month at $0.3067 per therm
Summer Period:	First 20* therms per 30 day month at $0.4566 per therm
	All over 20 therms per 30 day month at $0.3067 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 90 or 91 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company’s Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

U.S. Department of Labor Standard Industry Classification Codes will determine eligibility for this tariff.

8 COMMERCIAL/INDUSTRIAL SERVICE: MEDIUM ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-42

Availability

This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 10,000 therms and less than or equal to 100,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a heat content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$5.5687 per day or $167.06 per 30 day month
Winter Period:	First 1000* therms per 30 day month at $0.4152 per therm
	All over 1000 therms per 30 day month at $0.2766 per therm
Summer Period:	First 400* therms per 30 day month at $0.4152 per therm
	All over 400 therms per 30 day month at $0.2766 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Availability

This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 100,000 therms, a Winter Period usage less than 67% of annual usage, and a 12 month average usage greater than or equal to 90% of the average usage of December, January and February as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a heat content value of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$24.5947 per day or $737.84 per 30 day month
Winter Period:	All therms per 30 day month at $0.0630 per therm
Summer Period:	All therms per 30 day month at $0.0342 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to Page 90 or 91 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly,

**17 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, LOW WINTER USE RATE
CLASSIFICATION NO. G-55**

Availability
This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-51.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$2.4130 per day or $72.38 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.3578 per therm
	All over 100 therms per 30 day month at $0.2326 per therm
Summer Period:	First 100* therms per 30 day month at $0.3578 per therm
	All over 100 therms per 30 day month at $0.2326 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is made in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00

Terms and Conditions
Eligibility shall be based on the reasonable discretion of the Company and subject to verification of heating usage. U.S. Department of Labor Standard Industry Classification Code will determine eligibility for this tariff. Dual fuel customers may be required to sign annual contracts with minimum usage requirements in order to qualify for service under this tariff.

18 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: MEDIUM ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-56

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-52.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter:	$7.2393 per day or $217.18 per 30 day month
Winter Period:	First 1000* therms per 30 day month at $0.3072 per therm
	All over 1000 therms per 30 day month at $0.2046 per therm
Summer Period:	First 1000* therms per 30 day month at $0.2226 per therm
	All over 1000 therms per 30 day month at $0.1265 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In

19 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, LOAD FACTOR LESS THAN 90% RATE CLASSIFCATION NO. G-57

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-53.

Character of Service

Natural gas or equivalent will be supplied at a heat content value of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$31.9730 per day or $959.19 per 30 day month
Winter Period:	All therms per 30 day month at $0.2148 per therm
Summer Period:	All therms per 30 day month at $0.1030 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly, daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer

20 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, LOAD FACTOR GREATER THAN 90% RATE CLASSIFICATION NO. G-58

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-54.

Character of Service

Natural gas or equivalent will be supplied at a heat content value of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$31.9730 per day or $959.19 per 30 day month
Winter Period:	All therms per 30 day month at $0.0819 per therm
Summer Period:	All therms per 30 day month at $0.0445 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly, daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Commercial/Industrial Rate G-54.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

21 OUTDOOR GAS LIGHTING

Availability
This rate is available for residential outdoor gas lighting where such service is provided from the Company's existing delivery system to a standard gas light fixture or fixtures, located on the customer's premises, and when it is not feasible to meter such service along with other gas used on the premises and bill the same under the rate in effect for all other services. Service under this rate is available at those locations which were receiving service hereunder as of July 1, 2015, and which have continuously received service hereunder since that date.

Rate Per Light Per Month	$12.81

The above rates shall be adjusted to reflect the recovery of all applicable taxes.

Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a location, an account charge is incurred in addition to all other charges. The account charge is $20.00 when the visit to the location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Meters are read and bills are presented monthly.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

25 FIRM RATE SCHEDULES – OUTDOOR GAS LIGHTING

Outdoor Gas Lighting	
Per Light Per Month	$12.81

33. ENVIRONMENTAL SURCHARGE

Manufactured Gas Plants

Required annual Environmental increase	$2,970,867	
DG 10-17 Base Rate Revision Collections	$0	
Environmental Subtotal	$2,970,867	
Overall Annual Net Increase to Rates	$2,970,867	
Estimated weather normalized firm therms billed for the twelve months ended 10/31/19 - sales and transportation	184,654,874	therms
Surcharge per therm	$0.0161	per therm
Total Environmental Surcharge	$0.0161	

34 RATE CASE EXPENSE AND RECOUPMENT FACTOR CALCULATION

Liberty Utilities (Energy North Natural Gas) Corp. d/b/a Liberty Uitilities
Local Distribution Adjustment Charge (LDAC) increase due to Rate Case Expense and Recoupment
For LDAC effective November 1, 2018 - October 31, 2019

1	Rate Case Expense Remaining from Docket No. DG 14-180	$51,485
2	Rate Case Expense Through June 2018 in Docket No. DG 17-048	$578,477
3	Rate Case Expense for Docket No. DG 17-048 Currently Approved for $530,000	($48,477)
4	Remaining Recoupment from DG 14-180 & DG 17-048	$1,633,854
5	July 1, 2018 Balance	$2,215,339
6	Minus November 2019 & December 2019 Recoupment	($233,408)
7	Minus DG 17-048 Rate Case Rehearing Adjustments	($240,126)
8	Minus Estimated Recoveries from July 2018 through October 2018	($312,077)
9	Total Estimated Remaining Recovery As Of November 1, 2018	$1,429,728
10	Estimated November 2018 - October 2019 Interest	$36,303
11	Total Remaining Recovery	$1,466,032
12	Estimated November 2018 - October 2019 Sales (therms)	184,654,874
13	RCE & Recoupment rate per therm November 2018 - October 2019	$0.0079

Authorized by NHPUC Order No. 26,187 dated November 2, 2018, in Docket No. DG 17-048

REDACTED

STATE OF NEW HAMPSHIRE

BEFORE THE

PUBLIC UTILITIES COMMISSION

Docket No. DG 18-XXX

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities
Winter 2018/2019 Cost of Gas Filing
Summer 2019 Cost of Gas Filing

DIRECT TESTIMONY

OF

DAVID B. SIMEK

AND

CATHERINE A. MCNAMARA

August 31, 2018

THIS PAGE INTENTIONALLY LEFT BLANK

I. INTRODUCTION

Q. Please state your full name and business address.

A. (DS) My name is David B. Simek. My business address is 15 Buttrick Road, Londonderry, New Hampshire

(CM) My name is Catherine A. McNamara. My business address is 15 Buttrick Road, Londonderry, New Hampshire.

Q. Please state by whom you are employed.

A. We are employed by Liberty Utilities Service Corp. ("Liberty"), which provides service to Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities ("EnergyNorth" or the "Company").

Q. Please describe your educational background and your business and professional experience.

A. (DS) I graduated from Ferris State University in 1993 with a Bachelor of Science in Finance. I received a Master's of Science in Finance from Walsh College in 2000. I also received a Master's of Business Administration from Walsh College in 2001. In 2006, I earned a Graduate Certificate in Power Systems Management from Worcester Polytechnic Institute. In August 2013, I joined Liberty as a Utility Analyst and I was promoted to Manager, Rates and Regulatory Affairs in August 2017. Prior to my employment at Liberty, I was employed by NSTAR Electric & Gas ("NSTAR") as a Senior Analyst in Energy Supply from 2008 to 2012. Prior to my position in Energy

Supply at NSTAR, I was a Senior Financial Analyst within the NSTAR Investment Planning group from 2004 to 2008.

(CM) I graduated from the University of Massachusetts, Boston, in 1993 with a Bachelor of Science in Management with a concentration in Accounting. In November 2017, I joined Liberty as an Analyst in Rates and Regulatory Affairs. Prior to my employment at Liberty, I was employed by Eversource as a Senior Analyst in the Investment Planning group from 2015 to 2017. From 2008 to 2015, I was a Supervisor in the Plant Accounting department. Prior to my position in Plant Accounting, I was a Financial Analyst/General Ledger System Administrator within the Accounting group from 2000 to 2008.

Q. Have you previously testified in regulatory proceedings before the New Hampshire Public Utilities Commission (the "Commission")?

A. (DS) Yes. I have testified on numerous occasions before the Commission.

(CM) Yes, I previously testified in EnergyNorth's Cast Iron/Bare Steel Replacement Program proceeding, Docket No. DG 18-064.

Q. What is the purpose of your testimony?

A. The purpose of our testimony is to explain the Company's proposed firm sales cost of gas rates for the 2018/19 Winter (Peak) Period and the Company's proposed 2018/19 Local Delivery Adjustment Clause, both effective November 1, 2018. Our testimony also explains the Company's proposed firm sales cost of gas rates for the 2019 Summer (Off-Peak) Period.

II. WINTER 2018/19 COST OF GAS FACTOR

Q. What are the proposed firm Winter sales and firm transportation cost of gas rates?

A. The Company proposes a firm sales cost of gas rate of $0.7411 per therm for residential customers, $0.7403 per therm for commercial/industrial high winter use customers, and $0.7456 per therm for commercial/industrial low winter use customers as shown on Proposed First Revised Page 92 (Bates 050). The Company proposes a firm transportation cost of gas rate of $0.0005 per therm as shown on Proposed First Revised Page 94 (Bates 052).

Q. Please explain tariff page Proposed Original Page 92.1 (Bates 051) and Proposed First Revised Page 92.

A. Proposed Original Page 92.1 and Proposed First Revised Page 92 contain the calculation of the 2018/19 Winter Period Cost of Gas Rate and summarize the Company's forecast of firm gas costs and firm gas sales. As shown on Page 92, the proposed 2018/19 Average Cost of Gas of $0.7411 per therm is derived by adding the Direct Cost of Gas Rate of $0.7056 per therm to the Indirect Cost of Gas Rate of $0.0355 per therm. The estimated total Anticipated Direct Cost of Gas, derived on Page 92.1 and repeated on Page 92, is $61,003,856. The estimated Indirect Cost of Gas, also derived on Page 92.1 and repeated on Page 92, is $3,070,244. The Direct Cost of Gas Rate of $0.7056 and the Indirect Cost of Gas Rate of $0.0355 are determined by dividing each of these total cost figures by the projected winter period firm sales volumes of 86,451,254 therms.

To calculate the total Anticipated Direct Cost of Gas, the Company adds a list of allowable adjustments from deferred gas cost accounts to the projected demand and commodity costs for the winter period supply portfolio. These allowable adjustments, shown on Page 92.1, total $656,690. These adjustments are added to the Unadjusted Anticipated Cost of Gas of $60,347,166 to determine the Total Anticipated Direct Cost of Gas of $61,003,856.

Q. What are the components of the Unadjusted Anticipated Cost of Gas?

A. The Unadjusted Anticipated Cost of Gas shown on Proposed Original Page 92.1 consists of the following components:

1.	Purchased Gas Demand Costs	$10,308,483
2.	Purchased Gas Commodity Costs	41,318,346
3.	Storage Demand and Capacity Costs	922,462
4.	Storage Commodity Costs	5,125,663
5.	Produced Gas Cost	2,672,211
	Total	$60,347,166*

*$1 difference due to rounding

Q. What are the components of the allowable adjustments to the Cost of Gas?

A. The allowable adjustments to gas costs, listed on Proposed Original Page 92.1, are as follows:

1.	Deferred Gas Cost Prior Period Under Collection	$2,599,354
2.	Interest	63,196

3.	Fuel Inventory Revenue Requirement	351,017
4.	Broker Revenues	(497,759)
5.	Transportation COG Revenue	(26,381)
6.	Capacity Release Margin	(1,877,737)
7.	Fixed Price Administrative Cost	45,000
	Total Adjustments	$656,690

These allowable adjustments are standard adjustments made to the deferred gas cost balance through the operation of the Company's cost of gas adjustment clause. We discuss the factors contributing to the prior period under collection later in this testimony.

Q. How does the proposed average cost of gas rate in this filing compare to the average cost of gas rate approved by the Commission in Docket No. DG 17-135 for the 2017/18 Winter Period?

A. The average cost of gas rate proposed in this filing of $0.7411 per therm is $0.0966 per therm more than the initial rate of $0.6445[1] per therm approved by the Commission in Order No. 26,066 (October 31, 2017) in Docket No. DG 17-135. The $0.0966 per therm increase in the rate reflects a $2,530,984 increase in the Total Unadjusted Cost of Gas.

Q. How does the proposed firm transportation winter cost of gas rate compare to the rate approved by the Commission for the 2017/18 winter period?

A. The proposed firm transportation winter cost of gas rate is $0.0005 per therm. The rate approved in Docket No. DG 17-135 was $0.0027 per therm. The decrease in the rate relates to an estimated $88,304 decrease in costs due to the difference between the winter

1 For comparison purposes, by the end of the 2017/18 Winter Period, the residential cost of gas rate increased to $0.8056 per therm through the operation of the monthly adjustment mechanism.

season 2017/2018 beginning balance of $28,808 (an over-collection) and the winter season 2018/2019 beginning balance of ($59,496) (an under-collection).

Q. In the calculation of its firm transportation winter cost of gas rate, has the Company updated the estimated percentage used for pressure support purposes?

A. Yes. The Company used, for pressure support purposes, a rate of 8.7% based on the marginal cost study used for the rate design approved in Docket No. DG 17-048. Previously the Company used an estimated percentage of 9.9% for pressure support purposes.

Q. Did the Company include a fuel inventory revenue requirement calculation in this filing?

A. Yes (Bates 192). The Company is proposing to collect $351,017 in fuel inventory revenue requirement consistent with Order No. 26,156 dated July 10, 2018, in Docket No. DG 17-048. The rate of $0.0041 per therm is determined by dividing the $351,017 by the estimated November 2018 through October 2019 COG sales volumes of 86,451,254 therms.

Q. How was the statutory tax rate of 27.24% calculated (Bates 192)?

A. The statutory rate of 27.24% was calculated by using a 21% federal tax rate and a 7.9% tax rate for the State of New Hampshire (0.21 + 0.079 – (0.21 x 0.079) = 0.2724).

Q. How was the common equity pre-tax rate of 6.290% calculated (Bates 192)?

A. The common equity pre-tax rate of 6.290% was calculated by dividing the 9.30% rate of return on common equity, approved in Docket No. DG 17-048, by 0.7276 (1 – 0.2724 [statutory tax rate – see previous question]) and multiplied by 49.20% (equity component of the capital structure approved in DG 17-048) [0.930 / 0.7276 x 0.4920 = 0.0629].

Q. Has the bad debt percentage in this filing of 1.7% changed from the bad debt percentage calculated in the Winter 2017/2018 Cost of Gas Reconciliation?

A. Yes, the bad debt percentage of 1.7% used in this filing is the calculated rate for the period of May 2017–April 2018. The Winter 2017/2018 Cost of Gas Reconciliation included a calculated rate of 1.1%, which was inadvertently carried forward from the prior period of May 2016–April 2017.

Q. What was the actual weighted average firm sales cost of gas rate for the 2017/18 winter period?

A. The weighted average cost of gas rate was $0.7321 per therm (Bates 095 Line 54). This was calculated by applying the actual monthly cost of gas rates for November 2017 through April 2018 to the monthly therm usage of an average residential heating customer using 778 therms per year, or 636 therms for the six winter period months.

III. <u>PRIOR WINTER PERIOD UNDER-COLLECTION</u>

Q. Please explain the prior period under collection of $2,459,330.

A. The prior period under-collection is also detailed in the 2017/18 Winter Period Reconciliation that was filed with the Commission on July 27, 2018. The $2,459,330 under-collection is the sum of the deferred gas cost, bad debt, and working capital over- and under-collection balances as of April 30, 2018. The under-collection was driven mainly by the lag in the timing of monthly cost of gas rate adjustments as compared to changes in the underlying costs. For three months within the six-month winter period the calculated COG rate adjustment was higher than the allowable 25% price increase so the Company held the rate constant at the maximum allowable rate of $0.8056 per therm.

IV. <u>FIXED PRICE OPTION</u>

Q. Has the Company established a winter period fixed price pursuant to its Fixed Price Option Program?

A. Yes. Pursuant to Order No. 24,515 in Docket No. DG 05-127, the Fixed Price Option Program ("FPO") rates are set at $0.0200 per therm higher than the initial proposed COG rate. Proposed First Revised Page 91 (Bates 049) contains the FPO rate for the 2018/19 Winter period, which is $0.7611 per therm for residential customers. This compares to the FPO rate approved for the 2017/18 winter period of $0.6645 per therm for residential customers. This represents a $0.0966 per therm, or 14.5% increase in the residential FPO rate. The total bill impact on the winter period bills for an average FPO heating customer using 636 therms is an increase of approximately $122.86 or 14.25% compared to last winter. The total bill impact reflects the implementation of the increases approved in Docket Nos. DG 17-048 effective May 1, 2018, and DG 18-064 effective July 1, 2018, relating to permanent distribution rates and the cast iron/bare steel main replacement program, respectively. The estimated winter period bill for an average residential heating customer opting for the FPO would be approximately $12.71 (or 1.3%) higher than the bill under the proposed cost of gas rates, assuming no monthly adjustments to the COG rate during the course of the winter. Schedule 23 (Bates 189) contains the historical results of the FPO program.

V. LOCAL DELIVERY ADJUSTMENT CLAUSE ("LDAC")

Q. What are the surcharges that will be billed under the LDAC?

A. As shown on Proposed First Revised Page 97 (Bates 055), the Company is submitting for approval an LDAC of $0.0836 per therm for the residential non-heating class and residential heating class, and $0.0772 per therm for the commercial/industrial bundled sales classes, effective November 1, 2018. The surcharges proposed to be billed under the LDAC are the Energy Efficiency Charge, the Revenue Decoupling Adjustment Clause, the Energy Efficiency Resource Standard Lost Revenue Adjustment Mechanism, the Environmental Surcharge for Manufactured Gas Plant ("MGP") remediation, the Residential Low Income Assistance Program charge, and the rate case expense reconciliation surcharge from Docket No. DG 17-048.

Q. Which customers are billed an LDAC?

A. All EnergyNorth customers including those in Keene are billed an LDAC charge. When calculating the LDAC charge, the November 1, 2018, through October 31, 2019, forecasted Keene therm sales of 1,451,361 are added to the EnergyNorth therm sales forecast of 183,203,513 for a total therm sales forecast of 184,654,874.

Q. Please explain the Energy Efficiency Charge.

A. The Energy Efficiency Charge is designed to recover the projected expenses associated with the Company's energy efficiency programs for Calendar Year 2019 that will be filed with the Commission in the near future. In the calculation of the Energy Efficiency Charge, the Company has also included the projected prior period over-recovery of the Company's residential and commercial energy efficiency programs as of October 2018. As shown on Schedule 19 Energy Efficiency (Bates 125-127), the proposed Energy Efficiency charge is $0.0450 per therm for Residential customers and $0.0387 per therm for commercial and industrial customers.

Q. Please explain the Revenue Decoupling Adjustment Clause ("RDAC").

A. The first RDAC will not take effect until November 1, 2019, after the first decoupling year is complete. It is designed to recover, on an annual basis, the difference between the Actual Base Revenue per Customer and the Benchmark Base Revenue per Customer. The Actual Base Revenue per Customer is calculated after the first decoupling year. Schedule 19 RDAC (Bates 122) shows the proposed Benchmark Base Revenue per Customer calculation effective November 1, 2018, through October 31, 2019.

Q. Please explain the Energy Efficiency Resource Standard Lost Revenue Adjustment Mechanism ("LRAM").

A. As shown on Schedule 19 LRAM (Bates 120-121), the proposed LRAM charge is $0.0003 per therm for residential customers and $0.0001 per therm for commercial and industrial customers. It is designed to recover lost revenues associated with energy efficiency measures installed under the EERS programs. Since the Company is implementing decoupling effective November 1, 2018, the Company will continue to implement its Lost Revenue Adjustment only as a prior period true-up mechanism effective November 1, 2018, and ending October 31, 2019.

Q. What is the proposed Residential Low Income Assistance Program ("RLIAP") charge?

A. As shown on Schedule 19 RLIAP (Bates 123-124), the proposed RLIAP charge is $0.0130 per therm. It is designed to recover administrative costs, revenue shortfall, and the prior period reconciliation adjustment relating to this program. For the 2018/19 Winter Period, the Company is providing a 60% base rate discount, consistent with the settlement agreement approved by the Commission in Order No. 24,669 (Sept. 22, 2006) in Docket No. DG 06-120. The current RLIAP charge is designed to recover $2,409,164, of which $1,864,087 is for the revenue shortfall resulting from 5,056 customers receiving a 60% discount off their base rates, and $545,077 for the prior year reconciling adjustment.

Q. In Order No. 24,824 (Feb. 29, 2008) in Docket No. DG 06-122 relating to short-term debt issues, the Company agreed to adjust its short-term debt limits each year as part of the Company's Winter Period Cost of Gas filing. Did the Company

calculate the short-term debt limit for fuel and non-fuel purposes in accordance with this settlement?

A. Yes, the Company included in Schedule 24 (Bates 190) the short-term debt limit for fuel and non-fuel purposes for the 2018/19 period. As shown, the short-term debt limit for fuel inventory financing for the period November 1, 2018, through October 31, 2019, is calculated to be $19,222,230 and the limit for non-fuel purposes is calculated to be $94,878,262.

Q. Has the Company updated the Environmental Surcharge (Tariff Page 95)?

A. Yes, it has. The costs submitted for recovery through the MGP remediation cost recovery mechanism, as well as the third party recoveries, are included in the Environmental Cost Summary in Schedule 20 (Bates 128) of this filing. The environmental investigation and remediation costs that underlie these expenses are the result of efforts by the Company to respond to its legal obligations with regard to these sites, as described by Ms. Casey in her pre-filed direct testimony in this proceeding and as set forth in the MGP site summaries included in this filing under Schedule 20. The Summary included in Schedule 20 shows the remediation cost pools for the Concord Pond, Concord MGP, Manchester, Nashua, and Laconia sites, and a General Pool for costs that cannot be directly assigned to a specific site.

A summary sheet and detailed backup spreadsheets that support the 2017/18 costs are provided in Schedule 20 of this filing. Consistent with past practice, the Company met with the Commission Staff and OCA in August of this year to provide an update on the status of environmental matters. Ms. Casey's testimony describes the Company's activities with regard to all five sites.

Q. Please describe how the Company calculated the Environmental Surcharge included in this filing.

A. The proposed Manufactured Gas Plant Remediation surcharge for the period beginning November 1, 2018, and ending October 31, 2019, is $0.0161 per therm. This surcharge will recover a total of $2,970,867 in amortized remediation costs. The costs submitted for recovery are shown in the Environmental Cost Summary included in Schedule 20 of this filing.

Q. Did the Company include a Rate Case Expense (RCE) surcharge in this filing?

A. Yes. As shown on Schedule 19 RCE (Bates 118-119), the Company is proposing to collect $1,706,158 in uncollected rate case and recoupment expense consistent with Order No. 26,122 dated April 27, 2018, in Docket No. DG 17-048. The RCE rate of $0.0092 per therm is determined by dividing the $1,706,154 by the estimated November 2018 through October 2019 sales volumes of 184,654,874 therms.

Q. Has the Company also updated its Company Allowance percentage for the period November 2018 through October 2019 in accordance with Section 8 of the Company's Delivery Terms and Condition?

A. Yes, in Schedule 25 (Bates 191) the Company has recalculated its Company Allowance for the period November 2018 through October 2019. The Company calculated the Company Allowance of 1.80% based on sendout and throughput data for the twelve-month period ending June 2018. The Company proposes to apply this recalculated Company Allowance to all supplier deliveries beginning in November 2018.

VI. CUSTOMER BILL IMPACTS

Q. What are the estimated impacts of the proposed firm sales cost of gas rate and proposed LDAC surcharges on an average heating customer's winter bill as compared to the winter rates in effect last year?

A. The bill impact analysis is presented in Schedule 8 (Bates 095) of this filing. These bill impacts reflect the implementation of the increases approved in Docket Nos. DG 17-048 effective May 1, 2018, and DG 18-064 effective July 1, 2018, relating to permanent distribution rate increases and the cast iron/bare steel main replacement program. The total bill impact over the winter period for an average residential heating customer is an increase of approximately $67.17, or 7.42%. The total bill impact over the winter period for an average commercial/industrial G-41 customer is an increase of approximately $86.13, or 3.38% (Bates 096). Schedule 8 of this filing provides more detail of the impact of the proposed rate adjustments on heating customers.

VII. OTHER TARIFF CHANGES

Q. Is the Company updating its Delivery Terms and Conditions in the filing?

A. Yes. The Company is submitting Proposed First Revised Page 147 (Bates 056) relating to Supplier Balancing and Peaking Demand Charges and Proposed First Revised Page 148 (Bates 057) relating to Capacity Allocation.

Q. Please describe the changes to tariff Page 147.

A. In Proposed First Revised Page 147, the Company is updating the Peaking Demand Charge from $20.06 per MMBtu of Peak MDQ to $20.41 per MMBtu of Peak MDQ. This calculation is also presented in Schedule 21 (Bates 180).

Q. Please describe the changes to tariff Page 148.

A. Proposed First Revised Page 148 updates the Capacity Allocator percentages used to allocate pipeline, storage, and local peaking capacity to high and low load factor customers under the mandatory capacity assignment requirement for firm transportation service. Schedule 22 (Bates 183-188) contains the six-page worksheet that backs up the calculations for the updated allocators.

VIII. SUMMER 2019 COST OF GAS FACTOR

Q. What are the proposed 2019 summer firm sales cost of gas rates?

A. The Company proposes a firm sales cost of gas rate of $0.4445 per therm for residential customers, $0.4417 per therm for commercial/industrial high winter use customers, and $0.4506 per therm for commercial/industrial low winter use customers as shown on Proposed Seventh Revised Page 89 (Bates 200).

Q. Please explain tariff pages Proposed First Revised Page 88 and Proposed Seventh Revised Page 89.

A. Proposed First Revised Page 88 (Bates 199) and Proposed Seventh Revised Page 89 contain the calculation of the 2019 Summer Period Cost of Gas Rate and summarize the Company's forecast of firm gas sales, firm gas sendout, and gas costs. On Proposed

Seventh Revised Page 89, the 2019 Average Cost of Gas of $0.4445 per therm is derived by adding the Direct Cost of Gas Rate of $0.4354 per therm to the Indirect Cost of Gas Rate of $0.0091 per therm. The estimated total Anticipated Direct Cost of gas is $8,661,183 and the estimated Indirect Cost of Gas is $181,903. The Direct Cost of Gas Rate and the Indirect Cost of Gas Rates are determined by dividing each of these total cost figures by the projected Summer firm sales volumes of 19,890,267 therms. Proposed Seventh Revised Page 89 further shows that the Residential Cost of Gas Rate of $0.4445 per therm is equal to the Average Cost of Gas for all firm sales customers. It also shows the calculation of the Commercial/Industrial High Winter Use Cost of Gas Rate of $0.4417 per therm and the Commercial/Industrial Low Winter Use Cost of Gas Rate of $0.4506 per therm.

The calculation of the Anticipated Direct Cost of Gas is shown on Proposed First Revised Page 88. To derive the total Anticipated Direct Cost of Gas of $8,661,183, the Company starts with the Unadjusted Anticipated Cost of Gas of $8,002,703 and adds the Net Adjustment totaling $658,480.

Q. What are the components of the Unadjusted Anticipated Cost of Gas?

A. The Unadjusted Anticipated Cost of Gas consists of the following:

1. Purchased Gas Demand Costs	$4,372,669
2. Purchased Gas Supply Costs	3,602,943
3. Produced Gas Costs	27,091
Total Unadjusted Anticipated Cost of Gas	$8,002,703

Q. What are the components of the adjustments to the cost of gas?

A. The adjustments to gas costs, listed on proposed First Revised Page 88, are as follows:

1. Prior Period (Over)/Under Collection	$617,043
2. Interest	41,437
Total Adjustments	$658,480

Q. How does the proposed average Residential Summer cost of gas rate in this filing compare to the initial cost of gas rate approved by the Commission for the 2018 Summer Period?

A. The cost of gas rate proposed in this filing is $0.1312 per therm higher than the initial rate approved by the Commission for the 2018 Summer Period ($0.4445 vs. $0.3133) (Schedule 8, Bates 224). This increase is primarily due to an $874 thousand anticipated increase to the Supply Costs.

Q. Does this conclude your testimony?

A. Yes, it does.

FEDERAL ENERGY REGULATORY COMMISSION
WASHINGTON, D.C. 20426

FY 2017 GAS ANNUAL CHARGES
CORRECTION FOR ANNUAL CHARGES UNIT CHARGE
June 26, 2018

The annual charges unit charge (ACA) to be applied to in fiscal year 2019 for recovery of FY 2018 Current year and 2017 True-Up is **$0.0013** per Dekatherm (Dth). The new ACA surcharge will become effective October 1, 2018.

The following calculations were used to determine the FY 2018 unit charge:

2018 CURRENT:

Estimated Program Cost $66,791,000 divided by 49,985,774,086 Dth	=	0.0013362002

2017 TRUE-UP:

Debit/Credit Cost ($316,993) divided by 47,717,356,257 Dth	=	(0.0000066431)
TOTAL UNIT CHARGE	=	0.0013295571

If you have any questions, please contact Raven A. Rodriguez at (202)502-6276 or e-mail at Raven.Rodriguez@ferc.gov.

1/ Transporter's Settlement dated August 18, 2016, in Docket No. RP16-301-000, which was approved by Commission order issued October 20, 2016, established new base tariff recourse rates referred to as "Settlement Rates" and a moratorium on changes to the Settlement Rates until September 1, 2020. All recourse Maximum and Minimum Rates listed on Sheet Nos. 4, 4B, 4C, and 5A are Settlement Rates subject to the moratorium.
2/ No rate cap shall apply to any capacity releases with terms of less than or equal to one year pursuant to FERC Order Nos. 712 et al.

To the extent applicable, the following adjustments apply:

ACA ADJUSTMENT:

Commodity 1/	

MEASUREMENT VARIANCE/FUEL USE FACTOR:

Minimum	0.00%
Maximum (Non-Eastchester Shipper)	1.00%
Maximum (Eastchester Shipper)	4.50%
Maximum (Brookfield Shipper)	1.20%

1/ The ACA ADJUSTMENT Commoditiy rate shall be the applicable FERC ACA unit charge incorporated by reference pursuant to Section 12.2 in the General Terms and Conditions of Transporter's FERC Gas Tariff.

TRANSPORTATION RATES

(A) Applicability

The charges under this schedule shall be applicable to a Shipper who enters into a Transportation Service Contract with Union.

Applicable Points
Dawn as a receipt point: Dawn (TCPL), Dawn (Facilities), Dawn (Tecumseh), Dawn (Vector) and Dawn (TSLE).
Dawn as a delivery point: Dawn (Facilities).

(B) Services

Transportation Service under this rate schedule shall be for transportation on Union's Dawn - Parkway facilities.

(C) Rates

The identified rates represent maximum prices for service. These rates may change periodically.
Multi-year prices may also be negotiated, which may be higher than the identified rates.

	Monthly Demand Charges (applied to daily contract demand)	Fuel and Commodity Charges			
		Union Supplied Fuel	Shipper Supplied Fuel		
		Fuel and Commodity Charge	Fuel		Commodity Charge
	Rate/GJ	Rate/GJ	Ratio %	AND	Rate/GJ
Firm Transportation (1), (5)					
Dawn to Parkway	$3.716	Monthly fuel and commodity rates shall be in accordance with schedule "C".	Monthly fuel ratios shall be in accordance with schedule "C".		
Dawn to Kirkwall	$3.154				
Kirkwall to Parkway	$0.561				
M12-X Firm Transportation					
Between Dawn, Kirkwall and Parkway	$4.590	Monthly fuel and commodity rates shall be in accordance with schedule "C".	Monthly fuel ratios shall be in accordance with schedule "C".		
Limited Firm/Interruptible Transportation (1)					
Dawn to Parkway – Maximum	$8.918	Monthly fuel and commodity rates shall be in accordance with schedule "C".	Monthly fuel ratios shall be in accordance with schedule "C".		
Dawn to Kirkwall – Maximum	$8.918				
Parkway (TCPL / EGT) to Parkway (Cons) / Lisgar (2)	n/a	n/a	0.158%		
Cap-and-Trade Facility-Related Charges (applied to all quantities transported)					
Dawn to Kirkwall / Lisgar		$0.006			$0.006
Dawn to Parkway		$0.006			$0.006
Kirkwall to Parkway / Lisgar		$0.006			$0.006
Parkway to Dawn / Kirkwall		$0.006			$0.006
Kirkwall to Dawn		$0.006			$0.006
Parkway (TCPL / EGT) to Parkway (Cons) / Lisgar (2)		$0.006			$0.006

Peak 2018 - 2019 Winter Cost of Gas Filing
Capacity Assignment Calculations 2016-2017
<u>Derivation of Class Assignments and Weightings</u>

Basic assumptions:
1 Residential class pays average seasonal gas cost rate (using MBA method to allocate costs to seasons)
2 Residual gas costs are allocated to C&I HLF and LLF classes based on MBA method
3 The MBA method allocates capacity costs based on design day demands in two pieces:
   a The base use portion of the class design day demand based on base use
   b The remaining portion of design day demand based on remaining design day demand
4 Base demand is composed solely of pipeline supplies
5 Remaining demand consists of a portion of pipeline and all storage and peaking supplies

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

1. SITE LOCATION: 38 Bridge Street, Nashua, New Hampshire.

2. DATE SITE WAS FIRST INVESTIGATED: At the end of 1998, the New Hampshire Department of Environmental Services (NHDES) sent a "Notification of Site Listing and Request for Site Investigation" for the former Nashua Manufactured Gas Plant (MGP) to the former plant owners/operators: EnergyNorth Natural Gas, Inc. d/b/a National Grid (ENGI), and Public Service Company of New Hampshire (PSNH) and its parent company, Northeast Utilities Services Company (NU). NHDES designated the site DES #199810022.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the former MGP have been identified at the site and in the adjacent Nashua River. These residuals, which include tars and oils, have been found mainly in subsurface soil at discrete locations, in groundwater, and in localized river sediments.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES:

   - Prior to the time NHDES issued its notice letter to ENGI, the US Environmental Protection Agency (EPA) was remediating contamination (asbestos) at the former Johns Manville plant located adjacent to, and downstream from the 38 Bridge Street property. In the course of that work, EPA detected what it determined to be MGP related residuals in Nashua River sediments containing asbestos. EPA sought reimbursement from ENGI and PSNH of only those incremental additional costs it incurred to dispose of sediments containing MGP related wastes in addition to asbestos. ENGI and PSNH entered into a settlement agreement with the EPA at the end of September 2000. Under the terms of the agreement, each company received a release from liability associated with the so-called Nashua River Superfund Site and contribution protection against future claims associated with that site. The settlement agreement made it clear that EPA does not contend that ENGI or PSNH contributed any asbestos to the Nashua River.

   - In response to the 1998 notice from NHDES, QST Environmental, Inc. (QST, subsequently Environmental Science and Engineering, Inc. (ESE), and later Harding ESE, Inc. (Harding ESE)), submitted a Scoping Phase Field Investigation Scope of Work to NHDES on behalf of ENGI in February 1999.

   - In response to comments from NHDES, QST and ENGI refined the Scope of Work for the Scoping Phase Field Investigation and resubmitted to NHDES in April 1999.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

- NHDES approved the refined Scoping Phase Field Investigation Scope of Work in May 1999.

- During the summer of 1999, ENGI and QST conducted the Scoping Phase Field Investigation, collecting site background information and soil, groundwater, surface water and sediment samples from the former Nashua MGP and the adjacent Nashua River.

- ENGI and ESE submitted the Scoping Phase Field Investigation Report to NHDES in December 1999.

- NHDES provided comments to ENGI and ESE in February 2000 on the Scoping Phase Field Investigation Report and requested a Phase II Investigation Scope of Work.

- On behalf of ENGI, ESE submitted a Draft Phase II Investigation Work Plan to NHDES in April 2000.

- ENGI and ESE met with the NHDES site manager in April 2000 to discuss the Draft Phase II Investigation Work Plan.

- NHDES provided written comments on the Draft Phase II Investigation Work Plan in June 2000.

- ENGI and ESE met with NHDES in August 2000 to discuss NHDES' comments on the Phase II Work Plan.

- ENGI submitted a letter to NHDES in August 2000 discussing revisions to the Draft Phase II Investigation Work Plan in response to comments from NHDES and PSNH/NU, along with a proposed schedule for implementation of the work.

- NHDES approved the Revised Phase II Work Plan for the site at the end of August 2000.

- NHDES provided comments to ENGI and Harding ESE on the proposed schedule for Phase II Work Plan implementation in September 2000.

- ENGI submitted an addendum to the Phase II Work Plan, including a proposed approach for risk evaluation, to NHDES in November 2000.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.

NASHUA FORMER MGP

LINE
NO.

- Subsequent to meetings and discussions throughout 2000, ENGI and PSNH reached agreement in late 2000 regarding sharing of costs for the remediation work and transfer of management of the remediation work to ENGI.

- Harding ESE implemented the Phase II Work Plan during the fall and winter of 2000/2001. Work entailed a comprehensive field program that included the advancement of river borings and collection of sediment samples as well as the installation of borings and monitoring wells on and off the property.

- NHDES provided comments on the Phase II Work Plan addendum in February 2001.

- Harding ESE responded to NHDES comments on the Phase II Work Plan addendum in March 2001.

- In May 2001, ENGI submitted to NHDES a Draft Site Conceptual Model to assist with finalization of the Phase II Work Plan Addendum and met with NHDES to discuss.

- ENGI and Harding ESE revised the Draft Site Conceptual Model and outlined supplemental field activities to be included in the Phase II Work Plan Addendum and submitted to NHDES in June 2001.

- In July 2001, ENGI and Harding ESE met with NHDES to review the Site Conceptual Model and proposed Phase II supplemental investigation activities.

- ENGI and NHDES met in August 2001 to discuss the overall site objectives.

- In September 2001, Harding ESE, on behalf of ENGI, submitted a Phase IIB Supplemental Site Investigation (SI) Scope of Work to NHDES.

- NHDES provided verbal approval for the Phase IIB Supplemental SI, and Harding ESE initiated the field program on behalf of ENGI in October 2001.

- NHDES provided written approval of the Phase IIB Supplemental SI in October 2001. A modification to the proposed scope of work relating to investigations adjacent to the gas lines was proposed and verbal approval was obtained from NHDES on November 19, 2001.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

- Property owners north of the Nashua River did not provide access to install monitoring wells proposed in the Phase IIB SOW. Harding ESE completed all on-site work outlined in the Phase IIB SOW in February 2002.

- ENGI received access from PSNH to install Phase IIB monitoring wells west of the site in March 2002.

- Harding ESE installed additional groundwater monitoring wells west of the site in March and sampled all newly installed monitoring wells in April 2002. All work outlined in the Phase IIB SOW was completed except for the proposed monitoring wells north of the Nashua River where access was denied.

- The Phase II Report was submitted to NHDES in February 2003. The report was approved by NHDES in August 2003. At the time of approval, NHDES required ENGI to begin work on the Remedial Action Plan for the site, due in 2004.

- ENGI met with NHDES on November 3, 2003, to review the proposed remedial schedule, which called for the Remedial Action Plan to be submitted in July 2004, and remediation to occur in 2005. NHDES approved the schedule by letter dated December 1, 2003. In that letter they concurred with ENGI's request to divide the site into terrestrial and aquatic portions, to facilitate remediation of sediments concurrent with re-armoring of ENGI's gas mains crossing the river.

- By way of a May 5, 2004 letter, ENGI requested that NHDES waive the Remedial Action Plan (RAP) requirement for the aquatic portion of the site and allow ENGI to proceed with capping sediments in conjunction with gas main rearmoring, which was scheduled for completion in 2004. NHDES approved the request by letter dated May 14, 2004.

- ENGI held pre-application meetings with state and federal agencies (NHDES Wetlands Bureau, United States Army Corps of Engineers, United States Department of Fish and Wildlife, United States Environmental Protection Agency and National Oceanic and Atmospheric Administration) in June 2004. These meetings were held in advance of permit application submission for the capping/rearmoring project, to review the project and expedite the approval process. The application was submitted to these agencies as well as the City of Nashua on July 1, 2004. On July 6, 2004, NHDES deemed the permit application administratively complete. The hearing was closed on July 26, 2004 and the permit was issued in September 2004. The capping and re-armoring was

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

completed in October 2004 and the Remedial Completion Report, submitted to NHDES in January 2005, was subsequently approved.

- In October 2005, ENGI submitted the Terrestrial Remedial Action Plan to NHDES, and the document was deemed complete by NHDES in March 2006. NHDES requested supplemental information to be submitted before ENGI proceeded with remediation, and in 2007 ENGI gathered the requested data.

- In November 2007, ENGI submitted a Workplan for DNAPL Recovery Pilot Test to NHDES and the document was approved by NHDES on November 14, 2007.

- ENGI applied for three permits required for the implementation of the NHDES-approved DNAPL pilot testing activities: Nashua Conservation Commission Permit, Nashua Zoning Board of Appeals Permit and NHDES Dredge and Fill Permit. ENGI attended numerous hearings related to obtaining the permits and obtained the three permits on April 21, 2008, April 23, 2008 and May 31, 2008, respectively.

- In June 2008, ENGI installed six extraction wells for DNAPL recovery pilot testing at the site. ENGI completed the construction of the coal tar recovery system trailer (i.e., the equipment that will be used to pump, collect and temporarily store the coal tar) in December 2008. Trenching for the subsurface piping and final system installation was delayed in late 2008 due to weather. ENGI performed manual DNAPL recovery throughout 2008 and the first three quarters of 2009.

- In Spring 2009, ENGI began trenching and final system installation activities for the DNAPL recovery pilot testing. The trenching, pump installations and system electrical work were completed in July 2009. Electrical service was installed in late August 2009. The system was started up in November 2009 and has been operational since that time.

- In September 2010, ENGI submitted an Installation Summary and DNAPL Recovery Pilot test summary report to NHDES. This report recommended that DNAPL extraction activities continue. In October 2010, a work plan for an off-site groundwater investigation program to support the delineation of a Groundwater Management Zone was submitted to NHDES. This work plan was approved by NHDES in a letter dated November 5, 2010. Access negotiations and environmental permitting for the NHDES-approved investigation were completed in June 2011.

**LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES**

NASHUA FORMER MGP

LINE
NO.

- The NHDES-approved subsurface soil and groundwater investigation program was initiated on September 26, 2011. The goal of this program was to delineate a Groundwater Management Zone for the site, and allow for the filing of a Groundwater Management Permit (GMP). Due to known asbestos in the off-site area to be investigated, ENGI submitted an "In-active Asbestos Disposal Site (ADS) Work Plan"; NHDES approved the asbestos work plan in October 2011. Soil boring and well installation work was performed between October and December 2011. An In-active ADS Site Completion Report was submitted to and accepted by NHDES on May 4, 2012. Groundwater sampling events were conducted in February and May 2012. A meeting to discuss the preliminary results of the Groundwater Management Zone (GMZ) investigation program with NHDES took place on August 16, 2012. It was agreed that two more rounds of groundwater sampling should occur before a delineation of the GMZ is considered.

- On November 27, 2012 and December 6, 2012, 8.25 feet and 10.83 feet of DNAPL appeared in MW-106, situated in the foot print of historical Holder #2. A weekly monitoring and removal plan was initiated at this time and is ongoing as of July 2013. To date, 109 gallons of DNAPL has been removed manually, in addition to the system removal discussed above.

- In January 2013, a Supplemental Investigation Report (SIR) and DNAPL Recovery System Pilot Test Progress report was submitted to NHDES reporting on additional investigation activities, including the installation of sixteen additional wells in 2011, and the May and September 2012 (second and third of three) rounds of sampling to define groundwater quality and hydrogeologic conditions at the site, so that the GMZ can be delineated. Additionally, the report includes information regarding DNAPL recovery system O&M activities and DNAPL recovery rates demonstrating that the system still effectively recovers DNAPL. A meeting with NHDES took place on March 22, 2013 to discuss these results and next steps.

- NHDES responded to the January 2013 submittal via letter dated May 21, 2013 accepting the SI Report and authorizing ENGI to proceed with the delineation of the GMZ in order to submit a Groundwater Management Permit (GMP) application, and the preparation of a revised Remedial Action Plan (RAP) for the terrestrial portion of the site.

- ENGI responded to the NHDES letter on June 19 with a schedule targeting December 31, 2013 for submittal of the GMP application and revised RAP.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

- In December 2013 ENGI submitted a request to revise the RAP. The purpose of the request was to summarize activities conducted since submittal of the 2013 Supplemental Investigation Report and to propose a revision to the approved RAP for the area on site known as "Holder # 2."

- The RAP submitted in 2005 selected asphalt capping in the area of Holder #2. The entire area of the Holder was not designated to be capped with asphalt. At the time of the preparation of the RAP, separate phase NAPL was not considered to be present in recoverable quantities in Holder #2. In order to address what appears to be a limited area and quantity of NAPL in a monitoring well in Holder #2, continued manual NAPL recovery from two additional wells in the Holder #2 area was proposed as part of the GMP monitoring program.

- In addition to the NAPL recovery activity, the area of asphalt capping was proposed to be expanded to include all of former Holder #2. This expansion of paving will also address the asbestos contaminated material (ACM) present in this area of the site. The asphalt cap detail presented in the proposed RAP revision will be modified (as necessary) to address the relevant solid waste regulations for ACM in soil.

- On June 4, 2014, the NHDES approved of the requested RAP revision and required that a RAP Summary Report, with the necessary engineering details for the selected remedies, be provided. ENGI plans to submit this RAP Summary Report by December 31, 2014.

- The GMP Application was submitted in March 2014. The GMP proposed a list of monitoring wells and analytical methods in order to monitor the Groundwater Management Zone.

- On June 5, 2014, the NHDES approved the GMP application. This Permit was issued for a period of 5 years requiring the monitoring of groundwater quality, assessing and recovering any free product found, and visually inspecting the Nashua River sediment cap area. During the first year of the Permit, monitoring events will be conducted in October 2014 and April 2015, and each successive April and October. Annual summary reports are submitted to the NHDES in January of each year.

- The first groundwater monitoring annual summary report was submitted to NHDES in February 2015, and included the groundwater data from the first GMP round of sampling on October 27, 2014.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

- ENGI submitted the draft Activity and Use Restriction (AUR) and RAP Engineering Design details for the cap on September 14, 2015. ENGI received comments from NHDES on December 15, 2016. NHDES altered the design to include an impermeable capping layer, and incorporation of standards in the Waste Management Bureau's Asbestos Disposal Site rules. As ENGI is planning to pave the Nashua property in 2018, the cap will be installed in conjunction with this capital project.

- During 2017, NHDES required active hazardous waste sites managed by the NHDES Hazardous Waste Remediation Bureau to include Per- and Polyfluoroalkyl Substances (PFAS) in one of their sampling rounds.

- The capping remedy was planned for 2018 in conjunction with an overall paving of the property, however a portion of the City's sewer pipe that transects the property collapsed in early February 2018 prompting the City to plan a lining upgrade to it during summer 2018. This event has caused the remedy construction to be pushed out to 2019.

5. NEW HAMPSHIRE SITE REMEDIATION PROGRAM PHASE: All Supplemental Phase II Site Investigation Work that could be performed (based on property access) has been completed. Phase II Report was submitted to NHDES in February 2003, and approved by NHDES on August 28, 2003. Remediation of the Nashua River sediments was completed in the fall of 2004. A Remedial Action Plan (RAP) for the upland and groundwater was submitted in October 2005, and approved by NHDES in March 2006. DNAPL recovery is on-going. A Groundwater Management Permit was granted on June 5, 2014. A RAP Summary, involving the asphalt capping of the area over Holder #2 and continued groundwater monitoring, was submitted on April 2, 2015. A Monitoring Summary and Progress Report was submitted by ENGI on February 7, 2015. NHDES accepted the RAP Summary on April 10, 2015, with the provisions that ENGI submit the draft Activity and Use Restriction (AUR) and final engineering design plan for the cap by September 15, 2015. ENGI submitted the draft Activity and Use Restriction (AUR) and RAP Engineering Design details for the cap on September 14, 2015. NHDES responded to ENGI with their comments on December 15, 2016. Design for the engineered cap remedy is progressing, and when the design is completed it will be submitted to NHDES for approval. The cap construction and site paving are now planned for 2019 construction season.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: The Nashua Gas Light Company built the original coal gas facility in 1852 or 1853. In 1889, the Nashua Gas Light Company merged with the Nashua Electric Company to form the Nashua Light, Heat and Power Company (NHLPC). In 1914, the NLHPC merged with the Manchester Traction Light & Power Company, and PSNH acquired the facility in 1926. The MGP facility was upgraded and expanded. In 1945, PSNH divested the gas operations to Gas Service, Inc. Gas production was eliminated in 1952 when natural gas was supplied to the city via pipeline. In 1981, Gas Service, Inc. merged with Manchester Gas Company to form ENGI. ENGI currently owns the majority of the former gas plant property.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: The EPA made a claim against ENGI and PSNH related to the so-called Nashua River Asbestos Site located adjacent to the former MGP. EPA was removing asbestos from the Nashua River, when some was found to be mixed with wastes allegedly from the MGP. Without admitting any facts or liability, by agreement effective December 21, 2000, ENGI resolved EPA's claim in exchange for a payment of $387,371.46, plus interest accrued between settlement and final approval of an administrative consent order by EPA.

   ENGI and PSNH have entered into a confidential Site Responsibility and Indemnity Agreement effective as of September 15, 2000, which governs the financial and decision-making responsibilities of the two companies through the remainder of site study and remediation. Under this agreement, ENGI will take the lead on site investigation and remediation.

   Numerous, confidential insurance settlements have been entered into. A jury trial commenced against the London Market Insurers and Century Indemnity on November 1, 2005. On November 14, 2005, the jury returned a verdict in favor of EnergyNorth finding that the defendants were obligated to indemnify EnergyNorth for response costs incurred at the site. The Court then awarded ENGI its reasonable costs and attorneys fees to be paid by the defendants. Subsequent to the verdict, the London Market and ENGI entered into a confidential settlement. Century appealed to the First Circuit Court of Appeals in the summer of 2006. However, on the day its brief was due at the First Circuit, Century withdrew its appeal. Because the site has not yet been remediated, the jury was not asked to make a damage determination. Future proceedings will take place after the remedy has been approved by the NHDES to determine the indemnification amounts to be paid by Century. The New Hampshire Supreme Court's ruling and guidance on the proper manner in which costs are to be allocated among insurers (discussed in more detail in the Manchester MGP summary) will be used in the calculation of that figure.

1. SITE LOCATION: 130 Elm Street, Manchester, New Hampshire.

2. DATE SITE WAS FIRST INVESTIGATED: The New Hampshire Department of Environmental Services (NHDES) compiled a list of all former Manufactured Gas Plants (MGPs) in New Hampshire that were not already subject to a site investigation or remediation. In March of 2000, NHDES sent out notice letters to all parties it deemed responsible for the sites. EnergyNorth Natural Gas, Inc. (ENGI) received a "Notification of Site Listing and Request for Site Investigation" for the former Manchester MGP from NHDES, which designated the site DES #200003011.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the former MGP have been identified at the site. These residuals, which include tars and oils, have been found mainly in subsurface soil at discrete locations and in groundwater at the former MGP, as well as in the downgradient Singer Park and river sediment.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES:

   - On behalf of ENGI, Harding ESE, Inc. (Harding ESE), submitted a Scoping Phase Field Investigation Scope of Work to NHDES in March 2000.

   - NHDES approved the Scoping Phase Field Investigation Scope of Work in June 2000.

   - During the summer and fall of 2000, ENGI and Harding ESE conducted the Scoping Phase Field Investigation, collecting site background information and soil, groundwater, surface water and sediment samples from the former Manchester MGP and the nearby Merrimack River.

   - On August 31, 2000, an underground tank containing MGP residuals was discovered at the site. As required by NHDES regulations, the tank contents were removed and disposed of subject to a permit from NHDES. Harding ESE, on behalf of ENGI, submitted a summary report to NHDES in January 2001 documenting the response action.

   - ENGI and Harding ESE submitted the Scoping Phase Field Investigation Report to NHDES in February 2001.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

- NHDES provided comments to ENGI and Harding ESE in April 2001 on the Scoping Phase Field Investigation Report and requested a Phase II Investigation Scope of Work.

- ENGI responded to NHDES' comments on the Scoping Phase Investigation Report and indicated that ENGI planned to solicit bids for the Phase II Scope of Work.

- In July 2001, on behalf of ENGI, Harding ESE submitted a Scope of Work to NHDES to fence the ravine near the former Manchester MGP to prevent access to impacted sediments. In October 2001, NHDES accepted ENGI's fence installation plan, but requested clarification on the fence location and signage. In correspondence dated April 3, 2002, ENGI provided proposed language to NHDES for the signs to be attached to the ravine fence. NHDES approved the ravine sign language in April 2002.

- On May 1, 2002, ENGI issued a Request for Proposals to eight environmental consultants for the Phase II Site Investigation and Risk Characterization. ENGI received six proposals for the Phase II work in June 2002.

- In June 2002, the City of Manchester approved the ravine fence location and granted access to City property to install. The work was completed in August 2002.

- URS Consultants were awarded the contract to undertake the next phase of work. A Phase II Site Investigation Scope of Work was submitted in September 2002.

- Phase II field investigations began in the fall of 2002.

- In June 2003, the City of Manchester approved a proposal to construct a minor league ballpark, retail shops, parking garage, hotel and high-rise condominium complex on the Singer Park site, in the same general areas that MGP impacts were detected in ongoing Phase II investigations. Following supplemental ravine investigations during the spring and summer of 2003, the Drainage Ravine Engineering Evaluation was submitted to NHDES in January 2004, and presented four potential remedial alternatives for the ravine, which is located on a portion of Singer Park.

- ENGI had been a regular participant in monthly Singer Park redevelopment meetings with NHDES, the City of Manchester and the various developers from April 2003 until the regular meetings ended on November 15, 2004. ENGI had

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

attended these coordination meetings to ensure that the environmental and construction aspects of the redevelopment were being addressed concurrently and that ENGI avoided incurring costs associated with another entity's contamination.

- ENGI entered into confidential agreements with Manchester Parkside Place (the owner of the ravine property) for access and cleanup of MGP byproducts in the ravine in January 2005.

- In January 2005, ENGI submitted a Remedial Design Report to NHDES selecting excavation and off-site disposal of source material and impacted soils as the remedial alternative for the ravine. NHDES approved of this alternative via a letter dated February 7, 2005. Eleven contractors were invited to bid on the ravine remediation in January 2005. The contract was awarded to the low bidder (ENTACT) in February 2005. Remediation of the ravine began in March and was completed in July 2005. A remedial completion report was submitted to NHDES on September 2, 2005.

- ENGI submitted a Phase II Site Investigation Report to NHDES in March 2004. The report concluded that MGP impacts (including impacted soil and groundwater and separate phase coal tar) were present in the subsurface beneath the 130 Elm Street property, portions of Singer Park at depth and the Merrimack River sediment. Further investigations were recommended by ENGI to further assess the nature and extent of this contamination and a work plan proposing those investigations was submitted to NHDES in May 2004 and approved in July 2004. These supplemental investigations were completed and documented in the Supplemental Phase II Investigation Report and the Stage I Ecological Screening Report for the Merrimack River, submitted to NHDES in February and March 2005, respectively. The reports concluded that Remedial Action Plans for the upland and Merrimack River portions of the site were required. On September 15, 2005, NHDES issued a letter accepting the reports and requested ENGI prepare a Remedial Action Plan (RAP) to address impacted sediments in the Merrimack River, as well as MGP-related impacts on the upland portion of the site. Preparation of the RAPs began in August 2006.

- Additional Merrimack River investigations were completed in 2007 and the Remedial Design Report for dredging approximately 9,000 cubic yards of coal tar-impacted sediments from the river was submitted to NHDES on May 11, 2007. ENGI applied for, and was granted, a Dredge and Fill Permit for the remedial dredging from NHDES and the United States Army Corps of Engineers on May 18, 2007. Dredging of the river commenced in June 2007 and was substantially completed by the end of the year. Final site restoration activities associated with

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

the sediment remediation were complete in May 2008. A Remedial Action Implementation Report documenting the sediment remediation activities was submitted to NHDES in May 2008.

- Certain pre-design investigations were completed on the upland portion of the site in 2008/2009. ENGI also completed interim Phase I Corrective Actions at the site, including pilot scale light non-aqueous phase liquid (LNAPL) recovery, pilot scale dense non-aqueous phase (DNAPL) recovery, and design for repair/replacement of a deteriorated portion of the site drainage system located within a known LNAPL area of the site. Limited surface soil removal activities were conducted during the summer/fall of 2008 in an area with detected Upper Concentration Limit exceedences in shallow soils.

- ENGI was issued a Groundwater Management Zone (GMZ) permit No. GWP-200003011-M-001 for the former MGP site on June 15, 2009. The permit establishes a groundwater management zone in the vicinity of the former MGP site with associated notification/groundwater monitoring requirements. Groundwater monitoring events to support this GMZ permit have been ongoing, every April and October.

- ENGI submitted an RAP for the upland portion of the site to NHDES on June 30, 2010. The remedial objectives for the site include control of mobile DNAPL, reduction in contaminant mass (where practicable), and management of residual contamination through the use of administrative controls. The recommended remedial alternative includes removal of the contents of certain subsurface structures where removal is anticipated to provide a reduction in the potential for the further release of DNAPL to the subsurface; NAPL recovery from the subsurface; construction of a barrier wall proximate to the Merrimack River to mitigate potential DNAPL migration; and use of administrative controls to address potential human exposure to residual soil and groundwater contamination. Additional investigation activities were recommended to support the preparation of Design Plans and Construction Specifications following NHDES approval of the RAP and to confirm the appropriateness of certain remedial alternatives recommended in the RAP.

- In Fall 2010, ENGI performed storm drain rehabilitation activities on a deteriorated portion of the site drainage system that is located within a known LNAPL area. This work was performed to mitigate the migration of LNAPL to the Merrimack River via the storm drain system. These activities were mainly completed in late 2010.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

- In April 2011, NHDES approved of the upland RAP and requested that ENGI proceed with the additional investigation activities recommended in the June 2010 RAP. In addition, ENGI was contacted by both the developer and condominium association associated with the property directly downgradient of the site regarding potential impacts to the property, as well as the proposed remedy; ENGI met with both parties in early and mid-2011.

- After meeting with the developer of the property directly downgradient of the site at the potential location of the barrier wall regarding potential impacts to the property in September/October 2011, access was obtained to conduct certain approved pre-design off-site investigation activities as recommended in the June 2010 RAP. The off-property investigations were substantially completed in December 2011. A meeting was held with NHDES in December 2011 to discuss the results. A Remedial Design Report for the off-site property is currently being finalized.

- On-site pre-design investigation activities were conducted during the spring and summer of 2012 including: additional groundwater quality monitoring, former gas holder foundation test pit excavations, supplemental LNAPL delineation, cyanide source investigation test pit excavations, cyanide delineation and source investigation monitoring well installation, and storm drain inspection.

- Further storm drain inspections occurred during July and August 2013. The remedial design and construction specifications report was drafted including a summary of the design investigation activities and findings. The remedial design includes the monitoring and practicable recovery of NAPL at strategic on-site and off-site locations, as well as excavation of subsurface structures with concurrent source removal if encountered. The Remedial Design Report also summarizes the results of cyanide source investigation and delineation work, with further source delineation work anticipated. In addition to routine Groundwater Management Permit (GMP) sampling and reporting, an application for GMP renewal was also submitted to NHDES during June 2014. The Remedial Design Report was submitted to NHDES on December 19, 2014. On July 15, 2015, NHDES accepted the proposed remedial design with exceptions involving further remediation of historical Holder 3, and further investigation of the storm drain system beneath and downstream of the site. ENGI responded to NHDES' comments and requests on May 12, 2017.

- ENGI removed material from a tar-separator and other subsurface structures, installed three new monitoring wells and an extraction well on-site, prior to property paving in Fall 2017. Further removals from subsurface structures are planned for 2018.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.

MANCHESTER FORMER MGP

LINE
NO.

- During 2017, NHDES required active hazardous waste sites managed by the NHDES Hazardous Waste Remediation Bureau to include Per- and Polyfluoroalkyl Substances (PFAS) in one of their sampling rounds.

5. NEW HAMPSHIRE SITE REMEDIATION PHASE: Phase I Site Investigation complete. Phase II Site Investigation complete and supplemental report submitted to NHDES in February 2005. Remedial Action Plan (RAP) for the ravine submitted and approved by NHDES in 2005; remediation of ravine completed in July 2005. Remediation of the river sediment was completed in 2007. A RAP for the upland portion of the site was submitted to NHDES for review on June 30, 2010. NHDES issued its approval of the RAP for the upland portion of the site in a letter dated April 11, 2011. The Remedial Design Report summarizing the activities for addressing on-site and off-site impacts was submitted on December 19, 2014. On July 15, 2015, NHDES accepted the proposed remedial design with exceptions. ENGI addressed these concerns and implemented the remedial activities on-site and off-site in 2017.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: The former Manchester MGP is believed to have started producing coal gas in 1852. Gas was produced at the site by the Manchester Gas Company and its predecessors until the MGP was shut down in 1952 when natural gas was supplied to the city via pipeline. ENGI is the successor by merger to the Manchester Gas Company. ENGI continues to own and operate the 130 Elm Street property as an operations center.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: In late 2000, ENGI filed suit against UGI Utilities, Inc. in the United States District Court for the District of New Hampshire, alleging that during much of the early part of the 20th century, a predecessor to that entity “operated” the Manchester Gas Plant, as defined by the Comprehensive Environmental Response, Compensation and Liability Act (commonly referred to as “CERCLA” or “Superfund”). This claim was similar to a claim litigated and ultimately settled by the parties in the late 1990s, related to the former gas plant in Concord, NH. The case went to trial in June 2003 and was settled after 8 days of trial.

   Insurance recovery efforts are complete, and confidential settlements have been entered into with all insurance company defendants. An agreement with the last remaining insurance carrier was negotiated in August 2008, under which that carrier paid ENGI's attorneys fees incurred in the litigation. That settlement came about after a ruling from the New Hampshire Supreme Court, in response to a question certified by the United States

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

District Court, on allocation of coverage, and the scope and meaning of NH RSA 491:22-a, as it relates to awards of attorneys fees. EnergyNorth Natural Gas, Inc. v. Certain Underwriters at Lloyds, 156 N.H. 333 (2007). As to allocation, the Court ruled as proposed by the carrier that insurance coverage should be allocated on a *pro rata* basis when multiple policies are triggered by an ongoing event. ENGI had argued for an "all sums" allocation approach in which the insured could choose the policy years from which to obtain indemnity. With respect to attorneys fees, the Court held that " [i]f the insured has obtained rulings that require the excess insurer to indemnify it, the insured has prevailed within the meaning of RSA 491:22-b, and is immediately entitled to recover its reasonable attorneys' fees and costs. Recovery of these fees and costs does not depend on whether, after all is said and done; the excess insurer actually has to pay any indemnification. The insured becomes entitled to the fees and costs once it obtains rulings that demonstrate there is coverage under the excess insurance policy." Under that finding, the insurance carrier was obligated to reimburse attorneys fees even if the *pro rata* allocation analysis resulted in the carrier owning no indemnity.

Note: This summary is an overview and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

1. SITE LOCATION: The former MGP was located on Messer Street in Laconia. Sometime in the early 1950s, during decommissioning of the MGP, wastes from the MGP were disposed of at a location on Liberty Hill Road in Gilford. At the time of the disposal, the property was utilized as a gravel pit, and the disposal reportedly occurred with the permission of the gravel pit owner. The property currently comprises part of a residential neighborhood.

2. DATE SITE WAS FIRST INVESTIGATED: In 1994 and 1995, Public Service Company of New Hampshire (PSNH), one of the former owners and operators of the Laconia Manufactured Gas Plant (MGP), conducted limited site investigations at the plant. In 1996, the New Hampshire Department of Environmental Services (NHDES) sent a "Notification of Site Listing and Request for Site Investigation" for the former Laconia MGP to PSNH and its parent company, Northeast Utilities Services Company (NU), and to EnergyNorth Natural Gas, Inc. (ENGI), another former owner. NHDES designated the site DES #199312038. ENGI and PSNH reached a settlement, reported previously to the New Hampshire Public Utilities Commission (NHPUC), in September 1999. As a result of that settlement, PSNH has had responsibility for the MGP site remediation and interactions with NHDES.

   Per the aforementioned settlement, ENGI retained responsibility for any decommissioning-related liabilities, including off-site disposal. Therefore, in October 2004, ENGI notified NHDES of the possibility that wastes from the MGP were disposed of at a location on Liberty Hill Road sometime in the early 1950s during decommissioning of the plant. Drinking water samples were collected from two residential properties in the vicinity in December 2004, and from three additional properties in June and July 2005 by the NHDES; no MGP-related contaminants were detected. At the request of NHDES, ENGI began preliminary site investigations in July 2005 that culminated in the submission of a Site Investigation Report to NHDES in June 2006. As detailed in the report, MGP-related constituents have been detected in soil and shallow groundwater on four residential properties, and in the abutting brook. The report concluded that further investigations were necessary to determine the extent of the contamination. Additional investigation activities were completed between 2006 and 2009.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the former MGP have been identified at the Laconia MGP site and in the adjacent Winnipesaukee River. Please contact PSNH and refer to PSNH filings with NHDES for complete information on the nature and extent of site contamination at the MGP. Residual materials from the former MGP were disposed of at the Liberty Hill disposal area, and MGP-related constituents have been detected in soil and ground water.

**LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES**

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES: Based on the settlement with PSNH that has previously been reported to the Commission, ENGI has had no further involvement with the MGP site since the summer of 1999, except with regard to the Liberty Hill disposal area. Please contact PSNH and refer to PSNH filings with NHDES for complete information on material developments and interactions with environmental authorities.

With respect to the Liberty Hill disposal area, in October 2004, ENGI notified NHDES of the possible existence of this disposal site; the site was assigned disposal site number 200411113 by NHDES. NHDES collected drinking water samples from two residential wells in the vicinity in December 2004 and from three additional residential wells in June and July 2005; no MGP-related contaminants were detected. In January 2005, NHDES requested that ENGI conduct a preliminary site investigation on the two residential properties. ENGI submitted a scope of work for the investigation to NHDES on March 2, 2005. The investigation began in July 2005 and was completed in June 2006 with the submission of the Site Investigation Report.

Additional site investigations were conducted in 2006 and summarized in the December 20, 2006 Interim Data Report #2 submitted to NHDES. Based upon the results of the investigations, remediation is required at the site. In response, a Remedial Action Plan (RAP) was submitted to NHDES on February 28, 2007. The RAP presented NHDES with several remedial alternatives to address soil and groundwater contamination at the site. The February 2007 RAP identified soil excavation (to a depth of 3 feet), construction of a containment wall and impermeable cap on the four residential properties purchased by ENGI as the recommended alternative. In September 2007, NHDES responded to the February 2007 RAP and required that ENGI evaluate additional remedial alternatives that included further soil removal. In November 2007, a RAP Addendum was submitted to NHDES. The revised RAP recommended a remedial alternative that included removal of tar-saturated soils to a depth of approximately 45 feet, construction of a containment wall and impermeable cap on the four residential properties owned by ENGI. On February 29, 2008, NHDES issued a letter to ENGI indicating that NHDES had reached a preliminary determination that the remedy recommended in the November 2007 RAP met the NHDES requirements and that a final decision would be reached following a public meeting and comment period.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

On March 24, 2008, NHDES held a public comment meeting to discuss the recommended alternative and began 30-day public comment period. In April 2008, NHDES received a request to extend the public comment period closing date to May 8, 2008, to allow the Town time to provide technical comment. On June 26, 2008, NHDES issued a letter deferring its final decision on the recommended remedial alternative for the Liberty Hill site pending further data analysis following the development of a scope prepared collaboratively between the Town of Gilford and ENGI. In July and August 2008, technical representatives from ENGI, the Town of Gilford, the Liberty Hill neighborhood and NHDES met twice to discuss the comments provided to NHDES during the public comment period and discuss the scope for additional groundwater modeling activities and limited additional site data collection. The Company submitted Scopes of Work for additional data collection and groundwater modeling to NHDES in September and October 2008, respectively. The field activities were completed between November 2008 and January 2009. Modeling efforts began in late 2008 and were completed in May 2009. In March and May 2009, technical representatives from ENGI, the Town of Gilford, the Liberty Hill neighborhood and NHDES met to discuss the results of the field investigations and the modeling activities. One topic discussed with the technical team was that the modelling results indicate that low-flow pumping would need to be added to the selected remedy meet the remedial goals for the site. On June 30, 2009, NHDES issued a letter to ENGI requesting that a second RAP Addendum be prepared for the site to evaluate the technical changes (mainly the addition of low-flow pumping) to the proposed remedy that resulted from the modeling effort. ENGI submitted the second RAP Addendum to NHDES on August 17, 2009 and presented the findings at a public meeting held in Gilford on September 10, 2009. In October 2009, NHDES hired a third party consultant to review the RAP cost estimates and the results were presented in a report to NHDES in April 2010. In October 2010, NHDES issued a Preliminary Decision on RAP Addendum No. 2, in which NHDES indicated that it did not concur with ENGI's recommended remedial alternative and further recommended the complete removal of coal tar-impacted soils at the site. On January 28, 2011, ENGI submitted a comment letter to NHDES further explaining its rationale for the remedial alternative recommended in RAP Addendum No. 2. On November 2, 2011 NHDES announced a Final Decision indicating that it did not concur with ENGI's recommended remedial approach and selecting the full removal option as the remedy for the site. On December 2, 2011, ENGI filed an appeal of the NHDES Final Decision with the New Hampshire Waste Management Council. In March 2012, ENGI attended the Pre-Conference Hearing with the Council related to the appeal. Hearings on the matter were scheduled for October 18 and November 15, 2012. On July 26, 2012, the Hearing Officer granted an Assented to Motion to Continue the hearing until a date after January 3, 2013.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

During the period of time the appeal was subject to the continuance, the company, the New Hampshire Department of Justice and NHDES engaged in settlement discussions on a confidential basis. At the conclusion of those negotiations, NHDES and the company agreed on a final remedy for the site, which was approved by NHDES. That approval allowed ENGI to withdraw its appeal as of December 19, 2012, and proceed with implementation of the remedy. The town of Gilford was briefed on the agreed-upon remedy concurrently with NHDES approval and ENGI's withdrawal of the appeal.

ENGI has also performed numerous other activities requested by NHDES between 2008 and 2011, including remediation of the groundwater seep area near Jewett Brook in accordance with NHDES-approved September 2008 Initial Response Action Plan; evaluation of options for providing financial assurances to NHDES for the site remediation activities; coal tar recovery; semi-annual groundwater and surface water sampling activities; and drinking water well sampling. Groundwater sampling is reported to the NHDES in semi-annual reports. In addition, ENGI developed a Liberty Hill Road site website to assist in updating interested parties.

In conjunction with the Site Investigation work, ENGI has acquired 4 properties on Liberty Hill Road to facilitate remediation activities, and eliminate any potential risk to residents associated with a significant remediation and construction project. The properties were obtained based upon arms-length negotiations, and in one instance to settle potential litigation.

The site was remediated in 2014-2015 construction seasons, and was restored to grass field by December 2015. NHDES approved the Notice of Activity and Use Restriction (AUR) in February 2017. In May 2017, ENGI received the post-construction groundwater monitoring permit, involving annual groundwater sampling.

5. NEW HAMPSHIRE SITE REMEDIATION PROGRAM PHASE: On December 10, 2012, ENGI submitted a Conceptual Remedial Design Report to NHDES describing the approach for full removal. NHDES approved this Conceptual RAP Addendum design on December 18, 2012, and ENGI withdrew their appeal before the New Hampshire Waste Management Council on December 19, 2012. A public meeting was held in the Town of Gilford to present the approved Conceptual Remedial Design on January 23, 2013. The pre-design investigation to confirm extent and depth of contamination commenced on February 20, 2013 and was completed first week in April 2013. A public meeting was held on September 25, 2013 to present the design to the Town. The Remedial Design Report was finalized and approved by NHDES in December 2013. Plans and Specifications were developed concurrently, and the bidding process commenced in

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

September 2013 with a Request for Information to ten (10) prospective contractors. On October 28, six (6) contractors were selected to participate in the bidding for the construction, with bids due back on December 6, 2013. On January 9, 2014, three (3) of the bidders were interviewed and Charter Environmental of Boston, MA (the Contractor) was selected for the project. A public meeting took place on February 12, 2014 to further explain details of the anticipated construction and to introduce the project team to the community.

The Contractor mobilized to the site and began set-up in May 2014, with the first load of soil being hauled from the site on June 6, 2014. Construction began to remove tar-impacted soil on the south side of the site in the first season, with little to no impact to the surrounding community. In 2014, approximately 65% of the impacted soil was removed for treatment. On April 8, 2015, ENGI presented the results of the first season of construction at a Gilford Town Select Board meeting, and presented expectations for the second season to the community. Starting on April 13, 2015, the north side of the site was remediated, with the removal of all tar-impacted soil completed on August 3, 2015. The entire project was completed on September 24, 2015 with 2,662 truckloads hauling 93,502 tons of tar-impacted soil removed for thermal treatment. Some additional site restoration work was needed in October 2015 and another seeding in April 2016 to repair damage to the original restoration caused by a heavy rainstorm that occurred on September 30, 2015. Throughout the course of the project there was no disruption to the neighboring community and no safety incidents, logging 26,975 safe working hours. The project was completed within budget parameters.

The only activities on this site during the past year and ongoing are mowing and groundwater and surface sampling, per the new post-remedial Ground Water Management Permit received on May 10, 2017. During 2017, NHDES required active hazardous waste sites managed by the NHDES Hazardous Waste Remediation Bureau to include Per- and Polyfluoroalkyl Substances (PFAS) in one of their sampling rounds.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: ENGI is the successor by merger to Gas Service, Inc. (GSI). In 1945, GSI acquired the gas manufacturing assets of PSNH. The Laconia MGP, which began operating in 1894, was included in that transaction. Gas manufacturing took place at the property until 1952, when the MGP was converted to propane. Half of the property is now owned by Robert Irwin and maintained as an open field, and the other half is owned by PSNH, which operates an electric substation on the parcel.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

The Liberty Hill Road parcel on which disposal was believed to have occurred was utilized as a gravel pit at the time of the disposal. It was subdivided in May 1970, and currently constitutes part of a residential subdivision.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: ENGI and PSNH entered into a confidential settlement in 1999. Under this agreement, PSNH took the lead on the MGP site investigation and remediation and all communications with NHDES. ENGI retained responsibility for any decommissioning-related liabilities, including off-site disposal.

Insurance recovery efforts are complete with respect to the MGP, and numerous confidential settlements have been entered into. In 2003 the United States District Court certified a question to the New Hampshire Supreme Court asking what “trigger of coverage” should be applied to the insurance policies issued by Lloyds of London to ENGI’s predecessor, Gas Service, Inc. In May, 2004 the Supreme Court responded that a “continuous injury-in-fact” trigger should be applied. The federal court conducted a jury trial against Lloyds of London - the only remaining defendant – in October 5, 2004. At the end of that trial the jury returned a verdict in favor of ENGI. Subsequent to the verdict, ENGI and Lloyds of London entered into a confidential settlement.

With respect to Liberty Hill, insurance carriers have been placed on notice of a potential claim, but no litigation has been initiated. The Company does not expect to pursue any insurance litigation.

Note: This summary is an overview only and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

LIBERTYUTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

CONCORD FORMER MGP

LINE
NO.

1. SITE LOCATION: One Gas Street, Concord, New Hampshire.

2. DATE SITE WAS FIRST INVESTIGATED: EnergyNorth Natural Gas, Inc. (ENGI) received a Notice Letter from the New Hampshire Department of Environmental Services (NHDES) in September 1992. The Notice related primarily to contamination identified in the pond adjacent to Exit 13 off Interstate 93, although it was broad enough to also include the former manufactured gas plant (MGP) site itself.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the historic operation of the MGP were discovered in the area of the Exit 13 pond, as the NHDOT began site preparation work for the reconfiguration of that interchange. Subsequent investigations by ENGI and others indicate that contaminants originating from the MGP on Gas Street are present in soil and groundwater between the MGP and the Merrimack River, including within the Exit 13 pond.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES:

   Concord MGP: The New Hampshire Department of Transportation (NHDOT) contacted ENGI in August 2001 and February 2002 regarding possible coal tar-related impacts in a sewer line on a parcel adjacent to the former gas plant. NHDOT is currently conducting groundwater monitoring as part of a Groundwater Management Zone Permit on this parcel. ENGI met with NHDOT and NHDES in January 2003 to review the results of its 2002 site investigation. Limited coal tar impacts were observed in groundwater and subsurface soils at select locations.

   On July 15, 2003, NHDES issued a letter to ENGI requesting submission of a schedule and scope of work for a site investigation of the MGP site by mid-September 2003. ENGI proposed a May 2005 date for submission of a Site Investigation Report for the MGP site on Gas Street to NHDES by way of a letter dated October 6, 2003. NHDES agreed to the proposed schedule in their response letter dated October 31, 2003.

   ENGI submitted the work plan for the MGP site investigation to NHDES on May 20, 2004. NHDES accepted the work plan on June 16, 2004. The investigation took place between September 2004 and March 2005, and the Site Investigation Report was submitted to NHDES on June 6, 2005. The report indicated that subsurface impacts are present at the MGP, and additional investigation as well as limited remediation will

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

CONCORD FORMER MGP

LINE
NO.

be required. NHDES accepted the report on August 12, 2005, and requested ENGI submit a supplemental scope of work to complete the delineation of MGP-related impacts on and off Site. The document was submitted in November 2005. Site investigation activities at and downgradient of the MGP were conducted in 2006. ENGI submitted an additional supplemental scope of work to further delineate MGP impacts on May 31, 2007 and NHDES subsequently approved the scope on June 5, 2007. ENGI bid the NHDES-approved scope of work in June 2008 and awarded the contract in late July 2008. ENGI met with NHDES at the site in August 2008 to discuss the additional supplemental site investigation activities. The field work took place during October through December 2008, during which time 8 groundwater monitoring wells were installed at 4 off-site locations. The Additional Supplemental Site Investigation Report was submitted to NHDES in September 2009. ENGI met with NHDES to discuss the report findings and strategy for moving forward in October 2009. NHDES issued an approval letter for the Supplemental Site Investigation Report on February 9, 2010. The correspondence approved the report and requested that certain additional activities be completed by ENGI. These requested activities include the following: a) preparation and submission of an Initial Response Action Work Plan to remove approximately 3,500 gallons of liquid and sludge from historic subsurface drip pots and tar wells at the MGP property on Gas Street; b) evaluation of the groundwater conditions in the vicinity of the “Tar Pond” which is depicted on a referenced NHDOT site plan; and c) evaluation of potential indoor air impacts at select locations identified during the additional SSI work.

ENGI submitted the Initial Response Work Plan to NHDES in July 2010 to remove approximately 3,500 gallons of liquid and sludge from historic subsurface drip pots. NHDES issued an approval letter for this Work Plan on August 3, 2010 and the work was completed in June 2011. In addition, ENGI submitted a Supplemental Data Collection Work Plan for the additional off-ENGI-owned property investigation activities (items b and c above) to NHDES in August 2010. NHDES approved of the Work Plan on September 16, 2010. ENGI obtained access to 4 properties in the vicinity of the site in order to conduct the supplemental investigation activities, which included soil, ground water and soil vapor sampling, along with further investigation of the brick tar sewer. ENGI submitted a revised Work Plan with revised sampling locations to NHDES in November 2011; the revision was necessary because site access was not granted by the property owners for some of the originally proposed locations. The investigation work was completed in July 2012, and summarized in a Supplement Data Collection Report that was submitted in August 2013, in preparation for submittal of the Remedial Action Plan. This Supplement Data Collection Report was accepted by NHDES on October 24, 2013, and ENGI was authorized to prepare a RAP and Groundwater Management Permit (GMP) application. The GMP application was submitted on September 4, 2014, and the permit was received on December 1, 2014.

CONCORD FORMER MGP

LINE
NO.

On June 16, 2013, wind during a thunderstorm caused a tree to fall on the northern side of the roof of the Holder House located on the former Concord MGP property. Damage to the slate roof and brick was sustained. In a letter dated February 24, 2014 NHDES stated that the holder structure "…serves as a physical barrier to prevent infiltration of precipitation into the foundation and thereby limits the amount of MGP byproducts that may be released to the environment." ENGI has evaluated damage to the roof and structure of the holder, and will be using this information to determine whether the holder will be restored or razed.

On March 31, 2015, ENGI submitted a proposed Remedial Action Plan involving removal of shallow soils displaying MGP-related residual impacts, investigation and remediation of remaining known subsurface structures, capping of components of the local storm water drainage system, site capping design, and continued monitoring of groundwater on the site. NHDES approved the RAP on May 29, 2015, with the condition that roof of the brick gas holder either be restored, or the holder be razed and the soils beneath it remediated. Soil vapor monitoring; soil vapor probe installation; and remedial design investigations including subsurface structure location and inspection, shallow tar-saturated soil delineation, and site storm drain system inspections, as approved by the RAP, were performed in December 2015. A Remedial Design Report (RDR) was submitted to NHDES on March 16, 2016 summarizing the above remedial design investigations. The remediation activities, required to be completed prior to site capping, include tar-impacted material removals and plugging of the on-site drain system, took place in 2017.

In early 2016 ENGI was approached by a commercial developer who was interested in purchasing the property and repurposing the holder house structure. Several site meetings and productive conversations took place with the developer. If the property is transferred, the purchaser's future use design would be taken into account when the final design of the engineered cap is being developed. This site developer has not contacted ENGI since the fall of 2017, and appears to have lost interest in the redevelopment project.

Concord Pond: ENGI has continued to monitor groundwater semi-annually at the Exit 13 pond, in May and November, as required by the Groundwater Management Zone Permit that was issued in 1999 as part of the overall remedy following the remediation of the southern end of the Exit 13 pond. The permit was renewed in 2003, 2007 and 2012, and NHDES specified semiannual collection of surface water samples from the pond as an additional condition of the permit.

When the Exit 13 pond was remediated in 1999, NHDES required that the northern portion remained untouched, allowing for storm water input to the pond, with the knowledge that some contamination remained and may require remediation in the

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.

CONCORD FORMER MGP

LINE
NO.

future. In 2006, NHDES requested ENGI address the residual contamination in the pond, and in response, ENGI submitted an Interim Data Collection Report and Scope of Work in May 2006, which was approved in July 2006. This Scope of Work was implemented in 2006 and the results were to be used to prepare the Remedial Action Plan (RAP) which NHDES requested be submitted by August 31, 2006. In July 2006, NHDES extended the deadline for submittal of the RAP to June 30, 2007, to allow ENGI additional time for data collection and design. ENGI submitted an Interim Data Collection Report to NHDES in September 2006, and a Conceptual Remedial Design in March 2007. On March 25, 2009, ENGI submitted a Presumptive Remedy Approval Request to NHDES, in order to allow for the design and implementation of an engineered cap without the need to prepare a RAP. On May 4, 2009, NHDES granted the Presumptive Remedy Approval, and the project moved into the remedial design phase.

The proposed remedial work is to be performed on city-owned land and within a NHDOT right-of-way; therefore ENGI is working with these parties to come to agreement on the design features, negotiate access and clarify the responsibilities of the three parties. In April 2010, ENGI met with representatives from NHDES, the City of Concord, and NHDOT to present the proposed remedy, and ENGI submitted the draft design plans to the parties in June 2010. ENGI met with the regulatory permitting agencies in October 2010. The agencies requested that ENGI modify the remedial design to include an upland cap versus a wetland cap to minimize the impacts of the project. The cap was redesigned and ENGI met with the stakeholders in December 2010. At a subsequent meeting in January 2011, the City of Concord requested that the design be further modified to relocate the City's storm water outfall location.

ENGI met with the City in March 2011 to present the feasibility evaluation that was conducted for several alternatives, and concluded that the original design was the appropriate design. Contact was reconvened with the City in 2013, and adjustments to the original design were made to address outfall maintenance and access concerns of the City and NHDOT, respectively. The design was presented to the City on January 26, 2016. A rigorous schedule toward construction in late summer 2017 was agreed to by ENGI and the City in February 2016. The City did not meet an early deadline to determine and communicate details regarding access to their storm water system. Communication was again resumed in July 2016 by the City, however the City remained unresponsive to ENGI on implementation of the joint remedial design.

In March 2018, discussions with the new City Engineer took place and the City's engagement level has increased to come to a design solution on outfall maintenance. These discussions are frequent and ongoing.

Semiannual groundwater monitoring at the pond is ongoing, as is recovery of separate phase coal tar from a monitoring well in the vicinity of the pond. During 2017, NHDES required active hazardous waste sites managed by the NHDES Hazardous Waste

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.

Remediation Bureau to include Per- and Polyfluoroalkyl Substances (PFAS) in one of their sampling rounds.

During May 19, 2009 through May 22, 2009, ENGI implemented a NHDES-approved sediment sampling program in the Merrimack River to evaluate potential MGP-related impacts. ENGI met with NHDES in October 2009 to present the results of the sediment investigation, and submitted the sediment sampling data report to NHDES in October 2009. The investigation indicated limited site-related impacts to the shallow near-shore sediments of the Merrimack River. Based upon the results of the sediment investigation, it is unlikely that remedial actions will be necessary in the river. ENGI met with NHDES on February 20, 2013 to discuss all sampling activities to date, summarized in an SIR Addendum Report, submitted in June 2013.

In May 2016, ENGI submitted a proposed plan for monitoring the near-bank sediments to the pond area in the Merrimack River. After discussions regarding frequency, duration of the Monitored Natural Recovery (MNR) program, and methodologies to be used in determining the contaminant trending in the river sediment, NHDES approved a revised MNR Plan in a letter dated July 2017. The 5-year sampling plan began in 2017 with the first of 5 annual samplings.

5. NEW HAMPSHIRE SITE REMEDIATION PROGRAM PHASE:

Concord MGP: In July 2003, NHDES requested that ENGI submit a schedule and scope of work for completion of a site investigation of the MGP site. ENGI submitted the scope to NHDES in May 2004 and implemented the work between September 2004 and March 2005. The results of the investigation were documented in the Site Investigation Report, dated June 6, 2005, which was subsequently approved by NHDES. Supplemental investigation activities were performed in 2006. Additional investigation activities were performed in 2008. The additional SSI report was submitted to NHDES in September 2009. In addition, ENGI submitted the Initial Response Work Plan to NHDES in July 2010 to remove approximately 3,500 gallons of liquid and sludge from historic subsurface drip pots. NHDES issued an approval letter for this Work Plan on August 3, 2010 and the work was completed in June 2011. The Supplemental Data Collection report summarizing the investigation activities was accepted in October 2013, authorizing ENGI to prepare a RAP and GMP Application. The GMP application was submitted on September 4, 2014, and the permit was received on December 1, 2014. On March 31, 2015, ENGI submitted a proposed RAP, and NHDES approved the RAP with conditions. A Remedial Design Report, summarizing pre-design investigations, is to be provided to NHDES by the end of 2015.

Concord Pond: ENGI submitted an application for a five-year Groundwater Management Zone Permit to the NHDES in April 2002 for the Exit 13 pond. The permit

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

CONCORD FORMER MGP

LINE
NO.

was renewed in October 2007, with the collection of pond surface water samples as an additional condition. Under that permit, groundwater monitoring is expected to be required for the foreseeable future. In addition, as requested by NHDES, ENGI undertook a review of remedial technologies to address the residual contamination remaining in the pond. A conceptual remedial design was submitted to NHDES in March 2007, a Presumptive Remedy Approval was granted by NHDES in May 2009, and the engineered cap design has been drafted. The work will be undertaken pending agreement between the City, NHDOT and ENGI. ENGI met with these parties on several occasions in 2010 and 2011. The Company reinitiated discussion with the City in July 2014 regarding access to the site to implement the approved design of the wetland cap. The design was adjusted to accommodate the City's desire to simplify maintenance of the storm water system, however ENGI has received no response from the City after numerous attempts to begin the implementation

A renewal application for the Groundwater Management Permit was submitted on July 20, 2012, and the renewed permit was granted by NHDES on December 11, 2012. Groundwater and surface water monitoring continues under this permit every May and November.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: The Concord MGP operated from approximately 1850 to 1952, when the natural gas pipeline was extended to Concord. The plant was constructed and operated by predecessors of the Concord Gas Company, which later became known as the Concord Natural Gas Company. By virtue of a merger, ENGI acquired Concord Natural Gas. As has been reported previously by ENGI, it filed a contribution claim in the United States District Court for the District of New Hampshire against the successor to the United Gas Improvement Company. In that claim, ENGI alleged that under the federal Superfund statute, the United Gas Improvement Company exercised control over the operations of the Concord Gas Plant to the extent that the United Gas Improvement Company should be considered an "operator" under the statute. That matter was settled in 1997.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: Numerous confidential settlements with insurance carriers and with one private party have been entered into. *Insurance recovery efforts at the Concord Site are complete.*

Note: This summary is an overview only and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

* All gas transferred for storage contracts will be based on LDC's monthly WACOG
**All commodity volumes nominated will be invoiced at LDC's WACOG + fuel retention   Demand charge applicable for 6 months

Note **All capacity will be released at maximum tariff rates. Above rates are maximum tariff rates effective 11/01/18. Because rates can change, please refer to the applicable pipeline tariff for current rates.**

Above capacity is for all customers in the EnergyNorth Service territory with the exception of Berlin, NH. Any customers behind the Berlin citygate will be allocated 100% PNGTS capacity at a demand rate of $18.2633 /dth.

Docket No. DG 19-XXX

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities
Winter 2019/2020 Cost of Gas Filing
Summer 2020 Cost of Gas Filing

DIRECT TESTIMONY

OF

DAVID B. SIMEK

AND

CATHERINE A. MCNAMARA

September 3, 2019

THIS PAGE INTENTIONALLY LEFT BLANK

I. INTRODUCTION

Q. Please state your full name and business address.

A. (DS) My name is David B. Simek. My business address is 15 Buttrick Road, Londonderry, New Hampshire.

(CM) My name is Catherine A. McNamara. My business address is 15 Buttrick Road, Londonderry, New Hampshire.

Q. Please state by whom you are employed.

A. We are employed by Liberty Utilities Service Corp. ("Liberty"), which provides service to Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities ("EnergyNorth" or the "Company").

Q. Please describe your educational background and your business and professional experience.

A. (DS) I graduated from Ferris State University in 1993 with a Bachelor of Science in Finance. I received a Master's of Science in Finance from Walsh College in 2000. I also received a Master's of Business Administration from Walsh College in 2001. In 2006, I earned a Graduate Certificate in Power Systems Management from Worcester Polytechnic Institute. In August 2013, I joined Liberty as a Utility Analyst and I was promoted to Manager, Rates and Regulatory Affairs in August 2017. Prior to my employment at Liberty, I was employed by NSTAR Electric & Gas ("NSTAR") as a Senior Analyst in Energy Supply from 2008 to 2012. Prior to my position in Energy

Supply at NSTAR, I was a Senior Financial Analyst within the NSTAR Investment Planning group from 2004 to 2008.

(CM) I graduated from the University of Massachusetts, Boston, in 1993 with a Bachelor of Science in Management with a concentration in Accounting. In November 2017, I joined Liberty as an Analyst in Rates and Regulatory Affairs. Prior to my employment at Liberty, I was employed by Eversource as a Senior Analyst in the Investment Planning group from 2015 to 2017. From 2008 to 2015, I was a Supervisor in the Plant Accounting department. Prior to my position in Plant Accounting, I was a Financial Analyst/General Ledger System Administrator within the Accounting group from 2000 to 2008.

Q. Have you previously testified in regulatory proceedings before the New Hampshire Public Utilities Commission (the "Commission")?

A. (DS) Yes. I have testified on numerous occasions before the Commission.

(CM) Yes. I have testified on multiple occasions before the Commission.

Q. What is the purpose of your testimony?

A. The purpose of our testimony is to explain the Company's proposed firm sales cost of gas rates for the 2019/2020 Winter (Peak) Period and the Company's proposed 2019/2020 Local Delivery Adjustment Clause, both effective November 1, 2019. Our testimony also explains the Company's proposed firm sales cost of gas rates for the 2020 Summer (Off-Peak) Period.

II. WINTER 2019/2020 COST OF GAS FACTOR

Q. What are the proposed firm Winter sales and firm transportation cost of gas rates?

A. The Company proposes a firm sales cost of gas rate of $0.6203 per therm for residential customers, $0.6190 per therm for commercial/industrial high winter use customers, and $0.6258 per therm for commercial/industrial low winter use customers as shown on Proposed Sixth Revised Page 92 (Bates 049). The Company proposes a firm transportation cost of gas rate of $0.0009 per therm as shown on Proposed Third Revised Page 94 (Bates 051).

Q. Please explain tariff page and Proposed Sixth Revised Page 92 (Bates 049).

A. Proposed Sixth Revised Page 92 contains the calculation of the 2019/2020 Winter Period Cost of Gas Rate and summarize the Company's forecast of firm gas costs and firm gas sales. As shown on Page 92, the proposed 2019/2020 Average Cost of Gas of $0.6203 per therm is derived by adding the Direct Cost of Gas Rate of $0.5947 per therm to the Indirect Cost of Gas Rate of $0.0256 per therm. The estimated total Anticipated Direct Cost of Gas, derived on Page 92, is $52,211,274. The estimated Indirect Cost of Gas, also derived on Page 92, is $2,251,330. The Direct Cost of Gas Rate of $0.5947 and the Indirect Cost of Gas Rate of $0.0256 are determined by dividing each of these total cost figures by the projected winter period firm sales volumes of 87,788,508 therms.

To calculate the total Anticipated Direct Cost of Gas, the Company adds a list of allowable adjustments from deferred gas cost accounts to the projected demand and commodity costs for the winter period supply portfolio. These allowable adjustments, shown on Page 92.1 (Bates 050), total $275,601. These adjustments are added to the Unadjusted Anticipated Cost of Gas of $51,935,672 to determine the Total Anticipated Direct Cost of Gas of $52,211,274.

Q. What are the components of the Unadjusted Anticipated Cost of Gas?

A. The Unadjusted Anticipated Cost of Gas shown on Proposed Original Page 92.1 consists of the following components:

1.	Purchased Gas Demand Costs	$10,157,458
2.	Purchased Gas Commodity Costs	34,260,417
3.	Storage Demand and Capacity Costs	902,742
4.	Storage Commodity Costs	4,281,375
5.	Produced Gas Cost	2,333,680
	Total	$51,935,672

Q. What are the components of the allowable adjustments to the Cost of Gas?

A. The allowable adjustments to gas costs, listed on Proposed Original Page 92.1, are as follows:

1.	Deferred Gas Cost Prior Period Under Collection	$1,912,210
2.	Interest	(81,952)
3.	Fuel Inventory Revenue Requirement	351,641
4.	Broker Revenues	(30,924)
5.	Transportation COG Revenue	(44,891)
6.	Capacity Release Margin	(1,875,483)
7.	Fixed Price Administrative Cost	45,000
	Total Adjustments	$275,601

These allowable adjustments are standard adjustments made to the deferred gas cost balance through the operation of the Company's cost of gas adjustment clause. We discuss the factors contributing to the prior period under collection later in this testimony.

Q. How does the proposed average cost of gas rate in this filing compare to the average cost of gas rate approved by the Commission in Docket No. DG 18-137 for the 2018/2019 Winter Period?

A. The average cost of gas rate proposed in this filing of $0.6203 per therm is $0.1208 per therm less than the initial rate of $0.7411 per therm approved by the Commission in Order No. 26,188 (November 1, 2018) in Docket No. DG 18-137. The $0.1208 per therm decrease in the rate reflects an $8,411,494 decrease in the Total Unadjusted Direct Cost of Gas Cost of Gas.

Q. How does the proposed firm transportation winter cost of gas rate compare to the rate approved by the Commission for the 2018/2019 winter period?

A. The proposed firm transportation winter cost of gas rate is $0.0009 per therm (Bates 051). The rate approved in Docket No. DG 18-137 was $0.0005 per therm. The increase in the rate relates primarily to an estimated $30,335 increase in costs due to the difference between the winter season 2018/2019 beginning balance of $59,496 (an over-collection) and the winter season 2019/2020 beginning balance of $29,161 (an over-collection).

Q. In the calculation of its firm transportation winter cost of gas rate, has the Company updated the estimated percentage used for pressure support purposes?

A. No. The Company used, for pressure support purposes, a rate of 8.7% based on the marginal cost study used for the rate design approved in Docket No. DG 17-048.

Q. Did the Company include a fuel inventory revenue requirement calculation in this filing?

A. Yes (Bates 199). The Company is proposing to collect $351,641 in fuel inventory revenue requirement consistent with Order No. 26,156 (July 10, 2018) in Docket No. DG 17-048. The impact of this amount to the overall Cost of Gas rate is $0.0040 per therm which is determined by dividing the $351,641 by the estimated November 2019 through October 2020 COG sales volumes of 87,788,508 therms.

Q. How was the statutory tax rate of 27.08% calculated (Bates 199)?

A. The statutory rate of 27.08% was calculated by using a 21% federal tax rate and a 7.7% tax rate for the State of New Hampshire (0.21 + 0.077 – (0.21 x 0.077) = 0.27083).

Q. How was the common equity pre-tax rate of 6.280% calculated (Bates 199)?

A. The common equity pre-tax rate of 6.280% was calculated by dividing the 9.30% rate of return on common equity, approved in Docket No. DG 17-048, by 0.72917 (1 – 0.27083) [statutory tax rate – see previous question]) and multiplied by 49.20% (equity component of the capital structure approved in DG 17-048) [0.093 / 0.72917 x 0.4920 = 0.0628].

Q. Has the bad debt percentage in this filing of 1.11% changed from the bad debt percentage calculated in the Winter 2018/2019 Cost of Gas Reconciliation?

A. Yes, the bad debt percentage of 1.11% used in this filing is the calculated rate for the period of May 2018–April 2019. This is a $0.59 decrease from the calculated rate filed in the Winter 2018/2019 COG filing of 1.70%.

Q. What was the actual weighted average firm sales cost of gas rate for the 2018/2019 winter period?

A. The weighted average cost of gas rate was $0.6633 per therm (Bates 092 Line 54). This was calculated by applying the actual monthly cost of gas rates for November 2018 through April 2019 to the monthly therm usage of an average residential heating customer using 809 therms per year, or 666 therms for the six winter period months.

III. PRIOR WINTER PERIOD UNDER-COLLECTION

Q. Please explain the prior period under collection of $1,912,210.

A. The prior period under-collection is detailed in the 2018/2019 Winter Period Reconciliation that was filed with the Commission on August 22, 2019. The $1,912,210 under-collection is the sum of the deferred gas cost, bad debt, and working capital over- and under-collection balances as of April 30, 2019. The under-collection was driven mainly by the lag in the timing of monthly cost of gas rate adjustments as compared to changes in the underlying costs.

IV. FIXED PRICE OPTION

Q. Has the Company established a winter period fixed price pursuant to its Fixed Price Option Program?

A. Yes. Pursuant to Order No. 24,515 in Docket No. DG 05-127, the Fixed Price Option Program ("FPO") rates are set at $0.0200 per therm higher than the initial proposed COG rate. Proposed Second Revised Page 91 (Bates 048) contains the FPO rate for the 2019/2020 Winter period, which is $0.6403 per therm for residential customers. This compares to the FPO rate approved for the 2018/2019 winter period of $0.7611 per therm for residential customers. This represents a $0.1208 per therm, or 15.8% decrease in the residential FPO rate. The total bill impact on the winter period bills for an average FPO heating customer using 666 therms is a decrease of approximately $82.11 or 16.2% compared to last winter. The total bill impact reflects the overall rates in effect following implementation of the increases approved in Docket No. DG 19-054, effective July 1, 2019, relating to the cast iron/bare steel main replacement program. The estimated winter period bill for an average residential heating customer opting for the FPO would be approximately $13.32 (or 1.45%) higher than the bill under the proposed cost of gas rates, assuming no monthly adjustments to the COG rate during the course of the winter. Schedule 23 (Bates 196) contains the historical results of the FPO program.

V. <u>LOCAL DELIVERY ADJUSTMENT CLAUSE (“LDAC”)</u>

Q. What are the surcharges that will be billed under the LDAC?

A. As shown on Proposed Second Revised Page 97 (Bates 054), the Company is submitting for approval an LDAC of $0.0635 per therm for the residential non-heating class and residential heating class, and $0.0494 per therm for the commercial/industrial bundled sales classes, effective November 1, 2019. The surcharges proposed to be billed under the LDAC are the Energy Efficiency Charge, the Revenue Decoupling Adjustment Factor, the Energy Efficiency Resource Standard Lost Revenue Adjustment Mechanism, the Environmental Surcharge for Manufactured Gas Plant (“MGP”) remediation, the Residential Low Income Assistance Program charge, and the rate case expense reconciliation surcharge from Docket No. DG 17-048.

Q. Which customers are billed an LDAC?

A. All EnergyNorth customers including those in Keene are billed an LDAC charge. When calculating the LDAC charge, the November 1, 2019, through October 31, 2020, forecasted Keene therm sales of 1,542,677 are added to the EnergyNorth therm sales forecast of 185,636,009 for a total therm sales forecast of 187,178,686 (slightly off due to rounding).

Q. Please explain the Energy Efficiency Charge.

A. The Energy Efficiency Charge is designed to recover the projected expenses associated with the Company's energy efficiency programs for Calendar Year 2019 that will be filed with the Commission in the near future. In the calculation of the Energy Efficiency Charge, the Company has also included the projected prior period under-recovery of the Company's residential and commercial energy efficiency programs as of October 2019. As shown on Schedule 19 Energy Efficiency (Bates 132-134), the proposed Energy Efficiency charge is $0.0640 per therm for Residential customers and $0.0426 per therm for commercial and industrial customers.

Q. Please explain the Revenue Decoupling Adjustment Factor ("RDAF").

A. This is the initial calculation of the RDAF since the implementation of decoupling on November 1, 2019. The purpose of the RDAF is to recover or refund, on an annual basis, the difference between the Actual Base Revenue per Customer and the Benchmark Base Revenue per Customer. While in the process of preparing the necessary calculations, it was discovered that with respect to low-income customers the formulas approved in the

Company's tariff to calculate the Actual Base Revenue per Customer and the Benchmark Base Revenue per Customer do not use the same basis between the two formulas to calculate the revenue per customer. The approved Benchmark Base Revenue per Customer calculation uses low income residential heating revenue (rate R-4) in the calculation while the Actual Base Revenue per Customer calculation uses the residential heating rate (rate R-3) to calculate the rate R-4 revenue. In other words, the formulas in the tariff use the R-4 rate to calculate the benchmark R-4 revenue per customer and use the R-3 rate to calculate the actual R-4 revenue per customer. Schedule 19 RDAF (Bates 118-123) shows the proposed Actual Base Revenue per Customer and the Benchmark Base Revenue per Customer calculation of a total over-collection of $4,691,932 effective November 1, 2019, through October 31, 2020. In that calculation, the Company has aligned the Base Revenue per Customer and Benchmark Revenue per Customer calculations related to low income customers. Schedule 19 RDAF (Bates 124–129) shows the Actual Base Revenue per Customer and the Benchmark Base Revenue per Customer calculation reflecting the current language in the tariff, which results in a total over-collection of $6,642,895 effective November 1, 2019, through October 31, 2020, based on the formulas in the Company's tariff.

Q. What would be the effect of using the calculation based on the current tariff language?

A. The net effect would be that the dollars collected to recover the costs of the low-income program would effectively be returned to customers through the RDAF mechanism.

Q. Please explain the Energy Efficiency Resource Standard Lost Revenue Adjustment Mechanism ("LRAM").

A. As shown on Schedule 19 LRAM (Bates 116–117), the proposed LRAM charge is $0.0001 per therm for residential customers and $0.0001 per therm for commercial and industrial customers. It is designed to recover lost revenues associated with energy efficiency measures installed under the EERS programs. Since the Company implemented decoupling effective November 1, 2019, the Company will continue to implement its Lost Revenue Adjustment only as a prior period true-up mechanism effective November 1, 2019, and ending October 31, 2020.

Q. What is the proposed Residential Low Income Assistance Program ("RLIAP") charge?

A. As shown on Schedule 19 RLIAP (Bates 130–131), the proposed RLIAP charge is $0.0123 per therm. It is designed to recover administrative costs, revenue shortfall, and the prior period reconciliation adjustment relating to this program. For the 2019/2020 Winter Period, the Company is providing a 60% base rate discount, consistent with the settlement agreement approved by the Commission in Order No. 24,669 (Sept. 22, 2006) in Docket No. DG 06-120. The proposed RLIAP charge is designed to recover $2,307,356, of which $1,861,760 is for the revenue shortfall resulting from 5,932 customers receiving a 60% discount off their base rates, and $445,596 for the prior year reconciling adjustment.

Q. In Order No. 24,824 (Feb. 29, 2008) in Docket No. DG 06-122 relating to short-term debt issues, the Company agreed to adjust its short-term debt limits each year as part of the Company's Winter Period Cost of Gas filing. Did the Company calculate the short-term debt limit for fuel and non-fuel purposes in accordance with this settlement?

A. Yes, the Company included in Schedule 24 (Bates 197) the short-term debt limit for fuel and non-fuel purposes for the 2019/20 period. As shown, the short-term debt limit for fuel inventory financing for the period November 1, 2019, through October 31, 2020, is calculated to be $16,338,781 and the limit for non-fuel purposes is calculated to be $99,644,640.

Q. Has the Company updated the Environmental Surcharge (Tariff Page 95)?

A. Yes, it has. The costs submitted for recovery through the MGP remediation cost recovery mechanism, as well as the third party recoveries, are included in the Environmental Cost Summary in Schedule 20 (Bates 135) of this filing. The environmental investigation and remediation costs that underlie these expenses are the result of efforts by the Company to respond to its legal obligations with regard to these sites, as described by Ms. Casey in her pre-filed direct testimony in this proceeding and as set forth in the MGP site summaries included in this filing under Schedule 20. The Summary included in Schedule 20 shows the remediation cost pools for the Concord Pond, Concord MGP, Manchester, Nashua, and Laconia sites, and a General Pool for costs that cannot be directly assigned to a specific site.

A summary sheet and detailed backup spreadsheets that support the 2018/2019 costs are provided in Schedule 20 of this filing. Ms. Casey's testimony describes the Company's activities with regard to all five sites.

Q. Please describe how the Company calculated the Environmental Surcharge included in this filing.

A. The proposed Manufactured Gas Plant Remediation surcharge for the period beginning November 1, 2019, and ending October 31, 2020, is $0.0153 per therm. Consistent with filings made over the past few years, this surcharge will recover a total of $2,860,522 in amortized remediation costs. The costs submitted for recovery are shown in the Environmental Cost Summary included in Schedule 20 of this filing. This surcharge has not included recovery of any beginning balance transferred over from National Grid when the Company was acquired by Liberty Energy Utilities Corp. in Docket No. DG 11-040 nor has the surcharge included any actual to forecast true-up refund or recovery since the acquisition as provided for in the Company's tariff. The Company is planning to submit an environmental reconciliation to PUC audit staff for review and opinion by January 15, 2020. Audit Staff findings will be addressed in the Winter 2020/2021 COG filing.

Q. Did the Company include a Rate Case Expense (RCE) surcharge in this filing?

A. Yes. As shown on Schedule 19 RCE (Bates 114–115), the Company is proposing to collect $309,225 in uncollected rate case and recoupment expense consistent with Order No. 26,122 (April 27, 2018) in Docket No. DG 17-048. The RCE rate of $0.0017 per therm is determined by dividing the $309,225 by the estimated November 2019 through October 2020 sales volumes of 187,178,686 therms.

Q. Has the Company also updated its Company Allowance percentage for the period November 2019 through October 2020 in accordance with Section 8 of the Company's Delivery Terms and Condition?

A. Yes, in Schedule 25 (Bates 198) the Company has recalculated its Company Allowance for the period November 2019 through October 2020. The Company calculated the Company Allowance of 1.92% based on sendout and throughput data for the twelve-month period ending June 2019. The Company proposes to apply this recalculated Company Allowance to all supplier deliveries beginning in November 2019.

VI. CUSTOMER BILL IMPACTS

Q. What are the estimated impacts of the proposed firm sales cost of gas rate and proposed LDAC surcharges on an average heating customer's winter bill as compared to the winter rates in effect last year?

A. The bill impact analysis is presented in Schedule 8 (Bates 092) of this filing. These bill impacts reflect the implementation of the increases approved in Docket No. DG 19-054 effective July 1, 2019, relating to the cast iron/bare steel main replacement program. The total bill impact over the winter period for an average residential heating customer is a decrease of approximately $24.76 or 2.6%. The total bill impact over the winter period for an average commercial/industrial G-41 customer is a decrease of approximately

$129.12, or 5.2% (Bates 093). Schedule 8 of this filing provides more detail of the impact of the proposed rate adjustments on heating customers.

VII. OTHER TARIFF CHANGES

Q. Is the Company updating its Delivery Terms and Conditions in the filing?

A. Yes. The Company is submitting Proposed Second Revised Page 147 (Bates 055) relating to Supplier Balancing and Peaking Demand Charges and Proposed Second Revised Page 148 (Bates 056) relating to Capacity Allocation.

Q. Please describe the changes to tariff Page 147.

A. In Proposed Second Revised Page 147, the Company is updating the Peaking Demand Charge from $20.41 per MMBtu of Peak MDQ to $18.12 per MMBtu of Peak MDQ. This calculation is also presented in Schedule 21 (Bates 187).

Q. Please describe the changes to tariff Page 148.

A. Proposed Second Revised Page 148 updates the Capacity Allocator percentages used to allocate pipeline, storage, and local peaking capacity to high and low load factor customers under the mandatory capacity assignment requirement for firm transportation service. Schedule 22 (Bates 190–195) contains the six-page worksheet that backs up the calculations for the updated allocators.

VIII. SUMMER 2020 COST OF GAS FACTOR

Q. What are the proposed 2020 summer firm sales cost of gas rates?

A. The Company proposes a firm sales cost of gas rate of $0.4520 per therm for residential customers, $0.4474 per therm for commercial/industrial high winter use customers, and $0.4591 per therm for commercial/industrial low winter use customers as shown on Proposed Eighth Revised Page 89 (Bates 205).

Q. Please explain tariff pages Proposed Third Revised Page 88 and Proposed Ninth Revised Page 89.

A. Proposed Third Revised Page 88 (Bates 204) and Proposed Ninth Revised Page 89 contain the calculation of the 2020 Summer Period Cost of Gas Rate and summarize the Company's forecast of firm gas sales, firm gas sendout, and gas costs. On Proposed Ninth Revised Page 89, the 2020 Average Cost of Gas of $0.4520 per therm is derived by adding the Direct Cost of Gas Rate of $0.4603 per therm to the Indirect Cost of Gas Rate of ($0.0083) per therm. The estimated total Anticipated Direct Cost of gas is $9,653,380 and the estimated Indirect Cost of Gas is ($174,652). The Direct Cost of Gas Rate and the Indirect Cost of Gas Rates are determined by dividing each of these total cost figures by the projected Summer firm sales volumes of 20,973,031 therms. Proposed Ninth Revised Page 89 further shows that the Residential Cost of Gas Rate of $0.4520 per therm is equal to the Average Cost of Gas for all firm sales customers. It also shows the calculation of the Commercial/Industrial High Winter Use Cost of Gas Rate of $0.4474 per therm and the Commercial/Industrial Low Winter Use Cost of Gas Rate of $0.4591 per therm.

The calculation of the Anticipated Direct Cost of Gas is shown on Proposed Third Revised Page 88. To derive the total Anticipated Direct Cost of Gas of $9,653,380, the Company starts with the Unadjusted Anticipated Cost of Gas of $7,685,193 and adds the Net Adjustment totaling $1,968,188.

Q. What are the components of the Unadjusted Anticipated Cost of Gas?

A. The Unadjusted Anticipated Cost of Gas consists of the following:

1. Purchased Gas Demand Costs	$4,548,346
2. Purchased Gas Supply Costs	3,114,165
3. Produced Gas Costs	22,682
Total Unadjusted Anticipated Cost of Gas	$7,685,193

Q. What are the components of the adjustments to the cost of gas?

A. The adjustments to gas costs, listed on proposed Third Revised Page 88, are as follows:

1. Prior Period (Over)/Under Collection	$1,885,446
2. Interest	82,742
Total Adjustments	$1,968,188

Q. How does the proposed average Residential Summer cost of gas rate in this filing compare to the initial cost of gas rate approved by the Commission for the 2020 Summer Period?

A. The cost of gas rate proposed in this filing is $0.0075 per therm higher than the initial rate approved by the Commission for the 2019 Summer Period ($0.4445 vs. $0.4520)

(Schedule 8, Bates 228). This increase is primarily due to a $1,268,403 estimated under-collection increase compared to the under-collection from the prior summer period.

Q. Does this conclude your testimony?

A. Yes, it does.

Liberty Utilities

Re: DG 19-145 Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities Winter 2019/2020 Cost of Gas and Summer 2020 Cost of Gas

Dear Ms. Howland:

On behalf of Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities, enclosed please find an original and six copies of revised pages to the testimony and attachments in this docket.

These revisions (1) update the LDAC to properly reflect the Revenue Decoupling Adjustment Factor ("RDAF"), (2) incorporate revised RDAF tariff language pursuant to an agreement with Staff and the OCA reached during technical sessions in this docket, and (3) correct a separate RDAF formula error.

Thank you for your assistance with this matter. Please do not hesitate to contact me should you have any questions.

Sincerely,

Michael J. Sheehan

Enclosures
cc: Service List

compares to the FPO rate approved for the 2018/2019 winter period of $0.7611 per therm for residential customers. This represents a $0.1208 per therm, or 15.8% decrease in the residential FPO rate. The total bill impact on the winter period bills for an average FPO heating customer using 666 therms is a decrease of approximately $98.27 or 9.75% compared to last winter. The total bill impact reflects the overall rates in effect following implementation of the increases approved in Docket No. DG 19-054, effective July 1, 2019, relating to the cast iron/bare steel main replacement program. The estimated winter period bill for an average residential heating customer opting for the FPO would be approximately $13.32 (or 1.45%) higher than the bill under the proposed cost of gas rates, assuming no monthly adjustments to the COG rate during the course of the winter. Schedule 23 (Bates 196) contains the historical results of the FPO program.

V. <u>LOCAL DELIVERY ADJUSTMENT CLAUSE ("LDAC")</u>

Q. What are the surcharges that will be billed under the LDAC?

A. As shown on Proposed Second Revised Page 97 (Bates 054), the Company is submitting for approval an LDAC of $0.0310 per therm for the residential non-heating class and residential heating class, and $0.0478 per therm for the commercial/industrial bundled sales classes, effective November 1, 2019. The surcharges proposed to be billed under the LDAC are the Energy Efficiency Charge, the Revenue Decoupling Adjustment Factor, the Energy Efficiency Resource Standard Lost Revenue Adjustment Mechanism, the Environmental Surcharge for Manufactured Gas Plant ("MGP") remediation, the Residential Low Income Assistance Program charge, and the rate case expense reconciliation surcharge from Docket No. DG 17-048.

Q. Which customers are billed an LDAC?

A. All EnergyNorth customers including those in Keene are billed an LDAC charge. When calculating the LDAC charge, the November 1, 2019, through October 31, 2020, forecasted Keene therm sales of 1,542,677 are added to the EnergyNorth therm sales forecast of 185,636,009 for a total therm sales forecast of 187,178,686 (slightly off due to rounding).

Q. Please explain the Energy Efficiency Charge.

A. The Energy Efficiency Charge is designed to recover the projected expenses associated with the Company's energy efficiency programs for Calendar Year 2019 that will be filed with the Commission in the near future. In the calculation of the Energy Efficiency Charge, the Company has also included the projected prior period under-recovery of the Company's residential and commercial energy efficiency programs as of October 2019. As shown on Schedule 19 Energy Efficiency (Bates 132-134), the proposed Energy Efficiency charge is $0.0640 per therm for Residential customers and $0.0426 per therm for commercial and industrial customers.

Q. Please explain the Revenue Decoupling Adjustment Factor ("RDAF").

A. Schedule 19 RDAF (Bates 124-R–129-R) shows the Actual Base Revenue per Customer and the Benchmark Base Revenue per Customer calculation which results in a total over-collection of $7,016,791 effective November 1, 2019, through October 31, 2020, based on the formulas in the Company's proposed tariff. The Actual Base Revenue per

Customer proposed tariff change includes weather-normalized actuals as discussed with Commission Staff at the technical session held on September 23, 2019.

THIS SPACE IS INTENTIONALLY LEFT BLANK

therm is determined by dividing the $309,225 by the estimated November 2019 through October 2020 sales volumes of 187,178,686 therms.

Q. Has the Company also updated its Company Allowance percentage for the period November 2019 through October 2020 in accordance with Section 8 of the Company's Delivery Terms and Condition?

A. Yes, in Schedule 25 (Bates 198) the Company has recalculated its Company Allowance for the period November 2019 through October 2020. The Company calculated the Company Allowance of 1.92% based on sendout and throughput data for the twelve-month period ending June 2019. The Company proposes to apply this recalculated Company Allowance to all supplier deliveries beginning in November 2019.

VI. <u>CUSTOMER BILL IMPACTS</u>

Q. What are the estimated impacts of the proposed firm sales cost of gas rate and proposed LDAC surcharges on an average heating customer's winter bill as compared to the winter rates in effect last year?

A. The bill impact analysis is presented in Schedule 8 (Bates 092-R) of this filing. These bill impacts reflect the implementation of the increases approved in Docket No. DG 19-054 effective July 1, 2019, relating to the cast iron/bare steel main replacement program. The total bill impact over the winter period for an average residential heating customer is a decrease of approximately $46.46 or 4.93%. The total bill impact over the winter period for an average commercial/industrial G-41 customer is a decrease of approximately $132.18, or 5.35% (Bates 093-R). Schedule 8 of this filing provides more detail of the impact of the proposed rate adjustments on heating customers.

VII. OTHER TARIFF CHANGES

Q. Is the Company updating its Delivery Terms and Conditions in the filing?

A. Yes. The Company is submitting Proposed Second Revised Page 147 (Bates 055) relating to Supplier Balancing and Peaking Demand Charges and Proposed Second Revised Page 148 (Bates 056) relating to Capacity Allocation.

Q. Please describe the changes to tariff Page 147.

A. In Proposed Second Revised Page 147, the Company is updating the Peaking Demand Charge from $20.41 per MMBtu of Peak MDQ to $18.12 per MMBtu of Peak MDQ. This calculation is also presented in Schedule 21 (Bates 187).

Q. Please describe the changes to tariff Page 148.

A. Proposed Second Revised Page 148 updates the Capacity Allocator percentages used to allocate pipeline, storage, and local peaking capacity to high and low load factor customers under the mandatory capacity assignment requirement for firm transportation service. Schedule 22 (Bates 190–195) contains the six-page worksheet that backs up the calculations for the updated allocators.

STATE OF NEW HAMPSHIRE

PUBLIC UTILITIES COMMISSION

DG 19-145

<u>In the Matter of:</u>

Liberty Utilities (Energynorth Natural Gas) Corp.
Winter 2019/2020 And Summer 2020 Cost Of Gas Filing

Direct Testimony

of

Al-Azad Iqbal
Utility Analyst – Gas & Water Division

October 08, 2019

Q. Please state your name, current position, and business address.

A. My name is Al-Azad Iqbal. I am employed by the New Hampshire Public Utilities Commission (Commission) as a Utility Analyst. I have been a Utility Analyst from 2007 to the present. My business address is 21 South Fruit Street, Suite 10, Concord, New Hampshire, 03301.

Q. Please summarize your educational and professional background.

A. My educational and professional background is summarized in Appendix A.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to provide Commission Staff's analysis of the Liberty Utilities (Energynorth Natural Gas) Corp. d/b/a Liberty Utilities (Liberty EnergyNorth, or the Company) Winter 2019/2020 and Summer 2020 Cost Of Gas Filing wherein the company filed Revenue Decoupling Adjustment (RDA) calculations for the first time since decoupling went into effect on November 1, 2018.[1] In this testimony, Commission Staff (Staff) explains Staff's analysis of the RDA related tariff issue the Company raised in its initial filing, Staff's proposed corrections to the Company's Schedule 19 RDAF (Bates page 118-129), Local Delivery Adjustment Clause (LDAC) (Tariff page 97), and Staff recommendation regarding the normal weatherization adjustment (NWA) as applied to the proposed cost of gas (COG) rates for Liberty EnergyNorth customers. Liberty agreed with Staff and, on October 7, 2019, filed revised testimony and schedule pages.

[1] *See* Order No. 26,122 at 43-46, 53-55 (April 27, 2018) (approving decoupling); Order No. 26, 187 at 11 (November 2, 2018 (addressing Liberty's motion for rehearing).

Q. Please summarize the issues addressed in this testimony.

A. While reviewing Liberty's initial Filing, Staff identified the following issues with regard to Liberty's RDAF calculations:

- The Company initially claimed that the tariff related to RDAF calculation (Tariff page 34-38) does not match the intent of the RDAF because Liberty believed that the calculations of actual revenue and allowed revenue for R-4 customers were not aligned with each other. Staff disagreed and explained the reasons to the company in a technical session.
- The Company used the wrong Benchmark Base Revenue per bill (Schedule 19, page 8) for the period of November 2018 to June 2019.
- Staff discovered that the tariff language/formula to calculate RDAF does not incorporate an NWA monthly adjustment.

The Company ultimately agreed with Staff, and made a revised filing on October 7, 2019, that proposed to adjust schedules and testimony to correct the above errors.

Q. Please explain the issue related to R-4 revenue.

A. R-4 is a rate class for low-income heating customers**.** Low-income customers pay a 60% discounted delivery rate and 60% discounted customer charges as compared to R-3 heating customers. R-3 is a rate class for regular residential hearing customers. The cost of the discount for R-4 is collected and paid to the Company through the Residential Low Income Assistance Program (RLIAP) charge. All rate class customers, including R-4 customers, pay an LDAC charge, which includes the RLIAP charge. In combination, money from the R-4 (low income) customer class charges plus the RLIAP charge is equivalent to what would have been collected from R-4 customers if they had been charged the R-3 (regular residential hearing class) rates. Since the Company is already made whole for the discount offered to low-income (R-4) customers after revenue collected from the RLIAP charge is collected, Liberty's initial "adjustment" for R-4 customers overestimated compensation due to the Company by approximately 2.1 million dollars. Staff's analysis is consistent with the relevant tariff language which states that "For purposes of calculating the Actual Base Revenue, base revenues for Low Income rate class R4, shall be determined based on non-discounted rate R-3" when calculating the AR_{T-1} (Actual Base Revenue for the applicable Customer Class for the most recently completed Decoupling Year. See Tariff page 37). The intent of RDAF and tariff language match perfectly in this context.

Q. Please explain the second issue related to Benchmark Base Revenue per bill.

A. In its initial filing, the Company incorrectly used the latest rates, which were effective from July 1, 2019, for the whole decoupling period of Benchmark Base Revenue per bill calculation. The Benchmark Base Revenue per bill ($BRPC_{T-1)}$ is used to calculate the allowed revenue for the decoupling year. As the rates increased on July 1, 2019, the application of these rates for the entire decoupling year incorrectly inflated the allowed revenue by approximately 0.8 million dollars. The Company made a revised filing on October 7, 2019, that proposed changes to correct this error.

Q. Please explain the third issue related to the monthly NWA.

A. During the review of the RDAF calculations, Staff discovered that the tariff is ambiguous with regard to how to incorporate the real-time normal weather adjustment in the calculation of actual revenue in the context of the RDAF formula. According to the Tariff (page 34, Section D.4 (a): "The Company will use monthly distribution revenues and Actual Number of Customers to determine the Monthly Actual Base Revenue per Customer." This description underlies the tariff's Revenue Decoupling Adjustment Formulas (RDAF) on Tariff page 36 section 17.D.5 (b). This formula does not incorporate the real-time normal weather adjustment (NWA) which changes the actual revenue the company collects from customers. Without modification, the actual revenue calculated in the RDAF would either be higher or lower than actual revenue depending on the monthly normal weather adjustment (NWA) charge or credit. The annual reconciliation would not address this issue either, as it is not part of the RDAF calculation. In its analysis, Staff identified this issue. It is anticipated that Liberty will file proposed corrections to the tariff language to incorporate the NWA, and correct for NWA variations.

Q. Did the revised filing address this NWA issue?

A. Yes. The current tariff (page 36) defines the Normal Weather Factor (NWF) in terms of "delivery charges normal" and delivery charges actual." In its revised schedules, the Company proposed calculating NWF using normalized sales (normalizing Dth sales) to determine the actual revenue for RDAF purposes. Staff believes that using normalized sales in Dth to calculate the revenue effectively incorporates the NWA.

Q: Is current tariff language sufficient?

A: No. Staff believes the tariff should be amended to explicitly account for the NWA.

Q. Do you have any more comments?

A. Yes. Staff's review of the Company's RDAF calculations was limited to the data provided by the Company. Staff did not check the veracity of the inputs in the models used in the filing. Staff reserves the right to identify other issues or concerns with the Company's filing.

Q. Does that conclude your testimony?

A. Yes.

STATE OF NEW HAMPSHIRE
BEFORE THE
PUBLIC UTILITIES COMMISSION

In the matter of

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

Docket No. DG 20-105

Petition for Permanent Rate Increase

DIRECT TESTIMONY

OF

Al-Azad Iqbal
Economics/Finance Director

Office of the Consumer Advocate

March 18, 2021

Contents

Introduction

Q. Please state your name, occupation, and business address.

A. My name is Al-Azad Iqbal, and I am employed by the New Hampshire Office of the Consumer Advocate as Economics/Finance Director. My business address is 21 South Fruit Street, Suite 18, Concord, New Hampshire, 03301.

Q. Please summarize your educational and professional experience.

A. My educational and professional backgrounds are summarized in Appendix A.

Q. What is the purpose of your testimony in this proceeding?

A. The purpose of my testimony is to provide recommendations on issues related to the Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities (Liberty, or the Company) rate proposal regarding 1) depreciation; 2) rate design, rate plan and; 3) other rate-related issues.

Q. Please summarize your recommendations on these issues.

A. I recommend that the depreciation reserve variance amortization, approved in the last rate case, be ceased until a new depreciation study is completed. The Company should follow the recommendations in the Review of Reserve Variance Deficiency for Liberty Depreciable Gas Plant done by Paul Normand and Marcy Stefan of Management Applications Consulting, Inc. (MAC); which is found at Testimony of Steven E. Mullen, Attachment SEM (Bates II 235-239) in Liberty's initial filing of July 31, 2020, in this docket. I recommend certain updates in the rate design process concerning the treatment of decoupling and low-income discounts. I also raise concerns about the Company's proposed capital budget, and the rate plan with step adjustments.

Depreciation

Q. What is the significance of depreciation for purposes of this proceeding?

A. As with all public utilities, EnergyNorth includes in its annual revenue requirement an amount that is, at least theoretically, equal to the decline in the value of the company's capital assets over a 12-month period. This is necessary because all capital assets decline in value over their period of usage. To account for that, the annual amount of depreciation is deducted from the utility's rate base (on which the utility receives a return on investment) and that same value becomes a recoverable operating cost. In this manner, the utility's shareholders receive both a return *on* their investment and, via depreciation charges, a return *of* their investment.

The accounting necessary to determine the amount recoverable from ratepayers as a depreciation expense is complicated. Utilities, including EnergyNorth, must constantly add new capital assets to their rate base. Meantime, operating conditions are not static and thus existing assets do not depreciate precisely as they were expected to at the time they first go into rate base. For this reason, a utility like EnergyNorth commissions a depreciation study from time to time, usually conducted by consultants who are expert in the field of depreciation. A depreciation study is a statistical exercise that takes into account the vintage of the utility's assets – that is, the year when each asset was placed into service – the pace at which specific assets are being retired from service, and actuarial principles that are helpful in updating determinations of how much useful life remains in the rate-based assets. The depreciation experts use statistical techniques to make mathematical calculations of how the forces of retirement are acting upon each plant category and an estimate of the service life remaining in each such category.

Q. When was the last depreciation study done for EnergyNorth?

A. EnergyNorth's last depreciation study was done in Docket DG 17-048, the company's most recent rate case before this one. In that docket, the company's depreciation consultant -- Management Applications Consulting (MAC) -- used a Simulated Plant Record (SPR) life analysis approach. The SPR approach is useful when a utility lacks sufficient records to develop actuarial data. In connection with this current docket, EnergyNorth again engaged Mr. Normand's firm. MAC did not conduct a complete depreciation study as it did for the previous rate case but, rather, reviewed the growth in the Company's plant with the goal of quantifying changes in the depreciation reserve imbalance (as required by the order issued in Docket DG 17-048 on April 27, 2018 (Order No. 26,122). The findings of Mr. Normand (along with his colleague, Marcy Stefan) are attached to Mr. Mullen's testimony as Attachment SEM 3.

Q. What is a "depreciation reserve imbalance"?

A. A utility's depreciation reserve is a fund the company accumulates annually, based on the probable replacement cost of its depreciable assets. The depreciation reserve – also referred to as accumulated depreciation – is equal to the total amount of depreciation charged against all of the utility's capital assets as stated on the utility's balance sheet. A depreciation reserve imbalance occurs when there is a difference between the depreciation reserve on the company's balance sheet (booked reserve) and the calculated value of the accumulated depreciation (theoretical reserve). When a comparatively large depreciation reserve imbalance exists, it is necessary to determine how to correct it. The imbalance can be amortized over a relatively short period of time or it can be spread over the entire future remaining life of the plant in service.

Q. Please describe the findings of Mr. Normand's and Ms. Stefan's review (as contained in Attachment SEM – 3).

A. The depreciation consultants stated that even with the amortization of the reserve variance approved in the prior rate case, the reserve variance increased significantly. The biggest contributors to this increase are Mains (accounts 367 and 376), and Services (account 380), which were the same accounts that caused the reserve variance in the depreciation study done in Docket 17-048. In the report found at Attachment SEM-3, MAC identified three items affecting the reserve variance that should be examined in the context of a new depreciation study: 1) potential change in average service life (ASL); 2) replacement/retirement of large quantities of mains and services; and 3) the cost of removal portion of the Company's plant replacement activities.

MAC posited that a new study would derive longer ASLs for both mains and services which would impact the resulting reserve variance. Further, MAC stated: "… large growth in plant investments which has been occurring for many years, especially for key plant accounts related to mains and services, results in large amounts of unrecovered dollars being identified but not recovered in the short term".[1] MAC further stated: "In the last ten years, the rapid increase in plant replacement/retirement requirements had, in many cases, resulted in a more detailed review of these costs (COR) which has resulted in being modified to reflect a much lower 3 to 5% range of costs to new plant investments."[2]

Based on its review, MAC recommended that Liberty do a detailed review of COR and undertake a new depreciation study. As I explain more fully later, COR is an important aspect of depreciation because, obviously, when the useful life of an asset has been fully exhausted it must be physically removed, which has a cost that is properly included in the calculation of depreciation costs.

Q. Is the recommendation for a detailed review of COR through a new depreciation study consistent with the goal of the depreciation study?

A. Yes. In the last depreciation study, MAC discussed the relevant issues in the context of the whole life depreciation system (*see* Docket No. DG 17-048, Attachment PMN-2, Bates page 431):

> The whole life accrual rate is a function of two variables: the estimated net salvage (salvage less cost to retire) and the average service life of the group. The continued use of accrual rates properly developed at one point in time as a function of all circumstances known and projected at that time can be assumed to be appropriate for a limited number of years; however, if the lives and net salvage are not re-estimated periodically, the rates may not provide the

1 *See* Attachment SEM-3, Bates page II-236.

2 *Id*.

> appropriate recovery of capital.

He also stated:

> Obviously, when a change in either net salvage or life expectations is observed, the book depreciation reserve compared to the computed or theoretical reserve immediately appears as either over or under accrued.
>
> …..
>
> In general, the variance in the reserve is simply the difference between theoretical reserve based on an updated set of factors as developed in a depreciation study and the existing book reserves which reflect the historical reserve adjustments previously approved. The theoretical reserve calculation, however, is based on a new set of accrual rates, and applying these results to the current plant balances as if they were constant historical factors will result in a variance.

He also explained:

> …statistical mortality studies of past retirement experience may provide historical indications of the dispersion of retirements and of average service life if there has been sufficient retirement activity over a reasonable period of time. Such information may provide some indication as to what to expect in the future; however, it should not be taken for granted that the future will mirror the past, especially when present policies, plans, or external circumstances indicate otherwise.

So Mr. Normand's recommendation is consistent with his overall approach to the depreciation study. The quotes I just provided also highlight the need to update the sets of factors as the data clearly indicates the current ASL, and CORs are not representing the characteristics of the company's assets.

Q. What is your opinion about the Average Service Life issue?

A. I agree with the consultant's analysis. Between 2007 and 2016, according to the two depreciation studies, Liberty's plant balance for Gas Mains increased by 70%, and for Gas Services by 74%. Further, since the last depreciation study in Docket DG 17-048, which was based on 2016 balances, these account plant balances have increased by 35% and 28%,[3] respectively in the test year. Effectively, the characteristics of these assets have changed significantly in recent years. Given these balances have essentially doubled in the past 15 years or so, and given that the more recent plant additions are supported by more reliable accounting data that is available for study, we concur with the consultants' recommendation that a new deprecation study based on 2020 data be performed in early 2021 to evaluate the impact on ASLs.[4]

Q. Please elaborate on the Cost of Removal issue.

A. On this issue, I agree with Mr. Normand's and Ms. Stefan's analysis in Attachment SEM 3. The current practice of applying a flat 10% (of plant investment) estimate for the cost of removal might not be reflecting the actual COR. MAC pointed out that in the last decade, more detailed reviews of COR have resulted in a much lower range (3% to 5%) for COR related to new plant investments. The COR is primarily labor costs. With industry improvements in automation, asset management technology, etc., the COR should be reduced over time. For example, GIS-based geocoding of the mains would make it possible to pinpoint the precise

[3] *See* Attachment SEM-3, Bates page II-235.

[4] In the last study, MAC identified data problem for both Mains, and Services accounts and stated: "Our analyses of this account were based on total assets since the Company could not provide any historical details by material type for analyses. … we note that the recording of retirements for the last two years has been backlogged." *See* Docket DG 17-048, Attachment PMN-2, at 35 and 37 (Bates pages 445 and 447).

location of an asset, which would reduce the need for unnecessary digging and corresponding labor costs. The century-old mains and services the Company is replacing now had very little documentation compared to today's accounting and documentation standards. As a result, the COR of new assets is expected to be more efficient, and applying the same blanket percentage (10%) to current investment costs would not be representative of those lower, future costs (when today's investments need to be removed).automation, asset management technology, etc., the COR should be reduced over time. For example, GIS-based geocoding of the mains would make it possible to pinpoint the precise location of an asset, which would reduce the need for unnecessary digging and corresponding labor costs. The century-old mains and services the Company is replacing now had very little documentation compared to today's accounting and documentation standards. As a result, the COR of new assets is expected to be more efficient, and applying the same blanket percentage (10%) to current investment costs would not be representative of those lower, future costs (when today's investments need to be removed).

Q. Please explain how the Cost of Removal impacts depreciation expenses.

A. The cost of removal is a component of the net salvage value. The net salvage component is an important factor in determining the annual accrual rate for each account. A COR represents the cost of disposing of an asset at the end of its life. For regulatory purposes, this cost is typically incorporated as a component of book depreciation. So a higher COR would require higher accrual rates and thus requires higher depreciation expenses.

Q. Please explain how the Cost of Removal impacts the reserve variance.

A. As previously mentioned, the reserve variance is the difference between theoretical reserves and existing book reserves. The theoretical reserve is based on an updated set of factors including COR. A change in COR would have a significant impact on the theoretical reserve, and thus on the variance. For example, if COR were reduced from 10% to 5% of the new investments as indicated in the review, it would reduce Net Salvage by approximately half.[5] If we adjust Net Salvage by half, the combined reserve variance from Mains and Services would change from a $16.3 million shortfall to a $4.5 million surplus. The same would have been true for the depreciation study from DG 17-048, and would have resulted in a surplus of $5.7 million rather than the shortfall of $9.9 million which is currently being amortized. When a reserve variance shortfall is amortized, the revenue requirement increases to the detriment of the ratepayers. When a reserve variance surplus is amortized, the revenue requirement decreases to the benefit of ratepayers.

Q. What is your recommendation?

A. It is obvious that the current set of factors (ASL and COR) need to be updated which will change the reserve variance significantly. So the amortization of the reserve variance which increases the revenue requirement by approximately $1.5 million is unnecessary and unreasonable. I support MAC's recommendations regarding a new depreciation study and

[5] For example, Mains net salvage would reduce to 7.5% from 15%.

recommend that the reserve amortization approved in the last rate case be discontinued in this case and any further amortization should be authorized only after the detailed COR and ASL evaluations MAC recommended are conducted, and/or a new depreciation study is completed. If this docket is completed before those studies are available, I recommend that the amortization be discontinued.

Q. Please explain the rationale of your recommendation.

A. As indicated by MAC, ASL and COR were the main factors cited in the last depreciation study as contributing to the reserve variance. Likewise, the current recommendation is to review the Mains and Services accounts. If ASL is increased and COR is reduced (as MAC's report at Attachment SEM-3, p. 2 suggest may be warranted), the reserve variance will be significantly reduced.

In the depreciation study in DG 17-048, Mr. Normand pointed out that the large swing in the reserve variance (from the prior study, which showed a reserve surplus) was the direct result of the very large, recent increases in investments in mains and services. The expectation in DG 17-048 was that this level of investments would continue to be exhibited in a similar fashion as has been experienced in the past.[6] In DG 17-048, Mr. Normand mentioned, establishing a "collar" or a threshold bandwidth for the variance, such that no amortization would occur unless

[6] *See* Attachment AMI-4; response to Staff 7-9(a) in DG 17-048: "The large deviation is a direct result of the very large plant dollar increases for these accounts (Mains $98M, Services $66M) driven primarily by the mandated replacement program (CIBS) which is expected to continue for some period of time. As a result, we expect that this behavior will continue to be exhibited in a similar fashion as has been experienced but at a lower level since the recent amortization from the last study will be terminated."

the variance was in excess of 5% -10% of the theoretical reserve level, as an option to minimize the swing.[7] The current reserve variance is below a 10% threshold, so no amortization would be done under that approach. In the last study, in Docket DG 17-048, the reserve balance was just above 6%. As indicated earlier, if ASL and COR are adjusted as a result of the reviews recommended in Attachment SEM-3, the variance would be lower and could be eliminated (i.e., in surplus).

In DG 17-048, the Commission approved a variance amortization at an accelerated rate of 6 years instead of 12 years approved in the case prior to DG 17-048. In addition, the Commission required that Liberty re-examine the reserve balance in its next case, as Mr. Normand and Ms. Stefan have done with the report submitted as Attachment SEM-3. Continuing to amortize the reserve variance at an accelerated rate as proposed by Liberty in this case without waiting for the results of the analyses recommended by the consultants in their report (Attachment SEM-3) is unreasonable, especially given Mr. Normand's and Ms. Stefan's suggestion that two specific areas (ASL and COR) are ripe for review and adjustment, and especially when a correction to these items could produce a variance that is much smaller (below 5%), and could potentially lead to a significant reduction in rates.

[7] *See* Attachment AMI-4; response to Staff 7-9(c)(2) in DG 17-048. "If maintaining the WL [whole life] approach is required, then consider establishing a collar or a threshold band width for the variance such that no amortization would occur unless the variance is in excess of 5 or 10% of the theoretical level."

Rate Plan

Q. Please review some of the factors identified by the Company that led to the rate case filing in the current docket?

A. Mr. Mullen stated at Bates Page II-198 of his testimony that the major factor driving the Company's current rate request is the lag in recovery of capital investments and increases in costs, such as property taxes. He also mentioned the following factors - 1) decoupling; 2) reclassification of C&I customers; and 3) year-end customer count adjustment.

Q. Please address the decoupling issue cited by the Company.

A. The Company states that an increase in use (of gas) per customer (usage per customer, or UPC) impacts the Company negatively, but provides no support for this conclusion. Conceptually, UPC should have no impact on revenue under the approved decoupling mechanism. Decoupling sets the revenue per customer (RPC) based on test year data, not actual data. If the UPC changes from year to year, RPC should not. An increase in UPC might increase a customer's bill but would not impact the Company's revenue allowed under decoupling because any variances between allowed and actual revenue due to changes in UPC would be captured as over-or-under collections and would be reconciled through the Local Distribution Adjustment Clause (LDAC) Revenue Decoupling Adjustment Factor (RDAF) mechanism.

The concept of decoupling is based on the assumption that energy efficiency policies and programs reduce the sales of a utility's commodity – in this case, gas sales – and thus negatively affect the Company's earnings. Decoupling is designed to break this link between sales and revenues to eliminate any disincentive for utilities to implement EE programs based on the expectation that reductions in UPC result in associated reductions in revenue.

The reverse is also true – when UPC goes up, the revenue is not affected under decoupling. The Company's own review by its consultant (*see* Attachment AMI-1, OCA TS 1-7.3, Company Response to OCA DR TS 1-7) indicates that UPC does not impact the Company's revenue. Thus, I strongly disagree with the Company that decoupling warranted, or justifies, - the current rate case.

Q. Please address the rate class reclassification issue.

A. The Company claims that the reclassification of 1,598 commercial and industrial customers after the test year negatively impacted its revenue. The reclassification was the result of the Company's post-test year Rate Review process (Attachment AMI-2, Company Response to Staff DR 3-5.b). It is common practice for utilities to adjust customer rate classifications within a rate review process.

Q. What is your opinion on how the rate reclassification impacted the Company?

A. A rate classification adjustment could impact revenue, depending on the scale of migration from one class to another, because reclassification will determine the allowed revenue for those customers under decoupling. Usually, such migration patterns do not fluctuate significantly and impacts are negligible. If a customer migrates from a lower RPC class to a higher RPC class, the Company's allowed revenue would increase by the difference between the two RPCs and *vice versa*. According to the Company's analysis, the impact of reclassification is a reduction in allowed revenue under decoupling of $0.9 million. (Attachment AMI-2, Company Response to Staff DR 3-5.b).

The Company did not elaborate on the key reasons that could explain the somewhat large impact due to customer migration between rate classes. It matters how frequently the company reclassifies its customers. If the Company reclassifies its customers in a timely and diligent manner the impact due to reclassification cannot be substantive. The accuracy of the Company's test year revenues is important in any rate case filing. In this case, the Company claims a negative impact to its revenues, but in another situation the same factors might have a positive impact on its revenues.

Q. Please explain the end of the year adjustment issue?

A. Mr. Mullen described the end of year (EOY) adjustment issue as a methodology issue (Bates 11-199):

> The revenue adjustment was performed in a simplified manner, but the results of that adjustment were found to vary significantly from the determination of revenues to be received from customers under the Company's decoupling structure that uses monthly RPC amounts that vary by class. Due to the significant variations in monthly RPC amounts, the simplified methodology in the year-end customer count adjustment overstated the amount of revenue to be received from new customers.

I believe Liberty is concerned about the EOY adjustment methodology, which was proposed by Staff in DG 17-048 and was ultimately approved by the Commission. I believe that the simple methodology which was used in the last rate case (and in many other electric and gas rate cases and approved by the Commission) is reasonable. Usually, an EOY adjustment increases revenue and is applied to the test year sales number without any adjustment. In the rehearing process in DG 17-048, Staff identified the need for sales to be adjusted to ensure accurate rates. So while it is true that the application of the EOY adjustment to test year sales increase those sales for rate-setting purposes (which is consistent with using a year-end rate base in rate-setting) the same adjustment caused inflated rates in previous instances. This issue should be properly investigated where it is still used. In the current rate case, the EOY adjustment has been refined to address the data accuracy to a certain level. There might still be some room for improvement. OCA is open to improvements in the methodology, but supports the EOY adjustments as known and measurable adjustments that are consistent with using the year end rate base.

Rate Plan/Step Adjustments

Q. Why is the Company proposing multi-year step adjustments?

A. Mr. Mullen stated at Bates II-209 that "the largest negative impact on a utility's earnings between rate cases is the regulatory lag between the time capital investments are made and the time that recovery of the revenue requirement associated with those capital investments begins, particularly when those investments are considered non-revenue producing or non-growth related." He also pointed to the termination of the CIBS program and the need for an alternative method to obtain timely recovery of the costs involved with replacing leak-prone pipe on its distribution system.

Q. What is your opinion regarding non-revenue producing or non-growth related investment as a reason for multiple step adjustments?

A. Theoretically, investments that are not revenue producing or growth-related could be the basis for multiple step adjustments, but in this instance the planning and policy practices of Liberty undermine reliance on such investments as a reason for automatic rate increases outside of a rate case (when such planning and policy practices can be fully reviewed). Every utility faces regulatory lag. Customer growth provides an opportunity to minimize the impact of the regulatory lags, because customer growth produces increased revenue. Under decoupling, the revenue is stabilized for the Company but allowed to increase with customer growth. A reasonable utility would look for a balance between growth and non-growth capital investment so that the impact of regulatory lag would be manageable. Liberty's capital budget for the next five years (*see* Attachment AMI-3, Staff TS 3-9) shows an expansion in rate base from $346 million[8] at the end of 2019, plus a proposed $49 million[9] in actual investments in 2020, plus an *additional* $400 million in planned investments for 2021 through 2025, yet only 15% of its $400 million budget is growth-related and a lion's share of the non-growth, non-revenue-producing projects are discretionary. These amounts raise the question about Liberty's planning process, and management decisions – whether *doubling* the rate base in five years (while only 15% of that

[8] *See* Bates II-132R, line 1.

[9] *See* Staff TS 3-31.

investment is growth related) is a sound approach and beneficial for customers or in the public interest.

When this case was filed in July 2020, Liberty presented its "integrated capital spending plan" as Attachment BF/RM/HT-2, (Bates II-189) which showed projected spending as: 2021 at $34.7M; 2022 at $54.1M; and 2023 at $53.4M. In Data Response OCA 3-8, Liberty stated that its capital budget was: 2021 - $49M; 2022 -$38M, and 2023 - $59M. Then in February 2021, in Response Staff TS 3-9 (*see* Attachment AMI-3), the Company provided a revised capital budget for the next 5 years which showed the capital budget as follows: 2021 - $48M; 2022 - $111M; 2023 - $74; 2024- $93.5M; 2025 - $75M. Without any explanation, Liberty's capital budget has practically doubled since this case was filed.

Based on the last CIBS filing (DG 20-049, Attachment CAM-1) the average CIBS investment was $4.6 million per year. Since the last rate case, the average was $10 million per year. The proposed step adjustment asked for a recovery of 80% of the non-growth capital investments which translates to an average $54 million per year based on the latest capital budget described earlier. It is more than ten times the average CIBS investment. Even 20% of the non-growth capital investment (equivalent to $13.5 million per year) is more than the average CIBS investment of the last few years.

The OCA fundamentally questions whether such enormous increases in rate base are necessary. Such large increases in capital will exacerbate any inherent regulatory lag, but the OCA questions whether such large budgets with a huge non-growth discretionary investment are appropriate for a rate plan involving a series of step increases as opposed to traditional rate review and recovery through test-year based rate setting.

Other Issues

Q. Do you have any observations regarding any inaccuracies or errors that might impact the Company's decision to file this rate case?

A. I will address several issues regarding the Company's decision to file this rate case. The first issue is related to the low-income discount program. The second issue is related to the Company's treatment of decoupling that impacted its rate request. As this is the first rate case filing that Liberty has made since implementing the decoupling mechanism, the Company, Staff and the OCA worked together to address these issues through a settlement agreement in the temporary rates phase of this proceeding approved by the Commission.

Q. Before discussing the issues, please explain how revenue requirement, revenue collected, and allowed revenues are different in a traditional rate filing as compared to a rate filing made after a decoupling mechanism has been implemented.

A. Traditionally, any increase of revenue requirement allowed is added to a company's test year revenue when setting the new rates. If a company had $1,000 in test year revenues and demonstrated a need to collect an additional $300, then the company would design base rates to collect $1,300. That is no longer true under decoupling. Decoupling involves two versions of revenue: a) the revenue actually collected at current rates, and b) the allowed revenue that the company can retain under decoupling. Decoupling creates a separation between the revenue actually collected and the allowed revenue. The difference that is either returned to or collected from customers is identified by the company as "decoupling revenue" which could be surplus or deficit in any given year. In traditional rate filings, there is no such separation between the revenue actually collected and the allowed revenue. Under decoupling, in a rate case, if current rates collected more revenue than the company was allowed, and there was no revenue deficiency due to other factors (such as plant increases or O&M increases), the rate case would reduce revenues though reduced rates. If there is an increase in revenue requirement, and it is equal to the "decoupling revenue," there would not be any change in rates (the base rate increase would be offset by the decoupling mechanism decrease). Only if the increase in revenue requirement is higher than the decoupling revenue would there be an overall rate increase.

Q. Can you now please elaborate on the two issues?

A. In its initial filings, the Company calculated its revenue increase based on its allowed revenue and applied the increase to the revenues collected at current rates. (*See* Petition Attachment 1, pp. 2-4.) This did not take into account that the current rates provide for a revenue collection above the allowed revenue. However, the request for an increase in revenue requirement must take into account *all* the revenues that are being collected under the current rates. The Company's filing had two mistakes: 1) the revenue amount under current rates did not reflect the revenues from the Residential Low Income Assistance Program (RLIAP),[10] and 2) the

[10] Currently known as the Gas Assistance Program (GAP).

Company translated an increase in revenue requirement directly to an increase in rates which incorrectly did not take into account that the current rates provide for a revenue collection above the allowed revenue, the difference that would have been returned to customers through the RDAF.

Q. Please explain the first issue.

A. The first issue is related to the low-income discount program. The Company collects low-income program discounts from all customers through the RLIAP as part of the LDAC. As a result, the Company's revenue is made whole when both the base rate and the LDAC collection of this discount are considered. However, in its initial rate filing in this case, the Company did not account for the low income discount revenue recouped through the RLIAP/ LDAC when calculating its required distribution revenue (revenue requirement).[11] Thus, to begin with, the Company missed approximately $2 million in revenue in its earning calculations, rate of return, revenue increase required, etc. Inexplicably, the Company made mistakes in the rate model which resulted in an additional increase in the revenue requirement by the same amount. These errors reflected a roughly $4 million impact.[12] Such a large figure might have influenced the Company's decision to file a rate case.[13]

[11] This created a bigger issue in the rate design model which is discussed later.

[12] The $4 million amount is significantly more than the $0.9 million adjustment due to customer reclassification, which was stated as one of the reasons for the rate case.

[13] This error was corrected in the February 21, 2021 by the Company through an updated report of proposed rate changes and updated attachments. *See* Tab 32.

Q. Do you have any recommendations to correct this issue in the future?

A. Yes. The source of these errors is the integration of low-income discounts in the rate design model. I recommend that the Company treat all low-income customers as regular customers for all rates and revenue related matters, and reconcile the discount through the LDAC. First, all electric utilities and the one other gas utility in the state follow this methodology for their low income program-discounts costs and rate design and have not made similar errors in revenue calculations. Secondly, with the changes implemented in the recent low income program docket (DG 20-013), the discount is no longer offered year-round; instead, it is offered only for the winter season, and the discount now also applies to the supply portion of the bill (whereas before it was limited to the distribution portion). This approach would eliminate the possibility of errors in the complexity of rate design modeling, and would make it be easier to address program costs through the LDAC.

Q. Are you proposing to eliminate Rates-4 or low-income rates?

A. No. I am proposing to change the way those rates are presented in the rate design process. For rate design, R-4 (low-income) customers would be recognized at regular customer rates, and the Company will count the regular rates as revenue for rate design purposes. The discount will be given to the customers and the recoupment of that discount from all other customers will be accomplished through the LDAC.

Q. Please explain the second issue.

A. The second issue is more nuanced and new under decoupling. If there is an overcollection above allowed revenue, the Company returns the excess revenue through its approved decoupling mechanism, the RDAF. In a decoupled environment, when there is a rate case the over-collection can be credited towards the required rate increase so that the revenue requirement is increased without changing the base distribution rates. As a result, the RDAF mechanism will be reset. So without increasing the distribution rates, the Company's revenue can be increased. This is accomplished by changing the revenue per customer (RPC). RPC calculations should be filed as part of the tariff compliance filing.

Q. Has this adjustment been done before?

A. Yes. That is what was done (at Staff's recommendation) in the temporary rate phase of this proceeding, *see* DG 20-105 Exhibits 5 and 6, where adjusted decoupling RPCs and usage per customer (UPC) were implemented. For the settlement agreement in the temporary rates phase the Company proposed and the Parties agreed to use current rates as temporary rates to provide a temporary allowed revenue increase. By increasing the allowed revenue in temporary rates by maintaining current rates, customers did not see an increase in rates but they also were no longer receiving the refund they would have received under the RDAF.

Q. Do you think the approach taken in the temporary rates settlement agreement regarding decoupling should be replicated in the future?

A. No. The OCA believes that the implementation of this method, which involved changing the usage per customer (UPC) during the temporary rates phase, is inappropriate. The UPC is part of what the rate case determines and it is premature to make that judgement at the temporary rate phase because, to analyze the UPC properly, stakeholders need more time than the temporary rate phase allows. In the future, rate increases at the temporary rate phase should only be accomplished through a change in the RPC as occurs during CIBS or a step increase.

Q. Please explain the rate design model issue you mentioned earlier.

A. As discussed earlier, in its Rates-5 rate design schedule the Company did not include the approximately $2 million in revenue that it collected through the LDAC. This oversight has two layers of impacts: 1) it inflates the required revenue increase, and 2) the revenue increase, applied to the deflated current revenue as the base, produces a higher percentage, which is then applied to the actual revenue when designing rates. For example, if the actual revenue is $100, and the low income program discount is $2, the Company is counting $98 for rate design and all other rate case filing purposes. If we assume that a cost of service study shows a required revenue of $105, then the rates model will show a revenue increase of $7 ($105 -$98) needed, as compared to the actual required increase of $5 (($105 -$100), with a difference of $2. This is the first layer. When the percentage increase is calculated, the model uses $98 as the base and $7 as the revenue increase, which is 7.14%. Then the Company applies this percentage to its actual current revenue of $100, giving them a revenue of $107.14, whereas it should be $105. In actuality, only a 5% increase was required.

In Docket DG 17-048, and in the initial filing in this case, the Company added another wrinkle in its Rates-5 schedule. Specifically, the Company added the low income program amount above the approved revenue increase. Continuing the example I have been using, assuming that the Commission approved the $7 revenue increase (incorrectly), the Company added another $2 to that revenue to recover the 'low-income program cost' so that the Rates-5 schedule would reflect a revenue increase of $9. Using the example previously given, the calculations will produce revenue of $109.2, instead of the $105.00 if everything were done correctly. Unfortunately, this mistake is what occurred in the last rate case DG 17-048 resulting in an increase in revenue currently reflected in the test year allowed revenue.

Q. Did the Company correct these issues in its updated filing?

A. Yes. Liberty updated its rate filing on February 25, 2021, which corrected how revenues under decoupling and the low-income discount program are accounted for when calculating revenue requirements, and designing rates, under a decoupling mechanism environment.

Q. Do you have any additional observation on the updated filing?

A. Yes. The updated filing requests an increase in delivery rates equivalent to $2.9 million by allocating $2 million to the production costs recovered in the Cost of Gas filings. In its original filing this $2 million was part of delivery rates. As our colleague Jerome Mierzwa has testified, the OCA agrees with this shift based on the functional cost of service study. This is still a proposed $4.9 million overall increase in rates.

The Company proposed revenue requirement increase, relative to the previously allowed revenue requirement, is actually $9.9 million which is the $4.9 million delivery and COG rate increases I just mentioned plus the of $4.97 million "decoupling revenue" increase implemented during the temporary rate phase.

Conclusion

Q. Please summarize your position?

A. In summary, OCA recommends the following:

- The OCA recommends that the amortization of reserve deficiency approved in the last rate case be discontinued until the ASL and COR are revised and a new depreciation study is done.
- On the rate plan issue, the OCA is concerned about the balance between growth and non-growth capital investment by the company, and recommends that any rate plan should incorporate a reasonable balance.
- The OCA recommends that the low-income rate class should be treated as regular residential customers in all rate design and revenue related purposes, and the low-income program cost should be dealt with in the cost of gas or any related dockets.
- The OCA recommends that in the future the UPC should not be changed during the temporary rate phase.
- The OCA recommends that the RPC calculations be filed as part of the tariff compliance filing.

Q. Does that conclude your testimony?

A. Yes.

Educational and Professional Background

Al-Azad Iqbal

I am employed by the New Hampshire Office of the Consumer Advocate as the Economics/Finance Director. My business address is 21 S. Fruit Street, Suite 18, Concord New Hampshire, 03301.

I received my Bachelor degree in Architecture (B. Arch) from Bangladesh University of Engineering and Technology. Later, I received my Masters (MS) in Environmental Management from Asian Institute of Technology and another Masters in City and Regional Planning (MCRP) from the Ohio State University. I was a Doctoral Candidate at the City and Regional Planning Department at the Ohio State University. After joining the PUC in 2007, I participated in several utility related training courses including marginal cost training by National Economic Research Associates (NERA), Advanced Regulatory Studies through the Institute of Public Utilities at Michigan State University, and Depreciation Training with the Society of Depreciation Professionals. On March 12, 2021 I joined the Office of the Consumer Advocate as the Economics/Finance Director.

Prior to joining the PUC, I was involved in teaching and research activities in different academic and research organizations. Most of my research work was related to quantitative analysis of regional and environmental issues.

RE: **Review of ENNG's Revenue Decoupling Mechanism**

SECTION I. EXECUTIVE SUMMARY

ENNG has engaged Concentric to conduct an audit of its recently approved revenue decoupling mechanism ("RDM") because the actual RDM results to date have resulted in distribution revenues $1.4 million[1] below that allowed in the Company's last rate case.[2] Additionally, the RDM calculation has shown volatile results and has produced an unanticipated large credit to customers over the first seven months since the RDM has been in place.

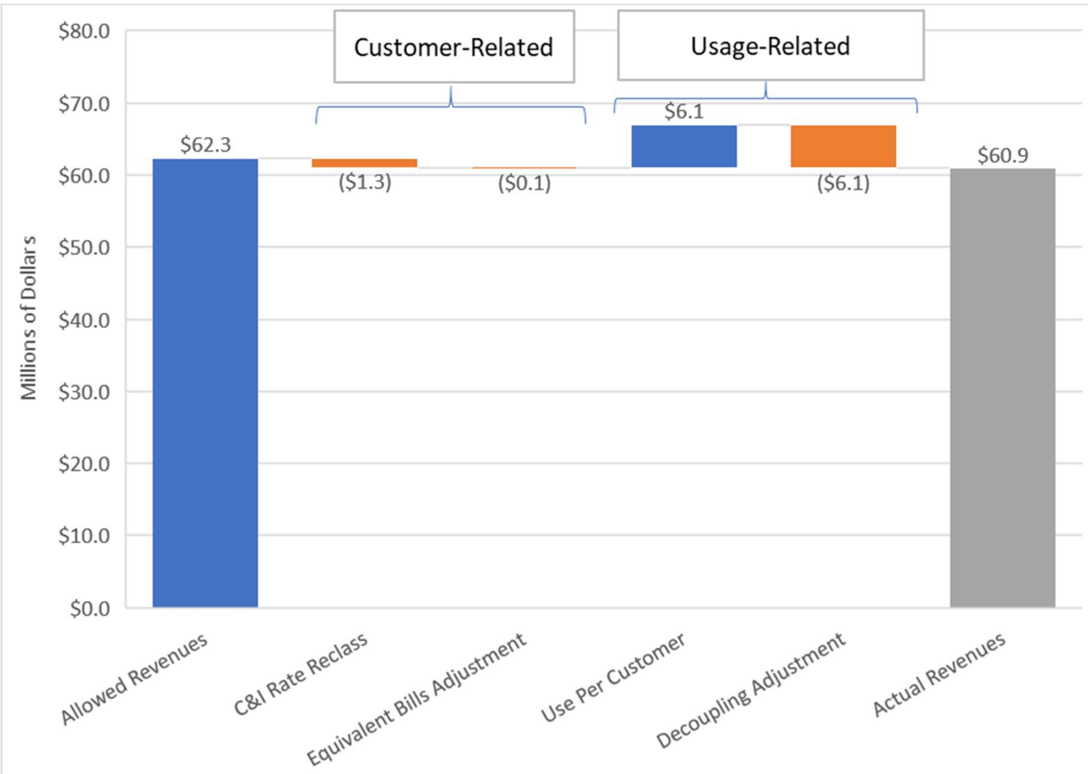
Concentric's findings are summarized as follows:

i. *The Company's RDM calculations are accurate.*
ii. *Actual class-level customer counts are significantly different than approved customer levels, resulting in a $1.4 million distribution revenue shortfall because:*
    a. *A Post-Test Year C&I customer reclass was not reflected in the rate case, and*
    b. *The New Hampshire Public Utilities Commission ("NHPUC") Staff made an "equivalent bills" adjustment in the rate case that makes attaining allowed revenues difficult.*
iii. *Increased use per customer is driving the large RDM credit.*
iv. *ENNG's use per customer trends are consistent with other regional natural gas companies.*
v. *The real-time weather normalization adjustment ("WNA") is now functioning properly after a $0.264 million error was discovered in November 2018 and subsequently credited back to customers in April 2019.*
vi. *The Company's unbilled revenue methodology is prone to higher monthly variation than other methods. Two minor errors in the seven months of entries also contributed to monthly decoupling entry variances.*

[1] For the period of November 2018 through May 2019.
[2] Docket No. 17-048 "Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities Distribution Service Rate Case", Final Decision dated April 27, 2018 (the "Final Decision").

The following chart summarizes the components of the variance between allowed and actual distribution revenues:

Chart 1: Components of Distribution Revenue Variance



The purpose of an RDM is to sever the link between sales units (usage) and revenues, thus enabling companies to freely promote conservation measures to their customers without suffering financial harm. A revenue per customer ("RPC") RDM construct is intended to recognize that adding new customers requires compensation to fund the incremental investment necessary to connect that customer to the distribution system. As such, an RPC RDM does not reconcile differences in customer counts.

The above chart shows that changes in customers compared to the approved rate year has resulted in an unfavorable margin variance of $1.4 million. This is primarily the result of two factors: 1) a February 2018 commercial and industrial ("C&I") rate review, which resulted in a significant reclassification of customers among the C&I rate schedules, and 2) a late adjustment to target (allowed) distribution revenues and customer counts ("equivalent bills") by the NHPUC Staff at the end of the rate case proceeding.

The $6.1 million favorable margin variance related to higher use per customer is properly captured through the RDM and nets to zero.

SECTION II. BACKGROUND

ENNG has engaged Concentric to conduct an audit of its recently approved RDM because the actual RDM results to date have resulted in distribution revenues $1.4 million below that allowed in the Company's last rate case. Additionally, the RDM calculation has shown volatile results and has produced an unanticipated large credit to customers over the first seven months since the RDM has been in place. The large RDM credit is unanticipated because the "real time" WNA is billed monthly on each customer's bill, thereby eliminating the largest anticipated variance component of the RDM, weather. Concentric first produced a work plan to address the primary purpose of this engagement, which is to determine whether there are any structural deficiencies in the RDM construct.

The details of this work plan consist of the following:

1. *Verify that the RDM is functioning properly, through investigation of the following:*
    i. *That the Allowed Revenue Per Customer being used in the RDM calculation is accurate and consistent with the approved billing determinants and allowed revenues from the rate case;*
    ii. *That the Actual Revenue Per Customer ("RPC") since inception of the RDM is also calculated correctly, and*
    iii. *That Concentric's independently calculated monthly RDM variances are equal to that recorded by the Company.*
2. *Quantify the monthly variances by category (i.e., customer-related and usage related);*
3. *Calculate the monthly weather-related variance and compare that result to actual billed WNA revenues;*
4. *Validate the monthly unbilled entries, and quantify the unbilled contribution to monthly variances, and*
5. *Summarize our audit findings and provide Concentric's recommendations.*

SECTION III. THE ENNG VARIANCE ANALYSIS

The Company provided Concentric with its monthly decoupling values as well as its variances to allowed distribution revenues. This is summarized as follows:

Table 1: Variance to Allowed Distribution Revenues (November 2018 – May 2019)

Line	Revenue Type	Total
1	Allowed Distribution Revenues	62,292,497
2	Actual Distribution Revenues	60,930,806
3	Difference	(1,361,691)
4	Decoupling Deferral[1]	(6,089,952)

1 Included in Line 2 above.

As Table 1 indicates, cumulative actual revenues (inclusive of the decoupling adjustment) are below allowed by $1.4 million. This significant unfavorable variance, coupled with the larger than anticipated decoupling adjustment, led to this audit to ensure the RDM is functioning properly and that the base revenue target RPC is appropriate and calculated consistent with the Final Decision.

SECTION IV. PRELIMINARY RESULTS

On July 12, 2019 Concentric reviewed a Microsoft PowerPoint© presentation with ENNG Management. This presentation included the following preliminary findings:

- The Company's RDM calculations are accurate.
    - Target RPC, by class and in total, are calculated correctly;
    - Actual Calendar Revenues cannot be calculated on a Class RPC basis because of the system-wide unbilled methodology, and
    - The method used to calculate the decoupling adjustment is different than the approved tariff methodology, but mathematically should yield the same result.
- Actual customer counts are below Allowed levels, primarily in the Commercial and Industrial ("C&I") rate classes result in a $0.7 million[3] delivery revenue shortfall that is not recoverable through decoupling.
- Use Per Customer Growth drives the higher than anticipated decoupling credits.
- The unbilled calculation contributes significantly to the monthly variances, making it difficult to assess the true impact of the decoupling adjustment.

As a result of this presentation Concentric was asked to further investigate use per customer trends from other New England gas companies. The above findings have been validated and refined, and now also include the requested use per customer comparisons.

SECTION V. FINAL FINDINGS

A. The Company's RDM calculations are accurate.

Concentric validated the Company's monthly RDM calculations by performing three tests:

1. *Replicate the monthly Target RPC;*
2. *Validate the Company's monthly Actual RPC, and*
3. *Compare the differences from steps 1 and 2 to the Company's reported monthly decoupling amounts.*

These steps require a review of the Company's unbilled methodology and monthly entries, which are necessary to report monthly revenues on a calendar basis.

The first audit test was to validate that the monthly RPC targets were calculated correctly using class-specific data from the Final Decision. CEA first obtained the final approved billing determinants from the Final Decision, which includes the number of customers (equivalent bills), throughput (therms), and the appropriate tariff's monthly fixed charges and delivery rates per therm. We then multiplied these billing determinants by the tariff rates to derive monthly allowed distribution revenues by rate class. Each class-specific distribution revenue was then divided by the allowed number of equivalent bills to derive class-

[3] Concentric's preliminary finding used customer rates to quantify the customer variance. The final analysis contained in this memorandum properly uses the class RPC values, which are used in the RDM calculation.

specific revenue per customer targets. Lastly, these revenue per customer targets were compared to the Company's RDM calculation workbook and were found to tie out in each class for each month.

The second step was to validate the Company's Actual RPC calculations. This was performed in total rather than at the class level because of the nature of the unbilled calculation (discussed below in Section VII). Unbilled is calculated by first using actual system gate station receipts less company use, daily metered volumes[4] and a lost-and-unaccounted-for deduction[5] pertaining to local delivery system losses. Because the Company utilizes the "gate station approach" to estimate unbilled sales, class-level detail is not possible. Therefore, Concentric reviewed both the class-specific billed revenues, the unbilled revenue estimate and the calculation of monthly equivalent bills to validate the monthly Actual revenues.

Concentric's review of the underlying billing data and unbilled entries did uncover a minor unbilled estimation error whereby the number of equivalent bills used in the unbilled calculation were incorrect for the months of November 2018 through and including March 2019[6]. This error has no effect on the seven-month cumulative variance, as the unbilled accruals are reversed each month and the equivalent bills error was corrected in the April 2019 accrual. Concentric then performed a second reasonableness test whereby the unbilled sales volumes and equivalent bills were spread to the rate classes based on billed volume percentages. This provided a "sanity check" calculation, which showed material volatility in the C&I classes. The root cause of this volatility is discussed below.

The third step compares the actual RPC to the Allowed RPC and multiplied times the number of calendar month equivalent bills. This calculation yielded a decoupling value very close to the Company's recorded decoupling revenues in total, but significant monthly variances in the months of November 2018 through March 2019.

A. Customer counts are significantly different than that allowed in the rate case.

Average customers for the period of November 2018 through May 2018 were compared to the 2016 rate year for each rate class. The variance in customer counts was then multiplied times the Allowed RPC for the same period. This calculation is shown below:

[4] Daily metered volumes are excluded from the unbilled calculation as they are billed on a true calendar basis.

[5] The Company utilizes a 1.6% lost-and-unaccounted-for percentage in all months. No attempts were made by Concentric to validate this assumption.

[6] Actual cycle-based number of bills was inadvertently used in these five months.

Table 2: Distribution Revenue Impact Related to Average Customer Counts

	Average Customer Counts			Distribution Revenue	
Rate Class	**Actual**	**Rate Year**	**Actual Versus Rate Year**	**Allowed RPC 11/2018 through 5/2019**	**Rate Year Variance**
R-1	3,133	3,558	(425)	$167	($70,804)
R-3	72,472	72,142	330	$458	$151,279
R-4	5,906	5,315	592	$177	$104,676
R-5	64	-	64	$217	$13,882
R-6	185	-	185	$596	$110,225
R-7	3	-	3	$230	$707
Total Residential	**81,763**	**81,015**	**749**		**$309,964**
G-41	9,200	9,147	53	$1,117	$58,864
G-42	1,379	1,755	(376)	$6,515	($2,448,421)
G-43	58	48	10	$43,278	$432,051
G-44	2	-	2	$1,452	$2,317
G-45	4	-	4	$8,469	$36,216
G-46	-	-	-	$56,262	$0
G-51	1,227	1,360	(133)	$810	($107,489)
G-52	374	325	49	$4,085	$199,787
G-53	36	32	4	$34,929	$151,109
G-54	28	26	2	$25,621	$52,094
G-55	3	-	3	$1,053	$2,909
G-56	-	-	-	$5,311	$0
G-57	-	-	-	$45,408	$0
G-58	1	-	1	$33,307	$36,320
Total C&I	**3,109**	**3,546**	**(437)**		**($1,682,336)**
Total All	**84,872**	**84,561**	**311**		**($1,372,372)**

As the above table indicates, the total difference in customer counts is the source of the difference between Actual and Allowed distribution revenues.

a. A Post-Test Year C&I Customer Reclass was not Included in the Decoupling Targets.

In February 2018 the Company analyzed its C&I rate classes to determine if any customers were not properly assigned to the appropriate rate class. For example, if a commercial customer has been receiving service under Rate G-41 (with an availability requirement that the customer must use less than 10,000 therms annually and use more than 67% of its annual usage in the winter months) and, as a result of the annual rate review it is determined that the customer has increased its annual usage above 10,000 therms, the customer is then reclassified to the G-42 rate schedule.

Concentric's review of current customer counts compared to that imputed into allowed revenues showed significant variation, particularly in the C&I class. We determined that the C&I rate review conducted in February 2017 was not accounted for in the rate case. The summary of these customer reclasses is as follows:

Table 3: February 2017 C&I Rate Reclassifications

Rate Class	C&I Customer Reclass				
	Out	In	Net	11/2018 - 5/2019 Allowed RPC	Delivery Revenue Impact
G-41	(489)	789	300	$1,117	$335,148
G-42	(529)	241	(288)	$6,515	($1,876,269)
G-43	(18)	17	(1)	$43,278	($43,278)
G-51	(437)	358	(79)	$810	($64,015)
G-52	(97)	162	65	$4,085	$265,532
G-53	(10)	15	5	$34,929	$174,647
G-54	(9)	7	(2)	$25,621	($51,241)
Total	**(1,589)**	**1,589**	-		**($1,259,476)**

This variance is a subset of the total customer-related margin variance calculated in Table 2.

b. Test Year Adjustments Included in the Decoupling Targets Makes Attaining Imputed Customer Counts Difficult.

Near the completion of the litigated rate case in Docket No. 17-048 the Commission Staff required the Company to make a calendarization adjustment for the number of test year bills. This adjustment is intended to "normalize" the test year customer counts and reflect new customer accounts added during the test year. The Company's approach to this request was to calculate an equivalent bills adjustment, which both smoothed test year customer counts and recognized new customer additions made during the test year. This adjustment resulted in the following increase to Allowed customer counts, therms and revenues:

Table 4: Rate Year Equivalent Bills Adjustment

Rate Class	Annual Bills	Annual Therms	Delivery Revenues
R-1	386	7,154	$8,475
R-3	14,336	1,043,363	$789,374
R-4	(1,580)	(214,472)	($56,689)
Total Residential	**13,142**	**836,045**	**$741,160**
G-41	3,214	485,913	$342,087
G-42	343	561,680	$238,682
G-43	(28)	(554,018)	($138,357)
G-51	99	14,201	$8,535
G-52	79	155,599	$40,388
G-53	(21)	(544,071)	($96,774)
G-54	(16)	(836,835)	($47,439)
Total C/I	**3,670**	**(717,529)**	**$347,123**
Total All	**16,812**	**118,516**	**$1,088,283**

The above adjustment is included in the Approved RPC targets resulting in a higher customer count that must be attained to achieve allowed delivery revenues. The RDM adjustment does not compensate the Company for lower actual customer counts than that imputed into base delivery revenues. The RDM is designed to sever the link between sales (therms) and revenues, not customer counts.

B. Use Per Customer

Again, the purpose of the RDM is to sever the link between customer usage and delivery revenues. Reasons for usage variances are primarily the result of colder or warmer than normal weather, conservation measures (from both ratepayer-funded programs and individual customer conservation measures) and economic activity. Given the Company's RDM construct that includes a real-time WNA, the variances related to use per customer were anticipated to be small. To the contrary, the decoupling revenue adjustment has credited customers $6.1 million over the first seven months of operation. The real-time WNA has properly captured the weather-related variance (discussed in Section VI below), which leaves the entire RDM adjustment attributable to use per customer. The increase in use per customer has occurred in both the Residential and C&I sectors:

Chart 2: Residential Use Per Customer

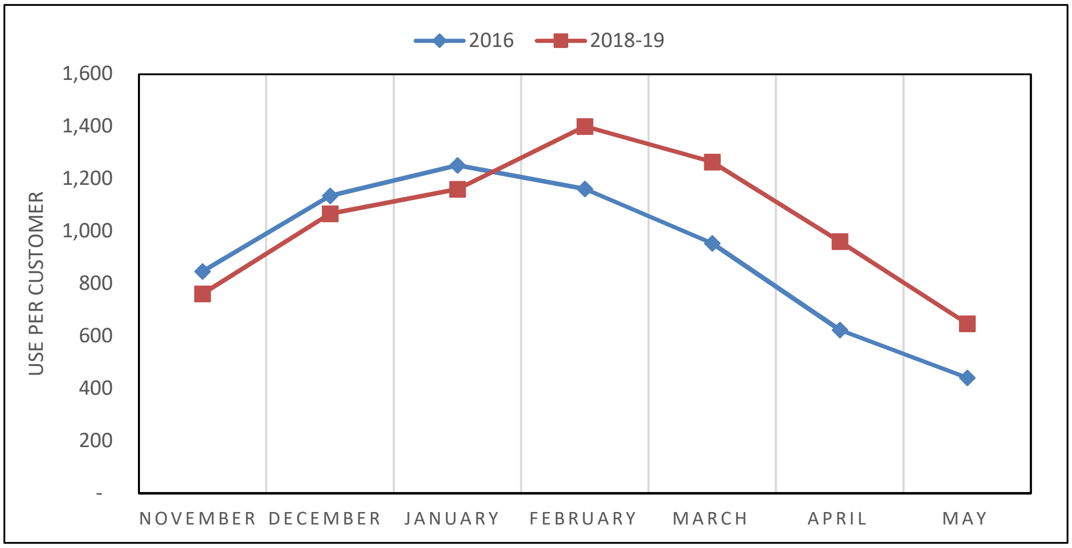


Chart 3: C&I Use Per Customer

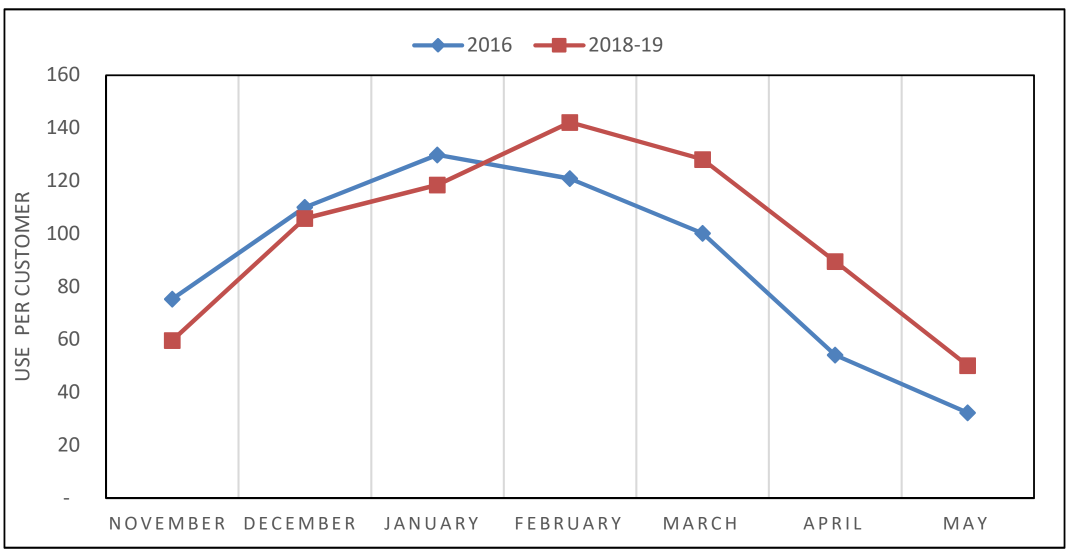


At the preliminary findings presentation, the Company was surprised by the recent increase in UPC, particularly for the Residential class. Concentric was asked to compare ENNG's UPC to that of neighboring natural gas utilities. Concentric was able to obtain customer and usage data from the following companies[7]:

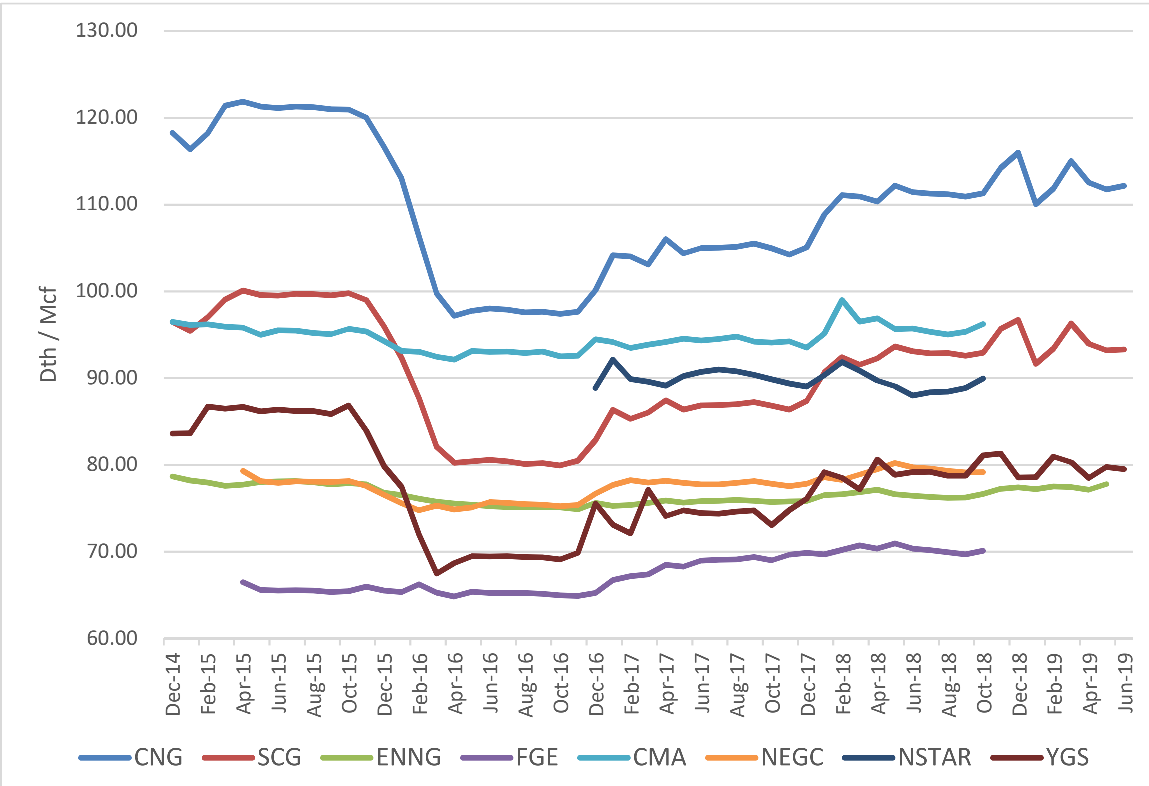
[7] This portion of the memorandum will be shared with the list of participants in recognition of their voluntary involvement in the study.

Table 7: Participating Local Gas Distribution Companies ("LDCs")

Utility	Abbreviation	Location	Approximate Number of Customers
Connecticut Natural Gas	CNG	Greater Hartford, CT and Greenwich, CT	180,000
Columbia Gas – MA	CMA	Springfield and Laurence, MA	325,000
Eversource Gas – MA	NSTAR	Central MA	290,000
Liberty – NH	ENNG	New Hampshire	95,000
National Grid – RI	NEGC	Rhode Island	55,000
The Southern Connecticut Gas Company	SCG	Greater New Haven and Bridgeport, CT	200,000
Unitil – MA	FGE	Fitchburg, MA	16,000
Eversource – CT	YGS	Across CT	200,000

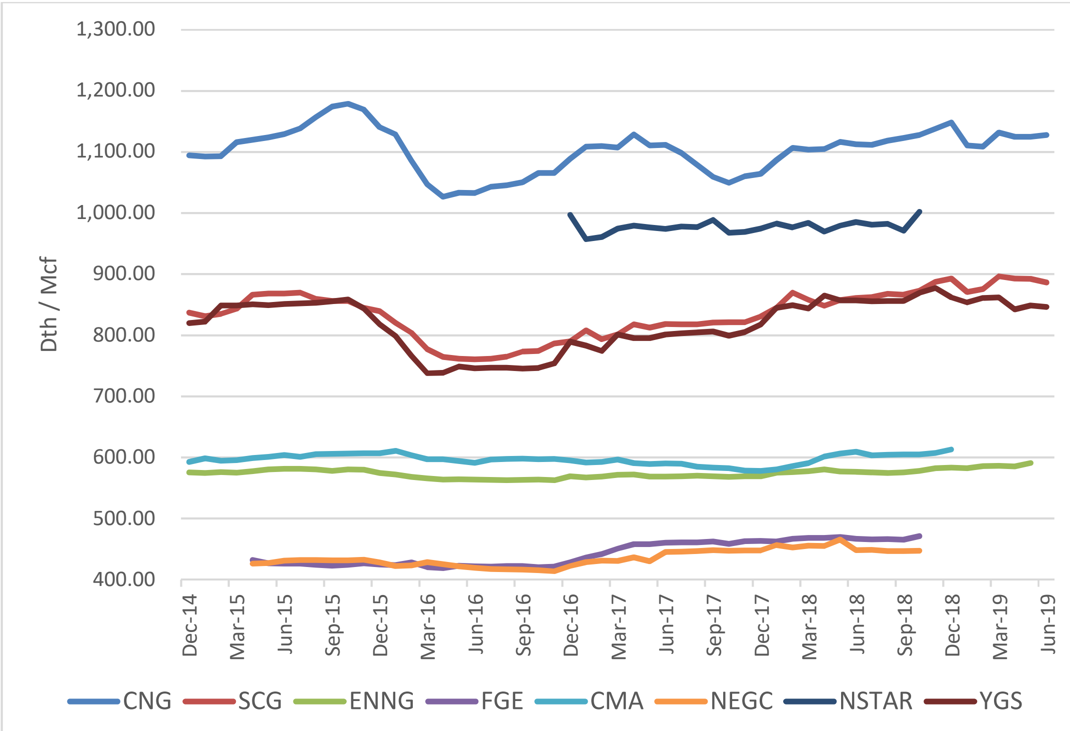
Monthly customer and usage data was obtained by rate class for as far back as January 2014. Concentric then calculated monthly UPC, then calculated a 12-month rolling total. Normalized consumption data was used where available. The data below represents summarized data for Residential (heat and non-heat), Commercial and Industrial customer classes.

Chart 4: Residential Use Per Customer Trends: 12-Month Rolling Total



The CNG, SCG and YGS trend lines are difficult to compare because only actual usage data was provided while all other survey respondents included both actual and normalized volumes. Still, the trend over the most recent three years is consistent with other LDCs.

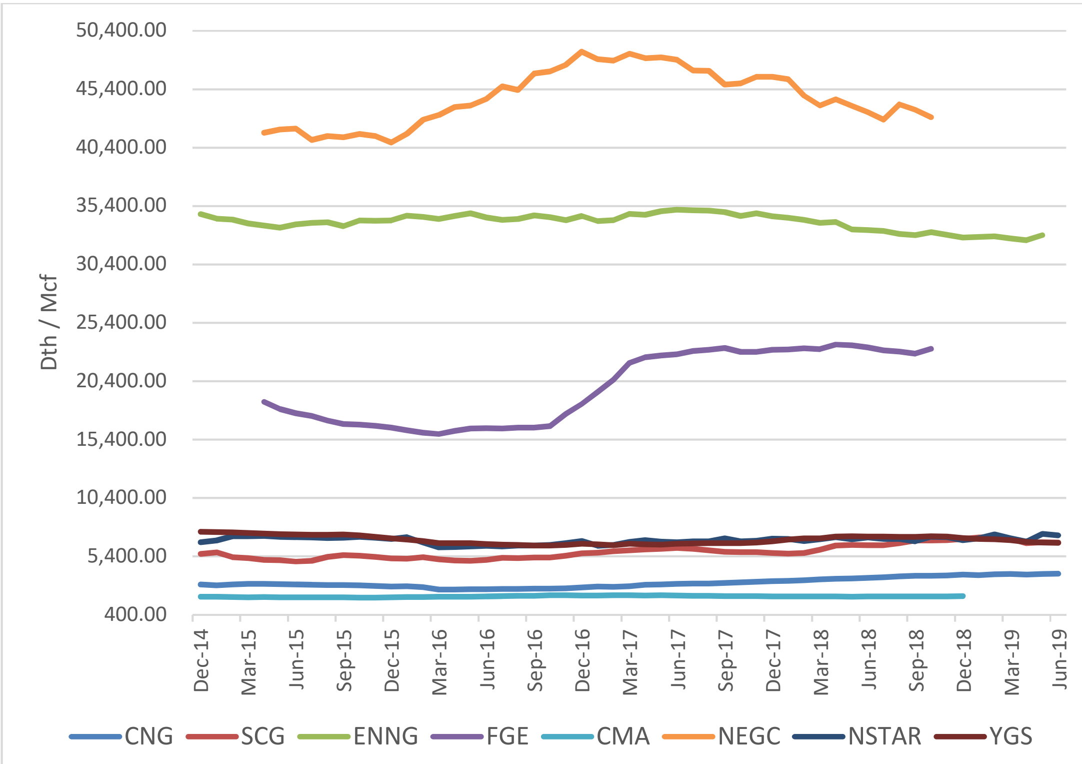
Chart 5: Commercial Use Per Customer[8] Trends: 12-Month Rolling Total



The Commercial trend exhibits a small upward trend for all LDCs except CMA, ENNG and NSTAR.

[8] NSTAR Gas represents a combined C&I UPC.

Chart 6: Industrial Use Per Customer Trends: 12-Month Rolling Total



The industrial class comparison is complicated by the fact that some of the utilities have appreciably different rate designs. For example, CNG, SCG and YGS's Industrial customers are served primarily under Rate LGS – Large General Service. This tariff does not carry a load factor distinction like the other participating LDCs tariffs. As such, the average UPC for these three LDCs appear much lower than those with more granular rate structures.

Appendix A contains individual use per customer graphs for each LDC.

SECTION VI. WEATHER VARIANCES AND THE REAL-TIME WNA

One of the audit tasks is to validate the accuracy of the real-time WNA adjustment. The real-time WNA is a customer-specific calculation that results in either a charge (when weather is warmer than normal) or a credit (when weather is colder than normal). The WNA is billed in the month in which the weather variance occurs, thus matching the charge or credit with the weather-related impact on the bill. Customer WNA billings is captured as a separate revenue component in the Company's revenue reporting, enabling a comparison between what was billed and what a class-level spreadsheet analysis produces. This comparison, although not expected to match perfectly, should indicate that the WNA is functioning properly or not. The results of the comparison between the real-time WNA and the Excel© based weather analysis is as follows:

Table 5: Comparison of Calculated Weather-Related Variance to the Real-Time WNA

Category	Nov-18	Dec-18	Jan-19	Feb-19	Mar-19	Apr-19	May-19
Distribution Revenues	$6,176,999	$9,601,480	$12,370,924	$12,544,467	$11,461,724	$9,515,278	$6,468,216
Heating Degree Days	*Colder / (Warmer)*						
Actual HDD	601	983	1,085	1,160	1,059	710	415
Normal HDD	504	857	1,162	1,167	1,026	737	414
Difference	97	126	(77)	(8)	33	(27)	1
Variance %	19.3%	14.8%	-6.6%	-0.7%	3.2%	-3.7%	0.3%
Weather Variance	*(Credit) / Charge*						
Calculated WNA	($510,539)	($900,154)	$585,425	$61,848	($255,743)	$218,110	($7,368)
Billed WNA[1]	($65,581)	($926,070)	$568,805	$11,317	($172,550)	$414,250	$206,917
Difference	($444,958)	$25,916	$16,620	$50,531	($83,193)	($196,139)	($214,285)
% of Revenues							
Calculated Weather	-8.3%	-9.4%	4.7%	0.5%	-2.2%	2.3%	-0.1%
Billed WNA	-1.1%	-9.6%	4.6%	0.1%	-1.5%	4.4%	3.2%

Upon reviewing the above comparison, one would expect to see only a small monthly variation between the calculated WNA and the billed WNA. Further, the two methods should move in the same direction (both methods resulting in a credit, or both resulting in a debit). Additionally, the magnitude of the adjustment should reflect the difference in heating degree days ("HDD"). Concentric's findings is that each month from December 2018 through March 2019 appear reasonable, displaying a close correlation between methods.

The months of November 2018 and April 2019 showed material variances between actual billed WNA and the spreadsheet estimate. November has a significant amount of HDDs and the weather was significantly colder than normal (19.3% colder). This colder than normal HDD implies that customers would have their heating systems on for the majority of the month. The fact that the billed WNA was a comparatively small credit compared to the spreadsheet analysis (and weather was significantly colder than normal) indicates that there was likely a billing system issue. It is our understanding from the preliminary results meeting that there was in fact an implementation issue with the real-time WNA in November 2018 and a credit was subsequently applied in April 2019, which explains the variation in these two months.

SECTION VII. THE UNBILLED REVENUE METHODOLOGY AFFECTS THE RDM CALCULATION

Unbilled revenues reflect those sales that occurred in the calendar month but have yet to be billed to the customer. Accounting standards require companies to report revenues on a calendar basis. When companies such as ENNG utilize billing cycles, there is an inevitable mis-match between billed sales (which cross calendar months) and calendar sales. To remedy this mismatch, companies must estimate the value of these unbilled sales. There are three commonly used methods to estimate unbilled sales:

Method 1: Perform a system-wide calculation based on monthly actual gate station take data (the "send-out" method);

Method 2: Utilize a base-thermal methodology, which estimates unbilled revenues based on unbilled heating degree days (the "base-thermal" method), and

Method 3: Utilize actual end-of-month meter reads (the "AMI" method).

Of these three methods, ENNG utilizes method 1. This method is the simplest of the three as it relies on total gate station receipts and system-level adjustments to derive calendar sales. The shortcomings of this method is that results tend to be volatile across the months, and class-level detail is not estimated making variance analysis more difficult. Further, with an RDM that includes rate class revenue targets, performing the monthly RDM entry must be performed at the system level given the current method for unbilled estimation. This means that the Company's actual RDM calculation is different than its published tariff:

Table 6: RDM Methodology Comparison

Approved Tariff Methodology (RPC)	Actual Practice (Revenues)
Step 1: Calculate the difference between Actual RPC and Allowed RPC for each rate class	**Step 1**: Derive Allowed revenues by multiplying the Allowed RPC times the actual number of customers for each rate class and sum them
Step 2: Multiply the RPC differences derived in step 1 times the Actual number of customers in each rate class	**Step 2:** Compare Actual Revenues to Allowed Revenues derived in step 1
Step 3: The sum of the rate class revenue differences calculated in step 2 to derive the monthly decoupling adjustment	**Step 3**: Subtract Actual from Allowed revenues to derive the decoupling adjustment

Both methodologies result in the same decoupling adjustment amount. However, the lack of transparency to the class level for the RDM calculation makes variance analysis more difficult.

There was an error in the unbilled calculation in the months of November 2018 through April 2019. Billing cycle equivalent bills rather than calendar equivalent bills were inadvertently used in the unbilled calculation. This error contributed to significant monthly swings in the RDM revenues, as the mismatch in equivalent bills is captured by the RDM, which includes target RPC based on calendar equivalent bills. The monthly variations are as follows:

Table 7: Unbilled Equivalent Bills Error Impact on Monthly RDM Variation

	Nov-18	Dec-18	Jan-19	Feb-19	Mar-19	Apr-19	May-19
Customer Difference	(3,107)	2,160	3,215	4,977	(4,342)	(99)	(98)
Allowed RPC	$85.90	$112.91	$127.12	$119.83	$102.87	$69.23	$49.68
Dollar Impact	($266,901)	$243,919	$408,697	$596,338	($446,641)	($6,856)	($4,868)
Contribution to Monthly Unbilled Variance	**($266,901)**	**$510,820**	**$164,779**	**$187,641**	**($1,042,979)**	**$439,785**	**$1,988**

Once the error was discovered and corrected in April 2019 the large variation ended.

SECTION VIII. RECOMMENDATIONS

Recommendation 1: Any C&I rate review must be incorporated into the adjusted (rate year) equivalent bills calculation, and do not perform any rate reviews between rate cases.

Recommendation 2: Consider switching to a base-thermal unbilled methodology. This change will require some up-front investment in spreadsheet development but should help smooth monthly variances. This method will enable the Company to calculate its RDM consistent with its approved tariff and help with monthly variance analysis.

Recommendation 3: The real-time WNA should continue to be audited in the Company's billing system, particularly in the months when it is being applied to prorated bills (November and May).

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty

DG 20-105
Distribution Service Rate Case

Staff Data Requests - Set 3

Date Request Received: 12/16/20 | Date of Response: 1/4/21
Request No. Staff 3-5 | Respondent: Steven Mullen

REQUEST:

Ref. Mullen Testimony, Bates page II-198, line 12-20. Please explain the following:

a. How an increase in use per customer impacts the company under decoupling;

b. Why reclassification was needed after the last rate case, and provide any analysis the company did regarding the impact of reclassification.

RESPONSE:

a. In general, an increase in average use per customer will result in a revenue shortfall under decoupling. The decoupling mechanism transforms the actual seasonal fixed-variable customer class rate designs used for billing into an equivalent series of fixed rates—the allowed base revenues per bill ("RPC"). These transformations are done under specific circumstances at a specific point in time, which reflect the average use per customer at that point. Subsequent changes in the number of customers and their average use will be reflected in the decoupling mechanism as follows: If the average use decreases, the allowed base revenues under decoupling will exceed actual billings, and the deficiency will be recovered from customers through the Revenue Decoupling Adjustment Factor ("RDAF"); conversely, if the average use increases, the actual billings will exceed the allowed base revenues, and the excess will be returned to customers through the RDAF.

b. The "reclassification" referred to in Mr. Mullen's Testimony, Bates page II-198, lines 15–19 was the result of the initial run of the Company's Rate Review process, which was under development in 2016. The Rate Review process was not driven by the Docket DG 17-048 rate case, and its timing post-test year in early 2017 was entirely coincidental. The Rate Review process commences with a computer-generated weather-normalized historical billing comparison for each eligible customer of their present rate to one or more proposed rates based on rate class eligibility criteria. The results are then manually reviewed by customer care personnel, and if determined to be correct, each affected customer is notified and a rate change is made. The summary results of the computer-generated initial run are shown in Attachment Staff 3-5.

Distribution Service Rate Case

Staff Technical Session Data Requests - Set 3

Date Request Received: 2/8/21	Date of Response: 2/24/21
Request No. Staff TS 3-9	Respondent: Heather Tebbetts

REQUEST:

Please provide a copy of the most recent 5-year capital spending plan.

RESPONSE:

Please see Attachment Staff TS 3-9.xlsx for the Company's most recent capital spending plan.

As shown in the attachment, the capital spending plan includes a variety of investments, many of which are standard types of projects and programs included in the annual capital budget, such as replacement of leak-prone mains and services, new services, meter purchases, and city/state construction. Also included in the annual capital budget are the gas system planning and reliability investments and the gas system supply investments that were discussed during the early February technical sessions. Also, consistent with the response to OCA 3-10, the Company has included its planned investment in SAP (referred to as Customer First), which is a critical project to replace the current Customer Information System, accounting system, and other various operations and work planning systems. As noted in the response to OCA 3-10, the Company is in the process of finalizing its analysis of the overall costs and benefits of the Customer First project and will have that analysis available by the end of the first quarter of 2021.

Distribution Service Rate Case

Staff Data Requests – Set 7

Date Request Received: 9/21/17 | Date of Response: 10/5/17
Request No. Staff 7-9 | Respondent: Paul Normand

REQUEST:

Reference testimony of Paul M. Normand, attachment PMN-2, Bates page 445: Given that average life, net salvage, and similar curve are being used for this account in the current and most recent depreciation study:

a. In your expert opinion, what are the possible reasons for the very large swings in reserve variances?

b. Does the Company's proposed level reserve variance amortization address the account level variances?

c. What are your recommendations to minimize such swings in reserve variances at the account level?

RESPONSE:

a. The large swing in the reserve variance is primarily from two accounts: Mains (367.00) and Services (380.00) since the Company's last study. The large deviation is a direct result of the very large plant dollar increases for these accounts (Mains $98M, Services $66M) driven primarily by the mandated replacement program (CIBS) which is expected to continue for some period of time. As a result, we expect that this behavior will continue to be exhibited in a similar fashion as has been experienced but at a lower level since the recent amortization from the last study will be terminated.

b. The Company's proposed amortization factors consider many additional aspects that go well beyond a typical depreciation study to consider. The depreciation study itself continues to recommend a two cycle amortization of the variances without any consideration for the impact to the reserve variances from the last ten years.

c. As I mentioned in response part a. above, the Company's continued replacement program is impacting primarily two accounts which will continue to require large plant investment well into the foreseeable future. The current results and variances will continue to be exhibited, but a reduced level for the immediate future with the following options capable of minimizing future variances:

1) Change the current depreciation model from a Whole Life (WL) to a Remaining Life (RL) model which is well recognized in the industry and regulators alike. This calculation incorporates the existing reserve levels for each account in deriving the accrual rate for each account. In this manner, the RL approach is self-correcting over time.
2) If maintaining the WL approach is required, then consider establishing a collar or a threshold band width for the variance such that no amortization would occur unless the variance is in excess of 5 or 10% of the theoretical level.
3) More frequent studies for selected accounts to evaluate the variance levels. This would control the costs somewhat while providing additional information to regulators with respect to the larger and faster growing plant accounts, especially where mandated requirements are in effect.

STATE OF NEW HAMPSHIRE
PUBLIC UTILITIES COMMISSION

DG 20-141

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

Winter 2020/2021 Cost of Gas and Summer 2021 Cost of Gas Filing

Order Approving Cost of Gas Rates and Other Charges

O R D E R N O. 26,419

October 30, 2020

APPEARANCES: Michael J. Sheehan, Esq., for Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities; the Office of the Consumer Advocate, by Christa Shute, Esq., on behalf of residential ratepayers; and Mary E. Schwarzer, Esq., for the Staff of the Public Utilities Commission.

This order approves a proposal by Liberty EnergyNorth for winter 2020-2021 and summer 2021 cost of gas (COG) rates. The initial residential COG rate for the winter period (November 1, 2020, through April 30, 2021) will be \$0.5571 per therm, and the fixed-price option will be \$0.5771 per therm. The local distribution adjustment clause rate will be \$0.0589 per therm from November 1, 2020, through October 31, 2021. A typical residential heating customer will pay approximately \$883 for the 2020-2021 winter period, compared to \$792 for last winter.

The initial residential cost of gas rate for the summer period (May 1, 2021, through October 31, 2021) will be \$0.3148 per therm. A typical residential heating customer will pay approximately \$229 for the 2021 summer period compared to \$227 for last summer.

I. PROCEDURAL HISTORY

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities (Liberty EnergyNorth[1] or the Company) is a public utility that distributes natural gas to approximately 97,000 customers in

[1] Liberty EnergyNorth is comprised of multiple divisions with a single COG for all divisions other than the Keene Division. That cost of gas is referred to as the EnergyNorth COG. This order refers to the Company as "Liberty EnergyNorth" to

southern and central New Hampshire and in the City of Berlin. On September 1, 2020, Liberty EnergyNorth submitted a tariff filing for the winter 2020-2021 and summer 2021 periods that proposed adjustments to COG rates. The filing, which included pre-filed direct testimony and supporting schedules, proposes changes to COG rates for firm sales customers, fixed winter COG rates under the fixed-price option (FPO), firm transportation COG rates, and the local distribution adjustment clause (LDAC). It also included a revenue decoupling adjustment factor (RDAF) as part of the LDAC, as decoupling was implemented in 2018 and first referenced in COG orders last year. *See Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities*, Order 26,122 at 43-46, 53-55 (April 27, 2018) (approving decoupling); Order No. 26,187 at 11 (November 2, 2018) (approving illustrative decoupling tariff); Order No. 26,306 (October 31, 2019) (Liberty EnergyNorth Winter 2019-2020 COG).

The Office of the Consumer Advocate (OCA) notified the Commission of its participation on behalf of residential ratepayers on September 8, 2020. There were no petitions for intervention filed in the docket, and no persons appeared at the hearing to provide public comment on the proposed rates.

The Order of Notice was issued on September 9, 2020. Commission Staff (Staff) conducted discovery and held a technical session with Liberty EnergyNorth and the OCA on September 23.

The Company made a number of revised filings. On October 16, 2020, the Company filed revised pre-filed testimony of David B. Simek and Catherine A. McNamara, with revised tariff pages and schedules. In particular, at the request of Staff, this filing recalculated the RDAF by customer class, as required by tariff. On October 19, 2020, at the request of Staff, the Company filed redlined versions of all changes made in the testimony, tariff pages, and schedules.[2] On October 22, 2020, at the

---

distinguish among divisions for purposes of COG rate-setting. The Liberty-Keene Winter 2020-2021 COG docket, Docket DG 20-152, is pending at this time.

[2] On October 21, consistent with the Commission's *Remote Hearing Guidelines*, Staff marked the Company's redlined filing Exhibit 5 for identification. At hearing, Exhibit 5 was not admitted as a full exhibit and was replaced with Exhibit 6.

request of Staff, the Company corrected errors in the redlined filing and provided an updated document. Staff marked the updated redlined documents as Exhibit 6, and filed the exhibit.

The petition and subsequent docket entries, other than any information for which confidential treatment is requested of or granted by the Commission, are posted on the Commission's website at https://www.puc.nh.gov/Regulatory/Docketbk/2020/20-141.html.

II. COST OF GAS ADJUSTMENT MECHANISM

The COG adjustment mechanism was implemented in 1974 during a time of rapidly changing prices as a way to pass on to consumers increases and decreases in energy supply costs quickly, without having to go through extended proceedings to change delivery rates. Supply costs make up approximately half of a residential heating customer's annual bill and include commodity prices (the cost of gas), the cost to transport the gas over the pipelines, and storage costs.

Liberty EnergyNorth has little control over the price of natural gas, which is an unregulated commodity. Similarly, the Company has little price control over pipeline transportation rates, which are set by the Federal Energy Regulatory Commission. The COG adjustment mechanism allows the Company to pass fuel supply costs on to its customers directly and efficiently without mark-up or profit. COG rates are initially set using projected costs and sales for the upcoming winter and summer periods. Through the COG adjustment mechanism, the Company may adjust its COG rates monthly to take into account changes in the natural gas market based on actual costs to date and projected costs for the remainder of the period. To the extent that adjustments are based on projected costs, they are subject to reconciliation periodically, after actual costs are known.

In the COG docket, the Commission also sets the LDAC rates that allow for recovery of expenses the Commission has approved in prior dockets through a per therm charge to be determined and implemented in the COG proceeding. The LDAC is a component of the Company's proposed COG rates in both the Liberty EnergyNorth and the Liberty Keene Division dockets. Order 26,122 at

37-41. LDAC expenses include costs associated with an environmental surcharge for manufactured gas plant remediation, Liberty Utilities' energy efficiency and low-income programs, and the RDAF.

III. POSITIONS OF THE PARTIES AND STAFF

A. Liberty EnergyNorth

In its initial filing of September 1, 2020, Liberty EnergyNorth proposed several rates for approval, including winter and summer COG rates for various rate classes, annual LDAC rates for various rate classes, a fixed price option COG rate for residential customers, and a firm transportation COG rate. *See* Exhs. 1-3; Exhibit 1 Bates 049 (transportation rate).

In the Company's revised filings, Liberty EnergyNorth made several changes primarily affecting the LDAC (including changes to the RDAF to calculate by separate rate class), and resulting in proposed amendments to the tariff and schedules. *See* Exhs. 3 and 6. The LDAC also includes costs associated with Liberty's participation in the Gas Assistance Program, formerly known as the Residential Low Income Assistance Program, as well as the costs associated with administering that program.[3]

Liberty EnergyNorth's proposed winter COG per therm rates for the various rate classes are $0.5571 for residential; $0.5552 for commercial and industrial (C&I) high winter use; and $0.5660 for C&I low winter use. The Company's proposed summer COG per therm rates are $0.3148 for residential, $0.3109 for C&I high winter use, and $0.3199 for C&I low winter use. *See* Exhs. 3at 085R-088R (winter rates and bill impacts) and 229R-232R (summer rates and bill impacts). In its revised filings, the Company proposed an LDAC rate of 0.0589 per therm for residential customers from November 1, 2020, through October 31, 2021, and $0.0555 per therm for C&I customers for the same period. Exhs. 3 and 6 at 052R.

[3] *See* Order No. 26,397 (August 27, 2020, Docket No. 20-013) (modifying the Residential Low Income Assistance Program for natural gas and renaming it the "Gas Assistance Program").

The following tables include the expected total bill impact based on the prior winter's and summer's average use for each customer class.

Winter 2020/2021 Projected Bill Impacts

Class	2019-2020 (Actual)	2020-2021 (Projected)	Percent Change
R-3 Residential Heating	$ 792	$ 883	11%
G-42 C&I High Winter Use	$ 13,718	$ 15,427	12%
G-52 C&I Low Winter Use	$ 9,220	$ 10,387	13%

Summer 2021 Projected Bill Impacts

Class	2020 (Actual)	2021 (Projected)	Percent Change
R-3 Residential Heating	$ 227	$ 229	1%
G-42 C&I High Winter Use	$ 3,234	$ 3231	0%
G-52 C&I Low Winter Use	$ 4,966	$ 4,638	-7%

The initial residential cost of gas rate for the winter period (November 1, 2020, through April 30, 2021) will be $0.5571 per therm, and the fixed-price option will be $0.5771 per therm. The (LDAC) rate will be $0.0589 per therm from November 1, 2020, through October 31, 2021, compared to $.0310 for the prior year. The initial residential cost of gas rate for the summer period (May 1, 2021 through October 31, 2021) will be $0.3148 per therm.

The Company also proposed: (1) a supplier balancing charge of $0.12 per MMBtu of daily imbalances; (2) a transportation peaking service demand charge of $17.32 per MMBtu of peak maximum daily quantity per month; (3) a gas allowance factor of 1.6 percent; (4) transportation capacity allocators; (5) short-term debt limits of $14,742,890 for fuel financing, and $105,567,204 for non-fuel financing for the November 1, 2020, through October 31, 2021, period. *See* Exhibit 1, Bates 049, 053 and 196.

B. Staff

Staff identified inaccuracies in Liberty EnergyNorth's initial filing that resulted in recalculated RDAFs by customer class, and resulting changes to the proposed tariff and schedules. Exh. 6. Proposed price increases, as compared to last year's COG proposed rates are primarily due to the change in NYMEX price and prior period over/under collections.

At hearing, Staff supported approval of the proposed, revised 2020-2021 COG and LDAC rates as filed on September 1, 2020, and updated by Liberty EnergyNorth on October 16 and October 22. *See* Exhibits 1-3, 6. Staff expressed appreciation for the Company's response to Staff concerns, and a preference for the Company filing redlined revised documents as exhibits itself in future COG dockets.

C. OCA

The OCA stated that the proposed rate changes reflected in the Company's September 1 filing, as revised on October 16 and October 22, are just and reasonable, and recommended that those changes be approved.

IV. COMMISSION ANALYSIS

The Commission has broad statutory authority to set rates in addition to "powers inherent within its broad grant" of express authority. *See Appeal of Verizon New England, Inc.*, 153 N.H. 50, 64-65 (2005) (citations omitted). The Commission applies the "just and reasonable" ratemaking standard of RSA 374:2 and RSA 378:7 when setting COG rates.

This is the second Liberty EnergyNorth COG proceeding in which decoupling has been incorporated into ratemaking. Decoupling was first implemented in 2018 and was designed to sever the link between sales and revenues to remove the Company's disincentive to promote energy conservation that is inherent in traditional ratemaking. This is accomplished through the revenue decoupling adjustment factor (RDAF), which, as stated above, is part of the LDAC.

We approve the proposed winter 2020-2021 and summer 2021 COG rates, as revised in the Company's October 16 filing and October 22 submission, as just and reasonable. *See* Exhibits 2, 3, 6. We also approve the Company's proposed LDAC rate, including but not limited to the RDAF, as revised in the October 16 filing and October 22 submission, as just and reasonable. *See id*. Because actual costs and revenues are reconciled every year, any adjustments needed as a result of further inquiry into the matters addressed in this order, including final audits and actual costs, can be made in Liberty EnergyNorth's COG filing for 2021-2022.

Pursuant to *EnergyNorth Natural Gas, Inc. d/b/a National Grid NH*, Order No. 24,963 (April 30, 2009), the Company may adjust the COG rates based on the projected over- or under-collection for the period, the adjusted rate to be effective the first day of the month and not to exceed, cumulatively, a maximum rate of 25 percent above the approved rate, with no limitation on reductions to the COG rates. *See also Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities,* Order No. 25,958 (October 26, 2016). By approving the rates in the initial filing, as corrected in the Company's October 16 and October 22 filings, the 25 percent upward limit has an appropriate starting point at the beginning of the 2020-2021 winter period.

We note that the use of the LDAC is similar among natural gas utilities. In Liberty EnergyNorth's Tariff No. 10, LDAC is defined on page 32 as the local distribution adjustment clause:

> The purpose of the Local Distribution Adjustment Clause ("LDAC" or this "Clause") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its delivery charges in order to recover Conservation Charges ("CC"), Revenue Decoupling Adjustment Factor ("RDAF"), Winter Period Surcharges ("WPS"), Environmental Surcharges ("ES") including the Relief Holder Surcharge ("RHS") and the Manufactured Gas Program Surcharge ("MGP"), rate case expenses ("RCE"), Residential Low Income Assistance Program costs ("RLIAP") and any other expenses the NHPUC may approve from time to time. The purpose of the Normal Weather Adjustment ("NWA") is to establish procedures that allow the Company, subject to the jurisdiction of NHPUC, to calculate and apply, for each customer on a monthly basis, the Normal Weather Factor ("NWF").

We direct Liberty EnergyNorth to modify its tariff so that LDAC is an abbreviation for local delivery adjustment charge to make the acronym consistent among gas utilities. We also direct Liberty EnergyNorth to substitute the newly adopted terminology Gas Assistance Program (GAP) for the Residential Low Income Assistance Program (RLIAP).

Based upon the foregoing, it is hereby

ORDERED, that Liberty EnergyNorth's 2020-2021 winter period COG per therm rates effective for service rendered on or after November 1, 2020, and Liberty EnergyNorth's 2021 summer period COG per therm rates effective May 1, 2021, are approved as set forth in this order, as follows:

Customer Class	2020/2021 Winter COG	2020/2021 Winter Maximum COG	2020/2021 Winter FPO	2021 Summer COG	2021 Summer Maximum COG
Residential	$0.5571	$0.6964	$0.5771	$0.3148	$0.3935
C&I High Winter Use	$0.5552	$0.6941	N/A	$0.3109	$0.3886
C&I Low Winter Use	$0.5660	$0.7075	N/A	$0.3199	$0.3999

and it is

FURTHER ORDERED, that Liberty EnergyNorth may, without further Commission action, adjust the COG rates based on the projected over- or under-collection for the period, the adjusted rate to be effective the first day of the month and not to exceed, cumulatively, a maximum rate of 25 percent above the approved rate (said maximum rates identified in the table above) with no limitation on reductions to the COG rates; and it is

FURTHER ORDERED, that Liberty EnergyNorth shall provide the Commission with its monthly calculation of the projected over- or under-collection, along with the resulting revised COG rates for the subsequent month, not less than five business days prior to the first day of the subsequent month. Liberty EnergyNorth shall include revised Calculation of the Firm Sales Cost of Gas Rate tariff pages and revised rate schedules under separate cover letter if Liberty EnergyNorth elects to adjust COG rates, with revised tariff pages to be filed as required by N.H. Admin. Rules Puc 1603; and it is

FURTHER ORDERED, that the over- or under-collection shall accrue interest at the prime rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates, the rate to be adjusted monthly; and it is

FURTHER ORDERED, that Liberty EnergyNorth's proposed LDAC per therm rates for the period November 1, 2020, through October 31, 2021, effective for service rendered on or after November 1, 2020, are $0.0589 and $0.0555 for residential and C&I customers, respectively; and it is

FURTHER ORDERED, that Liberty EnergyNorth's proposed firm transportation winter COG rate of $0.0001 per therm for the period November 1, 2020, through April 30, 2021, is approved; and it is

FURTHER ORDERED, that Liberty EnergyNorth's proposed supplier balancing charge of $0.12 per MMBtu of daily imbalance volumes is approved; and it is

FURTHER ORDERED, that Liberty EnergyNorth's proposed transportation peaking service demand charge of $17.32 per MMBtu of peak maximum daily quantity per month is approved; and it is

FURTHER ORDERED, that Liberty EnergyNorth's company gas allowance factor of 1.6 percent is approved; and it is

FURTHER ORDERED, that Liberty EnergyNorth's proposed transportation capacity allocators as filed in the *Proposed Third Revised Page 148*, *Superseding Second Revised Page 148*, are approved; and it is

FURTHER OR DERED, that Liberty EnergyNorth's proposed short-term debt limits of $14,742,890 for fuel financing and $105,567,204 for non-fuel financing for the period November 1, 2020, through October 31, 2021, are approved; and it is

FURTHER ORDERED, that Liberty EnergyNorth shall modify the LDAC definition as discussed above; and it is

FURTHER ORDERED, that Liberty EnergyNorth shall promptly file properly annotated tariff pages in compliance with this order no later than 15 days from the issuance date of this order, as required by N.H. Admin. Rules Puc 1603; and it is

FURTHER ORDERED, that before the next cost of gas proceeding, Liberty EnergyNorth shall submit its customer notice of proposed rate change for the 2021-2022 period to the Director of the Consumer Services and External Affairs Division, prior to delivery to its customers.

By order of the Public Utilities Commission of New Hampshire this thirtieth day of October, 2020.

STATE OF NEW HAMPSHIRE
PUBLIC UTILITIES COMMISSION

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty

Request for Change in Rates

Docket No. DG 20-105

SETTLEMENT AGREEMENT ON PERMANENT RATES

This Settlement Agreement on Permanent Rates ("Settlement Agreement") is entered into this 29th day of June, 2021, by and among Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty ("Liberty" or the "Company"), the Staff of the Public Utilities Commission participating in this proceeding ("Staff"), and the Office of the Consumer Advocate ("OCA") (together, "Settling Parties"). This Settlement Agreement resolves all issues among the Settling Parties regarding the Company's request to establish permanent rates in Docket No. DG 20-105, with the exception of Liberty's request to recover costs incurred to investigate, evaluate, and assess the development of the Granite Bridge Liquefied Natural Gas tank and related gas pipeline ("Granite Bridge Project").

SECTION 1. INTRODUCTION AND PROCEDURAL HISTORY

1.1 On July 1, 2020, Liberty filed with the New Hampshire Public Utilities Commission ("Commission") a Notice of Intent to File Rate Schedules pursuant to N.H. Code Admin. Rules Puc 1604.05. On July 31, 2020, the Company filed its Petition for Permanent and Temporary Rates ("Petition"), including proposed tariffs and rate schedules, testimony, attachments and other information supporting the Petition. Liberty's Petition requested that the Commission grant: (1) a permanent increase in Liberty's distribution rates effective with service rendered on or after September 1, 2020, designed to yield an increase of $13,497,250 in annual revenue above the then total Distribution Revenue of $86,698,260[1]; (2) temporary rates effective with service rendered on or after October 1, 2020, designed to yield an increase of $6,500,000 in annual revenue pending the Commission's final determination on the Company's request for a permanent rate increase; and (3) a step adjustment in rates designed to yield an increase of $5,680,641 in annual revenue to recover costs associated with approximately $38 million of capital expenditures projected to be placed in service during 2020, to be effective no earlier than August 1, 2021, and two additional step adjustments for capital expenditures projected to be placed in service in 2021 and 2022. The Petition requested approval of a 10.51 percent return on equity ("ROE"), and a capital structure consisting of 50.15 percent equity and 49.85 percent debt.

1.2 On July 8, 2020, the OCA filed a letter of participation in this docket pursuant to RSA 363:28. The Commission received no petitions for intervention in this docket by other parties.

1.3 On August 19, 2020, the Commission issued Order No. 26,395 suspending Liberty's proposed gas service tariff for temporary and permanent rate increases pending further investigation.

1.4 On September 16, 2020, the Commission held a hearing on temporary rates at which Liberty amended its request such that temporary rates would be set at current rates, and to approve a revenue requirement for temporary rates of $92,890,325, with the $4,994,290 increase in allowed revenues accomplished by adjusting the allowed revenue per customer ("RPC") amounts for each of Liberty's rate classes.[2] On September 30, 2020, the Commission issued Order No. 26,412

[1] The Distribution Revenue of $86,698,260 does not include revenue from Indirect COG Revenue and Other Revenue although both are included in total revenue requirement for the purpose of a distribution base rate case.

[2] The approved temporary rates revenue requirement of $92,890,325 does not include $1,993,588 from Indirect Cost of Gas (COG) Revenue.

approving Liberty's request for temporary rates effective with service rendered on and after October 1, 2020.

1.5 On October 5, 2020, the Commission approved an initial procedural schedule for adjudication of the Company's permanent rate request that included multiple rounds of discovery, technical sessions, settlement conferences, Staff and intervenor testimony, Company rebuttal testimony, and hearings. On November 20, 2020, the Company filed a motion to amend the Petition and supplemental pre-filed direct testimony in support of recovery of Granite Bridge Project costs.[3] The Commission subsequently amended the procedural schedule to accommodate the motion to amend the petition. On March 2, 2021, the Company filed an update to its proposed permanent rate request, including a total revenue requirement of $99,786,984[4] and a proposed permanent rate increase of $4,933,718[5]. Staff and OCA each filed testimony on March 18, 2021, and the Company filed rebuttal testimony on April 29, 2021.

1.6 Staff's testimony recommended the following: (1) an ROE of 9.0 percent and a capital structure of 49.21 percent equity and 50.79 percent long term debt; (2) a permanent decrease to revenue requirement of $2,240,114 below the temporary rate level; (3) one step increase for 2020 of $5,157,187 subject to audit, and no step adjustments for future years; and other proposed adjustments. OCA's testimony recommended an ROE of 8.9 percent, did not include a

---

[3] The motion to amend the Petition was filed pursuant to the Commission's order in Docket No. DG 17-198 in connection with the Granite Bridge Project, in which the Commission held: "Requests for authority to recover capital project and supply planning costs are appropriately reviewed in a full rate case." Order No. 26,409 at 13 (Oct. 6, 2020).

[4] The $99,786,984 includes $4,027,585 of Indirect COG Revenue and $1,207,376 of Other Revenue.

[5] Bates II-132R. The requested rate increase of $4,933,718 plus the revenue increase at temporary rates of $4,994,290 equates to a revenue increase of $9,928,008.

recommendation for a capital structure different from the Company's proposal, and included other proposed adjustments and rate design elements.

1.7 In the weeks prior to and following the Company's submission of rebuttal testimony, the Company, Staff, and the OCA engaged in settlement discussions. Based upon these discussions, the Settling Parties agreed to the terms of this Settlement Agreement, subject to Commission approval. The Settling Parties recommend and request that the Commission approve this Settlement Agreement without modification.

SECTION 2. REVENUE REQUIREMENT

2.1 The Revenue Requirement consists of three subparts: (1) allowed revenue from distribution rates ("Distribution Revenue"); (2) allowed revenue from cost of gas rates ("Indirect COG Revenue"); and (3) revenue outside of rates such as special contract revenue and property leases ("Other Revenue"), (collectively referred to as the "Revenue Requirement").

In a decoupling framework a key metric is the increase in the Distribution Revenue. Distribution rates are then set to best achieve this Distribution Revenue and are reconciled through the revenue decoupling adjustment factor each year.

The following table summarizes the revenue requirement and revenue allocation agreements of the Settling Parties.

	A	B	C	D
	Proposed Approved Revenue Calculation			
1	Distribution Revenue ($84,591,458+$2,106,802)	$ 86,698,260		(Exhibit 5, line 1+3)
2	Indirect COG Revenue	$ 1,993,587		(Fixed Indirect)
3	Other Revenue	$ 1,197,776		(Exhibit 5, line 5)
4	**Total Approved Revenue from Test Year**		$ 89,889,623	(B1+B2+B3)
5	Increase to Distribution Revenue via Temp Rates Settlement	$ 4,994,290		(Exhibit 5, line 2+4)
6	**Total Approved Revenue After Temp Rates Settlement**		**$ 94,883,913**	(C4+B5)
7	Order 26,412 did not include COG of $1,993,587	$ (1,993,587)		Existing Indirect COG Allocation
8	**Temp Rate Order 26,412 rev requirement for temp rates**		**$ 92,890,326**	(C6+B7) Temp Rate Order 26,412
9	Settlement Increase to Approved Rev above Temp Rates	$ 1,300,000		Perm Rates Settlement Agreement
10	**Total Proposed Approved Revenue Increase from Test Year**	**$ 6,294,290**		(B5+B9)
11	**Total Approved Revenue per Settlement for the Test Year**		**$ 96,183,913**	(C6+B9)
12	Approved Distrib Revenue (Target Revenue on Rates 5)	$ 91,082,950		(C11-B13-B14) (tie to Rates 5)
13	Approved Indirect COG Revenue	$ 3,893,587		(B17)
14	Other Revenue	$ 1,207,376		(B3+$9,600 from Audit Issue 6)

	A	B	C	D
	Proposed Approved Revenue Allocation			
15	Total Increase in Approved Revenue	$ 6,294,290		(B5+B9)
16	Amount of increase allocated to Indirect COG 11/1/21*	$ 1,900,000		Perm Rates Settlement (COSS)
17	Total Indirect COG Revenue	$ 3,893,587		(B16-B7)
18	Remainder of increase allocated to Dist Rates	$ 4,394,290		(B15-B16)
19	Adj to Rates (Permanent Increase less Temp Increase)	$ (600,000)		(B18-B5)
20	Total Revenue Increase Above Temp per Settlement	$ 1,300,000		(B16+B19)
21	Indirect COG increase to be Allocated to EN & Keene	$ 1,900,000		(B16)
22	Indirect COG Allocation to Keene (Production Cost)*	$ 208,129		Perm Rates Settlement Agreement
23	Indirect COG Allocation to Energy North*	$ 1,691,871		(B21-B22)
	*Reconciled to 10/1/2020			

The Company shall be allowed a Revenue Requirement increase of $6,294,290, which is a $1.3 million increase above the level provided by temporary rates. Based on the cost of service study the Settling Parties agree that $1,900,000 of the $6,265,231 revenue increase shall be applied to the next COG proceeding as described in Section 13.3, effective for service rendered on and after November 1, 2021. In addition, a surcharge shall be added through the LDAC to reconcile this $1,900,000 addition to the Indirect COG Revenue back to the effective date of temporary rates of October 1, 2020. The remaining $4,394,290 in revenue requirement shall be collected from distribution rates effective for service rendered on and after August 1, 2021, to be reconciled back to October 1, 2020, the effective date of temporary rates, consistent with Order No. 26,412 (Sept.

30, 2020) in this proceeding. Because the temporary rate revenue increase was an increase of $4,994,290, the result is that the permanent rate change shall be a decrease of $600,000 from temporary rates. In addition, the reconciliation from temporary rates to permanent rates shall be a reduction to account for the over-collection of distribution rates that occurred from October 1, 2020, to the implementation of permanent rates.

2.2 The agreed Revenue Requirement increase of $6,265,231 includes the following cost of service elements: (1) recovery of costs associated with the New Hampshire Department of Administrative Services special contract of $1,047,589 over three years ($349,196/year); (2) amortization of excess accumulated deferred income tax ("EADIT") for protected property over 28.93 years and for non-protected property over 20 years as further described in Section 3.3; (3) amortization of remaining 'costs to achieve' from Docket No. DG 06-107 of $48,197 over three years ($16,066/year)[6]; (4) continued amortization of $1,657,796 per year for the depreciation reserve imbalance amortization, subject to adjustment based upon updated cost of removal and average service life information to be determined pursuant to Section 3.2 of this Settlement Agreement; and (5) the cost of capital provided in Section 4 of this Settlement Agreement.

2.3 The agreed revenue increase reflects adjustments that have been made in order to reach settlement and shall not establish precedent for future rate proceedings.

[6] As referenced in Schedule RR-EN-3-6, adjustment 6 from the March 2, 2021, Corrections and Update filing.

SECTION 3. RATE BASE

3.1 The lead/lag days in Cash Working Capital shall be 25.72.

3.2 The Company shall perform a study during calendar year 2021 based on a sampling of different sized 2021 mains and services capital projects to determine the cost of removal percentages that should be applied to mains and services. The Company shall also obtain a new full depreciation study based on 2021 end of year plant balances, which study shall review and incorporate the results of the cost of removal study. The depreciation study shall be used to assess and update the depreciation reserve imbalance by making the necessary adjustments to the annual amortization amount of $1,657,796. The determination of the depreciation lives and rates applicable to various plant accounts shall adjust the annual depreciation expense amounts. Liberty shall file the updated depreciation study along with a report on its findings by May 1, 2022, for review by Staff and the OCA as part of the second step adjustment review. Any adjustments based on the updated depreciation study shall be reflected in the second step increase to take effect on August 1, 2022.

3.3 As a result of tax law changes from the Tax Cuts and Jobs Act of 2017, Liberty has a total of $37,855,214 of excess accumulated deferred income tax liabilities that will be amortized as credits to the benefit of customers as follows: (i) protected items totaling $33,434,927 will be amortized as annual credit of $1,155,718 over 28.93 years; and (ii) unprotected items totaling $4,420,287 will be amortized as an annual credit of $221,014 over 20 years.

SECTION 4. COST OF CAPITAL

4.1 The Company shall be allowed a return on equity of 9.3 percent.

4.2 The Settling Parties have agreed that a capital structure of 52.0 percent equity and 48.0 percent debt shall be used for purposes of determining the Company's revenue requirement in this proceeding, which results in the following pre-tax and after-tax weighted average costs of capital based on the current federal and state tax rates and the Company's current cost of long-term debt:

Description	Capital Structure	Cost of Capital	Weighted Cost of Capital	Tax Rate	Pre-Tax
Common Stock	52.00%	9.30%	4.84%	27.08%	6.64%
Long-Term Debt	48.00%	4.420%	2.12%		2.12%
Total	100.00%		6.96%		8.76%

SECTION 5. STEP ADJUSTMENTS

5.1 The Company shall be allowed two step adjustments as follows:

(a) Step 1 shall reflect an increase to account for certain capital projects placed in service during calendar year 2020 and shall be implemented on August 1, 2021. This first step adjustment reflects adjustments that have been made to the revenue requirement in order to reach settlement. The first step shall be subject to the following conditions:

i. The revenue requirement for this step shall be capped at a $4.0 million increase to annual Distribution Revenue.

ii. The step shall be based on the projects closed to plant in 2020, and shall exclude new business/growth-related projects.

iii. The projects that may be included in the step are identified in the listing attached as Appendix 1.

iv. Local property taxes shall not be included in the calculation and will be recovered through the Property Tax Adjustment Mechanism in Section 6 of the Settlement Agreement. State utility property taxes for all projects listed in Appendix 1, calculated using the statutory tax rate in RSA 83-F:2, shall be included in the step adjustment calculation, shall count toward the cap, and shall be given first priority of recovery.

(b) Step 2 shall reflect an increase to account for certain capital projects placed in service during calendar year 2021 and shall be effective August 1, 2022. This second step adjustment reflects adjustments that have been made to the revenue requirement in order to reach settlement. The second step shall be subject to the following conditions:

i. The revenue requirement for this step shall be capped at a $3.2 million annual increase to Distribution Revenue from the projects referenced in iii. below.

ii. The step shall be based on the projects closed to plant in 2021, and shall exclude new business/growth-related projects.

iii. The projects and programs that may be included in this step are identified in the listing attached as Appendix 2, including Keene CNG Phase 1 costs as further described in Section 7.2. The Settling Parties agree that the Company may substitute other similar non-growth projects prior to the commencement of the review period if projects identified in Appendix 2 are not deployed.

iv. Local property taxes shall not be included in the calculation and will be recovered through the Property Tax Adjustment Mechanism in Section 6 of the Settlement Agreement. State property taxes for all projects listed in Appendix 2 as it may be adjusted pursuant to iii. above, calculated using the statutory tax rate in RSA 83-F:2, shall be included in the step adjustment calculation and shall be given first priority of recovery.

v. The step adjustment shall include adjustments resulting from the updated depreciation study as provided in Section 3.2 of the Settlement Agreement.

5.2 For the second step, the Company shall make a filing on or before April 8, 2022, with rates effective August 1, 2022. The filing shall include, at least, the following documentation and process steps:

(a) The Company shall provide the amount of the investments to be included in the step increase (by project) and detailed project descriptions including the initial budget, the final cost, the treatment of any related retirements, and the date each project was booked to plant in-service.

(b) For each project Liberty shall provide all Company project documents including, but not limited to, Business Cases, Capital Project Expenditure Applications, Change Order Forms, Project Close Out Reports, and work orders.

(c) Staff and/or the OCA may request additional information after reviewing the initial filings.

(d) The Company shall propose a rate increase effective August 1, 2022, to recover the revenue requirement associated with the second step adjustment up to the $3.2 million cap.

5.4 For the second step, if the actual cost of the capital additions is less than the budgeted amounts, the actual amounts shall be used to calculate the step adjustments. If the actual cost of the capital additions exceeds the budgeted amounts for a particular project, the Company may seek recovery of the excess through this step adjustment process, subject to the cap. The Company may otherwise seek recovery in its next rate case for any above-budget investments not approved in a step adjustment described here. The revenue requirement for the step adjustments will be calculated in a manner similar to that used in the Company's filing seeking approval of the first step adjustment. The step increase shall be subject to Staff audit and reconciliation based on the results of the audit, as approved by the Commission.

5.5 Nothing in this Settlement Agreement shall preclude Staff or the OCA from contesting the prudence of individual investments requested for recovery within the step increases.

5.6 The Company shall not request recovery of any capital costs associated with plant placed in service outside of the above-described step adjustments until the Company's next distribution rate case filing, which shall be based on a test year ending no sooner than December 31, 2022.

SECTION 6. PROPERTY TAX ADJUSTMENT MECHANISM

6.1 The Company shall be authorized to implement a Property Tax Adjustment Mechanism ("PTAM") to allow the Company to request recovery or refund of local property tax expenses, as compared to the amount in base rates, beginning with the April 1, 2020, through March 31, 2021, property tax year. Consistent with RSA 72:8-e, property tax over- or under-recoveries as compared to the amount in base distribution rates shall be adjusted annually through the PTAM. The amount included in base distribution rates for local property tax expense shall be $8,924,897, as shown in Appendix 3.

6.2 The PTAM shall be a fully reconciling property tax adjustment mechanism except for the exclusion of State of New Hampshire utility property taxes. The State of New Hampshire utility property taxes levied on the step eligible investments shall be collected as part of the step revenue requirement as detailed in Section 5 above.

6.3 On an annual basis beginning with the property tax year that commenced April 1, 2020, actual local property tax amounts from the property tax bills received during a calendar year[7] shall be compared against the amount in base rates as of the March 31 end of each property tax year, and any variances will be reconciled through the PTAM. With respect to the initial year of reconciliation, local property tax bills received during calendar year 2020 will be compared to the calculated amount in distribution rates through March 31, 2021, which includes the recoupment of the property tax amount reconciled between temporary and permanent rates. Reconciliation in subsequent years will be handled in a similar fashion. Annual property tax billed amounts shall be adjusted for any credits received due to abatement proceeds received for tax years preceding the test year. The PTAM shall reconcile and provide for recovery or credit for any over- or under-recoveries beginning with the April 1, 2020, through March 31, 2021, property tax year.

6.4 The PTAM shall be established annually based on a full reconciliation with monthly compounded interest for any over- or under-recoveries occurring in prior year(s). Interest shall be calculated at the prime rate, to be fixed on a quarterly basis and to be established as reported in

[7] Property tax bills received during a calendar year cover the annual property tax year that begins on April 1 and runs through the following March 31.

The Wall Street Journal on the first business day of the month preceding the calendar quarter ("Prime Rate").

6.5 The Company shall submit the initial PTAM filing covering the period described in Section 6.3 on or before August 20, 2021, and the PTAM distribution rate adjustment for that period shall be effective with service rendered on and after November 1, 2021. Filings covering subsequent property tax years shall be made on or before March 10 using property tax bills received during the prior calendar year for adjustments to distribution rates effective May 1.

6.6 Billing determinants used for adjusting the Revenue Per Customer (RPC) amounts for the initial PTAM adjustment, as described in Section 11, for the purpose of the PTAM adjustment, shall be the same as the calendar year 2020 billing determinants used for the purpose of the first step adjustment (see Section 5.1). Billing determinants used for subsequent PTAM adjustments shall be the annual billing determinants for the calendar year that corresponds to the year that the local property tax bills were received for that particular PTAM reconciliation.

SECTION 7. KEENE CONVERSION TO CNG

7.1 Keene Cost of Gas. The Company shall recover one-half of the incrementally higher CNG supply costs as compared to the propane supply cost,[8] incurred from the commencement of CNG service through October 31, 2021, to be recovered through inclusion over one year in the next Keene cost of gas during the winter or summer periods consistent with the season in which the incremental costs were originally incurred. The Company shall provide the supporting calculations

[8] Incremental CNG supply cost/savings shall be calculated by multiplying the CNG therm purchases by the difference between the average per therm CNG supply cost and the propane supply costs for the applicable summer/winter period. Average CNG supply costs shall include all CNG supplier charges properly allocated between summer and winter periods. Average propane supply costs shall include Mont Belvieu propane pricing, transportation costs, and Broker Fee.

in the Winter 2021-2022 Keene Cost of Gas filing. Incremental CNG supply costs through the 2020-2021 winter period are provided in Appendix 4.

(a) Beginning November 1, 2021, if the CNG supply cost is higher than the propane supply cost as described in footnote 8, the Company shall recover one-half of the incrementally higher CNG supply cost, as determined through the cost of gas reconciliation process. If the CNG supply cost is lower than the propane supply cost, the Company shall recover and retain the full amount of the incrementally lower CNG supply cost up to the amount of incrementally higher CNG costs accrued since the commencement of CNG service, which have not then been recovered from customers, at which point the Company shall recover and retain one-half of the incrementally lower CNG supply costs. Reconciliation of the incremental CNG supply costs shall occur semi-annually in the Winter and Summer Cost of Gas filings, as applicable. A sample calculation of incremental CNG supply costs/savings, using non-confidential, hypothetical pricing, is illustrated in Appendix 5.

(b) CNG demand costs shall be allocated 75% to the winter period and 25% to the summer period until such time as otherwise determined by the Commission in a future proceeding. Any change in allocation shall be implemented during a Winter Cost of Gas filing.

7.2 Keene Expansion. Phase 1 of the Keene conversion to natural gas shall consist of: (1) installation of the existing temporary CNG facility; (2) conversion of the propane-air customers premises at the Monadnock Marketplace to natural gas as of the date of this Settlement; and (3) acquisition of customers at any additional premises not currently physically connected to the gas utility system in Keene after the date of this settlement who would be served CNG from both the existing CNG temporary facility and through existing mains. An "existing main" is one that has a Maximum Allowable Operating Pressure ("MAOP") greater than 0.5 psig and that can be safely used to deliver natural gas, satisfying all applicable safety rules and regulations. Inclusion of additional customers in Phase 1 as described in this section (3) shall not change the time frame of the risk sharing mechanism. Revenue from new customers at existing premises converted from propane-air to CNG shall not be included in the discounted cash flow analysis of the risk sharing mechanism. The Settling Parties agree that the existence of Phase 1 shall not be used to justify any further development of CNG in Keene beyond Phase 1.

(a) The Company shall be allowed to seek recovery of the Phase 1 costs as part of the second step adjustment (excluding the cost of the Production Avenue land), subject to the risk sharing mechanism established in Order No. 26,122 (April 27, 2018) at 39 as clarified in Order No. 26,274 (July 26, 2019). The Company retains the right to seek recovery of the cost of the Production Avenue land at a future time. As part of the second step adjustment, the Company shall be allowed to update the recovery of the Phase 1 costs to account for the revenue and costs associated with additional Phase 1 customers who began taking service or committed to take service on or before August 1, 2022, the effective date of the step adjustment, subject to the risk sharing mechanism established in the above orders. If a customer committed to take service does not actually take service prior to the next base rate case then the August 1, 2022, risk sharing adjustment calculation shall be recalculated and any shortfall shall be adjusted accordingly to reflect the actual service. The adjustment for the risk-sharing mechanism for the Phase 1 investments included in rate base as of December 31, 2019, is $21,736 as outlined in Appendix 6, which amount is already taken into account in the revenue requirement described in Section 2.

(b) Phase 2 shall not be implemented until Liberty satisfies the conditions of Order No. 26,122 (Apr. 27, 2018) as clarified in Order No. 26,274 (July 26, 2019), and the Company's tariff, as applicable. Incremental revenue from Phase 1 new customers may not be used to justify Phase 2. If a customer who committed to take service does not actually take service prior to the effective date of temporary rates in the next base rate case then the risk sharing adjustment calculation shall be recalculated and any shortfall shall be adjusted accordingly to reflect the actual service.

(c) The Settling Parties agree that prior to the implementation of any future phase the ten year net present value of such phase shall not be negative.

(d) The following definitions shall apply to Phase 2 and future phases of the conversion of Keene customers from propane-air to natural gas (including renewable natural gas):

(i) A "phase" shall be one or more customer additions or conversions which require the installation of 100 feet or more of new main. The addition or conversion of new customers requiring less than 100 feet of new main shall not be a "phase," but shall comply with the Company's line extension tariff.

(ii) Converting existing main from propane-air to natural gas shall be considered a "new main" unless the existing main has an MAOP of greater than 0.5 psig and can be safely used to deliver natural gas, satisfying all applicable safety rules and regulations.

SECTION 8. PELHAM EXPANSION

8.1 The agreed revenue requirement includes a reduction of ($61,871) pursuant to the risk sharing mechanism approved by the Commission in Docket No. DG 15-362, in Order 29,987, based on the Company's discounted cash flow ("DCF") analysis that compares the revenue requirement of the take station on the Concord Lateral with the anticipated annual revenue from new Pelham customers. The anticipated revenue includes expected revenue from a large industrial customer who signed an agreement to take service in 2016, has not yet taken service for various reasons, but is still expected to take service from Liberty in the near future.

8.2 The Settling Parties agree to maintain this adjustment for the August 1, 2021 – July 31, 2022 rate year. If the large industrial customer has not taken service from Liberty on or before August 1, 2022, the anticipated revenue from this customer shall be removed from the DCF calculation and the adjustment to remove revenue from that customer shall be made in the second step adjustment.

SECTION 9. iNATGAS COSTS

9.1 Consistent with the Commission's determination in Docket No. DG 17-048, and in light of the increased capital costs associated with the iNATGAS CNG fueling facility, the Settling Parties agree that there will be a reduction of the overall revenue requirement of $301,747 for ratemaking purposes, such amount already being reflected in the Revenue Requirement increase described in Section 2.1, until the time of the Company's next distribution rate case.

SECTION 10. GRANITE BRIDGE COST RECOVERY EXCLUDED FROM SETTLEMENT

10.1 The Company's Petition, as amended, requests Commission approval for recovery of the costs incurred to investigate, evaluate, and assess the development of the Granite Bridge Project, which the Company calculates as approximately $7.5 million (the "Granite Bridge Project Costs"). The Settling Parties agree that the current rate case is the appropriate docket for adjudication of the Granite Bridge Project Costs. The recovery of the Granite Bridge Project Costs are excluded from this Settlement Agreement and shall be litigated within this proceeding.

SECTION 11. RATES AND RATE DESIGN

11.1 **Decoupling.** As this is the first general rate case since the implementation of decoupling, the Settling Parties agree that this is an opportunity to clarify the process surrounding the decoupling mechanism and the associated tariff language. The Agreement consists of five points regarding decoupling:

(a) The calculation of the revenue per customer (RPC) for permanent rates shall include:

i. the end of year calendar month bill count adjustment in the denominator of the calculation for the test year;

ii. the volumetric therms used for the calculation shall reflect the monthly bill counts adjusted for the end of year calendar month bill counts; and

iii. the RPC for the permanent rate increase shall not change until the next rate case.

(b) The calculation of the incremental revenue per customer for subsequent non-rate case rate changes such as, but not limited to, step adjustments, property tax reconciliation, and temporary rates, shall (i) use actual calendar month bill counts for the same time period being used to determine the calculation of each new RPC, and (ii) add each incremental RPC to the RPC from the rate case.

(c) Because the MEP Premium[9] is not subject to decoupling, the RPC calculations that are used to calculate the allowed revenue and the Revenue Decoupling Adjustment Factor shall not include the MEP Premium.

[9] MEP Premium is the premium charge to customers in the Managed Expansion Program. In Docket No. DG 17-048, the Commission approved the decoupling proposal in the settlement (Order 26,122 at 45) which states in part: "Managed Expansion Program customers are subject to decoupling, but the expansion surcharge dollars (i.e., the 30% distribution premium) are excluded from the decoupling calculation" (DG 17-048 Exhibit 29 at 11)

(d) Each month the Company shall record a Revenue Decoupling Adjustment (RDA) in the balance sheet RDA Accounts in accordance with generally accepted accounting principles, including: (i) the Revenue Decoupling Adjustment which is the difference between the Monthly Allowed Revenue and the Monthly Actual Distribution Revenue; (ii) the reconciliation amounts collected or distributed through the RDAF recorded in the RDA Accounts for each Customer Class Group; and (iii) the accrued interest on the RDA Accounts calculated on the average monthly balance using the prime lending rate.

(e) The RPC calculations, including equivalent bill calculations and associated usage per customer, shall be submitted with each rate increase filing and the associated tariff compliance filing.

The tariff has been amended as shown in Appendix 11 to effectuate the above understanding.

11.2 Revenue Calculations.

(a) **Indirect Gas Costs**. The Settling Parties agree to include $3,893,588 of Indirect COG Revenue for recovery through the COG which includes $1,900,000 of the revenue requirement increase identified in 2.1. The Indirect COG Revenue shall not change until the next rate case. The Indirect COG Revenue collected through COG rates shall be included in the revenue calculation for all future filings. The Settling Parties agree that the $3,893,588 of Indirect COG Revenue includes $206,248 of propane production costs allocated to Keene and $1,881 of Phase 1 conversion costs. The Keene COG tariff shall reflect the combined total of $208,129 as indirect gas costs.

(b) The Settling Parties agree that for purposes of calculating revenue in filings to the Commission the Company shall use the following guidelines:

i. The revenue per customer for low-income customers shall not be different from customers not categorized as low-income. The discount provided to low-income customers shall not be included in the revenue calculation as it is reconciled separately through the Gas Assistance Program (GAP) portion of the LDAC.

11.3 The Company's customer charges shall be set at the levels identified in Appendix 8. Thereafter, the Company's residential customer charges shall remain as set until the Company's next rate case. Specifically, any base rate increase and any surcharges or sur-credits for residential customers provided for in this Settlement Agreement shall be collected solely through changes in consumption charges for residential customers.

SECTION 12. TEST YEAR

12.1 The test year for the Company's next general distribution rate case shall be no sooner than the twelve-month period ending December 31, 2022.

SECTION 13. OTHER ISSUES

13.1 On or before November 30, 2021, the Settling Parties shall meet to review a list of regulatory reports currently required by the Commission, and discuss areas for potential elimination, consolidation, decreased frequency, and other measures to streamline reporting requirements. The Settling Parties shall submit individual or collective recommendations to the Commission following such meeting.

13.2 Liberty agrees to include in its Form F-1 quarterly rate of return reports adjustments of iNATGAS and risk sharing disallowances as described above. Reporting to include Indirect COG Revenue. Until changed in a future rate proceeding, the adjustment amounts shall be as follows: iNATGAS of $301,747, Keene risk sharing of $21,736, and Pelham risk sharing of $61,871.

SECTION 14. RECOUPMENT

14.1 Subject to Staff audit and adjustment for the difference between estimated and actual expense, the Company shall recover over one year $856,864.64 in rate case expenses commencing on November 1, 2021, through the LDAC mechanism, as shown on Appendix 9. The Company agrees to submit by August 1, 2021, an accounting of its rate case expenses, with appropriate supporting documentation, for review by Staff and the OCA and subsequent approval by the Commission. Staff shall provide its recommendation for rate case expense recovery to the parties as soon as reasonably possible, and the Company shall be authorized to recover the approved rate case expenses beginning with service rendered as of November 1, 2021. Any necessary adjustments to rate case expenses, including adjustments for any invoices received subsequent to the August 1, 2021, filing date, will be reviewed as part of the LDAC proceeding.

14.2 The permanent rate increase agreed to in Section 2.1 shall be effective for all service rendered on and after August 1, 2021.

14.3 **Distribution Revenue Reconciliation.** The difference between the Distribution Revenues obtained from the rates prescribed in the temporary rate order, Order No. 26,412, and the Distribution Revenues that would have been obtained under the rates designed to collect the Approved Distribution Revenue finally determined after review and approval of this Settlement Agreement, if applied during the period that the temporary rate order was in effect from October 1, 2020, to July 31, 2021, shall be returned to customers over a period of 12 months beginning with service rendered as of November 1, 2021. The total estimated amount of recoupment is ($570,933), as shown on Appendix 10, and shall be reconciled through the LDAC mechanism. Any necessary adjustments to the recoupment amount will be reviewed as part of the LDAC proceeding.

14.4 **Indirect COG Revenue Recoupment.** The difference between the Indirect COG Revenues obtained in accordance with Exhibit 5, of $1,993,587, and the Indirect COG Revenues that would have been obtained under the Approved Indirect COG Revenues finally determined after review and approval of this Settlement Agreement, if applied during the period since the temporary rate order, is $1,900,000 and shall be recovered over a period of 12 months through the LDAC mechanism. Any necessary adjustments to the recoupment amount will be reviewed as part of the LDAC proceeding.

SECTION 15. EFFECTIVE DATE

15.1 This Settlement Agreement is subject to and shall become effective upon Commission approval, with new permanent distribution rates to become effective as of August 1, 2021. The Settling Parties shall use best efforts to obtain Commission approval on or before July 30, 2021.

SECTION 16. GENERAL PROVISIONS

16.1 A revised tariff intended to incorporate the provisions of this Settlement Agreement is included as Appendix 11.

16.2 This Settlement Agreement is expressly conditioned upon the Commission's acceptance of all its provisions, without change or condition. If the Commission does not accept this Settlement Agreement in its entirety, without change or condition, or if the Commission makes any findings that go beyond the scope of this Settlement Agreement, and any of the Settling Parties notify the Commission within five business days of their disagreement with any such changes, conditions, or findings, the Agreement shall be deemed to be withdrawn, in which event it shall be deemed to be null and void and without effect, shall not constitute any part of the record in this proceeding, and shall not be relied on by Staff or any party to this proceeding or by the Commission for any other purpose.

16.3 Under this Settlement Agreement, the Settling Parties agree to this joint submission to the Commission as a resolution of the issues specified herein only.

16.4 The Settling Parties agree that the Commission's approval of this Settlement Agreement shall not constitute continuing approval of, or precedent for, any particular principle or issue, but such acceptance does constitute a determination that the adjustments and provisions stated in their totality are just and reasonable and consistent with the public interest and that the rates contemplated will be just and reasonable under the circumstances.

16.5 This Settlement Agreement shall not be deemed an admission by any of the Settling Parties that any allegation or contention in this proceeding by any other party, other than those specifically agreed to herein, is true and valid. This Settlement Agreement shall not be construed to represent any concession by any Settling Party hereto regarding positions taken with respect to the Company's proposals in this docket, nor shall this Settlement Agreement be deemed to foreclose any Settling Party in the future from taking any position in any subsequent proceedings. The amounts associated with each of the settlement adjustments detailed herein are liquidated amounts that reflect a compromise of all the issues in this proceeding

16.6 With the exception of pre-filed testimony and supporting documentation related to Granite Bridge Project Costs, the pre-filed testimony and supporting documentation previously provided in this proceeding are not expected to be subject to cross-examination by the Settling Parties, which would normally occur in a fully litigated case. The Settling Parties agree that all such pre-filed testimony and supporting documentation should be admitted as full exhibits for the purpose of consideration of this Settlement Agreement, and be given whatever weight the Commission deems appropriate. Consent by the Settling Parties to admit all such pre-filed testimony without challenge does not constitute agreement by any of the Settling Parties that the content of the pre-filed testimony is accurate or that the views of the witnesses should be assigned any particular weight by the Commission. The resolution of any specific issue in this Settlement Agreement does not indicate the Settling Parties' agreement to such resolution for purposes of any future proceedings, nor does the reference to any other document bind the Settling Parties to the contents of, or recommendations in, that document for purposes of any future proceeding. The Commission's approval of the recommendations in this Settlement Agreement shall not constitute a determination or precedent with regard to any specific adjustments, but rather shall constitute only a determination that the rates resulting from, and other specific conditions stated in this Settlement Agreement are just and reasonable. The Settling Parties agree to forego cross-examining witnesses regarding their pre-filed testimony and, therefore, the admission into evidence of any witness's testimony or supporting documentation shall not be deemed in any respect to constitute an admission by any party to this Agreement that any allegation or contention in this proceeding is true or false, except that the sworn testimony of any witness shall constitute an admission by such witness

16.7 The rights conferred and the obligations imposed on the Settling Parties by this Settlement Agreement shall be binding on or inure to the benefit of any successors in interest or assignees as if such successor or assignee was itself a signatory party. The Settling Parties agree to cooperate in advocating that this Settlement Agreement be approved by the Commission in its entirety and without modification.

16.8 The discussions that produced this Settlement Agreement have been conducted on the understanding that all offers of settlement and settlement discussions relating to this docket shall be confidential, shall not be admissible as evidence in this proceeding, shall be without prejudice to the position of any party or participant representing any such offer or participating in any such discussion, and are not to be used in connection with any future proceeding or otherwise. The content of these negotiations, including any documents prepared during such negotiations for the purpose of reaching a settlement, shall be privileged and all offers of settlement shall be without prejudice to the position of any party presenting such offer.

16.9 This Settlement Agreement may be executed by facsimile and in multiple counterparts, each of which shall be deemed to be an original, and all of which, taken together, shall constitute one agreement binding on all Settling Parties.

SECTION 17. CONCLUSION

17.1 The Settling Parties affirm that the proposed Settlement Agreement will result in just and reasonable rates and should be approved by the Commission.

NOTES: Revenues calculated using actual calendar month billing determinants from October 2020 through March 2021 and calculated using estimated monthly billing determinants from April 2021 through July 2021.

NHPUC NO. 11 - GAS

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP. D/B/A

LIBERTY

SUPERSEDING NHPUC No. 10

TARIFF

FOR

GAS SERVICE

Applicable

in

Thirty-five towns in New Hampshire
served in whole or in part.

(For detailed description, see Service Area)

DATED: August 13, 2021

EFFECTIVE: August 1, 2021

ISSUED BY: /s/Neil Proudman

I. GENERAL TERMS AND CONDITIONS

1 SERVICE AREA

A. Service Area. The area authorized to be served by the Company and to which this tariff applies are the following cities and towns: Allenstown, Amherst, Auburn, Bedford, Belmont, Berlin, Boscawen, Bow, Concord, Derry, Franklin, Gilford, Goffstown, Hanover, Hollis, Hooksett, Hudson, Keene, Laconia, Lebanon, Litchfield, Londonderry, Loudon, Manchester, Merrimack, Milford, Nashua, Northfield, Pelham, Pembroke, Sanbornton, Tilton, Windham, and part of Canterbury and Winnisquam.

2 GENERAL TERMS AND CONDITIONS

A. Filing. A copy of this tariff is on file with the New Hampshire Public Utilities Commission ("NHPUC" or the "Commission") and is open to inspection at the offices of the Company.

B. Revisions. This tariff may be revised, amended, supplemented, or otherwise changed from time to time in accordance with the rules of the Commission and such changes, when effective, shall have the same force as the original tariff.

C. Application. The tariff provisions apply to everyone lawfully receiving gas supply service and/or delivery-only service from the Company under the rates herein and receipt of gas service shall constitute the receiver a customer of the Company as the term is used herein whether service is based upon contract, agreement, accepted signed application, or otherwise.

D. Statement by Agents. No representative has the authority to modify a tariff rule or provision or to bind the Company by a promise or representation contrary thereto.

E. No Prejudice of Rights. The failure of the Company to enforce any of the terms of this tariff shall not be deemed a waiver of its right to do so.

F. Gratuities to Employees. The Company's employees are strictly forbidden to demand or accept any personal compensation or gifts for service rendered by them while working for the Company on the Company's time.

G. Advance Payments. Payments to the Company for charges provided in these rules and regulations to be borne by the customer shall be made in advance.

H. Assignment. Subject to the rules and regulations, all contracts by the Company shall be binding upon, and oblige, and continue for the benefit of, the successors and assigns, heirs, executors, and administrators of the parties hereto.

3 CHARACTER OF SERVICE – EXCLUDING KEENE CUSTOMERS

A. Gas Supply. This Tariff applies only to the supply of gas, having a thermal content of nominally 1,000 British thermal units per cubic foot at supply pressures available in the locality in which the premises to be served are situated.

B. Determination of Therms. The gas for any billing period, expressed in hundreds of cubic feet (ccf), shall be multiplied by the average BTU of the gas send out as determined below and divided by 1,000 in order to

C. Determine the number of therms consumed in the billing period. For billing purposes, gas therms shall be determined on a "dry" basis.

The BTU therm factor of the gas sendout shall be calculated for each billing cycle from the daily weighted average BTU of the natural gas delivered to the Company by its suppliers and the gas produced at the Company's peak-shaving plants. The daily average BTU content shall be determined by appropriate gas measurement devices operated by the Company or its supplier.

D. Delivery of Gas Supply. The rates specified in this tariff are based upon the supply of service to a single customer through one delivery and metering point.

E. Use of Service at Separate Properties. The use of service at two or more separate properties will not be combined for billing purposes.

4 CHARACTER OF SERVICE – KEENE CUSTOMERS

A. Gas Supply. This Tariff applies to the supply of either propane-air gas or natural gas at the company's standard heat content value for the gas supply source, adjusted for temperature and pressure, in the locality in which the premises to be served are situated.

1. For Keene customers on the propane air-gas distribution system, the supply of gas sold will be nominally 740 British thermal units per cubic foot.

2. For Keene customers on the natural gas distribution system, the supply of gas sold will be nominally 1,000 British thermal units per cubic foot.

B. Determination of Therms.

1. The propane-air gas for any billing period, expressed in hundreds of cubic feet (CCF), shall be multiplied by the average BTU/cubic foot of the gas send out as determined below and divided by 1,000 in order to determine the number of therms consumed in the billing period.

   The average BTU of the gas sendout for billing purposes shall be calculated for each billing period using the daily average BTU of propane-air gas produced by the company's production plant as determined by appropriate gas heat content measurement devices[1] operated by the company. The average BTU so calculated shall be used in determining the therms for monthly bills based on meter readings and the average BTU for the billing period.

2. The natural gas for any billing period, expressed in hundreds of cubic feet (CCF), shall be multiplied by the average BTU/cubic foot of the gas send out as determined below and divided by 1,000 in order to determine the number of therms consumed in the billing period.

   The average BTU of the gas sendout for billing purposes shall be calculated for each billing period using the daily average BTU of compressed or liquefied natural gas delivered to the company in New Hampshire by its suppliers. To determine the daily average BTU, each tanker's BTU content will be provided by the supplier or measured by the Company with appropriate gas heat content measurement devices,[1]

---
[1] Typically chromatographs or calorimeters are used for measuring the heat content of gas.

including when more than one tanker is connected to the Company's natural gas system and simultaneously providing flow at any given time. The average BTU so calculated shall be used in determining the therms for monthly bills based on meter readings and the average BTU for the billing period.

5 CUSTOMER'S INSTALLATION

A. Point of Delivery. Upon request, the Company will designate a point at which the customer shall terminate his piping for connection to the meter of the Company, but such information does not constitute an agreement or obligation on the part of the Company to furnish service.

B. Space for Meter. The customer shall provide, free of expense to the Company, a dry, warm and otherwise suitable place for the regulator or regulators, meter or meters, or other equipment of the Company which may be necessary for the fulfillment of such contracts as may be entered into with the Company.

C. Location of Meter. The space provided for the Company's meters and equipment shall be convenient access to the Company's employees and, as near as possible, to the point where the service supply pipe enters the customer's building. Its location shall be such that the meter connections are not concealed by plaster or sheathing and shall be otherwise acceptable to the Company.

D. Reverse Flow. The customer may be required to install check valves or other devices to prevent compressed air or other gases from entering the Company's mains.

6 APPLICATION FOR SERVICE

A. Service Contract. Every applicant for gas service may be required to sign a contract, agreement, or other form then in use by the Company covering the special circumstances of the applicant's use of gas and must agree to abide by the rules and regulations and standard requirements of the Company.

B. Right to Reject. The Company may reject any application for service which would involve excessive cost to supply, or which might affect the supply of service to other customers, or for other good and sufficient reasons.

C. Special Contracts. Standard contracts shall be for terms as specified in the statement of the rate, but where large or special investment is necessary for the supply of service, contracts of longer terms as specified in the rate, or with a special guarantee of revenue, or both, may be required to safeguard such investment.

D. Unauthorized Use. Unauthorized connection to the Company's gas service supply facilities, and/or the use of service obtained from the Company without authority, or by any false pretense, may be terminated by the Company without notice. The use of service without notifying the Company and without enabling the company to read its meter will render the user liable for any amount due for service supplied to the premises from the time of the last meter reading of the Company's meter immediately preceding the user's occupancy as shown by the Company's books.

E. Managed Expansion Program. The Managed Expansion Program targets gas expansion in specific areas that have high potential for demand. Each Managed Expansion Program project includes a Main Extension. Customers under this program avoid a portion or all of a contribution in aid of construction which would otherwise be required absent the Managed Expansion Program.

F. Managed Expansion Program ("MEP") Premium. The markup for all MEP rates above the rates that would otherwise be applied absent the Managed Expansion Program. The MEP Premium is 30%.

7 CREDIT

A. Prior Debts. Service will not be furnished to former customers until any indebtedness to the Company for previous service has been satisfied.

B. Deposits. Before rendering or restoring service, the Company may require a deposit subject to the Commission's Rules and Regulations. (See Puc 1200 rules).

8 SERVICE AND MAIN EXTENSIONS

A. Definitions. The following are definitions of terms used in these provisions relative to main and service extensions and are applicable only in the main and service extensions provisions.

1. Service and Main Extensions. Extensions that require the construction of a new gas main and a service from that new main in order to provide requested gas service to a customer.

2. Service Extensions. Extensions from an Existing Gas Main to the point of delivery on the customer's premises.

3. Main Extension. An extension of the new gas main portion of a Service and Main Extension.

4. Existing Gas Main. A main that is installed in the street and through which gas is flowing.

5. Abnormal Costs. Abnormal Costs are service and/or main construction costs that are attributable to frost or ledge (including ditching or backfilling necessitated as a result of the presence of frost or ledge),and/or other conditions not typically encountered in service and/or main construction that are peculiar to the particular service and/or main construction concerned. Abnormal Costs are to be paid by the customer.

6. Extra Footage. The charge (contribution in aid of construction) for Extra Footage is $63.90 per foot. The charge will be updated annually by calculating the historical average cost per foot for Service Extensions, excluding overheads, for the most recent calendar year and the updated charge shall be effective April 1.

7. Estimated Annual Margin. The Estimated Annual Margin is equal to the estimated revenue to be derived from the monthly Customer Charge and delivery charge to be received from the customer for gas service utilizing the Service and Main Extension or Service Extension during the first twelve (12) months after completion of the extension. The Estimated Annual Margin does not include revenue received by the Company for the cost of gas and local distribution adjustment factor.

8. Estimated Cost of Construction. For the purpose of determining the cost of Service and Main Extensions, Estimated Cost of Construction of mains and/or services includes the cost of labor and materials for such construction, and incidental or associated miscellaneous costs, but excluding overheads. Miscellaneous costs include, but are not limited to, meter(s), traffic control and city and town road permits and degradation fees. The customer may perform on-site trenching and backfilling in accordance with the Company's specifications, in which case the Estimated Cost of Construction will be reduced to reflect the costs avoided by the Company as a result of the customer's performance of the work.

B. Costs of Extensions. In areas where the Company is authorized to operate, subject to the Application for Service provisions of this tariff, service is available as follows:

1. Residential Service Extensions. Residential Service Extensions up to 100 feet in length will be installed at no charge to customers served under either a (i) residential heating rate; or (ii) a residential non-heating rate provided that such extension is installed during the installation of a Main Extension or during the performance of work on cast iron/bare steel main replacements; unless there are Abnormal Costs associated with such extensions, in which case the customer shall be charged for the Abnormal Costs. For residential Service Extensions in excess of 100 feet, the customer will be charged for the Extra Footage, plus any Abnormal Costs. This Section 7(B)(1) shall apply only to Service Extensions and shall not apply to Service and Main Extensions as described in Section 7(B)(3).

2. Commercial and Industrial Service Extensions. Commercial and industrial Service Extensions will be installed at no charge to the customer provided that the Estimated Annual Margin is at least one-sixth of the Estimated Cost of Construction of the Service Extension, excluding any Abnormal Costs. If the Estimated Annual Margin is less than one-sixth of the Estimated Cost of Construction, the customer will be required to pay to the Company, in advance, any amount by which the Estimated Cost of Construction of the Service Extension exceeds six times the Estimated Annual Margin. Abnormal Costs are charged separately and are not included in the Estimated Cost of Construction for the purpose of this calculation. This Section 7(B)(2) shall apply only to Service Extensions and shall not apply to Service and Main Extensions as described in Section 7(B)(3).

3. Service and Main Extensions of Less Than $1,000,000. The Company shall not commence construction on a Service and Main Extension for which the Estimated Cost of Construction is less than $1,000,000 until the sum of (i) six times the Estimated Annual Margin for all commercial and industrial customers who have committed to take service, plus (ii) eight times the Estimated Annual Margin for all residential customers who have committed to take service equals or exceeds 25% of the Estimated Cost of Construction.

   a. Residential. Residential Service and Main Extensions will be installed at no charge to the customer provided that the Estimated Annual Margin is at least one-eighth of the Estimated Cost of Construction of the Service and Main Extensions. If the Estimated Annual Margin is less than one-eighth of the Estimated Cost of Construction, the customer will be required to pay to the Company the difference between the Estimated Cost of Construction and eight times the Estimated Annual Margin, plus any Abnormal Costs.

   If the Main Extension will serve more than one location, the Company will calculate the sum of the Estimated Annual Margin from all metered services and the sum of the Estimated Cost of Construction for the Main Extension and all Service Extensions to determine whether any payment will be required from the customers to be served. The Company will also include the Estimated Annual Margin and the Estimated Cost of Construction for Service Extensions for all existing premises for which the Company reasonably anticipates will take service, using the assumption that 60% of such premises will take service. If any payment is required, it will be allocated equally among all current metered services that exist as of the date that the Main Extension becomes an Existing Gas Main. Abnormal Costs associated with Main Extensions will be allocated equally among all customers, unless such costs can be attributed to specific customers.

b. Commercial and Industrial. Commercial and industrial Service and Main Extensions will be installed at no charge to the customer provided that the Estimated Annual Margin is at least one-sixth of the Estimated Cost of Construction of the Service and Main Extensions. If the Estimated Annual Margin is less than one-sixth of the cost of construction of the Service and Main Extensions, the customer will be required to pay to the Company the difference between the Estimated Cost of Construction and six times the Estimated Annual Margin, plus any Abnormal Costs.

c. If the Main Extension will serve more than one location, the Company will calculate the sum of the Estimated Annual Margin from all metered services and the sum of the Estimated Cost of Construction for the Main Extension and all Service Extensions to determine whether any payment will be required from the customers to be served. The Company will also include in such calculations the Estimated Annual Margin and the Estimated Cost of Construction for Service Extensions for all existing premises for which the Company reasonably anticipates will take service, using the assumption that 60% of such premises will take service. If any payment is required, it will be allocated among all current metered services that exist as of the date that the Main Extension becomes an Existing Gas Main based on each customer's proportional share of the Estimated Annual Margin. Abnormal Costs associated with Main Extensions will also be allocated based on each customer's proportional share of the Estimated Annual Margin, unless such costs can be attributed to specific customers, in which case the costs shall be allocated appropriately to specific customers.

d. Extensions Serving Customers in More Than One Rate Class. If the Main Extension will serve both residential and commercial or industrial customers, the Company will determine whether a contribution will be required by the customers by calculating the difference between the Estimated Cost of Construction of the Main and Service Extensions and (i) six times the Estimated Annual Margin for all commercial and industrial customers to be served, plus (ii) eight times the Estimated Annual Margin for all residential customers to be served. The Company will also include in the above calculations the Estimated Annual Margin and the Estimated Cost of Construction of Service Extensions for all existing premises for which the Company reasonably anticipates will take service. If the difference described above is positive, the customers will be required to pay to the Company such difference. The amount of payment will be allocated among all metered services that exist as of the date that the Main Extension becomes an Existing Gas Main based on each customer's proportional share of the Estimated Annual Margin. Abnormal Costs associated with Main Extensions will also be allocated based on each customer's proportional share of the Estimated Annual Margin, unless such costs can be attributed to specific customers, in which case the costs shall be allocated appropriately to specific customers.

4. Service and Main Extensions Greater Than or Equal to $1,000,000. If the cost of the Main Extension equals or exceeds $1,000,000, then in addition to the requirements specified in Section 7(B)(3), the Company will not commence construction unless a discounted cash flow analysis

demonstrates a positive net present value over a 10-year period of the difference between the Estimated Annual Margin and the revenue requirement associated with the Estimated Cost of Construction.

A. Failure to Use Installed Gas Service. If a customer fails, within nine months after the date a service is installed under this Section 7, either in whole or in part, to make use of the service, the customer will reimburse the Company for all costs of constructing, removing and retiring the service less any contribution in aid of construction made by the customer for the service, which will be forfeited.
B. Easements, Etc. The Company is not required to construct extensions other than in public ways unless the customer provides, in advance and without expense or cost to the Company, all necessary permits, consents, authorizations and right-of-way easements, satisfactory to the Company, for the construction, maintenance and operation of the pipeline.
C. Shortest Distance. Services are run the shortest practical safe distance to the meter location. However, a customer may have the Company install a longer alternate service provided that the customer pays for the extra expense in advance of installation.
D. Winter Construction. Ordinarily, no new service pipes or main extensions are installed during the winter conditions (when frost is in the ground) unless the customer defrays the extra expenses.
E. Timing and Refunding of Contribution. Except as otherwise agreed by the Company under unusual circumstances, any required contribution in aid of construction will be made prior to installation by the Company of a service. To help cover the Company's expenses, damages and lost business, if substantial construction of the building or buildings for which gas service has been sought is not commenced by the earlier of (1) November 30th next following submission of the application; or (2) the date when the Company commences construction of the main and service concerned prior to withdrawal of the application, ten percent (10%) of the contribution will be forfeited to the Company and will not be returned to the customer. The balance of the contribution will be refunded if and when the application is withdrawn, or will be applied toward the new contribution if the customer submits a new application for service or subsequently commences construction of the building or buildings. A new application may be submitted at any time.
F. Reasonable Duration and Non-Discrimination. Under none of the foregoing provisions will the Company be required to install service pipes or to contract main extensions where the business to be secured may not be of reasonable duration or will tend, in any way, to constitute unreasonable discrimination.
G. Title. Title of all extensions constructed in accordance with the above shall be vested in the Company.
H. Other Requirements. The Company generally will not approve any application or, if it shall have given such approval, will not proceed or continue with main and/or service construction unless the Company is satisfied

1. That the final site plans, sub-division plans and plans and specification for building or buildings to be served by the main and/or service concerned, including plans for waste disposal, water and other associated systems and facilities, have been prepared and approved by owner;

2. That all permits, exceptions, approvals and authorizations of governmental bodies or agencies required for construction of such building or buildings and associated systems and facilities have been obtained;
3. That the customer is proceeding or plans promptly to proceed with such construction; and

4. That nothing has occurred or failed to occur which will or is likely to prevent or interfere with such construction.

9. INTRODUCTION OF SERVICE

A. Service Contract. Every applicant for gas service may be required to sign a contract, agreement, or other form then in use by the Company covering the special circumstances of his use of gas and must agree to abide by the rules and regulations and standard requirements of the Company.

B. Defective Installation. The Company may refuse to connect if, in its judgment, the customer's installation is defective, or does not comply with such reasonable requirements as may be necessary for safety, or is in violation of the Company's standard requirements.

C. Unsatisfactory Installation. The Company may refuse to connect if, in its judgment, the customer's equipment or use thereof might injuriously affect the equipment of the Company or the Company's service to other customers.

10. COMPANY EQUIPMENT ON CUSTOMER'S PREMISES

A. Meters and Regulators. The Company shall furnish and install, maintain and own, any meter or meters, regulator or regulators required in the supply of service. For certain large customers, the Company shall furnish, install and maintain, at the customer’s expense, any remote meter reading equipment to record usage for daily balancing. Such equipment shall remain the property of the Company at all times.

B. Customer's Responsibility. The customer shall be responsible for safekeeping of the Company's property while on the customer's premises. In the event of injury or destruction of any such property, the customer shall pay the costs of repairs and replacements.

C. Relocation and/or Replacement of Company Equipment. The original service connection, including piping, meters and all other necessary or incidental equipment, which remains the property of the Company, shall be installed by the Company at its expense unless otherwise expressly provided in this tariff. Subsequent relocation and/or replacement of any such equipment on private property, whether it be for one or more service connections, shall be performed by the Company at the customer's expense unless such work is done at the request of the Company and for its convenience, in which case the Company shall bear the expense.

D. Protection by Customer. The customer shall protect the equipment of the Company on his premises and shall not permit any persons, except a Company employee having a Company photo identification card or other Company identification, to break any seals upon or do any work on any meter, service supply pipe, or other equipment of the Company located on the customer's premises.

E. Tampering. In the event the Company's meter or other property is being tampered with or interfered with, the customer being supplied through such equipment shall pay the amount which the Company may estimate is due for service used but not registered on the Company's meter and for any repairs or replacements required as well as for costs of inspections, investigations, and protective installation.

F. Right of Access. The Company's identified employees shall have access to the premises of the customer at all reasonable times for the purpose of reading meters, testing, repairing, removing, or exchanging any or all equipment belonging to the Company.

G. Ownership and Removal. All equipment supplied by the Company shall remain its exclusive property and the Company shall have the right to remove the same from the premises of the customer at any time after the termination of service for whatever cause.

11 SERVICE CONTINUITY

A. Regularity of Supply. The Company will use reasonable diligence to provide a continuous, regular and uninterrupted supply of service, but should the supply be interrupted by the Company for the purpose of making repairs, changes, or improvements in any part of its system for the general good of the service or the safety of the public, or should the supply of service be interrupted or fail by reason of accident, strike, legal process, state or municipal interference, or any cause whatsoever beyond its control, the Company shall not be liable for damages, direct or inconsequential, resulting from such interruption or failure.

B. Notice of Trouble. The customer shall notify the office of the Company immediately should the service be unsatisfactory for any reason or should there be any defects, leaks, trouble, or accident affecting the supply of gas.

12 CUSTOMER’S USE OF SERVICE

A. Resale Forbidden. The customer shall not, directly or indirectly, sell, sublet, assign, or otherwise dispose of to others, gas purchased from the Company, or any part thereof, without the consent of the Company. This rule does not apply to a public utility Company purchasing gas in bulk expressly for the purpose of delivering it to others.

B. Fluctuations. Gas service must not be used in such a manner as to cause unusual fluctuations or disturbances in the Company's supply system. In the case of violation of this rule, the Company may discontinue service or require the customer to modify its installation and/or equip it with approved controlling devices.

C. Additional Load. The service supply pipe, regulators, meters, and equipment supplied by the Company for each customer have definite capacities. The customer shall notify the Company of substantial changes in service requirements or location of appliances.

13 INSPECTIONS

A. Company's Right to Inspect. The Company shall have the right, but shall not be obliged, to inspect any installation before service is introduced or at any time later and reserves the right to reject any piping or appliances not in accordance with the Company's standard requirements. However, such inspection, failure to inspect, or failure to reject shall not render the Company liable or responsible for any losses or damage resulting from defects in the installation, piping or appliances, from violation of Company rules, or from accidents which may occur upon the premises of the customer.

14 MEASUREMENT

A. Supply of Meters. The measurement of gas service shall be by meters furnished and installed by the Company. The Company will select the type and make of metering equipment and may, from time to time, change or alter the equipment. The Company's sole obligation is to supply meters that will accurately and adequately furnish records for billing purposes.

B. Special Measurements. The Company shall have the right, at its option and its own expense, to place demand meters, pressure gauges, special meters, or other instruments on the premises of any customer for the purpose of determining the adequacy of the Company's service or for making tests of all or any part of the customer's load.

15 METER TESTS

A. Meter Tests. Meters are tested according to NHPUC Rules and Regulations. (See Puc 500 rules).

B. Request Tests. The fee for a special request test is $20.00 when scheduled at the mutual convenience of the Company and the customer; otherwise the amount is $30.00. (See Puc 500 rules).

C. Customer's Bill Adjustment. Should any meter fail to register correctly, the quantity of gas consumed will be determined by the Company based on information supplied by the customer and known by the Company subject to NHPUC Rules and Regulations. (See Puc 500 rules).

16 DISCONNECTION BY THE COMPANY

A. Disconnection by the Company. The Company may disconnect its service to a customer for violation of its rules subject to NHPUC Rules and Regulations. (See Puc 1200 rules).

B. Non-Payment Shut-Off. The Company may disconnect its service on reasonable notice and remove its equipment in case of non-payment of amounts billed for gas usage.

C. Shut-Off for Cause. The Company may disconnect its service on reasonable notice if entry or access to its meter or meters is refused, obstructed, or hazardous, or for other violation of the Company's standard requirements.

D. Safety Shut-Off. The Company may disconnect without notice if the customer's installation has become dangerous or defective.

E. Defective Equipment. The Company may disconnect without notice if the customer's equipment, or use thereof, might injuriously affect the equipment of the Company or the Company's service to other customers.

F. Shut-Off for Fraud. The Company may disconnect without notice for abuse, fraud or tampering with the connections, meters or other equipment of the Company.

G. Reconnection Charge. A reconnection charge is made for reconnection of service discontinued by the Company and is payable in advance in addition to all other amounts due. The reconnection charge is made instead of the meter account charge. The amount of the reconnection charge is the same as the comparable meter account charge except when it has been necessary to dig up the service pipe or connection to effect discontinuance of service. In such cases, the reconnection charge is the price of removal and restoration of service pipe or connection.

17. COST OF GAS CLAUSE EXCLUDING KEENE

A. Purpose. The purpose of this Cost of Gas Clause is to establish procedures that allow the Company, subject to the jurisdiction of the Commission, to adjust, on a semiannual basis, its rates for firm gas sales in order to recover the costs of gas supplies, along with any taxes applicable to those supplies, pipeline and storage capacity, production capacity and storage, bad debt expense associated with purchased gas costs, and the costs of purchased gas working capital, to reflect the seasonal variation in the cost of gas, and to credit to customers receiving firm service from the Company all supplier refunds and capacity release sales.

B. Applicability. This Cost of Gas Clause ("COGC") shall be applicable to the Company and all firm gas sales made by the Company, unless otherwise designated. The application to the clause may, for good cause shown, be modified by the NHPUC. See Section 17(N), "Other Rules."

C. Cost of Firm Gas Allowable for COGC. All costs of firm gas including, but not limited to, commodity costs, taxes on commodity, demand charges, local production and storage costs, hedging related costs, other gas supply expense incurred to procure and transport supplies and commodity related bad debt expense, the gas used in Company operations, transportation fees, costs associated with buyouts of existing contracts, and purchased gas working capital may be included in the COGC. Any costs recovered through application of the COGC shall be identified and explained fully in the semiannual filings outlined in Section 17(M).

D. Effective Date of Cost of Gas Factor. The seasonal Cost of Gas Factor ("COG") shall become effective upon NHPUC approval on the first day of each season as designated by the Company. Unless otherwise notified by the NHPUC, the Company shall submit COG filings as outlined in Section 17(M) of this clause on or before the first business day in September...

E. Definitions. The following terms shall be defined in this section, unless the context requires otherwise.

1. Bad Debt Expense: The uncollectible expense attributed to the portion of the Company's revenue associated with the recovery of gas costs under this clause.

2. Capacity Release Revenues: The economic benefit derived from the sale or release of transportation and storage capacity that the Company has under contract.

3. Carrying Charges: Interest expense calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates, and then added to the end of month balance.

4. Correction Factor: Seasonal Adjustment necessary to align the peak day volumes used to calculate the Commercial and Industrial load factor ratios with the seasonal Commercial and Industrial High Winter and Low Winter throughput volumes applied to the cost of gas calculations.

5. Direct Gas Costs: All purchased gas costs including supplier, storage and pipeline demand and commodity costs, as well as the commodity costs for local manufactured gas (Liquid Propane Gas ("LPG") and Liquefied Natural Gas ("LNG")).

6. Economic Benefit: The difference between the revenues received and the marginal cost determined to serve non-core customers.

7. Inventory Finance Charges: As billed in each Winter Season for annual charges. The total shall represent an accumulation of the projected charges as calculated using the monthly average of financed inventory at the existing or anticipated financing rate through a trust or other financing vehicle.

8. Local Production and Storage Capacity Costs: The costs of providing storage service from the Company's storage facilities (*i.e.*, LNG and LPG) as determined in the Company's most recent rate proceeding.

9. Market Based Allocator ("MBA"): The method used to allocate gas costs among Commercial and Industrial Customer Classifications. These ratios are presented in Section 17(F).

10. Non-Core Commodity Costs: The commodity cost of gas assigned to non-core sales to which the COG is not applied.

11. Non-Core Sales: Sales made under non-traditional off-system sales.

12. Non-Core Sales Margins: The economic benefit derived from non-core transactions to which the COG is not applied, including non-core sales generated from the use of the Company's Gas Supply Resource portfolio.

13. Summer Commodity: The gas supplies procured by the Company to serve firm load in the Summer Season.

14. Summer Demand: The gas supply demand and transmission capacity procured by the Company to serve firm load in the Summer Season.

15. Summer Season: The calendar months May 1 through October 31.

16. Off-System Sales Margin: The economic benefit derived from the non-firm sales of natural gas supplies upstream of Company's distribution system.

17. Winter Commodity: The gas supplies procured by the Company to serve firm load in the Winter Season.

18. Winter Demand: Gas supply demand, peaking demands, storage and transmission capacity procured by the Company to service firm load in the Winter Season.

19. Winter Season: The calendar months November 1 through April 30.

20. PR Allocator: The percentage of annual capacity charges assigned to the Winter Season calculated using the Proportional Responsibility Method.

21. Purchased Gas Working Capital: The allowable working capital derived from Winter Season and Summer Season demand and commodity related costs.

F. Approved Cost. The Cost of Gas calculation utilizes information periodically established by the NHPUC. The table below lists the approved costs factors:

Variable	Description	Approved Figure
PS	Production and Storage Capacity	$3,893,588
WCA%	Working Capital Allowance Percentage	3.91%

<table>
<tr><th>Bad Debt % Measurement and Reconciliation Period</th><th>COG Recovery Period</th><th>Actual Bad Debt Rate</th><th>Bad Debt allowed Recovery Rate</th></tr>
<tr><td>May 2010 – April 2011</td><td>November 2011 – October 2012</td><td>Actual</td><td>Actual</td></tr>
<tr><td rowspan="3">May 2011 – April 2012</td><td rowspan="3">November 2012 – October 2013</td><td>Greater than 2.9%</td><td>Actual less 0.4</td></tr>
<tr><td>2.5% to 2.9%</td><td>2.5%</td></tr>
<tr><td>Less than 2.5%</td><td>Actual</td></tr>
<tr><td rowspan="3">May 2012 - April 2013 and each subsequent May – April period thereafter</td><td rowspan="3">November 2013 - October 2014 and each subsequent November – October period thereafter</td><td>Greater than 3.3%</td><td>Actual less 0.8</td></tr>
<tr><td>2.5% to 3.3%</td><td>2.5%</td></tr>
<tr><td>Less than 2.5%</td><td>Actual</td></tr>
</table>

If the Company's actual bad debt percentage is reduced to 2.5% or less during any 12 month period, which need not be the same 12 months as the measurement periods defined above, then beginning with the reconciliation filing for the period during which this bad debt percentage was achieved the Company shall thereafter recover its actual gas supply related bad debt on a fully reconcilable basis and the percentages in the table above shall no longer apply. The actual bad debt percentage shall be calculated by dividing the Company's actual net write-offs for the relevant measurement period by its revenue for the same period.

G. Cost of Gas (COG) Calculations by Customer Class. The COG Formula shall be computed on a semiannual basis for three (3) groups of customer classes as shown on the following table. The computation will use forecasts of seasonal gas costs, carrying charges, sendout volumes, and sales volumes. Forecasts shall be based on either historical data or Company projections, but must be weather-normalized. Any projections must be documented in full with each filing.

The COG for the Residential rate classes shall represent the total system average unit cost of gas of meeting firm sales load, projected in each COG filing. The Commercial & Industrial (C&I) Low Winter (LW) and High Winter (HW) rates will be calculated in the following way: first, the demand unit cost of gas, the sum of purchased and stored gas demand costs divided by projected prorated sales, will be multiplied by the applicable load factor ratio and then multiplied by the correction factor. This adjusted demand factor will then be added to the commodity factor, adjustment factor and indirect cost of gas rate to determine the total COG rates for the C&I LW and HW rate classes. The two load factor ratios shall be derived once a year, for effect every November 1 through October 31, using the ratio of the unit capacity cost of each C&I group to the total system unit capacity cost that is determined in the Company's submittal of its Capacity

Allocators, for Capacity Assignment purposes, filed with its Winter COG, and as presented in Attachment C of the Delivery Service Terms and Conditions. The Correction Factor aligns the peak day volumes used to calculate the load factor ratios with the seasonal throughput volumes applied to the COG calculations.

GROUP	CUSTOMER CLASSES
Residential	Residential Heating and Non-Heating
Commercial and Industrial: Low Winter Use	G-51 through G-58
Commercial and Industrial: High Winter Use	G-41 through G-46

Winter Season Cost of Gas Formula (CGw)

The Winter Season COG shall be comprised of Winter Demand costs, Winter commodity costs, Winter reconciliation costs, Winter working capital reconciliation, Winter bad debt expenses, local production and storage capacity costs, and miscellaneous and A&G costs calculated at the beginning of the Winter Season according to the following formula:

$$CGw = Dw + Cw + Rw + WCRw + BDw + PS + ((MISC + Rbd) \times \frac{W{:}Sales)}{A{:}Sales}$$

Winter Demand Cost (Dw) Formula

Dw = DEMw – NCSMw + WCwd – R1d – R2d
and:

NCSMw = CRRw + OSSMw + SBdw
and:

WCwd = (DEMw – NCSMw) × WCA% × CC
where:

CGw = The total cost of gas for the Winter Season for the Company's firm sales customers previously defined.

BDw = Bad Debt expense for the Winter Season.

Cw = Commodity-related direct gas cost for the Winter Season.

Dw = The total Winter Demand costs.

DEMw = Demand Charges allocated to the Winter Season defined in Section 17(E).

NCSMw = The Non-Core Sales Margins equal to the sum of the Winter Season returnable Capacity Release Revenues, and Off-System Sales Margins.

WCwd = Working Capital allowable associated with demand charges allocated to the Winter Season as defined in Section 17(K).

R1d, R2d = Supplier demand-related refunds - The Supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds." See Section 17(I).

CRRw = The returnable Capacity Release Revenues allocated to the Winter Season. See Section 17(E).

OSSMw = The returnable Off-System Sales Margins allocated to the Winter Season. See Section 17(E).

SBdw = Demand revenues received from Firm Stand-By Sales Service customers in the Winter Season.

WCA % = Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 17(F) for this percentage.

CC = Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Rw = Reconciliation Costs – Winter Season deferred gas costs, Account 1920-1740 balance, inclusive of the associated Account 1920-1740 interest, as outlined in Section 17(J).

WCRw = Working Capital reconciliation adjustment associated with Winter Gas Costs - Account 1163-1422 balance as outlined in Section 17(K).

PS = The total dollar amount of costs associated with the local production and storage capacity gas less any production and storage capacity assignment revenues. Refer to Section 17(F) for this dollar amount.

MISC = The total dollar amount of gas costs associated with acquisition, dispatching, Administrative and General expenses and overheads as determined in the Company's most recent rate proceeding. Refer to Section 17(F) for this dollar amount.

Rbd = Annual Bad Debt Expense reconciliation adjustment - Account 1920-1743 balance

W:Sales = Forecasted firm sales volumes associated with the Winter Season.

A:Sales = Forecasted annual firm sales volumes.

Winter Season Commodity (Cw) Formula

Cw = COMw + FC + WCwc – R1c – R2c
and:

COMw = WSC – NCCCw - SBcw
and:

WCwc = (COMw + FC) × WCA% × CC
where:

COMw = Commodity Charges allocated to the Winter Season as defined in Section 17(E).

FC = Inventory finance charges as defined in Section 17(E).

WCwc = Working Capital Allowable Associated with commodity charges allocated to the Winter Season as defined in Section 17(K).

R1c, R2c = Supplier commodity-related refunds - The supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds". See Section 17(I).

WSC = Commodity charges associated with gas supply sent out in Winter Season as defined in Section 17(E)

NCCCw = Non-Core Commodity Costs incurred in the Winter Season as defined in Section 17(E).

SBcw = Winter Season commodity revenues received from Firm Stand-By Gas Supply Service sales customers.

WCA % = Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 17(F) for this percentage.

CC = Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Winter Bad Debt (BDw) Formula

BDw = BD% x (Dw + Cw + Rw + WCRw)

where:

BDw = Forecasted gas supply cost related Bad Debt Expense calculated for Winter Season.

BD% = Bad Debt percentage calculated based on a twelve month basis ending April of each year. Refer to Section 17(F) Bad Debt Allowed Recovery Rate for this percentage.

Dw = Demand related costs in the Winter Season as previously defined.

Cw = Commodity related costs in the Winter Season as previously defined.

Rw = Reconciliation Costs – Winter Season deferred gas costs as previously defined.

WCRw = Winter Season Working Capital Reconciliation adjustment as previously defined.

Residential Winter Season Cost of Gas (COGwr)

All residential firm sales customers will pay the same Cost of Gas for the Winter Season. The factor represents the total forecasted Winter Season average cost of gas rate. This factor is calculated according to the following formula:

$$\text{COGwr} = \frac{\text{CGw}}{\text{W:Sales}}$$

where:

CGw = The total cost of gas for the Winter Season for the Company's firm sales customers previously defined.

W:Sales = Forecasted sales volumes associated with the Winter Season.

R = Designates the Residential Heating and Residential Non-Heating customer classes.

Summer Season Cost of Gas (COG) Formula (CGs)

The Summer Season COG shall be comprised of Summer demand costs and Summer commodity costs, Summer reconciliation costs, Summer working capital reconciliation, plus a Summer bad debt charge, and a miscellaneous and A&G charge calculated at the beginning of the Summer Season according to the following formula:

$$CGs = Ds + Cs + Rs + WCRs + BDs + \left((MISC + Rbd) \times \frac{S:Sales}{A:Sales}\right)$$

Summer Demand Cost (Ds) Formula

Ds = DEMs + WCsd – Rld – R2d
and:

WCsd = DEMs × WCA% × CC
where:

A:Sales =	Forecasted annual sales volumes.
BDs =	Bad Debt Expense for Summer Season.
Cs =	Commodity-related direct gas costs for the Summer Season.
CGs =	The total cost of gas for the Summer Season for the Company's firm sales customer previously defined.
DEMs =	Demand charges allocated to the Summer Season defined in Section 17(E).
MISC =	The total dollar amount of gas costs associated with acquisition, dispatching, Administrative and General expenses and overheads as determined in the Company's most recent rate proceeding. Refer to Section 17(F) for this dollar amount.
R1d, R2d =	Supplier refunds from pipeline demand charges - The per unit supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds." See Section 17(I).
Rs =	Summer Season Reconciliation Costs - Account 1920-1741 balance, inclusive of the associated Account 1920-1741 interest, as outlined in Section 17(J).
S:Sales =	Forecasted sales volumes associated with the Summer Season.
WCA % =	Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 17(F) for this percentage.
CC =	Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.
Rbd =	Annual Bad Debt Expense reconciliation adjustment - Account 1920-1743 balance.
WCRs =	Working Capital reconciliation adjustment associated with Summer gas costs – Account 1163-1424 as outlined in Section 17(K).
WCsd =	Working Capital allowable costs associated with demand costs allocated to the Summer Season as defined in Section 17(K).

Summer Season Commodity Cost (Cs) Formula

Cs = COMs – NCCCs + WCsc – R1c – R2c
and:

WCsc = (COMs – NCCCs) × WCA% × CC
where:

COMs = Commodity charges associated with gas supply sent out in the Summer Season as defined in Section 17(E).

WCsc = Working Capital allowable costs associated with commodity charges allocated to the Summer Season as defined in Section 17(K).

R1c, R2c = Supplier refunds from pipeline commodity charges - The supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds."

NCCCs = Non-core commodity costs incurred in the Summer Season as defined in Section 17(E).

WCA % = Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 17(F) for this percentage.

CC = Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Summer Bad Debt (BDs) Formula

BDs = BD% x (Ds + Cs + Rs + WCRs)
where:

BD% = Bad Debt percentage calculated based on a twelve month basis ending April of each year. Refer to Section 17(F) Bad Debt Allowed Recovery Rate for this percentage.

BDs = Forecasted gas supply related Bad Debt Expense calculated for Summer Season defined in Section 17(E).

Ds = Demand related costs in the Summer Season as previously defined.

Cs = Commodity related costs in the Summer Season as previously defined.

Rs = Reconciliation Costs – Summer deferred gas costs as previously defined.

WCRs = Summer Season Working Capital Reconciliation adjustment as previously defined.

Residential Summer Season Cost of Gas (COGsr)

All residential firm sales customers will pay the same cost of gas for the Summer Season. The factor represents the total forecasted Summer Season average cost of gas rate. This factor is calculated according to the following formula:

$$COGsr = \frac{CGs}{S:Sales}$$

where:

CGs = The total cost of gas for the Summer Season for the Company's firm sales customers as previously defined.

S:Sales = Forecasted sales volumes associated with the Summer Season.

R = Designates the Residential Heating and Residential Non-Heating customer classes.

Commercial and Industrial Winter and Summer Season Cost of Gas

The Commercial and Industrial customer classes Winter Season Cost of Gas will be based on the Winter Season average cost of gas components used for the Residential Winter Season Cost of Gas. A separate Winter Season Cost of Gas factor will be computed for the low winter use class, Rates G-51, G-52, G-53, G-54, G-55, G-56, G-57, and G-58 and a separate Winter Season Cost of Gas Factor will be computed for the high winter use class, Rates G-41, G-42, G-43, G-44, G-45, and G-46.

The Commercial and Industrial customer classes Summer Season Cost of Gas will be based on the Summer Season average cost of gas components used for the Residential Summer Season Cost of Gas. A separate Summer Season Cost of Gas factor will be computed for the low winter use class, Rates G-51, G-52, G-53,G-54, G-55, G-56, G-57, and G-58 and a separate Summer Season Cost of Gas factor will be computed for the high winter use class, Rates G-41, G-42, G-43, G-44, G-45, and G-46.

These Cost of Gas Factors will be computed by applying ratios to the average demand portion of the Winter and Summer Season's cost of gas unit rate times the correction factor and then adding the remaining Residential average cost of gas unit rate.

These factors are calculated according to the following formulas:

Low Winter Use (COGwl) Formula Winter Season

COGwl = RATIOl x CFw x CGwd + CGwo

Low Winter Use (COGsl) Formula Summer Season

COGsl = RATIOl x CFs x CGsd + CGso

and:

$$RATIOl = \frac{DCcl}{DDcl} \div \frac{DCc}{DDc}$$

and:

High Winter Use (COGwh) Formula Winter Season

COGwh = RATIOh x CFw xCGwd + CGwo.

High Winter Use (COGsh) Formula Summer Season

COGsh = RATIOh x CFs x CGsd + CGso

and

RATIOh = <u>DCch</u> ÷ <u>DCc</u>
DDch = DDc

and:

$$CFw = \frac{(WL{:}Sales + WH\ Sales)}{(RATIOl \times WL{:}Sales) + (RATIOh \times WH{:}Sales)}$$

$$CFs = \frac{(SL{:}Sales + SH{:}Sales)}{(RATIOl \times SL{:}Sales) + (RATIOh \times SH{:}Sales)}$$

$$CGwd = \frac{Dw}{W{:}Sales}$$

$$CGwo = \frac{CGw - Dw}{W{:}Sales}$$

$$CGsd = \frac{Ds}{S{:}Sales}$$

$$CGso = \frac{CGs - Ds}{S{:}Sales}$$

DCcl = Bcl * PLrate + (DDcl – Bcl) * REMrate

DCch = Bch * PLrate + (DDch- Bch) * REMrate

PLrate = PL/ PLmdcq

$$REMrate = \frac{(DCc - (Bc*PLrate))}{DDc - Bc}$$

$$DCc = \frac{(DC \times DDc)}{DD}$$

where:

Bc =	The daily base load for all the Commercial and Industrial rate classes
Bch =	The daily base load for the Commercial and Industrial rate classes G-41, G-42, G-43, G-44, G-45 and G-46.
Bcl =	The daily base load for the Commercial and Industrial rate classes G-51, G-52, G-53, G-54, G-55, G-56, G-57 and G-58.
CFs =	Summer Season Commercial and Industrial gas cost correction factor.
CFw =	Winter Season Commercial and Industrial gas cost correction factor.
CGs =	The total cost of gas for the Summer Season for the Company's firm sales customers as previously defined.
CGw =	The total cost of gas for the Winter Season for the Company's firm sales customers as previously defined.

DC =	The annual forecasted pipeline, storage and peaking demand charges plus the total production and storage capacity costs, as stated in Section 17(F).
DCc =	The Commercial and Industrial rate classes pro-rata share of the annual forecasted pipeline, storage, and peaking demand capacity costs.
DCch =	The Commercial and Industrial pro-rata share of the annual forecasted pipeline, storage, and peaking demand capacity costs allocated to Commercial and Industrial High Winter Use rate classes, G-41, G-42, G-43, G-44, G-45, and G-46.
DCcl =	The Commercial and Industrial pro-rata share of the annual forecasted pipeline, storage, and peaking demand capacity costs allocated to the Commercial and Industrial Low Winter Use rate classes, G-51, G-52, G-53, G-54, G-55, G-56, G-57, and G-58.
DD =	Total peak design day determinants.
DDc =	The peak design day determinants allocated for all the Commercial and Industrial rate classes.
DDch =	The peak design day determinants for the Commercial and Industrial rate classes, G-41, G-42, G-43, G-44, G-45, and G-46.
DDcl =	The peak design day determinants for the Commercial and Industrial rate classes, G-51, G-52, G-53, G-54, G-55, G-56, G-57, and G-58.
Ds =	The total Summer Demand charges as defined below.
Dw =	The total Winter Demand charges as previously defined.
PL =	The annual forecasted pipeline only demand charges
PLmdcq =	The maximum daily contract pipeline volume available to the Company.
PLrate =	The pipeline demand rate.
RATIOh =	Ratio of the average high Winter Use class Cost of Gas low load factor demand capacity costs to the total average Commercial and Industrial demand capacity costs.
RATIOl =	Ratio of the average low Winter Use class Cost of Gas high load factor demand capacity costs to the total average Commercial and Industrial demand capacity costs.
REMrate =	The weighted average demand rate for storage and peaking supplies.
S: Sales =	Forecasted sales volumes associated with the Summer Season.
SH:Sales =	Total Winter Season forecasted Commercial and Industrial high winter use sales.
SL: Sales =	Total Winter Season forecasted Commercial and Industrial low winter use sales volumes.
W:Sales =	Forecasted sales volumes associated with the Winter Season.
WH:Sales =	Total Winter Season forecasted Commercial and Industrial high winter use sales.
WL: Sales =	Total Winter Season forecasted Commercial and Industrial low winter use sales volumes.

H. Non-Core Sales Margins (“NCSM”). One hundred percent (100%) of margins from Off-System Sales and all revenues from Capacity Release will be credited to firm sales customers during the winter season through operation of the COG.

I. Gas Suppliers' Refunds. Account 5541-8048: Refunds from suppliers of gas, from upstream capacity suppliers and suppliers of product demand are credited to Account 5541-8048, "Commodity and Demand Refunds." Transfers from these accounts will reflect as a credit in the semiannual calculation of the COG to be calculated as follows:

Refund programs shall be initiated with each semiannual COG filing and shall remain in effect for a period of one year. The total dollars to be placed into a given refund program shall be net of over/under-returns from expired programs plus refunds received from suppliers since the previous program was initiated. Refunds shall be segregated by demand and commodity charges and distributed volumetrically, producing per unit refund that will return the principal amount with interest as calculated using the Company's average short-term cost of borrowing for the month to the average of the beginning and end of month balances of refunds. The Company shall track and report on all Account 5541-8048 activities as specified in Section 17(K).

J. Reconciliation Adjustments – Various Accounts.

1. The following definitions pertain to reconciliation adjustment calculations:

a. Capacity Costs Allowable per Winter Season Formula shall be:

(1) Charges associated with upstream storage transmission capacity and product demand procured by the Company to serve firm load in the Winter Season, plus a reallocation of a portion of such charges incurred in the Summer Season to serve firm load.

(2) Charges associated with peaking, downstream production and storage capacity to serve firm load dispatching costs, and other administrative and general expenses in connection with purchasing gas supplies in the Winter Season from the Company's most recent test year and allocated to firm sales service.

(3) Non-Core Sales Margins or economic benefits associated with returnable capacity release and off-system sales.

(4) Credits associated with firm Stand-by Gas Supply Service Monthly Reservation Charges, daily imbalance charges and fixed component of penalty charges billed transportation customers in the Winter peak Season.

(5) Winter Season Demand Cost carrying charges.

b. Gas Costs Allowable Per Winter Season Formula shall be:

(1) Charges associated with gas supplies, including any applicable taxes, purchased by the Company to serve firm load in the Winter Season.

(2) Credit non-core commodity costs assigned to non-core customers to which the COGC does not apply, as defined in Section 17(H) (NCCCw).

(3) Inventory finance charges (FC).

(4) Winter Season commodity cost carrying charges.

c. Capacity Costs Allowable Per Summer Season Formula shall be:

(1) Charges associated with transmission capacity and product demand procured by the Company to serve firm load in the Summer Season

(2) Credits associated with daily imbalance charges and fixed component of penalty charges billed transportation customers in the Summer Season.

(3) Summer Season demand cost carrying charges.

d. Gas Costs Allowable Per Summer Season Formula shall be:

(1) Charges associated with gas supplies, including any applicable taxes, procured by the Company to serve firm load in the Summer Season.

(2) Non-core commodity costs associated with non-core sales to which the COG is not applied, as defined in Section 17(E).

(3) Summer Season commodity cost carrying charges.

e. Costs Allowable Per Bad Debt Formula shall be:

(1) Costs associated with uncollected gas costs, incurred by the Company to serve sales load. Such costs represent the bad debt expense related to the gas supply related write-off of sales customers and will be computed by multiplying actual gas costs by the Bad Debt Allowed Recovery Rate specified in Section 17(F). The reconciliation adjustment each season will be computed as the difference between the actual supply related bad debt revenues and the actual gas costs multiplied by the actual Bad Debt Allowed Recovery Rate as specified in Section 17(F).

(2) Account 1920-1743 – Annual Bad Debt, carrying charges.

2. Calculation of the Reconciliation Adjustments: These accounts contain the accumulated difference between gas cost revenues and the actual monthly gas costs incurred by the Company. The Company shall separate Account 175 into Winter Season Gas Costs (Account 1920-1740) and Summer Season Gas Costs (Account 1920-1741), Account 1920-1740 shall contain the accumulated difference between revenues toward gas costs calculated by multiplying the Winter Season Gas Cost for each Customer Classification, (COGwr, COGwl and COGwh) times monthly firm sales volumes for each Customer Classification, and the total costs allowable per the Winter Season gas cost formula. Account 1920-1741 shall contain the accumulated difference between revenues toward gas costs calculated by multiplying the Summer Season Gas Cost for each Customer Classification, (COGsr, COGsl and COGsh) times monthly firm sales volumes for each Customer Classification, and the total gas costs allowable per the Summer Season demand formula.

Carrying Charges shall be calculated on the average monthly balance of each subaccount. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

The annual bad debt reconciliation adjustments Rbd shall be determined for use, incorporating the bad debt balances in Account 1920-1743.

The bad debt account balance contains the accumulated difference between the Bad Debt Allowed Recovery Rate for the applicable period multiplied by the actual gas costs and the actual supply related bad debt revenues for the Winter and Summer COG filings.

The Winter Season reconciliation shall be filed with the NHPUC no later than July 29 of each year.

The Summer Season reconciliation shall be filed with the NHPUC no later than January 31 of each year.

K. Working Capital Reconciliation Adjustments - Accounts 1163-1422 and 1163-1424.

1. *The following definitions pertain to reconciliation adjustment calculations:*

a. Working Capital Demand Gas Costs Allowable per Winter Season Gas Formula shall be:

(1) Charges associated with upstream storage, transmission capacity, and product demand procured by the Company to serve firm load in the Winter period, plus a reallocation of a portion of such charges incurred in the Summer Season to serve firm load.

(2) Carrying charges.

b. Working Capital

(3) Charges associated with gas supplies, including any applicable taxes, purchased by the Company to serve firm load in the Winter season.

(4) Non-core commodity costs associated with non-core sales to which the COG is not applied, as defined in Section 17(E).

(5) Carrying charges.

c. Working Capital Demand Gas Costs Allowable per Summer Season Gas Formula shall be:

(6) Charges associated with upstream storage and transmission capacity procured by the Company to serve firm load in the Summer Season.

(7) Carrying charges.

d. Working Capital Commodity Gas Costs Allowable per Summer Season Gas Formula shall be:

(8) Charges associated with gas supplies, including any applicable taxes, procured by the Company to serve firm load in the Summer Season.

(9) Non-core commodity costs associated with non-core sales.

(10)Carrying charges.

e. The Winter and Summer Cost of Gas working capital allowances shall be calculated by applying the Working Capital Allowance Percentage (WCA%) set forth in Section 17(F).

2. Calculation of the Reconciliation Adjustments

a. Accounts 1163-1422 and 1163-1424 contain the accumulated difference between working capital allowance revenues and the actual monthly working capital allowance cost. The actual monthly working capital allowance shall be calculated by multiplying the actual gas costs times the Working Capital Allowance Percentage (WCA%) set forth in Section 17(F), to the actual Direct Gas Costs allowable.

b. The Winter Season working capital reconciliation adjustment (WCRw) shall be determined for use in the Winter Season Gas Cost calculations incorporating the Winter Season working

capital account 1163-1422. A Summer Season working capital reconciliation adjustment (WCRs) shall be determined for use in the Summer Season Gas Cost calculations incorporating the Summer Season working capital account 1163-1424 balance.

L. Application of COG to Bills: The Company will employ the COGs as follows: The COGs ($/therm) for each customer group for each season shall be calculated to the nearest hundredth of a cent per unit and will be applied to each customer's monthly sales volume within the corresponding customer classification. The Cost of Gas will be applied to gas consumed on or after the first day of the month in which the cost of gas becomes effective.

M. Information Required to be Filed with the NHPUC.

1. Reconciliation Adjustments: The Company shall file with the NHPUC a seasonal reconciliation of gas costs and gas cost collections containing information in support of the reconciliation calculation set out in Sections 17(J) (2) and 17(K) (2). Such information shall include the complete list of gas costs recoverable through the COGC over the previous season. This seasonal reconciliation shall be filed with the respective seasonal COG reconciliation filing, along with complete documentation of the reconciliation adjustment calculations.

   Additionally, information pertaining to the Cost of Gas shall be filed with the NHPUC in accordance with the format established by the NHPUC. Reporting requirements include filing the Company's monthly calculation of the projected over or under-collection with the NHPUC, along with notification by the Company to the NHPUC of any revised COG for the subsequent month, not less than five (5) business days prior to the first day of the subsequent month.

   The Company shall file with the NHPUC an annual reconciliation of bad debt expense and bad debt collections containing information in support of the reconciliation calculation set out in Sections 17(J) (1) and 17(J) (2). Such information shall detail the revenues collected as an allowance for bad debt, as well as the actual bad debt expense associated with gas cost recoverable through the COGC over the 12-month period ending April 30th. This annual reconciliation of bad debt expenses shall be filed with the Winter COG reconciliation filing, along with documentation.

2. Commercial and Industrial COG Ratio: The following factors will be filed annually by the Company for informational purposes. Significant changes in these factors signal the need to evaluate the COG ratios. These variables will assist in predicting significant shifting of the MBA-based escalator of gas costs and resulting changes in the COG ratios:

   a. The percentage of load migration from sales to transportation service in the Commercial and Industrial High and Low Winter Use classes.

   b. The ratio of delivered costs of winter supplies to pipeline delivered supplies.

   c. The July and August consumption for the Commercial and Industrial High and Low Winter classes as a percentage of their annual consumption.

N. Other Rules.

1. The NHPUC may, where appropriate, on petition or on its own motion, grant an exception from the provisions of this tariff, upon such terms that it may determine to be in the public interest.

2. The Company may, without further NHPUC action, adjust the approved COG upward or downward monthly based on the Company's calculation of the projected over or under-collection for the period, but the cumulative adjustments upward shall not exceed twenty-five percent (25%) of the approved COG.

3. The Company may, at any time, file with the NHPUC an amended COG.

4. The operation of the Cost of Gas Clause is subject to all powers of suspension and investigation vested in the NHPUC.

5. The Company shall file both seasonal COG filings on or before the first business day in September. The summer portion of the filing will include COG rates effective May 1 of the following year.

O. Reconciliation Adjustment Accounts.

1163-1422

Winter Season Gas Working Capital Allowance Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Winter Season gas working capital allowance revenues and Winter Season gas working capital allowance. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1163-1424

Summer Season Gas Working Capital Allowance Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Summer Season gas working capital allowance revenues and Summer Season gas working capital allowance. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1920-1740

Winter Season Gas Cost Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Winter Season gas revenues and Winter Season gas costs. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1920-1741

Summer Season Gas Cost Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Summer Season gas revenues and Summer Season gas costs. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1920-1743

Annual Bad Debt Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Annual bad debt revenues and annual bad debt costs. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

5541-8048

Commodity and Demand Refunds: This account shall be used to record the refunds from upstream commodity supplies and suppliers of product commodity and transfers of credits in the semiannual calculation of the COG as well as to record the refunds from upstream capacity supplies and suppliers of product demand and transfer of credits in the semiannual calculation of the COG. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

P. Firm Transportation Cost of Gas Charge. To permit the Company to charge its firm transportation customers with a portion of the cost of gas produced by the Company between November 1 and April 30 of each year, there is a Firm Transportation Cost of Gas Charge ("FTCG") which applies to all firm transportation billed under this tariff. This volumetric charge is to compensate firm sales customers for the increase in gas costs, through the use of supplemental liquid fuels, attributable to firm transportation customers during the Winter Period.

1. Application. The FTCG will be calculated for the Winter Period, defined as the period from November 1 through April 30. The FTCG will be applied to billings commencing with the first November revenue billing cycle

2. Purpose. The amount of the FTCG is the estimated liquid costs used for pressure support purposes multiplied by the transportation throughput as a percentage of the total system throughput for the Winter Period. The resulting amount shall be adjusted by the prior period over or under collection, if any, and shall be recovered over the estimated total transportation throughput subject to the FTCG to yield a per therm volumetric charge. The FTCG shall be computed to the nearest one hundredth cent per therm and shown separately on customers' bills. At the conclusion of the Winter Period, the Company will calculate the extent that the FTCG revenues are greater or lesser than actual unit cost. The revenue and liquid costs will be reconciled so that all liquids costs shall be collected from either firm sales or firm transportation customers.

3. Changes. The amount of the FTCG may be changed within the period whenever the unit cost materially deviates from the anticipated unit cost

4. Reporting. The Company shall submit to the New Hampshire Public Utilities Commission, on or before the first business day in September, a copy of the FTCG computation. A reconciliation of the prior period under/over collection will be submitted to the New Hampshire Public Utilities Commission no later than July 29.

Q. Fixed Price Option Program. Fixed Price Option Program. An alternative to the traditional Winter Period cost of gas pricing mechanism may be elected by a residential customer (rates R-1, R-3, R-4, R-5 or R-6) pursuant to the Company's Fixed Price Option Program (the "Program"). The Company may offer up to 50% of its weather normalized firm sales for the prior Winter Period under the Program. The cost of gas rate offered under the Program will remain fixed for all Winter Period deliveries commencing November 1 and ending April 30. The Company shall submit to the New Hampshire Public Utilities Commission on or before September 1 of each year a copy of the fixed price option computation. Once elected, customers must remain on the Program for the duration of the Winter Period, unless service is terminated. There are no maximum or minimum usage levels. No sign up fees apply.

18 COST OF GAS CLAUSE – KEENE DIVISION

A. Purpose. To permit the Company to charge its customers in the Keene Division with the cost of gas purchased or produced. A cost of gas rate will be applied to all firm gas billed under this tariff as calculated on the appropriate pages.

B. Application. A cost of gas rate will be calculated for the winter heating period, defined as the period from November 1 through April 30, and a cost of gas rate will be calculated for the summer period, defined as the period from May 1 through October 31.

The winter cost of gas rate will be applied to billings commencing with the first November revenue billing cycle; the summer cost of gas rate will be applied to billings commencing with the first May revenue billing cycle.

C. Calculation. The amount of the cost of gas rate is the anticipated unit cost of gas sold.

At the conclusion of each winter and summer period the Company will calculate the extent that cost of gas revenues are greater or less than actual unit costs of gas compared with the anticipated unit costs. The calculated difference (actual gas sales volumes multiplied by the difference between actual and anticipated unit costs) will be carried forward into the computation of the cost of gas rate for the corresponding winter or summer period.

Any excess revenue collected, as determined above, will earn interest as specified by the Commission.

D. Changes. The cost of gas rate may be adjusted without further Commission action based on the projected over-/under-collection of gas costs, the adjusted rate to be effective the first of the month. Any such rate adjustments may not exceed a maximum rate of 25 percent above the approved rate, but there is no limit on the amount of any rate reductions.

E. Refunds. When refunds are made to the Company by its suppliers that are applicable to increased charges collected under this provision, the Company will make appropriate refunds to its customers and as the Commission may direct.

F. Reporting. The Company shall submit to the Commission, at least 30 days prior to the effective date, the proposed winter and summer period cost of gas rate computation. Any monthly adjustments to the cost of gas rate must be filed five (5) business days prior to the first day of the subsequent month (the effective date of the new rate).

The cost of gas rate shall be computed to the nearest one hundredth cent per therm and shown on customers' bills.

G. Fixed Price Option Program. An alternative to the traditional winter period cost of gas rate mechanism may be elected by the customer pursuant to the Company's Fixed Price Option (FPO) Program. The Company may offer up to 50% of its expected firm sales for the winter period under the FPO Program. The cost of gas charge offered under the FPO Program will remain fixed for all winter period billings commencing November 1 and ending April 30 of the effective winter period. Once elected, customers must remain on the FPO Program for the duration of the winter period unless service is terminated. There are no maximum or minimum usage levels. Customers may enroll in this Program by contacting the Company between the October 1 and October 19 period immediately preceding the effective winter period.

19 LOCAL DISTRIBUTION ADJUSTMENT CLAUSE AND NORMAL WEATHER ADJUSTMENT

A. Purpose. The purpose of the Local Distribution Adjustment Clause (“LDAC” or this “Clause”) is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its delivery charges in order to recover Conservation Charges (“CC”), Revenue Decoupling Adjustment Factor (“RDAF”), Winter Period Surcharges (“WPS”), Environmental Surcharges (“ES”) including the Relief Holder Surcharge (“RHS”) and the Manufactured Gas Program Surcharge (“MGP”), rate case expenses and recoupment (“RCE”), Gas Assistance Program costs (“GAP”) and any other expenses the NHPUC may approve from time to time. The purpose of the Normal Weather Adjustment ("NWA") is to establish procedures that allow the Company, subject to the jurisdiction of NHPUC, to calculate and apply, for each customer on a monthly basis, the Normal Weather Factor ("NWF").

B. Applicability. This Clause shall be applicable in whole or part to all of the Company's firm sales service and firm delivery service customers. The application of this clause may, for good cause shown, be modified by the NHPUC. See Section 19(K) "Other Rules." ______This Clause is applicable to all rates and charges on a Rate Class basis. The application of the CC, RDAF, ES, RCE and GAP is applicable to all therms and therefore the application to all customers, including Managed Expansion Program Customers, is at the same rate per therm as the corresponding non-Managed Expansion Program Customers.

C. Conservation Charges Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Conservation Charge, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers costs associated with its energy efficiency management programs.

2. Applicability: A conservation charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the Commission as determined in accordance with the provision of this rate schedule. Such conservation charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.

3. Calculation of Conservation Charge: The Company will properly assign expenses for forecasted conservation expenditures to the applicable rate categories for a future twelve (12) month period commencing November 1 of each year. The total of such conservation expenditures plus any prior period reconciling adjustments shall be divided by therm sales as forecasted by the Company for the same annual period and rounded to the nearest hundredth of a cent. The resulting conservation charge shall be included in the Company's Local Distribution Adjustment Charge and applied to actual therms sold or transported for the following twelve (12) month period starting November 1 and ending October 31.

4. Reporting: The Company shall submit annual reports to the Commission reconciling any difference between the actual conservation expenditures and actual revenues collected under this rate schedule. The difference whether positive or negative will be carried forward into the conservation charge for the next recovery period. Upon completion of the conservation program(s), any over or under collection may be credited or charged to the deferred Winter Period cost of gas account, subject to Commission approval.

5. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the CC applicable to each Rate Category during the next subsequent twelve-month period commencing with the calendar month of November.

6. Reconciliation Adjustment: Account 1163-1755 shall contain the cumulative difference between the sum of the DSM expenditures incurred by the Company plus the sum of the DSM repayments and the revenues collected from customers. The Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.

D. Revenue Decoupling Adjustment Factor.

1. Purpose: Revenue decoupling eliminates the link between volumetric sales and Company revenue in order to align the interests of the Company and customers with respect to changing customer usage by establishing an allowed revenue per customer ("RPC"). The Company is allowed to collect that RPC for the number of actual customers it has in a given month. The purpose of the Revenue Decoupling Adjustment Factor ("RDAF") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its rates for firm gas sales and firm transportation in order to reconcile the difference between the Actual Revenue collected and the Allowed Revenue. The purpose of the Normal Weather Adjustment ("NWA") is to adjust each customer's bill for the difference in delivery charges caused by the variation in actual Heating Degree Days ("HDDs") from normal HDDs during the Winter Period.

2. Effective Date: The RDAF and NWA shall take effect beginning on November 1, 2018, and replace the Lost Revenue Adjustment Mechanism (LRAM) established in Order No. 25,932 (Docket No. DE 15-137).

3. Applicability: The Revenue Decoupling Adjustment Factor and NWA shall apply to all of the Company's firm tariff rate schedules, excluding special contracts, as determined in accordance with the provisions of this RDAF and NWA.

4. Definitions: The following definitions shall apply throughout Section 19D:

   a. Actual Number of Customers is the actual number of Equivalent Bills for the applicable Rate Class for each applicable month of the Decoupling Year.
   b. Equivalent Bill. Customers are billed on different days of the month. To calculate the number of customers in a month for purposes of calculating the Monthly Actual Revenue it is necessary to use Equivalent Bills as a representation for customers. Equivalent Bills are calculated by dividing the number of days in the billing period of each customer's bill by 30.
   c. Billing Year is the 12-months commencing November 1 immediately following the completion of the Decoupling Year.
   d. Decoupling Year. The first Decoupling Year shall be the 10-month period from November 1, 2018 to August 31, 2019. Each subsequent Decoupling Year shall be the twelve months commencing September 1 through August 31.
   e. Rate Class are customers taking service pursuant to the rate schedules combined as follows: Rates R-1 and R-5, Rates R-3, R-4, R-6, and R-7, Rates G-41 and G-44, Rates G-42 and G-45, Rates G-43 and G-46, Rates G-51 and G-55, Rates G-52 and G-56, Rates G-53 and G-57, and Rates G-54 and G-58.
   f. Customer Class Group (CG) is the group of rate schedules combined for purposes of calculating the Revenue Decoupling Adjustment and the RDAF. The two Customer Class Groups are as follows:

Residential Customer Class Group (CG1): defined as both Residential Non-Heating Rate Class and Residential Heating Rate Class, shall consist of all customers taking service pursuant to the Company's residential rate schedules. CG1 shall include customers taking service under rate schedules R-1, R-3, R-4, R-5, R-6 and R-7.

Commercial and Industrial Customer Class Group (CG2): shall consist of all customers taking service pursuant to one of the Company's general service rate schedules, G-41, G-42, G-43, G-44, G-45, G-46, G-51, G-52, G-53, G-54, G-55, G-56, G-57 and G-58.

g. Distribution Revenue is the revenue from the Company's firm sales service and firm delivery service customers and does not include other revenue, special contracts, and all revenues recovered from Cost of Gas filings.

5. Calculation of Revenue Per Customer

a. Definitions:

i. Initial Approved Revenue is the Distribution Revenue for each Rate Class less MEP Premium revenues, all as approved by Order of the Commission in a rate case, to determine the Commission approved Initial RPC per Rate Class.

ii. Incremental Approved Revenue is the amount of any change to the Initial Approved Revenue that is approved by Order of the Commission between rate cases and used to determine the Commission approved Incremental RPC and new Approved RPC.

iii. Initial Revenue per Customer ("Initial RPC") is calculated for each Rate Class and approved by Order of the Commission in a rate case.

iv. Incremental Revenue per Customer ("Incremental RPC") divides the Incremental Approved Revenue for each Rate Class based on the monthly Equivalent Bills for that Rate Class for the test period associated with the Incremental Approved Revenue. The Incremental RPC is approved by Order of the Commission in a proceeding other than a rate case that results in a permanent adjustment to base distribution rates. Such proceedings may include, but are not limited to, step adjustments, property tax reconciliation, and temporary rates.

v. Approved Revenue per Customer ("Approved RPC") is the sum of the Initial RPC per Rate Class and all Incremental RPC's per Rate Class, if any.

b. A separate RPC is calculated for each month of the decoupling year for each Rate Class using Approved Revenue and Equivalent Bills for each month.

c. The Initial RPC is set for each month by calculating the Initial Approved Revenue by Rate Class by month from the approved rate schedule rates by Rate Class for that month. The rate schedule rates adjusted for the MEP Premium are multiplied by the appropriate monthly billing units, Equivalent Bills for customer charges, therms for the blocked therm charges, to produce the Initial Approved Revenue by Rate Class by month. The monthly Initial Approved Revenue are then divided by the Equivalent Bills for that month to produce the Initial RPC's for each Rate Class. For the Initial RPC's, the Equivalent Bills and associated blocked therm billing units shall be adjusted by an End of Year Bill Adjustment that reflects the number of customers that received service at the end of the test year.

d. The Incremental RPC is set for each month by calculating the Incremental Approved Revenue by Rate Class by month from the approved rate schedule rates by Rate Class for that month. The rate schedule rates adjusted for the MEP Premium are multiplied by the appropriate monthly billing units, Equivalent Bills for customer charges, therms for the blocked therm charges, to produce the Incremental Approved Revenue by Rate Class by month. The monthly

Initial Approved Revenue are then divided by the Equivalent Bills for that month to produce the Initial RPC's for each. For the Incremental RPC's, the Equivalent Bills and associated blocked therm billing units shall be those bills and units for the test period associated with the Incremental Approved Revenue.

6. Calculation of Normal Weather Adjustment

a. Definitions.

i. Real-time normal weather adjustment is the difference between actual distribution revenue billed to each customer in each billing cycle for each month or portion thereof during the Winter Period, and what distribution revenue for each customer's bill would have been based on weather normalized therm deliveries for the same period. The resulting charge or credit will be added to or subtracted from each customer's bill at the time the bill is rendered (i.e., "real time").

ii. Winter Period. The time period from November 1 of a given year through April 30 of the following year inclusive.

iii. Base Load Factor for each customer is the customer's most recent two-year average daily delivered therms for actual bills rendered for those billing periods that are completely within the June 1 through August 31 calendar period excluding such billing periods that are only partially within the June 1 to August 31 period. If a customer has less than two-year's billing history, then the customer's available history for the months of June through August as defined above will be used to calculate the average daily delivered therms; and if a customer has no billing history for the months of June through August as defined above, then the average daily delivered therms for the calendar months of June through August for the rate schedule under which the customer is served will be used.

iv. Base Usage for each bill is the current Base Load Factor times the number of days in the billing period.

v. Heating Usage for each bill is the difference between the actual delivered therms for that bill less the Base Usage for that bill. If the calculated Heating Usage is less than zero, then the Heating Usage for that bill is set equal to zero.

vi. Heating Degree Days (HDD) for each day is sixty-five (65) minus the average temperature in degrees Fahrenheit for that day. If the calculated HDD is less than zero, then the HDD for that day is set equal to zero.

vii. Normal Heating Degree Days (Normal HDD) for each day is the thirty-year average HDD for that day.

viii. Normal Weather Adjustment Slope (NWA Slope) for each bill is the Heating Usage divided by the sum of actual HDD during the billing period.

ix. Normal Heating Usage for each bill is the NWA Slope times the sum of the Normal HDD for the billing period.

x. Normal Usage for each bill is the sum of the Base Usage and the Normal Heating Usage.

xi. Normal Weather Factor (NWF) for each bill is

$$\text{NWF} = \frac{\text{DeliveryCharge}_{\text{Normal}}}{\text{DeliveryCharge}_{\text{Actual}}} - 1$$

where Delivery Charge Normal is the calculated delivery charge for Normal Usage for the rate schedule applicable to that bill or portion thereof during the Winter Period and Delivery Charge Actual is the calculated delivery charge for actual delivered therms for the rate schedule applicable to that bill or portion thereof during the Winter Period.

The Normal Weather Adjustment (NWA) for each bill is

$$\mathrm{NWA} = \mathrm{DeliveryCharge}_{\mathrm{Actual}} \times \mathrm{NWF}$$

where Delivery Charge Actual is the calculated delivery charge for actual delivered therms for the rate schedule applicable to that bill or portion thereof during the Winter Period.

7. Application of the NWA to Customer Bills

The NWA charge or credit will be separately stated, and added to or subtracted from each bill as applicable. Each bill will have a separate line titled "Normal Weather Adj.," which line will include the total variable distribution charges, the NWF percentage, and the resulting charge or credit.

8. Calculation of Revenue Decoupling Adjustment and Reconciliation
   a. Definitions
      i. Monthly Actual Distribution Revenue is the monthly billed Distribution Revenue less the MEP Premium for that month.
      ii. Monthly Allowed Revenue is the Approved RPC per Rate Class for the applicable month multiplied by the Actual Equivalent Bills for that month.
      iii. Forecasted Throughput Volume is the forecasted firm tariff throughput for a given Customer Group for the Billing Year.
      iv. Revenue Decoupling Accounts ("RDA Accounts") are the accounts established on the balance sheet for the purpose of recording the Revenue Decoupling Adjustment for each Customer Class Group.
   b. Description of Revenue Decoupling Adjustment and Reconciliation

Each month the Company will record a Revenue Decoupling Adjustment in the RDA Accounts in accordance with generally accepted accounting principles. The Revenue Decoupling Adjustment is the difference between the Monthly Allowed Revenue and the Monthly Actual Distribution Revenue. In addition, the reconciliation amounts collected or distributed through the RDAF are also recorded in the RDA Accounts for each Customer Class Group. The RDA Accounts accrue interest on the average monthly balance using the prime lending rate. At the conclusion of each Decoupling Year, the sum of the balance in each of the RDA Accounts for each Customer Class Group shall be used to determine the RDAF for the next Billing Year.

The RDAF to be applied to customers' bills in the Billing Year is the balance in the RDA Accounts at the end of the Decoupling Year for each Customer Class Group divided by the Forecasted Throughput Volume for that Customer Class Group.

9. Application of the RDAF to Customer Bills

The RDAF ($ per therm) shall be calculated annually for each Customer Group and shall be truncated at four decimal points per therm. The annual calculated Customer Group RDAF will be applied to the monthly firm tariff throughput for each customer in that particular Customer Group, effective November 1 of the given year.

10. Information to be Filed with the Commission

Information pertaining to the RDAF will be filed annually with the Commission consistent with the filing requirements of all costs and revenue information included in the LDAC. Such information shall include:

a. The calculation of the RDA Account Balance at the end of the Decoupling Year.
b. The calculation of the RDAF for the Decoupling Year by Customer Class Group to be applied to the upcoming Billing Year.
c. The approved calculation of the RDAF for the previous Billing Year by Customer Class Group.
d. The calculation for the each Commission Approved RPC and the associated Equivalent Bills for the Initial RPC and each Incremental RPC.

E. Environmental Surcharges ("ES") Allowable for LDAC.

1. Purpose: In order to recover expenditures associated with former manufactured gas Programs, there shall be an ES Rate applied to all firm volumes billed under the Company's delivery service charges.

2. Applicability: An annual ES Rate shall be calculated effective every November 1 for the annual period of November 1 through October 31. The annual ES Rate shall be filed with the Company's Winter season Cost of Gas Clause ("COG") filing and be subject to review and approval by the Commission. The annual ES Rate shall be applied to firm sales and to firm delivery throughput as a part of the LDAC. Special contract customers are exempt from the ES.

3. Costs Allowable: All approved environmental response costs associated with manufactured gas Programs may be included in the ES Rate

   The total annual charge to the Company's customers for environmental response costs during any annual ES recovery period shall not exceed five percent (5%) of the Company's total revenues from firm gas sales and delivery throughput during the preceding twelve (12) month period ending June 30. The total annual charge shall represent the ES expenditures reflected in the calculation of the ES Rate to be in effect for the upcoming twelve-month period, November 1 through October 31. If this recovery limitation results in the Company recovering less than the amount that would otherwise be recovered in a particular ES Recovery Year, then the Company would defer this unrecovered amount, with interest, calculated monthly on the average monthly balance, until the next recovery period in which this amount could be recovered without violating the 5% limitation. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

4. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the ES applicable to all firm sales and firm delivery service throughput for the subsequent twelve-month period commencing with the calendar month of November.

5. Definitions:

   Environmental Response Costs shall include all costs of investigation, testing, remediation, litigation expenses, and other liabilities relating to manufactured gas Program sites, disposal sites, or other sites onto which material may have migrated, as a result of the operating or decommissioning of New Hampshire gas manufacturing facilities. These cost shall include the costs of the closure of the Relief Holder and pond at Gas Street, Concord, NH. The ES shall also include the expenses incurred by the Company in pursuing insurance and third-party claims and any recoveries or other benefits received by the Company as a result

6. Reconciliation Adjustments: Prior to the Winter Period COG, the Company shall calculate the difference between (a) the revenues derived by multiplying firm sales and delivery throughput by the ES Rate, and (b) the historical amortized costs approved for recoveries in the prior November's Annual ES Recovery Period. Account 1920-1863 shall contain the cumulative difference and the Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

7. Calculation of the ES: The ES Rate calculated annually consists of one-seventh of actual response costs incurred by the Company in the twelve-month period ending June 30 of each year until fully amortized (over seven years). Any insurance and third-party recoveries or other benefits for the twelve month period ending June 30 shall be applied to reduce the unamortized balance, shortening the amortization period. The sum of these amounts is then divided by the Company's forecast of total firm sales and delivery throughput for the upcoming twelve months of November 1 through October 31.

8. Application of ES to Bills: The annual ES Rate shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

F. Expenses Related to Rate Cases/Temporary Rate Reconciliation Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates for the recovery of NHPUC-approved rate case expenses and the reconciliation of temporary rates.

2. Applicability: The Rate Case Expenses/Temporary Rate Reconciliation ("RCE") shall be applied to all firm tariffed customers. The RCE will be determined by the Company, as defined below.

3. Rate Case Expenses Allowable for LDAC: The total amount of the RCE will be equal to the amount approved by the Commission.

4. Effective Date of Rate Case Expense Charge: The effective date of the RCE will be determined by the NHPUC in an individual rate proceeding.

5. Definition: The RCE includes all rate case-related expenses approved by the NHPUC. This includes legal expenses, costs for bill inserts, costs for legal notices, consulting fees processing expenses, and other approved expenses. The temporary Rate reconciliation will include the variance between the delivery revenues obtained from the rates prescribed in the temporary rate order and the delivery revenues obtained from the final rates approved by the NHPUC.

6. Rate Case Expense/Temporary Rate Reconciliation (RCE) Factor Formulas: The RCE will be calculated according to the Commission Order issued in an individual proceeding to establish details including the number of years over which the RCE shall be amortized and the allocation of recovery among rate classes. In general, the RCE Factor will be derived by dividing the annual portion of the total RCE, plus the RCE Reconciliation Adjustment, by forecast firm annual throughput.

7. Reconciliation Adjustments: Account 1930-1745 shall contain the accumulated difference between revenues toward Rate Case Expenses as calculated by multiplying the Rate Case Expense Factor ("RCEF") times the appropriate monthly volumes and Rate Case Expense allowed, plus carrying charges added to the end-of-month balance. The carrying charges shall be calculated beginning on the first month of the recovery period by applying the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates to the average monthly balance.

At the end of the recovery period, any under or over recovery will be included in an active LDAC component, as approved by the Commission.

8. Application of RCE to Bills: The RCE ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

9. Information to be Filed with the NHPUC: Information pertaining to the RCE will be filed with the NHPUC consistent with the filing requirements of all cost and revenue information included in the LDAC. The RCE filing will contain the calculation of the new RCE and will include the updated RCE reconciliation balance.

G. Recoverable Gas Assistance Program Costs.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to recover the revenue shortfall (costs) associated with customers participating in the Gas Assistance Program (“GAP”). Such costs, as well as, associated administrative and marketing costs shall be recovered by applying a GAP rate to all firm sales and transportation service throughput.

2. GAP Rate shall be applied to all firm sales and transportation tariff customers. The GAP Rate shall be filed with the Company’s Winter season Cost of Gas Clause filing and shall be determined annually by the Company and be subject to review and approval by the Commission.

3. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company’s request for a change in the GAP Rate applicable to all firm sales, delivery and transportation service throughput for the subsequent twelve-month period commencing with the calendar month of November.

4. GAP Costs Allowable for LDAC: The costs to be recovered through the GAP Rate shall comprised of the revenue shortfall calculated by forecasting the number of customers enrolled in the GAP and the associated volumetric billing determinants for the upcoming annual recovery period and applying those billing determinants to the difference between the regular and reduced gas assistance program residential base rates, plus the GAP discount applied to the cost of gas, administrative, marketing and startup costs. The GAP Rate shall be calculated by dividing the resulting costs, plus any prior period reconciling adjustment, by the forecast of annual firm sales and transportation service throughput.

5. GAP Factor Formula

$$GAPF = \frac{GAP + A_{GAP}}{A: TPev}$$

where:

A: Tpev Forecast Annual Throughput Volumes of all firm sales and transportation tariffed customers eligible to receive firm delivery-only service from the Company.

GAP GAP costs comprising of the revenue shortfall associated with customer participation, plus administrative, marketing, IT and start-up costs.

RA_{GAP} GAP Reconciliation Adjustment - Account 1169-1756, inclusive of the associated Account 1169-1756 interest, as outlined in Section 19(G)(6).

6. Reconciliation Adjustments: Prior to the Company's Winter season Cost of Gas filing, the Company will calculate the difference between (a) the revenue derived by multiplying the actual firm sales and delivery service throughput by the GAP Rate through October 31st, and (b) the actual costs of the program which consists of (1) the revenue shortfall calculated by applying the actual billing determinants of the GAP classes to the difference in the regular and reduced residential base rates and cost of gas rates in effect for the annual reconciliation period and (2) the GAP discount applied to the cost of gas, start-up, administrative and marketing costs associated with the implementation of the program, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates. The combined costs will then be recorded in the deferred GAP account 1169-1756. The Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

H. Effective Date of Local Distribution Adjustment Clause. The LDAC shall be filed annually and become effective on November 1 of each year pursuant to NHPUC approval. In order to minimize the magnitude of future reconciliation adjustments, the Company may request interim revisions to the LDAC rates, subject to review and approval of the NHPUC.

I. Local Distribution Adjustment Clause Formulas. The LDAC shall be calculated on an annual basis, by customer, by summing up the various factors included in the LDAC, where applicable.

LDAC Formula

$LDAC^x = CC^x + RDAF^x + ES + GREF^x + RCE + GAP$ and:

$ES^x = RHS + MGP$

where:

$LDAC^x$ = Annualized class specific LDAC.

CC^x = Annualized class specific CC or EE Charge.

$RDAF^x$ = Annualized class specific RDAF.

ES = Total firm annualized ES.

RHS = Annualized charge to recover the costs of the closure of the Relief Holder at Gas Street, Concord, NH

MGP = Annualized charge to cover the remediation costs related to former manufactured gas plants.

$GREF^x$ = Total firm annualized class specific Gas Restructuring Expense Factor.

RCE = Rate Case Expense Factor.

GAP = Gas Assistance Program Rate

J. Application of LDAC to Bills. The component costs comprising the LDAC ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm sales and firm delivery service throughput in accordance with the table shown in Section 19(B).

K. Other Rules.

1. The NHPUC may, where appropriate, on petition or on its own motion, grant an exception from the provisions of these regulations, upon such terms that it may determine to be in the public interest.
2. Such amendments may include the addition or deletion of component cost categories, subject to the

review and approval of the NHPUC.

3. The Company may implement an amended LDAC with the NHPUC approval at any time.

4. The NHPUC may, at any time, require the Company to file an amended LDAC.

5. The operation of the LDAC is subject to all powers of suspension and investigation vested in the NHPUC.

L. Amendments to Uniform System of Accounts

1163-1755 **Energy Efficiency Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the sum of DSM and/or EE Expenditures incurred by the Company plus the sum of DSM and/or EE Repayments and the revenues collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(C).

1920-1863 **Environmental Response Costs Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the revenues toward environmental response costs as calculated by multiplying the ES times monthly firm sales volumes and delivery service throughput and environmental response costs allowable per formula. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(E).

1930-1745 **Rate Case Expense/Temporary Rates Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the recovery and actual amounts of third-party incremental expenses associated with the Company's Rate Case initiatives and the difference between the final and temporary distribution rates. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 17(F).

1169-1756 **Gas Assistance Program Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the actual revenue derived from the actual sales and transportation service throughput multiplied by the GAP rate and the actual costs of the program, which consists of the revenue shortfall and all administrative and marketing costs, as outlined in the Local Distribution Adjustment Clause, 17(G).1168-1823 **Revenue Decoupling Adjustment Factor:** The RDA Accounts shall be used to record the difference between Actual Revenue and Allowed Revenue as well as the RDAF Revenue and associated interest as described in 17(D).

20 SUPPLY & CAPACITY SHORTAGE ALLOCATION POLICY

A. DEFINITIONS

The following are definitions of terms used in this subsection and applicable only to this subsection:

1. Residential: Service to customers which consists of direct natural gas usage in a residential dwelling for space heating, air conditioning, cooking, water heating and other residential uses

2. Commercial: Service to customers engaged primarily in the sale of goods or services including institutions and local, state and federal government agencies for uses other than those involving manufacturing or electric power generation

3. Industrial: Service to customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power

4. Large Volume: Service to large commercial and industrial customers with an annual gas load greater than 200,000 therms

5. Seasonal: Service available from April 1 to October 31 to all customers using gas to replace some other fuel or gas for air conditioning purposes

6. Firm Sales Service: Service from schedules or contracts under which seller is expressly obligated to supply and deliver specific volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened

7. Firm Transportation Service: Service from schedules or contracts under which seller is expressly obligated to deliver specific third-party volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened.

8. Plant Protection Gas: Is defined as minimum volumes required to prevent physical harm to the plant facilities or danger to plant personnel, when such protection cannot be afforded through the use of alternate fuel. This includes the protection of such material in process as would otherwise be destroyed, but shall not

include deliveries required to maintain plant production. For the purpose of this definition, propane and other gaseous fuels shall not be considered alternate fuels.

I. Feedstock Gas: Is defined as natural gas used as a raw material for its chemical properties in creating an end product

J. Process Gas: Is defined as gas use for which alternate fuels are not technically feasible such as in applications requiring precise temperature controls and precise flame characteristics. For the purpose of this definition, propane and other gaseous fuels shall not be considered alternate fuels

K. Boiler Fuel: Is considered to be natural gas used as a fuel for the generation of steam or electricity including the utilization of gas turbines for the generation of electricity

L. Alternate Fuel Capabilities: Is defined as a situation where an alternate fuel could have been utilized whether or not the facilities for such use have actually been installed, provided however, where the use of natural gas is for plant protection, feedstock or process uses and the only alternate fuel is propane or other gaseous fuel, then the consumer will be treated as if he had no alternate fuel capability.

M. POLICY

In the event that, due to gas supply restrictions or capacity constraints, the Company is unable to deliver the total requirements of its firm, sales or transportation rate customers, the available volumes of gas will be allocated to the Company's firm rate customers in accordance with the provisions of this policy. In the event that the Company, during a curtailment or interruption, requires emergency gas, and takes the gas of the customer, customer shall be compensated for such emergency gas at the customer's alternate cost of fuel as demonstrated to the reasonable satisfaction of the Company.

As curtailment becomes necessary through each succeeding category, the Company will implement full or partial curtailment of a customer, or by groups of customers, taking into consideration customer load characteristics, the Company's delivery system design and Company load characteristics in a manner which is believed to be in the best interests of customers in general.

N. PRIORITIES

Firm rate customers shall be serviced according to the following preference categories with the first and each succeeding category having preference over the succeeding categories:

1. Company use for fuel and lost and unaccounted for

O. Firm sales or transportation service for high priority residential uses including apartment buildings and other multi-unit buildings, small commercial establishments using less than 50 DT on a peak day, schools, hospitals, police protection, fire protection, sanitation facilities and correctional facilities

P. Firm sales or transportation service for essential agricultural uses, as defined by the Secretary of Agriculture, for full food and natural fiber production, process and feedstock use for fertilizer and agricultural chemicals, process and feedstock for animal feeds and food, food quality maintenance, food packaging, marketing and distribution for food related products and on farm uses

Q. Firm sales or transportation service for large commercial requirements (50 DT or more on a peak day), firm industrial requirements for plant protection, feedstock and process needs and firm industrial sales up to 300 DT per day

R. Firm sales or transportation service for all industrial requirements not specified in (2), (3), (4), (6), or (7)

S. Firm sales or transportation service including the transportation for industrial requirements for boiler fuel use at less than 1,500 DT per day, but more than 300 DT per day, where alternate fuel capabilities can meet such requirements

T. Firm sales or transportation service including transportation for industrial requirements for large volume (1,500 DT or more per day) boiler fuel use where alternate fuel capabilities can meet such requirements

U. STORAGE INJECTION

Within each category, storage injection required to meet the needs of higher priorities may be given preference over all other uses within that category.

V. PENALTY

For all unauthorized volumes of gas taken by a customer, the customer shall pay the Company a penalty of five times the daily index for each therm taken. Such penalty shall be added to the regular rates in effect. The Company shall have the right, without obligation, to waive any penalty for unauthorized use of gas, if on the day when the penalty was incurred deliveries to other of the Company's customers were not adversely affected. Continued unauthorized use, at the sole discretion of the Company, may result in termination of service.

II. RATE SCHEDULES

1 RESIDENTIAL NON-HEATING RATE: CLASSIFICATION NO. R-1

Availability
This rate is available to all residential customers who do not have gas space heating equipment, who consume less than 80% of their normal usage in the six winter months of November through April and whose usage does not exceed 100 therms in any winter month. Available for use which is separately metered and billed for each dwelling unit. Availability is limited to use in locations served by the Company's mains and for which the Company's facilities are adequate.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.5130 per day or $15.39 per 30 day month
Winter Period:	All therms per 30 day month at $0.3844 per therm
Summer Period:	All therms per 30 day month at $0.3844 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

2 RESIDENTIAL HEATING RATE: CLASSIFICATION NO. R-3

Availability
This rate is for all residential use for those domestic customers who use gas as the principal household heating fuel. Availability is limited to use in domestic locations which are separately metered and billed and which are served by the Company's mains and for which the Company's facilities are adequate.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.5130 per day or $15.39 per 30 day month
Winter Period:	All therms per 30 day month at $0.5632 per therm
Summer Period:	All therms per 30 day month at $0.5632 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

3 GAS ASSISTANCE PROGRAM RESIDENTIAL HEATING RATE: CLASSIFICATION NO. R-4

Availability

This rate is for residential use for those domestic customers who use gas as the principal household heating fuel if any member of the household qualifies for a benefit through one of the programs listed below, subject to the qualification period described under the "Terms and Conditions" of this rate. Availability is limited to use in domestic locations which are separately metered and billed and which are served by the Company's mains and for which the Company facilities are adequate.

Qualified Programs:

a. Low Income Home Energy Assistance Program (LIHEAP)
b. Electric Assistance Program (EAP)
c. Supplemental Security Income Program
d. Women, Infants and Children Program
e. Commodity Surplus Foods Program (for women, infants and children)
f. Elderly Commodity Surplus Foods Program
g. Temporary Aid to Needy Families Program
h. Housing Choice Voucher Program (also known as Section 8)
i. Head Start Program
j. Aid to the Permanently and Totally Disabled Program
k. Aid to the Needy Blind Program
l. Old Age Assistance Program
m. Food Stamps Program
n. Any successor program of a-m

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Winter Customer Charge Per Meter:	$0.2823 per day or $8.47 per 30 day month
Winter Period:	All therms per 30 day month at $0.3098 per therm
Summer Customer Charge Per Meter:	$0.5130 per day or $15.39 per 30 day month
Summer Period:	All therms per 30 day month at $0.5632 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive.

Cost of Gas Charge

All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
For those customers qualifying for the program this rate R-4 shall apply for a six month winter period. On the date that the six month winter period expires, eligibility for this rate shall expire unless the customer provides the Company with evidence that the customer continues to be eligible for one or more qualifying programs. When the Rate R-4 expires, the rate on each account shall revert back to the non-gas assistance program Residential Heating Rate, R-3. Customers whose eligibility for the program is based on their having qualified for LIHEAP shall be eligible for this rate retroactive to November 1 of the heating season in which they qualified. Eligibility for such customers shall expire the following April 30, subject to their re-qualifying through receipt of LIHEAP or other benefits as set forth above.

Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

4 MANAGED EXPANSION PROGRAM RESIDENTIAL NON-HEATING RATE: CLASSIFICATION NO. R-5

Availability
This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Residential Non Heating Rate R-1.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.6670 per day or $20.01 per 30 day month
Winter Period:	All therms per 30 day month at $0.4997 per therm
Summer Period:	All therms per 30 day month at $0.4997 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Residential Non Heating Rate R-1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

5 MANAGED EXPANSION PROGRAM RESIDENTIAL HEATING RATE: CLASSIFICATION NO. R-6

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program projects area who otherwise would have qualified for Residential Heating Rate R-3.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.6670 per day or $20.01 per 30 day month
Winter Period:	All therms per 30 day month at $0.7322 per therm
Summer Period:	All therms per 30 day month at $0.7322 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge

All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Residential Non Heating Rate R-3.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading an estimated bill will be rendered to the customer.Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

**6 MANAGED EXPANSION PROGRAM GAS ASSISTANCE PROGRAM RESIDENTIAL HEATING RATE:
CLASSIFICATION NO. R-7**

Availability
This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Gas Assistance Program Residential Heating Rate R-4.

Qualified Programs:
a. Low Income Home Energy Assistance Program (LIHEAP)
b. Electric Assistance Program (EAP)
c. Supplemental Security Income Program
d. Women, Infants and Children Program
e. Commodity Surplus Foods Program (for women, infants and children)
f. Elderly Commodity Surplus Foods Program
g. Temporary Aid to Needy Families Program
h. Housing Choice Voucher Program (also known as Section 8)
i. Head Start Program
j. Aid to the Permanently and Totally Disabled Program
k. Aid to the Needy Blind Program
l. Old Age Assistance Program
m. Food Stamps Program
n. Any successor program of a-m

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Winter Customer Charge Per Meter:	$0.3670per day or $11.01 per 30 day month
Winter Period:	All therms per 30 day month at $0.4027 per therm
Summer Customer Charge Per Meter:	$.6670 per day or $20.01 per 30 day month
Summer Period:	All therms per 30 day month at $0.7322 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00

when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Gas Assistance Program Residential Heating Rate R-4.

For those customers qualifying for the program this rate R-7 shall apply for a six month winter period. On the date that the six month winter period expires, eligibility for this rate shall expire unless the customer provides the Company with evidence that the customer continues to be eligible for one or more qualifying programs. When the Rate R-7 expires, the rate on each account shall revert back to the non-gas assistance program Residential Heating Rate, R-6. Customers whose eligibility for the program is based on their having qualified for LIHEAP shall be eligible for this rate retroactive to November 1 of the heating season in which they qualified. Eligibility for such customers shall expire the following April 30, subject to their re-qualifying through receipt of LIHEAP or other benefits as set forth above.

Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

7 COMMERCIAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-41

Availability

This rate is available for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage less than or equal to 10,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$1.9020 per day or $57.06 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.4688 per therm
	All over 100 therms per 30 day month at $0.3149 per therm
Summer Period:	First 20* therms per 30 day month at $0.4688 per therm
	All over 20 therms per 30 day month at $0.3149 per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 90 or 91 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

U.S. Department of Labor Standard Industry Classification Codes will determine eligibility for this tariff.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

8 COMMERCIAL/INDUSTRIAL SERVICE: MEDIUM ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-42

Availability
This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 10,000 therms and less than or equal to 100,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company's records and procedures.

Character of Service
Natural gas or equivalent will be supplied at a heat content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$5.7063 per day or $171.19 per 30 day month
Winter Period:	First 1000* therms per 30 day month at $0.4261 per therm
	All over 1000 therms per 30 day month at $0.2839 per therm
Summer Period:	First 400* therms per 30 day month at $0.4261 per therm
	All over 400 therms per 30 day month at $0.2839 per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 90 or 91 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Dual fuel customers may be required to sign annual contracts with minimum usage requirements in order to qualify for service under this tariff. U.S. Department of Labor Standard Industry Classification Codes will determine eligibility for this tariff.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

9 COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-43

Availability
This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 100,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company's records and procedures.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter:	$24.4897 per day or $734.69 per 30 day month
Winter Period:	All therms per 30 day month at $0.2620 per therm
Summer Period:	All therms per 30 day month at $0.1198 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 90 or 91 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly,

daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

10 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-44

Availability
This rate is Mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-41.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$2.4727 per day or $74.18 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.6094 per therm
	All over 100 therms per 30 day month at $0.4094 per therm
Summer Period:	First 20* therms per 30 day month at $0.6094 per therm
	All over 20 therms per 30 day month at $0.4094 per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to Page 92 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

13 COMMERCIAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-51

Availability

This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage less than or equal to 10,000 therms and a Winter Period usage less than 67% of annual usage as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$1.9020 per day or $57.06 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.2819 per therm
	All over 100 therms per 30 day month at $0.1833 per therm
Summer Period:	First 100* therms per 30 day month at $0.2819 per therm
	All over 100 therms per 30 day month at $0.1833 per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 90 or 91 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is made in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00

Terms and Conditions

Eligibility shall be based on the reasonable discretion of the Company and subject to verification of heating usage. U.S. Department of Labor Standard Industry Classification Code will determine eligibility for this

tariff. Dual fuel customers may be required to sign annual contracts with minimum usage requirements in order to qualify for service under this tariff.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

14 COMMERCIAL/INDUSTRIAL SERVICE: MEDIUM ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-52

Availability
This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 10,000 therms and less than or equal to 100,000 therms and a Winter Period usage less than 67% of annual usage as determined by the Company's records and procedures.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter:	$5.7063 per day or $171.19 per 30 day month
Winter Period:	First 1000* therms per 30 day month at $0.2428 per therm
	All over 1000 therms per 30 day month at $0.1617 per therm
Summer Period:	First 1000* therms per 30 day month at $0.1749 per therm
	All over 1000 therms per 30 day month at $0.1000 per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to Page 90 or 91 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly, daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

15 COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, LOAD FACTOR LESS THAN 90% RATE CLASSIFICATION NO. G-53

Availability

This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 100,000 therms, a Winter Period usage less than 67% of annual usage, and a 12 month average usage less than 90% of the average usage of December, January and February as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a heat content value of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$25.2033 per day or $756.10 per 30 day month
Winter Period:	All therms per 30 day month at $0.1697 per therm
Summer Period:	All therms per 30 day month at $0.0814 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to Page 90 or 91 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

17 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-55

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-51.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$2.4727 per day or $74.18 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.3665 per therm
	All over 100 therms per 30 day month at $0.2383 per therm
Summer Period:	First 100* therms per 30 day month at $0.3665 per therm
	All over 100 therms per 30 day month at $0.2383 per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

18 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: MEDIUM ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-56

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-52.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter:	$7.4183 per day or $222.55 per 30 day month
Winter Period:	First 1000* therms per 30 day month at $0.3157 per therm
	All over 1000 therms per 30 day month at $0.2102 per therm
Summer Period:	First 1000* therms per 30 day month at $0.2287 per therm
	All over 1000 therms per 30 day month at $0.1300 per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

21 OUTDOOR GAS LIGHTING

Availability
This rate is available for residential outdoor gas lighting where such service is provided from the Company's existing delivery system to a standard gas light fixture or fixtures, located on the customer's premises, and when it is not feasible to meter such service along with other gas used on the premises and bill the same under the rate in effect for all other services. Service under this rate is available at those locations which were receiving service hereunder as of July 1, 2015, and which have continuously received service hereunder since that date.

Rate Per Light Per Month	$12.81

The above rates shall be adjusted to reflect the recovery of all applicable taxes.

Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a location, an account charge is incurred in addition to all other charges. The account charge is $20.00 when the visit to the location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Meters are read and bills are presented monthly.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

Adjusted Com/Ind High Winter Use Cost of Gas Rate	$ 0.3109		

28 CALCULATION OF SUMMER PERIOD COST OF GAS RATE – KEENE CUSTOMERS

Period Covered: Summer Period May 1, 2021, through October 31, 2021

Projected Gas Sales - therms			311,740
Total Anticipated Cost of Sendout			$391,714
Add:	Prior Period Deficiency Uncollected	$0	
	Interest	$0	
Deduct:	Prior Period Excess Collected	($23,223)	
	Interest	$18	
	Prior Period Adjustments and Interest		($23,205)
Total Anticipated Cost			$368,509
Cost of Gas Rate - Beginning Period (per therm)			$1.1821
Mid Period Adjustment - June 1, 2021			$0.0844
Mid Period Adjustment - July 1, 2021			$0.2015
Mid Period Adjustment - August 1, 2021			
Mid Period Adjustment - September 1, 2021			
Mid Period Adjustment - October 1, 2021			
Revised Cost of Gas Rate - Effective July 1, 2021 (per therm)			$1.4680

Pursuant to tariff section 17(d), the Company may adjust the approved cost of gas rate upward on a monthly basis to the following rate:

Maximum Cost of Gas Rate (per therm)	$1.4776

29 CALCULATION OF FIXED WINTER PERIOD COST OF GAS RATE EXCLUDING KEENE CUSTOMERS

II. RATE SCHEDULES
CALCULATION OF FIXED WINTER PERIOD COST OF GAS RATE
PERIOD COVERED: WINTER PERIOD, NOVEMBER 1, 2020 THROUGH APRIL 30, 2021
(Refer to Text in Section 17(A) Fixed Price Option Program)

	(Col 1)	(Col 2)		(Col 3)	
1	Total Anticipated Direct Cost of Gas	$46,922,854			
2	Projected Prorated Sales (11/01/20 - 04/30/21)	88,213,529			
3	**Direct Cost of Gas Rate**		$	0.5319	per therm
4	**Demand Cost of Gas Rate**	$12,978,688	$	0.1471	per therm
5	**Commodity Cost of Gas Rate**	32,931,719	$	0.3733	per therm
6	**Adjustment Cost of Gas Rate**	1,012,447	$	0.0115	per therm
7	**Total Direct Cost of Gas Rate**	$46,922,854	$	0.5319	per therm
8	Total Anticipated Indirect Cost of Gas	$ 2,220,114			
9	Projected Prorated Sales (11/01/20 - 04/30/21)	88,213,529			
10	**Indirect Cost of Gas**		$	0.0252	per therm

31. ANTICIPATED COST OF GAS - EXCLUDING KEENE CUSTOMERS

Anticipated Cost of Gas

PERIOD COVERED: WINTER PERIOD, NOVEMBER 1, 2020 THROUGH APRIL 30, 2021
(REFER TO TEXT ON IN SECTION 16 COST OF GAS CLAUSE)

(Col 1)		(Col 2)		(Col 3)
ANTICIPATED DIRECT COST OF GAS				
Purchased Gas:				
Demand Costs:	$	12,022,922		
Supply Costs:		28,276,980		
Storage Gas:				
Demand, Capacity:	$	955,766		
Commodity Costs:		3,064,149		
Produced Gas:		1,590,589		
Hedged Contract (Saving)/Loss		-		
Hedge Underground Storage Contract (Saving)/Loss		-		
Unadjusted Anticipated Cost of Gas			$	45,910,407
Adjustments:				
Prior Period (Over)/Under Recovery (as of 05/01/20)	$	2,227,421		
Interest		72,812		
Fuel Inventory Revenue Requirement		441,037		
Broker Revenues		(32,725)		
Refunds from Suppliers		-		
Fuel Financing		-		
Transportation CGA Revenues		(4,516)		
Interruptible Sales Margin		-		
Capacity Release and Off System Sales Margins		(1,736,581)		
Hedging Costs		-		
Fixed Price Option Administrative Costs		45,000		
Total Adjustments				1,012,447
Total Anticipated Direct Cost of Gas			$	46,922,854
Anticipated Indirect Cost of Gas				
Working Capital:				
Total Unadjusted Anticipated Cost of Gas 11/01/20 - 04/30/21	$	45,910,407		
Working Capital Rate: Lead Lag Days / 365		0.0391		
Prime Rate		3.25%		
Working Capital Percentage		0.127%		
Working Capital	$	58,347		
Plus: Working Capital Reconciliation (Acct 142.20)		(66,837)		
Total Working Capital Allowance				(8,490)
Bad Debt:				
Total Unadjusted Anticipated Cost of Gas 11/01/20 - 04/30/21	$	45,910,407		
Less: Refunds		-		
Plus: Total Working Capital		(8,490)		
Plus: Prior Period (Over)/Under Recovery		2,227,421		
Subtotal	$	48,129,338		
Bad Debt Percentage		1.11%		
Bad Debt Allowance	$	534,236		
Plus: Bad Debt Reconciliation (Acct 175.52)		(296,628)		
Total Bad Debt Allowance			$	237,608
Production and Storage Capacity			$	1,980,428
Miscellaneous Overhead 11/01/20 - 04/30/21	$	13,170		
Times Winter Sales		89,365		
Divided by Total Sales		111,369		
Miscellaneous Overhead				10,568
Total Anticipated Indirect Cost of Gas			$	2,220,114
Total Cost of Gas			$	49,142,968

32. CALCULATION OF FIRM SALES AND FIXED WINTER PERIOD COST OF GAS RATE - KEENE CUSTOMERS

Calculation of the Cost of Gas Rate

Period Covered: Winter Period November 1, 2020 through April 30, 2021

Projected Gas Sales - therms			1,108,419	
Total Calculated Cost of Gas Sendout			$1,310,950	
CNG Costs Not Included In Cost of Gas Rate			($204,754)	
Total Anticipated Cost of Gas Sendout			$1,106,196	
Add:	Prior Period Deficiency Uncollected	$30,171		
	Interest	$136		
Deduct:	Prior Period Excess Collected	$0		
	Interest	$0		
	Prior Period Adjustments and Interest		$30,307	
Total Anticipated Cost			$1,136,503	
Costs Adjusted per Order No. 26,428 in Docket No. DG 20-152 dated December 02, 2020				
Cost of Gas Rate			Excluding Gas Assistance Program	Gas Assistance Program
Non-Fixed Price Option Cost of Gas Rate - Beginning Period (per therm)			$1.0253	$0.5639
Mid Period Adjustment - December 01, 2020			$0.0000	$0.0000
Mid Period Adjustment - January 01, 2021			($0.0283)	($0.0156)
Mid Period Adjustment - February 01, 2021			($0.0042)	($0.0023)
Mid Period Adjustment - March 01, 2021			$0.0000	$0.0000
Mid Period Adjustment - April 01, 2021			$0.2888	$0.1588
Revised Non-Fixed Price Option Cost of Gas Rate - Effective April 1, 2021 (per therm)			$1.2816	$0.7048
Fixed Price Option Cost of Gas Rate (per therm) November 2020			$1.2300	$0.6765
Fixed Price Option Cost of Gas Rate (per therm) December 2020-April 2021			$1.0277	$0.5652

Pursuant to tariff section 17(d), the Company may adjust the approved cost of gas rate upward on a monthly basis to the following rate:

Maximum Cost of Gas Rate - Non-Fixed Price Option (per therm)	$1.2816	$0.7049

33. CALCULATION OF FIRM TRANSPORTATION COST OF GAS RATE

II. RATE SCHEDULES
Calculation of Firm Transportation Cost of Gas Rate
PERIOD COVERED: WINTER PERIOD, NOVEMBER 1, 2020 THROUGH APRIL 30, 2021
(Refer to text in Section 16(Q) Firm Transportation Cost of Gas Clause)

(Col 1)	(Col 2)		(Col 3)		(Col 4)
ANTICIPATED COST OF SUPPLEMENTAL GAS SUPPLIES:					
PROPANE	$ 568,511				
LNG	1,022,078				
TOTAL ANTICIPATED COST OF SUPPLEMENTAL GAS SUPPLIES	1,590,589				
ESTIMATED PERCENTAGE USED FOR PRESSURE SUPPORT PURPOSES	8.7%				
ESTIMATED COST OF LIQUIDS USED FOR PRESSURE SUPPORT PURPOSES	$ 138,381				
PROJECTED FIRM THROUGHPUT (THERMS):					
FIRM SALES	89,364,968		67.8%		
FIRM TRANSPORTATION SUBJECT TO FTCG	42,456,275		32.2%		
TOTAL FIRM THROUGHPUT SUBJECT TO COST OF GAS CHARGE	131,821,243		100.0%		
TRANSPORTATION SHARE OF SUPPLEMENTAL GAS SUPPLIES	32.2%	x	$ 138,381	=	$ 44,569
PRIOR (OVER) OR UNDER COLLECTION					(40,053)
NET AMOUNT TO COLLECT FROM (RETURNED TO) TRANSPORTATION CUSTOMERS					$ 4,516
PROJECTED FIRM TRANSPORTATION THROUGHPUT					42,456,275
FIRM TRANSPORTATION COST OF GAS					$ 0.0001

34. ENVIRONMENTAL SURCHARGE - MANUFACTURED GAS PLANTS

Environmental Surcharge - Manufactured Gas Plants

Manufactured Gas Plants		
Required Annual Environmental Increase	$2,864,179	
First one-third of prior period under recoveries (through June 2019)	$341,389	
July 2019 - June 2020 recovery difference between actual and estimate	$338,564	
Environmental Subtotal	$3,544,132	
Overall Annual Net Increase to Rates	$3,544,132	
Estimated weather normalized firm therms billed for the twelve months ended 10/31/20 - sales and transportation	179,574,679	therms
Surcharge per therm	$0.0197	per therm
Total Environmental Surcharge	$0.0197	

DATED: August 13, 2021
EFFECTIVE: August 1, 2021

ISSUED BY: /s/Neil Proudman
Neil Proudman
TITLE: President

Authorized by NHPUC Order No. 26,505 dated July 30, 2021, in Docket No. DG 20-105

35 RATE CASE EXPENSE AND RECOUPMENT FACTOR CALCULATION

Liberty Utilities (Energy North Natural Gas) Corp. d/b/a Liberty
Local Delivery Adjustment Charge (LDAC) increase due to Rate Case Expense and Recoupment
For LDAC effective November 1, 2020 - October 31, 2021

Rate Case Expense Remaining from Docket No. DG 17-048	$87,069
Recoupment Remaining from Docket No. DG 17-048	$0
July 1, 2020 Balance	$87,069
Plus Estimated Interest from July 2020 through October 2020	$745
Minus Estimated Recoveries from July 2020 through October 2020	($43,733)
Total Estimated Remaining Recovery As of November 1, 2020	$44,081
Estimated November 2019 - October 2020 Interest	$538
Total Remaining Recovery	$44,619
Estimated November 2020 - October 2021 Sales (therms)	179,574,679
RCE & Recoupment rate per therm November 2020 - October 2021	$0.0002

37 Residential Energy Efficiency Loan Program

Availability

Subject to the Terms and Conditions of the Tariff of which it is a part, this program shall allow Customers installing energy-efficiency measures under an energy efficiency program offered by the Company and approved by the Commission ("Participating Customers") to borrow all or a portion of the Customer's share of the installed cost of the energy-efficiency measures ("Customer Loan Amount") from the Company and to repay the Customer Loan Amount through an additional charge on their monthly retail delivery service bill issued by the Company. It is available to Participating Customers who meet the following qualifications:

A. The Participating Customer must own the property where the energy-efficiency measures are installed; and
B. A Participating Customer must have an active Delivery Service account with the Company for the property where the energy-efficiency measures are installed and receive Delivery Service under R-1, R-3, R-4, R-5, R-6, R-7 ; and
C. The Participating Customer must not have received a disconnect notice from the Company during the twelve months preceding the Participating Customer's request for a loan under this program; and
D. The Customer Loan Amount has no minimum and must be less than or equal to $4,000 per customer per year, and must not exceed the Participating Customer's share of the installed cost of the energy efficiency measures installed under the Company's approved energy-efficiency program; and
E. The Participating Customer must meet the qualifications of the applicable energy-efficiency program through which the energy-efficiency measures are being installed.

At its sole discretion, the Company shall determine eligibility for service under this program subject to the availability of program funds.

Any Participating Customer receiving a loan under this program must remain a Delivery Service customer of the Company at the property where the energy-efficiency measures are installed until the loan has been repaid in full. In the event the Participating Customer ceases to be a Delivery Service Customer of the Company at the property where the energy-efficiency measures are installed, any remaining charges under this program shall immediately become due and payable.

Customer Loan Agreement

Participating Customers shall be required to execute a separate Residential Customer Loan Agreement which will specify the fixed monthly charge and other applicable terms. A Participating Customer can choose to pay the remaining balance owed to the Company at any time. A late payment charge as described in the Terms and Conditions for Delivery Service section of the Company's Tariff is applicable to the monthly charges rendered under this program. Participating Customers are not subject to disconnection of natural gas service for nonpayment of the charges under this program.

The Customer Loan Amount shall be paid to the Company by the Participating Customer through a fixed monthly charge applied over a term of months as established in the Customer Loan Agreement. Participating Customers may specify the repayment term of the Customer Loan Amount subject to the maximum repayment term limit of 48 months.

38 Non-Residential Energy Efficiency Loan Program

Availability

Subject to the Terms and Conditions of the Tariff of which it is a part, this program shall allow Customers installing energy-efficiency measures under an energy efficiency program offered by the Company and approved by the Commission ("Participating Customers") to borrow all or a portion of the Customer's share of the installed cost of the energy-efficiency measures ("Customer Loan Amount") from the Company and to repay the Customer Loan Amount through an additional charge on their monthly retail delivery service bill issued by the Company. It is available to Participating Customers who meet the following qualifications:

A. The Participating Customer must own the property where the energy-efficiency measures are installed; and
B. A Participating Customer must have an active Delivery Service account with the Company for the property where the energy-efficiency measures are installed and receive Delivery Service under G-41, G-42, G-43, G-44, G-45, G-46, G-51, G-52, G-53, G-54, G-55, G-56, G-57, or G-58; and
C. The Participating Customer must not have received a disconnect notice from the Company during the twelve months preceding the Participating Customer's request for service under this program; and
D. The Customer Loan Amount has no minimum and must be less than or equal to $50,000 for each project, and must not exceed the Participating Customer's share of the installed cost of the energy efficiency measures installed under the Company's approved energy-efficiency program; and
E. A Participating Customer is limited to $150,000 per year in loan funds with no limit on the number of projects at the sole discretion of the Company based on program demand. If at any point there are no loan fund recipients or there have been no loan fund recipients in a given year, the Company may petition the Commission to allow a particular customer to receive more than $150,000 in loan funds in a given year; and
F. The Participating Customer must meet the qualifications of the applicable energy-efficiency program through which the energy-efficiency measures are being installed.

At its sole discretion, the Company shall determine eligibility for service under this program subject to the availability of program funds.

Any Participating Customer receiving a loan under this program must remain a Delivery Service customer of the Company at the property where the energy-efficiency measures are installed until the loan has been repaid in full. In the event the Participating Customer ceases to be a Delivery Service Customer of the Company at the property where the energy-efficiency measures are installed, any remaining charges under this program shall immediately become due and payable.

Customer Loan Agreement

Participating Customers shall be required to execute a separate Non-Residential Customer Loan Agreement which will specify the fixed monthly charge and other terms of the loan. A Participating Customer can choose to pay the remaining balance owed to the Company at any time. A late payment charge as described in the Terms and Conditions for Delivery Service section of the Company's Tariff is applicable to the monthly charges rendered under this program. Participating Customers are not subject to disconnection of natural gas service for nonpayment of the charges under this program.

The Customer Loan Amount shall be paid to the Company by the Participating Customer through a fixed monthly charge applied over a term of months as established in the Customer Loan Agreement. Participating Customers may specify the repayment term of the Customer Loan Amount subject to the maximum repayment term limit of 60 months.

III. DELIVERY TERMS AND CONDITIONS

1 RATES AND CHARGES

1.1 The Company shall apply this tariff on a non-discriminatory and non-preferential basis to all Customers who obtain service from the Company, except as this tariff is explicitly modified by order of the NHPUC. The provisions of Part III Section 20 of this tariff will specifically apply to all entities designated by the Customer as set forth in Section 20.5 to supply Gas to a Designated Receipt Point for the Customer's account.

1.2 The Company reserves the right to impose reasonable fees and charges pursuant to the various provisions of this tariff.

1.3 In the event that the Company incurs minimum bill, inventory, transition, take or pay, imbalance, or any other charges associated with the provision of Delivery Service to Customers, the Company may impose an additional charge on the Suppliers serving said Customers as approved by the NHPUC.

2 DEFINITIONS

Adjusted Target Volume ("ATV)	The volume of Gas determined by the Company using a Consumption Algorithm and required to be nominated and delivered each Gas Day by the Supplier on behalf of Customers taking non-daily metered Delivery Service.
Aggregation Pool	One or more Customer accounts whose Gas Usage is served by the same Supplier and aggregated pursuant to Section 20.6 of this tariff for operational purposes, including but not limited to nominating, scheduling, and balancing Gas deliveries to Designated Receipt Point(s) within the associated Gas Service Area.
Annual Reassignment Date	Five (5) Business Days prior to November 1 of each year when the Company reassigns Capacity to Suppliers pursuant to Section 11.6 of this tariff.
Assignment Date	Five (5) Business Days prior to the first Gas Day of each month when the Company assigns Capacity to Suppliers pursuant to Section 11.4 of this tariff.
Authorization Number	A number unique to the Customer generated by the Company and printed on the Customer's bill that the Customer must furnish to the Supplier to enable the Supplier to obtain the Customer's Gas Usage information pursuant to Section 20.4, and to initiate or terminate Supplier Service as set forth in Section 20.5 of this tariff.
Btu	One British thermal unit; i.e., the amount of heat required to raise the temperature of one pound of water one degree Fahrenheit at sixty degrees (60°) Fahrenheit.
Business Day	Monday through Friday excluding holidays recognized by the Company. Where relevant, a Business Day shall consist of the hours during which the Company is open for business with the public. ***If any performance date referenced in this Tariff is not a Business Day, such performance shall be the next succeeding Business Day***.
Capacity	Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity as defined in this tariff.

Capacity Allocators	The estimated proportions of the Customer's Total Capacity Quantity that comprise Pipeline Capacity, Storage Withdrawal Capacity and Peaking Capacity.
Capacity Mitigation Service	The service available to Suppliers in accordance with Section 11.10.
City Gate	The interconnection between a Delivering Pipeline and the Company's distribution facilities.
Commodity	See Gas.
Company	Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty
Company Gas Allowance	The difference between the sum of all amounts of Gas received into the Company's distribution system (including Gas produced by the Company) and the sum of all amounts of Gas delivered from the Company's distribution system divided by said amount of Gas received. Such difference shall include but not be limited to Gas consumed by the Company for its own purposes, line losses, and Gas vented and lost as a result of force majeure, excluding Gas otherwise accounted for.
Company-Managed Supplies	Capacity and Supply contracts held and managed by the Company and made available to the Supplier pursuant to Section 11.9 of this tariff including Supply-sharing contracts and load-management contracts.
Consumption Algorithm	A mathematical formula used to estimate a Customer's daily consumption.
Critical Day	In accordance with Section 16 of this tariff, a day declared at any time by the Company in its reasonable discretion when unusual operating conditions may jeopardize operation of the Company's distribution system.
Customer	The recipient of Delivery Service whose Gas Usage is recorded by a meter or group of meters at a specific location and who is a customer of record of the Company.
Daily Baseload	The Customer's average usage per Gas Day that is assumed to be unrelated to weather.
Daily Index	The mid-point of the range of prices as published by Gas Daily under the heading "Daily Price Survey, Midpoint, Citygates, Tennessee/Zone 6 (delivered)" for the relevant Gas Day listed under "Flow date(s)". In the event that the Gas Daily index becomes unavailable, the Company shall apply its daily marginal cost of Gas as the basis for this calculation until such time that the NHPUC approves a suitable replacement.
Dekatherm	Ten Therms.
Delivery Point	The interconnection between the Company's facilities and the Customer's facilities.
Delivery Service	The distribution of Gas by the Company on any Gas Day from the Designated Receipt Point to the Customer's Delivery Point and related Customer services.
Design Peak Season	The forecasted Peak Season during which the Company's system experiences the highest aggregate Gas Usage.
Designated Receipt Point	For each Customer, the Company designated interconnection between a Transporting Pipeline and the Company's distribution facilities at which

point, or such other point as the Company may designate from time to time for operational purposes, the Supplier will make deliveries of Gas for the Customer's account.

Designated Representative	The designated representative of the Customer, who shall be authorized to act for, and conclusively bind, the Customer regarding Delivery Service in accordance with the provisions of Section 21 of this tariff.
Gas	Natural Gas that is received by the Company from a Transporting Pipeline at the Designated Receipt Point and delivered by the Company to the Delivery Point for the Customer's account. In addition, the term shall include amounts of vaporized liquefied natural Gas and/or propane-air vapor that are introduced by the Company into its system and made available to the Customer as the equivalent of natural Gas that the Customer is otherwise entitled to have delivered by the Company.
Gas Day	A period of twenty-four (24) consecutive hours beginning at 10:00 a.m., E.T., and ending at 10:00 a.m., E.T., the next calendar day, or other such hours used by the Transporting Pipeline.
Gas Service Area	An area within the Company's distribution system as defined in Section 4 of this tariff, for the purposes of administering Capacity assignments, Nominations, balancing, imbalance trading, and Aggregation Pools.
Gas Usage	The actual quantity of Gas used by the Customer as measured by the Company's metering equipment at the Delivery Point.
Heating Degree Day	A measure used to estimate weather-sensitive Gas consumption calculated by subtracting the average temperature for each day from the number 65. Each degree day that represents a degree below 65 is considered a Heating Degree Day.
Heating Factor	The Customer's estimated weather-sensitive Gas consumption per Heating Degree Day.
MMBtu	One million Btus.
Maximum Daily Peaking	The portion of a Customer's Total Capacity Quantity identified
Quantity ("MDPQ")	and allocated as Peaking Capacity, such that the maximum daily amount of Gas that can be withdrawn from a Supplier's Peaking Service Account pursuant to Section 14 of this tariff shall be equal to the sum of the MDPQs for all Customers in that Supplier's Aggregation Pool.
Month	A calendar month of Gas Days.
Monthly Index	The average of the Daily Index numbers for all Gas Days in a Month.
NHPUC	The New Hampshire Public Utilities Commission.
Nomination	The notice given by the Supplier to the Company that specifies, in accordance with the Standard Nomination Form attached as Attachment A, an intent to deliver a quantity of Gas to the Designated Receipt Point(s) on behalf of one or more Customers, including the volume to be received, the Designated Receipt Point(s), the Transporting Pipeline, the delivering contract(s), the shipper, and other such non-confidential information as may be reasonably required by the Company.
Off-Peak Season	The consecutive months of May to October, inclusive.

Operational Flow Order ("OFO")	The Company's instructions to the Supplier to take such action as conditions require including, but not limited to, diverting Gas to or from the Company's distribution system pursuant to Section 16 of this tariff.
Peak Day	The forecasted Gas Day during which the Company's system experiences the highest aggregate Gas Usage.
Peak Season	The consecutive months of November to April, inclusive.
Peaking Capacity	Capacity in addition to upstream pipeline and underground storage Capacity normally used by the Company to meet daily requirements during a Design Peak Season and acquired specifically for the Peak Season.
Peaking Service	A Company-managed resource consisting of Peaking Capacity and Peaking Supply.
Peaking Service Account	An account whose balance indicates the total volumes of Peaking Service resources available to a Supplier, where the maximum balance in the account shall equal the Peaking Supply assigned to the Supplier pursuant to this tariff.
Peaking Service Rule Curve	A system of operational parameters associated with the use of the Company's Peaking Capacity including, but not limited to, indicators of the necessary levels of Peaking Supply that must be maintained in Suppliers' Peaking Service Accounts in order for the Company to meet system demands under Design Peak Season conditions. The Company will communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Peaking Service Rule Curve as identified in Section 14 of this tariff.
Peaking Supply	The aggregate amount of Supply in excess of upstream pipeline and underground storage Supply required to meet the Company's forecasted Supply needs during a Design Peak Season and acquired specifically for the Peak Season.
Peaking Supply Allocator	An allocation factor that represents the proportion of a Customer's estimated Gas Usage during the Design Peak Season that is generally served with Peaking Service supplies.
Pipeline Capacity	Transportation capacity on interstate pipeline systems normally used for deliveries of Gas to the Company's city gates, exclusive of Storage Withdrawal Capacity.
Pre-Determined Allocation	Instructions from the Supplier to the Company for the method allocation of discrepancies in confirmed Nominations among the Supplier's Aggregation Pools and/or Customers as set forth in the Supplier Service Agreement.
Rate Schedule	The schedule of rates included in this tariff.
Reference Period	A period of at least twelve (12) months for which a Customer's Gas Usage information is typically available to the Company.
Sales Service	Commodity service provided on a firm basis to a Customer who is not receiving Supplier Service, in accordance with the provisions set forth in this tariff. The provision of Sales Service shall be the responsibility of the Company and shall be provided to the Customer by the Company or its designated Supplier pursuant to law or regulation.

Seasonal Storage Capacity	Contracts for Capacity in off-system storage facilities used to accumulate and maintain Gas inventories for re-delivery to the Company's city gates normally during the Peak Season.
Storage Withdrawal Capacity	Capacity for the withdrawal of Gas inventories maintained in off-system storage facilities, as well as the Pipeline Capacity used to deliver such Gas to the Company's city gates.
Supplier	Any entity that has met the Company's requirements set forth in Section 20 of this tariff and that has been designated by a Customer to supply Gas to a Designated Receipt Point for the Customer's account; provided, however, that a Customer may act as its own Supplier in accordance with Section 5.2 of this tariff.
Supplier Service	The sale of Gas to a Customer by a Supplier.
Supplier Service Agreement	An agreement, substantially in the form set forth in Attachment A, which must be executed by the Company and a Supplier in order for the Supplier to serve Customers on the Company's system.
Supply	See Gas.
Therm	An amount of Gas having a thermal content of 100,000 Btus.
Total Capacity Quantity	The total amount of Capacity assignable to a Supplier on behalf
("TCQ")	of a Customer.
Transporting Pipeline	The interstate pipeline company that transports and delivers Gas to the Designated Receipt Point.

3 CHARACTER OF SERVICE

3.1 All rates within Part II Rate Schedule are predicated upon service to a Customer at a single Delivery Point and metering installation, except as otherwise specifically provided by a given rate. Where service is supplied to a Customer at more than one Delivery Point or metering installation, each single Delivery Point or metering installation shall be considered to be a separate Customer for purposes of applying the Rate Schedule, except when a Customer is served through multiple points of delivery or metering installations for the Company's own convenience.

3.2 The Company may refuse to supply service to loads of unusual characteristics which, in its sole reasonable judgment, might adversely affect the quality of service supplied to other Customers, the public safety or the safety of the Company's personnel. In lieu of such refusal, the Company may require a Customer to install any necessary regulating and protective equipment in accordance with the requirements and specifications of the Company.

4 GAS SERVICE AREAS AND DESIGNATED RECEIPT POINTS

4.1 There shall be 1 Gas Service Area defined for purposes of administering Capacity assignments, Nominations, balancing, imbalance trading, and Aggregation Pools pursuant to this tariff. Each such Gas Service Area shall be defined to include the municipalities listed within each such Gas Service Area, as follows:

(1) Area 1: Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty.
The area authorized to be served by the Company and to which this tariff applies are the following cities and towns: Allenstown, Amherst, Auburn, Bedford, Belmont, Berlin,

Boscawen, Bow, Concord, Derry, Franklin, Gilford, Goffstown, Hollis, Hooksett, Hudson, Laconia, Litchfield, Londonderry, Loudon, Manchester, Merrimack, Milford, Nashua, Northfield, Pelham, Pembroke, Sanbornton, Tilton, Windham, and part of Canterbury.

4.2 For each Aggregation Pool as set forth by Section 20.6, the Company will designate at least one specific interconnection between a Transporting Pipeline and the Company's distribution facilities, at which point, or such other point as the Company may designate from time to time, the Supplier will make deliveries for the Aggregation Pool. The interconnections that the Company may assign as the Customer's Designated Receipt Point for the Aggregation Pool are as follows:

(1) *Name Transporting Pipeline: Tennessee Gas Pipeline*
Names of City Gates/Meter Numbers:

Nashua/Milford	#020132
Manchester	#020133
Hooksett	#020254
Concord/Laconia	#020426
Suncook	#020451
Londonderry	#020632

(2) *Name Transporting Pipeline: Portland Natural Gas Transmission System*
Names of City Gates/Meter Number

Berlin	#020260

5 CUSTOMER REQUEST FOR SERVICE FROM COMPANY

5.1 Application for Delivery Service, Sales Service, or any other service offered by the Company to a Customer will be received by any duly authorized representative or agent of the Company.

5.2 Before any service from the Company may commence, the Customer must request such service. A Customer applying for Delivery Service only must also arrange for Supplier Service with a Supplier pursuant to Section 20. A Customer may act as its own Supplier provided it meets all of the Supplier requirements delineated in Section 20.

6 QUALITY AND CONDITION OF GAS

6.1 Gas delivered to the Company by or for the Customer shall conform, in all respects, to the Gas quality standards of the Transporting Pipeline. All Gas tendered by a Supplier at a Designated Receipt Point shall be of merchantable quality and shall be interchangeable with Gas purchased by the Company from its Suppliers. The Company reserves the right to refuse non-conforming Gas.

6.2 In no event shall the Company be obligated to accept and deliver any Gas that does not meet the quality standards of the Transporting Pipeline.

6.3 The Company reserves the right to commingle Gas tendered by a Supplier at a Designated Receipt Point with other Gas, including liquefied natural Gas and propane-air vapor.

6.4 Gas tendered by a Supplier at a Designated Receipt Point will be at a pressure sufficient to enter the Company's distribution system without requiring the Company to adjust its normal operating pressures to receive the Gas. The Company has no obligation to receive Gas at a pressure that exceeds the maximum allowable operating pressure of the Company's distribution system at the Designated Receipt Point.

7 POSSESSION OF GAS

7.1 Gas shall be deemed to be in the control and possession of the Company after such Gas is delivered to the Designated Receipt Point and until the Gas is delivered to the Customer at the Delivery Point. The Company shall not be responsible for the Gas when the Gas is not in the Company's control and possession.

7.2 The Company shall not be liable to the Supplier or the Customer for any loss arising from or out of Delivery Service, including loss of Gas in the possession of the Company or for any other cause, except for the negligence of the Company's own employees or agents.

8 COMPANY GAS ALLOWANCE

8.1 The amount of Gas tendered by the Supplier to the Designated Receipt Point will be reduced, upon delivery to the Customer's Delivery Point, by the Company Gas Allowance. The Company Gas Allowance shall be in effect from November 1 through October 31. Such adjustment shall be recalculated prior to the Company's Peak Season cost of Gas filing with the NHPUC.

9 DAILY METERED DELIVERY SERVICE

9.1 Applicability

Section 9 of this tariff shall be applicable in the following conditions:

9.1.1 All Customers whose service may be interrupted at any time during the year shall be required to take daily metered Delivery Service.

9.1.2 Any Customer, regardless of annual Gas Usage, may elect daily metered Delivery Service.

9.1.3 Customers under Rate Schedules G-43, G-46, G-53, G-54, G-57, and G-58 wishing to take Delivery Service are required to take Daily Metered Delivery Service. In addition, the Company may require a Customer to take daily metered Delivery Service if the Company determines that the daily Gas Usage characteristics of the Customer cannot be accurately modeled using the Company's Consumption Algorithm or if the volumes reasonably anticipated by the Company to be used by the Customer are of a size that may materially affect the integrity of the Company's distribution system.

9.2 Delivery Service Provided

This service provides delivery of Customer purchased Gas from the Designated Receipt Point to the Delivery Point on any Gas Day. For Customers taking Delivery Service under Rate Schedules ***G-43, G-46, G-53, G-54, G-57, and G-58*** this service provides firm, year-round delivery of Customer purchased Gas from the Designated Receipt Point to the Delivery Point.

9.3 Nominations and Scheduling of Service

9.3.1 The Supplier is responsible for nominating and delivering to the Designated Receipt Point(s) every Gas Day an amount of Gas that equals the aggregated Gas Usage of Customers in the Aggregation Pool plus the Company Gas Allowance in accordance with Section 8 of this tariff.

9.3.2 Nominations shall be communicated to the Company by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means.

9.3.3 Nominations for the first Gas Day of a Month shall be submitted to the Company no later than two (2) hours prior to the deadline for first of the Month Nominations of the Transporting Pipeline or such lesser period as determined by the Company. The Company will make available, from time to time, a schedule of Nomination due dates. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

9.3.4 The Supplier may make daily Nominations including, but not limited to, changes to existing Nominations, within a given Month no later than two (2) hours prior to the deadline for daily Nominations of the Transporting Pipeline for the Gas Day on which the Nomination is to be effective, or such lesser period as determined by the Company. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

9.3.5 The Supplier may make intra-Gas Day Nominations, including but not limited to changes to existing Nominations, within a given Gas Day no later than two (2) hours prior to the intra-Gas Day Nomination deadline for the Transporting Pipeline on which the Nomination is to be effective, or such lesser period as determined by the Company. Intra-Gas Day Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

9.3.6 Nominations will be conditionally accepted by the Company pending confirmation by the Transporting Pipeline. The Company will attempt to confirm the nominated volume with the Transporting Pipeline. In the event of a discrepancy between the volume nominated to the Company by the Supplier and the volume nominated by the Supplier to the Transporting Pipeline, the lower volume will be deemed confirmed. The Company will allocate such discrepancy based on a predetermined allocation method set forth in the Supplier Service Agreement. If no predetermined allocation method has been established prior to the event of such discrepancy, the Company will allocate the discrepancy on a pro rata basis.

9.3.7 Nominations may be rejected, at the sole reasonable discretion of the Company, if they do not satisfy the conditions for Delivery Service in effect from time to time.

9.4 Determination of Receipts

9.4.1 The quantity of Gas deemed received by the Company for the Supplier's Aggregation Pool at the Designated Receipt Point(s) will equal the volume so scheduled by the Transporting Pipeline(s).

9.4.2 The Company Gas Allowance will be assessed against receipts pursuant to Section 8 of this tariff.

9.5 Metering and Determination of Deliveries

9.5.1 The Company shall furnish and install, at the Customer's expense, telemetering equipment and any related equipment for the purpose of measuring Gas Usage at each Customer's Delivery Point. Telemetering equipment shall remain the property of the Company at all times. The Company shall require each Customer to install and maintain, at the Customer's expense, reliable telephone lines and electrical connections that meet the Company's operating requirements. The Company may require the Customer to furnish a dedicated telephone line. If the Customer fails to maintain such telephone lines and electrical connections for fourteen (14) consecutive days after notification by the Company, the Company may discontinue service to the Customer.

9.5.2 Should a Customer or a Supplier request that additional telemetering equipment or a communication device be attached to the existing telemetering equipment in addition to that provided pursuant to Section 9.5.1, the Company shall install, test, and maintain the requested telemetering equipment or communication device; provided that such telemetering equipment or communication device does not interfere with the operation of the equipment required for the Company's purposes and otherwise meet the Company's requirements. The Customer or Supplier shall provide such telemetering equipment or communication device, unless the Company elects to do so. The Customer or Supplier shall bear the cost of providing and installing the telemetering equipment, communication device, or any other related equipment, and shall have electronic access to the Customer's Gas Usage information. Upon installation, the telemetering equipment or communication device shall become the property of the Company and will be maintained by the Company. The Company shall bill the Customer or Supplier after installation.

9.5.3 The Company shall complete installation of telemetering equipment and communication devices, if reasonably possible, within sixty (60) days of receiving a written request from the Customer or Supplier provided that the Customer completes the installation of any required telephone or electrical connections within ten (10) days of such request.

9.5.4 The Company may, at its sole discretion, bill the Customer on a calendar month or cycle month basis.

9.6 Balancing

9.6.1 The Supplier must maintain a balance between daily receipts and daily Gas Usage within the following tolerances:

Off-Peak Season: The difference between the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area and the aggregated Gas Usage of Customers in the Aggregation Pool shall be within 15% of said receipts. The Supplier shall be charged 0.1 times the Daily Index for all differences not within the 15% tolerance.

Peak Season: The difference between the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area and the aggregated Gas Usage of Customers in the Aggregation Pool shall be within 10% of said receipts. The Supplier shall be charged 0.5 times the Daily Index for all differences not within the 10% tolerance.

Critical Day(s): The Company will determine if the Critical Day will be aggravated by an under-delivery or an over-delivery, and so notify the Supplier when a Critical Day is declared pursuant to Section 16.

Critical Day That Will Be Aggravated by Under-delivery.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by under-delivery shall be charged 5 times the Daily Index for the aggregated Gas Usage of Customers in the Aggregation Pool that exceeds 102% of the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by under-delivery shall be charged 0.1 times the Daily Index to the extent that the difference between the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area and the aggregated Gas Usage of Customers in the Aggregation Pool exceeds 20% of said receipts [(Receipts - Usage) > (20% x Receipts)].

Critical Day That Will Be Aggravated by Over-delivery.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by over-delivery shall be charged 0.1 times the Daily Index to the extent that the difference between the Supplier's aggregated Gas Usage of Customers in the Aggregation Pool exceeds 120% of the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by over-delivery shall be charged 5 times the Daily Index to the extent that the difference between the Supplier's actual receipts on the Transporting Pipeline to each Gas Service Area and the Supplier's aggregated Gas Usage of Customers in the Aggregation Pool exceeds 2% of said receipts [(Receipts - Usage > (2% x Receipts)].

Point Specific Balancing: In the event that the Transporting Pipeline requires its customers to balance on a point-specific basis, the Supplier must balance pursuant to this Section at each Designated Receipt Point.

9.6.2 If the Supplier has an accumulated imbalance within a Month, the Supplier may nominate to reconcile such imbalance, subject to the Company's approval, which approval shall not be unreasonably withheld.

9.6.3 In addition to the charges set forth in Section 9.6.1, the Company shall flow through to the Supplier any pipeline imbalance penalty charges attributable to the Supplier.

9.6.4 If, as a result of the Company interrupting or curtailing service pursuant to Section 17 of this tariff, the Supplier incurs a daily imbalance penalty due to over delivery, the Company will waive such penalty for the First Day of the interruption or curtailment period. If the Company has issued notice of an interruption or curtailment in service and the Supplier is unable to change its Nomination, or if the Supplier's Gas has been delivered to the Designated Receipt Point, then the Company will credit such Gas against the Supplier's imbalance.

9.6.5 The Supplier will maintain a balance between receipts at the Designated Receipt Point(s) and the aggregated Gas Usage of Customers in each Aggregation Pool. If the Transporting Pipeline posts notice on its electronic bulletin board that its customers will be required to adhere to a maximum hourly flow rate, the Supplier will be deemed to have notice that maximum hourly flows will be in effect on the Company's distribution facilities as of the same time and for the same period as maximum hourly flows are in effect on the Transporting Pipeline. The Supplier's maximum hourly flow will be established based on an allocation of even hourly flows of daily receipts of Gas scheduled in the relevant period in accordance with the applicable transportation tariff of the Transporting Pipeline. All Gas Usage in excess of the Supplier's maximum hourly flow rate shall be subject to an additional charge of 5 times the Daily Index for each Dekatherm in excess of the Supplier's maximum hourly flow. The Company will notify the Supplier of the Supplier's maximum hourly flow.

9.6.6 If, during any fifteen (15) consecutive Gas Days, the Supplier delivers an amount less than 70% of the sum of the aggregated Gas Usage of Customers in the Aggregation Pool in said Gas Days, the Company may declare the Supplier ineligible to nominate Gas for the following thirty (30) Gas Days. The Supplier shall have the opportunity to cure the imbalance with the demonstration of verifiable imbalance trades or otherwise within twenty-four (24) hours of notification by the Company. If the Supplier is declared ineligible to nominate Gas for such 30 Gas Days, the Supplier may be reinstated at the end of the 30 Gas Days, provided it posts security equal to the product of: (1) the maximum aggregate daily Gas Usage of Customers in the Aggregation Pool expressed in MMBtu and (2) $300. If, within twelve (12) months of the first offense, such Supplier is declared ineligible to nominate Gas pursuant to this Section, the Supplier will be disqualified from service under this tariff for one (1) full year from the time of the second disqualification. If the Supplier defaults on its obligations under this tariff, the Company shall have the right to use such security to satisfy the Supplier's obligations. Such security may be used by the Company to secure Gas, transportation, and storage, and to cover other related costs incurred as a result of the Supplier's default. The security may also be used to satisfy any outstanding claims that the Company may have against the Supplier including imbalance charges, cash-out charges, pipeline penalty charges, and other charges.

9.7 Cash Out

For each Aggregation Pool, the Supplier must maintain total Monthly receipts within a reasonable tolerance of total Monthly Gas Usage. Any differences between total Monthly receipts for an Aggregation Pool and the aggregated Gas Usage of Customers in the Aggregation Pool, expressed as a percentage of total Monthly receipts, will be cashed out according to the following schedule:

Imbalance Tier	Over-deliveries	Under-deliveries
0% ≤ 5%	The average of the Daily Indices for the relevant Month.	The highest average of seven consecutive Daily Indices for the relevant Month
> 5% ≤ 10%	0.85 times the above stated rate.	1.15 times the above stated rate.
> 10% ≤ 15%	0.60 times the above stated rate.	1.4 times the above stated rate.
> 15%	0.25 times the above stated rate.	1.75 times the above stated rate.

For purposes of determining the tier at which an imbalance will be cashed out, the price will apply only to volumes within a tier. For example, if there is a 7% under-delivery on a Transporting Pipeline, volumes that make up the first 5% of the imbalance are priced at the highest average of the seven (7) consecutive Daily Indices. Volumes making up the remaining 2% of the imbalance are priced at 1.15 times the average of the seven (7) consecutive Daily Indices.

10 NON-DAILY METERED DELIVERY SERVICE

10.1 Applicability

Section 10 of this tariff applies to Customers taking Delivery Service under Rate Schedules G-41, G-42, G-51, G-52 and their Suppliers.

10.2 Delivery Service Provided

This service provides firm, year-round delivery of Customer purchased Gas from the Designated Receipt Point to the Delivery Point on any Gas Day for Customers, without the requirement of recording Gas Usage at the Delivery Point on a daily basis. Daily Nominations are calculated by the Company on the basis of a Consumption Algorithm and the Supplier is obligated to deliver to the Designated Receipt Point(s) such quantities.

10.3 Nominations and Scheduling of Service

10.3.1 The Supplier is obligated to nominate and deliver the Adjusted Target Volume ("ATV"), as determined in Section 10.3.2, to the Designated Receipt Points on every Gas Day for each Aggregation Pool.

10.3.2 The Company shall determine the ATV for each Aggregation Pool of Customers taking non-daily metered Delivery Service for each Gas Day using a Consumption Algorithm. The ATV shall include the Company Gas Allowance. On each Business Day, the Company will communicate, electronically, by facsimile, or by other agreeable alternative means, the forecasted ATV to the Supplier for at least the subsequent four (4) Gas Days. The ATV in effect for any Gas Day shall be the most recent ATV for that Gas Day communicated to the Supplier by the Company. The ATV for a given Gas Day shall not be effective unless it has been communicated to the Supplier at least two (2) hours prior to the Company's Supplier Nomination deadline for that Gas Day, which shall be at least two (2) hours prior to the deadline for nominations on the Transporting Pipeline, or such lesser period as determined by the Company.

10.3.3 Nominations will be communicated to the Company electronically, by facsimile, or other agreeable alternative means.

10.3.4 Nominations for the first Day of a Month shall be submitted to the Company no later than two (2) hours prior to the deadline for first of the Month nominations of the Delivering Pipeline or such lesser period as determined by the Company. The Company will make available, from time to time, a schedule of nomination due dates. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

10.3.5 The Supplier shall provide an intra-Month nomination no later than two (2) hours prior to the deadline of the Delivering Pipeline for the next Gas Day, or such lesser period as determined by the Company. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

10.3.6 Nominations will be conditionally accepted by the Company pending confirmation by the Transporting Pipeline. The Company will attempt to confirm the nominated volume with the Transporting Pipeline. In the event of a discrepancy between the volume nominated to the Company by the Supplier and the volume nominated by the Supplier to the Transporting Pipeline, the lower volume will be deemed confirmed. The Company will allocate such discrepancy based on a predetermined allocation method set forth in the Supplier Service Agreement. If no predetermined allocation method has been established prior to the event of such discrepancy, the Company will allocate the discrepancy on a pro rata basis. The Company will not confirm any volume nominated by the Supplier in excess of the ATV.

10.3.7 In the event that the Supplier is unable to deliver a confirmed ATV Nomination, the Supplier may make intra-Gas Day Nominations relating to changes to existing Nominations within a given Gas Day no later than two (2) hours prior to the intra-Gas Day Nomination deadline for the Transporting Pipeline on which the Nomination is to be effective, or such lesser period as determined by the Company; provided, however, that the

10.3.8 Nomination must be in conformance with the requirements of and must be permitted by the Transporting Pipeline. Intra-Gas Day Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized by the Company for its own operations. The Company shall not adjust the ATV applied for the Gas Day.

10.3.9 Nominations may be rejected if they do not satisfy the conditions for Delivery Service in effect from time to time.

10.3.10 All quantities of Gas over-delivered or under-delivered to the Company's system in violation of an Operational Flow Order ("OFO") declared by the Company pursuant to Section 16 will be subject to the Critical Day provisions of Section 10.6.1 of this tariff, and the delivered quantity specified in the OFO will replace the ATV.

10.4 Determination of Receipts

10.4.1 The quantity of Gas deemed received by the Company for the Supplier's Aggregation Pool at the Designated Receipt Point(s) will equal the volume so scheduled by the Transporting Pipeline(s).

10.4.2 The Company Gas Allowance will be assessed against receipts pursuant to Section 8 of this tariff.

10.5 Metering and the Determination of Deliveries

The Company shall record the Customer's Gas Usage at the Delivery Point by making actual meter reads on a monthly [or bi-monthly] basis. In the event that the Customer's Gas Usage is metered on a bi-monthly basis, the Company shall make available to the Supplier estimates of the Customer's Gas Usage for each of the two billing months.

10.6 Balancing

10.6.1 Any difference between the Supplier's ATV for an Aggregation Pool and the receipts on the Transporting Pipeline to the appropriate Designated Receipt Point(s) will be cashed out by the Company according to the following:

Off-Peak Season: For receipts less than the ATV, the Supplier shall be charged 1.1 times the Daily Index for the difference. For receipts greater than the ATV, the Supplier shall be charged 0.8 times the Daily Index for the difference.

Peak Season: For receipts less than the ATV but greater than or equal to 95% of the ATV, the Supplier shall be charged 1.1 times the Daily Index for the difference. For receipts less than 95% of the ATV, the Supplier shall be charged 1.1 times the Daily Index for the first 5% difference, and the Supplier shall be charged two (2) times the Daily Index for the remaining difference. For receipts greater than the ATV, the Supplier shall be charged 0.8 times the Daily Index for the difference.

Critical Day(s) The Company will determine if the Critical Day will be aggravated by an under-delivery or an over-delivery, and so notify the Supplier when a Critical Day is declared pursuant to Section 16.

<u>Critical Day That Will Be Aggravated by Under-delivery</u>.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by under-delivery shall be charged five (5) times the Daily Index for the difference between the ATV and actual receipts.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by under-delivery shall be charged the following amounts for all receipts in excess of the ATV:

(a) up to 25% in excess of the ATV, the Supplier shall be charged the Daily Index for the difference.

(b) for receipts in excess of 25% above the ATV, the Supplier shall be charged 0.8 times the Daily Index for the difference.

Critical Day That Will Be Aggravated By Over-delivery.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by over-delivery shall be charged 0.4 times the Daily Index for receipts greater than the ATV.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by over-delivery shall be charged the following amounts--for receipts less than the ATV but greater than or equal to 75% of the ATV, the Supplier shall be charged the Daily Index for the first 25% difference, and the Supplier shall be charged 1.1 times the Daily Index for the remaining difference.

10.6.2 In addition to the charges set forth in Section 10.6.1, the Company shall use a daily balancing charge calculation to account for balancing costs it incurs in serving each Aggregation Pool due to differences in forecast versus actual Heating Degree Days. The daily balancing charge shall be based on the sum of the absolute values of the daily differences between the Aggregation Pool's ATV and the recalculated ATV value described in Section 10.7.1 below. Such charge shall be billed to the Supplier monthly and shall reflect the cost of resources used by the Company to balance such differences for each Gas Day of the Month. The Company shall calculate such charge annually in its Winter Season Cost of Gas filing according to a formula as set forth in Attachment B.

10.6.3 In addition to the charges set forth in Section 10.6.1, the Company shall use a daily balancing charge calculation to account for balancing costs it incurs in serving each Aggregation Pool due to differences in forecast versus actual Heating Degree Days. The daily balancing charge shall be based on the sum of the absolute values of the daily differences between the Aggregation Pool's ATV and the recalculated ATV value described in Section 10.7.1 below. Such charge shall be billed to the Supplier monthly and shall reflect the cost of resources used by the Company to balance such differences for each Gas Day of the Month. The Company shall calculate such charge annually in its Winter Season Cost of Gas filing according to a formula as set forth in Attachment B.

In the event that the Transporting Pipeline requires its customers to balance on a point-specific basis, the Supplier must balance pursuant to this Section at each Designated Receipt Point.

10.6.4 In addition to the charges set forth in Sections 10.6.1 and 10.6.2, the Company shall flow through to the Supplier any pipeline imbalance penalty charges attributable to the Supplier.

10.7 Cash Out

10.7.1 The Company shall use a daily cash out calculation to account for imbalances due to differences in forecast versus actual Heating Degree Days. Using a Consumption Algorithm, the Company will recalculate the ATV for each Aggregation Pool for each Gas Day of the Month, substituting actual Heating Degree Days for forecast Heating Degree Days. Daily recalculations shall be compared to the Aggregation Pool's daily ATV, and the difference shall be cashed out at 100% of the Daily Index.

10.7.2 During the billing months of both June and December, the Company shall use a six-month cash-out calculation to account for differences in forecast usage versus billed Gas Usage. The Company may cash-out differences in forecast usage versus billed usage at intervals that are less than six months as provided by the Supplier Service Agreement.

(1) In the billing month of June, using the recalculated ATV values described in Section 10.7.1, the Company will compare the sum of the recalculated ATV values for each Aggregation Pool for the six-month period of November 1 through April 30 to the sum of billed usage volumes used by each Aggregation Pool for that same period. The differences shall be cashed out at 100% of the average of the Daily Index weighted by actual Heating Degree Days over the same period. The Winter period cash-out shall be calculated and provided to Suppliers within 60 days of the month ending April 30.

(2) In the billing month of December, using the recalculated ATV values described in Section 10.7.1, the Company will compare the sum of the recalculated ATV values for each Aggregation Pool for the six-month period of May 1 through October 31 to the sum of the billed usage volumes used by each Aggregation Pool for that same period. The differences shall be cashed out at 100% of the average of the Daily Index over the same period. The Off-Peak period cash-out shall be calculated and provided to Suppliers within 60 days of the month ending October 31.

10.7.3 The Company shall allow Suppliers to trade seasonal differences. Prior to the seasonal cash-out, the Company shall make available a list of Suppliers. Aggregation Pools affected by the transaction must be located within the same Gas Service Area as defined in Section 4, unless waived by the Company. All trades must be communicated to the Company within three (3) Business Days following receipt of the list.

10.7.4 If, during any fifteen (15) consecutive Gas Days, the Supplier delivers an amount less than 70% of the sum of the ATVs of the Aggregation Pool in said Gas Days, the Company may declare the Supplier ineligible to nominate Gas for the following thirty (30) Gas Days. The Supplier shall have the opportunity to cure the imbalance with the demonstration of verifiable imbalance trades or otherwise within twenty-four (24) hours of notification by the Company. If the Supplier is declared ineligible to nominate Gas for such 30 Gas Days, the Supplier may be reinstated at the end of the 30 Gas Days, provided it posts security equal to the product of: (1) the Supplier's estimated maximum aggregate daily Gas Usage of Customers in the Aggregation Pool expressed in MMBtu and (2) $300. If, within twelve (12) months of the first offense, such Supplier is declared ineligible to nominate Gas pursuant to this Section, the Supplier will be disqualified from service under this tariff for one (1) full year from the time of the second disqualification. If the Supplier defaults on its obligations under this tariff, the Company shall have the right to use such security to

10.7.5 satisfy the Supplier's obligations. Such security may be used by the Company to secure Gas, transportation, storage, and to cover other related costs incurred as a result of the Supplier's default. The security may also be used to satisfy any outstanding claims that the Company may have against the Supplier including imbalance charges, cash-out charges, pipeline penalty charges, and other charges.

11 CAPACITY ASSIGNMENT

11.1 Applicability

Section 11 of this tariff applies to all Suppliers that have enrolled one or more Customers into one or more Aggregation Pools and shall include Customers acting as their own Supplier. The Company shall assign and the Supplier shall accept each Customer's pro-rata share of Capacity, if any, as established in accordance with this Section.

11.2 Identification of Capacity for Assignment

11.2.1 On or before September 15 of each year, the Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Capacity to be made available for assignment to Suppliers on each of twelve Assignment Dates beginning in October.

11.2.2 The Company shall identify, by Gas Service Area, the specific contracts and resources for assignment to Suppliers based on the Company's Capacity and resource plans. Such identified contracts and resources shall be used to determine the pro-rata shares of Capacity assignable to a Supplier on behalf of the Customers enrolled in its Aggregation Pool.

11.2.3 Capacity assigned by the Company may include Company-Managed Supplies that effectuate, at maximum tariff rates, the assignment of certain Capacity contracts including Canadian, Federal Energy Regulatory Commission, 15 U.S.C. § 717(c) or Section 7(c) [Part 157 of the FERC regulations (18 C.F.R. part 157)] and other contracts that are not assignable to third-parties due to governing tariffs.

11.3 Determination of Pro-Rata Shares of Capacity

11.3.2 The Company shall establish a Total Capacity Quantity ("TCQ") for each Customer taking Delivery Service. The TCQ represents the total amount of Capacity assignable to a Supplier on behalf of a Customer.

11.3.3 For a Customer receiving Sales Service on or after March 14, 2000, the TCQ shall be the Customer's estimated Gas Usage on the Peak Day as determined by the Company each October prior to the Customer's enrollment into Supplier Service. The Company shall derive such estimate using a Daily Baseload and a Heating Factor based upon the Customer's historic Gas Usage during the Reference Period, or the best estimates available to the Company should actual Gas Usage information be partially or wholly unavailable.

11.3.4 For a Customer that was either receiving Supplier Service (or the equivalent form of service at the time) on March 14, 2000, or had an executed contract for firm transportation service (i.e., the equivalent of Delivery Service) on file with the Company on or before March 14, 2000, the TCQ shall be zero.

11.3.5 A Customer that was either receiving Supplier Service (or the equivalent form of service at the time) on March 14, 2000, or had a written request on file with the Company on or before March 14, 2000 may elect for its Supplier to accept assignment of its pro-rata share of Capacity as determined by the Company in accordance with Section 11.2 and, subject to availability, as determined by the Company in its sole reasonable discretion. In order to make such election, the Customer must have submitted to the Company, on or before ten (10) days prior to the first Assignment Date prior to the original effective date of this tariff, a completed application for Capacity that is signed by both the Customer and Supplier. All assignments of Capacity made on behalf of such electing Customer shall be executed in accordance with Sections 11 and 14 of this tariff as if the Customer had been receiving Sales Service on or after March 14, 2000

11.3.5 For a new Customer taking Supplier Service as its initial service after March 14, 2000, the TCQ shall be zero except in cases where the Customer is a new Customer of record at a meter location where a former Customer of record received firm service from the Company any time during the preceding twenty-four (24) months, in which case the TCQ established by the Company for the former Customer shall become the TCQ for the new Customer. The Company may reduce said TCQ value for the new Customer, if, in its sole reasonable discretion, the Company determines that the old Customer's TCQ exceeds the new Customer's estimated future consumption on the Peak Day. In the event that Sales Service is provided at a new meter location for Gas Usage associated with new construction, the TCQ shall be zero, provided that the Customer initiates Supplier Service upon the completion of said new construction in accordance with Section 20.5 of this tariff

11.3.6 Once the Company establishes a TCQ for a Customer pursuant to this Section 11.3, it shall remain in effect for the purpose of determining the Customer's pro-rata shares of Capacity until such time that the Customer returns to Sales Service. The Company shall establish a new TCQ value for the Customer pursuant to Section 11.3.2 if the Customer again elects to take Supplier Service after returning to Sales Service, unless otherwise established herein..

11.3.7 The Company shall determine the pro-rata shares of Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity assignable to a Supplier on behalf of a Customer as the product of the Customer's TCQ times the applicable Capacity Allocators. The Capacity Allocators for each class of Customers billed under the Company's Rate Schedule shall be set forth annually in Attachment C to this tariff.

11.3.8 The Company shall determine the pro-rata share of Seasonal Storage Capacity assignable to a Supplier on behalf of a Customer consistent with the tariffs governing the associated Storage Withdrawal Capacity.

11.3.9 The Company shall determine the pro-rata shares of Peaking Supply assignable to a Supplier in accordance with Section 14 of this tariff.

11.4 Capacity Assignments

11.4.1 On each Assignment Date, the Company will assign to the Supplier the pro-rata shares of Capacity on behalf of each Customer as determined by the Company in accordance with Sections 11.2, 11.3 and 11.7.

11.4.2 The total amount of Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity assigned to the Supplier on behalf of the Customers in an Aggregation Pool shall be at least equal to the cumulative sum of the pro-rata shares of Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity for all Customers enrolled in said Aggregation Pool as of Five (5) Business Days prior to the Assignment Date.

11.4.3 Storage Withdrawal Capacity shall be subject to Operational Flow Orders that are issued by the Company pursuant to Section 16 of this tariff, in the event that the Company requires the Supplier to deliver or to store quantities of Gas for the purposes of managing system imbalances and maintaining Delivery Service. Whenever the Company assigns incremental Storage Withdrawal Capacity to the Supplier, the Company shall also assign to that Supplier additional Seasonal Storage Capacity pursuant to Section 11.8.

11.4.4 The Peaking Capacity assigned to the Supplier shall establish the Maximum Daily Peaking Quantity ("MDPQ") for the Aggregation Pool in the Supplier's Service Agreement. In the event that the Company increases a Supplier's MDPQ, the Company shall also assign to that Supplier additional Peaking Supply pursuant to Section 14.

11.4.5 The Company shall execute Capacity assignments in increments of 200 MMBtus. The Supplier shall accept an initial increment of Capacity on the first Assignment Date when the sum of the pro-rata shares of Capacity assigned to the Supplier pursuant to Section 11.4.1 exceeds 150 MMBtus. The Supplier shall accept additional increments of Capacity on the following Assignment Dates commensurate with any cumulative increase in the sum of pro-rata shares of Capacity assigned to the Supplier, as rounded to the nearest 200 MMBtus. Each increment of Capacity accepted by the Supplier shall comprise Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity in proportion to the cumulative increase of the pro-rata shares of assigned Capacity as established in accordance with Section 11.4.1. Section 11.4.2 shall not apply to a Customer that is acting as its own Supplier.

11.4.6 If a Customer is acting as its own Supplier, the Company shall assign Capacity to the Customer in an amount equal to the Customer's TCQ, as established pursuant to Section 11.3.

11.5 Release of Contracts

11.5.1 With the exception of Company-Managed Supplies and Peaking Capacity, Capacity contracts shall be released by the Company to the Supplier, at the maximum tariff rate or lesser rate paid by the Company and including all surcharges, through pre-arranged Capacity releases, pursuant to applicable laws and regulations and the terms of the governing tariffs.

11.5.2 Capacity contracts released to a Supplier on an Assignment Date shall be released for a term beginning on the first Gas Day of the Month following the Assignment Date through the expiration date of the respective capacity contract being assigned. and ending on October 31. For example, contracts assigned to a Supplier on April 25 of a given year shall be released for a term beginning on May 1 of that year and ending on October 31 of that year.

11.5.3 The Company reserves the right to adjust releases of Storage Withdrawal Capacity in the event that fifty percent (50%) or more of the total Storage Withdrawal Capacity serving a Gas Service Area has been assigned to Suppliers. Such adjustments may include, but are not limited to, the reassignment of certain Storage Withdrawal Capacity as Company-Managed Supplies in order for the Company to maintain operational control over Capacity resources associated with system balancing, and/or the retention of specific Capacity resources associated with system balancing and the implementation of a balancing charge to offset the associated costs.

11.6 Annual Reassignment of Capacity

11.6.1 On each Annual Reassignment Date, the Company shall adjust the Capacity assignments previously made to a Supplier to conform with the Company's resource and requirements plans. Such previously assigned Capacity shall be replaced by the assignment to the Supplier of the pro-rata shares of the same or similarly situated Capacity on behalf of the

Customers enrolled in the Supplier's Aggregation Pools (as of the first Gas Day of the Month following the Annual Reassignment Date).

11.6.2 If the reassignment of Storage Withdrawal Capacity requires adjustments to the Seasonal Storage Capacity previously assigned to a Supplier, the Company shall reassign Seasonal Storage Capacity to such Supplier, and the Company and the Supplier shall address any associated increments and decrements to inventories in place pursuant to Section 11.8 of this tariff.

11.6.3 If the reassignment of Peaking Capacity requires adjustments to the MDPQ for the Supplier's Aggregation Pool, the Company shall reassign Peaking Supply to such Supplier, and the Company and the Supplier shall address any associated increments and decrements to supplies pursuant to Section 14 of this tariff.

11.7 Recall of Capacity

11.7.1 If the pro-rata shares of Capacity assignable to a Supplier decline because one or more of the Supplier's Customers has returned to Sales Service, the Company shall have the right, but not the obligation, to recall from the Supplier the pro-rata shares of Capacity previously assigned to the Supplier on behalf of such Customers. The decision on whether to exercise its Capacity-recall rights shall be made by the Company in its sole reasonable discretion. If the Company elects to recall Capacity from a Supplier pursuant to this Section, such recall shall be made on the Assignment Date following the effective date of the Customer's return to Sales Service. Notwithstanding the foregoing, in the following circumstances the Company shall be required to recall Capacity associated with Customers returning to Sales Service:

(a) The Supplier returning the Customers to Sales Service certifies that it is ceasing all business operations in New Hampshire;

(b) The Supplier returning the Customers to Sales Service certifies that it will no longer offer service to a particular market sector (e.g., small commercial and industrial Customers) and, therefore, once such Customers are returned to Sales Service, the Supplier is not eligible to re-enroll Customers of that type; or

(c) The Supplier demonstrates that it has provided Supplier Service to the Customer for a 12-month period, and for a period of no less than any 12-month increment, prior to the Customer's return to Sales Service.

11.7.2 If the Company elects to recall Storage Withdrawal Capacity from the Supplier pursuant to this Section, the Company shall reduce the Seasonal Storage Capacity associated with the affected Aggregation Pool in accordance with Section 11.8 of this tariff. If the Company elects to reduce the MDPQ in the Supplier Service Agreement, the Company shall reduce the Peaking Supply associated with the affected Aggregation Pool in accordance with Section 14 of this tariff.

11.7.3 In the event that a Customer in a Supplier's Aggregation Pool switches to another Supplier, the Company shall recall from the former Supplier said Customer's pro-rata shares of Capacity for reassignment to the new Supplier pursuant to Section 11.4. There shall be no change in the Customer's TCQ used to determine the Customer's pro-rata shares of Capacity for reassignment to the new Supplier. The recall of such Capacity from the Customer's former Supplier and the assignment of Capacity to the new Supplier shall be made on the Assignment Date following the effective date of the Customer's switch in Suppliers.

If the Company recalls Storage Withdrawal Capacity from the Customer's former Supplier, the Company shall reduce the Seasonal Storage Capacity associated with the affected Aggregation Pool in accordance with Section 11.8 of this tariff. If the Company reduces the MDPQ in the Customer's former Supplier's Service Agreement, the Company shall also reduce the Peaking Supply associated with the affected Aggregation Pool in accordance with Section 14 of this tariff.

11.7.4 The recall of Capacity by the Company shall entail the recall of released contracts pursuant to governing tariffs and/or the reduction in assigned quantities set forth in the Supplier Service Agreement. The recall of Capacity shall be executed in decrements of 200 MMBtus, commensurate with the cumulative reduction in the pro-rata shares of Capacity assigned to the Supplier, rounded to the nearest 200 MMBtus. Each decrement of Capacity assigned to the Supplier shall comprise Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity in proportion to the cumulative decrease in the pro-rata shares of Capacity recalled from the Supplier.

In the event that a Supplier is declared ineligible to nominate Gas for thirty (30) Gas Days pursuant to Sections 9.6.6 or 10.7.4 of this tariff, the Company shall have the right to recall any or all Capacity assigned to said Supplier. If the Supplier is reinstated at the end of such 30 Gas Days, the Company shall reassign Capacity to the Supplier on the next Assignment Date pursuant to Sections 11.4 and 11.5. There shall be no change in the TCQ values used to determine the Supplier's Customers' pro-rata shares of Capacity for reassignment.

11.7.5 In the event that a Supplier is disqualified from service for a one (1) full year pursuant to Sections 9.6.6 or 10.7.4 of this tariff, the Company shall have the right to recall any or all Capacity assigned to said Supplier. If the Supplier is reinstated at the end of such period, the Company shall reassign Capacity to the Supplier on the next Assignment Date pursuant to Sections 11.4 and 11.5. There shall be no change in the TCQ values used to determine the Supplier's Customers' pro rata shares of Capacity reassignments.

11.7.6 In the event that the Supplier fails to meet the applicable registration and licensing requirements established by law or regulation, fails to satisfy the requirements and practices as set forth in Section 20.3 of this tariff, fails to be and remain an approved shipper on the upstream pipelines and underground storage facilities on which the Company will assign capacity, fails to make timely payment under the assigned contracts, or fails to comply with or perform any of the obligations on its part established in this tariff or in the Supplier Service Agreement, the Company shall have the right to recall permanently any or all Capacity assigned to said Supplier. This section shall also apply to a Customer acting as its own Supplier.

11.7.7 The Supplier shall forfeit its rights to Capacity recalled by the Company pursuant to this Section. Such forfeiture shall be effected in accordance with applicable laws and regulations and the governing tariffs. In the event of Capacity forfeiture pursuant to this Section, the Supplier shall be responsible to compensate the Company for any payments due under the contracts prior to forfeiture, as well as any interest due thereon. The Company will not exercise discretion in the application of the forfeiture provisions of this Section. This section shall also apply to a Customer acting as its own Supplier.

11.8 Seasonal Storage Capacity

11.8.1 On each Assignment Date, the Company shall release Seasonal Storage Capacity to a Supplier that accepts the assignment of Storage Withdrawal Capacity pursuant to Section 11.4. The Company shall assign such Seasonal Storage Capacity consistent with the tariffs governing the release of the associated Storage Withdrawal Capacity.

11.8.2 If the Company assigns Seasonal Storage Capacity to a Supplier pursuant to Section 11.8.1 above, the Company shall transfer in-place Gas inventories to the Supplier. The quantity of inventories to be transferred from the Company to the Supplier shall be determined by multiplying the incremental Seasonal Storage Capacity assigned to the Supplier on the Assignment Date times the applicable storage inventory percentage described in Section 11.8.5. The Supplier shall be charged the Company's weighted average cost of inventories in off-system storage facilities for each Dekatherm transferred from the Company to the Supplier. The Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Company's weighted average cost of inventories, by Gas Service Area, at least two Business Days prior to each Assignment Date.

11.8.3 In the event that the Company recalls Storage Withdrawal Capacity from the Supplier pursuant to Section 11.7, the Company shall also recall Seasonal Storage Capacity from the Supplier. The Company shall determine the total Seasonal Storage Capacity to be recalled from the Supplier in accordance with the tariffs governing the Storage Withdrawal Capacity returned to the Company.

11.8.4 If the Company recalls Seasonal Storage Capacity from a Supplier pursuant to Section 11.8.3, the Supplier shall transfer in-place Gas inventories to the Company. The quantity of inventories to be transferred from the Supplier to the Company shall be determined by multiplying the decremental Seasonal Storage Capacity times the applicable storage inventory percentage described in Section 11.8.5. The Supplier shall be reimbursed at the Company's weighted average cost of inventories in off-system storage facilities as of the Assignment Date, for each Dekatherm transferred from the Supplier to the Company. The Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Company's weighted average cost of inventories, by Gas Service Area, at least two (2) Business Days prior to each Assignment Date.

11.8.5 Seasonal storage inventory percentages shall represent the amount of Seasonal Storage Capacity in each assigned storage resource that is assumed to be filled with inventories as of the first Gas Day of the month following the Assignment Date. Each September, the Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the storage inventory percentages for each resource that shall be applied to incremental or decremental Seasonal Storage Capacity assignments executed on each of the twelve (12) Assignment Dates beginning in October.

11.9 Company-Managed Supplies

11.9.1 The Company shall provide access to and ascribe cost responsibility for the pro-rata shares of certain Capacity contracts including Canadian, Federal Energy Regulatory Commission, 15 U.S.C. § 717(c) or Section 7(c) [Part 157 of the FERC regulations (18 C.F.R. part 157)], and other contracts that are not assignable to third-parties.

11.9.2 The Supplier's Service Agreement shall set forth the quantity of each Company-Managed Supply assigned to the Supplier pursuant to Sections 11.4 and 11.8.

11.9.3 The Company shall notify the Supplier of the conditions and/or restrictions on the use of Company-Managed Supplies pursuant to the tariffs governing the resources.

11.9.4 The Company shall invoice the Supplier for its pro-rata shares of the demand charges for Capacity contracts assigned to the Supplier as Company-Managed Supplies. The Company shall also flow through to the Supplier all costs, including Supply costs, incurred from the utilization of Company-Managed Supplies on behalf of the Supplier.

11.9.5 The Company shall nominate quantities to the Transporting Pipeline and/or other interstate pipelines and off-system storage operators on behalf of Suppliers to which the Company has assigned Company-Managed Supplies, provided that the requested Nomination conforms to the tariffs governing the resource. The Supplier shall communicate its desired Nomination quantities to the Company subject to the provisions in Sections 9.3 and 10.3 of this tariff.

11.10 Capacity Mitigation Service

11.10.1 Capacity Mitigation Service is available to Suppliers that have been assigned Capacity pursuant to Section 11 of this tariff. Such Suppliers shall have the option to take Capacity Mitigation Service from the Company for contracts that would otherwise be released to the Supplier in accordance with this tariff.

11.10.2 Within five (5) Business Days prior to the Annual Reassignment Date, the Supplier must designate those contracts that would otherwise be released to the Supplier pursuant to Section 11.5, as contracts to be managed by the Company for cost mitigation in accordance with the Company's Capacity Mitigation Service. Such designation will be effective for the period November 1 through October 31. Such notice shall be communicated in accordance with the Supplier's Service Agreement.

11.10.3 The Supplier shall pay to the Company the maximum-tariff rate or lesser rate paid by the Company, including all surcharges, for the Capacity contracts that are retained and managed by the Company. The Company shall bill the Supplier monthly for such charges.

11.10.4 The Company will market Capacity contracts designated by Suppliers for mitigation through the Capacity Mitigation Service. The Supplier shall receive a credit on its bill for Capacity Mitigation Service equal to the pro-rata share of the proceeds earned from the Company in exchange for such contract management. Such credit shall be determined on a contract-specific basis at the end of each Month and will be included in the bill sent to the Supplier in the following Month.

12 BILLING AND SECURITY DEPOSITS

12.1 The Customer shall be responsible for all charges for service furnished by the Company under the Company’s applicable rates, as filed from time to time with the NHPUC, from the time service is commenced until it is terminated. The Company shall provide a single bill, reflecting unbundled charges, to Customers for Sales Service.

12.2 The Company shall offer two billing service options to Customers taking only Delivery Service: standard complete billing service and standard pass-through billing service. The Supplier shall inform the Company of the selected billing option in accordance with the provisions set forth in Section 20.5

12.2.1 Standard Complete Billing Service

The Customer shall receive a single bill from the Company for both Delivery Service and Supplier Service. The Company shall use the rates supplied by the Supplier to calculate the Supplier’s portion of the single bill and integrate this billing within a single mailing to the Customer. The Company may charge a fee to the Supplier for providing this billing service as approved by the NHPUC.

The Supplier shall adhere to the Customer classes and rate structure as specified in the Company's then current Rate Schedule on file with and approved by the NHPUC. The Company shall reasonably accommodate, at the Supplier's expense, different Customer classes or rate structures as agreed to by the Company and the Supplier in the Supplier Service Agreement.

The Company shall provide an electronic file to the Supplier that will, in addition to the usage being billed, contain the calculated Supplier billing amounts for the current billing cycle. Customer revenue due the Supplier shall be transferred to the Supplier in accordance with the Supplier Service Agreement. Upon receipt of Customer payments, the Company shall provide a file for the Supplier summarizing all revenue from Supplier sales which have been received and recorded that day.

If a Customer pays the Company less than the full amount billed, the Company shall apply the payment first to Delivery Service, and if any payment remains, it shall be applied to Supplier Service.

12.2.2 Standard Pass-through Billing Service

The Customer taking Delivery Service shall receive two (2) bills: the Company shall issue one bill for Delivery Service and the Supplier shall issue a second bill for Supplier Service.

The Supplier shall be responsible for the collection of amounts due to the Supplier from the Customer. Customer payment responsibility with Suppliers shall be governed by the particular Customer/Supplier contract.

Within three (3) Business Days following the end of the Customer's billing cycle, the Company shall provide an electronic file for the Supplier that will contain the Customer's usage being billed including the current and previous meter readings.

12.2.3 The Company shall inform a Customer when Supplier Service has been initiated by a Supplier along with information on how the Customer may file a complaint regarding an unauthorized initiation of Service. This information shall be included on the first bill rendered to the Customer after such initiation.

12.2.4 A Customer acting as its own Supplier will be subject to the billing and payment requirements in Section 20.8 of this tariff.

12.2.5 Readings taken by an automated meter reading device will be considered actual readings for billing purposes.

13 SALES SERVICE

13.1 Sales Service is the Commodity service provided by the Company for Customers not electing to subscribe to Supplier Service and shall be provided by the Company, or its designated Supplier, in accordance with this tariff. Each Customer receiving Sales Service shall receive one bill from the Company reflecting delivery and Commodity charges.

13.2 A Customer receiving Sales Service on March 14, 2000 shall continue to receive Sales Service unless the Customer elects to take Supplier Service and until such time that Supplier Service is initiated for the Customer in accordance with Section 20.5 of this tariff. If the Customer terminates Supplier Service, if a Supplier terminates service to the Customer, or if the Customer's designated Supplier becomes ineligible to serve the Customer pursuant to Sections 9.6.6, 10.7.4, or 20.3 of this tariff, the Company will provide Sales Service to the Customer. Pursuant to Section 20.5 of this tariff, the Company will initiate Sales Service for the Customer and will provide Sales Service to the Customer until such time that Supplier Service is initiated for the Customer by a new Supplier.

13.3 Any Customer whose Supplier has been assigned Capacity on behalf of said Customer pursuant to Section 11 of this tariff may elect to return to Sales Service if the Customer is no longer receiving Supplier Service. If necessary, the Company will initiate Sales Service for the Customer pursuant to Section 20.5 of this tariff and will provide the Customer with Sales Service until such time that Supplier Service is initiated for the Customer by a new Supplier. The Company will provide Sales Service to said Customer up to a maximum daily level of Gas Usage not to exceed the Total Capacity Quantity ("TCQ") of recallable Capacity assigned to the Customer's former Supplier.

13.4 In the event that a Supplier that has been assigned Capacity on behalf of a Customer pursuant to Section 11 of this tariff terminates Supplier Service to the Customer, the Customer may select another Supplier. If necessary, the Company will initiate Sales Service for the Customer pursuant to Section 20.5 of this tariff and will provide the Customer with Sales Service until Supplier Service is initiated for the Customer by a new Supplier. The Company will provide Sales Service to the Customer up to a maximum daily level of Gas Usage not to exceed the TCQ of recallable Capacity assigned to the Customer's former Supplier.

13.5 In the event that a Supplier that has been assigned Capacity on behalf of a Customer pursuant to Section 11 of this tariff becomes ineligible to serve the Customer pursuant to Sections 9.6.6, 10.7.4, or 20.3 of this tariff, the Company will provide the Customer with Sales Service up to a maximum daily level of Gas Usage not to exceed the TCQ of recallable Capacity assigned to the Customer's Supplier.

13.6 The Company shall be under no obligation to provide Sales Service to a Customer at a maximum daily level in excess of the TCQ of recallable Capacity assigned to a Supplier on behalf of the Customer. The Company may elect to provide Sales Service to the Customer if, and to the extent that, adequate system Capacity and Supplies are available and upon the same terms and subject to the same conditions as any new Customer seeking to take Sales Service.

14 PEAKING SERVICE

14.1 Applicability

Section 14 of this tariff applies to all Suppliers, and to all Customers acting as their own Supplier, that have been assigned, or have elected to be assigned, Capacity on behalf of themselves or Customers in their Aggregation Pools pursuant to Section 11 of this tariff.

14.2 Character of Service

14.2.1 Peaking Service shall be provided by the Company subject to an executed Supplier Service Agreement that sets forth the Maximum Daily Peaking Quantity ("MDPQ") and the assigned Peaking Supply for each of the Supplier's Aggregation Pools.

14.2.2 The Company shall provide quantities of Gas, at the Supplier's request, from the Supplier's Peaking Service Account as established in accordance with Section 14.4. Such quantities shall be deemed delivered by the Company and received by the Company at the Designated Receipt Point(s) for the Aggregation Pool. Peaking Service shall be firm and available to the Supplier each Gas Day in accordance with the balance of the Supplier's Peaking Service Account and the parameters of the Company's Peaking Service Rule Curve.

14.3 Rates and Charges

14.3.1 The applicable rates for Peaking Service shall be established in the Company's tariff. The Supplier shall pay a peaking demand charge based on its MDPQ of assigned Peaking Capacity as billed by the Company for the Peak Season. Such unit demand charge shall be equal to the total Capacity costs and other fixed costs associated with the Company's peaking resources, excluding costs collected through Delivery rates, divided by the estimated peaking resources needed to meet the Company's total system Peak Day requirement.

14.3.2 The Supplier shall pay a Commodity charge equal to the estimated weighted average cost of peaking supplies, including fuel retention and carrying charges. The Company shall communicate electronically, by facsimile or by other agreeable alternative means the Company's estimated weighted average cost of peaking supplies by the 15th of the month preceding the next Assignment Date. The Commodity charge will be multiplied by the volumes of Peaking Service Gas nominated by the Supplier during each Month.

14.4 Peaking Supply

14.4.1 The Customer's portion of the Peaking Supply that shall be assigned to the Supplier on behalf of the Customer shall be equal to the Peaking Supply multiplied by the ratio of the Customer's MDPQ to the aggregate MDPQ of the total system.

14.4.2 On each Assignment Date, the Company shall assign Peaking Supply to a Supplier whose MDPQ has been increased pursuant to Section 11.4. If the Company assigns incremental Peaking Supply to a Supplier, the Company shall credit the balance of the Supplier's Peaking Service Account for volumes available through October 31 in accordance with the Peaking Service Rule Curve. The amount credited to the Supplier's Peaking Service Account shall be determined by multiplying the incremental Peaking Supply by the peaking inventory percentage described in Section 14.4.5.

14.4.3 On each Assignment Date, the Company shall recall Peaking Supply from a Supplier whose MDPQ has been decreased pursuant to Section 11.7. The Company shall determine the Supplier's total Peaking Supply for recall to be equal to the difference between the cumulative total Peaking Supply assigned to the Supplier as of the previous Assignment Date and the total Peaking Supply that is assignable to the Supplier in accordance with Section 14.4.1 above.

14.4.4 If the Company recalls Peaking Supply from a Supplier pursuant to Section 14.4.3, the Company shall debit the balance of the Supplier's Peaking Service Account for volumes available through October 31 in accordance with the Peaking Service Rule Curve. The amount debited from the Supplier's Peaking Service Account shall be determined by multiplying the decremental Peaking Supply by the peaking inventory percentage described in Section 14.4.5.

14.4.5 The peaking inventory percentage shall represent the level of Peaking Supply assumed to be available to a Supplier in its Peaking Service Account as of the first Gas Day of the Month following the Assignment Date for incremental and decremental assignments of Peaking Supply. Each September, the Company shall communicate electronically, by facsimile or by other agreeable alternative means the Peaking Inventory Percentages that shall be applied to incremental or decremental Peaking Supply assignments executed on each of the twelve (12) Assignment Dates beginning in October.

14.4.6 On each Annual Reassignment Date, the Company shall reset the balance in the Supplier's Peaking Service Account to equal the total Peaking Supply assignable to the Supplier on behalf of Customers enrolled in its Aggregation Pool (as of the first Gas Day of the Month following the Annual Reassignment Date) as determined in accordance with Section 14.4.1 above.

14.5 Nomination of Peaking Service

14.5.1 The Supplier shall nominate with the Company the quantity of Peaking Supply, not in excess of the amount determined pursuant to Section 14.4.2, that the Supplier desires to be provided from its Peaking Service Account for the applicable Gas Day. For an Aggregation Pool of Customers taking daily metered Delivery Service, the notice given by the Supplier to the Company for an applicable Gas Day shall be made in accordance with Section 9.3 of this tariff. For an Aggregation Pool of Customers taking non-daily metered Delivery Service, the notice given by the Supplier to the Company for an applicable Gas Day shall be made in accordance with Section 10.3 of this tariff.

14.5.2 In response to a valid Nomination for Peaking Service, the Company shall provide the requested quantity of Gas, which shall be deemed to be delivered by the Company and received by the Company at the Designated Receipt Point(s) of the Supplier's Aggregation Pool, subject to the limitations herein. Nominated quantities shall be included in the determination of receipts at the Designated Receipt Point(s) for the Supplier's Aggregation Pool which factors into the daily balancing provisions set forth in this tariff.

14.5.3 The Company may reject a Supplier's Nomination for Peaking Service if the nominated quantity would cause the balance of the Supplier's Peaking Service Account to fall to a level that is 10% or more below the minimum allowable account balance for the Month in which the Nomination is requested, as computed in accordance with the Peaking Service Rule Curve. Under such circumstances, the Company shall require the Supplier to nominate the pipeline and/or storage resources, within the contract entitlements assigned to the Supplier under Section 11, required to maintain the Supplier's Peaking Service Account above the minimum allowable account balance described above. The balance of the Supplier's Peaking Service Account may not in any event fall below zero (0).

14.5.4 The Company shall provide Peaking Service supplies to the Supplier only when the volumes in the Peaking Service Account for the Aggregation Pool are greater than zero (0).

14.6 Peaking Service Critical Day Provisions

14.6.1 In the event that the volumes in a Supplier's Peaking Service Account for an Aggregation Pool are reduced to a level below the minimum allowable account balance as computed in accordance with the Company's Peaking Service Rule Curve, the Company may issue an OFO to such Supplier pursuant to Section 16 of this tariff.

14.6.2 In the event that the total volumes of all Peaking Service Accounts within one or more of the Company's Gas Service Areas are reduced to levels below the total minimum allowable account balances as computed in accordance with the Company's Peaking Service Rule Curve, the Company may declare a Critical Day and issue a blanket OFO pursuant to Section 16 of this tariff.

14.6.3 If, on a Critical Day, the Company projects, based on the Supplier's Nominations, that the Supplier's scheduled deliveries to the Designated Receipt Point(s) of an Aggregation Pool are less than the maximum feasible volumes for deliveries on the Transporting Pipeline, the Company may issue an OFO to the Supplier in accordance with Section 16 of this tariff.

15 DISCONTINUANCE OF SERVICE

15.1 The Company shall notify a Customer's Supplier of record that it has initiated any applicable billing and termination procedures as prescribed by the NHPUC. In the event that the Company discontinues Delivery Service to a Customer in accordance with the provisions set forth above, the Company shall provide electronic notification to the Customer's Supplier of record upon final billing to the Customer. The Company shall not be liable for any revenue loss to the Supplier as a result of any such disconnection.

16 OPERATIONAL FLOW ORDERS AND CRITICAL DAYS

16.1 In the event of a material and significant threat to the operational integrity of the Company's system, the Company may declare a Critical Day.

16.2 Circumstances constituting a threat to the operational integrity of the system that may cause the Company to declare a Critical Day shall include, but not be limited to: (1) a failure of the Company's distribution, storage, or production facilities; (2) near-maximum utilization of the Company's distribution, storage, production, and Supply resources; (3) inability to fulfill firm service obligations; and (4) issuance of an OFO or similar notice by upstream transporters.

16.3 In the event that the Company has declared a Critical Day, the Company will have the right to issue an Operational Flow Order ("OFO") in which the Company may instruct Suppliers to take such action as conditions require, including, but not limited to, diverting Gas to or from the Company's distribution system, within the contract entitlements, if any, assigned to the Supplier under Section 11 hereof. An OFO may be issued on a pipeline or point-specific basis. An OFO may be issued by the Company as a blanket order to all Suppliers or to an individual Supplier whose actions are determined by the Company to jeopardize system integrity. The Company may issue an OFO to an individual Supplier if the Company faces Gas cost exposure in excess of daily cashout or imbalance penalties as set forth in Sections 9.6, 9.7, 10.6, and 10.7 for any under-deliveries or over-deliveries caused by that Supplier.

16.4 The Company will provide the Supplier with as much notice as is reasonably practicable of the issuance and removal of a Critical Day or an OFO; under most circumstances, the Company intends to provide at least twenty-two (22) hours' notice prior to the start of the Gas Day for the issuance of the Critical Day or OFO. Notification of the issuance and removal of a Critical Day or an OFO will be made by means as established in the Supplier Service Agreement. The Supplier will be responsible for coordinating with its Customers any change to the Customer's quantity of Gas Usage. An OFO or Critical Day will remain in effect until its removal by the Company.

16.5 All quantities of Gas over-delivered or under-delivered to the Company's system in violation of an OFO will be subject to the Critical Day provisions of Sections 9.6 and 10.6 of this tariff.

17 FORCE MAJEURE AND LIMITATION OF LIABILITY

17.1 Neither the Company nor the Supplier will be liable to the other for any act, omission, or circumstance occasioned by or in consequence of any event constituting force majeure, and unless it is otherwise expressly provided herein, the obligations of the Company and the Supplier then existing hereunder will be excused during the period thereof to the extent affected by such event of force majeure, provided that reasonable diligence is exercised to overcome such event. As used herein, force majeure will mean the inability of the Company or the Supplier to fulfill its contractual or regulatory obligations: as a result of compliance by either party with an order, regulation, law, code, or operating standard imposed by a governmental authority; by reason of any act of God or public enemy; by reason of storm, flood, fire, earthquake, explosion, civil disturbance, labor dispute, or breakage or accident to machinery or pipeline (which breakage or accident is not the result of the negligence or misconduct of the party claiming force majeure); by reason of any declaration of force majeure by upstream Transporting Pipelines; or by reason of any other cause, whether the kind enumerated herein or otherwise, not within the control of the party claiming force majeure and which by the exercise of reasonable diligence such party is unable to prevent or overcome. Notwithstanding the foregoing, the Customer's and the Supplier's obligation to make any payments required under this tariff will in no case be excused by an event of force majeure. Nor will a failure to settle or prevent any labor dispute or other controversy with employees or with anyone purporting or seeking to represent employees be considered to be a matter within the control of the party claiming excuse. The party claiming force majeure will, on request, provide the other party with a written explanation thereof and of the remedy being undertaken.

17.2 The Company shall be liable only for direct damages resulting from the Company's conduct of business when the Company, its employees, or agents have acted in a negligent or intentionally wrongful manner. In no event shall the Company be liable to any party for any indirect, consequential, or special damages, whether arising in tort, contract, or otherwise, by reason of any services performed, or undertaken to be performed, or actions taken by the Company, or its agents or employees, under this tariff or in accordance with or required by law, including, without limitation, termination of the Customer's service.

17.3 If the Company is unable to render firm Delivery Service to the Customer taking such service as contemplated by this tariff as a result of force majeure and such inability continues for a period of thirty (30) Gas Days, the Customer may provide written notice to the Company of its desire to terminate Delivery Service at the expiration of thirty (30) Gas Days from the Company's receipt of such notice, but no sooner than sixty (60) Gas Days following the outset of the force majeure. If the Company has not restored Delivery Service to the Customer at the end of such notice period, the Customer's Delivery Service will terminate and both parties will be released from further performance hereunder, except for obligations to pay sums due and owing as of the date of termination.

17.4 The Company and the Supplier shall indemnify and hold the other and their respective affiliates, and the directors, officers, employees, and agents of each of them (collectively, "affiliates") harmless from and against any and all damages, costs (including attorney's fees), fines, penalties, and liabilities, in tort, contract, or otherwise (collectively, "liabilities"), resulting from claims of third parties arising, or claimed to have arisen, from the acts or omissions of either party in connection with the performance of the indemnifying party's obligations under this tariff. The Company and the Supplier shall waive recourse against the other party and its affiliates for or arising from the non-negligent performance by such other party in connection with the performance of its obligations under this tariff.

18 CURTAILMENT

18.1 Whenever the integrity of the Company's system or the Supply of the Company's Customers taking Sales Service or Delivery Service is believed to be threatened by conditions on its system or upon the systems with which it is directly or indirectly interconnected, the Company may, in its sole reasonable judgment, curtail or interrupt Gas service or reduce pressure as set out in Section 18, Supply and Capacity Shortage Allocation Policy of this tariff. Such action shall not be construed to constitute a default nor shall the Company be liable therefor in any respect. The Company will use efforts reasonable under the circumstances to overcome the cause of such curtailment, interruption, or reduction and to resume full performance.

18.2 The Company shall communicate notice of curtailment as soon as practicable to the Suppliers of affected Customers by means as specified in the Supplier Service Agreement.

18.3 The Company shall take reasonable care in providing regular and uninterrupted service to its firm Customers, but whenever the Company deems that the situation warrants any interruption or limitation in the service to be rendered, such interruption or limitation shall not constitute a breach of the contract and shall not render the Company liable for any damages suffered thereby by any person, or excuse the Customer from further fulfillment of the contract.

18.4 In any case where the Company determines in its judgment that a curtailment or interruption of firm services is necessary, the Company will curtail and/or interrupt firm Delivery Service and Sales Service Customers on a nondiscriminatory basis.

19 TAXES

19.1 In the event a tax of any kind is imposed or removed by any governmental authority on the distribution of Gas or on the gross revenues derived from the distribution of Gas at retail (exclusive, however, of taxes based on the Company's net income), the rate for service herein stated will be adjusted to reflect said tax. Similarly, the effective rate for service hereunder will be adjusted to reflect any refund of imposition of any surcharges or penalties applicable to service hereunder which are imposed or authorized by any governmental or regulatory authorities.

19.2 The Customer will be responsible for all taxes or assessments that may now or hereafter be levied with respect to the Gas or the handling or subsequent disposition thereof after its delivery to the Delivery Point. However, if the Company is required by law to collect and/or remit such taxes, the Customer will reimburse the Company for all amounts so paid. If the Customer claims exemption from any such taxes, the Customer will provide the Company in writing its tax exemption number and other appropriate documentation. If the Company collected any taxes or assessments from the Customer and is later informed by the Customer that the Customer is exempt from such taxes, it shall be the Customer's responsibility to obtain any refund from the appropriate governmental taxing agency.

19.3 The Supplier will be responsible for all production, severance, ad valorem, or similar taxes levied on the production or transportation of the Gas before its delivery to the Designated Receipt Point. The Supplier will also be responsible for sales taxes imposed on Gas delivered for the Customer's account. However, if the Company is required by law to remit such taxes to the collecting authority, it will do so and invoice the Supplier for such taxes paid on the Supplier's behalf.

20 SUPPLIER TERMS AND CONDITIONS

20.1 Applicability

The following terms and conditions shall apply to every Supplier providing Supplier Service in the State of New Hampshire, to every Customer doing business with said Suppliers, and to Customers acting as their own Supplier.

20.2 Obligations of Parties

20.2.1 Customer

Unless otherwise agreed to by the Company and the Customer, a Customer shall select one Supplier for each account at any given time. A Customer electing Supplier Service must provide the selected Supplier with its applicable Authorization Number. A Customer may choose only a Supplier who meets the terms described in Sections 20.2.3 and 20.3 below and who meets any applicable registration requirements established by law or regulation.

20.2.2 Company

The Company shall deliver Customer purchased Gas from the Designated Receipt Point to the Delivery Point in accordance with the service selected by the Customer pursuant to this tariff and, among other things, shall:

(a) Provide Customer service and support, including call center functions, for services provided by the Company under this tariff;

(b) Respond to service interruptions, reported Gas leaks, and to other Customer safety calls;

(c) Handle connections, curtailments, and terminations for services provided by the Company under this tariff;

(d) Read meters;

(e) Submit bills to Customers for Delivery Service and if contracted by the Supplier, for Supplier Service in accordance with Section 12.2.1.

(f) Address billing inquiries for Delivery Service;

(g) Answer general questions about Delivery Service;

(h) Provide to Suppliers, on request, the data format and procedures for electronic information transfers and funds transfers;

(i) Arrange for or provide Sales Service to the Customer at the request of the Customer in accordance with the Company's tariff; and

(j) Provide information regarding, at a minimum, rate tariffs, billing cycles, Capacity assignment methods, and Consumption Algorithms.

20.2.3 Supplier

The Supplier shall act on behalf of the Customer to acquire Supplies and to deliver them to the Designated Receipt Point pursuant to the service selected by the Customer and the requirements of this tariff.

The Supplier is responsible for enrolling Customers pursuant to Section 20.5 of this tariff.

The Supplier must request, complete and sign a Supplier Service Agreement to act as a Supplier on the Company's system, satisfy the Supplier requirements and practices as set forth in Section 20.3 of this tariff, be and remain an approved shipper on the upstream pipelines and underground storage facilities on which the Company will assign Capacity, if any, under Section 11, and be and remain eligible to provide service to Customers in New Hampshire.

The Supplier is responsible for completing all transactions with the Company and for all applicable charges associated with Customer enrollment and changes in the Customer's service as set forth in Section 20.5 and Attachment B.

20.3 Supplier Requirements and Practices

20.3.1 The Company shall have the right to establish reasonable financial and non-discriminatory credit standards for qualifying Suppliers. Accordingly, in order to serve Customers on the Company's system, the Supplier shall provide the Company, on a confidential basis, with audited balance sheet and other financial statements, such as annual reports to shareholders and 10-K reports, for the previous three (3) years, as well as two (2) trade and two (2) banking references. To the extent that such annual reports to shareholders are not publicly available, the Supplier shall provide the Company with a comparable list of all corporate affiliates, parent companies, and subsidiaries. The Supplier shall also provide its most recent reports from credit reporting and bond rating agencies. The Supplier shall be subject to a credit investigation by the Company. The Company shall review the Supplier's financial position periodically.

20.3.2 The Supplier shall also confirm in the Supplier Service Agreement that:

(a) The Supplier is not operating under any chapter of bankruptcy laws and is not subject to liquidation or debt reduction procedures under state laws, such as an assignment for the benefit of creditors, or any information creditors' committee agreement.

(b) The Supplier is not aware of any change in business conditions which would cause a substantial deterioration in its financial conditions, a condition of insolvency, or the inability to exist as an ongoing business entity.

(c) The Supplier has no delinquent balances outstanding for services previously provided by the Company, and the Supplier has paid its account according to the established terms and not made deductions or withheld payment for claims not authorized by contract.

(d) No significant collection lawsuits or judgments are outstanding which would materially affect the Supplier's ability to remain solvent as a business entity.

(e) The Supplier's New Hampshire business advertising and marketing materials conform to all applicable state and federal laws and regulations.

20.3.3 In the event the Supplier has not demonstrated to the Company's satisfaction that it has met the Company's credit evaluation standards, the Company shall require the Supplier to provide one of the following at the Maximum Financial Liability as calculated below:

(a) Advance deposit;

(b) Letter of credit;

(c) Surety bond; or

(d) Financial guaranty from a parent company that meets the creditworthiness criteria.

The Company shall base the Supplier's maximum financial liability as two (2) times the highest month's aggregated Gas Usage of all Customers currently served by the Supplier at the highest Monthly Index in the preceding twenty-four (24) Months. This amount may be updated continuously, and at minimum, whenever the aggregated Gas Usage of all Customers served by the Supplier changes by more than 25%. The Supplier agrees that the Company has the right to access and apply the deposit, letter of credit, or bond to any payment of any outstanding claims that the Company may have against the Supplier, including imbalance charges, cash-out charges, pipeline penalty charges, and other amounts owed to the Company, or to secure additional Gas supplies, including payment of the costs of the Gas supplies themselves, the cost of transportation storage, and other related costs incurred in bringing those Gas supplies into the Company's system. The Supplier shall continue its obligation to maintain its financial security instrument until it has satisfied all of its outstanding claims with the Company. The Supplier's financial security as established above must be in place no later than five (5) Business Days prior to the first day of each calendar month in order for the Supplier to maintain its eligibility to provide service to Customers.

20.3.4 The Supplier shall warrant that it has or will have entered into the necessary arrangements for the purchase of Supplies which it desires the Company to transport to its Customers, and that it has or will have entered into the necessary upstream transportation arrangements for the delivery of these Gas supplies to the Designated Receipt Point.

20.3.5 The Supplier shall warrant to the Company that it has good title to or lawful possession of all Gas delivered to the Company at the Designated Receipt Point on behalf of the Supplier or the Supplier's Customers. The Supplier shall indemnify the Company and hold it harmless from all suits, actions, debts, accounts, damages, costs, losses, taxes, and expenses arising from or out of any adverse legal claims of third parties to or against said Gas.

20.3.6 The Supplier shall be responsible for making all necessary arrangements and securing all required regulatory or governmental approvals, certificates, or permits to enable Gas to be delivered to the Company's system.

20.3.7 By agreeing to provide service under this tariff, the Supplier acknowledges that adherence to any applicable law regarding unfair trade practices, truth in advertising law, or law of similar import is required. Any Supplier found by a court of competent jurisdiction to have willfully or repeatedly violated the New Hampshire Consumer Protection Act, N.H.R.S.A. Ch. 358-A; the Federal Trade Commission Telemarketing Sales Rules, 16 C.F.R. Part 310; or the regulations promulgated pursuant to the Federal Trade Commission Act, 15 U.S.C. § 45 (a) (1), may be suspended or disqualified from acting as a Supplier on the Company's system.

20.3.8 If the Supplier fails to comply with or perform any of the obligations on its part established in this tariff or in the Supplier Service Agreement (e.g., failure to deliver Gas or late payment of bills rendered or failure to execute a capacity assignment), the Company maintains the right to terminate the Supplier's eligibility to act as a Supplier on the Company's system. Written notice of such an intent to terminate the Supplier's eligibility shall be given to the Supplier, its Customers, and the NHPUC. Notification to the Supplier shall be via Registered U.S. Mail - Return Receipt Requested or other means of documented delivery. Upon issuance of such written notice, the Company shall have the right to terminate the Supplier's eligibility to act as a Supplier on the Company's system at the expiration of ten (10) Gas Days after the giving of such notice, unless within such ten (10) Gas Day period the Supplier shall remedy to the full satisfaction of the Company such failure. Termination of such Supplier eligibility for any such cause shall be a cumulative remedy as to the Company, and shall not release the Supplier from its obligation to make payment of any amount or amounts due or to become due from the Supplier to the Company under the Company's applicable tariffs. Customers whose Supplier's deliveries have been terminated will be placed on Sales Service pursuant Section 13 of this tariff.

20.4 Access to Usage History and Current Billing Information

The Supplier shall be responsible for obtaining the necessary Authorization Number from each Customer prior to requesting the Company to release the Company's historic usage information specific to that Customer to such Supplier.

The Company shall be required to provide the most recent twelve (12) months of a Customer's historic usage data to a Supplier, provided that the Supplier has received the appropriate authorization as set forth above.

20.5 Enrollment, Cancellation, and Termination of Supplier Service

20.5.1 The Supplier shall be responsible for obtaining the necessary Authorization Number from each Customer prior to initiating Supplier Service to the Customer.

20.5.2 The Supplier must provide the Company with the following minimum information in the Company's predetermined format prior to the commencement or termination of service by the Supplier pursuant to Section 20.5 of this tariff:

(a) The Customer's name and current Authorization Number;

(b) The name of the Supplier;

(c) The Customer's billing option (for commencement of service);

(d) The type of change in Supplier Service (e.g., commencement of service, termination of service, or cancellation of service due to the rescission of an agreement with the Supplier by the Customer); and

(e) Any additional information reasonably required by the Company.

The Company shall determine whether each Customer's enrollment request as provided by a Supplier is complete and accurate, and matches the Customer's account record. In the event that the enrollment request is incomplete, inaccurate, or does not match the Customer's account record, then the Company will notify the Supplier so that the Supplier can resolve any discrepancies.

20.5.3 A change in Supplier Service will normally be made on a monthly metering and billing cycle basis, with changes taking effect on the date of the Customer's next scheduled meter read. Enrollment forms must be transmitted no less than ten (10) Business Days prior to the Customer's next scheduled meter read. If more than one Supplier submits a Supplier Service transaction for a given Customer during the monthly billing cycle, the first completed transaction that is received during the cycle shall be accepted. All other transactions shall be rejected. Rejected transactions may be resubmitted after the Customer's next scheduled meter read.

20.5.4 If the Supplier submits information to the Company to terminate Supplier Service to a Customer less than ten (10) Gas Days before the next scheduled meter read, Supplier Service shall be terminated on the date of the Customer's subsequent scheduled meter read. The Company shall confirm the termination date for Supplier Service.

20.5.5 In those instances when a Customer who is receiving Supplier Service from an existing Supplier initiates such service with a new Supplier, the Company shall send the date for the Customer's change in Supplier Service to the existing Supplier. To terminate Supplier Service with a Supplier and to initiate Sales Service, a Customer shall so inform the Company and the Supplier. Supplier Service shall be terminated on the date of the Customer's next scheduled meter read provided that the Company receives notice of such termination no less than ten (10) days in advance of the next scheduled meter read. Where such notice is received by the Company in less than ten (10) days in advance of the next scheduled read, the termination shall be effective as of the date of the following scheduled read. The Company shall send the Customer's termination date for Supplier Service to the Supplier.

20.5.6 A Customer who moves within the Company's service territory shall have the opportunity to notify its existing Supplier that it seeks to continue Supplier Service with said Supplier. Upon such notification, the Supplier may enroll the Customer pursuant to the provisions set forth in this Section in order to initiate Supplier Service for the Customer at the new location. The Company shall make the necessary adjustments to the Supplier's affected Aggregation Pools, including but not limited to, changes to Designated Receipt Points, and quantities of Capacity for assignment, if any, pursuant to this tariff and the Supplier's Service Agreement with the Company. In the event that the existing Supplier does not enroll the Customer for Supplier Service at the new location, the Company shall arrange for or provide Sales Service to the Customer.

20.5.7 In those instances when a new Customer moves to the Company's service territory, the Customer's Supplier must enroll the Customer pursuant to the provisions set forth in this

Section in order to initiate Supplier Service for the Customer. Otherwise, the Customer shall receive Sales Service in accordance with Section 13.

20.5.8 The Company may charge fees to the Supplier for processing the transactions described in this Section, as approved by the NHPUC. These fees are included in Attachment D.

20.6 Aggregation Pools

20.6.1 The aggregation of Customer accounts into an Aggregation Pool is limited by the Delivery Service of the respective Customers. Non-daily metered Customers subscribing to Delivery Service under Rate Schedules G-41, G-42, G-51 and G-52 must be aggregated in a separate pool from Customers subscribing to daily metered service under Rate Schedules G-43, G-53, and G-54.

20.6.2 Non-daily metered Customers taking Delivery Service pursuant to Section 10 of this tariff shall be combined by a Supplier into a single Aggregation Pool within each of the Company's designated Gas Service Areas.

20.6.3 Daily metered Customers taking Delivery Service pursuant to Section 9 of this tariff shall be combined by a Supplier into a single Aggregation Pool within each of the Company's designated Gas Service Areas.

20.6.4 A separate Supplier account will be established for each Supplier Aggregation Pool.

20.6.5 The election of any service from the Company by the Supplier shall apply to the entire Aggregation Pool and not just an individual customer in the Aggregation Pool.

20.6.6 The Company may charge a monthly fee to the Supplier for each Aggregation Pool pursuant to Attachment B.

20.7 Imbalance Trading

20.7.1 Prior to the imposition of imbalance charges, the Supplier may engage in trading daily and monthly imbalances for the previous Month, provided that daily imbalance trades are communicated to the Company within three (3) Business Days upon the Company's provision of information on Supplier imbalances for said Month.

20.7.2 The Company will make available a list of Suppliers by Gas Service Area making deliveries during the previous Month.

20.7.3 Aggregation Pools affected by the transaction must be located within the same Gas Service Area as defined in Section 4, unless waived by the Company.

20.7.4 Daily imbalance trades must be point-specific on those Gas Days when the Transporting Pipeline required the Company to balance on a point-specific basis.

20.8 Billing and Payment

20.8.1 By the tenth (10th) Business Day of the calendar month, the Company shall render to the Supplier a statement of the quantities delivered and amounts owed by the Supplier for the prior Month. The Company will provide Suppliers with their Customers' consumption data based on estimated or actual meter readings at the appropriate cycle read dates for each Customer in the Aggregation Pool pursuant to Section 12 of this tariff. This data will be provided on a rolling basis as readings or estimates are made.

20.8.2 Calculation of the charges applicable to the Aggregation Pool will be based on aggregated Gas Usage and other such indicators of all Customers in the Aggregation Pool. Billing for charges applicable to an Aggregation Pool, including but not limited to imbalance charges, credits or penalties, shall be billed to the Supplier on a calendar month basis.

20.8.3 The Supplier shall have ten (10) Business Days from the date of such statement to render payment to the Company. The Supplier shall render payment by means of electronic funds transfer to the Company. The late payment rate will apply to all amounts outstanding after ten (10) days.

20.8.4 If the correctness of the Company's bill to the Supplier is questioned or disputed by the Supplier, an explanation should be promptly requested from the Company. If the bill is determined to be incorrect, the Company shall issue a corrected bill. In the event that the Supplier and the Company fail to agree on the amount of the bill, the Supplier may file a complaint with the Commission to resolve such complaint.

21 CUSTOMER DESIGNATED REPRESENTATIVE

21.1 The Customer may appoint a Designated Representative to satisfy or undertake the Customer's duties and obligations; including, but not limited to submitting and/or receiving notices, making nominations, arranging for trades of imbalances, and performing operational and administrative tasks; provided, however, that under no circumstances will the appointment of a Designated Representative relieve the Customer of the responsibility to make full and timely payment to the Company for all Delivery Service provided under this tariff.

21.2 A request by a Designated Representative to the Company that contains the Customer's Authorization Number will be deemed to be confirmation that the Customer has designated such person or entity as a Designated Representative. A Customer may appoint only one (1) Designated Representative per account.

21.3 Under any agency established hereunder, the Company shall rely upon information concerning the applicable Customer's Delivery Service that is provided by the Designated Representative. All such information shall be deemed to have been provided by the Customer. Similarly, any notice or other information provided by the Company to the Designated Representative concerning the provision of Delivery Service to such Customer shall be deemed to have been provided to the Customer. The Customer shall rely upon any information concerning Delivery Service that is provided to the Designated Representative as if that information had been provided directly to the Customer.

21.4 The Customer shall agree to indemnify the Company and hold it harmless from any liability (including reasonable legal fees and expenses) that the Company incurs as a result of the Designated Representative's negligence or willful misconduct in its performance of agency functions on the Customer's behalf.

IV. ATTACHMENTS

1 ATTACHMENT A
Supplier Service Agreement

GAS SUPPLIER SERVICE AGREEMENT

This Agreement made this **[day]** day of **[month]**, 20**[xx]**, between Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities, a New Hampshire Corporation with a principal place of business at 15 Buttrick Road, Londonderry, NH 03053 (the "Company") and **[name of supplier]**, a **[state]** company with a principal place of business at **[address]** ("Supplier"). The Company and the Supplier is also individually referred to herein as a "Party" or collectively as the "Parties."

BASIC UNDERSTANDINGS

Whereas, the Company operates as a natural gas local distribution company and provides firm transportation of third- party gas on its distribution system; and

Whereas, the Company's Tariff (the "Tariff") on file with, and approved by, the New Hampshire Public Utilities Commission (the "NHPUC") permits delivery service customers to assign their rights of nominating and scheduling delivery of gas for transportation on the Company's system to a third-party natural gas supplier; and

Whereas, Supplier seeks to nominate and schedule delivery of gas for distribution on the Company's system on behalf of one or more customers taking delivery service from the Company; and

Whereas, the Company's Tariff, Part III, Section 20.2.3, requires Supplier to enter into this Supplier Service Agreement (the "Agreement") with the Company prior to the initiation of Supplier Service, as defined therein; and

Now therefore, the Parties hereto, each in consideration of the agreement of the other, do hereby agree as follows:

I. SCOPE AND APPLICATION

1.0 This Agreement shall be subject to the Company's Tariff as on file with the NHPUC and in effect from time to time. The Company's Tariff and applicable Rate Schedules are hereby incorporated by reference as though directly set forth herein. In the event the terms of this Agreement conflict with the Company's Tariff, the Tariff shall control.

1.1 This Agreement is intended for use between the Company and natural gas suppliers providing service to customers on the Company's distribution system, and may not be waived, altered, amended, or modified, except as provided herein.

1.2 Exhibits A and B, attached hereto and incorporated herein by reference, include additional terms that are a part of this Agreement.

II. DEFINITIONS

2.0 Any capitalized terms used in this Agreement and not defined herein shall be as defined in the Tariff or as stated in the NHPUC's regulations.

III. TERM

3.0 This Agreement shall become effective on the date hereof (the "Effective Date") and shall continue in full force and effect from month to month unless terminated by either Party by written notice given no less than thirty (30) days prior to the desired termination date, or unless otherwise agreed by the Parties. Notwithstanding the foregoing, the Parties agree to abide by all terms of this Agreement until any transactions that are outstanding at the time of termination are completed, including, but not limited to, the payment by Supplier to the Company of any and all outstanding balances.

3.1 Notwithstanding anything to the contrary elsewhere in this Agreement or in the Company's Tariff, any Party, by written notice to the other Party (the "Breaching Party") may terminate this Agreement, in whole or in part, with respect to such Breaching Party or suspend further performance without terminating this Agreement upon the occurrence of any of the following:(a) the Breaching Party terminates or suspends doing business; (b) the Breaching Party becomes subject to any bankruptcy or insolvency proceeding under federal or state law (unless removed or dismissed within sixty (60) days from the filing thereof), or becomes insolvent, becomes subject to direct control of a transferee, receiver or similar authority, or makes an assignment for the benefit of creditors; or (c) the Breaching Party commits a material breach of any of its obligations under this Agreement or the Tariff and has not cured such breach within fifteen (15) days after receipt of a written notice from the other Party specifying the nature of such.

3.2 Consistent with the provisions of Part III, Section 20.3.8 of the Company's Tariff, the Company also maintains the right to terminate the Supplier's eligibility to act as a Supplier. on the Company's system in the event that Supplier fails to comply with or perform any of the obligations on its part established in the Tariff or in this Agreement, including but not limited to, failure to deliver gas or to make payment of amounts due to the Company.

3.3 Notwithstanding the Effective Date, Supplier acknowledges and agrees that the Company is obligated to provide services pursuant to this Agreement only upon full satisfaction, or the Company's express written waiver, of the Conditions Precedent set forth in Article IV of this Agreement.

3.4 No delay by either Party in enforcing any of its rights hereunder shall be deemed a waiver of such rights, nor shall a waiver of one default be deemed a waiver of any other or subsequent default.

3.5 The enumeration of the foregoing remedies shall not be deemed a waiver of any other remedies to which either Party is legally entitled.

IV. CONDITIONS PRECEDENT

4.0 The following requirements shall be conditions precedent to the Company's obligations hereunder:

(a) Supplier shall provide the Company with all information requested in Exhibits A and B attached hereto and incorporated herein;

(b) Pursuant to Part Ill, Section 20.3.1 of the Company's Tariff, the Company shall confirm the Supplier's creditworthiness. In the event that Supplier has not demonstrated to the Company's satisfaction that it has met the Company's credit evaluation standards, the Company will identify such deficiencies to the Supplier, and the Supplier shall provide financial assurances as required by the Company consistent with the provisions of Part III, Section 20.3.3;

(c) Pursuant to Part Ill, Section 20.2.3 of the Company's Tariff, Supplier shall register with the NHPUC and provide evidence of such to the Company on an annual basis;

(d) Pursuant to Part III, Section 20.2.3 of the Company's Tariff, Supplier shall demonstrate to the Company that it is an approved shipper on the upstream pipelines and underground storage facilities on which the Company will assign capacity;

(e) Pursuant to Part Ill, Section 12.2.1 of the Company's Tariff, where Supplier elects to utilize the Standard Complete Billing Services from the Company, Supplier shall furnish to the Company a complete schedule of its relevant rates and rate pricing options for Supplier Service in written form or in an electronic format reasonably acceptable to the Company, at Company's option, no less than ten (10) Business Days prior to initial Customer enrollment for any such rate or prior to a change in Supplier's existing rates or five (5) Business Days prior to a change in rate pricing options.

(f) Prior to Customer Enrollment, Supplier shall successfully complete testing of the business-transaction communication protocols established by the Company, which may include communication by fax or telephone, electronic transactions as specified by the Company, or any other applicable communication requirements set forth by the Company.

V. <u>SUPPLIER CERTIFICATION</u>

5.0 In addition to the requirements listed in Section IV of this Agreement, and pursuant to Part III, Section 20.3.2 of the Company's Tariff, the Supplier hereby affirms the following:

(a) Supplier is not operating under any chapter of bankruptcy laws and is not subject to liquidation or debt reduction procedures under state laws, such as an assignment for the benefit of creditors, or any information creditors' committee agreement.

(b) Supplier is not aware of any change in business conditions that would cause a substantial deterioration in its financial conditions, a condition of insolvency, or the inability to exist as an ongoing business entity.

(c) Supplier has no delinquent balances outstanding for services previously provided by the Company, and Supplier has paid its account according to the established

terms and not made deductions or withheld payment for claims not authorized by contract.

(d) No significant collection lawsuits or judgments are outstanding that would materially affect Supplier's ability to remain solvent as a business entity.

(e) Supplier's New Hampshire business advertising and marketing materials conform to all applicable New Hampshire state and federal laws and regulations.

5.1 Supplier shall promptly notify Company of any material change in its financial condition as it relates to Supplier's creditworthiness or solvency as a business enterprise.

5.2 In the event that the NHPUC enacts regulations whereby Supplier must register with the NHPUC, Supplier shall notify Company within twenty-four (24) hours in writing in the event that its registration as a Competitive Supplier is acted upon by the NHPUC in such a way that it materially affects Supplier's performance under this Agreement, including but not limited to suspension, revocation, modification, or non-renewal. Consistent with Part III, Section 20.3.8 of the Company's Tariff, revocation or non-renewal of Supplier's registration shall be grounds for immediate termination of this Agreement by Company.

VI. NOMINATIONS AND SCHEDULING

6.0 The Company and Supplier, pursuant to the Company's Tariff on file with the NHPUC and the terms of this Agreement, agree to exchange and act on information regarding the nomination and scheduling of gas for transportation on behalf of Supplier's customers.

6.1 Supplier acknowledges and agrees that its transportation rights under this Agreement are solely those that have been assigned to it by the Customer pursuant to the Company's Tariff. Supplier further agrees that the Company shall have no obligation to honor any nomination or scheduling request from Supplier that, in the Company's sole judgment, exceeds the scope of Supplier's assigned rights or where such nominations or requests could be reasonably refused, directly or indirectly, based on the terms of this Agreement or the Company's Tariff.

6.2 Pursuant to Part Ill, Sections 9.3.2 and 10.3.3 of the Company's Tariff, nominations will be communicated to the Company in accordance with the terms of this Agreement as set forth in Exhibit A.

6.3 In the event of a discrepancy between the volume nominated to the Company by Supplier and the volume confirmed by the Company, the discrepancy shall be allocated between and among Supplier's Aggregation Pools and/or Customers in accordance with the Pre-Determined Allocation Method set forth in Exhibit B, attached hereto. In the event that the Supplier has not provided the Company with a Pre-Determined Allocation Method, the discrepancy will be allocated consistent with the provisions of the Company's Tariff.

VII. CAPACITY ASSIGNMENTS

7.0 The Supplier's Maximum Daily Peaking Quantity ("MDPQ") may be modified during the calendar year in accordance with the provisions of Part Ill, Sections 11.0 and 14.0 of the Company's Tariff. Company will notify Supplier prior to the effective date of such changes.

7.1 Pursuant to Part III, Section 11.9.2 of the Company's Tariff, the quantity of each Company Managed Supply assigned to Supplier may be modified during the calendar year in accordance with Part III, Sections 11.4 and 11.8 of the Company's Tariff. Company will notify Supplier prior to the effective date of such changes.

7.2 In accordance with Part Ill, Sections 11.0 and 14.0 of the Company's Tariff, the quantity of Capacity assigned to Supplier may be modified during the calendar year. In addition, the Company shall have the right to adjust a Customer's total capacity quantity C'TCQ") if the Company determines that the TCQ calculation is in error or is otherwise not calculated in accordance with the provisions of Part Ill, Sections 11.3.2.

7.3 Pursuant to Part Ill, Section 11.10.2 of the Company's Tariff, Supplier shall provide notice to the Company of its designation of contracts to be managed by the Company for cost mitigation purposes by the means set forth in Exhibit 8.0.

VIII. LEFT BLANK INTENTIONALLY (RESERVED FOR FUTURE USE)

IX. BILLING AND PAYMENT

9.0 Bills, fees and charges for services provided by the Company, including, but not limited to, monthly cashouts, monthly imbalance charges, daily imbalance charges, and any other applicable charges set forth in the Tariff or in this Agreement, shall be

rendered to Supplier on a monthly basis and shall be due upon receipt of said bill, unless otherwise specified in Exhibit A.

In addition to any other right or remedy available to the Company, Supplier's failure to make payment within ten (10) days of the posting date on the bill shall result in the addition of interest on any unpaid balance calculated at the maximum monthly rate allowable by the Company's Tariff. Interest shall accrue commencing from the date said bill was posted. The posting date is the date the bill is transmitted to Supplier. The bill may also be transmitted electronically if agreed to between the Parties in Exhibit A.

9.1 The Company shall have the right to deduct any amounts owed by Supplier to the Company for such services, which are thirty (30) days or more past due, from any amounts collected in the normal course of business by the Company on the Supplier's behalf. Amounts subject to a good faith dispute will not be subject to deduction.

9.2 The Parties agree to cooperate and provide each other with necessary documentation relating to any transactions resulting hereunder, including but not limited to, applicable sales or other tax exemptions. The Parties agree that Supplier's failure to comply with the provisions of this Article IX shall constitute default of payment under the Tariff and expose Supplier to liability thereunder as well as under this Agreement.

9.3 Consistent with the provisions of Part Ill, Sections 20.3.1 and 20.3.3 of the Company's Tariff, Supplier shall satisfy the creditworthiness standards established by the Company. In the event the Supplier has not demonstrated satisfaction of the Company's creditworthiness standards, the Supplier shall provide, upon ten (10) days written notice from the Company, financial assurance in the form of an advance deposit, letter of credit, surety bond or financial guaranty from a parent company, as reasonably determined by the Company. The amount of any such financial assurance required by the Company shall be calculated in accordance with the provisions of Part III, Section 20.3.3 of the Company's Tariff. The Company shall review Supplier's satisfaction of the Company's creditworthiness standards every twelve (12) months during the term of this Agreement giving consideration to Supplier's payment history in the preceding twelve-month period. Upon the request of Supplier, the Company shall exercise its sole reasonable discretion to determine whether a change in the form of financial assurance is warranted. In the event that the Company requires financial assurances in the form of a deposit, such deposits shall accrue interest in accordance with the Company's Tariff. Such deposit shall be returned to Supplier within thirty (30) days of the expiration or termination of this Agreement, provided that Supplier is not in default under this Agreement. The Company may deduct from the deposit any amount payable to the Company by Supplier under this Agreement, which has not been paid by the Supplier when due, unless such non-payment relates to a documented billing dispute between Supplier and the Company. Such deduction may be taken by the Company without notice or demand of any kind and the Company may, in its sole discretion, apply such deposit against any amount then due and payable. In the event that Company applies all or any portion of such deposit, Supplier shall deposit such sums as are necessary to replenish the security deposit to its maximum amount, within ten (10) days' notice of such deduction and application.

X. REPRESENTATIONS

10.0 Each Party represents that it is and shall remain in compliance with all applicable laws, tariffs, and NHPUC regulations during the term of this Agreement.

10.1 Each person executing this Agreement for the respective Parties represents and warrants that he or she has authority to bind that Party.

10.2 Each Party represents that (a) it has the full power and authority to execute, deliver, and perform this Agreement; (b) the execution, delivery, and performance of this Agreement have been duly authorized by all necessary corporate or other action by such Party; and (c) this Agreement constitutes that Party's legal, valid and binding obligation, enforceable against such Party in accordance with its terms.

10.3 Each Party shall exercise all reasonable care, diligence and good faith in the performance of its duties pursuant to this Agreement, and carry out its duties in accordance with applicable recognized professional standards.

XI. NONDISCLOSURE

11.0 Neither Party may disclose any Confidential Information obtained pursuant to this Agreement to any third Party, including affiliates of such Party, without the express prior written consent of the other Party. As used herein, the term "Confidential Information" shall include, but not be limited to, all business, financial, and commercial information pertaining to the Parties, Customers of either or both Parties, Suppliers for either Party, personnel of either Party; any trade secrets; and other information of a similar nature; whether written or in intangible form that is marked proprietary or confidential with the appropriate owner's name.

11.1 Confidential Information shall not include information known to either Party prior to obtaining the same from the other Party, information in the public domain, or information obtained by a Party from a third party who did not, directly or indirectly, receive the same from the other Party to this Agreement or from a Party who was under an obligation of confidentiality to the other Party to this Agreement, or information developed by either Party independent of any Confidential Information. The receiving Party shall use the higher of the standard of care that the receiving Party uses to preserve its own Confidential Information or a reasonable standard of care to prevent unauthorized use or disclosure of such Confidential Information. Each receiving Party shall, upon termination of this Agreement or at any time upon the request of the disclosing Party, promptly return or destroy all Confidential Information of the disclosing Party then in its possession.

11.2 Notwithstanding the preceding, Confidential Information may be disclosed to any governmental, judicial or regulatory authority requiring such Confidential Information pursuant to any applicable law, regulation, ruling, or order, provided that: (a) such Confidential Information is submitted under any applicable provision, if any, for confidential treatment by such governmental, judicial or regulatory authority; and (b) prior to such disclosure, the other Party is given prompt notice of the disclosure requirement so that it may take whatever action it deems appropriate, including intervention in any proceeding and the seeking of any injunction to prohibit such disclosure.

11.3 No provision of this Agreement shall prohibit the Company from communicating to its Customers and prospective customers, information regarding Supplier's eligibility to conduct business on the Company's distribution system. In addition, obligations under this Article XI shall survive the termination or expiration of this Agreement.

XII. LIABILITY AND INDEMNIFICATION

12.0 The Parties acknowledge and agree that the Force Majeure provisions set forth in Part III, Section 17 of the Company's Tariff are incorporated by reference as if set forth herein.

12.1 The Parties acknowledge and agree that the liability and indemnification provisions in Part III, Section 17 of the Company's Tariff are incorporated by reference as if set forth herein.

12.2 For purposes of such liability and indemnification, however, the Parties acknowledge and agree that nothing in such Tariff prohibits one Party from impleading the other Party as a third-party defendant, whether or not one or both Parties are named as defendants in the initial claim of a third party. The third-party claim shall be stayed pending resolution of any dispute regarding liability and indemnification under this Agreement. Such resolution shall be final and binding upon the Parties only after agreement between the Parties or after entry of a final judgment, after any further appeals of a court of competent jurisdiction to which any appeal may have been taken from the determination of the arbitrator(s).

12.3 The Parties acknowledge and agree that for purposes of Part III, Section 17 the Company's Tariff, a Party seeking recovery from the other Party in connection with the performance of its obligations of the Tariff shall not be entitled to recovery where its own negligent acts or omissions contribute to or cause such damages, costs, fines, penalties or liabilities.

12.4 The Parties expressly acknowledge and agree that the dispute resolution provision in Article XIII of this Agreement shall apply to any and all disputes arising under this Article, including, without limitation, those disputes that arise as a result of either of

the Parties being named as a defendant in the primary action or being named as a third-party defendant by a defendant in the primary action.

12.5 Notwithstanding anything in this Agreement or the Tariff to the contrary, in no event shall any Party hereto be liable to any other Party hereto for indirect, consequential, punitive, special, or exemplary damages under any theory of law that is now or may in the future be in effect, including without limitation: contract, tort, N.H.R.S.A. Ch. 358-A, strict liability, or negligence.

12.6 Notwithstanding the availability of other remedies at law or in equity, either Party hereto shall be entitled to specific performance to remedy a breach of this Agreement by the other Party.

12.7 Supplier further agrees that it shall indemnify, defend and hold harmless the Company with respect to any claim, suit, damages or costs of any kind arising from any action or inaction of the Company in reliance upon the nominations, scheduling instructions or other communications from Supplier. The Parties agree that reliance on such instructions and communications shall be deemed reasonable and shall not constitute negligence.

12.8 The provisions of this Article XII shall survive the termination of this Agreement.

XIII. DISPUTE RESOLUTION

13.0 Disputes hereunder shall be reduced to writing and referred to the Parties' representatives for resolution. The Parties' representatives shall meet and make all reasonable efforts to resolve the dispute. Pending resolution, the Parties shall continue to fulfill their obligations under this Agreement in good faith, unless this Agreement has been suspended or terminated. If the Parties fail to resolve the dispute within thirty (30) days, they may mutually agree to pursue mediation or arbitration to resolve such issues.

13.1 The interpretation and performance of this Agreement shall be in accordance with and controlled by the laws of the State of New Hampshire, without regard to the doctrines governing choice of law. All disputes arising hereunder shall be brought either before the NHPUC or the state courts of the State of New Hampshire.

XIV. COMMUNICATIONS

14.0 Except as otherwise provided herein, any notices given under this Agreement shall be in writing and shall be delivered to the Company as set forth in Exhibit A, by hand or sent by (a) certified mail, return receipt requested, first class postage prepaid, (b) telecopy, or (c) a nationally recognized courier service. Notices and other communications to Supplier shall also be addressed as shown on Exhibit A. Notices given hereunder shall be deemed to have been given upon receipt or any refusal to accept; telecopied notices shall be deemed to have been given upon confirmation of their receipt.

14.1 All communications required by the Company's Tariff shall be made in accordance with the schedule listed in Exhibit A. Information on active Company fax numbers and e-mail addresses shall be posted on the Company's Internet Website at http://www.libertyutilities.com/east/gas/business_partners/index.html

XV. ENFORCEABILITY

15.0 In the event that any portion or part of this Agreement is deemed invalid, against public policy, void or otherwise unenforceable by a court of law, the validity and enforceability of the remaining portions thereof shall otherwise be fully enforceable.

15.1 No waiver by any Party of any one or more defaults by the other Party in the performance of any provision of this Agreement shall operate or be construed as a waiver of any other present or future default, whether of a like or different character. No delay by either Party in enforcing any of its rights hereunder shall be deemed a waiver of such rights.

XVI. ASSIGNMENT AND DELEGATION

16.0 Any entity that shall succeed by purchase, merger or consolidation to the assets and properties, substantially or as an entity, of either Party hereto shall be entitled to the rights and shall be subject to the obligations of its predecessor in interest under this Agreement.

16.1 Either Party may, without relieving itself of its obligations under this Agreement, assign any of its rights or obligations hereunder to an affiliated entity, but otherwise no assignment of this Agreement or any of the rights or obligations hereunder shall

be made unless there first shall have been obtained the written consent of the other Party. No assignment by Supplier shall take effect until the assignee has met the requirements of Article IV hereunder. No assignment of this Agreement shall relieve the assigning Party of any of its obligations under this Agreement until such obligations have been assumed by the assignee.

16.2 The restrictions on assignment contained herein shall not in any way prevent either Party from pledging or mortgaging its rights as security for its indebtedness.

16.3 In addition, either Party may subcontract its duties under this Agreement to a subcontractor provided that the subcontracting Party shall remain fully responsible as a principal and not as a guarantor for performance of any subcontracted duties, and shall serve as the point of contact between its subcontractor and the other Party, and the subcontractor shall meet the requirements of any applicable laws, rules, regulations, and Tariff. The assigning or subcontracting Party shall provide the other Party with thirty (30) calendar days' prior written notice of any such subcontracting or assignment, which notice shall include such information about the subcontractor as the other Party shall reasonably require.

XVII. MISCELLANEOUS

17.0 This Agreement, all Exhibits and attachments hereto and all documents referenced herein, constitute the entire agreement between the Parties and supersedes all other agreements, communications, and representations. Paragraph headings are for convenience only and are not to be construed as part of this Agreement.

17.1 Unless otherwise provided herein, no modification of, or supplement to, the terms and provisions stated in this Agreement shall be or become effective without the written consent of both Parties.

17.2 This Agreement may be executed simultaneously in two or more counterparts, each of which shall be deemed to be an original but all of which shall constitute one and the same document.

In witness whereof, the Parties have caused this Agreement to be executed by their duly authorized representatives as of the date above.

STATE OF NEW HAMPSHIRE
PUBLIC UTILITIES COMMISSION

DG 20-105

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP. D/B/A LIBERTY

Petition for Permanent Rates

Order on Settlement Agreement and Permanent Rates

O R D E R N O. 26,505

July 30, 2021

In this order, the Commission approves a permanent rate increase for Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty, effective August 1, 2020.

I. PROCEDURAL HISTORY

On July 31, 2020, Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty (Liberty) filed a Petition for Permanent and Temporary Rates pursuant to RSA 378:27 and 378:28. Liberty also filed a motion for confidential treatment regarding compensation information, customer information, and contract pricing.

On July 8, 2020, the Office of the Consumer Advocate (OCA) filed a letter of participation in this docket pursuant to RSA 363:28.

In Order No. 26,395 (August 19, 2020), the Commission suspended Liberty's proposed tariffs pending further investigation pursuant to RSA 378:6, I(a). In Order No. 26,412 (September 30, 2020), the Commission set temporary rates at existing levels, approved a revenue requirement for the purposes of temporary rates of $92,890,325 with a $4,994,290 increase in allowed revenues accomplished by adjusting the allowed revenue per customer (RPC) amounts for each of Liberty's rate classes, effective October 1, 2020.

On November 20, 2020, Liberty filed a Motion to Amend its petition to include a request for recovery of approximately $7.5 million in costs incurred to investigate, evaluate, and assess the Granite Bridge Liquefied Natural Gas tank and related gas pipeline (Granite Bridge project). Accompanying its filing was a motion for protective order and confidential treatment. On December 18, 2020, the Commission issued a Supplemental Order of Notice relating to Liberty's motion.

On May 24, 2021, Commission Staff, now with the Department of Energy (Energy), on behalf of the parties, filed a letter informing the Commission that a settlement in principle had been reached resolving all issues in this proceeding except for the recovery of costs associated with the Granite Bridge project, which the parties intended to litigate. On May 28, the Commission issued a secretarial letter scheduling separate hearing dates to consider the Granite Bridge project dispute and to consider a settlement agreement as to the other issues in this rate case. On June 7, Liberty filed a motion for confidential treatment for discovery responses. On June 30, Liberty filed a settlement agreement reached between the parties on permanent rates (Settlement Agreement) and attachments. On July 13, the Commission held a duly noticed hearing on the Settlement Agreement.

Liberty's petitions and related filings, other than any information for which confidential treatment is requested of or granted by the Commission, are posted on the Commission's website at https://www.puc.nh.gov/Regulatory/Docketbk/2020/20-105.html.

II. POSITIONS OF THE PARTIES

A. Liberty

Liberty's petition requested that the Commission grant: (1) a permanent increase in Liberty's distribution rates effective with service rendered on or after September 1, 2020, designed to yield an increase of $13,497,250 in annual revenue; (2) temporary rates effective with service rendered on or after October 1, 2020, designed to yield an increase of $6,500,000 in annual revenue pending the Commission's final determination on the Company's request for a permanent rate increase; and (3) a step adjustment in rates designed to yield an increase of $5,680,641 in annual revenue to recover costs associated with approximately $38 million of capital expenditures projected to be made during 2020, to be effective no earlier than August 1, 2021. Liberty alleged that under the rates currently in effect, it is unable to earn the rate of return authorized by the Commission.

B. Office of the Consumer Advocate

On March 18, 2021, the Office of the Consumer Advocate (OCA) pre-filed the direct testimony of Pradip Chattopadhyay, Al-Azad Iqbal, and Jerome Mierzwa. The OCA's testimony recommended an ROE of 8.9 percent, did not include a recommendation for a capital structure different from the Company's proposal, and included other proposed adjustments and rate design elements.

C. Department of Energy

On March 18, 2021, Energy filed the direct testimony of Stephen Frink, Randall Woolridge, and Donna Mullinax. Energy's testimony recommended the following: (1) a return on equity of 9.0 percent and a capital structure of 49.21 percent equity and 50.79 percent long term debt; (2) a permanent decrease to revenue requirement of $2,240,114 below the temporary rate level; (3) one step increase for capital expenditures projected to be made during 2020 of $5,157,187, subject to audit, with no step adjustments for future years; and (5) other proposed adjustments.

III. MOTIONS FOR PROTECTIVE ORDER

Liberty moved for orders pursuant to the New Hampshire Code of Administrative Rules, Puc 203.08, to protect portions of its filings and responses to various data requests. Liberty asserted that each of its identified responses are exempt from disclosure under RSA 91 A:5, IV, or RSA 363:38.

In its July 31, 2020 filing Liberty requested confidential treatment of bates page I-120 of its initial filing, which it stated contains employee compensation information for which there is a strong privacy interest with no corresponding public interest. In its November 20, 2020, filing Liberty requested confidential treatment of its Supplemental Testimony at bates pages 18, 20, 23-24, 26-27, and 44-45, which it stated contains confidential pricing information that, if disclosed, would impair its ability to receive competitive pricing in the future and for which there is a strong privacy interest with no corresponding public interest. In its April 29, 2021, filing Liberty requested confidential treatment of: Attachment WJC-MRS-1(c) at Bates II-607 of its rebuttal testimony, which it stated contains confidential pricing information that, if disclosed, would impair its ability to receive competitive pricing in the future; and Attachment WJC/SEM-1, which it stated contains customer information that is confidential pursuant to RSA 363:37-38. In its June 7, 2021, filing Liberty requested confidential treatment of: Confidential Attachments OCA 1-4.e.3,xlsx, Staff 1-8.xlsx, Staff 1-8.1, Staff TS 1.2.b.1, Staff TS 1-2.b.2, and Staff TSTS-1.a.xlsx, which it stated contains customer information that is confidential pursuant to RSA 363:37-38; Confidential Attachments OCA 1-35.xlsx, Staff 1-4.d.2.xlsx, Staff TS 3-8.b.1, Staff TS 3-8.b.2, Staff TS 3-8.b.3, Staff TS 3-8.b.4, Staff TS 3-8.c.xlsx, and Staff TS 2-1 under both RSA 363:38 and RSA 91-A:5 for which there is a strong privacy interest with no corresponding public interest., IV; Confidential Attachments OCA 4-9.b.i.1 through OCA 4-9.b.i.3, OCA 4-

9.b.iii.1 through OCA 4-9.b.iii.5, and Staff 4-5a through Staff 4-5l, which it stated contains confidential information of third parties that is proprietary and competitively sensitive for which there is a strong privacy interest with no corresponding public interest; Confidential Attachments Staff 2-1, t Staff 3-2.1, Staff 3-20.1.zip, Staff 3-20.2.pdf, Staff 3-22.zip[1], Staff 3-23.2.zip, OCA 6-9.2, and Staff TS 3-16, which it stated contains confidential information of Liberty and its corporate affiliates for which there is a strong privacy interest with no corresponding public interest; responses to Staff 3-64, Staff 3-67, and Confidential Attachment Staff TS 3-15.xlsx, which it stated contains confidential employee information which constitutes confidential personnel information for which there is a strong privacy interest with no corresponding public interest; Confidential Attachment Staff 4-3, Staff 5-7.xlsx and its response to OCA 5-6, which it stated contains confidential pricing information that, if disclosed, would impair its ability to receive competitive pricing in the future. Aside from the withdrawn request relating to Staff 3-22.zip, no party objected to Liberty's requests.

IV. SETTLEMENT AGREEMENT

Liberty, the OCA, and Energy (Settling Parties) were signatories to the Settlement Agreement. During the hearing on the Settlement Agreement, testimony was presented by Steven Mullen, David Simek, Heather Tebbetts, Pradip Chattopadhyay, Al-Azad Iqbal, and Donna Mullinax in support of the agreement.

The Settlement Agreement provides for a permanent increase to Liberty's distribution revenue requirement in the amount of $6,294,290, which is a $1.3 million increase above the level approved of in the temporary rates order. Of the total increase, the Settling Parties agreed

[1] At hearing on July 13, 2021, Energy objected to Liberty's request for confidential treatment of the information identified as Staff 3-22.zip, Liberty withdrew its request for confidential treatment of this information in its cover letter accompanying its responses to Record Requests on July 16, 2021.

that $1,993,587 of the permanent increase shall be applied to the next cost of gas proceeding, along with a reconciling surcharge added to Liberty's Local Distribution Adjustment Clause. The remainder of the revenue requirement increase, $4,394,290, would be collected through distribution rates for service rendered effective August 1, 2021, and reconciled back to the effective date of temporary rates. Because the temporary rate revenue increase was an increase of $4,994,290, the result is that the permanent rate change shall be a decrease of approximately $600,000 from temporary rates.

Regarding rate base, the Settlement Agreement provides for 25.72 lead/lag days in cash working capital, commitments to study cost of removal in 2021 and depreciation based on 2021 numbers which shall be reflected in the second step increase, and for treatment of Liberty's excess accumulated deferred income tax liabilities.

The Settlement Agreement provides for a return on equity of 9.3 percent and a capital structure of 52 percent equity and 48 percent long term debt. The Settlement Agreement allows Liberty two step adjustments, the first for certain capital projects placed in service during calendar year 2020, effective on August 1, 2021, and capped at a $4.0 million increase to annual distribution revenue. The second step adjustment would be for certain capital projects placed in service during calendar year 2021, and shall be effective August 1, 2022, and capped at a $3.2 million annual increase to distribution revenue. Additionally, the Settlement Agreement contains a provision restricting Liberty's next rate case test year to be no sooner than the twelve-month period ending December 31, 2022.

The Settlement Agreement includes a local property tax adjustment mechanism, which the settling parties assert is consistent with RSA 72:8-e. The mechanism would allow Liberty recovery or refund of local property tax expenses that differ from the amount included in base rates, beginning with the April 1, 2020 tax year.

The Settlement Agreement contains new provisions relating to the costs associated with the Keene propane to compressed natural gas (CNG) conversion, including allowing Liberty to recover one-half of the incrementally higher CNG supply costs as compared to the propane supply cost, definitional terms relating to the Keene Phase 1 project, and a provision for cost recovery in the second step adjustment. The Settlement Agreement also contains provisions resulting in reduction to the revenue requirement relating to the continuation of the risk sharing mechanism for the Pelham Expansion project and iNATGAS CNG facility. The recovery of costs associated with the Granite Bridge project are excluded from the Settlement Agreement.

The settling parties included provisions relating to Liberty's decoupled rate structure designed to clarify the decoupling mechanism and associated tariff language. Those provisions include five key points relating to 1) revenue per customer calculations; 2) incremental revenue per customer calculations; 3) the Managed Expansion Program premium; 4) a Revenue Decoupling Adjustment on Liberty's balance sheets; and 5) the revenue per customer calculation reporting requirements. The settling parties also agreed to review regulatory reporting requirements, and discuss areas for potential elimination, consolidation, and decreased frequency of those reporting requirements.

Lastly, the Settlement agreement contains provisions relating to recoupment of rate case expenses and revenue reconciliation. Under the terms of the Settlement Agreement, Liberty is authorized to recover an estimated $856,864.64 in rate case expenses beginning November 1, 2021 through the Local Distribution Adjustment Clause mechanism, subject to review and approval by the Commission. In reconciling temporary rates to permanent rates, Liberty shall return an estimated $570,933 through the Local Distribution Adjustment Clause mechanism, subject to review and approval as part of a through the Local Distribution Adjustment Clause proceeding.

V. COMMISSION ANALYSIS

Settlement Agreement

The Commission is authorized to fix rates after a hearing, upon determining that rates, fares, and charges are just and reasonable. RSA 378:7. In circumstances where a utility seeks to increase rates, the utility bears the burden of proving the necessity of the increase pursuant to RSA 378:8. In determining whether rates are just and reasonable, the Commission must balance the customers' interest in paying no higher rates than are required against the investors' interest in obtaining a reasonable return on their investment. *Eastman Sewer Company, Inc.*, 138 N.H. 221, 225 (1994). In this way, the Commission serves as arbiter between the interests of customers and those of regulated utilities. *See* RSA 363:17-a; *see also EnergyNorth Natural Gas, Inc. d/b/a National Grid NH*, Order No. 25,202 at 17 (March 10, 2011).

Pursuant to RSA 541-A:31, V(a), informal disposition may be made of any contested case at any time prior to the entry of a final decision or order, by stipulation, agreed settlement, consent order, or default. Puc 203.20(b) requires the Commission to determine, prior to approving disposition of a contested case by settlement, that the settlement results are just and reasonable and serve the public interest.

In general, the Commission encourages parties to attempt to reach a settlement of issues through negotiation and compromise, as it is an opportunity for creative problem solving, allows the parties to reach a result more in line with their expectations, and is often a more expedient alternative to litigation. *EnergyNorth Natural Gas, Inc. d/b/a National Grid NH*, Order No.

25,202 at 18 (March 10, 2011). Even where all parties join a settlement agreement, however, the Commission cannot approve it without independently determining that the result comports with applicable standards. *Id*. As the Settlement Agreement pertains to a rate case, the underlying standard to be applied is whether the resulting rates are just and reasonable. RSA 378:7.

We note that the Settlement Agreement purports to resolve all matters in this docket with the exception of the Granite Bridge Project, which the parties agreed to litigate separately. The Commission accepted the parties' effective bifurcation of issues though secretarial letter scheduling separate hearings on the different issues. The Commission held separate hearings related to the recovery costs of the Granite Bridge project on June 7^{th} and 8^{th}, 2021. In this order we consider the terms of the Settlement Agreement only; the dispute regarding recovery of costs associated with the Granite Bridge Project will be addressed in a subsequent order.

The Settlement Agreement calls for an overall permanent revenue requirement increase of $6,294,290, which is a $1.3 million increase above the level provided by temporary rates. The Settlement Agreement also contemplates two step adjustments. The first step adjustment is capped at $4,000,000 for 2020 capital investments placed in service on or before December 31, 2020, and the second step adjustment is capped at $3,200,000 for 2021 capital investments placed in service on or before December 31, 2021.

We note the Settlement Agreement contemplates a process for review and Commission approval of the second step adjustment, while no process is provided for the first step adjustment. Implicit authorization of a company's first step adjustment through a hearing on a rate case settlement agreement is not in keeping with this Commission's recent practice, and assumes approval of the settlement agreement. *See, e.g.,* filings of May 26, 2020, in Docket No. DE 19-064 (Liberty Utilities (Granite State Electric) Corp. d/b/a Liberty Utilities concurrently filed settlement agreement and request for first step adjustment); filings of October 9, 2020, in Docket No. DE 19-057 (Public Service Company of New Hampshire d/b/a Eversource Energy concurrently filed settlement agreement and request for first step adjustment). Additionally, we note that subsection 5.5 affords the parties to the Settlement Agreement the ability to contest the prudence of individual investments within the step *increases*. Since the Commission has not reviewed the non-growth projects placed in service in 2020 (Exhibit 49, bates page 28) in detail, we cannot determine prudence of the first step.

We compare the amounts to the revenue increase sought by Liberty (a revenue increase of $13,497,250 plus a 2020 step adjustment of $5,680,641 together with a request yearly step adjustments for capital expenditures placed in service in 2021 and 2022), to that originally recommended by Energy ($2,240,114 revenue decrease below the temporary rate level with one step adjustment for $5,157,187). From that comparison, we understand that the amount of the revenue increase in the Settlement Agreement represents a negotiated amount that the Settling Parties agreed will provide the Company the revenues necessary to provide safe and reliable service.

The Commission notes that Liberty's approved distribution revenue from the time of its acquisition of EnergyNorth in 2012 (Order No. 25,370 (May 30, 2012)) to the present has resulted in an average annual increase of 7.3%, while the customer base has grown only 1.4% per year.

The Commission notes further the Company's actual debt/equity ratio of 43.6% Long-Term Debt and 56.4% Equity, and the Settlement Agreement of 48% Long Term Debt and 52% Equity. We encourage Liberty to review its capital structure in light of a low cost-of-debt macroeconomic environment in anticipation of future rate cases. We also note that the agreement results in a return on equity of 9.3% and return on debt of 4.42%.

Based on the evidence before us, we find the capital structure, overall rate of return, and return on equity to be reasonable, though we anticipate gradual movement toward more debt in the cost of capital moving forward. In an increased debt regime, equity would be lower and may result in a higher return on equity than currently contemplated. We also note that the return on equity we are approving is within the scope of recent equity returns approved by the Commission, a reasonable but by no means definitive indication of an appropriate return on equity. *See Bluefield Water Works & Improvement Co. v. P.S.C. of West Virginia*, 262 U.S. 679 (1923) and *F.P.C. v. Hope Natural Gas Co.*, 320 U.S. 591 (1944), *see, e.g.*, *Public Service Company of New Hampshire d/b/a/ Eversource Energy*, Order No. 26,433 at 19 (December 15, 2020) (approving a return on equity of 9.3 percent); *Liberty Utilities (EnergyNorth Natural Gas) Corp., d/b/a Liberty Utilities*, Order No. 26,122 at 43 (April 27, 2018) (approving a return on equity of 9.3 percent); *Liberty Utilities (Granite State Electric) Corp. d/b/a Liberty Utilities*, Order No. 26,376 at 12 (June 30, 2020) (approving a return on equity of 9.1 percent).

The record before us included testimony made under oath and adopted during the hearing that was sufficient to make the required findings relating to the permanent rate increase based on the test year of 2019 proposed in the Settlement Agreement. We have reviewed the record and conclude that the Settlement Agreement balances the interests of the customers' desire to pay no higher rates than reasonably necessary and the investors' right to earn a reasonable return on their investment. *See Eastman Sewer Company, Inc.*, 138 N.H. 221, 225 (1994). Accordingly, we find the resulting increase to permanent rates to be just and reasonable as required by RSA 374:2 and RSA 378:28.

With respect to the Property Tax Adjustment Mechanism described in the Settlement Agreement, we find its terms to be consistent with the requirements of RSA 72:8-e, and find the terms relating to filing deadlines and recoupment periods contained in the Settlement Agreement to be acceptable. *See* RSA 72:8-e, II.

Although we recognize the proposed Settlement Agreement represents a global settlement of all issues in this proceeding by parties with diverse interests, and we generally agree that the settlement results are just and reasonable and serve the public interest, we approve the Settlement Agreement subject to the following conditions:

1) With respect to the Settlement Agreement's provision for the recovery of rate case expenses, we understand the $856,864.64 figure provided is an estimate that is subject to our review and approval. We emphasize that the Commission's approval of rate case expenses is based on the criteria identified in Puc Ch. 1900, and contingent on our independent finding that the expenses to be recovered are just and reasonable and in the public interest. *See* Puc 1901.01(b). Our approval of the Settlement Agreement is not a finding that Liberty has met its burden to prove that its rate case expenses have met this standard.
2) With respect to the first step adjustment, for plant placed in service during 2020, we accept the provision allowing for and capping such an adjustment at $4.0 million, however we reject its implementation on August 1, 2021, contemporaneously with the distribution rates approved by this order. For the reasons stated above, we direct Liberty not to collect any revenue requirement associated the first step adjustment until it files a related request with the Commission containing the same level of detail as specified in the Settlement Agreement for the second step increase and specifically

identifying which projects shall be considered for prudence determinations up to but not in excess of the $4 million dollar cap, the Commission holds a hearing, and the Commission has found the 2020 plant additions necessary to support the revenue requirement cap to be prudently incurred, used, and useful. Upon receipt of the request, the Commission will schedule such a hearing. We direct the Company to request an effective date for the step increase no sooner than 30 days from the date the request is filed. We also condition the first step increase on the same conditions included in section 5.4 of the Settlement Agreement, including that it shall be subject to audit and reconciliation based on the results of the audit, as approved by the Commission.

Motion for Protective Order Related to Discovery Responses

RSA Chapter 91-A, ensures public access to information relative to the conduct and activities of government agencies or "public bodies" such as the Commission. Disclosure of records may be required unless the information is protected by statute under RSA 91-A:4 , or exempt from disclosure under RSA 91-A:5. RSA 91-A:5, IV, exempts several categories of information, including personnel practices; confidential, commercial, or financial information; and personnel files. In each instance, the party seeking protection of the information in question has the burden of showing that a privacy interest exists, and that its interest in confidentiality outweighs the public's interest in disclosure. *Union Leader Corp. v. Town of Salem*, 173 N.H. 345, 354-355 (May 29, 2020) (citing *Prof'l Firefighters of N.H. v. Local Gov't Ctr.*, 159 N.H. 699, 707 (2010)). The Commission's rules require a motion for confidential treatment to include, among other things, a "[s]pecific reference to the statutory or common law support for confidentiality" and a "detailed statement of the harm that would result from disclosure." Puc

203.08. The benefits of disclosure to the public are then weighed against the interest(s) in nondisclosure. Separately, RSA 363:37-38 states an independent statutory basis for confidential treatment of individual utility customer data that can identify, singly or in combination, specific customers.

With respect to the requests that are related to confidential information and based solely on RSA 91-A:5, IV's enumerated exemptions, we find that Liberty has identified adequate privacy interests and that disclosure is likely to cause harm to Liberty, its employees, other third parties, and/or customers. Finally, we agree that RSA 363:38 protects the identified customer data and therefore RSA 91-A:4 applies.

Next, we must consider the public interest in disclosure. This information Liberty seeks to protect is unlikely to inform the public of the Commission's regulatory activities. On balance, the public's interest in disclosure of this information is outweighed by the potential harm to Liberty, its employees, third parties, and/or customers. Therefore, we grant Liberty's motions for protective orders filed on July 31, 2020, April 29, 2021, and June 7, 2021. We defer action on Liberty's motion for protective order filed on November 20, 2020 until we issue an order on Liberty's request to recover costs associated with the Granite Bridge project. This ruling is subject to our ongoing authority, on our own motion, or on the motion of Staff, any party, or member of the public to reconsider our determination. *See* Puc 203.08(k).

The Commission reminds the parties that due to recent statutory changes the Commission may not communicate with Department of Energy Staff on pending matters. *See* RSA 12-P:5, VI and, *see generally,* RSA 363:12. As a result, the Commission may lack access to information made available for Department of Energy unless it is directly filed in the Commission's relevant open docket.

Based upon the foregoing, it is hereby

ORDERED, that the Settlement Agreement regarding permanent distribution rates based on the 2019 test year between Liberty, Energy, and the Office of the Consumer Advocate is hereby APPROVED, as set forth and conditioned herein above; and it is

FURTHER ORDERED, that Liberty is hereby authorized to begin recovery of the permanent increase to its distribution revenue requirement of $6,294,290 in rates effective with service rendered on and after August 1, 2021, consistent with the terms of the Settlement Agreement and this order; and it is

FURTHER ORDERED, that temporary rates approved in Order No. 26,412 (September 30, 2020), are to be reconciled with permanent rates approved in this order, with such reconciliation occurring through the Local Distribution Adjustment Clause mechanism over the course of the 12 month period beginning November 1, 2021, consistent with the terms of the Settlement Agreement; and it is

FURTHER ORDERED, that that Liberty is authorized to recover just and reasonable rate case expenses over one year through the Local Distribution Adjustment Clause commencing on November 1, 2021, subject to audit and adjustment, as set forth herein above; and it is

FURTHER ORDERED, that Liberty is authorized to recover two step increases for capital expenditures placed in service in 2020 and 2021 as provided in the Settlement Agreement, subject to further review and determination by the Commission as set forth herein above and in the Settlement Agreement; and it is

FURTHER ORDERED, that Liberty shall file all necessary documentation and reports in support of regulatory costs as noted above, and the step increases, as required by the Settlement Agreement and the conditions of this order; and it is

FURTHER ORDERED, that that the Commission will hold a hearing on Liberty's request for an increase in its step 1 revenue requirement of $4.0 million pursuant to the terms of the Settlement Agreement and conditions of this order; and it is

FURTHER ORDERED, that the Property Tax Adjustment Mechanism described in the Settlement Agreement is APPROVED; and it is

FURTHER ORDERED, that Liberty's Motions for Protective Orders Related to Discovery Responses filed July 31, 2020, April 29, 2021, and June 7, 2021, as discussed in the body of this order, are GRANTED; and it is

FURTHER ORDERED, that Liberty Utilities shall file tariffs conforming to this order within 15 days of the date of this Order pursuant to N.H. Code Admin. R., Puc 1603.02(b).

By order of the Public Utilities Commission of New Hampshire this thirtieth day of July, 2021.

STATE OF NEW HAMPSHIRE

PUBLIC UTILITIES COMMISSION

DG 17-048

In the Matter of:
Liberty Utilities (EnergyNorth Natural Gas) Corp., d/b/a Liberty Utilities
Request for Change in Rates

Direct Testimony

of

Al-Azad Iqbal
Utility Analyst – Gas & Water Division

November 30, 2017

Table of Contents

Introduction

Q. Please state your name, occupation and business address.

A. My name is Al-Azad Iqbal, and I am employed by the New Hampshire Public Utilities Commission (Commission) as Utility Analyst. My business address is 21 South Fruit Street, Suite 10, Concord, New Hampshire, 03301.

Q. Please summarize your educational and professional experience.

A. My educational and professional backgrounds are summarized in Appendix A.

Q. What is the purpose of your testimony in this proceeding?

A. The purpose of my testimony is to provide Staff's recommendations on three issues related to the Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities' (Liberty or Company) proposal: 1) on Depreciation Study ; 2) on Decoupling; and, 3) Recovery of Concord Training center.

Q. Please summarize Staff's recommendations on these issues.

A. The depreciation expenses should be adjusted as recommended by Staff and the reserve variance amortization term should be twelve years instead of three years. The decoupling methods proposed by the Company need to be changed in light of the guidance provided by the Commission in relevant dockets and discussed in my testimony. Staff recommends that the Commission deny recovery of training center costs but allow recovery of training costs unrelated to the training center

Depreciation Study

Q. When was the last depreciation study done for EnergyNorth? Is the current study consistent with that last study?

A. EnergyNorth's last depreciation study was done in Docket DG 08-009. In that study, Mr. Normand used the same methodology as presented in this case. In both cases, he used a Simulated Plant Record ("SPR") life analysis approach using a straight line method, broad group procedure, average whole life technique using the "Iowa"-type survivor curves at the account level. Then he evaluated the results using other factors including the character of the depreciable assets, experience, engineering knowledge, and judgment etc. Liberty states that the only difference between the current study and the prior study is that the current study is based on FERC accounts and the prior study was based on PUC accounts.[1]

Q. Please summarize your recommendation on depreciation and amortization expenses.

A. EnergyNorth proposes an overall depreciation and amortization expense of $18,932,544. My recommendation is $15,830,829, a reduction of $3,101,715. Schedule AI-DEP-1 provides a summary of my recommendation. There are two components reflected in my overall recommendation: Depreciation expenses, and the amortization of the depreciation reserve variance. I recommend depreciation expense of $15,001,931 and amortization of depreciation reserve variance of $828,898.

Please refer to Schedule AI-DEP-1 for a summary of my recommendation for depreciation expense. I adjusted the average service life for some accounts based on the outcome of

1 Staff 2-37

statistical analysis done by Mr. Normand.[2] I kept net salvage as proposed by the Company. I agree with Mr. Normand's recommendation to stop the monthly reserve adjustment (Order No. 25,202) and to amortize the reserve variance over two depreciation cycles or 12 years. And thus, my recommendation reflects a 12 year amortization.

Q. Please explain why you adjusted ASL for account 381 and subaccounts.

A. In this study, for the first time for EnergyNorth, different ASL and curves are used at sub-account level. This has created a large impact on depreciation accrual levels as well as reserve variance. In the last study, assets were grouped at the account level (as opposed to the sub-account level in this study). Customer meters and installation were under Account 1360, with an ASL of 35 years (Curve R2.5). In the current study, the assets included under Customer meters and installations are spread across 4 different sub-accounts, each with its own ASL and accrual rate; specifically, accounts for Meters (381), Meter Instruments (381.10), and Meter Installation (382) and Meters-ERTS (381.20). In this study, the first three items (Meters, Meter Instruments and meter Installations) are assigned an ASL 32 and an accrual rate of 3.13%, while Meters – ERTS has an ASL of 15 years and a corresponding accrual rate of 6.7%. This change alone increased the proposed annual accrual amount for the assets in the Meters Group (Account 1360 in the last study) by $150,000. Further, because of this change Meters-ERTS (381.20) now has an average remaining life (ARL) of 2.54 years, compared to the rest of the Meters subaccounts which have an ARL of 18-25 years. This change has a very large impact on Reserve Variance. During its lifespan, accrual rate for Meters ERTS was around 3% (as part of account 381). This rate is much lower than

2 Staff 2-38.b

the proposed 6.7% and this change created a reserve variance of 2.6 million in last 18 years (1997-2015).

Q. What is your recommendation?

A. As indicated Attachment AI-DEP-2, Staff recommends a more gradual approach, which is to use an ASL of 25 years for account 381.20 instead of the 35 years which was recommended for the rest of the 381 sub-accounts. This will help to smooth out the reserve variance. Staff and the Company can revisit this issue and adjust the ASL accordingly in future studies.

Q. What is your recommendation about reserve variance?

A. Staff recommends that the reserve variance be recalculated with staff schedule (AI-DEP-1) and amortized the variance for 12 years, as suggested by Mr. Normand.

Q. Did Liberty incorporate Mr. Normand's recommendation to amortize the reserve variance over 12 years in the revenue requirement proposed in this case?

A. No. The company proposes a 3 year amortization period for the reserve variance. The Company provided no explanation for this in its initial their filing, but did discuss the reasoning in responses to Staff data requests. In response to a Staff data request (Attachment AI-DEP-3), the Company cited generational equity as the reason for the shorter amortization period meaning that a shorter amortization period will help assign the cost of the of the variance to the same customers who took service while the reserve accumulated. But, the company did not provide any analysis which supports their position.

Q. Does the current study support Company's position for a 3 years amortization period?

A. No. the biggest contributor to the reserve variances are Mains and Services. If one looks at the average consumed life and average remaining life, and variance percentages, it is clear that there is no generational inequity in these accounts.

Table 1

Account	Description	Reserve Variance	Average Service Life	Average Consumed Life	Average Remaining Life	Variance (% of plant Balance)
367.00	MAINS	$9,128,041	60	14.08	45.92	4.38%
380.00	SERVICES	$2,169,199	45	13.20	31.80	1.61%

This level of reserve variances in these two accounts is not unexpected considering the high level of recent investment, which can create ups and downs in the reserve. The depreciation rate is set using the straight-line method and theoretical reserve follows an Iowa curve. Depending on what point of its service life the asset is at the time of reserve calculation, and time span between the two depreciation studies, a certain level mismatch is expected. This is one of the reasons depreciation studies are recommended at regular intervals. I agree with Mr. Normand that that stopping the monthly reserve adjustment will reduce the reserve variances in future years.

Decoupling

Q. Has the Commission discussed the issue of decoupling in the past? If so, please summarize these discussions.

A. The Commission conducted an investigation on Energy Efficiency Rate Mechanism in Docket DE 07-064. In that context, decoupling was considered as an alternative. The proceeding was opened to "investigate the merits of instituting…appropriate rate mechanisms, such as revenue decoupling, which would have the effect of removing obstacles to, and encouraging investment in, energy efficiency."[3] In it order in that case, the Commission stated, "energy efficiency rate mechanisms will need to be tailored to the energy efficiency load loss and fixed and variable cost structure of each company." Further, the Commission stated decoupling was considered as a rate design option. "Revenue decoupling could be also be implemented through changes in rate design. That is, the Commission could consider changes to the fixed charge component of the rate design to more accurately align cost causation of the utility's actual fixed costs with the fixed charge component of the rate design." The Commission was mindful about the possible consequences on small rate classes - "any decoupling proposal to change the rate design needs to consider the impact on small rate classes to ensure that such classes are not unduly impacted by such changes." The Commission was also aware of the potential inappropriate risk shifting from decoupling - "revenue decoupling could enhance the utility's revenue stability and reduce earnings volatility; hence, revenue decoupling may result in a shift of risk away from the utility and toward the customer."

3 Order No. 24,934

In Docket DE 15-137, the Commission revisited the issues related to decoupling under the Energy Efficiency Resource Standard. In Order No 25,932, the Commission stated "we are mindful that, with an LRAM, [Lost Revenue Adjustment Mechanism] the utilities' revenues can increase above their authorized revenue requirements from increased sales, and, for that reason and others, some parties prefer decoupling. This is because decoupling provides reconciliations to the last-approved revenue requirement (i.e., in the case of a utility collecting more revenue than its last-approved revenue requirement, the utility would be required to prospectively credit customers for any such over-collection)".

Q. Please briefly describe the Company's decoupling proposal in this matter.

A. The Company proposed a revenue per customer (RPC) decoupling mechanism for all rate classes, with a seasonal adjustment. The RPC for each season will be set in this rate case and then will be used as the starting point to calculate allowed revenues by season. The Actual Revenues per Customer and the RDM revenue shortfall/surplus will be calculated monthly on a calendar month basis. Then, the sum of all the monthly data will be used to calculate actual RPC on a seasonal basis. The difference between the allowed and actual will be adjusted in the next seasonal rates. Here are salient features of the proposal:

- The Company's firm rate classes will be combined into RDM Customer Groups for revenue calculations.
- The RDM adjustment rates will be calculated using the Company's total revenue shortfall or surplus and projected therm deliveries for the upcoming season.

- Expansion rate customers will be excluded from the RDM calculation and not be charged or credited the RDM rate.
- The RDM adjustment will be capped at +/- 5 percent of distribution revenues. Any excess over the 5 percent limit will be deferred for recovery or pass- back in the next period with carrying charges at the prime lending rate.
- A mid-period adjustment will be made if the projected end of the season RDM under or over collection exceeds 10 percent of total projected seasonal distribution revenues.

Q. Please summarize Staff's position.

A. In light of the guidance provided by the Commission in relevant dockets as summarized earlier, Staff believes that the following changes should be included in the decoupling mechanism:

1) The adjustment should be based on weather normalized revenues.
2) The adjustment should be performed at the rate class level (instead of at the company level).
3) Expected revenue should be calculated at individual rate class level, not at combined rate class level.
4) Expansion rate customers should be included in the RDM calculation.
5) The RDM adjustment should be capped at +/- 2 percent.
6) No mid-period adjustment should be made; if needed, an adjustment can be made at the time of Company's next rate case.

Q. Q. Please explain weather normalization of revenue in the context of decoupling (Issue 1 above).

A. The company proposed a full decoupling where the rates will be adjusted based on the difference between total revenue expected (calculated using RPC) and actual revenue realized, that is, without any weather normalization of expected or actual revenues. Under Staff's proposal, the actual revenue realized will be weather normalized and the difference between weather normalized revenue expected and actual weather normalized revenue realized will be used for as a basis for the rate adjustment.

Q. Please explain the reason for this recommendation.

A. As discussed earlier, the Commission decisions discussed decoupling as a mechanism for lessening the impact on utility revenues associated with reductions in sales from increased efficiency and conservation. The Commission was also concerned with the potential for risk shifting via decoupling. The Company's proposal adjusts for all impacts on revenue (e.g., the economy, energy efficiency, weather etc.) which is well beyond the efficiency and conservation related sales reductions. It also eliminates, all risk except the risk of management inefficiency[4]. Under Liberty's proposal, the RPC is set on weather normalized test year revenue levels. By also weather normalizing the actual revenue realized (as Staff proposes), the risk of colder or warmer temperatures will stay with the Company. The

4 Testimony of Gregg H. Therrien, Bates 289-90 "The utility remains at risk for managing its expenses commensurate with the level set for the test year base rates. This means the utility must manage its capital expenditure programs, its operations (e.g., salaries and wages, benefits, overtime, maintenance programs, uncollectible, outside services, etc.), and pay taxes (including property taxes that are adjusted annually by most municipalities)".

decoupling adjustment will compensate the utility for the revenues that it would have collected had sales-impacting events including energy efficiency and ups and downs in the economy. Staff's position in this case is consistent with Staff testimony in the EERS docket[5]and aligns more closely to the guidance provided by the Commission concerning decoupling.

Q. Did Liberty discuss the concept of a weather normalized true up calculation?

A. Yes. Mr. Therrien stated - "The true up calculation could be performed by determining the difference between target revenues and weather normalized actual revenues. Using this approach, the revenue true-up calculation would not be affected by colder or warmer than normal weather."[6] He stated that this method would involve "a complicated normalization calculation and subsequent Commission review" and discarded the idea on that basis. However, given that in most gas company filings in New Hampshire (for example, rate cases, cost of gas, etc.) weather normalization is standard practice, this concern is not valid.

Q. Please explain the reasons for combining the rate classes in groups for purposes of calculating a decoupling adjustment (Issues 2 and 3 above).

A. Mr. Therrien cited two reasons – 1) the potential shifting of C&I customers between rate classes causing unintended results in the RDM calculations, and 2) significant year-to-year variability in normal revenue per customer for several C&I rate classes. He concluded that RDM rate adjustments for each C&I rate class would likely result in noticeable rate volatility for some C&I rate classes and

5 DE 15-137, Staff Testimony at 7 "In order to compensate the utilities for lost revenues associated with energy efficiency, Staff recommends the adoption of a lost revenue recovery mechanism for an initial three-year period, to be replaced by a decoupling mechanism in the future".
6 Testimony of Gregg H. Therrien, Bates 294

that this potential volatility is avoided with a single RDM true-up calculation for all C&I rate classes combined.

Q. Do you agree with this observation?

A. I agree that RDM rate adjustments for each C&I rate class would likely result in noticeable rate volatility for some C&I rate classes which could be avoided with a single RDM true-up calculation for all C&I rate classes combined. I disagree that expected revenue should be calculated at the group level.

Q. Please explain.

A. There are two parts of revenue adjustments – one is the calculation of expected revenue, and the other is how to distribute the difference between actual and expected revenue. Accuracy on both fronts is important. The C&I customers are not homogenous in their usage and corresponding RPCs. For example, the annual RPC of a G-41 customer is $1,285 and for a G-54 customer is $40,000. When the C&I classes are combined, RPC is only $2,533. So, if a G-54 customer is added or leaves the system, the expected revenue will change only $2,533 instead of $40,000. So the Company, or the rest of the C&I customers, have to account for the difference of $37,500. By calculating expected revenue at the rate class level, this inaccuracy is eliminated. After calculating expected revenue for each class, one can sum those up to arrive at the expected total C&I revenue. Once we know the difference between expected revenue (as calculated for all the C&I classes) and actual revenue at for all C&I classes combined, we can allocate the difference on a per therm basis for the combined C&I classes. This way we calculate the expected revenue accurately and address the volatility issue too. This method will also accurately catch any impact of inter-class migration, whereas the

Company's proposed method is indifferent to inter-class migration.

Q. Do you agree that the decoupling adjustment to rates should be at the Company level?

A. No. The whole reason for revenue decoupling stems from energy efficiency program. Unlike electric utility's System Benefits charge (SBC), gas utilities have a different mechanism to budget and recover the cost of energy efficiency program. Due to class specific the program design, cost recovery is generally different for residential and C&I sectors. In the past years, there have been significant differences in gas energy efficiency ("EE") programs between the sectors. The two sectors have significantly different EE charges per therm in the LDAC. Energy savings and corresponding lost revenue would differ by sector as well. Currently, for the same reason, LRAM is calculated at sector level. Thus, Staff believes that any decoupling adjustment should be done at the sector level, consistent with the planning, budgeting and implementation of the gas EE programs.

Q. Please explain how expansion rate (MEP) customers should be treated for decoupling (Issue 4 above).

A. The Company proposed to exclude the MEP customer in the decoupling adjustment rate calculation. Staff believes these customers should be included in determining RPC and when calculating the rate adjustments. It is important that their usage should be counted in its original rate class. Staff believes RPC for MEP customer should be included in the rate class revenue calculation after the MEP premium is separated. MEP premium is a known percentage added to the various class delivery rates, so it is simple to separate and remove the premium for purposes of calculating a decoupling adjustment.

Q. Please explain why you are proposing 2% cap instead of 5% cap as proposed by the

Company and elimination of the midyear adjustment (Issues 5 and 6 above).

A. By weather normalizing the actual revenue for the purpose of the decoupling adjustment, one of the biggest reasons for revenue fluctuation (the weather) is removed. Nationwide experience has shown that annual adjustments are typically in the range of -2% (a refund) to +2% (a surcharge), when weather is removed. So Staff believes that a 2% cap is reasonable. For the same reason, Staff believes that there will be no need for mid-term adjustment (Issue 6 above). If needed, the adjustment could be done in the Company's next rate case.

Q. Do you have any other comments or recommendations??

A. Staff believes that any decoupling related adjustment should be tied to the Company's energy efficiency program performance. If the Company does not meet its EE goals, there should be some restriction in decoupling adjustment because the logical conclusion is that the decoupling adjustment was attributed to something other than EE. In the event that a decoupling adjustment is calculated in any year where Liberty does not meet its EE goals as established in the docket where EE programs are approved, Staff recommends that the Company be required to demonstrate that its EE efforts were the primary factor in reducing its energy sales in order for any amount above the decoupling cap to be carried forward for recovery in a subsequent year. This would not apply on any refund, because that would occur in a year where revenues are growing, and thus on its face it is clear that the decoupling adjustment is not attributable to EE efforts.

Rate Design Issues

Q. Please explain why a rate design change is needed if a decoupling adjustment is approved in this case?

A. In the context of decoupling and the associated policy goal of energy conservation, Liberty's the current rate design is incompatible. For example, currently, there are two rate blocks - head block and tail block. The rate is higher for the head block to provide the utility a reasonable opportunity to collect fixed costs which are not recovered through the customer charge. The idea is that most of the customers' usage will fall in the head block and thus the fixed costs will be recovered. However, from an energy efficiency perspective, this gives the wrong signal to the consumers as they pay less on per unit basis for higher energy use. Under decoupling, the Company has a much greater assurance of collecting its fixed costs and that opens the door to address the "anti-conservation" price signal of declining rate blocks.

Q. Please describe your recommendation regarding rate design in the context of decoupling.

A. Staff believes that the decoupling provides an opportunity to change rate design without harming the Company and at the same time, further the goal of energy conservation. In this context, Staff proposes the following changes:

1. Set the rates for both head and tail block at the same level
2. Any decoupling adjustment would be allocated to the head or tail blocks based on whether it is a surcharge or refund. Refunds will be allocated to head block and surcharges will be collected from the tail block for the residential sector and high winter use C&I customers.

Q. Please explain why you recommend setting both head and tail block rate at the same level.

A. The only reason the head block rates are set higher than the tail block is to allow the Company to recover its customer related fixed cost from the customers whose customer charge is set below the level need to recover these fixed costs. In absence of decoupling, Staff is supportive of gradual increases in the customer charge to approach recovery of the fixed costs. As discussed earlier, with decoupling, Staff believes that there is no longer a need for higher head block rates. But, Staff is not recommending elimination of the two blocks, just that the rates be set at the same level, before any decoupling adjustment is made.

Q. Why is it reasonable to allocate decoupling refunds to the head block and surcharges to the tail block?

A. There are several reasons it is compatible with energy conservation policy. First of all, over time, this will create the same dynamic as an inclining rate block structure, which is a known tool in the context of energy conservation. It will provide a proper price signal to the customers to encourage energy conservation. This approach would also benefit lower consumption households that could tend to include be lower income households with smaller homes and less energy use compared to higher income households. Low use households, on average, have relatively little or no consumption in the tail block and thus would see little or no rate increases from decoupling. This addresses the stated concern of the Commission that "any decoupling proposal to change the rate design needs to consider the impact on small rate classes to ensure that such classes are not unduly impacted by such changes"[7]. It also reduces the volatility of gas bills for low use customers.

7 Order No. 24,934 (January 16, 2009)

Concord Training Center

Q. What is the purpose of your testimony about Concord Training center?

A. The purpose of my testimony is to provide Staff's recommendation as to whether the costs associated with the Liberty's Concord Training Center costs should be recovered through the rates proposed in this proceeding. Last year, in Docket 16-383 involving the Company's electric affiliate, Granite State Electric Company, Staff addressed this same issue and recommended further investigation. Staff cited a lack of reliable analysis and support in the decision-making process and questioned whether the construction of the training center was a prudent investment for Liberty compared to other alternatives available for training. A copy of my testimony and schedules from Docket 16-383 is provided as Attachment AI-TR1. In this docket, Staff has completed its review of the training center and recommends that the Commission disallow recovery of all training center related cost from rates.

Q. Did you review Company's Business Cases during this proceeding?

A. Yes. The Company provided two Business Cases related to the Concord Training Center. The first business case, dated January 24, 2014 (Attachment AI-TR 2) provided a brief description of the training center and mentioned training at National Grid's facility in Millbury, MA as an alternative to an estimated cost of training $400,000/year. Under the Financial Assessment section, the Business Case stated a payback period of fewer than 3 years for the investment in the training center. The second business case, dated May 1, 2014, had fewer details and contained no analysis of alternative options and no financial assessments. None of the documents, indicated that the Company made any consideration of the operating and maintenance expenses Liberty would incur for the training center, in addition to training costs.

Q. Did the Company provide any support for its alternatives and financial assessment in its business cases?

A. Several times, Staff requested that Liberty provide any financial analysis supporting Liberty's decision to build the training center, but no reasonably adequate analysis was provided. In data response Staff 2-3 from DE 16-560 (provided as Attachment AI-TR 3) , the Company did perform a cost-benefit analysis, for the first time, between a training center and training at a National Grid facility in Millbury, MA, which was the alternative cited in their initial business case. When Staff raised questions about the usefulness of the analysis (Staff Testimony DE 16-383 at bates 000010-11, Attachment AI-TR1), the Company responded that the analysis has "little relevance to the decision to build the training center"[8] and the analysis is "pointless" because training at the National Grid facility was no longer an option.

Q. Did the Company consider any other alternatives to building its own training center?

A. According to the business cases, no other alternatives were considered. Later, the Company argued that only alternative it had was to build a training center due to the absence of National Grid facilities. "If training center had not been constructed, Liberty would have been without any viable option for training employees."[9]

Q. Did the Company provide any support for its conclusion that building its own training center was the only option available?

A. No. To the contrary, when asked about organizations Liberty reached out to explore possible alternatives to the National Grid's training arrangement, the Company stated "Company

8 Rebuttal Testimony of Smith and Mullen DE 16-383 at 227-229
9 Ibid at page 227-228

personnel contacted management employees at Unitil Energy Systems (UES), New Hampshire Electric Cooperative (NHEC), and Green Mountain Power (GMP) and discussed their current training methods. UES and NHEC train on the job with the training conducted by supervisors rather than dedicated trainers. GMP has a dedicated trainer who performs classroom and field based training"[10]. Liberty also reached out to Eversource, which had a training facility in Pittsfield, which has subsequently closed. This demonstrates that Liberty knew that other New Hampshire utilities performed training without a dedicated building and without dedicated trainers, yet Liberty did not consider or analyze any of these alternative training models or methods as an alternative to building its training center. Instead, Liberty determined that those methods were not viable alternatives for providing the range of gas and electric training needs required by Liberty, and therefore it concluded that no financial/economic analysis of those options was warranted.[11]

Q. Why, according to Liberty, were alternative methods of training not viable?

A. Liberty simply states that on the job training is "insufficient" to ensure employees to "fully learn" and safely perform their function. [12] When asked to provide analyses, rules/standards, studies etc. supporting this conclusion, the Company provided none and stated that "it is the Company's view that "exclusive" reliance on that [on the job] training method would not provide the optimal training experience". [13]

Q. Did the Company attempt to obtain training services from an outside provider?

A. No. The Company stated that "although Liberty did not issue RFPs, Liberty did reach out to

10 Staff 4-24
11 Staff 5-43
12 DE 16-383, at Smith/Mullen Rebuttal Testimony, 229-230;
13 Staff 5-40

other regional utilities to explore training alternatives." [14] Staff believes that a simple and appropriate way to explore the market for any services is to issue an RFP and that Liberty should have issued an RFP for its training needs prior to undertaking the construction of the dedicated training center.

Q. Has Liberty mentioned other benefits of a dedicated training center?

A. The Company cites flexibility of scheduling, the ability to train non-field employees on gas and electric utility topics, and the ability to make the facility available at times to accommodate training-related events including use of the facility by outside parties as other benefits[15].

Q. Did the Company provide any analysis of those benefits?

A. No, when asked for financial/economic analysis of any efficiency gains, Liberty rehashed reasons already stated and concluded that: "Even without any financial analysis, it is clear that each of those training conditions offers efficiencies in terms of consistency of training, scheduling, planning, travel time, and controlled training conditions, among other things".[16] The Company further explained "a financial/economic analysis was not performed as attempting to quantify the gains would have involved complex analyses of a number of variable factors including travel distances, number of employees who could be trained at each job location, ability of supervisors to take time from other job tasks to perform training, variability in training among supervisors, potential follow-up training due to that variability, ability to train specific tasks due to job site conditions, ability of training personnel to

14 Staff 5-42
15 Testimony of Mr..Mullen, filed on June 30, 2017 at page 023-027
16 Staff 4-26

effectively schedule training at numerous locations, etc. Thus, the results of any financial/economic analysis would be highly variable, subject to a range of challenges, and thus of questionable value."[17]

In another data response Company stated "While some of those items may involve quantifiable benefits, the majority involve non-quantifiable benefits. Hence, there is no analysis responsive to this request"[18].

Further, Staff asked about the policy or guideline etc. related to using non-quantifiable costs or benefits in its decision making. Liberty referred to the Business case[19], section on Risk assessment and Qualitative Evaluation. Staff could not find any mention of non-quantifiable costs or benefits in either of the business cases concerning the training center.

Q. In your view, should Liberty have attempted to perform more in depth analyses of the perceived benefits of building a stand-alone training center?

A. Yes. Every decision involves dealing with different future scenarios and options. A rational decision maker would use reasonable assumptions to assess those scenarios and options instead of discarding them outright. That is particularly true in this instance, where the perceived benefits (efficiency, scheduling, improved quality of training etc.) form the basis of the decision to build the training center, not analyzing these factors is not acceptable. The fact that performing analyses is difficult and complex, and that such analyses could face

17 ibid. (Staff 4-26.)
18 Staff 4-32
19 Staff 5-45

challenges should not be used as a rationale for not doing any analyses.

The most basic analysis Liberty could have done is to compare its expiring option (training at National Grid) and their preferred option (dedicated training center) to address the variability in cost of these two alternatives. Had the Company done a thorough analysis of these two alternatives and reviewed the analysis as a sanity test (as was done by Staff in DA 16-560, Staff 2-3 – attached here as Attachment AI-TR 3), Liberty's ultimate decision to build a training center may have been different[20].

Q. Why is that?

A. Going back to the first business case, the Company would have known that the $400,000/training cost (the National Grid option) [21] would not automatically translate to a fewer than three year payback period for a $1,000,000 plus investment. Such an analysis would have revealed that most of Liberty's historic training costs (particularly the payroll cost of the trainees), would remain irrespective of what alternatives Liberty choose. The analysis would have revealed that Liberty should have been evaluating options based only on the incremental cost or savings of the options and Liberty should ignore trainee payroll costs that would remain under any option. Staff believes this would have provided tremendous value in the context of the training center decision making.

Q. Did the Company analyze the incremental cost related to Training center?

A. As best as Staff can determine, the Company did not analyze incremental costs. These incremental costs would include: costs for the trainers, operation and maintenance cost,

20 Staff Testimony in DE 16-383 (attached here at Attachment AI-TR 1) discussed that analysis in detail.
21 Staff was told in 2014 that Liberty historic annual training costs approximated $400,000. (DG 14-180, Staff 2-6, response, 2014 costs of $448,210; DG 14-180, Staff 2-107, costs of $413,250 for the test year and $341,040 from April 2014 through March 2015),

property tax, return on the investment, etc. These costs could have been estimated reliably and should have been part of any financial analysis, had the Company undertaken any financial analyses in its decision-making process.

Q. Did the company perform any financial analysis in the face of increasing cost of its selected option – the dedicated training center?

A. No. although the Company states that "Cost increases were reviewed, analyzed, and approved as they arose"[22], it did not perform any financial analysis, even in the case of three fold increase of the cost[23] .

Q. Did you looked at the training cost trend pre and post training center for Energy North?

A. Yes, in my testimony in DE 16-383: Table 5 - Annual Training Cost, I provided an analysis of EnergyNorth's training costs, expressed on a $ per hour of training basis. Below is an updated version of the analysis.

Table 2 Energy North Training Costs

	Training Cost	Training Center Cost[24]	Total	Hours	Training Cost/Hour	Training Cost/Hour (without training center cost)
2013	$288,163	$0	$288,163	3,233	$89	$89
2014	$325,724	$0	$325,724	3,918	$83	$83
2015	$305,302	$439,678	$744,980	3,446	$216	$89
2016	$237,084	$384,411	$621,495	2,756	$226	$86

22 Staff 5-44
23 Staff 7-12
24 Staff 2-26

This illustrates that the average hourly training cost did not change much over time, when the training center costs were excluded. It also supports our earlier assertion that a financial analysis based on incremental training costs would have made clear to the decision makers that the proposed project would not generate sufficient savings to pay for itself in less than three years. And it shows that Liberty's decision to build a dedicated, stand-alone training center actually harmed its ratepayers by significantly increasing the average training cost/hour.

Q. Please summarize your findings?

A. Staff investigation is summarized here:

- Business cases were used as the basis for the decision by the management to build the training center, but the business cases are not supported by any detailed financial analysis:
  - the financial assessment used was erroneous or inadequate and without support
  - no qualitative evaluation was done
  - no analysis of incremental costs was performed.
- None of the alternative methods to train employees were explored to any significant degree:
  - Liberty was aware of the alternative methods used for training by other utilities
  - Liberty's rationale for not exploring alternatives is not supported by any data, standard, rule, study or report
  - Liberty did not explore training alternatives by issuing an RFP to training service providers.

- Liberty disregarded any need for financial analysis at every step of its decision making (except when asked by Staff).

The absence of any credible analysis of its chosen path to build a training center and its failure to analyze available viable alternatives based on unsupported conclusion raise serious concerns about Liberty's decision to build the training center and its decision making process. Credible analyses would have provided the decision makers the information (that was known or should have been known at the time of the decision) that should have led to a decision not to build a training center (at least not with significantly more study of the costs of the center and any alternatives).

Q. What is your recommendation?

A. It is clear that Liberty did not perform any credible analysis in the process of the deciding to build the Training center, and consequently harming its ratepayer with increased cost. Staff believes the Company failed to meet any standard applicable to any reasonable decision-making process involving a substantial investment. Staff recommends that the commission deny recovery of training center costs bur allow recovery of training costs unrelated to the training center.

Q. Does that conclude your testimony?

A. Yes.

Educational and Professional Background
Al-Azad Iqbal

I am employed by the New Hampshire Public Utilities Commission (PUC) as a Utility Analyst. My business address is 21 S. Fruit Street, Suite 10, Concord New Hampshire, 03301.

I received my Bachelor degree in Architecture (B. Arch) from Bangladesh University of Engineering and Technology. Later, I received my Masters (MS) in Environmental Management from Asian Institute of Technology and another Masters in City and Regional Planning (MCRP) from the Ohio State University. I was a Doctoral Candidate at the City and Regional Planning Department at the Ohio State University. After joining the PUC in 2007, I participated in several utility related training courses including Marginal cost training by NERA, Advanced Regulatory Studies at Institute of Public Utilities, Michigan State University, Depreciation Training by Society of Depreciation Professionals.

Prior to joining the PUC, I was involved in teaching and research activities in different academic and research organizations. Most of my research work was related to quantitative analysis of regional and environmental issues.

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

DG 17-048
Distribution Service Rate Case

Staff Data Requests – Technical Session Set 1

Date Request Received: 8/29/17
Request No. Staff Tech 1-45

Date of Response: 9/13/17
Respondent: Steven Mullen

REQUEST:

Reference Staff 5-48. Mr. Normand discusses the recommendation that the depreciation reserve variance be amortized over 12 years. On Schedule RR-EN-3-6 (Bates 052), the Company proposes to amortize the variance over 3 years. In the technical session Liberty referred to additional considerations outside of the depreciation study that gave rise to the 3 year amortization proposal. Please describe these considerations in more detail.

RESPONSE:

There are many considerations that must be taken into account when any amount is either to be recovered from customers or flowed back to customers over a period of years. Those considerations include such things as: the length of time over which the amount accumulated, the total duration of time from the first creation of the item until its planned disposition using the proposed amortization period, the magnitude of the amount, inter-generational equity issues, and the expected period of time between rate cases.

In this case, we are dealing with an approximate $10 million depreciation reserve deficit that started as a $12.4 million depreciation reserve surplus in an earlier rate case docket, DG 08-009. Per agreement among the settling parties in that docket, that surplus has been flowed back to customers at an annual rate of $933,588 since July 1, 2009. That agreed amortization period was a little over 13 years. However, seven-and-a-half years later (i.e., through December 31, 2016), the reserve variance is now a deficit of approximately $10 million, meaning that the Company has under-recorded depreciation expense for a number of years, with a significant portion due to the amount that has annually been flowed back to customers (approximately $7 million). Although the depreciation reserve surplus of $12.4 million was an agreed upon amount in DG 08-009, it is clear that a significant correction is now needed. Since the current depreciation reserve deficit has been incurred over seven-and-a-half years, extending the period of time by another 12 years to address the existing imbalance would lead to a situation where significant inter-generational equity issues would exist for an extended period of time rather than being addressed in the near future. Although inter-generational equity issues are inherent in ratemaking, an extended amortization period would exacerbate those issues. Assuming a three-year rate case cycle, the Company's proposed amortization period would address the current reserve imbalance by the time of the next rate case and the Company would consider performing an updated comparison of the theoretical-versus-actual depreciation reserves at that time without the necessity and expense of filing a new depreciation study. Revisiting the status of the depreciation reserves in that relatively short period of time would help avoid the accumulation of a large reserve imbalance, either a surplus or a deficit, which could otherwise accumulate over an extended amortization period.

STATE OF NEW HAMPSHIRE

BEFORE THE

PUBLIC UTILITIES COMMISSION

DE 16-383

Liberty Utilities (Granite State Electric) Corp. d/b/a Liberty Utilities

Request for Change in Rates

DIRECT TESTIMONY OF

AL-AZAD IQBAL

December 16, 2016

Q. Please state your name, current position, and business address.

A. My name is Al-Azad Iqbal, and I am employed by the New Hampshire Public Utilities Commission (Commission) as Utility Analyst. My business address is 21 South Fruit Street, Suite 10, Concord, New Hampshire, 03301.

Q. Please summarize your educational and professional background.

A. My educational and professional backgrounds are summarized in Appendix A.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to provide Staff's recommendation as to whether the costs associated with the Company's Concord Training Center costs should be recovered through the rates proposed in this proceeding. This recommendation impacts a larger question concerning whether the construction of the Training Center was a prudent investment for Liberty as a whole (Granite State Electric and EnergyNorth) as compared to other alternatives available for training. In addition to providing information on Training Center costs, cost allocation, cost recovery and utilization, my testimony also examines the methodology and underlying assumptions used by Liberty to evaluate the cost and benefits of building the Training Center.

Q. Please summarize your finding and recommendations regarding on these issues.

A. The Commission should deny recovery of the Training Center costs in this proceeding and address the issue of cost recovery in the next Liberty Utilities (EnergyNorth Natural Gas) Corp., d/b/a Liberty Utilities ("EnergyNorth") rate filing, where a full prudence review can be conducted. In this proceeding (and in Docket DA 16- 560 where Liberty has requested approval of the lease of the facility by EnergyNorth to Granite State as an transaction between a utility and an affiliated party), Liberty failed to provide a cost/benefit analysis on which the decision to build, maintain and operate a training center justified the decision to go forward with the project. Furthermore, the information provided in this case and the Affiliate Transaction docket does not demonstrate that building the Training Center was the least cost alternative. Finally, in the event that the Commission includes the costs associated with the Training Center in rates, Staff recommends that the Training Center costs be allocated between the gas and electric utilities based on actual training hours, rather than number of employees as is currently being done.

Q. Briefly describe Liberty's filings that address the Training Center.

A. In DG 14-180, EnergyNorth's last rate filing, Liberty identified the Training Center as a future capital investment that it would be seeking to recover in rates after it was placed into service.

In DA 16-560, Liberty provided a lease agreement between EnergyNorth and Granite State whereby Granite State is leasing the non-exclusive right to occupy and use the land and building known as the Training Center. The lease provides that "Granite State's Proportionate Share" shall be twenty-five percent (25%) and will be recalculated based on the ratio of EnergyNorth's and Granite State's union employees as of end of the immediately preceding calendar year.

In DE 16-383, this Granite State rate case, Granite State seeks to recover $146,559 (Schedule RR-3-12(CU)) of lease costs for the Training Center.

In none of these dockets has Liberty provided sufficient support to demonstrate the reasonableness of building the Training Center.

Q. Please summarize the Training Center capital costs and annual operating expenses.

A. See Table 1, below, for the original projected cost, actual cost, operating and maintenance costs.

Table 1: Concord Training Center Estimated Annual Operating Costs[1]

Original Estimated Cost [2]	1,450,000
Cost of building on books	4,109,880
Accum Depr thru 3/31/16	(118,365)
	3,991,515
Return @ EnergyNorth WACC of 7.05%	281,402
Annual Book Depreciation	118,364
Estimated Insurance on Bldg.	1,500
Utilities	39,762
Property Taxes	30,210
Routine Maintenance	115,000
Total	586,238
Percentage to GSE based on use @ 25%	146,559

Q. Please briefly describe Liberty's supporting analysis.

A. In response to data request Staff 2-3 in DA 16-560, Granite State provided a cost/benefit analysis and its rationale for building the Training Center. Granite State examined only the incremental cost of training personnel at the National Grid training facility at Millbury, Massachusetts based on six months of training use by gas employees and 12 months of training by electric employees during 2013. Basically, these incremental costs involved travel costs and overtime for attendees and, where appropriate, cost of instructors. Liberty referenced some minor benefits (scheduling efficiency, optional basic training for non-field employees, training for other stakeholders, etc.) associated with building the Training Center but did not provide any

[1] Attachment AI-1 (DA 16-560 Staff 1-2)
[2] Attachment AI-2 (DG 14-180, Brouillard testimony, Bates page 0175)

cost or savings estimates for those items. In response to data request Staff 1-1 in DA 16-560, Granite State stated that it included training hours projected in 2016 as its rational for the 25% allocation of costs to Granite State.

Regarding alternatives for training sources, Liberty mentioned that it searched the local area for another source of training and found no available gas or electric training. It also considered utilizing an existing Liberty facility in the Manchester yard but ruled it out because of environmental and permitting issues.

Q. What is your opinion of the analysis provided?

A. Staff believes that the analysis is inadequate, especially considering that the Training Center was budgeted to cost $1.5 million, and, ultimately, cost over $4 million. First, Granite State analyzed only one year's incremental cost of training at the National Grid facility at Millbury, MA. The Company provided no evidence that during its decision making process it evaluated the cost of training options other than using existing Liberty facilities (such as the Manchester yard) or the cost of building a new training center. A comparative economic analysis of training options should have been done at or before the time when the decision was made to build and operate the Training Center. Based on the information provided by the Company in its filings and through discovery, it appears the decision to build the Training Center was not a prudent decision, as it has resulted in a significant increase in annual training costs. A more thorough analysis prior to making that decision most likely would have resulted in a different outcome, one that would have been less costly, therefore, the costs associated with the Training Center should not be allowed in rates in this proceeding.

Q. Please elaborate on your concerns about Liberty's analysis?

A. Staff has concerns about the accuracy and usefulness of Liberty's incremental cost analysis. As mentioned earlier, using only one year's cost for analysis to analyze an investment of $4 million is far too simplistic. Staff believes that a long term economic analysis (i.e. discounted cash flow analysis etc.) should have been done for this project.

Liberty calculated an annual incremental cost $374,490 (combined Granite State and EnergyNorth) of using National Grid for training. Incremental costs included travel time, overtime where applicable and instructor costs, all of which could be avoided or reduced if training were done locally.[3] The estimated cost savings are significantly less than the combined Granite State and EnergyNorth annual cost of $586,238 (revenue requirement to recover the capital cost and operating and maintenance expenses) for the Training Center.[4] This limited analysis indicates that building the Training Center increased combined company annual training costs by $211,748.

Furthermore, Staff has concerns about the hours and costs Liberty used to calculate the incremental cost of training using National Grid. The incremental cost is based on an analysis of employees who trained at National Grid during periods of time in 2013. According to Liberty, the incremental travel time was approximately 3,000 hours (combined Granite State and EnergyNorth for both Management and Union trainees for the year 2013. (DA 16-650 Staff 2-3). Staff compared these estimated hours with 2013 actual training data (Staff Tech 1-3[5]), which shows total actual hours of 3,699 for all Management and Union related training hours, including travel. If the estimated incremental hours (travel to Milford MA) is correct, only 699 hours were for actual

[3] Attachment AI-3 (Staff 2-3, in DA 16-560)
[4] Attachment AI-1 (DA 16-560 Staff 1-2)
5Staff questioned the accuracy of the data in Staff 2-3 at a technicalthe technical session which prompted Liberty to update the response in Staff Tech 1-3.

training. Liberty also stated that the incremental cost figure was derived from a conservative estimate.[6] These figures raise concerns regarding the accuracy of Liberty's incremental cost estimates and its justification for the Training Center.

A comparison of actual Management and Union related training cost and incremental cost for 2013 shows a similar anomaly. See Table-2 and Table-3, below. The total payroll cost for actual training was $194,811 whereas Liberty's estimated incremental cost saving is $157,770. Inexplicably, for Granite State the estimated hours saved are higher than the actuals (1,692 hours of estimated travel savings versus 1,008 hours of total actual training). Liberty mentioned (Tech 1-3) that the actual costs do not include National Grid instructor costs because Liberty was not billed for these costs. No analysis has been provided comparing the cost for a National Grid instructor(s) with the cost of the Liberty instructor(s), so it is undetermined as to whether instructor training would differ.

Table 2: 2013 Actual Training Hours (Source: Staff Tech 1-3[7])

	Energy North		Granite State		
	No. Of trainee	Hours	No. Of trainee	Hours	Total Hours
Management:	7	168	14	336	504
Union:	87	2523	24	672	3195
Total		2691		1008	3699
Payroll		$126,037		$68,774	$194,811

[6] Attachment AI-3 (DG 16-560, Staff 2-3) "As the cost estimate was based on the number of employees who attended training during that time period, the cost estimate is significantly less than the amount that would be calculated based on the amount of training that has been conducted and will be conducted going forward at the Liberty training center…"
[7] Attachment AI-4

Table 3: 2013 Incremental Hours (Source: DA 16-560, Staff 2-3[8])

	Energy North		Granite State		Total
	No. Of trainee	Hours	No. Of trainee	Hours	
Management:	1	80	16	288	368
Union:	15	1200	52	1404	2604
Total		1280		1692	2972
Overtime Payroll		$63,000		$94,770	$157,770

Staff also compared 2015 training costs, the first year the Training Center was used, with previous years' training costs to see if any savings were achieved, but Staff could not identify any savings.

Table 4: Yearly Management and Union Training cost – actual per Staff Tech 1-3[9]

	Energy North		Granite State	
Year	No. of trainee	Cost	No. of trainee	Cost
2013	94	$249,656	38	$237,994
2014	101	$305,821	42	$328,543
2015	101	$273,285	42	$299,480

Other witnesses in this case present testimony concerning deficiencies in Liberty's capital budgeting process, specifically, that projects have been undertaken without appropriate analysis of alternatives and that cost estimates have varied significantly from actual construction costs. These conclusions apply to the Training Center as well.

[8] Attachment AI-3
[9] In this Table, the training costs include the cost technical training staff, travel time to the training centers and training hours multiplied by times employee hourly pay. Attachment AI-4

Q. What is your opinion about Liberty's assertion that it could not find local training resources?

A. It is not clear what steps Liberty took in its search for an alternate provider for training. Liberty stated that "Utilization of third party training facilities and instructors causes limited availability and often times conflicts with operational requirements."[10] Yet, the other combined gas and electric utility in New Hampshire [11] does not own a training center. UES relies on contracted instructors and local technical institutions for its training needs, including hands-on training. Staff is not aware of any instance where UES could not meet its training requirements because of unavailability of such services in New Hampshire or elsewhere.

Q. What is your opinion on the method used by the Company to allocate the costs of the Training Center between EnergyNorth and Granite State?

A. The lease provides that the annual costs of the training center be allocated using the ratio of EnergyNorth's and Granite State's union employee. There are different training requirements for gas and electric employees, and thus the number of employees might not reflect actual usage of the Training Center. Staff believes that a more consistent and reasonable allocation could be made using the proportion of training hours for management and union trainees of Granite State and EnergyNorth, on average over the immediate past 3 years. Given that the rationale for building the Training Center is to meet training needs of management and union employees, and given that environmental and safety training does not require a special training center, Staff believes that it is

[10] Attachment AI-5 (DG 14-180, Staff 2-6)
[11] Unitil Energy Systems ("UES"), which serves 103,500 electric customers and 78,700, natural gas customers in Maine, Massachusetts and New Hampshire, and employs 500 employees of which 159 are union employees. (Source : Annual Report 2015)

reasonable to exclude environmental and safety inputs from the cost allocation method. Using the 3-year average proportion of management and union employees, Granite State would bear 36.5% of the Training Center cost instead of the 25% proposed by Liberty.

Q. Do you have any other comments?

A. The installed cost of the Training Center increased substantially from the estimated figure submitted in DG 14-180 (Brouillard testimony from DG 14-180, Bates page 0175, line 16). The estimate was $1.45 million and the actual, installed cost is $4.10 million (DA 16-560 Staff 1-6). This suggests that Liberty did not adequately research the cost to build, equip and furnish the Training Center prior to making the decision to build it. The disparity between the original estimate and the actual cost of the Training Center raises questions about the adequacy of the Liberty review of other options available to meet its training requirements and the cost of those options. Without accurate data, the results of any cost/benefit analysis cannot be relied upon. Table-5, below, shows the cost of training in the two years prior to the opening of the Training Center and training costs after the training center commenced operations in March 2015.[12] This Table shows no reduction in Granite State's training costs after the Center was opened.

[12] These costs do not include National Grid Instructor costs, and Staff Tech 1-3 does not show any incremental instructor cost for training in-house at the training center.

Table 5: Annual Training Cost[13]

	Energy North			Granite State			Safety/Symposium	Grand Total
	Actual Cost (Man+Union+Env)	Training Center Cost	Total	Actual Cost (Man+Union+Env)	Training Center Cost	Total		
2013	$288,163	$0	$288,163	$291,485	$0	$291,485	$98,131	$677,779
2014	$325,724	$0	$325,724	$346,394	$0	$346,394	$107,476	$779,595
2015	$305,302	$439,678	$744,980	$325,787	$146,559	$472,346	$116,822	$1,334,148

Q. **What is your recommendation for the Commission?**

A. The lack of reliable analysis and support provided in this docket for the Training Center limits Staff's ability to sufficiently analyze and quantify the impact of this investment. The analyses that were submitted do not indicate that building the Training Center produced savings to Granite State or will result in future savings, but rather increased training costs. There is also a concern as to how Training Center costs are being allocated between Granite State and EnergyNorth. Therefore, Staff recommends that the Commission not allow recovery of the Training Center expenses of $146,559 included in RR-3-12 (CU) (Bates page 040). Given that 75% of the costs are allocated to EnergyNorth, and Liberty expects to petition the Commission for an increase in delivery rates in 2017, the Commission will be able to revisit this issue in that docket if it so chooses.

Q. What information does Staff recommend Liberty provide to assist in the evaluation of the decision to build the Training Center?

[13] Based on Attachment AI- 4 (Staff Tech 1-3)

A. To be able to analyze and quantify the incremental cost of the Training Center, and allocate costs, Staff believes that the following information is essential:

- Training requirements by position and number of positions (Qualification vs. Training);
- Training options available and cost of each option (Q vs T);
- RFPs issued for training services (Q vs T);
- Consideration and efforts to provide training to others for profit;
- Business case provided corporate to support proposed training center;
- Revenue requirement related to the training center (capital & operating);
- Long term Cost/Benefit analysis comparing annual revenue requirement to cost of alternative options;
- Training Center calendar from March 1, 2015 to present that includes all scheduled events, event hours and attendees.

Q. Does that conclude your testimony?

A. Yes.

BUSINESS CASE

PROJECT TITLE: LIBERTY UTILITIES TRAINING CENTER

PROJECT SPONSOR: MICHAEL KNOTT
PROJECT LEAD: STEPHEN SZCZECHURA
DATE: 1/24/2014
PROJECT ID: 8840-C18772
BUSINESS PLAN NUMBER: (Assigned by Corporate Finance)

RECOMMENDATION:

To build a training center on company owned property in Concord, NH. This facility will provide training to our gas and electric employees, contractors and local first responders. There is the potential for providing training to other utilities on a fee basis.

OBJECTIVE(S)

To build a training center to serve Liberty Utilities employees that will be located in New Hampshire. Currently employees are sent to other utilities training sites out of state to complete mandated yearly training.

BACKGROUND

The project will consist of ground up construct of the Liberty Utilities Training Center building to be located at 10 Broken Bridge Rd in Concord NH. There will be site work for a foundation, septic system and asphalt parking area. The masonry building will consist of office space, first and second floor classroom space, high bay lab / training area with a mezzanine, lunch room, standard and ADA compliant restrooms. A well for potable water and fire suppression will also be installed.

ALTERNATIVES/OPTIONS

Training can be provided at National Grid's Training Facility in Millbury, MA. The estimated cost for having an outside agency provide training is $400,000/year.

FINANCIAL ASSESSMENT

Simple ROI for the project has payback in less than 3 years.

RISK ASSESSMENT AND QUALITATIVE EVALUATION

No risks foreseen if construction schedule is met.

IMPLEMENTATION/ACTION PLAN

Upon completion of architectural redesign the project will be sent to competitive bid. Anticipate a June start for construction with completion in November.

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

DA 16-560
Affiliate Agreement with Liberty Utilities (Granite State Electric) Corp. d/b/a Liberty Utilities related to Concord Training Center

Staff Data Requests - Set 2

Date Request Received: 6/21/16
Request No. Staff 2-3

Date of Response: 7/1/16
Respondent: Mark Smith

REQUEST:

Ref. Response of Staff 1-4. Did Liberty perform any cost-benefit analysis concerning use of the training center? Identify and quantify all major and minor benefits and costs analyzed. Provide details with supporting analysis and work papers.

RESPONSE:

Yes, Liberty performed a cost benefit analysis concerning the use of the training center. The analysis was based on economic factors as well as non-economic factors. A cost estimate of utilizing the National Grid training facility in Millbury, Massachusetts was approximately $375,000 per year, which included an analysis of six months of use by gas employees and 12 months of use by electric employees during 2013. See Attachment Staff 2-3.xlsx. That cost estimate includes incremental travel time and instructor's charges combined for electric and gas employees. It does not include the employee's basic hourly pay rate which would have been incurred regardless of where the training was held. As the cost estimate was based on the number of employees who attended training during that time period, the cost estimate is significantly less than the amount that would be calculated based on the amount of training that has been conducted and will be conducted going forward at the Liberty training center, as discussed below.

In addition to cost, other factors played a major role in the decision process. The arrangement with National Grid was temporary, like the Transition Service Agreements (TSAs) between Liberty and National Grid. Liberty did not have a written TSA with National Grid for training but did have a verbal commitment from National Grid to provide training services for a reasonable period of time until Liberty was ready to assume this obligation. When training in Millbury, Liberty employees were part of classes which included National Grid employees from Massachusetts and/or Rhode Island. Consequently the training they received was not specific to New Hampshire and in some cases conflicted with New Hampshire practices and procedures. Also, scheduling New Hampshire employees for this training was becoming increasingly difficult as Liberty employees were slotted into classes based on when openings were available. Priority was given to the National Grid employees. In many cases, the timing of available openings was in conflict with operational needs. Liberty also searched the local area for another source of training and found no gas or electric training available that would in any way come close to meeting our needs. Consideration was given to utilizing an existing Liberty facility. The only facility reasonably centrally located and of sufficient size was a building in the Manchester yard. However, due to environmental and permitting issues, it was ruled out. For all of the above reasons the decision was made to build a training center.

Operator Qualifications (OQs) testing is also performed at the training center. Prior to construction of the training center, OQ testing was done using site visits to the various operating yards with testing logistics and conditions varying from site to site. Gas OQ testing criteria have also recently changed. As OQs expire, there is a new requirement to demonstrate proficiency by physically performing the respective task in addition to the current requirement to pass the written test. This requires even greater use of the training center as it allows the instructor to assess the individual's ability to perform the tasks in a controlled environment rather than in the field which is more difficult as logistics and conditions at the yards varied. There are approximately eighty-five OQ tasks. While every employee is not required to pass them all, each employee does have to pass a number of them. Specific OQ tasks vary by job function. Since it now controls the scheduling of training, Liberty is able to train and test more employees more efficiently than when Liberty relied on National Grid for training. In addition, local training keeps employees in the area and able to respond to an emergency situation if needed. The training center is also being used for basic gas and electric training for all non-field employees to provide them with a better understanding of the business. Such training would not have been possible with National Grid's facility given the constraints on use of that facility. To date, approximately 110 employees have been through this basic training. Liberty also plans to use the training center for public awareness training with first responders such as fire departments and police. It will also be used in our outreach efforts with technical high schools and colleges to educate students in careers in the utility industry. For all these reasons having a Liberty training facility provides many quantifiable and non-quantifiable benefits to the Company, its employees, customers and the communities served by Liberty.

Staff Data Requests - Set 4

Date Request Received: 7/7/17 Date of Response: 7/21/17
Request No. Staff 4-24 Respondent: Steven Mullen

REQUEST:

Reference Docket DE 16-383, Rebuttal Testimony of Mr. Smith & Mr. Mullen, Bates page 227-228. Please provide list of organizations Liberty reached out to explore possible alternatives to National Grid's training arrangement. Please provide supporting documents of such efforts.

RESPONSE:

As stated in that section of testimony, training through National Grid is "no longer available," so Liberty was not seeking an alternative to that training, it was determining a replacement for that training.

Based on information provided to me by Liberty's trainers, Company personnel contacted management employees at Unitil Energy Systems (UES), New Hampshire Electric Cooperative (NHEC), and Green Mountain Power (GMP) and discussed their current training methods. UES and NHEC train on the job with the training conducted by supervisors rather than dedicated trainers. GMP has a dedicated trainer who performs classroom and field based training. Based on the contact at that time, GMP's trainer had no ability to perform training for additional people.

As stated on Bates 229 of the referenced rebuttal testimony, Liberty also reached out to Eversource and conducted a few training sessions in 2014 at Eversource's Pittsfield training facility. Eversource subsequently closed that facility.

Attachment Staff 4-24 is a copy of an invoice for some of the training sessions conducted in June 2014 at the Eversource facility. I am not aware of any documentation regarding the other entities that were contacted as discussed above.

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

DG 17-048
Distribution Service Rate Case

Staff Data Requests - Set 2

Date Request Received: 6/16/17 | Date of Response: 6/30/17
Request No. Staff 2-26 | Respondent: Daniel Dane

REQUEST:

Reference Attachment DBS/DSD-2, Schedule RR-EN-3-10, Page 1 of 1 (Bates 057), Lines 28-32 – Concord Training Center: The pro-forma adjustment appears to indicate there was an effective decrease in the annual rental expense intercompany credit amount from $146,559 (5/1/16 – 4/30/17) to $95,930 (5/1/17 – 4/30/18). (See also RR-EN-3-10 WP). Please explain.

RESPONSE:

The rental expense for the Concord Training Center is to be updated on May 1 of each year, per the Training Center Lease Agreement. The amount of the expense is based on EnergyNorth's annual costs of ownership of the Concord Training Center. Per the Company's calculation of EnergyNorth's costs of ownership for the period May 1, 2017 to April 30, 2018, the costs will decrease from the prior year, resulting in the *pro forma* reduction shown in DBS/DSD-2, Schedule RR-EN-3-10.

As indicated in both Docket No. DA 16-560 and Docket No. DE 16-383, the $146,559 was derived using a combination of actual and estimated amounts as it was for the initial year of the lease and a full year of actual costs had not yet been experienced. The $95,930 was calculated in advance of the rate case filing and involved some estimated costs as actual costs for the lease year ended April 30, 2017, were not yet fully available. Following the completion of the lease year and after submittal of the rate case filing, the lease amount was recalculated using actual amounts as well as an updated count of union employees to determine Granite State's Proportionate Share (as defined in the Lease Agreement). The updated count of union employees was 37 for Granite State and 147 for EnergyNorth, resulting in Granite State's Proportional Share to be 20.11% versus EnergyNorth's at 79.89%. The recalculated lease amount for Granite State is $96,764. The amount of lease revenue to be received by EnergyNorth will be adjusted by $834 as part of the Corrections and Updates filing.

Please see Attachment Staff 2-26 for a comparison of the calculation of the $146,559 and the $96,764.

Concord Training Center
Annual Determination of Lease Payment

	Year 2 (Commencing May 1, 2017)		Initial Year Estimate		Difference	Comments
Cost of building on books, 4/30/2017	$ 3,824,673.56		$ 4,109,880		$ (285,206.44)	Mostly reclassified expenditures to another job; see tab FA 106<>0317

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

DG 17-048
Distribution Service Rate Case

Staff Data Requests - Set 4

Date Request Received: 7/7/17 Date of Response: 7/21/17
Request No. Staff 4-26 Respondent: Steven Mullen

REQUEST:

Reference Docket DE 16-383, Rebuttal Testimony of Mr. Smith & Mr. Mullen, Bates page 229-230. Did Liberty perform any financial/economic analysis of the efficiency gain described here? If yes, please provide the analysis. If not, please explain why not?

RESPONSE:

The referenced section of the DE 16-383 rebuttal testimony discusses the efficiencies obtained from use of the training center by not having to rely solely on on-the-job training, by not having the gas and electric trainers traveling to multiple work locations to train small groups of employees, and by not requiring supervisors to provide training rather than dedicated training personnel. Even without any financial analysis, it is clear that each of those training conditions offers efficiencies in terms of consistency of training, scheduling, planning, travel time, and controlled training conditions, among other things.

While the cost of training is always a consideration, it is vital to keep in mind that the timing and adequacy of training for employees is a top priority. The Company must ensure that it has field trained, knowledgeable employees who can perform their jobs safely and competently. This is the primary consideration in ensuring the safety of our workers as well as providing safe and reliable service.

Regarding the efficiency gains referenced in the testimony, a financial/economic analysis was not performed as attempting to quantify the gains would have involved complex analyses of a number of variable factors including travel distances, number of employees who could be trained at each job location, ability of supervisors to take time from other job tasks to perform training, variability in training among supervisors, potential follow-up training due to that variability, ability to train specific tasks due to job site conditions, ability of training personnel to effectively schedule training at numerous locations, etc. Thus, the results of any financial/economic analysis would be highly variable, subject to a range of challenges, and thus of questionable value.

APPENDIX B: Business Case Template

BUSINESS CASE

PROJECT TITLE	
PROJECT SPONSOR:	
PROJECT LEAD:	
DATE:	
PROJECT ID	
BUSINESS PLAN NUMBER:	(Assigned by Corporate Finance)

Recommendation:

- Brief Description of what is being recommended and why. What problem are we trying to resolve?
- Indicate if it is for:
    - Release of Funds (approval to spend) under a previously approved business case or budget.
    - Approval of a Budgeted Project
    - Approval of a New Project not in current budget
- Under all scenarios outline the total dollar value of the plan, the amount of funds to be released now, and the amount(s) and timing of future funds to be released.
- Amount of funds allotted to OM&A and amount of funds allotted to Capital.
- Scope of project (What work activities, equipment needed, man hours, customer interruptions, etc)
- Expected start date and finish date.

Objective(s)

Describe the major measurable result that is to be achieved. Do not state the recommendation as the required result.

Background

- Describe the current situation and the background leading up to it. (Answer the question of why do we need to do anything?)
- Describe any related project previously approved for this project and any funds previously spent that are related to this proposal.
- Describe the decision criteria used in evaluating the alternatives. i.e. Work process improvement, system improvement, etc.
- Describe any restrictions or conditions, which must be satisfied and would affect the decision or restrict the acceptance of some alternatives. i.e. safety, minimum service level, etc.

Alternatives/Options

Describe all reasonably viable alternatives. Discuss the viability of each and provide reasons if rejected. Discuss Status Quo, Postponement, Buy vs Rent vs Build options.

- Pros, Cons, & Risks of each alternative Tables.

Financial Assessment

- Corporate Finance Division can provide support in completing this section, as required.
- Brief description of financial assessment for each option

- Table or Chart ideal for summarizing data, with any spreadsheets used attached as an appendix.
- NPV should be used for all projects, unless there is only one viable alternative, the recommendation is based on non-economic criteria, or it is obvious that one alternative is much more economically viable than the others. (Provide details of reason)
- Discuss the results of the evaluation, indicating which alternative is best, and any relevant financial issues.
- Identify whether adequate funds are available in the budget. If funds are not available, identify tradeoffs to accommodate the work, or rationale for increasing the budget.
- If expenditures are incurred for more than one year, show annual cash flows for the controlling unit(s).
- Identify any staff level impacts.

Risk Assessment and Qualitative Evaluation

- Not all decisions will be based on lowest cost – qualitative factors can drive the decision.
- Discuss any risks and uncertainties associated with the recommended alternative. Including: Safety, Economic, Operational, Technical, Environmental, Social/Political, Customer Impact, and Regulatory Issues.
- Discuss any other qualitative factors, which may affect this decision.

Implementation/Action Plan

Bullet points of implementation time line, including major hurdles such as approval, work start, cash flows, completion date.

Details of Request

Project description

Is this project growth or customer connection related? If "yes", list the specific locations and how expenditure aligns with customer expansion objectives.

Please describe any permitting requirements, environmental impacts, or resulting performance obligations that may or may not result from this expenditure?

Will there be assets, greater than $5,000, currently in service removed as a result of this expenditure? If yes, please detail the specific assets that will be removed: 1. Original Cost of Plant to be removed (if known): 2. What is the replacement cost of the plant being removed (if original cost not known)? 3. Original Work Order of Plant to be removed (if known): 4. Is the Plant being removed reusable? 5. What is the year of original installation of the plant being removed

What alternatives were evaluated and why were they rejected?

What are the risks and consequences of not approving this expenditure?

Please describe how Health, Safety and Security concerns and impacts as a result of this expenditure been addressed.

Please describe the Regulator's perspective on this expenditure and the necessity to complete related projects?

Are there other pertinent details that may affect the decision making process?

Distribution Service Rate Case

Staff Data Requests - Set 4

Date Request Received: 7/7/17
Request No. Staff 4-32

Date of Response: 7/21/17
Respondent: Steven Mullen

REQUEST:

Reference Docket DG 17-048, Testimony of Mr. Mullen, Bates page 023-027. Did Liberty perform any financial/economic analysis related to the benefits described here? If yes, please provide the analysis with supporting work papers.

RESPONSE:

Bates 023-027 of my testimony include descriptions of various topics such as the types of gas and electric training infrastructure installed at the Training Center, the different types of training available at the facility, flexibility of scheduling, the ability to train non-field employees on gas and electric utility topics, and the ability to make the facility available at times to accommodate training-related events including outside parties. While some of those items may involve quantifiable benefits, the majority involve non-quantifiable benefits. Hence, there is no analysis responsive to this request.

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

DG 17-048
Distribution Service Rate Case

Staff Data Requests - Set 5

Date Request Received: 7/27/17 Date of Response: 8/10/17
Request No. Staff 5-40 Respondent: Steven Mullen

REQUEST:

Reference Docket DE16-383, Rebuttal Testimony of Mr. Smith & Mr. Mullen, Bates 229, lines 19-20. Please explain the basis of the conclusion that "exclusive reliance of on-the-job training is insufficient to ensure employees are able to fully learn and safely perform their function." Please provide analyses, rules/standards, studies etc. which supports this conclusion.

RESPONSE:

The full sentence from the cited rebuttal testimony which begins on line 17 is as follows:

> *"The Company also considered on-the-job training, without any classroom or controlled environment, but ruled it out for several reasons, mostly because reliance o[n] (sic) on-the-job training is insufficient to ensure employees are able to fully learn and safely perform their functions."*

Classroom instruction and controlled environment training are necessary aspects of a well-rounded training experience as they introduce efficiency and consistency which benefits employees, the Company and, ultimately, customers. By conducting classroom training, multiple employees simultaneously receive identical training. Such training is not only efficient from a scheduling perspective, it is also cost efficient. Controlled environment training ensures that employees receive training on certain techniques and procedures under the same conditions, thus ensuring that the training received is standardized from employee to employee. While certainly on-the-job training is vital to an employee's job knowledge and experience, it is the Company's view that "exclusive" reliance on that training method would not provide the optimal training experience. That position is the result of the collective experience of numerous Company personnel who have been involved in the gas and electric utilities for many, many years. Thus, no particular analyses or studies were necessary.

Distribution Service Rate Case

Staff Data Requests - Set 5

Date Request Received: 7/27/17 | Date of Response: 8/10/17
Request No. Staff 5-42 | Respondent: Steven Mullen

REQUEST:

Reference Docket DE16-383, Rebuttal testimony of Mr. Smith & Mr. Mullen, Bates 228, lines 1-2, DG 17-048 response Staff 4-24.

a. Please explain why the UES method (on the job training by supervisors) was not and still is not a viable option for Liberty?

b. Did Liberty issue RFPs (or take other similar steps) for training services before deciding to build Training Center? Please provide supporting documentation.

RESPONSE:

a. As explained in the response to Staff 4-26, in the Company's view, on-the-job training performed by supervisors, while a possible method of providing training, has inherent inefficiencies that are avoided through the use of a centralized training facility. Those inefficiencies include:

- Diverting the actions of supervisors from the additional tasks they are required to perform in the course of their normal duties;
- Potential inconsistency in the training provided by individual supervisors;
- Potential inconsistency in the training provided from job site to job site based on particular conditions experienced at each site; and
- Scheduling and planning concerns.

In addition, please see the response to Staff 5-40 for a discussion of the Company's decision to not rely on the exclusive use of on-the-job training.

b. As explained in the response to Staff 4-24, although Liberty did not issue RFPs, Liberty did reach out to other regional utilities to explore training alternatives. Please also see Bates 228-230 of the Smith/Mullen rebuttal testimony in Docket No. DE 16-383 for other alternatives explored, including potential use of other exiting Company property or acquiring a new piece of property. Please also refer to Attachment SEM-1 to my testimony for further discussion of factors taken into account in the decision making process and avenues explored.

Distribution Service Rate Case

Staff Data Requests - Set 5

Date Request Received: 7/27/17 | Date of Response: 8/10/17
Request No. Staff 5-43 | Respondent: Steven Mullen

REQUEST:

Reference Docket DE16-383, Rebuttal testimony of Mr. Smith & Mr. Mullen, Bates 231, lines 6-8 and DG 17-048 response of Staff 4-24 and Staff 4-33. Please explain why Liberty did not perform a comparative financial/economic analysis between the option it ultimately selected (training center) and an alternative option (e.g. UES method of on the job training by supervisors, or use of IBEW facility, or others)?

RESPONSE:

None of the referenced sources discussed the performance of a financial/economic analysis. The cited portion of the DE 16-383 rebuttal testimony discussed Staff's lack of support for a position taken in its DE 16-383 testimony, the response to Staff 4-24 discussed Liberty's outreach efforts to other utilities, and the response to Staff 4-33 discussed training methods used by contractors.

None of the topics discussed in the cited references were viable alternatives for providing the range of gas and electric training needs required by Liberty, so no financial/economic analysis of those options was warranted. With respect to on-the-job training, please see the responses to Staff 5-40, Staff 5-42, Bates 229-230 of the Smith/Mullen DE 16-383 rebuttal testimony, and Bates 021 of my testimony in the current docket.

Please see Attachment SEM-1 to my testimony for a discussion of a financial analysis that was performed.

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

DG 17-048
Distribution Service Rate Case

Staff Data Requests - Set 5

Date Request Received: 7/27/17
Request No. Staff 5-44

Date of Response: 8/10/17
Respondent: Steven Mullen

REQUEST:

Reference Docket DE16-383, Rebuttal testimony of Mr. Smith & Mr. Mullen, Bates 232, lines 13-19 and DG 17-048 response of Staff 4-28. In the context of these cost increases, did Liberty explore any alternatives? Please explain why or why not in detail.

RESPONSE:

Alternatives explored and the reasons for not pursuing those alternatives are discussed in the Smith/Mullen DE 16-383 rebuttal testimony, the Mullen DG 17-048 testimony, and the responses in DG 17-048 to Staff 4-24, Staff 4-25, Staff 4-30, Staff 5-40, Staff 5-42, and Staff 5-43.

As explained in the DE 16-383 rebuttal testimony as well as the testimony in the current docket, building a local gas and electric training facility was determined to be the best solution to the long-term training needs for Liberty's employees. As construction conditions for the Training Center changed, cost increases were analyzed based on change orders, information received from contractors, and other relevant documentation. Cost increases were reviewed, analyzed, and approved as they arose. Note that the Audit Division also reviewed the Training Center capital costs as part of its audit in this proceeding.

Despite the increases in cost from the original estimate, the Training Center still makes sense from an economic, business, and employee perspective as it is a long-term investment in furthering the technical skills, knowledge, and safety of not only the gas and electric field workers, but also of Liberty's employees as a whole. Such an investment also allows Liberty to better serve customer needs. As training requirements continue to increase and evolve, it is beneficial to have a facility that allows us to adapt to those changes and schedule new training as the need arises. Liberty is aware of other utilities that have invested $10 million and $20 million for gas training facilities whereas Liberty's facility services both gas and electric training requirements at a significantly lower cost.

Further, given the number of non-quantifiable benefits associated with the Training Center (see the Smith/Mullen DE 16-383 rebuttal testimony, the DG 17-048 Mullen testimony including Attachment SEM-1, and the responses to Staff 4-26, Staff 4-32, and Staff 5-40), a simple spreadsheet analysis would not provide a complete picture of this overall value. For instance, one benefit not mentioned in my testimony is that, effective in September 2017, the Training Center will serve as the backup contingency site for Liberty's call center. Using an existing facility that will be ready to serve contingency needs is sensible from both logistical and economic perspectives, particularly given that such contingency needs can and will occur unexpectedly.

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

DG 17-048
Distribution Service Rate Case

Staff Data Requests - Set 5

Date Request Received: 7/27/17 | Date of Response: 8/10/17
Request No. Staff 5-45 | Respondent: Steven Mullen

REQUEST:

Reference Docket DG 17-048, Response Staff 4-32. Does Liberty have any policy or guideline etc. related to using non-quantifiable costs or benefits in its decision making? Please explain in detail and provide any supporting documents.

RESPONSE:

Yes. Included in Liberty's "Capital Expenditures – Planning and Management" policy are templates for preparing a Business Case and a Capital Expenditure Application. Sections of each of those documents instruct the preparer to address non-quantifiable cost and benefit items:

- Alternatives – Pros, cons and risks;
- Qualitative factors;
- Risks and uncertainties including safety, economic, operational, technical, environmental, social/political, customer impact, and regulatory issues;
- Risks and consequences of not approving the expenditure;
- Health, safety, and security concerns and impacts; and
- Other pertinent details that may affect the decision making process.

The Business Case template includes the statement, "Not all decisions will be based on lowest cost – qualitative factors can drive the decision." Please see Attachment Staff 5-45.

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities

DG 17-048
Distribution Service Rate Case

Staff Data Requests – Set 7

Date Request Received: 9/21/17
Request No. Staff 7-12

Date of Response: 10/5/17
Respondent: Steven Mullen

REQUEST:

Reference Staff 5-44 response: The response states "Cost increases were reviewed, analyzed, and approved as they arose." Please provide all analyses referenced in this statement.

RESPONSE:

The full relevant portion of the response to Staff 5-44 reads as follows:

> *As construction conditions for the Training Center changed, cost increases were analyzed based on change orders, information received from contractors, and other relevant documentation. Cost increases were reviewed, analyzed, and approved as they arose.*

"Analyze" means to study or examine an issue, but does not necessarily involve the preparation of documents or spreadsheet analyses. With respect to construction projects, analysis involves examining issues, changed conditions, and additional requirements as they arise to determine whether they are necessary, whether something can be done in another manner to address the changes, and the extent to which the new conditions will impact costs, schedule, and other considerations.

As discussed on Bates 015 and 016 of my June 30, 2017, prefiled testimony, many cost increases resulted from requirements imposed by the City of Concord and were not included in the original project cost estimate. Attachment Staff 7-12 is a copy of a document included in the project file that provides a narrative summary of the changes, and resulting cost increases, required by the City of Concord. (This information was previously provided to Liberty Consulting Group as Attachment PB-13.2.) Those requirements significantly increased the project costs and delayed the construction schedule.

In addition to the requirements of the City of Concord, many of the cost increases were fairly inconsequential, thus not warranting extensive analysis. For example, the installation of items such as a landline phone for security and safety contingencies, a manhole cover and guard that allows for manhole rescue training, and a roof hatch safety rail and grip tape on the stairs for added safety measures all are minor cost items that, while not included in the original pricing, were practical measures that required little analysis.

As stated in the response to Staff 5-44, analysis was performed by review of the change proposals, change orders, and supporting documentation for each cost increase. As with any major construction project, there were many changes to the costs of the Training Center project following the initial estimate; therefore, the Company suggests that Staff identify specific costs and the Company will provide the available supporting documentation.

Summarization of additional project costs imposed by City of Concord fees, inspection services, and scope of work changes.

In order to approve construction of the new Training Center and CNG facility on Broken Bridge Road in Concord, NH, the City of Concord (City) imposed certain required project conditions that added significant costs to the initial estimated costs of building the facilities. Due to the fact that the Training Center was being constructed first and in order to meet deadlines associated with completion of the Training Center, these costs were passed on to Training Center project. Specifically, the City required off-site improvements consisting of installation of a new municipal waterline and hydrants down the entire length of Broken Bridge Road, widening of certain sections of Broken Bridge Road, and complete resurfacing of the road. In order to be able to move forward with both projects, we moved forward with obtaining pricing to complete the off-site road improvements and added the costs to the Training Center contract ($488,905). Prior to the pre-construction conference with the City, the City notified us that traffic impact fees ($19,015), City inspection fees ($33,300), and water investment fee ($2,595) would need to be paid prior to the City giving approval to start work on-site. Due to schedule constraints these fees were paid and not contested through the City's appeal process. During installation of the waterline, unsuitable materials (organics) were encountered in the roadway within the waterline trench. The City required that these unsuitable materials be removed and replaced with imported structural fill including crushed stone below the waterline ($26,279). Due to the fact that the waterline was installed below the water table in certain areas and the placement of stone in the trench, water began seeping out of the road way in an area below a steep incline in the road. Due to the seepage, the City is requiring that an underdrain be installed ($15,073) in the section of roadway with seepage in order to direct water flow from below the road away from the road. An additional cost not associated with the roadway, but required by the City prior to receiving a temporary occupancy permit was the addition of a gas detection system within the building ($15,435). The gas detection was not included in the original plan set approved by the City, but the fire department required a gas detection system when they completed their final plan review for permit approval.

STATE OF NEW HAMPSHIRE

BEFORE THE

PUBLIC UTILITIES COMMISSION

Docket No. DG 17-048

Liberty Utilities (EnergyNorth Natural Gas) Corp.

Distribution Service Rate Case

TESTIMONY

OF BEN JOHNSON, PH.D.

On Behalf of the

STATE OF NEW HAMPSHIRE

OFFICE OF THE CONSUMER ADVOCATE

November 30, 2017

Table of Contents

Q. Would you please state your name and address?

A. Ben Johnson, 5600 Pimlico Drive, Tallahassee, Florida.

Q. Please briefly describe your occupation and qualifications.

A. I am employed as a consulting economist and president of Ben Johnson Associates, Inc.®, an economic research firm specializing in public utility regulation. I received a Bachelor of Arts degree in Economics from the University of South Florida, and both a Master of Science in Economics and Doctor of Philosophy in Economics from Florida State University.

Over the course of more than 40 years, I have been actively involved in more than 400 regulatory dockets, involving electric, natural gas, and other utilities. I have presented expert testimony on more than 250 occasions, before federal regulatory agencies, various state courts, and regulatory commissions in 40 states, two Canadian provinces, and the District of Columbia. Most of this work has been performed on behalf of regulatory commissions, consumer advocates, and other government agencies involved in regulation. However, our firm has also worked for other types of clients as well, including large industrial consumers and non-profit entities like the AARP and the North Carolina Sustainable Energy Association.

Q. Have you prepared an appendix that provides some additional details concerning your qualifications?

A. Yes. Appendix A, attached to my testimony, will serve this purpose.

Q. Have you prepared any exhibits in support of your testimony?

A. Yes. I prepared Exhibit___(OCA-2), consisting of two schedules. These schedules were prepared under my supervision and are true and correct to the best of my knowledge.

Q. What is your purpose in making your appearance at this hearing?

A. My firm has been retained by the New Hampshire Office of the Consumer Advocate (OCA) to assist in preparing and presenting evidence with respect to the pricing and decoupling proposals submitted by Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberties Utilities ("EnergyNorth" or "the Company").

I will primarily be responding to the pricing proposals set forth in the testimony of David B. Simek and Gregg H. Therrien, and the revenue decoupling proposal set forth in separate testimony submitted by Gregg H. Therrien. I will also discuss the marginal cost study described in the testimony of Melissa F. Bartos, and the functional (embedded) cost study described in the testimony of David A. Heintz.

Following this introduction, my testimony has five major sections. In the first section, I discuss the Company's revenue decoupling proposal. In the second section I discuss the Company's proposed revenue allocation and rate design. I give particular attention to the EnergyNorth's proposals to increase the fixed monthly charges that are paid by all customers regardless of how much energy they consume. In the third section I define various economic concepts, including marginal costs, joint costs and sunk costs and the difference between the long-run and the short-run. I then explain how these concepts relate to the way prices are established in unregulated markets, and the rate design issues in this proceeding. In the fourth section, I discuss the Company's marginal cost study. I note some serious flaws in the study and recommend that the Commission not rely on the study results as submitted. In the fifth section I summarize my recommendations.

I. THE COMPANY'S DECOUPLING PROPOSAL

Q. Can you briefly describe the Company's decoupling proposal?

A. Yes. The Company is proposing a revenue per customer decoupling mechanism that will eliminate the traditional link between sales and revenues. Normally, when customers use more energy, revenues and earnings increase; when they use less energy, revenue and earnings decline. This normal linkage will be broken by creating a mechanism that periodically adjusts rates to cancel out the impact of usage changes.

> EnergyNorth proposes to implement rate design measures that will "decouple" the traditional connections between the volume of gas that EnergyNorth delivers to its customers and its revenues and earnings.[1]

If it is accepted by the Commission, this mechanism will disassociate EnergyNorth's financial performance from the amount of gas it delivers during any given month or year. This will tend to stabilize its revenues, improve earnings, and reduce the frequency rate cases. While these are significant benefits from a stockholder perspective, the Company did not dwell on these aspects of its proposal. Instead, its testimony primarily focuses on the way decoupling will reduce the disincentive for it to promote energy conservation.

> By eliminating the link between customer consumption and Company earnings, decoupling removes the disincentive

1 Direct Testimony of Gregg Therrien, Page 4.

> for utilities to promote conservation and energy efficiency programs. Companies that have implemented decoupling are no longer caught between promoting conservation (that reduce sales) and growing revenues (by increasing sales). Breaking the link between utility sales and revenues is the best way to promote conservation activities fully and freely.[2]

Q. Is decoupling related to the existing LRAM?

A. Yes. Decoupling would replace the LRAM, which serves a similar purpose. The LRAM was recently added to the Company's tariff pursuant to Order 25,932, which implemented the Energy Efficiency Resource Standard.[3] The parties to that proceeding sought to reduce the incentives utilities have to encourage increased energy usage, or to discourage energy conservation.

> Utilities should have the incentive and initiative to continue implementing robust energy efficiency programs effectively, to the mutual benefit of ratepayers, shareholders, and the natural environment of the state.[4]

Although the LRAM and decoupling were viewed as alternative mechanisms for achieving similar goals, full consideration of decoupling was postponed until future rate cases.

> [A] targeted lost revenue adjustment mechanism (LRAM) or decoupling may be used to compensate utilities for lost revenues associated with energy efficiency.
>
> …
>
> Because of Commission policy requiring the consideration of decoupling only within the context of a rate case, Staff recommended the adoption of an LRAM for the initial three-

2 Ibid, pp. 5-6.
3 New Hampshire Public Utilities Commission, Order 25,932, August 2, 2016 (“Order 25,932”).
4 Ibit, p. 9.

> year period, to be replaced thereafter by a decoupling mechanism.[5]

Q. How does decoupling relate to energy conservation?

A. Under traditional ratemaking, utilities benefit when customers use more energy, since this leads to increased revenue in the short-run and a larger rate base and increased earnings in the long-run. The LRAM alleviates these perverse incentives, but only with respect to specific energy efficiency programs and initiatives. Decoupling achieves a broader, more fundamental shift in incentives, because revenues become largely impervious to improvements in energy efficiency – including improvements resulting from tightened building codes, increased appliance standards, technology improvements, heightened awareness of greenhouse gas emissions, and other factors.

This broader scope is significant, because EnergyNorth can potentially influence the decisions by customers and the companies that construct new buildings concerning what insulation they install, what appliances they purchase, and what type of energy they use. Currently, EnergyNorth has an incentive to steer customers into the programs and initiatives included in the LRAM, rather than finding other ways to reduce their energy usage that are not tied to those specific programs.

Implementation of decoupling is often accompanied by a move away from high fixed customer charges, declining blocks, and other rate structures that create a

5 Ibid, p. 24.

disincentive for energy conservation.[6] For example, Pacific Gas & Electric (PG&E)'s move to decoupling included replacement of their fixed customer charge with a minimum monthly charge of three dollars. This makes sense, because decoupling provides the revenue stability that was one of the primary motivations behind high fixed customer charges and low volumetric rates, but without the harmful impacts on low usage customers and without the disincentive for energy conservation associated with high fixed charges and low volumetric rates.[7]

Q. How does decoupling affect customers?

A. As with the LRAM, the per-therm cost of gas delivery will increase under decoupling – assuming conservation efforts are resulting in a downtrend in energy usage per customer. However, decoupling is more symmetrical than the LRAM. For instance, if commercial and industrial usage increases due to an improvement in economic activity, the decoupling mechanism can lead to lower rates – a potential that does not exist with the LRAM.

When thinking about these issues, it is important to remember that distribution rate increases that occur under decoupling would eventually occur anyway, under

[6] Lazar, J. and Weston, F. Regulatory Assistance Project. Revenue Decoupling: A Guide to Theory and Application. Page 25-28. (June 2011) Available at: https://www.raponline.org/wp-content/uploads/2016/05/rap-revenueregulationanddecoupling-2011-04.pdf

[7] Migden-Ostrander, J. and Sedano, R. Regulatory Assistance Project. "*Decoupling Design: Customizing Revenue Regulation to Your State's Priorities*." Page 39. (November 2016) Available at: http://www.raponline.org/wp-content/uploads/2016/11/rap-sedano-migdenostrander-decoupling-design-customizing-revenue-regulation-state-priorities-2016-november.pdf (Stating "high fixed charges reduce the customer's incentive to conserve by increasing the payback period on energy efficiency and distributed generation investments" and "there is significant concern around the perverse subsidy that high fixed charges create in which a customer living in a large suburban home pays the same high monthly fixed charge as a low-income customer in a one bedroom or studio apartment, even though the costs for the utility to serve these customers are dramatically different in that the cost to serve customers in densely populated areas is generally less than in more spread-out residential neighborhoods."

traditional ratemaking, but with different timing. Regardless of whether or not decoupling is adopted, customers who reduce their energy usage will receive the benefit of a lower bill, and customers as a whole must still pay the fixed costs of the delivery system. The main difference is that rate adjustments necessitated by improved energy efficiency will occur in smaller, more frequent increments under decoupling.

That is not to say the only possible difference is one of timing. Under traditional ratemaking (without an LRAM or decoupling), customers can potentially benefit from the lag between the time when energy usage is reduced and when rates are adjusted. However, there are no “free lunches” under traditional rate base regulation. The more significant the improvement in energy efficiency, the more this lag will result in downward pressure on the utility's earnings. The resulting earnings erosion or attrition will motivate the utility to file more frequent rate cases, and it is likely to request a higher allowed return, larger allowances for “known and measurable changes,” larger step increases, or other modifications to the traditional ratemaking process, in an effort to offset the earnings erosion problem. Regardless of whether or not these requests are accepted, the Commission will take steps to ensure that the Company has a reasonable opportunity to recover its costs and earn a fair return. And, regardless of the outcome, the increased frequency and complexity of the rate filings will increase rate case expenses – to the detriment of customers.

Q. Is the proposed decoupling mechanism an improvement over the existing LRAM?

A. Yes. It does a better job of removing the disincentive for EnergyNorth to encourage energy conservation, while eliminating the bias in favor of programs and initiatives included in the LRAM. With decoupling, the Company will have a more neutral outlook, since it will no longer be financially better off when customers channel their energy conservation efforts into specific programs included in the LRAM.

The proposed decoupling mechanism is also superior to the LRAM because it is symmetrical, while the LRAM is not. This means the potential exists for rate reductions due to decoupling – or, at a minimum, offsetting factors can potentially ameliorate the magnitude of rate increases necessitated by energy conservation. Decoupling allows revenue increases attributable to factors like changes in economic conditions and changes in the customer mix to offset revenue reductions attributable to energy efficiency programs. In contrast, the LRAM is narrowly focused on the impact of energy reductions due to specific programs, so there is no opportunity for offsetting factors to be considered.

Q. Please compare the approximate cost to ratepayers of EnergyNorth's LRAM arrangement against the approximate cost of the proposed decoupling mechanism.

A. Under the arrangement set forth in the April 2016 EERS Settlement Agreement and approved in Order No. 26,932, New Hampshire's investor owned utilities are compensated for their lost revenues attributable to their energy efficiency programs on a cumulative basis, with lost revenues accruing until the Company's next rate case, at which point the lost revenues are "reset to zero." *Order No. 26,932* at 30. The projected compensation associated with EnergyNorth's LRAM detailed in the 2016 EERS Settlement Agreement's "Gas Attachment B" assumes a four year timeframe before

EnergyNorth's first "reset to zero," and is summarized in the table on the left.[8] This can be compared to the approximate cost to ratepayers of the proposed decoupling mechanism. An estimate of that cost is provided by Greg Therrien for the period from summer 2011 to summer 2016 and summarized in the table to the right.[9]

Year	EnergyNorth Lost Base Revenue
2017	$143,274
2018	$480,808
2019	$841,813
2020	$1,226,837
Annual Average	**$673,183**

Year	Accrued Revenue Shortfall (Surplus)
Summer 2011	$224,260
Winter 2011-12	$3,969,815
Summer 2012	$446,708
Winter 2012-13	$156,006
Summer 2013	$162,960
Winter 2013-14	($3,479,131)
Summer 2014	($325,587)
Winter 2014-15	($2,761,837)
Summer 2015	($60,719)
Winter 2015-16	$3,687,185
Summer 2016	$85,642
Annual Average	**$382,781**

Q. Are there changes to the proposed decoupling mechanism that should be considered?

A. Yes. The Commission should consider two changes: linking the decoupling mechanism to total revenues, rather than revenue per customer, and having the mechanism operate on a "real-time" basis.

[9] Therrien Direct Testimony at Bates 327. (Annual Average is the sum of the revenue column figures, divided by 5.5 years)

Q. Can you briefly elaborate on the difference between total revenue decoupling and revenue per-customer decoupling?

A. The key difference is whether revenues are pegged to the dollar amount needed to recover the revenue requirement, or whether that amount is converted into a per-customer equivalent. Under the latter option, total revenues will increase over time, as customers are added to the system. The Company explained its preference for the per-customer approach as follows:

> Adding new customers to the system involves incremental capital investment, which requires that the revenues from these new customers be necessarily retained by the Company to fund this new investment. Therefore, RPC RDMs are superior to Total Revenue RDMs for gas utilities, as new customer revenues are retained (at the system average RPC) to help cover the cost of the corresponding new investment. If a Total Revenue RDM is employed instead, then the LDCs incentive to add new customers is significantly diminished, as total revenues will remain unchanged while rate base grows.[10]

While I understand this reasoning, I don't find it persuasive. Total revenue decoupling would stabilize the Company's revenues at a level that has been reviewed and approved by the Commission, equal to the approved revenue requirement. In contrast, the per-customer approach results in a growing level of revenues (tied to the number of customers), which will become increasingly attenuated from the revenue requirement that was calculated and approved by the Commission in the most recent rate case.[11]

---

[10] Direct Testimony of Gregg Therrien, Page 11.

[11] If the Commission chooses to rule in favor of the Company's revenue per customer proposal, they should consider requiring rate cases at least every five years, to ensure the gap between approved revenues and required revenues does not become excessive.

The increase in revenues that occurs with per-customer decoupling is not necessarily matched by an equivalent increase in the revenue requirement. In fact, some customers can be added to the system at locations where very little additional capital investment is required. There is no assurance that the increase in total revenues that occurs under the per-customer approach is fully needed, or that the resulting revenue growth will match any corresponding increase in the revenue requirement. It is also important to keep in mind that EnergyNorth has cash flows provided by depreciation and retained earnings that can be used to support new customer additions. If its capital additions exceed depreciation, and as a result its rate base increases (rather than decreases as depreciation accumulates), it will have the opportunity to recover the associated costs after they are reviewed and approved in a rate case.

As to the question of incentives, it is true that total revenue decoupling reduces the incentive to add new customers, but it will not completely eliminate that incentive. From a utility's perspective, growth is almost always viewed as desirable – particularly if it translates into an increase in the rate base. Growth in rate base supports growth in earnings per share and it makes a utility's stock more attractive from a stockholder perspective. There is every reason to anticipate that EnergyNorth will continue to pursue growth opportunities even if decoupling is approved on a total revenue basis. Admittedly, customer growth will not be as profitable as it would be under per-customer decoupling, but that does not mean growth will suddenly become unattractive, or negate the appeal of a larger rate base and increased overall scale of the Company's operations.

Q. Are there benefits to using total revenues rather than revenues per-customer?

A. Yes. This approach further increases revenue stability, which is appropriate since the Company's cost structure is tied to extremely long-lived investment. This approach also makes it easier to visualize and anticipate the impact of the decoupling mechanism – eliminating uncertainties related to unknown future fluctuations in the number of customers, the mix of different types of customers (e.g. high versus low-load factor commercial and industrial customers), and the impact of changing economic conditions on the usage of different size customers.

Q. Can total revenue decoupling be implemented in a way that provides additional funding for customer growth?

A. Yes. If the Commission decides that expansion into new areas should be encouraged and this type of customer growth should be more strongly supported, revenues from new customers that pay the "expansion rate" can be excluded from the total revenue decoupling mechanism. For instance, revenues from new customers who are required to pay the R-6 (Residential Heating-Expansion) delivery rates (which are 30 percent higher than existing R-3 Residential heating rates) could be excluded from both the "actual" and "target" revenues considered in the decoupling mechanism. This would effectively allow the Company to retain revenues from this category of customers, but not from new customers connected to parts of the system where the expansion rates do not apply.

Q. What do you mean by a "real-time" approach to decoupling?

A. Under the Company's proposal, annual calculations are performed that take into account the difference between actual billed revenues and the target level of revenues approved by the Commission. In a typical year, a large portion of this difference will be attributable to weather fluctuations; the remainder is attributable to energy conservation and other factors that influence usage.

> Between rate cases, sales vary because of weather, conservation, economic conditions, the deployment of DERs, and other factors. But weather is probably the largest of these, responsible for perhaps 80 percent of decoupling cost deferrals.[12]

With "real-time" decoupling, the difference between actual and normal weather is calculated and used to adjust bills as they are sent out each month.[13] This essentially eliminates any impact of weather on the annual decoupling calculations, confining those calculations to the more limited purpose of adjusting for any remaining difference between billed revenue and the targeted level of revenue. In effect, weather related usage fluctuations are decoupled in "real-time" each month, while all remaining usage fluctuations – including the downtrend in usage due to increased energy efficiency – are decoupled in the annual adjustment process.

Real-time decoupling can be implemented using either a per-customer or total revenue approach. In the former case, the review process would adjust for any

[12] Migden-Ostrander, J. and Sedano, R. Regulatory Assistance Project. "Decoupling Design: Customizing Revenue Regulation to Your State's Priorities." Page 25. (November 2016) Available at: http://www.raponline.org/wp-content/uploads/2016/11/rap-sedano-migdenostrander-decoupling-design-customizing-revenue-regulation-state-priorities-2016-november.pdf
[13] Ibid.

discrepancies between billed revenues and the authorized level of revenues per-customer. In the latter case, the review process would adjust for any discrepancies between total billed revenues and authorized total revenues. Because the review process would not be focused on weather fluctuations, it could occur annually (rather than semi-annually, as proposed by the Company).

Q. Are there benefits to "real-time" decoupling?

A. Yes. This type of decoupling would achieve the same degree of revenue stability, while improving cash flow stability. This is a significant benefit for both the Company and its customers. Because weather-related decoupling would occur within the billing cycle, it will help smooth out bill fluctuations, making cash flows smoother and more predictable for both the Company and its customers.

Consider, for example, what would happen if November 2018 were unusually cold (compared to a normal November). Under EnergyNorth's proposal, this will result in a downward rate adjustment in order to achieve a stable level of revenues per customer – but the rate reduction won't occur until the 2019-2020 winter season – roughly a year after the cold snap. Under EnergyNorth's proposal, the offsetting bill credit appears a year later – far too late to help alleviate any cash flow problems customers suffer in the immediate aftermath of unexpectedly cold weather.

If a real-time decoupling mechanism were used instead, the rate reduction would be calculated and applied to the same billing cycle that includes the higher usage, and the downward rate adjustment or bill credit would appear in the exact same bill that includes the higher usage due to the abnormally cold weather. This is a very significant timing difference, which provides a very real, tangible benefit for customers – weather-related downward bill adjustments occur precisely when they are most needed.

If weather is abnormally mild, the corresponding bill adjustment works in reverse. With real-time decoupling, an upward adjustment occurs on the exact same bill that has a lower than expected level of usage. This timing is again ideal, because customers will be paying the slightly higher rate during a month when their usage is lower than normal. The end result is a slightly higher bill than if decoupling were not in effect, but that bill is still lower than it would have been if the weather had been normal. In contrast, under EnergyNorth's proposal, the upward rate adjustment appears on bills roughly a year later – at a time when the customer's bill might actually be higher than normal, due to colder than normal weather.

Not only does the “real-time” approach improve cash flows from the customer's perspective, it also improves cash flows from the Company's perspective. Since the Company's cost structure is largely fixed, while the weather fluctuates widely, this discrepancy forces it to maintain larger cash balances, or to engage in more intensive cash management efforts, than if its cash inflows were following a stable, easily predicted seasonal pattern based upon normal weather.

EnergyNorth's decoupling proposal does not improve this situation. Although it stabilizes revenues, it accomplishes this by accruing a “normal” level of revenues for each month; its actual incoming cash flow will not be synchronized with this stabilized revenue accrual. If the weather is mild, the Company will bill less than it accrues, then wait a year to implement the rate adjustment needed to actually receive the cash corresponding to its accrual. Conversely, if the weather is unusually cold, the Company will bill more than it accrues, keeping the excess cash until it adjusts rates downward approximately a year later. Weather fluctuations in both directions will continue to cause fluctuations in customer bills, and corresponding fluctuations in cash received from customers, which will not be synchronized to the Company's actual (relatively stable) cash flow needs.

In contrast, with real-time decoupling, cash flows will be synchronized with a stabilized, seasonal revenue pattern (customers will continue to see lower bills in the summer and higher bills in the winter, consistent with normal seasonal weather patterns). The timing of cash flows will be more predictable and improved for both the Company and its customers, regardless of how warm or how cold it is. With either approach to decoupling, rates will eventually be reduced if the weather is unusually cold, and they will eventually increase if the weather is unusually mild. The key difference is when this occurs. With the Company's proposed approach, weather-related rate adjustments occur long after an unusual weather event occurs, so the Company has to deal with the cash flow discrepancy during the interim. In contrast, with real-time decoupling, rate adjustments are simultaneous with weather-related usage fluctuations, thereby mitigating bill fluctuations and reducing the need to deal with cash flow discrepancies.

Since a real-time decoupling mechanism would provide substantial benefits to EnergyNorth, it would be reasonable for the Company to accept responsibility for most, if not all, of the administrative costs necessary to initiate this form of decoupling.[14]

[14] A preliminary vendor estimate provided to EnergyNorth and conveyed to the OCA via email on 11/27/17 suggests the up-front administrative costs associated with billing system upgrades is in the vicinity of $50,000 to $100,000. Amortized over three years, the mid-point of this estimate is equivalent to .015 cents per therm. To put this into

Q. Are there any other advantages to the "real-time" decoupling approach?

A. Yes. Customers will be more likely to understand and accept the mechanism if the portion that deals with weather-related fluctuations is separated from the portion that deals with energy conservation and other factors influencing usage. With the Company's proposal, weather-related rate adjustments will be combined with calculations related to other changes in usage, making it more difficult to explain the process to customers. Since weather fluctuations are very noticeable to customers, it makes sense to show them the weather-related rate adjustment immediately after the weather event – rather than a year later. Without the impact of weather fluctuations, the annual rate adjustment will be smaller, and it will be easier to explain to customers.

With the "real-time" approach, the annual true-up will compare billed revenues to authorized revenues. The resulting adjustment will ensure that actual revenues match the authorized level (either defined as the Commission-authorized total revenue or the authorized revenue per customer multiplied by the total number of customers). That annual discrepancy will be relatively small, since it won't be affected by weather fluctuations, and given its narrow focus it can be more readily explained as an "adjustment to match authorized revenues." Since the annual rate adjustment will be smaller under real-time decoupling, this approach also alleviates the need to impose a customer impact cap as suggested in Greg Therrien's Direct Testimony at Bates 324. If the Commission were to rule against real-time decoupling, they should strongly consider adoption of the customer impact protections suggested by Mr. Therrien. Additionally, since the magnitude of the annual adjustments will be smaller, and symmetrical, it would

perspective, this is equivalent to 1 cent per month for a residential or small commercial customer using 800 therms per year.

be reasonable to further simplify the calculations by eliminating the need for a carrying charge associated with deferrals between true-up periods.

Q. Does real time decoupling shift risks associated with weather-related revenue fluctuations away from the Company toward customers?

A. No. With real-time decoupling risks are reduced for <u>both</u> stockholders and customers. Unexpected month-to-month and year-to-year fluctuations in customer cash-flows will diminish for customers just as they will diminish for stockholders – delivery bills will follow a predictable pattern that tracks normal seasonal patterns. For both sides of the billing process, real time decoupling eliminates the consequence of having a day or month that happens to be warmer or colder than that day or month would normally be. Removing this weather-related risk benefits both stockholders and customers.

Q. Do you have any other comments related to weather fluctuations?

A. Yes. New Hampshire has recently been experiencing mild winter weather, compared to years past, as shown below:

	Oct -Nov	Dec - Feb	Mar - May	Jun - Sep	Total
40 Yr	1,131	3,360	1,627	196	6,314
30 Yr	1,122	3,329	1,64o	183	6,273
25 Yr	1,127	3,327	1,646	173	6,272
20 Yr	1,124	3,317	1,642	174	6,257
15 Yr	1,119	3,345	1,624	166	6,254

	Oct -Nov	Dec - Feb	Mar - May	Jun - Sep	Total
10 Yr	1,111	3,338	1,578	166	6,193
5 Yr	1,103	3,276	1,576	158	6,112

It is not self-evident whether the recently milder weather has been entirely due to a sustained long term downward trend, or if cyclical factors or random fluctuations have been contributing factors. Regardless, the recent trend is not likely to suddenly reverse, or immediately revert to the colder weather that was experienced decades earlier. Given the above data, for ratemaking purposes, it would be reasonable to use a slightly shorter period of 25 years, and to give more weight to recent data than to older data. More specifically, I recommend giving full weight to the 2016 data, 24/25 weight to the 2015 data, 23/25 weight to the 2014 data, and continuing with that pattern through 1992, which should be given 1/25 weight. The resulting 25 year weighted averages are shown below:

	Oct -Nov	Dec - Feb	Mar - May	Jun - Sep	Total
25 Yr	1,114	3,327	1,623	168	6,233

Q. What would be the effect of this change?

A. It would have no impact on the calculated revenue requirement, but it would reduce the test year billing units. In turn, this would increase the calculated volumetric rates needed to achieve the revenue requirement. Finally, this change would make it more likely for the weather-related portion of any approved decoupling adjustments to fluctuate back and forth between positive and negative amounts, rather than being consistently biased in the positive direction. Stated another way, if decoupling is tied to "normal" weather that is colder than the milder weather that will actually be experienced during the next five to ten years, the decoupling adjustment will be systematically biased in the upward direction. This problem can be mitigated by using "normal" weather data that is more consistent with recent experience.

Q. Can you please summarize your recommendations concerning decoupling?

A. I recommend the Commission adopt a total revenue decoupling mechanism, in lieu of the existing LRAM. To the extent it is practical to do so, I recommend implementing this mechanism on a real-time basis, in conjunction with 25 year weighted average normal weather data for each billing cycle.

II. THE COMPANY'S RATE DESIGN PROPOSALS

Q. Before delving into the details of the Companies' pricing proposals, can you briefly explain your general approach to rate design?

A. Yes. Although rate design is more of an art than a science, it is nevertheless a very important part of the overall regulatory process. Designing rates is the stage where the Commission's decisions will have the greatest short-run impact on customers, and the greatest long-run impact on the Commission's overall policy goals. Rate design is not an area where deference should be given to the utility's preferences, or where "business as usual" is an appropriate philosophy. Instead, this is an area where the Commission should carefully weigh the pros and cons of the available options, and adopt that set of rates which it concludes will best serve the public interest.

The following discussion (in the context of electric rates) from page 5 of the Smart Rate Design for a Smart Future issued by the Regulatory Assistance Project in July 2015 is informative:

> Rate design is important because the structure of prices — that is, the form and periodicity of prices for the various services offered by a regulated company — has a profound impact on the choices made by customers, utilities, and other . . . market participants. The structure of rate designs and the prices set by these designs can either encourage or discourage usage at certain times of the day, for example, which in turn affects resource development and utilization choices. It can also affect the amount of electricity customers consume and their attention to conservation. These choices then have indirect consequences in terms of total costs and benefits to society, environmental and health impacts, and the overall economy.

Before going into greater detail concerning the current and proposed rate design, it is worth noting that the Commission faces a difficult task in designing rates, and I fully understand it must weigh the claims made by parties with widely varying perspectives. The Regulatory Assistance Project provides some useful perspective concerning the rate design process on page 8 of their July 2015 paper, Smart Rate Design for a Smart Future:

> A variety of stakeholder interests are at play in the debate over rate design, and finding common ground is not easy. Regulators face the task of fairly balancing concerns among utilities, consumers and their advocates, industry interests, unregulated power plant owners, and societal interests. The

> regulator accepting the charge of "regulating in the public interest" considers all of these values.

It is for this reason that I will explain my recommendations in considerable detail. EnergyNorth's revenue allocation and rate design proposals are closely linked to its marginal cost study, so I will define various cost-related terms and provide a strong theoretical foundation for my critique of the Company's cost claims.

There is one overarching theme that will run through all of this discussion: the appropriate relationship between prices and costs, and how that relationship impacts different types and sizes of customers. To advance the public interest, and be more consistent with how prices are set in competitive markets, I recommend recovering more of the revenue requirement through the volumetric rates. Throughout the remainder of my testimony I will provide detailed evidence supporting this recommendation, with the intent of providing the Commission with the tools it will need to evaluate the claims made by EnergyNorth and to chart a course that makes greater progress toward well-accepted public policy goals, without unduly impacting any group of customers.

A. Fixed versus Volumetric Cost Recovery

Q. What has EnergyNorth proposed with respect to its rate design?

A. The Company made a priority to increase its customer charges (the fixed monthly rate that applies regardless of how much or how little gas the customer uses). This priority is apparent from the workpapers it used to develop the proposed rate design, and is alluded to on pages 16-17 of the joint testimony of Simek and Therrien. They describe a two-step process: the proposed customer charges were developed first, and the remainder of the revenue requirement was recovered through the volumetric rates. The Company's marginal cost estimates were used in both steps.

> To determine the appropriate level of customer charges for each class, we considered: (1) the marginal customer costs resulting from the marginal cost study; (2) rate continuity; and (3) customer impacts.[15]

The second and third items just mentioned did not support increasing the customer charges; rather, they ameliorated the extremely large increases that would be needed to move these rates all the way to the Company's estimate of marginal cost. For example, the Company is proposing to increase the customer charge for the residential R-1 (non-heating) class by $6.23, or 40.8%, from the current tariff level of $15.27 to the proposed level of $21.50. The marginal cost calculated by the Company for this class is $61.17. They would have needed to increase this rate element by 300% – from $15.27 to $61.17 – in order to go all the way to the cost they calculated. Needless to say, such an extreme increase in this rate element would not be consistent with the principle of rate continuity, and the resulting customer impacts would also be of potential concern – hence the reference to the second and third factors they considered in deciding on the proposed customer charges.

Q. What has the Company proposed for other customer classes?

A. For the other residential tariffs it used a similar approach, increasing the customer charge to a level that moves closer to the numbers calculated in its marginal cost study, then adjusting the remaining (volumetric) rate elements as necessary to achieve the requested

15 Direct testimony of Simek and Therrien, Page 17.

revenue requirement. The primary thrust of this exercise was to move customer charges closer to the cost level calculated by the Company. However, it ameliorated that movement in the interest of maintaining a degree of rate continuity and to avoid excessive customer bill impacts.

Since the proposed rate design is closely tied to the Company's marginal cost results, I will discuss the appropriate relationship between costs and prices in the next major section, followed by my discussion of the Company's marginal cost study. I would note, however, that EnergyNorth's primary focus seems to be on increasing the customer charges; the cost study is in more of a supporting role. One reason I say that is because the Company is proposing increases to its customer charges even for tariffs where moving in that direction isn't supported by its cost study. This is apparent from this passage in its testimony:

> Although Attachment RATES-5 Line 99 also indicates that the proposed C&I rate class customer charges exceed the marginal unit customer costs for rates G-42, G-43, G-52, and G-53, the customer charges for these rate classes were increased by 10 percent,

The Company could have proposed maintaining the existing customer charges, or begun to move them toward the (lower) calculated marginal cost level. The Company instead proposed to increase the customer charges by 10% – which is about five times the recent annual rate of inflation. No cost justification was offered to support this proposal, nor was there any acknowledgement that this would exacerbate and perpetuate an existing pattern of overcharging low use customers (according to its own cost calculations). The stated reason supporting this proposal is that the 10% increase was necessary to ensure a large enough share of the rate increase would be paid by low usage customers relative to larger customers in the same class:

> if we had not increased these rate class customer charges, large gas users in each of these classes would experience disproportionately large increases, relative to smaller gas users in each of these rate classes.

While applying a similar percentage increase to both small and large customers may seem reasonable, what is notable is that this reasoning was <u>not</u> followed in the opposite direction. Nor was it followed with respect to the prices charged to customers in the Keene division.

If it had consistently applied this line of reasoning, the Company could have concluded that large users in the Keene division should pay 10% higher rates, rather than decreased, to ensure that other customers do not experience disproportionately large increases. Similarly, if it had following this reasoning consistently, it would have concluded that residential customer charges should not be drastically increased, because a disproportional increase to this rate element has the effect of requiring small residential gas users to experience disproportionately large increases, relative to larger gas users in the same rate class. In other words, the emphasis on maintaining existing rate relationships seems to be somewhat selective in EnergyNorth's proposals. The one thing that seems to consistently run throughout the Company's rate proposals (as well as its decoupling proposal) is a desire for greater revenue stability, which would be achieved by imposing higher customer charges.

Q. Do you agree with this emphasis on increasing customer charges?

A. No. The public interest can best be advanced by moving in the opposite direction. A gradual process may be more appropriate than immediately implementing the reductions in customer charges that could be justified based on the evidence in this case, but it would be appropriate to at least begin to move that direction. By decreasing the fixed part of the bill and increasing the volumetric part (increasing the per-therm rate – particularly in the tail block), the Commission can provide a stronger incentive for customers to fully participate in controlling their utility bill, and a stronger incentive to learn about and adopt more energy efficient products and technologies. By moving in the opposite direction to that proposed by EnergyNorth, the Commission can reduce the burden on small customers, thereby making the tariff structure more equitable, it can enable customers to gain greater control over their monthly utility bill, and it can advance the broad public interest by encouraging energy efficiency.

EnergyNorth's current rate structure does not provide a very strong incentive for customers to increase the insulation in their home or business, or to replace existing, inefficient water heaters and furnaces with more energy efficient ones. Reasonable steps can and should be taken in this proceeding to strengthen these incentives by increasing the volumetric rates, and especially the tail block rates. These steps will also have the salutary effect of reducing the burden on low energy users and providing all customers with an increased opportunity to gain control over their utility bill.

B. Comparison to Other Utilities' Rates

Q. How do the Company's existing and proposed customer charges compare to those in other jurisdictions?

A. With the exception of the rates paid by customers in the Keene division, EnergyNorth's customer charges are already higher than those charged by many other utilities in New England and elsewhere around the country. In May 2015, the American Gas Association published a report that concluded that the nationwide median residential customer charge was just $11.25 per month, while the customer charge in EnergyNorth's R-1 (residential non-heating) tariff is currently $15.27. It's R-3 (residential heating) tariff includes a customer charge of $22.10, which is nearly double the nationwide median reported by the American Gas Association. A substantial discrepancy also exists in the Company's other tariffs. For instance, the nationwide median rate for commercial customers was reported to be $22 per month, which is less than half the Company's current customer charge of $48.36 for G-41 and G51 (commercial/industrial – low annual use) customers. The discrepancy is even more extreme for the Company's G-42 (commercial/industrial – medium annual use) customers, who are currently paying a fixed monthly rate of $145.08 in addition to the volumetric rate.

Table 2
2015 Natural Gas Utility Median Monthly Customer Charges by Census Region

Census Region	Residential	Commercial
New England	$ 13.50	$ 28.41
Middle Atlantic	$ 14.60	$ 23.60
East North Central	$ 11.38	$ 24.00
West North Central	$ 13.16	$ 24.40
South Atlantic	$ 10.00	$ 22.00
East South Central	$ 14.00	$ 16.96
West South Central	$ 13.24	$ 18.51
Mountain	$ 10.80	$ 20.00
Pacific	$ 4.95	$ 14.90

As shown in the table above, the data in the American Gas Association report suggest that EnergyNorth's New Hampshire customers may already be paying some of the highest customer charges in the United Sates. Further increasing these charges may seem appealing to the Company, since this would further increase the stability of its revenues. However, the current high customer charges already impose a large burden on low usage customers compared to the rates charged by many other utilities. Furthermore, the higher the customer charge, the lower the volumetric rate. Tilting the balance away from volumetric rates detracts from the widely accepted public policy goal of encouraging energy conservation.

C. Fixed Cost Recovery

Q. Gas utilities sometimes argue that a fixed monthly fee is the correct way to recover costs that are fixed. How do you respond to this argument?

A. I am willing to concede there is some intuitive appeal to this argument. However, it is at most a pricing tactic rather than a valid goal – the actual goal is revenue predictability or stability. This goal makes sense from a utility's perspective, but it is not a high priority from a public interest perspective. Nor is there any policy reason why fixed costs need to be recovered through fixed rates. A stable, more predictable revenue stream makes it easier to manage a firm's cash flows, and it could might reduce the risks borne by the firm's stockholders to a small degree, but neither of these concerns merit much weight from a public policy perspective.

In fact, this pricing tactic does not advance the public interest, since it conflicts other, more significant policy goals, like inter-customer equity and encouraging energy conservation. Moreover, recovering fixed costs as a uniform amount per customer is not consistent with the fixed cost recovery mechanism that is typical of most unregulated markets. In competitive markets the interaction of supply and demand determines prices, and there is no consistent tendency for fixed costs to be recovered through “fixed charges” nor is there any tendency to charge every customer the same amount each month, regardless of how much or how little they use.

Where substantial fixed, sunk and joint costs exist, the portion of these costs that is recovered from different products or services will not be a uniform amount each month, but instead will vary depending upon supply and demand conditions. More specifically, the relative cost-recovery shares will depend on the degree to which different types of purchasers benefit from the production process, and the relative strength of demand for the different products that are being jointly produced. Each customer will not contribute a uniform, fixed dollar amount toward the recovery of joint and common costs merely because those costs are fixed. To the contrary, cost recovery will vary widely, with larger customers tending to contribute more than smaller customers (because they use more, and benefit more from the common production process). Similarly, if some of the products offered by the firm are perceived to be more valuable than others, those will tend to have a larger markup, resulting in a larger contribution toward joint and common costs than is obtained from those products that are perceived to be less valuable.

In most parts of the economy, the amount contributed by specific customers, or specific products will vary depending on the strength of demand. The stronger the demand – and in that sense, the greater the benefit received from joint and common production processes – the greater the share of joint and common costs that will be borne by any particular product, service, customer, or customer group.

Q. EnergyNorth's rates are determined by the Commission, not by market forces. Should the Commission deviate from the normal market outcome to require uniform per-customer contributions toward fixed costs?

A. No. Just because the Commission has the option of doing this doesn't make it preferable. In fact, the advantages of non-uniform cost recovery can be demonstrated by looking at a different analogy: how taxing authorities most frequently handle the problem of spreading the tax burden (recovering the fixed costs of providing government services).

Consider a hypothetical small business owner who operates a 1,000 square foot retail store. This retailer competes with several other retailers located on the same side of the street, which are twice as large, as well as a 50,000 square foot department store located across the street. Under the cost recovery approach advocated by the Company, the department store would contribute the same amount toward the local municipality's fixed costs as the smallest competitor on the street, despite being 50 times larger.

It is certainly true that many of the costs of providing government services (like the cost of maintaining a traffic light at the end of the street where all of the stores are located) are fixed, at least in the sense they do not directly vary with the size of each store. Nevertheless, few people would argue it would be more equitable to require the smallest store on the block to pay the same dollar amount per month toward the municipality's fixed costs as the largest store on the block, merely because the costs are the same every month, and cannot be directly attributed to any one store. The inequitable nature of a uniform, “everyone pays the same amount” approach to cost recovery becomes even clearer when their respective shares of the fixed costs are compared on an apples-to-apples basis. The department store would end up paying 98% less per square foot for the municipality's fixed costs than the smallest store. Similarly, other stores on the the street would pay half as much per square foot as the smallest store. Most people will readily concur that this would not be a fair approach to cost recovery.

Q. Does similar reasoning apply to the recovery of fixed costs from different size residences?

A. Yes. If the fixed costs of government were going to be collected as a uniform dollar amount from all residences, both small and large, a hypothetical 400 square foot studio apartment would pay as much as a luxurious 3,500 square foot house – even though many of the municipal services (like maintaining 24-hour per day police and fire protection) provide greater benefits to the owner of the larger, more costly residence. In practice, by collecting property taxes in proportion to assessed value, an attempt is made to ensure that all types and sizes of residences make a reasonable contribution toward the fixed costs of providing government services – and that contribution is not a uniform monthly dollar amount. Instead, the amount contributed through taxes varies widely, with large residences generally contributing more than small residences.

Q. What conclusion do you draw from this analogy?

A. First, this analogy demonstrates that the rate design I am recommending is consistent with the cost recovery pattern that is most frequently observed when government policy makers, tasked with serving the public interest, decide how best to recover the fixed costs of government.

Second, this analogy helps demonstrate the inherent fairness of a non-uniform cost recovery pattern. Taxes provide an example where non-uniform cost recovery is familiar and a pattern that most of us readily accept without dispute. In fact, it is hard to imagine anyone arguing that the smallest store on the block (or its landlord) should pay the exact same dollar amount in property taxes as the largest store. Over the course of many years, involving many different public policy decision-makers in many different jurisdictions, it has been the common practice to spread the tax burden widely but not uniformly. Virtually all local, state and federal taxes are recovered from households and businesses in ways that ensure that small taxpayers pay much less than large ones. The largest taxpayers, who are in the strongest position to pay for government services, pay the lion's share of the tax burden. This pattern of cost recovery is widely accepted because it spreads the cost of government more equitably than a system that requires every taxpayer to pay the same dollar amount. In the next section I will demonstrate that non-uniform fixed cost recovery is also prevalent in most unregulated markets.

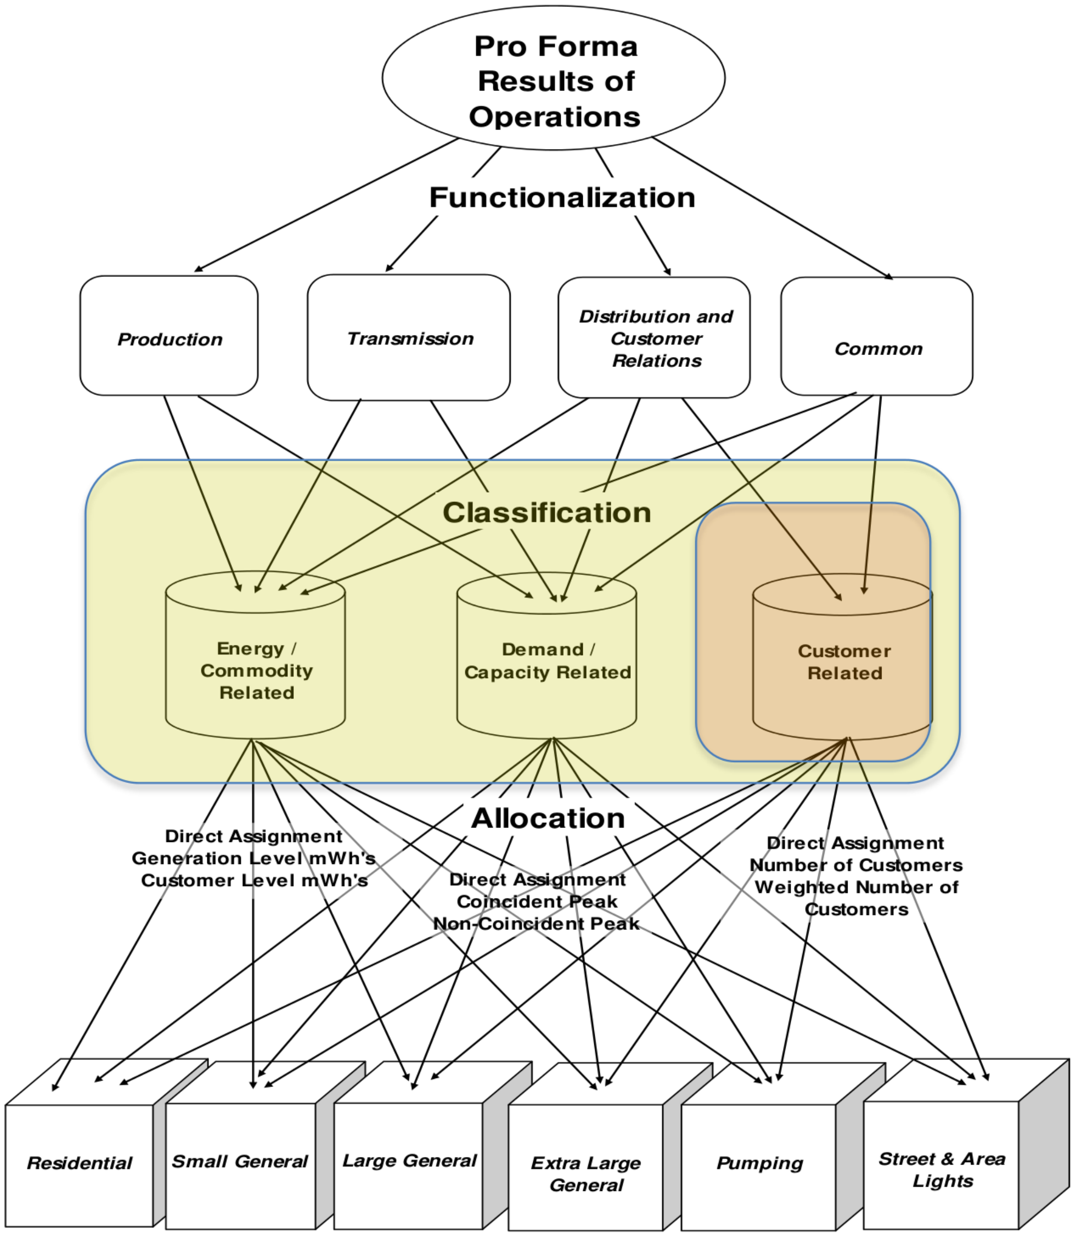
III. ECONOMIC COSTS AND OPTIMAL PRICES

Q. Is an understanding of economic cost concepts helpful in resolving the rate design and revenue allocation issues in this proceeding?

A. Yes. The Company developed an economic cost study, which it characterizes as a “marginal cost” study. It heavily relied on the results of these calculations in developing its proposed revenue allocation (distributing the revenue requirements to different customer classes), and its rate design proposals. In fact, its marginal cost study is the primary – virtually the only – support provided by EnergyNorth for its proposed changes to its existing rate design. While the Company also provided a functional (embedded) cost study, it is only of peripheral importance – helping determine what portion of the Company's revenue requirement will be recovered through base rates and what portion will be recovered through the cost of gas mechanism.

The mechanics of a traditional embedded cost allocation process are well-established and not controversial, although judgments that are made during that process can be very controversial. The mechanics of this process are nicely illustrated in the following flow chart, which was developed by the Regulatory Assistance Project and provided on page 11 of its slide presentation, Smart Rate Design for a Smart Future, dated August 4, 2015.

ELECTRIC COST OF SERVICE STUDY FLOWCHART



Pro Forma Results of Operations by Customer Group

In the first major step, called "functionalization," historical accounting costs are organized into various operating functions (e.g., production, transmission, distribution, customer accounting and customer service). The Company used this process to determine what portion of the overall revenue requirement will be recovered through the Cost of Gas mechanism, and what portion will be recovered through base distribution rates.

In jurisdictions where an embedded cost study is used for rate design purposes, two additional steps are needed. In the second major step – called "classification" – costs are grouped into three rate-related classifications: demand-related, commodity-related, and customer-related. In the third major step, these costs are allocated to specific customer classes. The allocated cost results are also sometimes used to support proposals for specific rate elements – for instance, determining what portion of the cost should be recovered through demand charges, and what portion through customer charges.

The initial steps taken by the Company in developing its marginal cost study were similar to the functionalization and classification steps just described. However, unlike a typical embedded cost study, judgments were not applied in allocating costs to various customer classes. Instead, a similar result was achieved by applying judgments concerning the way various costs were estimated, and the degree to which particular costs were assumed to vary "at the margin." These judgments, occurring within the work papers for the marginal cost study and not discussed in detail in the Company's direct testimony, largely determined the magnitude of the marginal costs that were estimated. In turn, these estimates provided most of the support for EnergyNorth's proposals with respect to the degree to which rates for specific customer classes should be increased (revenue allocation), and the degree to which specific rate elements should be increased or decreased for each class (rate design).

I will discuss some of these judgments in detail later in my testimony. For the moment it is sufficient to note that these judgments were crucial to the final conclusions reached in the study – including the conclusions that were reached concerning the alleged level of fixed "customer costs" (which support EnergyNorth's proposals to increase its customer charges) and the level of "demand costs" (which support its proposals for volumetric rates). The methodology and assumptions used in analyzing "customer costs" and "demand costs" were not consistent. These inconsistencies helped create the pattern of costs which the Company cites as support for its rate design and revenue allocation proposals.

Q. The Company provided both a marginal cost study and an embedded cost study. Can you please explain the difference between these two different types of cost?

A. There are at least three important differences.

First, and most fundamentally, embedded costs are derived entirely from the accounting records of the firm, and are heavily influenced by and dependent upon the conventions adopted by the firm in books and records. In contrast, marginal costs are a particular type of economic cost. Economic costs can be estimated using data from a wide variety of different sources including accounting records, engineering cost estimates, and special studies.

Second, a typical embedded cost study is focused on allocating total costs, whereas a marginal cost study does not (or should not) focus on total cost, or cost allocations. Instead, the focus should be on the extent to which costs vary "at the margin."

Third, because the term "marginal cost" is taken from the economic literature, the usefulness and validity of the Company's marginal cost estimates and its underlying assumptions, should be judged in that context. One way to test the validity of a marginal cost study is to examine how well it matches up with the way economists define and analyze costs. Does the study adequately consider opportunity costs? Is the study focused on a logical, internally consistent "run" or planning horizon? Is the selected planning horizon appropriate given the purpose for which costs are being studied? As I will explain later in my testimony, the Company's marginal cost study fails all of these tests. To understand why it falls short, it will be necessary to explain various concepts from economics.

A. Marginal, Variable, Fixed, and Total Costs

Q. Are there certain economic cost concepts that are important to understanding your analysis of the Company's marginal cost study and pricing proposals in this proceeding?

A. Yes. In economics, the most fundamental and important types of costs are fixed cost, variable cost, total cost, average cost, marginal cost, incremental cost, and stand-alone cost. All of these are integral parts of economic theory – along with other, more specialized cost concepts, including sunk, direct, joint, and common costs. All of these cost concepts are significant to the issues in this proceeding.

Fixed costs do not change with the level of production, during the planning period or "run" under consideration. **Variable costs** change directly (but not necessarily proportionately) with the level of production. It should be noted that the exact same item might be a fixed in the short-run and a variable in the long-run. Together, fixed and variable costs constitute **total cost**, which is the sum of all costs incurred by the firm to produce a given level of output. Dividing the total cost of producing a given volume of output by the total number of units produced, one can calculate **average total cost**.

Short-run costs are those which arise in situations where most costs are fixed. In contrast, **long-run costs** are those calculated under the assumption that many, if not all, costs are variable, and relatively few costs are fixed or sunk. The classic long-run concept is sometimes known as a "scorched earth" approach – that is, no pre-existing plant is considered in the analysis. Instead, the firm is free to build precisely the size and type of plant which best fits the assumed output level. However, even in the long-run some aspects of the production process are typically assumed to remain inflexible – like the technology the firm uses, or the state or region where the firm operates.

Incremental cost is the change in total cost resulting from a specified increase or decrease in output. In mathematical terms, incremental cost equals total cost assuming a specific increment of output is produced, minus total cost assuming the increment is not produced. Incremental cost is often stated on a per-unit basis, with the change in cost divided by the change in output. Incremental cost can vary widely, depending upon the increment of output under consideration. If the entire increment from zero units to the total volume of output is considered, incremental cost is identical to total cost. Similarly, where the increment ranges from zero to total output, incremental cost per unit is identical to average cost per unit for that volume of output. Because a wide variety of different increments can be specified, a wide variety of different incremental costs can be calculated. Thus, in considering any estimate of incremental cost it is crucially important to determine whether or not the specified increment is relevant to the issues at hand.

Marginal cost is the same as incremental cost where the increment is extremely small (e.g., one unit) and the cost function is smooth and continuous. In mathematical terms, marginal cost is the first derivative of the total cost function with respect to output (the rate of change in total cost as output changes).

A wide array of different incremental costs can potentially be defined, corresponding to an array of different increments that can potentially be analyzed. Marginal cost corresponds to one very specific part of this overall array – where the increment is narrowly defined and extremely small. One important distinction between marginal and incremental cost is worth noting here: when large increments are studied, the cost of adding an additional increment of output will often be quite different from the cost of reducing output by an increment of the same magnitude. In contrast, if the cost function is smooth and continuous, marginal cost will generally be the same regardless of whether it is measured by how much total cost increases when the volume of production increases by an extremely small amount, or how much total cost decreases when the volume of production decreases by an extremely small amount.

In the economic literature, a crucial distinction is drawn between marginal costs and average costs. That distinction is closely related to (but subtly different from) the distinction between fixed and variable costs. In essence, average total cost per unit spreads both fixed and variable costs over the total volume of production, while marginal cost does not include fixed costs. However, the discussion can become complicated, because the extent to which particular costs vary "at the margin" can change depending upon the circumstances, including the specific "planning horizon" or "run" that is being studied. The distinction between average cost and marginal cost is of crucial importance to the highly refined understanding of costs that has been developed by economists, which has laid the foundation for much of the progress that has been made in microeconomic theory and empirical research over the past 125 years.

The fundamental reason why I so strongly disagree with the Company's marginal cost estimates is that it has not made appropriate, internally consistent distinctions between which costs are fixed or "sunk" and which costs are variable, and because it has not selected and applied an appropriate, internally consistent planning horizon or "run" that is appropriate to this context. I will explain both of these problems in further detail, after providing the necessary foundation for this explanation.

Q. Can you elaborate on the distinction between fixed and variable costs, and explain how this distinction relates to incremental or marginal cost?

A. Yes. As the name implies, a fixed cost does not increase or decrease as the volume of production changes. In contrast, a variable cost is one that changes in response to changes in production volume. Fixed and sunk costs have no impact on marginal cost. In fact, determining which costs are fixed and which ones are variable is crucial to whatever conclusions one reaches concerning the level of marginal costs in any particular context. It must be kept in mind, however, that the exact same item may be variable in the long-run and fixed in the short-run. Hence, the selected planning horizon – and the extent to which specific costs are assumed to vary in that planning horizon – largely determines the results of a valid marginal cost analysis.

Fixed costs are those elements of the firm's total cost which do not increase (in the context of the specified planning horizon) as the volume of output increases. **Sunk costs** are similar, except that fixed costs can be eliminated if the firm is willing to exit the market entirely (e.g., by abandoning its equipment or converting it to another purpose), while sunk costs cannot be eliminated in this manner. Aside from this difference, sunk costs can be thought of as an extreme case or a special type of fixed cost. Because sunk costs cannot be avoided or changed under any circumstances, they are irrelevant (once incurred) for most economic decisions. In contrast, although fixed costs do not affect marginal costs, they are not entirely irrelevant, because they can be avoided if the firm is willing to exit the market.

A typical example of a fixed cost is the cost of owning a factory building; as long as the building is in use as a factory, its costs are unavoidable and they do not vary with the volume of output produced by the factory. However, the firm can avoid the costs of ownership if it discontinues production and sells the building to someone who will convert it to another use (e.g. condominiums or a factory producing a different product). Hence, the cost of the building would be classified as fixed, not sunk, to the extent the building can be converted to a different purpose.[16] If the building has been optimized for a specific production process, it will likely involve a combination of fixed and sunk costs. To the extent a willing buyer would not pay extra for these unique attributes, and instead

16 A mere change in legal ownership is not sufficient; the potential to convert to a different use helps determine whether a cost is fixed or sunk.

would simply demolish them or ignore them, the cost of those unique attributes would be sunk.

Q. Can you clarify the distinction between fixed and sunk costs?

A. Yes. A few examples will suffice. A natural gas utility incurs some capital-related costs, like property insurance and property taxes, that economists classify as fixed costs, because they do not vary with day to day or month to month fluctuations in the volume of production. That is not to say they cannot be changed under any circumstances. Fixed costs can typically be reduced or eliminated by divesting, shutting down, or abandoning some of the firm's capital investment. In the case of a gas utility, it could potentially reduce its property insurance by disposing of some of its equipment, or it might be able to reduce its property taxes by permanently shutting down parts of its system. Since a gas distribution system cannot be moved to a new location, economists classify the capital invested in the system itself as a sunk cost (rather than a fixed one), except to the extent portions of that capital investment can be recouped by selling parts of the system to another firm that converts it to a different purpose. For instance, if a telecommunications carrier would be willing to purchase parts of the distribution system in order to convert some of the pipes into conduit for fiber optic cables, the price the carrier would be willing to pay for the pipes would be classified as a fixed cost of the gas utility; the remainder of the investment would be classified as sunk.

A classic example of a sunk cost is the cost of writing a novel. Once this cost is incurred, it cannot be avoided, reduced or eliminated, regardless of whether or not the novel is published or how many copies are sold. Stated another way, sunk costs are irretrievable once they are incurred. From that point forward, they are completely irrelevant to any pricing, production, or other economic decisions that must be made.

B. Long-run versus Short-run

Q. Can you elaborate on the distinction between long-run and short-run economic costs?

A. Yes. The degree to which costs are variable depends on the "run," which is a technical term that is closely tied to the concept of a "planning horizon." In the short-run, the firm minimizes its costs by focusing on options, like hiring or firing employees or adding overtime, which can be analyzed and implemented quickly. Notably, the firm's existing capital investment is considered to be a fixed or sunk cost in the short-run. Additional, more fundamental, changes in the firm's operations become feasible over longer periods of time. These options include investing in additional plant and equipment, replacing some of its existing equipment with a different type of equipment, or selling some of its capital equipment and scaling back the scale of its operations. By definition, none of these options are available to the firm's managers in the short-run, because of the durability of its existing capital investment, and the difficulties involved with making changes to that investment.

While it is simpler to discuss these concepts by contrasting just two "runs" – the "short-run" and the "long-run" – it is more accurate and realistic to think in terms of an entire continuum of possibilities, or "runs." The longer the "run", the greater the extent to which the capital-related factors of production can be varied and optimized. Stated another way, as the planning horizon becomes longer, the firm is not as limited by, or significantly constrained by, inherent limitations and characteristics of its existing capital investment.

Similarly, while it is easier to simplify the discussion by equating the “run” with different periods of time, it's important to recognize that the extent to which capital-related factors of production can be varied, (and how long it typically takes for a firm to replace its existing capital stock), can vary greatly across different industries. The time period corresponding to the “short run” in one industry might correspond to the “long-run” in a different industry. While the “run” is related to time, the amount of time is not as important as the degree to which the factors of production can be optimized.

In general, as the “run” becomes longer, it becomes feasible to analyze and optimize more and more aspects of the firm's production process, including more and more aspects of the firm's capital investment. Economists often explain the concept of the “run” with reference to time, because this makes it easier to understand how additional options open up for the firm as it moves along the continuum from the short-run to the long-run. For example, as the amount of available time for making decisions and implementing them increases, the firm will need to decide how, and whether, to replace equipment that is wearing out. Similarly, with more time the firm may be able to find someone willing to purchase some of its existing equipment and move it to a new location, to be used in a different production process.

By thinking in terms of how the firm can respond differently over different time periods it is easy to grasp the key attributes of the economic concept of the “run”. For instance, it is easy to see why the cost of a machine with a useful economic life of five years will be classified as fixed in a six month planning horizon, but the cost of that same machine will be reclassified as variable over a ten year planning horizon. Hence, there is no universally "correct" way of classifying any particular item. That does not mean that "anything goes." There are clearly "wrong" ways of classifying specific costs in any given planning horizon. It is self-evident that if the planning horizon is long enough to allow the firm to replace an existing machine with a different size or type of machine, then the electricity used to operate the machine should also be classified as a variable cost. Similarly, if a cost is classified as variable in the short run, it has to be classified as variable in the long run, as well. One cannot arbitrarily pick and choose which items will be categorized as variable or fixed – logical consistency is mandatory.

Q. Can you provide an example which clearly illustrates the concept of the "run"?

A. Yes. A classic example used by economists is the costs incurred by a fisherman. To make this example easy to relate to, it is usually introduced and explained in terms of time – noting that all costs may be fixed over a short period of time, but many of these cost become variable over a longer period of time. However, to fully appreciate the nuances of this example, it is helpful to keep in mind that in economic theory, the "run" does not actually refer to any specific period of time. Rather, the "run" refers to the degree to which costs (particularly capital investments) are assumed to be variable, rather than fixed or sunk – and in our common experience this variability is correlated with time.

Q. Can you use this illustration to clarify how the "run" relates to time, at the short end of the spectrum?

A. Yes. Economic theory envisions a continuum of different planning horizons. The extreme short end of the continuum is sometimes referred to as the "market period." This corresponds to the situation confronting a fisherman during the brief period after unloading the fish but prior to selling them. The load of fish cannot be "uncaught" and the costs of catching the fish cannot be reduced by reducing the size of the catch. Nor can costs be reduced by selling some of the fish and throwing the rest away. The costs of catching the fish are sunk, and cannot be avoided or varied at that point.

However, an entire array of "runs" exists. Consider a slightly different example, which can also be classified as an example of the "extreme short-run" – the situation confronting the fisherman during short period after the fish are caught until they are sold. The cost of fuel that was burned while locating and catching the fish is a sunk, but the cost of the additional fuel needed to haul the heavy catch all the way back to shore can potentially be avoided by dumping the fish overboard. The small amount of labor that could be avoided by dumping the catch overboard and coming more quickly back to shore can also be avoided (in theory). Accordingly, over this slightly longer time period, the marginal cost per pound of fish would be slightly higher than the even more abbreviated "market period". Needless to say, in both of these examples, the total costs incurred by the fisherman are far above zero, and the captain's goal is to recoup all of the costs, including the sunk costs.

Q. Can you extend this example to illustrate the "short-run"?

A. Yes. The classic short-run is a planning horizon where the fisherman has many more options than in the market period or the extreme short-run, but all of the fisherman's capital costs remain fixed. It is easy to envision some of these options if you visualize what the fisherman can do over the course of a week or two. For example, the cost of fuel and labor can be varied, as the fisherman decides how much time to spend on the water each day, or how many days per week she will go fishing. By spending more time on the water, the fisherman can catch more fish, at the cost of burning more fuel. Looking at the same option from the other direction, the amount of fuel burned can be limited on a daily or weekly basis, but this reduction in fuel costs will typically result in fewer fish being caught.

If the captain chooses to use more fuel and spend more time on the water, the marginal cost per pound of fish acquired will begin to increase, once a point of diminishing returns is reached, because she will be forced to spend more and more time on the water, searching farther and farther afield from the prime locations where a lot of fish can almost always be found. This extra time on the water will help the fisherman bring back a larger catch, but there will be higher variable costs, because of the extra fuel that will be burned. If this strategy is pursued too far, the boat could become overloaded, and the captain will be forced to slow down when returning to shore, in order to avoid capsizing the boat. All of these factors tend to drive up the marginal cost of each pound of fish brought to shore, once the point of diminishing returns is reached.

Similarly, in the short-run the fisherman can hire additional workers to go out on the boat. These workers help haul in the nets more quickly, increasing the size of the catch for any given expenditure on fuel. However, this strategy will increase short-run marginal cost, since the extra workers will need to be paid for the entire time they are on the water – not just when they are actually needed to help with bringing up the nets.

Q. Can you extend this example to illustrate the "long-run"?

A. Yes. The long-run corresponds to a planning horizon where most capital-related costs become variable – the fisherman is assumed to have many capital-related options. While the long-run is not tied to any specific period of time, in the fishing context it can be thought of as a time period that is long enough to provide an opportunity to investigate and evaluate capital-related options, like replacing the existing boat. For example, the fisherman might evaluate the option of selling the existing boat and buying a faster one with more powerful engines. This would make it feasible to the prime fishing spots more quickly, saving time, and provide the option of going to additional locations on days when the catch is poor at the first location. Or, the fisherman could invest in a larger boat, which would allow the captain to haul more fish back to shore (at least on days when enough fish can be found to fill the larger boat).

The fisherman could also evaluate less drastic capital-related options, like installing better, more powerful gear for hauling in the nets. This might reduce labor costs without requiring a change in boats. Similarly, the fisherman might invest in technology which helps quickly and precisely find the fish, so less time will be wasted letting down the nets and hauling them back up with a disappointing catch. In the long-run, there will be options for reducing the capital investment – not just increasing it. For instance, a smaller, cheaper boat might be chosen, which costs less to own and operate, but doesn't hold as many fish. In the long-run, this might allow the fisherman to increase profits by more closely conforming the boat to the size of the catch that can easily be found and hauled back on a typical day. With a smaller boat, the fisherman might be able to focus exclusively on prime fishing locations, without wasting so much time going to other, less reliable, or less plentiful locations in an effort to fill the existing boat.

As this example demonstrates, while the difference between the short-run and the long-run can easily be envisioned and discussed in terms of time periods of different durations, the really crucial difference is the degree to which capital costs are variable. In the short-run, the fisherman is stuck with the existing boat, which represents a fixed cost that cannot be easily avoided or varied. In the short-run, the fisherman cannot change the capacity, technology, configuration and other attributes of the existing capital equipment. Hence, all of the costs of owning the boat, including the cost of capital, insurance, and property taxes are fixed (they cannot be varied) in the short-run. In turn, it is easy to see why marginal costs would not necessarily be the same in the short-run and the long-run. Since marginal cost is the rate of change in total cost resulting from an extremely small change in output, differences in the degree to which various costs can be varied will result in differences between short-run marginal cost and long-run marginal cost.

Q. Can you clarify some key differences between the long-run and the short-run in the specific context of EnergyNorth?

A. Yes. Compared to the fishing example, a gas distribution system has high capital-related costs relative to size of the other, more easily varied, costs. Hence, EnergyNorth's marginal costs are necessarily going to be far below its average total cost in the short-run. This follows directly from the fact that in actual practice, the Company's costs are mostly fixed or sunk, and ample capacity undoubtedly exists along many of the routes where it has installed distribution mains. As a result, most customers can be delivered as much gas as they want, whenever they want it, without incurring "opportunity costs" or the need to curtail the delivery of gas to other customers.

This is in contrast to the fishing example, where every pound of fish that is caught increases the amount of fuel that is burned, and where time and space constraints create trade-offs or "opportunity costs" that increase short-run marginal costs. The amount of one type of fish that can be brought back to shore during any given fishing trip will be limited by the amount of other types of fish that are also brought back on the same trip. In effect, increasing the volume produced of one product (the harvesting of a particular type of fish) will make it more difficult or costly to produce any other products (the harvesting of other types of fish). Space is limited on a boat, and the time spent hauling in one type of fish will reduce the time available for hauling in a different type of fish – all of which translates into higher short-run marginal costs for any given type of fish.

To some degree, something analogous can apply to parts of EnergyNorth's gas delivery system. If capacity constraints or potential low pressure conditions exist on parts of the system, these problems will translate into higher short-run marginal costs. Low pressure problems can result in opportunity costs because increased deliveries to one set of customers can only be accomplished safely by reducing deliveries to another set of customers, which will increase short-run marginal costs.

As a general matter, however, we can anticipate that the short-run marginal cost of delivering gas to most customers will be very low (approaching zero) during most of the year. Because short-run marginal costs are so low, it is readily apparent that gas delivery prices that are set equal to short-run marginal cost will not allow EnergyNorth to recover its revenue requirement. A substantial contribution above short-run marginal cost is necessary for the firm to remain viable and ensure recovery of its total costs over the long-run.

Because many capital investments can be varied in the long-run, the long-run marginal cost of distributing gas will likely be much higher. Consider, for example, a long-run planning horizon that corresponds to the degree to which capital investments can potentially be varied over a typical 10 to 20 year planning horizon. Unlike in the short-run, in this longer planning horizon, the cost of EnergyNorth's distribution mains is not entirely fixed or sunk, and will instead (to some degree) be variable. For instance, over this time period new mains may need to be installed along some routes, because the existing mains are nearing the end of their useful life, or becoming unacceptably leak-prone. Over a 10 to 20 year time period, some degree of congestion will likely arise, with growth in usage in some areas creating opportunity costs (a reduction in usage by one group of customers might be necessary to accommodate increased deliveries to another group of customers) or the need for investments in main reinforcements or expansion.

Q. Can you explain in more depth why the long-run marginal cost of delivering gas tends to be higher than the short-run marginal cost?

A. Yes. There are several factors that determine the extent to which marginal costs will differ between the short-run and the long-run. These factors will differ depending on the technical characteristics of the production function, but in the specific case of a natural gas utility, the overall tendency will be for long-run marginal costs to be higher than short-run marginal costs. The additional flexibility that is available in a long-run planning horizon will provide opportunities to reduce total costs that don't exist in the short-run, and in some situations this can translate into lower marginal costs in the long-run than in the short-run. However, costs that were classified as fixed or sunk in the short-run may be reclassified as variable as the planning horizon becomes longer, and this will tend to push long-run marginal costs above the level of short-run marginal cost (as fixed and sunk costs diminish in importance). Accordingly, we can confidently state that long-run marginal costs exceed short-run marginal costs for a typical gas distribution utility, since fixed and sunk costs are pervasive in the short-run, pushing short-run marginal costs down to very low levels.

While decisions concerning the replacement or retirement of certain mains, as well as the size of these mains can be optimized over the course of a longer planning horizon, these costs are not eliminated. To the contrary, due to the high cost of installing, reinforcing or replacing mains, the overall system-wide long-run marginal cost of mains will be far above the level observed in the short-run. In fact, due to inflation and other factors, the long-run marginal cost of mains could easily exceed the average embedded cost of the existing mains, despite the fact that the cost of mains in some parts of the system may still be classified as fixed or sunk.

Q. Are you suggesting that some fixed or sunk costs can still exist even in the long-run?

A. Yes. The distinction between treating capital-related costs as variable and treating them as fixed or sunk is fundamental to the concept of the planning horizon. In application, however, the theory is quite flexible, and can readily be adapted to different factual situations. There is nothing illegitimate or inappropriate about studying a planning horizon in which some of the firm's capital investment can be varied, while other aspects of its existing system are treated as fixed. Since the natural gas industry has extremely long-lived assets, this may be a much more relevant and realistic application of the "long-run" concept than a traditional "scorched earth" planning horizon, in which every aspect of the firm's capital investment is treated as variable.

Most of the pipes and other facilities owned by EnergyNorth have a useful economic life of 60 to 70 years or more. To entirely eliminate fixed and sunk costs it would be necessary to select a planning horizon or "run" that corresponds to an extremely long period of time – perhaps 100 years – but this would more typically be described as an "extreme long-run" planning horizon lieing at the extreme far end of the continuum of possibilities. In this extreme long-run, all costs would be assumed to be 100% variable, including those that can only be changed in a purely hypothetical scenario, or one that involves an extremely long period of time like 100 years.

In the fishing example, in contrast, the extreme long-run would not require such a long time period. Instead, it would involve a purely hypothetical analysis in which the firm is assumed to have not yet entered the business, and it is free to choose whether to operate out of Portsmouth, or to fish off the coast of Oregon or Alaska, or to invest in aquaculture to raise farm-bred fish, instead. Similarly, in the case of EnergyNorth, the equivalent extreme long-run planning horizon would involve a purely hypothetical scenario in which the firm has no sunk costs – it is considering the option of entering the market, and it has complete freedom to choose the locations where it will provide gas service, the routes where it will install distribution mains, and the specific buildings it will connect to its mains.

It is certainly possible to develop a cost study based upon "scorched earth" assumptions, in which the existing system is ignored. This would be a purely hypothetical system, which is optimized to fit current population and usage patterns. In that case, every main, every regulator, and every service line would be treated as 100% optional or variable. However, in my opinion, that analysis would not be particularly useful or relevant in this proceeding. The key questions in this proceeding can best be answered by taking a more realistic approach to analyzing economic costs. Many aspects of EnergyNorth's system should be taken as a given, and as a result some of its capital-related costs are more correctly classified as fixed or sunk.

Q. Can you clarify what you are recommending with regard to how long-run marginal costs should be defined in this proceeding?

A. Yes. The approach I am recommending can be thought of as the typical of a "long-run" which reflects the degree of flexibility that actually exists over a 10 to 20 year time period. This is similar to the time frame that is usually envisioned when discussing long-run costs in the context of a manufacturing firm. For instance, in the long-run it would typically be assumed that a manufacturer is not limited to the configuration and scale of its existing factories. The existing building can be abandoned or sold to someone who will use them for a different purpose; the firm can replace it with a different size factory, or one in a different location. However, it will likely have at least some aspects of its operations that remain fixed. For example, inventing and implementing an entirely new production process would not be an option – that sort of hypothetical possibility would be relegated to the "extreme long-run".

The approach I am recommending is more useful and appropriate than a purely short-run approach, or an extreme long-run approach. The distinction I am drawing is important because many of the facilities owned by EnergyNorth are installed in the ground and cannot be easily removed or downsized, yet they have a useful economic life of 60 years or more. During a 10 to 20 year time frame, only some of these facilities will need to be replaced or reinforced. Many parts of the system will remain unchanged no matter what decisions customers make in response to the prices that are established in this proceeding. It would be a mistake to ignore this reality and to arbitrarily treat sunk costs as if they were not sunk. It would be particularly inappropriate to treat sunk costs as if they were 100% variable, on an arbitrary, purely hypothetical basis. The truth is that many items in the system cannot be removed, replaced, or resized at will. While the latter view of cost variability is sometimes used in a “scored earth” planning horizon, it is not appropriate for use in this case.

That is not to say that purely short-run view of costs should be used. More useful and meaningful insights can be developed by thinking about the costing problem from the perspective of 10 to 20 year planning horizon, and recognizing that an array of different situations exist in different parts of EnergyNorth's New Hampshire service area. Along the existing route sending gas to any given customer, there is a certain probability that capacity constraints will result in significant opportunity costs over the next 10 to 20 years. Over a similar time scale, there is also a certain probability that usage growth, leak-prone pipes, or safety concerns will result in a need to reinforce, replace or enhance parts of the system (unless those parts are downsized or abandoned).

Consumption decisions by customers who are served by many parts of the system can potentially accelerate or delay the need for investments over the next 10 to 20 years, and their decisions can increase or decrease the magnitude of these investments. Similarly, customer decisions to increase or decrease gas consumption can potentially increase or reduce congestion on various parts of the system, which in turn will translate into opportunity costs that will increase the system-wide level of long-run marginal costs.

Appropriately developed, a system-wide measure of long-run marginal costs will consider the configuration and characteristics of the entire system, and potential future changes to that system, in conjunction with a distribution of probabilities. By considering this entire array of probabilities, circumstances where opportunity costs and capital replacement or expansion costs are high can be weighed with circumstances where marginal costs are low (for instance, where existing capacity can safely serve all relevant levels of demand over the next 50 or 60 years).

When viewed in this way, costs can analyzed on a precise, granular basis, reflecting the fact that the long-run marginal cost of distributing gas will be higher in locations where congestion or other problems will soon emerge, and lower in locations congestion is less of a concern, and capital-related costs are almost entirely sunk. This granular approach would be particularly useful if the analyst is considering the option of charging different prices in different geographically areas, or establishing a new sub-category of customers for pricing purposes. For instance, this sort of geographically granular cost data could be used to develop higher prices for customers in newly added residential neighborhoods or lower prices for commercial and industrial customers brought onto the system in an economic development zone where excess capacity exists.

The thrust of this discussion, however, is not to show how prices might be geographically de-averaged (which is not normally up for discussion). Instead, the point is that wide differences in circumstances at different locations in the system do not need to be ignored or simplified away; instead, these differences can be evaluated in terms of an overall system-wide distribution of probabilities. If customer's can sometimes reduce the total cost of the system by reducing their usage or leaving the system, and sometimes their decisions will have no impact due to pervasive sunk costs, both possibilities can be considered and weighed relative to the probability and relevance of each possibility. This is similar to the way automobile or fire insurance rates will often be based upon a detailed analysis of different circumstances. The actuaries recognize that risks vary depending on many different granular factors, but they ultimately roll up this information into broader prices which reflect an assessment of the overall pattern of probabilities and characteristics for an entire community, or a carefully defined category of customers.

C. Joint and Common Cost Recovery

Q. Earlier you mentioned joint and common costs. Can you please define these concepts, and explain how they relate to each other?

A. Yes.

Common costs are incurred when production processes yield two or more outputs. They are often common to the entire output of the firm but can be common to just some of the outputs produced by the firm. An increase in production of any one good will tend to increase the level of common costs; however, the increase will not necessarily be proportional. The costs of producing several products within a single firm may be less than the sum of the analogous costs that would be incurred if each of the products were produced separately (this is referred to as economies of scope).

Joint costs are a specific type of common cost—they are incurred when production processes yield two or more outputs in fixed proportions. A classic example arises in the joint production of leather and beef. Although cattle feed is a necessary input for the production of both gloves and hamburgers, there is no economically meaningful way to separate out the feed costs that are required to produce each. If the quantity of leather and beef is reduced, there will be a savings in the amount of cattle feeding costs, but it is impossible to say how much of this change in cost results from the change in the quantity of leather, and how much from the change in the quantity of beef.

Q. Are joint costs relevant to the issues in this proceeding?

A. Yes. Joint costs create a challenging puzzle for economic theory: it is not immediately obvious how joint costs are recovered in competitive markets, since they do not show up in the marginal costs which normally explain how prices are determined. The solution to this puzzle, which was discovered in the early 1900's, sheds light on some key aspects of EnergyNorth's pricing proposals in this case.

The solution to this puzzle is not only relevant to markets where joint costs are important (beef and hides) but also to markets where sunk costs are important (novels), for much the same reason (marginal costs may be close to zero). Understanding how prices are established when marginal costs are close to zero – or at least, too low to recover total costs – is useful in resolving some of the pricing issues in this case –

especially since many of the costs included in the Company's revenue requirement are to some degree sunk, or joint, or both.

Q. Before explaining how joint costs are recovered, can you explain how prices relate to marginal cost where the joint cost problem isn't present?

A. Decades before the joint cost puzzle was solved, economists had figured out that prices tend to equilibrate to a level that is equal to marginal cost. In fact, in situations where firms are accepting a market-determined prevailing price, marginal cost is the key to understanding how that prevaiing price is established. Among other insights gleaned from this analysis is that average cost is much less important than marginal cost.

A classic example is a wheat farmer. A wheat farmer has no control over the weather, and no control over the price of wheat, which is decided through nationwide forces of supply and demand. Hence, he concentrates on optimizing those aspects of his production function that he can control (deciding how many acres to plant, what crop rotation system to use, what seed to plant, how much fertilizer to use, how much to irrigate) in an attempt to maximize profits.

Like all competitive firms, wheat farmers make these types of decisions based on an analysis (whether explicit or implicit) that is tightly linked to marginal cost, rather than average cost. The firm increases each factor of production beyond the point of diminishing returns, until the point where the marginal revenue product associated with each input is equal to marginal resource cost of that input. While each firm makes these decisions independently, their individual decisions collectively lead to a convergence of industry-wide prices and marginal costs. In fact prices will exactly equal the industry-wide level of short-run marginal cost if the industry is in short-run equilibrium, and prices will equal long-run marginal cost if the industry is in long-run equilibrium. In equilibrium, every firm's marginal cost will exactly equal every other firm's marginal cost, despite wide differences in their individual circumstances, like the fertility of their soil, the types of equipment they use, and other details of their production function, and despite the lack of any coordination in their individual production decisions.

Because joint costs do <u>not</u> directly vary with the output of any one product, they are an exception to this general pattern, and it is not self-evident how they are recovered from customers. Among other insights that can be gleaned from solving the joint cost puzzle is that the general equilibrium conditions that were just described are not achieved exclusively by costs being adjusted to match prices. To some extent, the process also works in the reverse direction: prices also tend adjust to the level of marginal costs incurred by the typical firm. Decisions made by <u>both</u> producers and consumers are important in establishing prices in competitive markets. Succinctly stated, the interaction of both supply and demand determines what costs are incurred by producers and what prices are paid by consumers.

Q. Before explaining the joint costs in more detail, can you briefly summarize the solution?

A. Yes. Unregulated prices tend to reflect the direct costs incurred by producers – particularly marginal, or variable costs – <u>plus</u> a contribution toward otherwise unrecoverable indirect, joint and common costs that varies depending on market conditions and the strength of demand for different products or services. While market forces typically push prices toward short-run marginal cost, there are other market forces that push prices toward a long-run equilibrium level that exceeds this level, when this is necessary to ensure that each price includes an adequate contribution toward joint and common costs so that a typical firm can recover its total costs. In fact, demand conditions help determine the extent to which the firm's costs are recovered from specific products or services, and the extent to which its costs are recovered from specific customers or customer groups.

More specifically, if purely marginal cost-based prices would not be sufficient to ensure adequate total cost recovery, prices will instead equilibrate (in the long-run) toward levels that exceed marginal cost by the amount necessary to enable the typical firm to recover its joint and common costs. Significantly, this demonstrates that competitive prices are not purely a function of marginal cost. Instead, prices are determined by market forces, with the interaction of supply and demand determining the relative share of joint and common costs that are provided (over and above marginal cost) by different products and customer groups. This holds true in markets for many different types of goods and services – even where competition is only partly effective, and individual firms enjoy a substantial degree of market power.

Q. How does this discussion relate to this proceeding?

A. Because EnergyNorth is a rate-regulated monopolist, the Commission decides what prices are charged for gas delivery. Substituting for market forces or the interaction of supply and demand, the Commission decides how the Company's costs will be recovered during the revenue allocation and rate design phase of each case.

Many of the costs included in the Company's revenue requirement are fixed or sunk. Accordingly, prices set equal to marginal cost will likely fail to recover the Company's revenue requirement, assuming marginal cost is accurately estimated over the short- to long-run. Typically, there is little or no controversy concerning the recovery of short-run marginal costs, which are primarily variable costs that can be clearly and unambiguously be traced directly to specific customers. For instance, there is usually very little controversy concerning the appropriate price a utility should charge for the natural gas it purchases from an interstate pipeline and delivers to its customers. Most parties will readily agree that it is reasonable to charge a price that closely approximates the short-run marginal cost of gas – an amount which is approximately equal to the amount EnergyNorth pays for gas received during the hour when it is consumed. Any complications in deciding what to charge different customers will usually be a function of differences in customer usage patterns, and corresponding uncertainties concerning the precise timing of when each customer's gas was purchased (since gas prices fluctuate daily, and because gas can sometimes be purchased in advance and stored for use during peak hours).

Recovery of the cost of purchased gas is relatively straightforward. It is more difficult to determine how much each customer should be charged for using pipes and other facilities that are buried underground and shared by hundreds or thousands of different customers. Among other complicating factors, customers are in different locations (some are closer to the interstate pipeline, some are farther away), and they may use gas to a different extent during different times of the day and year. Consequently, EnergyNorth's distribution system gives rise to both fixed and sunk costs, and – due to economies of scale and scope – it inherently involves the problem of joint and common cost recovery.

To understand why I say this, consider first the way costs can be incurred jointly across time. In fact, as EnergyNorth installs gas distribution mains, it adds delivery capacity in fixed proportions across different times of the day and different months of the year. Even if a capacity addition is motivated by a need to increase capacity during the peak hour, the same amount of additional capacity will become available to serve load during other hours of the day, as well. Similarly, in the long-run, when capacity is increased or decreased in response to changes in winter gas usage, capacity in the summer will increase or decrease by the same amount. Hence, gas delivery during off-peak hours can be thought of as a byproduct of delivery during peak hours, and summer gas delivery can be viewed as a byproduct of winter gas delivery.

The pervasive existence of fixed and sunk costs, compounded by a joint cost problem across different time periods and geographic locations, results in a situation where very few costs can be reduced or avoided if any single customers' usage increases or decreases by a small amount. In other words, the marginal cost of delivering a little more or a little less gas to a typical customer will be relatively close to zero. Even the long-run incremental cost savings that would be achieved if a typical customer were to discontinue their gas usage entirely (permanently leaving the system) might be very small compared to the average cost of serving a typical customer. Under these circumstances, prices cannot be set equal to marginal cost and still generate enough revenue to recover EnergyNorth's total costs.

Q. What is the solution to the joint cost puzzle?

A. The answer is straightforward, but not obvious: in competitive markets, relative levels of value – or benefits – largely determine the share of joint costs recovered from each of the joint products. If two products are jointly produced, the most valuable product, or the one that receives the largest benefit from the joint production process, will pay the largest share of the joint costs. The least valuable product, or the one that receives the smallest benefit from joint production, will pay the smallest share.

Recall that joint costs are incurred when production processes yield two or more outputs in fixed proportions. Two classic examples are the production of beef and hides and the production of cotton and cottonseed. The costs of raising and slaughtering cattle are part of a joint production process that produces both meat and hides, in relative proportions than cannot easily be adjusted by the cattle farmer. Similarly, cotton and cottonseed oil are both part of a joint production process, in proportions that cannot be easily adjusted.

The cost of fattening and slaughtering cattle are paid by consumers of both beef and hides, while the cost of growing and harvesting cotton are recovered from consumers of both cotton and cottonseed oil, in proportions that depend on the relative value of each of the joint products (not their respective marginal costs). For example, if hamburger is not highly valued (because consumers don't particularly like hamburger, or they prefer chicken or seafood), but leather is highly valued, a surprisingly large fraction of the cost of cattle feed may be borne by the purchasers of leather goods. Similarly, if the purchasers of gloves are willing to pay more for leather gloves than for cloth gloves, they may end up paying a relatively large share of the cost of cattle feed while the purchasers of cotton gloves may pay a relatively small share of the cost of growing cotton (and consumers of cottonseed oil may pay a larger share than might otherwise be expected).

Once the solution to the joint cost puzzle is explained, for many people it will seem intuitively logical and fair. The purchasers of both leather gloves and hamburgers benefit from the joint production process so it intuitively makes sense that both will contribute to the cost of joint production. Similarly, the demand for both beef and leather products is strong, so it seems logical that market forces would lead to both consumers of both sets of products to contribute toward the joint costs of raising and slaughtering cattle.

Different customers pay different amounts, depending on how much benefit they derive from the joint production process. Those consuming the most highly valued products (for which demand is strong) will pay the largest share of the joint costs, while those those consuming the least valuable products (for which demand is weak) will pay the least. This principal applies not only to the distinction between beef and hides, but also to different types of beef, or different sections of the hide. A customer that purchases hamburger will end up paying more per pound toward the joint costs of cattle production than one who purchases standing rib roast or filet mignon.

Q. Does joint cost recovery differ when one of the products is primarily driving production decisions and the other product is a mere byproduct?

A. No. Even if cottonseed is just a minor byproduct of the production of cotton that is used in manufacturing T-shirts and bed linens, the cottonseed is valuable, so it will not be discarded. Instead, the seeds will be converted to cottonseed oil, and consumers of this byproduct will make a contribution to the joint costs of raw cotton production. The status of one item as the primary product and the other as a byproduct does not change the pattern of cost recovery, nor does it indicate that consumers of the main product will pay nearly all of the joint costs. If the byproduct is valuable, purchasers of the byproduct will benefit from its production, and they will contribute toward the cost of the joint production process. Succinctly stated, the strength of demand for the byproduct will determine how much those consumers pay toward the joint costs.

A somewhat analogous joint cost phenomenon arises geographically within EnergyNorth's system, since the same pipe can be used to deliver gas to more than one location. Furthermore, pipes are manufactured in "lumpy" sizes, and their installed cost involves substantial economies of scale. If a 4" main is not quite adequate to serve the anticipated future usage of customers in a particular neighborhood, the next largest size considered might be a 6" main, which provides more than double the capacity with only a small increase in the installed cost per linear foot. If the 6" main is installed it will have substantial excess capacity that will be available to accommodate growth in usage in other locations. This is another example of the joint cost phenomena, analogous to an increase in beef production creating an increase in the volume of hides that become available for tanning and sale to leather purchasers.

Q. How do joint costs relate to common costs?

A. Joint costs are simply a special type of common cost. To the extent common costs vary in proportion to output, they will be recovered in competitive markets in the same manner as direct costs: they become part of the marginal cost of producing each individual product, and will therefore directly impact prices (since prices tend to equilibrate towards marginal cost). However, production processes sometimes include common costs that give rise to significant economies of scale or scope. The recovery of common costs will, to that degree, follow the same pattern as the recovery of joint costs.

Since joint costs occur don't have an impact on marginal cost, the way they are recovered is on the basis of demand characteristics (value and benefits). Similarly, if economies of scale and scope are pervasive in a common production process, a markup above marginal cost will be necessary for the firm to stay in business. Market forces will lead to equilibrium conditions in which the price of each product will exceed the marginal cost of producing that product by an amount that depends on supply and demand conditions for that product. In essence, the markup recovered from each product will depend on how much the product is valued by consumers (or the benefit obtained from producing it in common with other products). Assuming equilibrium, on an overall basis, the contribution from each product, over and above recovery of its marginal cost, will be just enough to enable the firm to recover its total costs and stay in business.

Q. Can you please elaborate on differences in the amounts that will be paid by different customers toward the recovery of joint and common costs?

A. Yes. The portion of the joint and common costs that are recovered from different products or services will vary depending upon supply and demand conditions. More specifically, the relative cost-recovery shares will depend on the degree to which purchasers of different products benefit from the joint production process, the value of the different products, and the relative strength of demand for the different products. In other words, a uniform markup will not be added to marginal cost, and each customer will not contribute a uniform dollar amount toward the recovery of joint common costs. Instead, joint and common cost recovery will vary widely. Larger customers will tend to contribute more than smaller customers (because they use more, and therefore benefit more from the common production process). Similarly, more valuable products will tend to have a larger markup, resulting in a contribution toward joint and common costs than less valuable products.

In general, the amount contributed by specific customers (or specific products) will vary depending on the strength of demand in the different markets and submarkets. The stronger the demand – and in that sense, the greater the benefit received from the joint production process – the greater the share of joint costs that will be borne by any particular product, service, customer, or customer group. If General Motors incurs common costs when producing Chevrolet and Cadillac automobiles, to take advantage of additional economies of scale or scope, we can confidently predict that a larger share of the common costs will end up being recovered through a large markup above marginal cost built into the wholesale price of each Cadillac, while a smaller share of the common costs will be recovered in the wholesale price of each Chevy.

Q. You've also mentioned sunk costs several times. How do they relate to this discussion?

A. There are some striking similarities between joint costs and sunk costs. Once they are incurred, sunk costs are irrelevant to the pricing process. However, the mere fact that some costs are sunk does not mean the firm has no chance of recovering those costs, or will be forced out of business. The cost of writing a novel provides a good example. The actual amount of time and effort invested the writing process by a novelist is entirely irrelevant to what the writer will be paid for their work. Once a novel is written, the cost of creating the novel is sunk and irretrievable. Assuming a competitive market, this sunk cost will have no bearing on what publishers will bid for the right to publish the novel.

Similarly, once a publisher purchases the rights to a novel, the amount it pays for those rights, the cost of hiring an editor to work with the author in polishing the manuscript, the costs of typesetting, and various other costs leading up to and including the cost of the initial print run become sunk costs as they are incurred. These sunk costs are irretrievable and irrelevant to any subsequent pricing decisions. Not only will they have no bearing on the price the publisher asks for copies of the novel, they will little or no impact on how many copies are ultimately sold – that will depend almost entirely on how good the novel is, and how popular it becomes.

None of this suggests that sunk costs are never recovered. Successful authors are paid well for their work. If they were not, fewer novels would be created, and publishers would be forced to bid up the price paid for any novels that continue to be written. Market forces ensures that novels continue to be written and publishers continue to take a chance on publishing new books, despite the risk that their costs will be sunk, and may not be recouped. The parallel is clear: sunk costs incurred by any one author or publisher have no impact on marginal cost, and thus they have no impact on prices, yet these costs are often recouped, ensuring that novels continue to be written and published.

Q. What determines whether, and how, sunk costs are recovered?

A. Value. For instance, the sunk costs of producing a book will be recovered only to the extent the book itself has perceived value. The amount paid for each individual copy, and the total number of copies that are sold, will depend on the market for novels and the extent to which there is demand for this particular novel. If the novel is entertaining and well written, if it features interesting characters and a plot that people like, word will spread, and many copies will be sold at a price that customers consider to be fair for the value they receive. If enough people are eager to buy the book, they will pay a price that greatly exceeds the marginal cost of production (say, the cost of printing and binding one more copy in the course of a large print run). If the book is a dud, most of the copies will be destroyed, and the rest will linger on the "remainders" table, after being marked down to a price that is below the marginal cost of production. Either way, the sunk costs incurred by the author and publisher will be entirely irrelevant to the price-setting process. In first case, prices will generate revenue far in excess of the sunk costs; in the second case, prices will fail to recoup any of the sunk costs. The key factor is the difference in value, as reflected in the market outcome.

Q. Are you arguing that the Commission should set gas delivery rates in the exact same way competitive markets determine the price of novels, or beef and hides or Cadillac and Chevrolet automobiles?

A. No. The Commission has considerable flexibility in deciding how to price EnergyNorth's services, and I am not suggesting it should follow precisely the same pattern that explains how joint and sunk costs are recovered in competitive markets. However, the patterns observed in competitive markets are highly relevant and instructive, and they should be evaluated by the Commission, along with other considerations. To give just one example, it might be argued that prices should be relatively uniform, for reasons of simplicity, or administrative convenience, or to ensure consistency with the results of a particular cost study. However, in competitive markets joint and common costs are never recovered on a purely uniform basis, since this would be sub-optimal. As a general rule, market-based prices do not recover an identical monthly dollar amount from each individual customer toward recovery of fixed or joint costs, nor do they typically result in a uniform percentage markup above the marginal cost of producing each product.

When large differences exist in the benefits received from customers of different sizes or types, competitive prices will generally deviate from uniformity in order to take into account those differences. For instance, Ford produces multiple different car models in a common production process. By using the same transmission and other key components on more than one model, Ford can spread the recovery of the fixed costs of engineering and design, and the fixed costs of machine tooling for those common components across multiple different cars. This allows it to further exploit economies of scale and scope. As a result, a disproportionate share of Ford's profits is generated by higher-end models which are loaded up with accessories and luxury packages that are highly valued by some customers. Those customers are willing to pay a much higher price for cars with these enhancements (well in excess of the marginal cost of adding these enhancements). Consistent with economic theory, these customers provide a much larger contribution toward Ford's sunk, joint and common costs. Other customers, who don't value these features as highly, or who cannot afford them, purchase lower-end models which provide a much smaller contribution toward Ford's joint and common costs.

While Ford's motive in marking up prices for different car models by different amounts is a desire to maximize profits, the end result is beneficial to society as a whole. Differential markups enable lower income consumers to purchase newer, more reliable transportation, and it helps Ford produce more cars and employ more people than if it applied a uniform markup above marginal cost on each car model. Applying different markups to different models allows Ford to sell more cars more profitably, including sales made to customers who perceive relatively little benefit from owning a new car, and customers who can only afford a stripped-down version of the basic product – one that most consumers wouldn't be satisfied with.

One way of thinking about this competitive pricing process is to recognize that optimal prices involve the interaction of both supply and demand – like two blades of a scissor which cut paper much more effectively than a single blade on its own. The key takeaway is that competitive prices take into account more than just differences in marginal cost. The demand side of the equation (differences in the benefits or value received by different types and sizes of customers), are also important.

Similarly, the Commission can (and should) use its discretion to decide how far specific prices should be set above marginal cost. More specifically, I recommend reducing EnergyNorth's customer charges, and increasing the volumetric rates, thereby improving the alignment with differences in the value received by large and small customers, and better advancing important public policy goals, including fairness and encouragement of economic efficiency and energy conservation.

IV. THE COMPANY'S MARGINAL COST STUDY

Q. What role did the marginal cost study play in the Company's pricing proposals?

A. This study is virtually the only evidence offered by EnergyNorth to support its proposed revenue allocation and rate design in this proceeding. The justification for placing so much emphasis on this study was explained as follows:

> A well-established principle of economic theory is that the price of a good that is sold in a perfectly competitive market will be set at the marginal cost to produce that good. It is a further well- established principle of economic theory that the best allocation of resources will occur, and the best consumption decisions will be made, in an economy in which the prices of goods are set at marginal costs.
>
> It has been the Commission's rate-design policy and precedent since the mid-1980s to apply the concepts of marginal cost pricing in a rate case (a) to determine the share of total rate case revenue requirement for which each rate class is responsible, and (b) to set base distribution rates in order to promote appropriate price signals and, therefore, proper energy consumption decisions. The basis for the Company's current allocation of revenue requirement to classes, rate design, and current rate classifications was approved by the Commission in Order No. 23,675 (Apr. 5, 2001) in the Company's 2000 revenue neutral rate design proceeding, Docket No. DG 00-063.[17]

17 Direct Testimony of Melissa F. Bartos, Pages 2-3.

Q. Have you reviewed Order No. 23,675?

A. Yes. A marginal cost study was filed in that case (and in subsequent cases) and was accepted in the settlement agreement that resolved that proceeding. Based upon my reading of the order, the cost study does not seem to have been a primary focus of attention. Rather than extensively debating details of the marginal cost study, the parties seem to have primarily focused on specific rate issues, including the level of customer charges, the introduction of a load factor-based rate structure and Cost of Gas clause, and an effort to reduce rates charged Commercial and Industrial customers without unduly burdening Residential customers.

The Company explained it wanted to move toward "cost-based rates" and facilitate increased retail competition, but the primary focus of the parties seems to have been on the proposed rate changes. It isn't clear how carefully the parties examined the inner workings of the cost study that was submitted in that proceeding, but the details of the study were not pivotal to the settlement agreement, nor was there any discussion of the inner workings of the study in the Commission's order. Furthermore, OCA and other parties expressly reserved the right to argue for a different cost of service methodology in future proceedings.

Q. Did the Commission discuss or endorse the details of the marginal cost study in its order?

A. No. The marginal cost results are briefly mentioned in the order, and they undoubtedly played a role in the Commission's decision, but there is no indication the details of the underlying methodology was being endorsed.

> We note that the target marginal cost-based class revenue served as a guide in establishing the Settlement rates. Had the Settling Parties and Staff fully reflected the results of the marginal cost studies in the ratemaking process the rate increase for the Residential classes would likely exceed those that were proposed. For example, the Settling Parties and Staff recommended monthly customer charges of $10.00 and $7.00 for Residential Heat and Residential Non-heating customers respectively... considerably short of the $22-23 shown in KeySpan's marginal cost study. ...
>
> Further, while a 6% increase in the revenue requirements for the Residential Heating Class and a 13% increase for the Residential Non-Heating class appear substantial, one must also consider the monthly bill impact and the fact that KeySpan custoemrs have not had a base rate increase since April 1, 1993. ...
>
> The statutory standards ... do not require that the Commission determine the outcome using any specific methodology, so long as the result is consistent with the "public interest" and the rates are "just and reasonable." ...
>
> We believe that an "end result" review is particularly applicable to the consideration of settlement agreements, which, by their nature, often require parties to compromise positions and principles in order to reach an acceptable outcome. Thus, while the Commission ... must condut its own independent review in order to ensurethat the "public interest" and "just and reasonable" standards have been met, it may do so without reliance upon any particular theory or methodology.[18]

Q. Can you briefly summarize your overall reaction to the cost study in this proceeding?

A. While there are several aspects of the Company's cost study I disagree with, the most fundamental problem is the severe lack of consistency with economic theory. These

18 New Hampshire Public Utilities Commission, Order No. 23,675, April 5, 2001, pages 22-24.

inconsistencies include a failure to draw meaningful and appropriate distinctions between fixed or sunk costs and variable costs, and a failure to maintain these distinctions in an internally consistent, logical manner. The effect of these inconsistencies is to increase the customer-related cost estimates relative to the demand-related cost estimates.

This problem is further compounded by the questionable manner in which some of the statistical equations were developed, which involved an unacceptably high degree of "data mining," an excessive reliance on dummy variables, and the lack of theoretical support for the dummy variables. The combined impact of the theoretical and statistical problems are so severe, they completely invalidate any conclusions that might otherwise be drawn from the study.

A. Inconsistencies with economic theory

Q. Did the Company adopt a clear, consistent definition of planning horizon or "run" that it studied?

A. No. Ms. Bartos never explicitly states what "run" or planning horizon she intended to study, and neither the word "run" nor the phrase "planning horizon" appear anywhere in her testimony. I did find the phrase "Long-Run Unit Costs" used as a label on line 1 of Attachment MFB-8, page 1, and this cryptic reference suggest the intent was to study some sort of long-run costs, not short-run costs.

As I indicated earlier in my testimony, the planning horizon or "run" is crucially important. Both as a theoretical matter and as an empirical matter, when looking at a well-designed marginal cost study for a gas utility, one can expect to see lower low cost estimates the shorter the planning horizon that is evaluated, since the shorter the "run" the greater the extent to which sunk costs will dominate the calculations (assuming they are correctly developed). Conversely, when looking at long-run studies, one can expect to see higher marginal or incremental cost estimates – especially if a "scorched earth" or "extreme long-run" scenario is modeled, which assumes there are very few, or no, sunk costs.

When the "run" is not clearly and consistently stated, or a mixture of different planning assumptions or time-horizons are used in different aspects of a marginal or incremental cost study, one can expect the results to be highly dependent upon specific assumptions and details concerning what is treated as fixed and what is treated as variable. This was the situation I encountered when examining the Company's study in this case. The Company completely ignored the fact that a service line, regulator and meter have already been installed at most building along the routes where EnergyNorth has distribution mains in New Hampshire. The cost of these items is almost always sunk and unavoidable once they are installed. In the case of a typical existing building, which is already connected to the system, if the building sits vacant for a while, the cost will not be reduced just because the service line isn't being used. If a new owner or tenant moves into the building and requests gas service, the Company will add another customer to its rolls, but the cost of these facilities will not increase. If the customer then remains on the system, the cost will not change. Finally, if the customer subsequently leaves the system, the cost will not decline.

This sunk cost problem was completely ignored when the Company developed its cost estimates for service lines, regulators and meters. Unlike the statistical approach it used in studying other costs, the Company adopted a "scorched earth" approach to cost modeling, which is entirely based on engineering cost estimates, and gave no consideration to the extent to which customer-related costs are actually at "the margin." In the context of EnergyNorth's system, this approach is only logically consistent with an extreme long-run planning horizon. A far less extreme version of the long-run was used in the rest of the study, where a statistical approach was used to estimate the degree to which costs are increasing due to main reinforcements and main extensions.

The explanation provided by Ms. Bartos glossed over these inconsistencies, but this brief passage provides a good entry point for explaining them in greater detail:

> I prepared calculations and analyses to estimate the marginal distribution function-related costs that the Company would incur to serve (a) additional demand when the Company is experiencing design day conditions, and (b) additional customers.

At least two things are noteworthy about this brief explanation. First, she exclusively refers to "additional" demand or customers, meaning the increases in total cost that potentially would occur if there were to be an increase in design day demand or an increase in the number of customers. She makes no mention of how much costs decline when customers conserve energy or reduce their design day demand, or how much total costs decline when an existing customer leaves the system. Second, she separates her calculations and analyses into two broad groups, corresponding to the pricing distinction between volumetric rates (which are supported by her cost estimates for "additional demand when the Company is experiencing design day conditions" and customer charges (which are supported by her cost estimates for "additional customers."

Upon further investigation, I confirmed the study is exclusively focused on how costs change when the volume of output increases. No attempt was made to examine how much costs decrease when an existing customer leaves the system, or when an existing customer reduces their energy usage or design day peak demand. This failure to consider the rate of change in the downward direction compounded some other flaws I found in the study. This may also help explain why the Company didn't notice any of the problems with adopting a purely hypothetical "scorched earth" approach to modeling the cost of service lines, regulators and meters. If did not examine how much costs decline when a customer leaves the system (e.g. when a building becomes vacant or a customer switches to a geothermal heat pump). Thus, it completely ignored the "ratchet" phenomenon – the fact that investments in services, regulators and meters are sunk once they are installed at a specific building. They do not increase or decrease with changes in the number of customers receiving gas service at that location.

Q. Why is the change in total cost as output decreases relevant?

A. In part, it is relevant because the study results have been labeled as "marginal cost" estimates. Since the term "marginal cost" is taken from the economic literature, the validity of the Company's cost estimates and underlying assumptions, should be judged in that context. Under the simplest conditions considered in economics, where he cost function is smooth and continuous, and cost is the same whether it is measured by how much total cost increases as output increases by an extremely small amount, or how much total cost decreases as output decreases by an extremely small amount. If this equivalence cannot be confirmed, it should be taken as an indication that may be flaws in the modeling approach, or there are complexities that need to be carefully evaluated and resolved.

These complexities arise when the cost function is not smooth and continuous, because of lumpiness, “ratchet” effects, or other complications. Where those complications are known to exist (or are encountered during the modeling process), they need to be dealt with appropriately. A good starting point is to evaluate how much costs change when output is varied by different amounts, or in different directions, or in different geographic locations. To the extent the cost estimates vary significantly, it becomes necessary to decide on the most appropriate solution. Should these disparate results be averaged? Should they be blended, with different weights given to different cost estimates? Or, should different prices be developed which are applicable to the different situations which give rise to different costs?

From my perspective as an economist, the least desirable and least logical solution is to simply ignore the problem. In the case of the service lines, the effect of ignoring the sunk cost problem is to effectively treat every customer as if they were “at the margin” – equivalent to the relatively rate situation facing a potential customer that is thinking about constructing a new building and they need to decide whether to use natural gas. Since this situation is not the one confronting most people most of the time, it obviously deserves less weight than the more common situation where someone is occupying an existing building, or thinking about moving into an existing building, with an existing connection to EnergyNorth's distribution system.

For most customers and potential customers, the situation where the service line doesn't exist is a purely imaginary or hypothetical scenario with little relevance. The decisions most people will make in response to the prices set in this proceeding will not involve any action or potential action that puts the service line, regulator and meter at the "margin" of decision-making. In terms of economic efficiency and public policy, the most relevant question for designing rates is how much costs will actually increase or decrease at the margin when someone decides whether to use gas, or how much gas to use, while occupying a building that is already connected to the system. For those customers, the cost of the service, regulator and meter will typically be a sunk cost, which is irrelevant from the perspective of optimal pricing policy.

One exception, where the cost is not fixed or sunk, occurs when someone builds a new home or business. Another exception occurs when gas service is being extended for the first time to their neighborhood, and they decide whether to connect to the system. Since those exceptions are less common than the situation where the building is already connected to the system, the overall system-wide level of long-run marginal costs should give much more weight to the typical situation, where these costs are sunk.

Q. Is the proportion of sunk costs uniform throughout the system?

A. No. Sunk costs are most prevalent where facilities are used by just one or two customers, and they are less prevalent where facilities are shared by hundreds or even thousands of customers. The logical connection between the degree of cost-sharing and sunk costs is straightforward. Recall that long-run marginal cost is the rate of change in total costs that occurs in a planning horizon where many capital costs are potentially variable. The more customers that share a particular piece of equipment, the greater the likelihood that increased usage by any one of those customers can create "congestion costs" or opportunity costs which impact hundreds or thousands of other customers. Congestion occurs whenever the demand placed on shared equipment begins to approach its design capacity. Conceptually, this is somewhat analogous to a bottleneck in an assembly line, which impacts the productivity of every worker and every piece of equipment that is downstream from the congestion point. When congestion begins to occur within a widely shared part of the system, expanded usage by even a single customer can adversely affect the safety and reliability of service to other customers on the system. When congestion begins to become a concern, the marginal cost begins to increase, based upon the increased probability of encountering problems which would adversely impact the safety and reliability of service to many different customers. If insufficient capacity exists to fully accommodate fluctuations in and potential growth in demand, the marginal cost curve will turn sharply vertical, as the probability of unsafe conditions or inadequate operating pressure begins to escalate.

Because reliable utility service is vitally important to most customers, the cost to customers, and society, of being unable to supply gas when it is needed can be extremely large. This is analogous to the risk of a tornado, or hurricane, or fire, where a very large problem is multiplied by a very small probability – which explains why people pay for insurance even though there is very little risk they will encounter a problem during any one hour or day. The probability-based costs associated with potential system congestion or inadequate capacity become part of the marginal cost to society associated with providing gas service to every customer who can potentially be affected by the problem. This logically follows because an increase in peak usage by any customer downstream from the point of congestion could trigger problems for many other customers. Similarly, a reduction in usage by any downstream customer can help alleviate the problem, reducing the risk of a problem. Under those conditions, the reduction in usage by any one customer will reduce the marginal cost of serving all of the other customers on that part of the system, and vice versa.

These societal costs are one of the reasons regulations exist which require utilities to provide safe and reliable service. Even if this were not required, it would be in the best interest of the gas company to install ample capacity wherever it might be needed, in order to reduce the potential for future congestion problems. However, building adequate reserve margins throughout the system is costly, and this should be considered when estimating the long-run marginal cost of meeting design day demand. These congestion-related societal costs are highly relevant in the context of distribution mains and other widely shared parts of the system, and of much less relevance to a service line that only impacts a few customers.

Q. How are capital costs handled in a valid long-run marginal cost study?

A. Basically, a valid long-run marginal cost study considers the rate of change in the total cost function as the size, design and capacity of the capital investment is varied and optimized, along with corresponding variations in operating costs. This optimization analysis is supposed to be performed in the context of a long-run "planning horizon" which is not excessively tied to, or unduly constrained by, limitations and characteristics of the existing system. In other words, rather than focusing on the "worst case" scenario of what would happen if problems arose and no effort were made to resolve them by making new investments, the assumption in a long-run planning horizon is that new investments are made that avoid these problems, taking into account growth and replacement needs over the long-run.

As I indicated earlier, an appropriate long-run planning horizon for EnergyNorth would correspond to the degree to which capital investments can potentially be varied over a typical 10 to 20 year planning horizon. Over this time period, EnergyNorth's distribution mains would not be classified as entirely fixed or sunk, but instead should be treated as being variable to a substantial degree. For instance, over this time period new mains will need to be installed along some routes, where older, existing mains are nearing the end of their useful life, or becoming unacceptably leak-prone. This impacts the long-run marginal cost of all of the customers sharing those facilities.

Similarly, over a 10 to 20 year time period, even if system-wide average consumption is stable, there will be pockets of growth in some areas, and declining usage in other areas. Accordingly, congestion will likely arise in some areas which can be resolved by replacing the existing mains with larger ones, reinforcing the route with a second main, or upgrading parts of the system to operate at higher pressures. None of these options is entirely cost-free, of course, and the costs of the optimal solution will be reflected in the marginal cost of serving every customer using those mains.

EnergyNorth has the opportunity to optimize many capital-related decisions over a 10 to 20 year planning horizon. For instance, it can decide whether to reinforce, replace or retire some of its existing mains, and it can select the optimal size of each newly installed or reinforced main over its economic life. For locations where capital investments can be optimized, the cost of installing, reinforcing or replacing mains may be relatively high (compared to the cost of existing mains) on a per-linear foot basis, due to inflation and other factors, like the difficulties involved with installing new mains in areas where older mains, water lines and other infrastructure already exists.

Of course, in a location where the existing main is relatively new, it has many decades of useful life remaining, and the route has ample capacity to meet all foreseeable demand for that entire time period, the capital-related costs of the main may appropriately be classified as fixed or sunk. In those locations, the capital-related cost of distribution mains may be very low, especially if the main cannot be adjusted or optimized to serve some other purpose over the relevant planning horizon. Accordingly, an analysis of the overall system-wide level of long-run marginal costs of distribution mains will represent a composite of relatively high costs in some locations and relatively low costs in other locations.

B. Flaws in the Statistical Cost Estimates

Q. What approach did the Company use to estimate the marginal cost of distribution mains?

A. Unlike its approach to the cost of facilities at or near the customer's premises, the Company used a statistical approach to estimating the marginal cost of other parts of the system. The general approach is captured in the following passage in the direct testimony of Melissa Bartos:

> I asked the Company to prepare an engineering study of forecasted system reinforcement projects that the Company would be required to construct from 2016 to 2026 to meet the Company’s projected design day demand during that period. The engineering study that I asked the Company to

> prepare is different from the Company's actual distribution asset plan, which takes into account (a) projects that will be required to meet projected load growth, (b) projects that are included in the Company's Cast Iron Bare Steel ("CIBS") replacement program, and (c) other distribution replacement and relocation plans. The Company's distribution asset plan is different from the projections that I requested because the actual asset plan may combine a reinforcement project with a CIBS replacement project or other replacement or relocation projects, which is likely to affect the timing and location of reinforcement projects.[19]

This is virtually the entirety of the conceptual or theoretical support offered for this approach. The remainder of the explanation is focused on the specific data that was used, and the statistical approach that was used to analyze this data. No explanation was offered concerning the portion of the overall system-wide total cost of mains that was effectively being treated as fixed or sunk, and no explanation was given for why the Company used a fundamentally different approach to estimate the cost of services, regulators and meters.

While the offered explanation is rather cryptic, when it is considered in conjunction with the Company's work papers, it is clear that some of the cost of distribution mains is implicitly being treated as fixed or sunk. In effect, the cost estimates developed by the Company represent a composite of relatively high costs for mains in locations where growth is occurring, or mains need to be replaced or relocated, and relatively low (or zero) costs for mains in the remaining locations. While I don't find this approach objectionable in principal, I am troubled by some aspects of the actual calculations.

19 Direct Testimony of Melissa F. Bartos, Pages 9-10.

Q. Do you have any concerns regarding the statistical approach used by the Company?

A. Yes. There are two closely related problems which obliterate the validity of the statistical results. The first major problem is that some potentially important explanatory variables were not evaluated. Because variables that are potentially important (on theoretical grounds) were never evaluated, it is difficult or impossible to judge the statistical validity of the other variables that were included in the analysis. The second major problem is closely related: data mining was used to evaluate far too many "dummy" variables – including variables for which no "a priori" theoretical basis exists to justify testing them. Both problems are very serious, and make it impossible to have any confidence in the validity of the statistical results.

Q. Can you briefly explain the statistical approach used by the Company to analyze the cost of distribution mains?

A. Yes. A single statistical tool – called linear regression – was used for to study the cost of main reinforcements and extensions.

> I prepared a regression analysis to estimate the statistical relationship between the projected cost of system reinforcement projects and projected design day demand. The regression equation that I estimated is provided in Attachment MFB-1, page 3.

> I prepared a regression analysis to estimate the statistical relationship between the cost of main extensions and design day demand, based on the historical data from 1989 to 2016. The regression results are summarized in Attachment MFB-1, page 4.[20]

20 Ibid, page 10.

Linear regression is a popular statistical technique that is frequently used to model the relationship between a scalar dependent variable (typically referred to as "Y") and one or more explanatory variables (also referred to as independent variables) which are typically denoted as "X" (or X1, X2, X3...). In this context, the dependent variable is the cost of installing distribution mains, and the explanatory variables are the factors which help explain why those costs are high in some years, or some locations, and low in other years, or other locations.

Q. Why is it a problem to exclude important explanatory variables from a regression analysis?

A. Linear regression works best when adequate data is available that captures every significant variable that helps explain, or "cause" fluctuations in the dependent variable. In the case of distribution mains, that suggests it would be preferable, if at all possible, to obtain and use data concerning any potentially important explanatory variable that might be varying from year to year, or location to location. For instance, it would be helpful to obtain data from work orders, engineering records, or other internal sources that indicates the extent to which mains were installed under streets (which is potentially more costly and time consuming, and requires restoration of the paving when completed). Similarly, it would be helpful to obtain data that could be used to evaluate the extent to which mains were being installed in urban areas, compared to less congested rural areas. Similarly, it would be preferable to obtain data concerning the extent to which rocky conditions, or solid bedrook, was encountered on particular jobs, or along particular routes. Sound theory and logic suggests variations in these conditions could easily have a significant impact on the cost of mains installed in one year, or one location, compared to the cost of mains installed in different locations and different years.

If reliable data is not available for important explanatory variables, then the results of the linear regression will automatically impute the impact of those missing variables onto whatever variables are included in the analysis. For example, if the cost of installing mains in year one happens to be high and the cost in year two happens to be low, the goal of the statistical analysis will be to "explain" how much of the variation from one year to the next is attributable to the explanatory variables that are included in the regression analysis. However, if variables are missing, the regression will not account for, or "hold constant" those missing variables. Instead, the statistical software will attribute the fluctuation in costs to whatever explanatory variables happen to be used in the regression equation.

Sometimes, when needed variables are missing, the result will be a poor statistical "fit" – the regression will only explain a small portion of the observed variation in the dependent variable. However, this is not always the case. Sometimes instead, the result will be a fairly good statistical "fit" but the result will be inaccurate and misleading. For example, consider what would happen if a missing variable, like the amount of bedrock that is encountered, happens to be much larger in year one than in year two. If it also happens to be the case – by pure coincidence – that the capacity of the mains installed in year one happens to be larger than the capacity installed in year two, the statistical software will have no way of knowing what portion of the cost fluctuation is caused by differences in the amount of bedrock. Instead, it may attribute the entire difference in cost to the difference in design capacity, while in reality only a portion of the cost difference is actually attributable to difference in capacity. Succinctly stated, when data for important variables is missing, the regression results will not be reliable, imputing some of the cost fluctuations that are actually caused by missing variables to whatever independent variables are included in the regression.

Q. Did the Company acknowledge that there are explanatory variables that were not accounted for in its statistical analysis?

A. Yes. For example, the Company was asked in discovery to explain what other explanatory variables could impact main extension investments. It responded:

> There are many variables that could impact main extension investments, including: terrain, length of pipe installed, urban/rural area, type of pipe installed, diameter of pipe installed, paving requirements, and traffic detail requirements.[21]

Yet, none of these variables were statistically evaluated. The only justifications offered for excluding these variables from the analysis were "practical" concerns that potentially might have made it difficult to collect the data needed to evaluate some of these variables, and this claim:

> In addition, the purpose of this analysis is to identify the relationship between main extension costs and design day demand on an annual basis, not to predict main extension costs for individual projects.[22]

However, if these variables may be needed to accurately predict the cost of individual projects, they may also be needed to accurately predict the cost of projects that

21 Response to Request No. OCA 1-56 (c).
22 Ibid.

will occur in future years (since the mix of future main extension projects will not be identical to the particular mix that was observed in the historical time period).

Q. Can you explain your concern with respect to dummy variables?

A. Yes. Although Ms. Bartos doesn't mention the words "dummy variable" in her testimony, she used a lot of them. Looking at the final statistical equations used in the marginal cost study, I found an interactive dummy variable for the years 2018-2026 on Attachment MFB-1, page 3, a dummy variable for the year 2000, two different dummy variables for the years 2012 to 2016, and a dummy variable for 2002 to 2004 just on Attachment MFB-3, page 4, alone. I also found two different dummy variables on Attachment MFB-4, and an astounding 10 different dummy variables on Attachment MFB-5 page 1. I found additional dummy variables scattered throughout the other pages of the marginal cost study, including six dummy variables on Attachment MFB-5 page 3, five dummy variables on Attachment MFB-6 page 1, four dummy variables on Attachment MFB-6 page 2, four dummy variables on Attachment MFB-6 page 3 and one more dummy variable on Attachment MFB-6 page 4.

The sheer number of dummy variables that were used by Ms. Bartos calls into question the plausibility and reliability of her statistical results. From my perspective as an economist, dummy variables can be thought of as disappointing second-best solution that we sometimes resort to, because of the inadequacies of our data. The main problem with dummy variables is that they don't really "explain" anything. They can improve the statistical fit, helping to overcome weaknesses in the data, but they don't actually provide any additional insight into the underlying factual relationships that explain the phenomena being studied. In this instance, they don't help us identify and understand the important factors which cause a particular level of total cost to be incurred in one year and a different level of total cost to be incurred in a different year. In turn, since we don't know why total cost differs between two years, we can't accurately estimate marginal cost (how much of the variation relates to differences in the volume of output). Stated another way, if we aren't gaining a true understanding of what caused the level of costs during specific years, we aren't developing a reliable tool for predicting what level of total cost will be incurred during future years, or how much that cost will vary as a function of differences in demand.

When dummy variables are arbitrarily used to improve the statistical “fit” we don't know what would happen if the equation were applied to a different utility during those same years, or if it were applied to the costs incurred by the same utility during an entirely different time period, or in a different jurisdiction. In this case, these inherent weaknesses were greatly exacerbated by five additional, interrelated problems:

First, Ms. Bartos considered and rejected numerous additional dummy variables, including ones that were ultimately rejected, and were not specifically disclosed in the marginal cost study documentation. The only dummy variables that were reported were those she ultimately chose to include in the final equation, because they “improved” the statistical fit.

Second, the use of dummy variables exacerbated the problem I described earlier with respect to what happens when important explanatory variables are excluded from a regression analysis. Adding dummy variables makes that problem worse because it increases the risk of inadvertently imputing cost fluctuations caused by missing variables to one of the independent variables in final regression equation. The more dummy variables that are tested, the greater the chance some of them will appear to be significant, yet they are merely picking up some of the unexplained cost fluctuations that are attributable to the missing explanatory variables.

Third, all of the dummy variables were evaluated on a purely statistical or "end result" basis. No *a priori* basis existed for testing many of these variables, and none of variables included in the final equations is justified on the basis of sound theoretical reasoning. Absent a sound, independent theoretical justifying a dummy variable, there is no reason to assume the variable is anything more than a statistical artifact of the particular data set that was used in developing the equation. The closest Ms. Bartos comes to providing a theoretical basis for her dummy variables was to note that ownership of the Company changed several times during the historical time period used in her analysis.

> I also tested each equation to look for "structural shifts," which are changes in the relationship between the Cost Variable and Cost Driver variable starting in a specific year and continuing for a number of years. I specifically looked for structural shifts that might have been related to the acquisition of EnergyNorth by KeySpan in 2000, the later acquisition of KeySpan by National Grid in 2007, and the acquisition of EnergyNorth by Liberty in 2012.[23]

However, Ms. Bartos had no basis in theory to anticipate whether costs would increase or decrease after any particular change in ownership. If they happened to increase or decrease around the same time as the change in ownership, she had no way of

23 Direct Testimony of Melissa F. Bartos, Page 5.

determining whether the change in costs was related to the change in ownership or purely coincidental. Conceivably, if costs increased after a change in ownership, it might be attributable to a greater corporate desire to build up the rate base. Conversely, if costs decreased after a change in ownership, it could conceivably be due to a greater commitment to cost control by the new management team.

The problem with not having sufficient *a prior* justification for using these dummy variables was compounded by a failure to collect additional evidence to evaluate what was causing costs to be different during these particular time periods. Ms. Bartos apparently made no effort to determine whether observed changes in costs that occurred around the time of an ownership change were attributable to something related to the ownership change, or something else entirely, like a larger or smaller fraction of new mains being installed in areas with a lot of bedrock, or in municipalities with costly traffic detail requirements.

Fourth, Ms. Bartos did not limit her exploration of dummy variables to specific time periods associated with each change in ownership. Instead, she explored numerous other time periods that were just loosely associated with the changes in ownership:

> However, I did not limit the potential structural shifts to these years. If I determined that a Cost Variable may have a structural shift, I tested additional regression equations that allowed the slope and/or intercept terms to be different for the time periods before and after the time of the potential structural shift.[24]

---

24 Ibid, Page 6.

Whatever the intent, this procedure was effectively a form of "data mining" and as a result, the statistical equation were driven by the data set, rather than using theory to develop the variables and using the data set to test the theory.

Fifth, Ms. Bartos arbitrarily assumed that the statistical results for the most recent time period would be applicable to future years. This is not a valid assumption given the approach she used.

> If a structural shift was found to be significant, I used the slope associated with the latest (i.e., most recent) time period as the marginal cost estimate because, all else being equal, costs from the most recent time period are expected to be more representative of costs in the future.[25]

In fact, the change in costs that occurred during the most recent few years might be attributable to some unique combination of unknown factors that happened to occur during those years – something entirely unrelated to the change in ownership, but some other phenomena that may or may not persist in future years. Accordingly, her equations do not provide us with any confidence that they can meaningfully predict what level of total costs will be incurred during future years, or how much those costs will vary at the margin. This follows directly from the fact that we have no way of predicting whether the unique combination of unknown causal factors that occurred during recent past will also occur to the same extent, and in the same combination, during future years. Especially given the large number of different dummy variables she considered and used, it is very likely that each of the time periods and sub-periods she studied has a unique combination of causal factors that happened to occur during those particular years.

25 Ibid.

Future years will have their own unique combination of causal factors, which will not precisely replicate that of the most recent historical period, or any other specific prior period.

By failing to collect enough data related to the underlying causal factors that actually explain fluctuations in cost from year to year, and by experimenting with different dummy variables to find ones that closely conform to those fluctuations, it becomes impossible to know whether, or to what extent, causal conditions in future years will resemble those that existed in any particular past time period. We have no statistical or theoretical basis for knowing whether a phenomena that occurred during the years 2002-2004 will also occur at some point in the future, and if so to what extent it will affect the long-run planning horizon being studied. Similarly, there is no way of knowing whether a phenomena that occurred during the years 2012-2016 subsequently ended in 2017, or whether it continued through the following year, but will end shortly thereafter, and therefore has little or no relevance to the long-run planning horizon.

Dummy variables allow the statistical equation to adapt to specific artifacts of the data that occurred during past years, but they inherently detract from our ability to use the equation to understand or predict what will happen in future years, since we have no way of knowing whether the phenomena that occurred during those years will, or will not, occur in the future, or to what extent those particular phenomena will occur in any particular future year.

Q. You also mentioned data mining. Can you please explain this problem?

A. Yes. Data mining is a term that was coined in the 1990's to describe the process of using computer software to search through a large data sets looking for patterns that are not readily apparent from simply looking at the data. As computers and data storage have become cheaper, it has become practical to assemble extremely large data sets, and companies have found it feasible and convenient to use automated process to search through their data looking for patterns that might provide them with useful insights. A leading provider of Analytics Software explained the benefits this way:

> Retailers, banks, manufacturers, telecommunications providers and insurers, among others, are using data mining to discover relationships among everything from pricing, promotions and demographics to how the economy, risk, competition and social media are affecting their business models, revenues, operations and customer relationships.[26]

In a blog post published by a major statistical software provider, data mining was described this way:

> Data mining uses algorithms to explore correlations in data sets. An automated procedure sorts through large numbers of variables and includes them in the model based on statistical significance alone. No thought is given to whether the variables and the signs and magnitudes of their coefficients make theoretical sense.
>
> We tend to think of data mining in the context of big data, with its huge databases and servers stuffed with information. However, it can also occur on the smaller scale of a research study.[27]

26 SAS, "Data Mining, What it is and why it matters" https://www.sas.com/en_us/insights/analytics/data-mining.html

27 The Mintab Blog, September 21, 2016, "Problems Using Data Mining to Build Regression Models," http://blog.minitab.com/blog/adventures-in-statistics-2/problems-using-data-mining-to-build-regression-models

The author goes on to show how dangerous data mining can be when it is used in developing a regression model.

> My first order of business is to prove to you that data mining can have severe problems.
>
> ...what could possibly be wrong with this approach? Data mining can produce deceptive results. The statistics and graph all look good but these results are based on entirely random data with absolutely no real effects. Our regression model suggests that random data explain other random data even though that's impossible. Everything looks great but we have a lousy model.[28]

Ms. Bartos used a process which closely matches the one this author warns against. She applied data mining to a small data set, experimenting with a large number of different dummy variables before settling on a particular set of dummy variables that happened to give her a particularly good statistical "fit." She then applied this model to the same data set she used to select the variables, rather than testing the resulting equation on an independent data set.

The reason why this process is inappropriate is well explained by the author, so I will quote at length from his article:

> The problem with data mining is that you fit many different models, trying lots of different variables, and you pick your final model based mainly on statistical significance, rather than being guided by theory.
>
> What's wrong with that approach? The problem is that every statistical test you perform has a chance of a false positive. A false positive in this context means that the p-value is statistically significant but there really is no relationship between the variables at the population level. If

28 Ibid.

> you set the significance level at 0.05, you can expect that in 5% of the cases where the null hypothesis is true, you'll have a false positive.
>
> Because of this false positive rate, if you analyze many different models with many different variables you will inevitably find false positives. And if you're guided mainly by statistical significance, you'll leave the false positives in your model. If you keep going with this approach, you'll fill your model with these false positives. That's exactly what happened in our example. ...
>
> As we've seen, data mining problems can be hard to detect. The numeric results and graph all look great. However, these results don't represent true relationships but instead are chance correlations that are bound to occur with enough opportunities. ...
>
> Data mining can have a role in the exploratory stages of an analysis. However, for all variables that you identify through data mining, you should perform a confirmation study using newly collected to data to verify the relationships in the new sample. ...
>
> An alternative to data mining is to use theory as a guide in terms of both the models you fit and the evaluation of your results. Look at what others have done and incorporate those findings when building your model. Before beginning the regression analysis, develop an idea of what the important variables are, along with their expected relationships, coefficient signs, and effect magnitudes.
>
> Building on the results of others makes it easier both to collect the correct data and to specify the best regression model without the need for data mining. The difference is the process by which you fit and evaluate the models. When you're guided by theory, you reduce the number of models you fit and you assess properties beyond just statistical significance.[29]

29 The Mintab Blog, October 19, 2016, "Problems Using Data Mining to Build Regression Models, Part Two," http://blog.minitab.com/blog/adventures-in-statistics-2/problems-using-data-mining-to-build-regression-models-part-two

Q. How serious are these problems?

A. The problems are very significant, but it is not easy to quantify the impact. To provide an order of magnitude indication of the seriousness of the problems, I will focus on a single example – main extensions. The Company's marginal cost estimate for main extensions was developed as follows:

> I prepared a regression analysis to estimate the statistical relationship between the cost of main extensions and design day demand, based on the historical data from 1989 to 2016. The regression results are summarized in Attachment MFB-1, page 4.[30]

Ms. Bartos summarized the result of her statistical analysis in Table 3, included in her direct testimony.[31]

Table 3: Marginal Cost of Distribution Capacity-related Plant Additions

Marginal Plant Additions Component	$ per Dth	Source (Attachment)
Production in lieu of Reinforcement	$56.05	MFB-1 page 1
Reinforcement	$63.33	MFB-1 page 3
Extension	$505.18	MFB-1 page 4
Total	$624.56	

Turning to Attachment MFB-1, page 4, we find the estimated marginal cost of main extensions ($505.18) is extremely dependent on her assumption that the equation for the four year period 2012-2016 is more appropriate to use in the long-run planning horizon. This documentation clearly shows that if one simply assumes the results for 2012-2016 are attributable to unknown unique factors occurring in those particular years,

30 Direct Testimony of Melissa F. Bartos, Page 10.
31 Ibid, Page 11.

and the estimated of costs prior to 2012 are also applicable to years after 2016, the marginal cost estimate changes from $505.18 to $1,672.55.[32]

For the period prior to 2012:

∂ Distribution Plant Additions for Main Extensions / ∂ Design Day Demand = $1,672.54 per Dth

For the period 2012 and beyond:

∂ Distribution Plant Additions for Main Extensions / ∂ Design Day Demand = $505.18 per Dth

No evidentiary support was offered for this assumption, which is not well-grounded in economic theory or practice. Arguably, it is more reasonable to assume the dummy variable captures phenomena that are unique to 2012-2016, in which case it would have no relevance to any other years. Under that assumption, the equation for the 23 year period prior to 2012 would be used for the long-run cost estimate. This has the advantage of focusing on more years of data, and it would better acknowledge that we have no information explaining why those four years had different costs than the other years. Absent convincing evidence that the unique factors applicable to those years will be present to the same degree in future years, there is absolutely no basis for using this dummy variable to estimate marginal costs for a long-run planning horizon.

One more point worth noting: while the most recent change in corporate ownership took place in 2012, I find it hard to believe the new owners suddenly discovered or pointed out a way to slash the cost of main extensions. I find it rather far-fetched to think the new owners found a way to slash reduce cost of main extensions from $1,672.55 per Dth to just $505.18 per Dth on a permanent basis. A far more plausible explanation is that there were unique circumstances applicable to the mains that

32 Ibid, Attachment MFB-1, page 4.

were installed during those particular years that made it feasible to install them at relatively little cost. The $1,672.55 per Dth estimate appears to be more plausible for use on a going-forward basis.

V. RECOMMENDATIONS

Q. What are your recommendations concerning the Company's rate design?

A. Reasonable steps can and should be taken in this proceeding to strengthen the incentive for customers to increase the insulation in their home or business and to replace existing, inefficient water heaters and furnaces with more energy efficient ones.

Because of the problems I just explained, the Company's marginal cost estimates should not be relied upon as filed. Instead, the monthly customer charges should be increased, and the tail block rates should be increased more than the initial block rates. By decreasing the fixed part of the bill and increasing the per-therm rates, especially in the tail block, the Commission can reduce the burden on small customers, make the tariff structure more equitable, enable customers to gain greater control over their monthly utility bill, and advance the broad public interest by encouraging energy efficiency.

Q. Have you developed some rate calculations to illustrate your recommendations?

A. Yes. For ease of comparison, I used the same general methodology as the Company. To overcome the Company’s grossly excessive estimate of the level of marginal costs, I started with the assumption that customer-related marginal costs were 20% of the level estimated by the Company. This is based, in part, on my assumption that the Company's engineering cost estimates for services, regulators and meters would be applicable to no more than 10 to 15% of all locations in a long-run planning horizon. The costs in other locations are almost entirely fixed or sunk. This estimate also considers the marginal cost of reading the meter and mailing and printing a bill to each customer.

I also assumed the dummy variable for 2012-2016 main extensions is unique to those four years, and therefore the long run marginal cost of main extensions is $1,672.55 per Dth, rather than $505.18. By this assumption I am not implying that other parts of the study were accurately developed. Rather, my intent is simply to provide an order-of-magnitude indication of the potential impact of increasing the usage-related marginal cost estimates to a more realistic level.

Similarly, I used the Company's proposed revenue requirement to prepare these illustrative rates. To be clear, this does not imply any sort of endorsement of the proposed revenue requirement, or specific details of the rate development methodology that I have not discussed. To the contrary, I am anticipating that the revenue requirement determined by the Commission will be lower than the one assumed in these calculation; this will alleviate the larger bill impacts shown in my exhibit.

Q. Can you briefly explain how you developed these illustrative rates?

A. Schedule 1 of my exhibit highlights some key numbers from the revised marginal cost calculations which I used to develop these illustrative rates. Taking these marginal cost estimates into account, but moderating the adjustments to maintain a greater degree of rate continuity, I adjusted the customer charges as shown in the following table.

Customer Class	Current Rate	Marginal Cost	Proposed Rate	Illustrative Rate
R-1 Residential Non-Heat	$15.27	$11.37	$21.50	$11.50
R-3 Residential Heat	$22.10	$11.11	$25.50	$12.75
G-41 C & I Low Load Factor Low Annual	$48.36	$12.44	$55.61	$35.00
G-42 C & I Low Load Factor Medium Annual	$145.08	$23.44	$159.59	$100.00
G-43 C & I Low Load Factor High Annual	$622.61	$39.66	$684.87	$400.00
G-51 C & I High Load Factor Low Annual	$48.36	$12.52	$55.61	$35.00
G-52 C & I High Load Factor Medium Annual	$145.08	$21.67	$159.59	$100.00
G-53 C & I High Load Factor High Annual	$640.74	$68.43	$704.81	$400.00
G-54 C & I High Load Factor High Annual	$640.74	$140.80	$704.81	$400.00

As shown in Schedule 2 of my exhibit, I also eliminated or flattened the existing declining block rate structure. The illustrative rates are linked to the requested revenue requirement for comparison purposes. However, in recommending this flattening of the block rate structure, I am assuming the final revenue requirement will actually be lower, and therefore the rate increase borne by large customers will not be as severe as that shown in my exhibit. To the extent large bill impacts persist after adjusting the rates to match the final revenue requirement, it would be appropriate to phase-in the rate changes, rather than implementing everything in a single year.

Q. Have you looked at how these illustrative rates would impact the newly acquired Keene division?

A. Yes. Customers in the Keene division are currently paying rates that are closer to my illustrative rate design than to the Company's proposed rate design. This is particularly evident with respect to the fixed customer charges, as shown in the following table.

Customer Class	Current Rate	Marginal Cost	Proposed Rate	Illustrative Rate
R-1 Residential Non-Heat	$9.00	$11.37	$21.50	$11.50
R-3 Residential Heat	$9.00	$11.11	$25.50	$12.75
G-41 C & I Low Load Factor Low Annual	$18.00	$12.44	$55.61	$35.00
G-42 C & I Low Load Factor Medium Annual	$18.00	$23.44	$159.59	$100.00
G-51 C & I High Load Factor Low Annual	$18.00	$12.52	$55.61	$35.00
G-52 C & I High Load Factor Medium Annual	$18.00	$21.67	$159.59	$100.00

Q. What are your recommendations concerning the proposed decoupling mechanism?

A. I recommend replacing the existing LRAM with a total revenue decoupling mechanism. If it is feasible to do so, I also recommend using a "real-time" mechanism, which will provide customers with a direct, tangible benefit by smoothing out unexpected weather-related bill fluctuations. While this approach has the disadvantage of adding some administrative costs and complexities, it has the offsetting advantage of improving the timing of cash flows for both customers and stockholders, as discussed earlier in my testimony.

Q. Does this conclude your direct testimony, which was prefiled on November 30, 2017?

A. Yes.

THE STATE OF NEW HAMPSHIRE
BEFORE THE
NEW HAMPSHIRE PUBLIC UTILITIES COMMISSION

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities
Less November 2018 – October 2019 LDAC Costs

Docket No. DG 18-137

Amended Technical Statement of David B. Simek and Catherine A. McNamara

October xx, 2018

A. Purpose of Technical Statement.

The purpose of this technical statement is to make the Commission aware that in the review of the 2018/2019 filing we noticed that the residential energy efficiency over collection for the last year was very similar to the previous year's residential energy efficiency budget. Upon researching this further it was discovered that the low income portion of the energy efficiency budget was included in the residential program budget and was also included as an allocation between both residential and commercial & industrial LDAC rates. Although we have followed the same process since the winter of 2014/2015, residential customers were only impacted during the winter of 2014/2015 due to the running balance of the over/under collection. Post winter 2014/2015 the additional low income costs included in the residential EE rate were substantially offset by the prior year over-collection. We want to make the commission aware that the Company plans to reduce the residential LDAC rate that is effective November 1, 2018 by $0.0163 per therm from the previously filed proposed rate of $0.0836 per therm. The adjusted residential LDAC rate is $0.0673per therm.

B. Reason for a Reduction in Local Distribution Adjustment Clause (LDAC) Costs of $1,310,342.

The Company had originally filed the residential LDAC rate at $0.0836 per therm and the commercial & industrial LDAC rate at $0.0772 per therm both effective November 1, 2018 – October 31, 2019. Since the original filing, the Company identified that the low income portion of the energy efficiency program budget was over stated by $1,310,342 (see Attachment 1 for additional details) within the residential calculation. The adjusted residential LDAC rate is $0.0673 per therm.

C. Customer Impact.

This impacts residential customers only. The projected total bill seasonal increase for a typical residential non-fixed price heating customer from the 2018/2019 winter season is projected to be $56.81 with the adjusted LDAC rate. The originally filed projected seasonal increase was $10.36 higher at $67.17. A bill comparison is included as Attachment 2.

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities
Docket No. DG 18-137
Winter 2018/2019 Cost of Gas & Summer 2019 Cost of Gas
