Proper Operation of the RDM

Allowed Revenue Targets (ART)

=

Actual Revenues Collected (ARC)

- Where ART and ARC are set on the same basis, then the differential represents the correct RDM adjustment.
- If ART > ARC, then revenue differential is collected by the Company
- If ART < ARC, then revenue differential is refunded to customers

Configuration 1: Allowed Revenue Targets Set by Customer Group

Allowed Revenue Targets

Targets are set for Residential Customers using R-3 Rate Schedule (non-discounted)

=

Actual Revenue Collected

Tariff Uses R-3 Rate Class Revenues for Calculation (non-discounted)

- Allowed Revenue Targets are set by **Customer Group** (Residential and C&I)
- Residential customers are served in the R-3 and R-4 rate classes.
- Residential rates are represented on R-3 Rate Schedule.
- R-4 rates are discounted from R-3 residential rates.
- Because R-3 and R-4 rate classes are not distinguished, R-3 rates are used for Allowed Revenue Targets

Configuration 2: Allowed Revenue Targets Set by Customer Class

Allowed Revenue Targets

Targets set using Rate Schedules approved for each customer class.

R-3 Non-Discounted

R-4 Discounted

≠

Actual Revenue Collected

Tariff Uses R-3 Rate Class Revenues for Calculation (non-discounted)

- **Allowed Revenue Targets are set by Customer Class**
- **R-3 Rate Schedule is not discounted**
- **R-4 Rate Schedule is discounted.**
- **Actual Revenue Collected is calculated using R-3 rates, non-discounted.**
- **Mismatch will indicate a customer refund is due because Actual Revenue Collected will be greater than Allowed Revenue Targets**

I. INTRODUCTION

Q. Please state your name, address and position.

A. My name is Gregg H. Therrien. I am an Assistant Vice President with Concentric Energy Advisors, 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts 01752. My professional qualifications and experience have been provided in Attachment GHT/DECPL-11 to this testimony.

Q. Have you testified previously before the New Hampshire Public Utilities Commission ("PUC" or the "Commission)?

A. No, I have not.

Q. What is your responsibility in this proceeding?

A. In this proceeding, I am responsible for: (1) designing the Revenue Decoupling Mechanism (Decoupling Testimony of Gregg H. Therrien) and (2) together with Company Witness David Simek, developing the rate design (Joint Rate Design Testimony of David B. Simek and Gregg H. Therrien) for Liberty Utilities (EnergyNorth Natural Gas Corp.) d/b/a Liberty Utilities ("EnergyNorth", or "the Company").

II. SCOPE OF DECOUPLING TESTIMONY

Q. Please summarize the scope of your testimony concerning the Company's proposed Revenue Decoupling Mechanism ("RDM").

A. In this testimony, I will:

1) provide general background on RDMs, why they are necessary as part of a comprehensive energy efficiency program, and why traditional ratemaking is insufficient support for utility energy efficiency advocacy;

2) provide the results of our research on RDMs that have been implemented by gas Local Distribution Companies ("LDCs") throughout the U.S.;

3) describe the impact that EnergyNorth's Energy Efficiency ("EE") programs, customer self-funded conservation, and other external factors has had on the Company's throughput volumes and the effect on the Company's ability to earn a reasonable rate of return between rate cases;

4) describe my understanding of the recent energy efficiency settlement agreement in Docket No. DE 15-137, and how it recognizes the need to harmonize increased energy efficiency spending with appropriate changes in ratemaking; and

5) describe and explain the Company's proposed RDM, which will allow EnergyNorth to continue to be a forceful and active advocate for energy conservation efforts, without harming its ability to earn a reasonable return.

Q. Please summarize your conclusions and recommendations.

A. My conclusions and recommendations are as follows:

In recent years, there has been a heightened focus on energy conservation efforts and policies that encourage conservation.[1] This interest in energy conservation has been attributed to environmental considerations and to a dramatic spike in energy prices that occurred in 2005 – 2006, and again in 2009. Although gas prices have dropped significantly since 2009, there has been price spikes in New Hampshire over the past three winters and the attention to gas conservation has continued.[2]

Since 2005, EnergyNorth has experienced a continuous decline in usage, as measured by Normalized Use per Customer ("NUPC"), in the Residential and Small Commercial and Industrial ("C&I") classes.[3] Continuing declines in the Residential Heating and Small C&I classes have been offset by increases in usage from the Large C&I customer classes. Despite EnergyNorth's overall customer usage remaining relatively flat over this time period, the Company has experienced significant year-to-year volatility in average use per customer.[4]

---

[1] Heightened focus in New Hampshire on energy conservation efforts and enabling policies to encourage conservation are demonstrated in the following reports: (a) New Hampshire Independent Study of Energy Policy Issues (September 2011), prepared for the New Hampshire Public Utilities Commission by Vermont Energy Investment Corporation; (b) Increasing Energy Efficiency in New Hampshire: Realizing Our Potential, (November 2013), prepared for the New Hampshire Office of Energy and Planning by the Vermont Energy Investment Corporation; (c) New Hampshire 10-Year State Energy Strategy (September 2014), published by New Hampshire Office of Energy & Planning; and most recently (d) the Energy Efficiency Resource Standard Settlement Agreement (the "Settlement Agreement"), dated April 27, 2016, as approved in the New Hampshire Public Utilities Commission ("NHPUC") order in Docket No. DG 14-180 (dated August 2, 2016).

[2] On an annual basis, the average Cost of Gas charged by EnergyNorth to firm sales customers has decreased from $1.18 per therm to $0.72 per therm between December 2009 and August 2013, a decrease of 40 percent. Since 2013 prices have trended even lower, despite increasing winter volatility. As of December 2016, EnergyNorth firm sales average annual customer average Cost of Gas is $0.50 per therm.

[3] These classes account for approximately 66% of the Company's total firm throughput, based on 2016 normalized consumption.

[4] The volatility in EnergyNorth's 12-month rolling Total firm NUPC is demonstrated by the following trend in standard deviation (in therms):
2006-2009 = 31.66

EnergyNorth is not alone - most US gas distribution companies have been experiencing similar patterns of declining use[5], and have responded by implementing RDMs in 29 different states.

EnergyNorth proposes to implement rate design measures[6] that will "decouple" the traditional connections between the volume of gas that EnergyNorth delivers to its customers and its revenues and earnings.

The decoupling rate design measures that the Company is proposing:

– Will allow the Company to remain an effective champion of energy efficiency initiatives without the financial disincentives that currently exist;

– Will comport with the State of New Hampshire's vision in its 2014 State Energy Strategy, which recognized that "[r]ealigning utility incentives to reward utilities for investing in efficiency is a necessary part of any effort to increase efficiency in New Hampshire"; [7]

2010-2013 = 14.95
2014-2016 = 21.48
These standard deviations indicate that volatility was highest during the 2006 – 2009 era of high gas prices, lowest post-shale supply influx, and increasing over the past three years as a result of the polar vortex and tight New England supplies. This is discussed in detail in Section IV. D. 3. of this testimony.

5 This trend was examined extensively by such organizations as the American Gas Association, which reported a trend in declining use per residential natural gas customer of 1 percent annually from 1980 to 2000, and accelerated thereafter. *See* An Economic Analysis of Consumer Response to Natural Gas Prices, by Frederick Joutz and Robert P. Trost, prepared for the AGA, March 2007.

6 Specifically, the Company's proposed RDM and the Company's rate design proposals, which increase the proportion of the Company's total distribution revenues that are derived from customer charge revenues.

7 New Hampshire 10-Year State Energy Strategy, published by the New Hampshire Office of Energy & Planning September 2014. Executive Summary, page ii.

– Will realize the vision crafted by the Settling Parties in the Energy Efficiency Resource Standards ("EERS") docket[8] by producing equitable ratemaking beyond the interim Lost Revenue Adjustment Mechanism ("LRAM") that fully supports the goals, and enables full acceptance of the energy savings initiatives envisioned in the Settlement Agreement; and

– Will fix a flaw in the traditional ratemaking methodology that does not allow utilities a reasonable opportunity to earn a reasonable return when customer usage is declining.

III. OVERVIEW OF DECOUPLING

A. Introduction

Q. Please describe a revenue decoupling mechanism.

A. In general terms, an RDM breaks the link between the quantities that a utility delivers to its customers and that utility's revenues. By eliminating the link between customer consumption and Company earnings, decoupling removes the disincentive for utilities to promote conservation and energy efficiency programs. Companies that have implemented decoupling are no longer caught between promoting conservation (that reduce sales) and growing revenues (by increasing sales). Breaking the link between

[8] The "Settling Parties" as defined in the Settlement Agreement approved in Docket No. DG 15-137, dated August 2, 2016, include: Commission Staff, Liberty Utilities (Granite State Electric) Corp.; Unitil Energy Systems, Inc.; Public Service Company of New Hampshire dba / Eversource Energy; the New Hampshire Electric Cooperative, Inc. Liberty Utilities (EnergyNorth Natural Gas) Corp.; Northern Utilities, Inc.; the Office of the Consumer Advocate; the Department of Environmental Services; the Office of Energy and Planning (OEP); New Hampshire Community Action Association; The Way home; the Conservation Law foundation; The Jordan Institute; Acadia Center; the New Hampshire Sustainable Energy Association; the New England Clean Energy Council; the NH Community Development finance Authority; and TRC Energy Services.

utility sales and revenues is the best way to promote conservation activities fully and freely. Other mechanisms that only compensate the utility for the costs of conservation programs, such as a Lost Revenue Adjustment Mechanism ("LRAM"), fall short.

Q. Why is a LRAM insufficient in promoting conservation programs?

A. Mechanisms such as the recently approved LRAM in New Hampshire only compensate for energy efficiency measures installed as a result of utility programs, and alone do not promote conservation behaviors. The American Council for an Energy Efficient Economy ("ACEEE"), a nonprofit, 501(c)(3) organization, whose stated mission is to "act(s) as a catalyst to advance energy efficiency policies, programs, technologies, investments, and behaviors"[9] states:

> "An LRAM alone will not fully incentivize efficiency nor remove the throughput incentive. While the lost revenue adjustment can help make a utility whole by compensating it for reduced energy sales associated with efficiency programs, it will do little to encourage investment in energy efficiency unless combined with other policy levers. In fact, our analyses indicate that having an LRAM policy itself is not currently associated with higher levels of energy efficiency effort (program spending) or achievement (energy savings) than are found in states without an LRAM policy. Nor does LRAM reduce a utility's motivation to increase sales (although some states do have safety nets in place). To fully remove the throughput incentive, decoupling should be considered."[10]

[9] *See* http://aceee.org/about-us.
[10] "Valuing Efficiency: A Review of Lost Revenue Adjustment Mechanisms", June 2015, ACEEE Report U1503.

Q. How does a decoupling mechanism work?

A. RDMs generally adjust rates on a periodic basis (e.g. annually or seasonally) to "make up" the difference between a target revenue per customer, which would have been set in the most recent rate case, and actual revenue per customer. RDMs are symmetrical; the calculation can result in either a charge or credit depending on the actual revenue per customer. A rate adjustment credit will be included in customers' bills in a future period when actual revenue per customer is greater than the target revenue per customer in a recently-completed period. Conversely, a rate adjustment charge will be included in customers' bills when actual revenue per customer is less than the target revenue per customer.

Q. Why do utilities need decoupling?

A. Utilities are becoming increasingly responsible for managing and actively promoting customer conservation through the development and implementation of robust energy efficiency programs. All else being equal, these programs will result in lower NUPC. In addition, utility customers have become increasingly aware of energy use and have invested in energy efficiency measures with their own dollars. Further, appliance efficiency improvements and stricter building code requirements result in higher overall energy efficiencies when customer equipment and existing building stock are replaced. Lastly, other external factors such as economic factors, demographics, and weather trends can contribute to changes in consumption. While reduced energy usage is good for individual consumers and society as a whole, it does have a negative impact on a utility's ability to earn its allowed rate of return under traditional ratemaking.

Q. Please elaborate on the utility earnings dilemma.

A. The Company's financial performance, all else being equal, is negatively affected by declining NUPC. Decoupling is an appropriate and increasingly common component of a well-designed and implemented demand-side management ("DSM") program. Decoupling is appropriate whenever a utility's rates are designed such that a decrease in sales volumes adversely affects the ability of the utility to earn a reasonable return on investment. According to the Regulatory Assistance Project ("RAP"):

> "Utilities are interested in revenue stability, so that they have net income that can predictably provide a fair rate of return to investors, regardless of weather conditions, business cycles, or the energy conservation efforts of consumers."[11]

Q. Why should policy-makers and customers support decoupling?

A. As discussed above, decoupling unlocks the utility's ability to enthusiastically support energy efficiency policy goals. Over time, decoupling mechanisms provide rate stability that results from the mechanism's symmetrical design.[12] Further, decoupling can protect customers from a utility recovering excess revenues that may result from colder than normal weather or from favorable economic conditions.

[11] "Revenue Regulation and Decoupling: A Guide to Theory and Application", November 2016, page 26.
[12] RAP also recognizes this, stating, "Customers also have an interest in bill stability, because in extremely cold winters or hot summers, their bills can quickly become unmanageable." Ibid, page 26.

B. <u>Support for Decoupling: Energy Efficiency Programs</u>

Q. Why is decoupling important for regulated utilities that offer energy efficiency programs?

A. The ACEEE best summarized the importance of decoupling for regulated utilities in its June 2014 Policy Brief titled "Utility Initiatives: Alternative Business Models and Incentive Mechanisms" where it stated that:

> "Under traditional rate-of-return regulation, utilities have an economic disincentive to provide programs to help their customers be more energy efficient. Because a utility's earnings are based on the total amount of capital invested and the amount of electricity sold, increased energy sales generally increase utility profits. Experience suggests that enacting regulatory reforms such as decoupling…help overcome those inherent disincentives regarding energy efficiency.'

Further, in its June 2015 Report titled "Valuing Efficiency: A Review of Lost Revenue Adjustment Mechanisms" [13] they state:

> "Creating a regulatory environment that incentivizes utilities to invest in efficiency is critical for programs to be successful, impactful, and long lasting. Doing so requires a mix of policy tools. In addition to energy efficiency targets, utilities need a business model that aligns their financial interests with energy efficiency, including program cost recovery, performance incentives that encourage utilities to achieve high levels of savings, and some policy mechanism to neutralize the throughput incentive. It is our opinion that decoupling is the best third leg of this stool. However, it is also clear that decoupling is not always an option for states for a variety of reasons. In such scenarios, LRAM can be a temporary solution, offering a mechanism to address the

[13] Report U1503.

> concern over lost revenues and, possibly, help make parties more comfortable with the idea of full decoupling in the future.

These ACEEE policy excerpts clearly show the need for, and evolution of, utility ratemaking that supports energy efficiency goals.

C. **Support for Decoupling: Ratemaking**

Q. Please describe and explain the structure of decoupling mechanisms.

A. RDMs calculate a surplus or shortfall between actual and allowed revenues. There are two common RDM structures: (a) revenue per customer ("RPC") RDMs and (b) total revenue RDMs. The primary difference between these two structures is the revenue "true up" calculation and the treatment of new customers. The RPC RDM revenue true up determines the revenue shortfall or surplus by (a) calculating the difference between the target RPC and actual current period RPC by customer group or rate class and (b) multiplying the difference per customer ("RDM per Customer Adjustment") by the current period number of customers. The effect of a RPC RDM is that the sum of actual rate class/rate group revenues per customer plus the RPC RDM per customer adjustment will always equal the target RPC, and total actual revenues will change in direct proportion to the change in the number of customers between the test year and current period. New customer revenues are therefore preserved to fund new customer investment made by the utility.

The total revenue true up determines the revenue shortfall or surplus by calculating the difference between the target revenues and actual current period revenues by customer group or rate class. The effect of a Total Revenue RDM is that the sum of actual rate class/rate group revenues plus the Total Revenue RDM true up for each rate class/rate group will always equal the revenue target and total actual revenues will not change until the LDC's next rate case. There is no inherent recognition of new customer additions in this approach.

Q. Of these two types of RDM, which is most common for gas LDCs?

A. The application of a RPC RDM best suits utilities that add new customers to their system, and is the prevalent methodology among LDCs that have decoupling. Unlike electric distribution companies, gas LDCs typically do not have 100% market share in their service territories and are motivated to convert customers from alternate fuels, such as oil or propane. Adding new customers to the system involves incremental capital investment, which requires that the revenues from these new customers be necessarily retained by the Company to fund this new investment. Therefore, RPC RDMs are superior to Total Revenue RDMs for gas utilities, as new customer revenues are retained (at the system average RPC) to help cover the cost of the corresponding new investment. If a Total Revenue RDM is employed instead, then the LDCs incentive to add new customers is significantly diminished, as total revenues will remain unchanged while rate base grows.

Q. Does decoupling guarantee utility earnings?

A. No, it does not. The proposed RDM trues up revenues to the amount allowed on a per-customer basis. The utility remains at risk for managing its expenses commensurate with the level set for the test year base rates. This means the utility must manage its capital expenditure programs, its operations (e.g., salaries and wages, benefits, overtime, maintenance programs, uncollectibles, outside services, etc.), and pay taxes (including property taxes that are adjusted annually by most municipalities).

D. LDC Experience with Decoupling

1. Decoupling in the U.S.

Q. Please summarize your research on U.S. gas LDCs that have implemented RDMs.

A. I have identified 67 gas LDCs in 29 states that have implemented a RPC RDM or a Total Revenues RDM. This is summarized as follows:

Table 1: Revenue Decoupling Mechanisms in Effect in the U.S.

State	RPC RDM	Total Revenue RDM	Grand Total
AR	1	2	3
AZ	1		1
CA		4	4
CO	1		1
CT		1	1
GA		1	1

VA	3		3
VT		1	1
WA	2	1	3
WI	1		1
WY	2		2
Grand Total	**43**	**24**	**67**

Q. Do any LDCs with RDMs also have other ratemaking adjustment mechanisms?

A. Yes, many LDCs with RDMs have also sought recovery of certain expenses and investments (plant / rate base additions) between general rate cases. Cost-related modifications to traditional ratemaking include several approaches to adjusting rates between rate cases to account for changes in (a) overall costs or (b) specific categories of costs. Rate plans that provide for allowed annual increases in a utility's allowed revenues[14] for a set number of years after the rate case is decided is an example of cost based departures that account for changes in overall costs. Step Adjustment increases are common practice in New Hampshire; step adjustments are a form of a rate plan.

Cost tracker mechanisms are another category of modifications to traditional gas LDC ratemaking. Cost trackers recover actual costs incurred on a timely basis. For example, capital cost trackers allow for periodic rate adjustments to recover the incremental revenue requirements associated with replacement and/or safety and reliability projects, while expense cost trackers recover certain specific expenses on a timely basis. New Hampshire has implemented some of these cost tracking measures, including the Cost of Gas Adjustment ("CGA"), indirect gas costs, EE/DSM program costs, environmental remediation costs, and the Cast Iron and Bare Steel ("CIBS") mechanism.

Common cost tracking mechanisms include:

a. Gas costs[15];
b. Pension and Post-Retirement Benefits Other than Pensions ("PBOP") expense;
c. Bad debt expense;
d. Environmental response costs;
e. EE program expense;
f. Property and/or franchise taxes;

[14] For example, the annual revenue increases may be (a) determined for each year of the rate plan in a rate case proceeding, or (b) calculated annually during the rate plan by a formula that accounts for changes in a price index.

[15] Recovery of gas costs through a rate adjustment mechanism is now so common that it is generally considered to be part of "traditional ratemaking."

g. Infrastructure replacement costs (e.g., CIBS);
h. System reinforcement costs, and
i. Integrity management costs.

The following table summarizes the prevalence of pairing an RDM with a cost tracker:

Table 2: LDCs With Decoupling and Cost Tracker

RDM Type	With a Tracker	No Tracker	Total
RPC	25	18	43
Total Revenue	20	4	24
Total	45	22	67

A complete listing of the 67 LDCs that currently have decoupling is included in Attachment GHT/DECPL-1.

Q. Have you identified any other common features in the structure of RDMs that you identified in your research?

A. Yes, I have. In Section III.A of this testimony, I explain that an RDM revenue true up calculation determines the difference between (a) Target RPC and Actual RPC or (b) Target Revenues and Actual Revenues. Both of these approaches to calculating the revenue true up account for differences in revenues that are the result of weather that is colder or warmer than normal in addition to accounting for differences due to conservation and related factors. For example, if weather in the current time period was colder than normal, the RDM would return to customers the revenue surplus associated with the colder weather in the following winter period, and if weather was warmer than normal, the RDM true up calculation would include a charge to recover the revenue deficiency associated with the warmer weather.

Alternatively, an RDM revenue true up calculation could determine the difference between (a) Target RPC and weather normalized RPC or (b) Target Revenues and weather normalized revenues. The true up calculation could be performed by determining the difference between target revenues and weather normalized actual revenues. Using this approach, the revenue true up calculation would not be affected by colder or warmer than normal weather.

Q. What does your research on RDMs indicate about the prevalence of RDMs that are based on actual revenues and RDMs that are based on weather normalized revenues?

A. I determined that 57 of the 67 LDCs have implemented RDMs that are based on actual revenues. Of the remaining 10 LDCs that have implemented RDMs based on normalized revenues, 7 have separate weather normalization adjustment mechanisms ("WNA").

Q. In your opinion, why are most RDMs – approximately 85 percent – based on actual revenues?

A. It is my belief that RDMs that are based on actual revenues, rather than weather normalized revenues, are more common because this RDM approach is easier to administer and oversee as the review process is straight-forward. RDMs that use actual revenues capture all sales-related variances, thus avoiding the need for a WNA (and explanation of its mechanics to customers) or a complicated normalization calculation and subsequent Commission review. Either (a) an RDM that is based on actual revenues or (b) an RDM that is based on weather normalized revenues together with a weather normalization adjustment mechanism have symmetrical, balanced effects that stabilize customers' bills and LDCs' revenues.

Q. What conclusions do you draw from the number of LDCs that have adopted revenue-related and cost-related modifications to traditional ratemaking?

A. Based on the widespread adoption of decoupling mechanisms (67 LDCs in 29 states; see Section III.D.1), of which 45 of these LDCs (two thirds) also have some form of cost tracker, I conclude that there is general understanding that (a) decoupling mechanisms are now viewed as an appropriate ratemaking approach that remove LDC disincentives to effectively promote EE programs and offset the overall effect of conservation on LDC revenues and earnings (b) cost tracking measures are now viewed as an appropriate approach to partially offsetting the effect of LDCs' capital spending plans on earnings between rate cases, and (c) the combination of a decoupling mechanism paired with an appropriate cost tracking measure may be necessary to provide a reasonable opportunity to earn a fair return.

2. Summary and Conclusion to Decoupling Overview

Q. Please summarize your findings about decoupling.

A. Over the past decade or longer, there has been considerable attention given to decoupling, which I believe is the result of a growing acceptance that decoupling is a balanced and administratively manageable ratemaking tool that will: (a) break the link between a utility's revenues and the amount of energy that the utility delivers or sells; and (b) address problems with traditional ratemaking that are caused by long term trends of declining customer energy usage.

I have found that, because LDCs in a number of states have adopted decoupling mechanisms over the last decade, there is now a rich source of data available concerning features of RDMs that have been implemented and issues related to the administration and implementation of RDMs, including, for example, RDM calculations and filing documentation.

IV. ENERGYNORTH'S EXPERIENCE

A. Introduction

Q. In Section III above, you provided a discussion of circumstances that would support the implementation of an RDM. Do those circumstances apply specifically to EnergyNorth?

A. Yes. As I will explain in the remainder of this section, EnergyNorth's circumstances demonstrate that an RDM is appropriate and justified for the Company. Specifically, I will:

- Describe EnergyNorth's current EE programs;
- Summarize the 2015 EERS Settlement Agreement;
- Describe and explain EnergyNorth's recent customer and revenue per customer trends; and
- Demonstrate that EnergyNorth's level of involvement in and support for EE

programs warrant the implementation of an RDM.

B. <u>EnergyNorth's Energy Efficiency programs</u>

Q. Please provide some background on EnergyNorth's EE programs.

A. EnergyNorth has been offering EE programs to its customers since 2003 that provide rebates and technical support for residential and commercial customers who seek to minimize their energy use.[16]. Table 3 below provides a summary of the actual and planned direct energy savings that result from EnergyNorth's EE programs.

[16] Referred to as the "Core programs" in the EERS Settlement Agreement.

1 **Table 3: EnergyNorth Energy Efficiency Program Savings (Annual Dth)**

Year	Actual / Estimate	Residential	C&I	Total Energy Savings
2006	Actual	25,529	47,269	72,797
2007		27,151	104,730	131,881
2008		35,360	48,278	83,638
2009		32,414	88,174	120,588
2010		43,524	34,703	78,227
2011		29,281	46,466	75,747
2012		39,702	108,565	148,267
2013		40,509	74,831	115,340
2014		34,401	82,545	116,946
2015		63,685	80,069	143,754
2016	Plan[17]	57,226	65,118	122,344
2017	Proposed Savings Targets	57,791	65,762	123,553
2018		61,594	70,088	131,682
2019		66,158	75,280	141,438
2020		69,958	79,606	149,564

2

3 Q. **Is the intent of the EE program incentive payment to compensate EnergyNorth for**
4 **foregone EE revenues?**

5 A. No, the incentive payment is intended to "incent the utilities to aggressively pursue
6 achievement of the performance goals of their energy efficiency programs" and "to
7 motivate the companies to achieve or exceed program goals".[18] It is not intended to
8 offset EnergyNorth's foregone EE revenues.

[17] Settlement Agreement, Attachment B.
[18] *Energy Efficiency Programs for Gas and Electric Utilities,* Order No. 24,203 at 13 (September 5, 2003).

C. The EERS Settlement Agreement

Q. Please describe the EERS Settlement Agreement.

A. The Company, along with the Settling Parties, entered into a Settlement Agreement on April 27, 2016, more than a year after the inception of the Commission's investigation of Staff's proposed Energy Efficiency Resource Standard.[19] The Settlement Agreement represents the Parties' implementation of the approved EERS in New Hampshire,[20] and specifically:

1) Extends the Core programs;
2) Requires implementation of a LRAM, commencing January 1, 2017 (capped at 110% of planned annual savings);
3) Contemplates the subsequent implementation of a decoupling mechanism to replace the LRAM;
4) Will implement the EERS commencing January 1, 2018;
5) Retains the Performance Incentive, with modifications;
6) Increases the low income share of the overall energy efficiency budget; and
7) Includes other legal provisions.

The Commission approved the Settlement Agreement in Order No. 25,932 (August 2, 2016).

[19] Docket No. IR 15-072, "Electric and Natural Gas Utilities - Energy Efficiency Investigation" dated March 13, 2015.
[20] Settlement Agreement, page 2.

Q. Please describe EnergyNorth's Implementation of the LRAM.

A. EnergyNorth implemented the LRAM effective January 1, 2017.[21] The Local Distribution Adjustment Charge ("LDAC") includes an embedded LRAM of $0.0016/therm and $0.0009 per therm for Residential and C&I customers, respectively. This LRAM will remain in effect (as part of the LDAC) until it is either recalculated for 2018 deliveries or replaced by the proposed decoupling mechanism described in Section V below.

Q. Does the Commission's Order approving the Settlement Agreement specifically require the Utilities, such as EnergyNorth, to implement decoupling?

A. Yes. The Commission approved the Settling Parties' proposed LRAM, and recognized that some parties prefer decoupling to an LRAM. Specifically, the Order states:

> "We note that our approval of the LRAM does not limit our subsequent consideration and approval at any time of a different lost revenue recovery mechanism, and that the Joint Utilities (except NHEC)) are *required* to seek approval of a decoupling or other lost-revenue recovery mechanism as an alternate to the LRAM in their first distribution rate cases after the first EERS triennium, if not before" (*emphasis added*).[22]

[21] Docket No. DG 16-814, "Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities -2016/2017 Cost of Gas", noticed on September 16, 2016. Approved by Commission Order No. 25,958 (October 26, 2016).
[22] Order No. 25,932 at 60.

Q. Is it the Company's position that proposing a decoupling mechanism in the instant proceeding comports with the Settlement Agreement and the Order?

A. Yes. The phrase "if not before" from the above caption clearly allows the Company to propose a decoupling mechanism prior to the end of the first EERS triennium, if desired.

D. <u>Impact of Customer Consumption Trends on EnergyNorth</u>

1. Introduction

Q. To set the stage for your discussion of the impacts of declining consumption on Energy North, please describe the analysis that you have prepared.

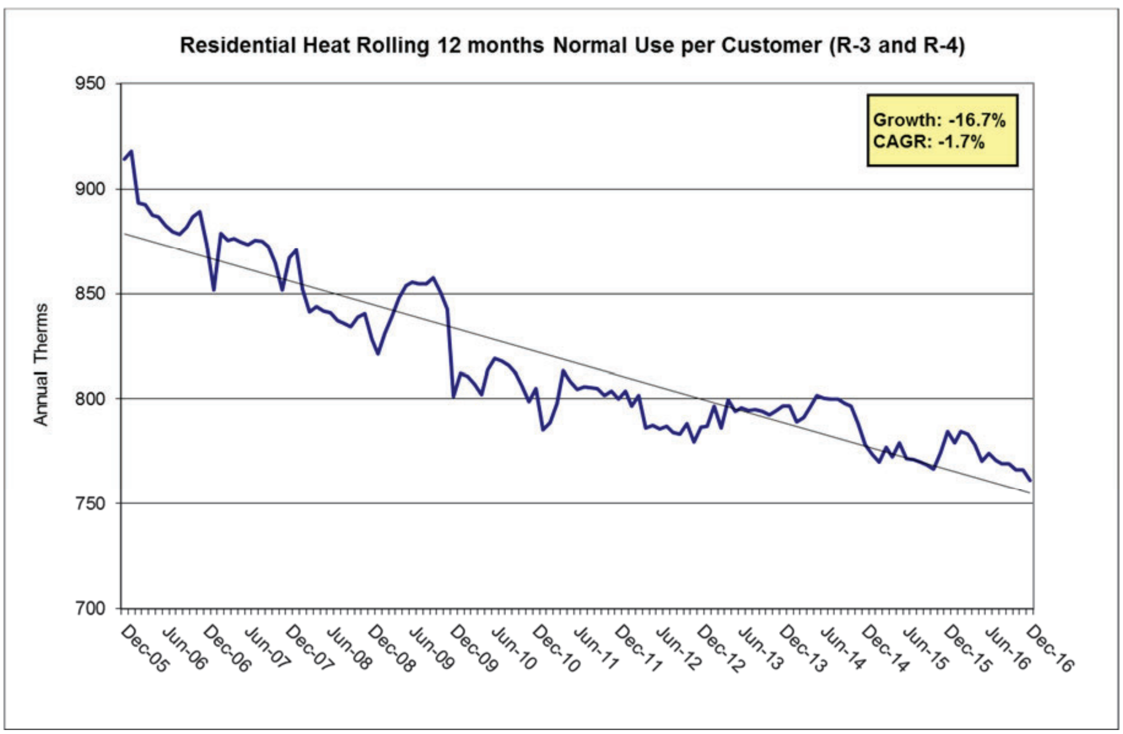
A. In this section, I discuss trends in EnergyNorth's NUPC and number of customers since 2005. I provide summary analyses that I prepared for the following customer groups: (a) Residential Non-Heating; (b) Residential Heating; (c) Low Load Factor C&I; (d) High Load Factor C&I; and (e) Total Company. I prepared separate analyses for the Residential and C&I Customer Groups because customers in these two groups have generally behaved very differently over the period of analysis, 2005 to 2016, particularly the High Load Factor C&I group. I also offer high level explanations for the changes in deliveries, customers and use per customer that EnergyNorth has experienced in the past several years.

2. Analysis of UPC and customer trends

Q. Please summarize the trends in EnergyNorth's weather NUPC that you have identified.

A. To identify trends in EnergyNorth's NUPC, I prepared Residential (Heating and Non-Heating), C&I (Low and High Load Factor) and Total Company NUPC graphs. These graphs are based on a 12-month rolling total NUPC, and are provided in Attachment GHT/DECPL-2. The first graph in Attachment GHT/DECPL-2 shows the NUPC for the Residential Heating Customer Class. A snapshot of this chart is as follows:

Chart 1: Residential Heating NUPC Snapshot



NUPC for the Residential Heating customer class declined 16.7% during the period of analysis, from 912 therms per customer in 2005 to 761 therms per customer in 2016, representing an average annual decline of 1.7%.[23] More recently, from 2013 to 2016 the Residential Heating class has declined at a similar rate of 1.5%.

The Residential Non-Heating NUPC in Attachment GHT/DECPL-2 shows a relatively level usage profile over time, with a 5.3% decline since 2005, or a -0.5% CAGR. Since 2013 NUPC for this class has decreased 12.4%, or 4.3%, primarily as a result of customer rate classification changes. At the conclusion of the last rate case in Docket No. DG 14-180 the Company discovered that 540 existing Rate R-1 customers should have been served under Rate R-3. Following that discovery, the Company initiated a program to convert these customers to Rate R-3.

The two C&I graphs in GHT/DECPL-2 show diverging trends depending on how customers in these classes use natural gas. Low Load Factor ("LLF") customers use gas predominantly for heating, while High Load Factor ("HLF") C&I customers tend to utilize natural gas for process loads, and are potentially subjected to multiple and unique usage drivers compared to LLFr C&I customers (and Residential Heating customers). As these two C&I graphs show, the LLF customer group had declining NUPC from 2005-2010, then rebounded back to 2005 levels by 2014. Their growth rate from 2005 to 2016 showed a slight decline at 0.2%, and a flat CAGR. Conversely, the HLF customer group exhibited rapid NUPC growth over the eleven-year historical period, growing 58.3%, or

[23] As calculated on the Compound Annual Growth Rate ("CAGR") formula.

4.3% annually. Since 2013 the LLF C&I group has remained flat (a 0.1% increase in NUPC) while the HLF C&I class' growth was comparatively lower (0.7% growth since 2013 compared to 4.3% CAGR since 2005).

The last graph in Attachment GHT/DECPL-2 shows that total company NUPC increased slightly by 2.3% percent, or 0.2% annually, which indicates that overall, the increasing HLF C&I NUPC offset much of the decreasing Residential and LLF C&I NUPC over the entire period. Of interest is the recent increase in volatility, including a declining overall NUPC trend since December 2013 of 2.0%. This is likely the result of recent winter period price spikes described further in Section IV.D.3 below.

Q. Please summarize the trends in EnergyNorth's number of customers that you have identified.

A. To identify trends in EnergyNorth's customer counts, I prepared graphs of the number of Residential, C&I and Total Company customers; these graphs are provided in Attachment GHT/DECPL-3. The first graph in Attachment GHT/DECPL-3 shows that the average number of Residential Non-Heating customers decreased by 2,285 (42.9%), or 5.0% annually. This is not surprising, as many low-use customers have converted their heating system to gas over the past decade, taking advantage of the favorable gas-to-oil price spread described in Section IV.D.3 and Table 6 below. The average Residential Heating customer class has increased by 9,914 customers (15.0%), or 1.3% annually. This increase is attributable to heating conversions and new customer attachments to the system (e.g., oil-to-gas conversions and new construction). This growth rate accelerated to 1.8% since 2013.

The next two graphs in Attachment GHT/DECPL-3 show that the number of LLF C&I average customers grew by 1,590 (18.6%), or 1.6% annually, while the HLF C&I class decreased by 86 customers on average, a 5.1% decrease (-0.5% annually).

The last graph in Attachment GHT/DECPL-3 demonstrates that the overall Company customer growth reflects an annual 1.0% growth in average firm customer count. Since the dramatic increase in the oil-to-gas price spread (using a 2013 base), the Residential Heating class has increased to a 1.8% annual growth rate.

3. Explanation for UPC and Customer trends

Q. What are the major contributors to declining NUPC?

A. Categorically, declining NUPC can be attributable to:

1) Utility-sponsored Energy Efficiency (EE)/DSM programs;
2) Customer self-funded conservation measures;
3) Improvements in appliance efficiencies and building code requirements;
4) Consumer responsiveness to increases in natural gas prices and/other economic and demographic factors; and
5) A warmer normal weather trend.

Q. Please explain each of these factors.

A. Utility-sponsored EE/DSM programs represent the Core programs, plus any additional programs contemplated in the EERS. These measures result in direct energy efficiency spending for EnergyNorth customers. Each program will have an avoided unit of energy and known levels of participation.

Customer self-funded conservation measures are the result of customers acting independently of utility-sponsored programs (e.g., when a customer installs insulation purchased at a home improvement store). Unlike company-funded conservation programs that track actual installed energy efficiency measures, the utility does not track customer-funded installations.

Appliance efficiencies and building code changes affect customer usage whenever an existing (less efficient) appliance is replaced by a new (more efficient) one, and new housing stock replaces old stock. There are known changes to building requirements and appliance efficiency standards that have been enacted over the past few decades. These include increased appliance efficiency requirements for furnaces and hot water heaters. Additionally, New Hampshire has passed a series of more stringent building codes consistent with national standards.

Price elasticity and economic impact on usage can be estimated using econometric modeling, but will have less of a degree of accuracy compared to known and measurable

EE/DSM installations. Although prices are low now[24], in the not so distant past, prices were high and customers responded by installing low cost permanent measures (weather stripping, water heater jackets, set back thermostats, etc.) and high cost permanent measures (insulated doors, added wall and attic insulation, efficient windows, etc.) as well as temporary measures (closing off rooms, turning down thermostats and wearing sweaters). The permanent measures reduce NUPC forever, long after the natural gas prices return to moderate levels. Further, changes in demographics (e.g., number of people per household, number of residents in a service territory or state) can also influence NUPC. Lastly, a significant downward trend in the 30-year normal weather standard also contributes to declining NUPC.

Q. What are the current and forecasted trends for each of these factors?

A. New Hampshire is clearly committed to EE, evidenced by the Settling Parties' commitment to implementing a comprehensive EERS in 2018. Customer-funded conservation measures are likely to continue, as low-cost weatherization options proliferate the home improvement marketplace. Even if the current appliance efficiencies and building codes do not change in the coming years, customer equipment and housing stock will be replaced resulting in net energy savings (e.g., replacing a failed gas furnace with a new gas furnace). Although the gas-to-oil pricing advantage has shrunk since

[24] The U.S. Energy Information Administration ("EIA") Annual Energy Outlook 2017 forecast of residential delivered cost of natural gas shows stable prices through 2025 (2017 forecast = $1.06 per therm compared to the forecasted 2025 delivered price of $1.14 per therm).

2012, the EIA is forecasting a return to a price spread where oil is twice the delivered price of natural gas.[25]

Q. Please elaborate on how customer-funded conservation contributes to declining NUPC.

A. Existing customers have chosen to invest in conservation measures using their own money without utilizing utility-sponsored EE programs. This occurs because of either a lack of understanding of the existence of utility programs or ineligibility based on program requirements. The quantification of energy savings for an individual, representative premise is easily obtainable for many conservation measures. The effectiveness of thermal resistance, for instance, is measured in "R-value" units. Increasing a surface's R-value reduces heat loss. Therefore, when a consumer installs additional insulation in their home, thus increasing the surface's R-value (e.g., attic floor, ceilings, walls, etc.) their natural gas usage (all else being equal) will decline. The following table demonstrates the impact of increasing R-values in a sample 1,000 square foot home in Concord, New Hampshire:

[25] EIA Annual Energy Outlook 2017.

Table 4: Potential Energy Savings from Increased R-Value [26]

Percentage Savings (therms)												
			OLD									
NEW	R-Value	Δ in R	R-10	R-11	R-12	R-13	R-14	R-15	R-16	R-17	R-18	R-19
	R-11	1	2.0%									
	R-12	2	3.7%	1.7%								
	R-13	3	5.1%	3.1%	1.4%							
	R-14	4	6.3%	4.3%	2.6%	1.2%						
	R-15	5	7.4%	5.4%	3.7%	2.3%	1.0%					
	R-16	6	8.3%	6.3%	4.6%	3.2%	2.0%	0.9%				
	R-17	7	9.1%	7.1%	5.4%	4.0%	2.8%	1.7%	0.8%			
	R-18	8	9.8%	7.8%	6.1%	4.7%	3.5%	2.5%	1.5%	0.7%		
	R-19	9	10.5%	8.5%	6.8%	5.4%	4.1%	3.1%	2.2%	1.4%	0.6%	
	R-20	10	11.0%	9.0%	7.4%	5.9%	4.7%	3.7%	2.8%	1.9%	1.2%	0.6%

As the above table indicates, an existing homeowner who upgrades their home with insulation, which increases the overall R-value of the dwelling, can decrease their natural gas usage significantly. For example, increasing the R-value from R-10 to R-16 would reduce annual usage from 682 to 626 therms, more than eight percent. Even a modest improvement in R-value can have a significant impact on declining usage.

Q. Please elaborate on how increased appliance efficiencies contribute to declining NUPC.

A. Appliance manufacturers have been improving the energy efficiencies of their gas equipment on both a mandated and voluntary basis. The U.S. Department of Energy ("DOE") regulates minimum efficiency standards for many appliances, including gas furnaces, boilers, and water heaters. In the early 1990s the DOE changed the standards on Annual Fuel Utilization Efficiency ("AFUE") factors. Under the new code, a gas furnace was required to meet at least an 80% AFUE while high efficient gas furnaces

[26] The average usage for a 1,000-square foot house in Concord, NH is estimated at 682 therms per year, using the estimator tool found at www.energydepot.com/residentialenergycalculator. The quantification of saved therms assumes EnergyNorth's normal annual heating degree days of 6,273 and utilizes the Insulation Investment Calculator found at www.chuck-wright.com/calculators/insulpb.html.

must achieve at least an 90% AFUE to meet the new standard. This is an increase from the 78% AFUE standard enacted in 1992.[27] Therefore, whenever an existing gas appliance (e.g., furnace, water heater, stove, dryer, grill, etc.) fails, its replacement will be more efficient and use less gas, resulting in lower NUPC.

Q. Have building codes changed as well?

A. Yes. New Hampshire has adopted the International Energy Conservation Code ("IECC"). Significant changes to New Hampshire's building code changes are as follows:

Table 5: New Hampshire Building Codes

New Hampshire Building Code Change History	
April 2010	2009 IECC adopted, with amendments
July 2007	2006 IECC adopted, with amendments
March 2002	Mandatory statewide building code is signed into law, using the 2000 IECC as reference, effective September 14th, 2002.

Q. How do these building code changes affect natural gas consumption?

A. Similar to the example provided in Table 4, changes in building codes has resulted in mandatory increases in R-value. Therefore, new buildings will be significantly more energy efficient. As old housing stock is replaced, average consumption (all else being equal) decreases.

[27] The National Appliance Energy Conservation Act of 1987, enacted March 17, 1987, and amended by the Energy Policy Act of 1992 and the Energy Policy Act of 2005.

Q. What are the economic and demographic effects on natural gas consumption?

A. I believe, based on preparing LDC demand forecasts, that the most significant economic factors that affected the Company's customer and NUPC trends include: (a) a dramatic spike in gas prices that started in 2005 caused by supply interruptions along the Gulf Coast; (b) equally dramatic decreases in gas prices since 2009, caused by a large increase in supply from shale formations in Pennsylvania and New York; (c) the economic recession that started in December 2007 and ended in June 2009[28]; and (d) the actual and forecasted long term price advantage that gas has over oil, caused by the large increase in gas supplies from shale formations. Some of these factors, such as the increased shale gas supply, have resulted in increased NUPC while other factors such as utility and customer-funded conservation, appliance efficiencies and building codes have contributed to declining NUPC.

To demonstrate the impact of gas prices on the Company's NUPC over the past several years, I have prepared Attachment GHT/DECPL-4, which shows the history of EnergyNorth's Residential Heating (Rate R-3) Cost of Gas ("COG") rates and the New York Mercantile Exchange ("NYMEX") futures settlement values. The significant decrease in COG rates since 2009 has likely had a positive effect on EnergyNorth's

---

[28] Recessions are determined by the Business Cycle Dating Committee of the National Bureau of Economic Research. The following is excerpted from a report issued September 20, 2010 by the Business Cycle Dating Committee:

> The Business Cycle Dating Committee of the National Bureau of Economic Research … determined that a trough in business activity occurred in the U.S. economy in June 2009. The trough marks the end of the recession that began in December 2007 and the beginning of an expansion. … In determining that a trough occurred in June 2009, the committee did not conclude that economic conditions since that month have been favorable or that the economy has returned to operating at normal capacity. … The trough marks the end of the declining phase and the start of the rising phase of the business cycle. Economic activity is typically below normal in the early stages of an expansion, and it sometimes remains so well into the expansion.

NUPC during the years immediately following this price change.[29] The polar vortex winter of 2013-2014 had a detrimental impact on national gas prices, coupled with increased concern over capacity constraints in the New England region. As a result, EnergyNorth appropriately responded with COG rate increases during this period. Although these price increases were significant, they were not as severe or long-lasting as the price increases between 2005 and 2009.

I believe that the decrease in Residential NUPC was caused by customer conservation efforts in response to (a) the high gas prices in 2005 – 2006 and again in 2009, and (b) the great recession of 2007-2009, which reduced customers' incomes and wealth.[30] In addition, I believe that more stable and slower declining Residential NUPC since 2010 indicates that the increase in usage that would be caused by the recovery from the recession and the decrease in gas costs has been largely offset by the continuing impact of energy conservation.

Customer NUPC trends during this period have also been impacted by the difference in oil and gas prices. Table 6, below, demonstrates the competitive price advantage that natural gas has had over oil in recent years.

[29] That is, if EnergyNorth COG rates had been constant or increasing during this period rather than decreasing by at least 40 percent, the NUPC growth rates would have been lower than the actual growth rates that are summarized in Attachment GHT/DECPL-2.

[30] In response to the high gas prices, customers installed long term irreversible conservation measures, such as high efficiency gas heating and water heating equipment, energy efficient windows and doors, and increased insulation. Customers also implemented short term reversible conservation efforts, such as reducing temperatures in heated living and working spaces, or closing off parts of homes and buildings. In response to the recession, customers would likely be limited to implementing low-cost, reversible conservation efforts.

Table 6: Residential Delivered Cost of Heating Oil and Natural Gas

Residential Delivered Cost per Therm			
Year	Distillate Fuel Oil	Natural Gas	Oil / gas ratio
2005	$1.42	$1.47	0.970
2006	$1.65	$1.61	1.028
2007	$1.84	$1.63	1.129
2008	$2.33	$1.61	1.445
2009	$1.73	$1.48	1.165
2010	$1.95	$1.40	1.390
2011	$2.36	$1.42	1.670
2012	$2.71	$1.33	2.033
2013	$2.65	$1.34	1.971
2014	$2.58	$1.58	1.638
2015	$1.96	$1.03	1.903
2016	$1.54	$0.99	1.556
2017	$1.85	$1.06	1.745
2018	$2.04	$1.06	1.925
2019	$2.16	$1.07	2.019
2020	$2.21	$1.09	2.028
2021	$2.26	$1.10	2.055
2022	$2.29	$1.10	2.082
2023	$2.33	$1.11	2.099
2024	$2.36	$1.13	2.088
2025	$2.41	$1.14	2.114

2005 – 2014 data from the U.S. EIA Residential Sector Energy Price and Expenditure Estimates, (Table ET3). 2015 - 2025 values from EIA's Annual Energy Outlook 2017.

Given the above natural gas price advantage, existing natural gas customers that use oil for other household needs (e.g., hot water) would be motivated to replace such equipment with gas-fired appliances. Low-use residential customers replacing their oil furnace with a natural gas furnace would increase overall system usage, but may contribute to declining NUPC once they become heating (Rate R-3) customers, as their usage (with a new, efficient furnace) would be lower than the Rate R-3 class average.

Q. How would this oil-to-gas price spread impact C&I customers?

A. I believe that the increases in C&I customers and NUPC have likely been driven by the impact of (a) existing EnergyNorth C&I customers converting from oil to gas equipment to take advantage of the competitive advantage of gas over oil, and (b) new C&I customers also converting to gas equipment, especially on-the-main energy users.

Finally, although overall NUPC has remained relatively flat since 2005, volatility has begun to increase. I believe this increased volatility is a reaction to shorter duration, less severe price spikes over the past three winters. If this trend continues and the price spikes become longer and more severe, NUPC will likely decline.

Q. Please describe how demographics can play a role in NUPC.

A. Demographics can influence NUPC at the individual premise level when more or fewer people occupy the premise. Additionally, premise vacancy rates caused by shifts in population also may affect use per customer[31]. The State of New Hampshire's August 2013 report[32] on the state's economic health recognizes the importance of demographics in the State's economic recovery. In the report, it was recognized that population growth in New Hampshire lags the nation:

> "Population changes may affect New Hampshire job growth and how job needs are met. From 2008 to 2012, the nation's population grew by 3.2 percent, compared to 0.4 percent for New Hampshire. This slower growth was primarily caused by domestic outmigration. A low rate of population growth

[31] Assuming that the premise retains an active gas account for minimal space heating, for example.
[32] "Measuring New Hampshire's Economic Health: A Workforce Perspective", published by the New Hampshire Employment Security, Economic and Labor Market Information Bureau, August 2013.

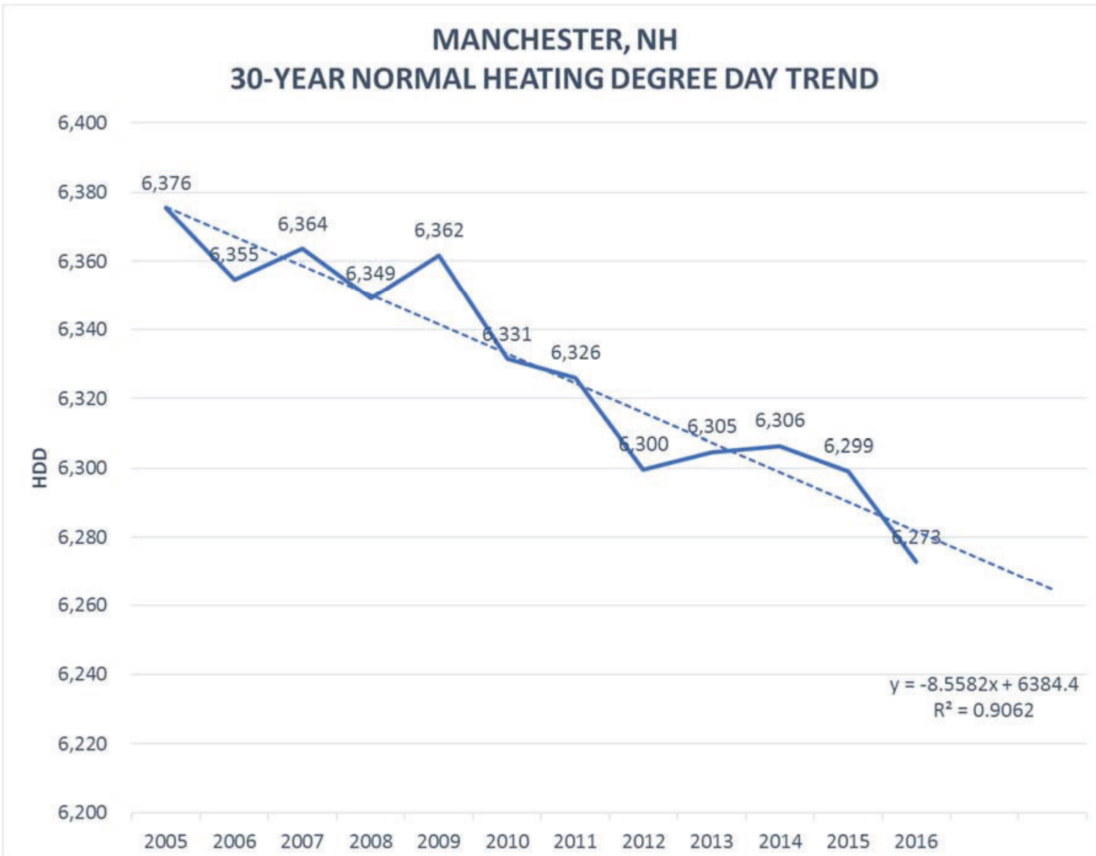
> will affect the rate of job growth in the future, as well as the distribution of jobs by industry and occupation."

Although the above quotation is addressing the issue of employment, it clearly speaks to the trend in New Hampshire's population growth, which can have a direct impact on NUPC, particularly in the Residential classes.

Q. The Company's proposed decoupling mechanism will symmetrically adjust for weather deviations from EnergyNorth's 30-year normal degree day standard. Are there other weather-related reasons to implement decoupling?

A. Yes. Normal temperature, defined in New Hampshire as the latest 30-year average heating degree days, has been declining. The trend over the past decade is for warmer years (most recent) to replace colder years (oldest of the 30-years). This is demonstrated as follows:

Table 7: 30-Year Normal Degree Day History



As the above graph shows, annual normal degree days has declined 103 heating degree-days ("HDD") since 2005. Even under "normal" weather conditions, it is reasonable to assume future year allowed revenues will be deficient if this warming trend continues.

4. Summary and Conclusion

Q. Please summarize why EnergyNorth is proposing, and should be granted, a decoupling mechanism.

A. The EERS Settlement Agreement states that each of the utilities in the state shall seek approval of a new decoupling mechanism, or another mechanism as an alternative to the LRAM. The Company's preferred solution is decoupling. Further, decoupling is now a mainstream ratemaking tool for gas LDCs across the country. 67 LDCs in 29 different states have a form of decoupling, with the clear majority utilizing actual revenues. EnergyNorth's proposed structure, detailed in Section V below, follows this nationally preferred and accepted design.

Decoupling further solves a long-standing ratemaking issue. There are clear declining NUPC trends in EnergyNorth's largest, most homogeneous customer classes (e.g., Residential Heating) that impact the Company's ability to earn its allowed rate of return. The factors contributing to this declining use reach well beyond utility-funded programs. The data and analysis presented in section IV.D above detail the main contributors to declining NUPC, including: customer-funded conservation; stricter appliance efficiency and building codes; economic and demographic drivers; and a warmer weather trend. None of these factors are within the control of the Company, and the Company should not be penalized between general rate cases for these exogenous events. Decoupling frees EnergyNorth from the negative effects of these causes of declining NUPC, and enables unfettered support and promotion of the State's energy efficiency goals.

V. ENERGYNORTH'S DECOUPLING PROPOSAL

A. Details of EnergyNorth's Proposed Decoupling Mechanism

1. Introduction

Q. Please provide a general description of the decoupling mechanism that EnergyNorth is proposing.

A. The Company is proposing a RPC decoupling mechanism that will be applied to all customers in all firm tariffed rate classes. The proposed RDM provides for separate winter and summer rate adjustments that correspond to the seasonality of the Company's distribution rates and Cost of Gas clause.

Q. Please list the RDM components that define EnergyNorth's proposed RDM.

A. EnergyNorth's proposed RDM is defined by the following RDM design components:

1) Basis for the true up calculation;
2) Rate classes to be included in the RDM;
3) Rate classes to be included in separate true-up customer groups;
4) Approach for returning RDM revenue surplus or recovering revenue shortfall from customers;
5) Frequency and timing of RDM rate adjustment filing;
6) Adjustments to Actual and Target revenues;
7) Treatment of new customers; and
8) Customer impact protections.

I will describe, explain and support these components of the Company's proposed RDM in the following sections of my testimony.

2. Basis for the true up calculation

Q. Please explain the approach that the Company is proposing for the true up calculation.

A. As described earlier in my testimony, the Company's proposed decoupling mechanism is a RPC RDM. A RPC RDM is critical to providing the Company with some opportunity to earn a reasonable return between rate cases, and retain revenues related to the growth in customers. Our RDM research indicates that RPC decoupling mechanisms are most common for gas LDCs because LDCs are experiencing significant customer growth that is related to the strong economic incentives for conversion from oil to gas. A RPC decoupling mechanism provides growth in revenues to partially offset the costs to connect the new customers.

3. Rate classes to be included in the RDM

Q. Which rate classes will be included in the Company's proposed RDM?

A. EnergyNorth proposes to include all firm tariffed customer classes in the RDM true up calculations, and to apply RDM rate adjustments to all firm rate classes.

It is appropriate to apply the RDM to all customers because (a) all EnergyNorth firm customers are eligible for the Company's EE programs and (b) Residential and C&I customers are likely to implement conservation efforts that are not directly associated with EnergyNorth's EE programs.

The RDM will not be applied to special contract customers because special contract customers are not eligible for EE programs, and special contract customers are not charged other rate adjustments, such as the LDAC.

4. True up Customer Groups

Q. How will the Company's customers be grouped for purposes of administering the proposed RDM?

A. The Company's firm rate classes will be combined into RDM Customer Groups as shown in Table 8 below:

Table 8: RDM Customer Groups

RDM Customer Group	Firm Rate Classes
Residential Non-Heating	R-1
Residential Heating	R-3, R-4
Commercial and Industrial	G-41, G-42, G-43, G-51, G-52, G-53, G-54

Q. Please explain why you are proposing to combine rate classes into the three rate groups that you have listed in Table 8, rather than keeping each C&I rate class separate?

A. I am not proposing to keep each rate class separate because C&I customers are assigned to the C&I rate classes based on their annual usage and percent of their annual usage that occurs in the Winter period. The potential shifting of C&I customers between rate classes may cause unintended results in the RDM calculations; these unintended results are avoided if all C&I customers are included in the same RDM customer group. In addition, I have prepared Attachment GHT/DECPL-5 to provide a summary of the variability in normal revenue per customer for each of the C&I rate classes[33]. Attachment GHT/DECPL-5 demonstrates that there is significant year-to-year variability in normal revenue per customer for several C&I rate classes, especially the large use classes G-42, G-43 and G-53. If the Company's RDM provided for separate revenue true ups and separate RDM rate adjustments for each C&I rate class, the calculation of the seasonal revenue shortfall/surplus would be significantly affected by whether the target RPC for that rate class had been determined in an "up" year or a "down" year. Separate RDM rate adjustments for each C&I rate class would likely result in noticeable rate volatility for some C&I rate classes.

This potential volatility is avoided with a single RDM true up calculation for all C&I rate classes combined. Attachment GHT/DECPL-5 also demonstrates that the normal revenue per customer for all C&I rate classes combined is relatively stable. Thus, the seasonal calculated revenue shortfall or surplus for the combined C&I RDM customer group will not be affected by the year (i.e. the rate case test year) that is used to determine the target RPC.

5. Frequency and timing of RDM rate adjustment filing

Q. Please explain how often and when the RDM rate adjustments will be made.

A. The Company will calculate separate Winter and Summer season RDM rate adjustments based on the prior winter or summer season RDM revenue shortfalls or surpluses, for

[33] This analysis is based on the same actual and weather normalized billing determinant data that was used to prepare Attachment GHT/DECPL-7; monthly revenues are based on 2016 rates, and R-4 revenues are calculated at R-3 rates. Additional discussion of the decoupling data base and analysis is provided in Section V.10.

each RDM customer group. Separate seasonal RDMs would reduce the shifting of charges or credits (associated with RDM revenue shortfalls or surpluses) between temperature sensitive and non-temperature sensitive customers.

6. Adjustments to Target and Actual revenues

Q. Please explain how the RDM Target Revenue per Customer will be determined.

A. The initial Winter and Summer RDM Target Revenue per Customer will be set in this proceeding; the target RPCs for each RDM customer group and for each season will be calculated in the Company's compliance filing by summing the allowed revenues by season for each RDM customer group, divided by the seasonal average number of RDM customer group customers.

For each seasonal RDM filing, the RDM target RPCs will be adjusted to account for the rates that were in effect during the recently-completed RDM season, because the Company's base distribution rates are adjusted annually, effective every July 1 to reflect the CIBS rate adjustment. The derivation of the Target Revenue per Customer by RDM Rate Group, based on the Company's proposed rates, is included as Attachment GHT/DECPL-9.

Q. Please explain how actual revenues per customer will be calculated.

A. Winter and Summer Actual Revenues per Customer, by RDM Rate Group, will be calculated directly from the actual booked base distribution revenues and actual booked number of average customers. The Company will calculate the RDM Actual Revenues per Customer and the RDM revenue shortfall/surplus monthly on a calendar month basis.

At the end of each season, the Company will sum all of the monthly data and will calculate RPC on a seasonal basis.

7. Treatment of new customers

Q. How will new customers be treated in the Company's proposed RDM?

A. The Company will include new, non-expansion rate customers in the RDM calculations. These customers will be charged the rate adjustments associated with the RDM and the calculations of actual revenues per customer will include the new customers. The Company proposes that expansion rate new customers be excluded from the RDM calculation and not be charged or credited the RDM rate. The reason for this proposed exclusion is that the expansion rates include a higher delivery rate than existing or new (non-expansion) customer rates. For example, expansion rate R-6 (Residential Heating - Expansion) delivery rates are 30% higher than existing R-3 Residential Heating rates. If R-3 and R-6 customers were included in the same RDM customer group, then the revenues associated with the 30% R-6 delivery premium, all else being equal, would be returned to all customers through the RDM. This defeats the purpose of the expansion rates, whereby the delivery premium revenue supports the incremental costs of the expansion investment.

An alternative treatment that creates a separate RDM customer group for expansion customers is not appropriate. Currently there are no expansion rate customers. Therefore, the near-term population of expansion rate customers will be small and would likely result in an unstable RDM calculation. For these reasons the Company proposes to exclude expansion rate customers from the RDM until they are migrated into the existing rate schedules once their expansion term expires.

8. Customer impact protections

Q. Is EnergyNorth proposing a customer impact cap on the annual RDM adjustments?

A. Yes. The Company's proposed RDM includes a plus or minus 5 percent cap on rate changes; that is, the RDM increase or decrease to rates will be limited to 5 percent of distribution revenues (revenues that exclude charges for COG and LDAC revenues, and all other related charges). Any excess over the 5 percent upper or lower limit will be deferred for recovery in the next period with carrying charges at the prime lending rate. The proposed 5 percent customer impact cap, based on distribution rates, is approximately equivalent to a 2.5 percent increase in total bills.[34]

Lastly, the proposed RDM includes a provision that the Company will file for a mid-period adjustment if the projected RDM end of season under or over collection exceeds 10 percent of total projected seasonal distribution revenues.

9. Summary

Q. To summarize, please describe how the Company's proposed RDM will be calculated and applied.

A. As a general summary of my testimony in this section, summer and winter RDM adjustments will be determined prior to the start of each season by (1) calculating Target

[34] The percent increase based on all charges, including COG and LDAC rates in addition to distribution rates, will depend on the level of the COG and LDAC rates at any time.

Revenue[35] per customer for that season for each RDM Rate Group; (2) calculating actual revenue per customer for that season (i.e. the most recently completed season) for each RDM Rate Group; (3) calculating the difference between Target and actual revenue per customer; (4) calculating RDM Rate Group revenue shortfalls or surpluses by multiplying the revenue per customer differences times actual average monthly customers for each rate group; (5) calculating the Company total revenue shortfall or surplus by summing the RDM Rate Group revenue shortfalls or surpluses; and lastly (6) calculating the RDM adjustment by dividing the Company total revenue shortfall or surplus by projected therm deliveries for the upcoming season.

This adjustment will also include a reconciliation of the same season prior period authorized Company total revenue shortfall or surplus to actual revenues recovered or returned in the same season prior period.

10. Additional RDM details

Q. Have you prepared a schedule to illustrate how the RDM calculations would be made?

A. Yes, I have prepared Attachments GHT/DECPL-6 and GHT/DECPL-7 for that purpose. To prepare this hypothetical illustration I used actual Company data for the period from January 2010 - 2016 to show:

[35] The summer and winter Target Revenue per customer for each rate group will be determined from the revenue requirement approved in this proceeding.

The calculation of the Target RPC for the three customer groups (Residential Heating, Residential Non-Heating, and C&I). I developed the Target RPC for a 2010 Test Year, which is shown in Attachment GHT/DECPL-6.

The calculation of actual RPCs, RDM revenue shortfalls or surpluses per customer, and total revenue shortfalls or surpluses for Summer 2011 through Summer 2016, which is shown in Attachment GHT/DECPL-7.

The hypothetical calculations for all years (2010-2016) utilize 2016 rates.

Q. Please summarize the results of the analysis that is provided in Attachment GHT/DECPL-9.

A. I have prepared Table 9,[36] below, to summarize the revenue shortfalls, by season, from Summer 2011 through Summer 2016:

[36] Please see Attachment GHT/DECPL-7 for supporting calculations. Also, Table 10 below provides further explanatory information regarding these hypothetical results.

Table 9: RDM Class Accrual Analysis

	Accrued Revenue Shortfall (Surplus) $			
	R-1	R-3, R-4	C&I	Total
Summer 2011	$763	$207,719	$15,778	$224,260
Winter 2011 - 2012	$3,978	$2,233,390	$1,732,447	$3,969,815
Summer 2012	$1,846	$373,048	$71,814	$446,707
Winter 2012 - 2013	-$15,033	$346,231	-$175,192	$156,005
Summer 2013	-$592	$288,368	-$124,816	$162,960
Winter 2013 - 2014	-$45,365	-$1,469,303	-$1,964,463	-$3,479,131
Summer 2014	-$687	$175,820	-$500,720	-$325,587
Winter 2014 - 2015	-$3,697	-$910,895	-$1,847,245	-$2,761,837
Summer 2015	$3,499	$356,979	-$421,197	-$60,720
Winter 2015 - 2016	$5,915	$2,509,631	$1,171,639	$3,687,184
Summer 2016	$3,656	$381,248	-$299,262	$85,642

[1] Utilizing a 2010 base year and billing determinants and 2016 billing rates.

Q. How will the seasonal revenue shortfalls or surpluses be billed to customers?

A. As described above, a singular rate per therm will be calculated each season based on the sum of the accrued class RDMs, and billed the subsequent matching season. For example, the Summer 2011 total accrued shortfall of $224,260 will be collected over the 2012 summer period. The rate per therm will be calculated on a total system basis and applied to all firm rate classes.

These accrued seasonal totals must first pass the 5% test prior to calculating the billing rate per therm. If the RDM accrual is a shortfall and exceeds 5% of total distribution revenues for that season, then the dollars in excess of 5% will be deferred for recovery until the next applicable season. For example, the Winter 2011/2012 total RDM value exceeded 5%; therefore, the excess dollars would have been deferred until the following

2012/2013 winter period. The 5% test applies to the sum of the calculated RDM and deferred RDM for the applicable period. This may result in deferred dollars not being collected for multiple seasons, if the RDM continues to yield a surcharge in excess of the 5% limit. However, the Company's proposal includes a provision whereby if the calculated RDM exceeds 10%, the Company may petition the Commission for a more immediate recovery of the RDM dollars in excess of 10%.

Based on the sample data, the billing of the calculated seasonal RDMs is as follows:

Table 10: Seasonal RDM Accruals, Deferrals, and Billing Rates

Hypothetical RDM

	Accrued Revenue Shortfall (Surplus) $				+/- 5.0% Limit Test		Billable Amounts		
Season	R-1	R-3, R-4	C&I	Seasonal Accrued Total	klokoshjlzih	Deferral	Adjusted Total	Adjusted % of distribution revenues	Rate Per Therm
Summer 2011	$763	$207,719	$15,778	$224,260	1.0%	$0	Billing Lag		
Winter 2011 - 2012	$3,978	$2,233,390	$1,732,447	$3,969,815	9.8%	$1,937,300			
Summer 2012	$1,846	$373,048	$71,814	$446,707	2.1%	$0	$224,260	1.0%	$0.0061
Winter 2012 - 2013	-$15,033	$346,231	-$175,192	$156,005	0.3%	$0	$2,032,515	5.0%	$0.0178
Summer 2013	-$592	$288,368	-$124,816	$162,960	0.7%	$0	$446,707	2.1%	$0.0113
Winter 2013 - 2014	-$45,365	-$1,469,303	-$1,964,463	-$3,479,131	-7.1%	-$1,022,620	$2,093,305	4.7%	$0.0180
Summer 2014	-$687	$175,820	-$500,720	-$325,587	-1.4%	$0	$162,960	0.7%	$0.0042
Winter 2014 - 2015	-$3,697	-$910,895	-$1,847,245	-$2,761,837	-5.5%	-$1,261,730	-$2,456,511	-5.0%	($0.0207)
Summer 2015	$3,499	$356,979	-$421,197	-$60,720	-0.3%	$0	-$325,587	-1.4%	($0.0075)
Winter 2015 - 2016	$5,915	$2,509,631	$1,171,639	$3,687,184	8.4%	$240,762	-$2,522,728	-5.0%	($0.0211)
Summer 2016	$3,656	$381,248	-$299,262	$85,642	0.4%	$0	-$60,720	-0.3%	($0.0014)
Winter 2016 - 2017							$2,184,693	5.0%	$0.0180
Summer 2017							$85,642	0.4%	$0.0021
					Outstanding Deferrals	Winter	$240,762		
						Summer	$0		
Based on a 2010 base year and billing determinants, and 2016 billing rates.									

The results of the above calculations are shown graphically below:

Chart 2a: Cumulative Effect of RDM - Summer

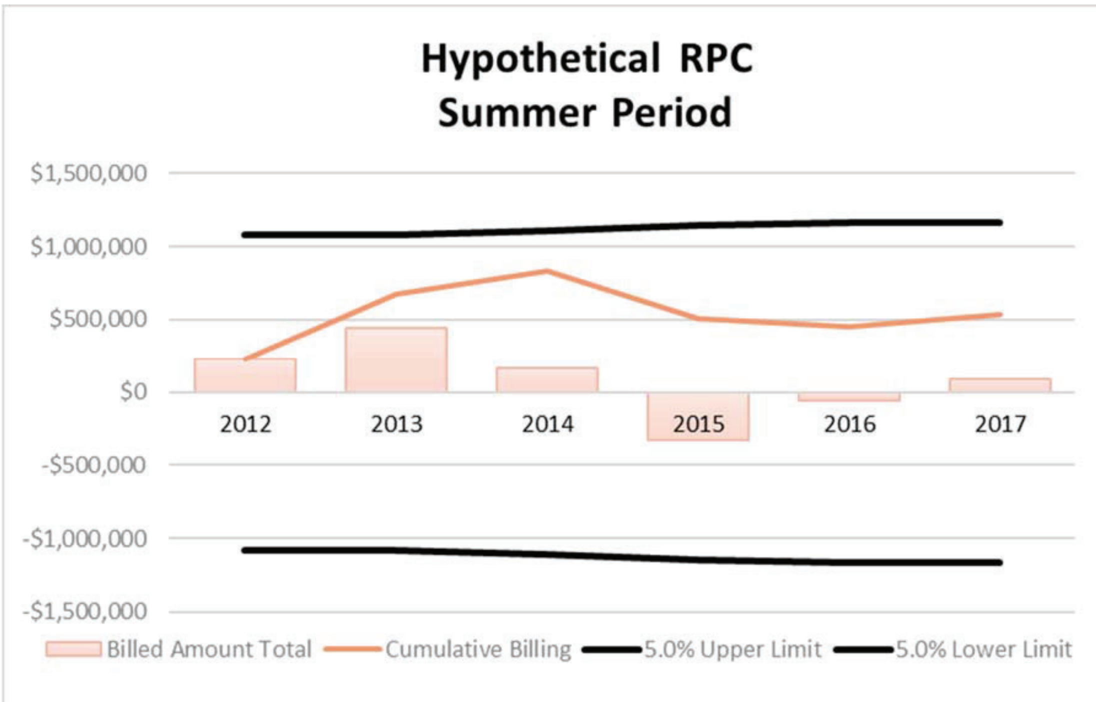


Chart 2b: Cumulative Effect of RDM - Winter

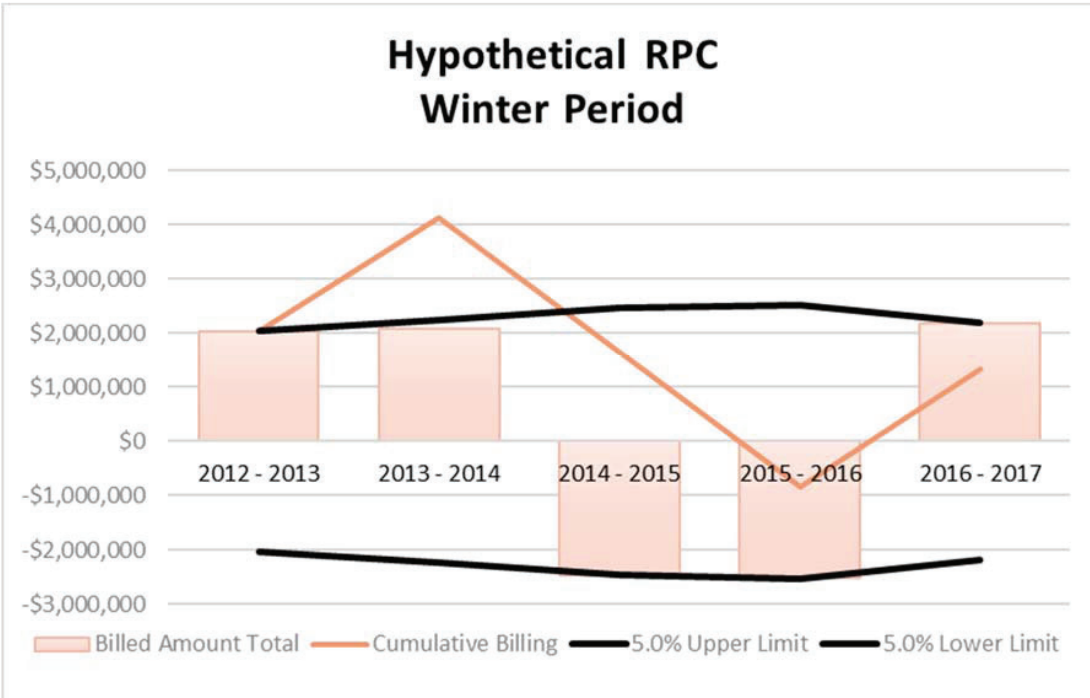

Tables 9 and 10 demonstrate that if an RDM had been in effect during this period, the RDM rate accrual would have been a debit (charge) in 5 seasons and a credit in the other 6 seasons. The largest shortfall is $3,969,815, or 9.8% of distribution revenues and the largest surplus is -$3,479,131, or 7.1% of distribution revenues. On a cumulative basis, the five-year cumulative RDM shortfall would have been $2,105,298; or 0.6% of total distribution revenues.

On a billed basis, the RDM rate adjustments would have been generally small. Seven of the seasons would have resulted in a charge to customer bills, and four seasons would have been credits. The 5 percent customer impact cap would have been applied in two of the five winter seasons, to be recovered in following winter periods. The 5 percent cap would not have been exceeded in any of the six summer periods. Lastly, there is a hypothetical shortfall to be collected in the Winter 2017 – 2018.

Q. Please describe the timing of RDM calculations, filings, and rate adjustments.

A. I have prepared Attachment GHT/DECPL-8 to illustrate the timing of RDM calculations, filings, and rate adjustments. Referring to Attachment GHT/DECPL-8, the Winter or Summer RDM Adjustment Factor will be based on the calculations related to the most recently completed corresponding Winter or Summer RDM prior period. The Company proposes to make its Winter RDM filing together with its annual LDAC filing, on or before September 1 of each year and each Summer RDM filing will be made on or before March 1 of each year. Each Winter and Summer RDM filing will also include a final reconciliation of actual and allowed RDM revenues for the prior same period.

Q. Has the Company prepared an RDM tariff provision?

A. Yes. The Company's proposed Local Distribution Adjustment Clause ("LDAC"), which includes provisions for the RDM in Section 18(C.1) of the LDAC, is included in the proposed tariff in this proceeding. Section 18(C.1) describes the manner in which the Company proposes to annually true up Actual Revenues versus Target Revenues, and to recover the RDM Adjustment Factors through rates. Section 18(C.1) also describes the documentation that the Company will provide with annual RDM filings. This new RDM language replaces the current "Lost Revenue Adjustment Mechanism Allowable for LDAC" provisions, as the proposed RDM replaces the LRAM in its entirety.

Q. Does this complete your testimony?

A. Yes, it does.

I. INTRODUCTION AND BACKGROUND

Q. Please state your name and business address.

A. My name is Steven E. Mullen. My business address is 15 Buttrick Road, Londonderry, New Hampshire.

Q. By whom are you employed and in what capacity?

A. I am employed by Liberty Utilities Service Corp. ("Liberty") as Director, Rates and Regulatory Affairs. I am responsible for rates and regulatory affairs for Liberty Utilities (EnergyNorth Natural Gas) Corp. ("EnergyNorth" or "the Company") and Liberty Utilities (Granite State Electric) Corp. ("Granite State") in New Hampshire, Liberty Utilities (Peach State Natural Gas) Corp. in Georgia, and Liberty Utilities (St. Lawrence Gas) Corp. in New York.

Q. Please state your professional experience and educational background.

A. In 2014, I was hired by Liberty as the Manager, Rates and Regulatory, and was promoted to Senior Manager in August 2017 and to my current position of Director in July 2018. In addition to managing the Rates and Regulatory Affairs department, I am responsible for the development of regulatory strategy, interacting with regulators and other parties on behalf of Liberty, reviewing and preparing testimony and other aspects of regulatory filings, and internal approval of rate changes for EnergyNorth and Granite State, among other duties.

From 1996 through 2014, I was employed by the New Hampshire Public Utilities Commission ("Commission") in various roles. Through 2008, I held positions first as a

PUC Examiner, then as a Utility Analyst III and Utility Analyst IV. In those roles, I had a variety of responsibilities that included field audits of regulated utilities' books and records in the electric, telecommunications, water, sewer, and gas industries; rate of return analysis; review of a wide variety of utility filings; and presenting testimony before the Commission. In 2008, I was promoted to Assistant Director of the Electric Division. Working with the Electric Division Director, I was responsible for the day-to-day management of the Electric Division, including decisions on matters of policy. In addition, I evaluated and made recommendations concerning rate, financing, accounting, and other general industry filings. In my roles at the Commission, I represented Commission Staff in meetings with utility officials, outside attorneys, accountants, and consultants relative to the Commission's policies, procedures, Uniform System of Accounts, rate cases, financing, and other industry and regulatory matters.

From 1989 through 1996, I was employed as an accountant with Chester C. Raymond, Public Accountant, in Manchester, New Hampshire. My duties involved preparation of financial statements and tax returns, as well as participation in year-end engagements.

I graduated from Plymouth State College with a Bachelor of Science degree in Accounting in 1989. I attended the NARUC Annual Regulatory Studies Program at Michigan State University in 1997. In 1999, I attended the Eastern Utility Rate School sponsored by Florida State University. I am a Certified Public Accountant and have obtained numerous continuing education credits in accounting, auditing, tax, finance, and utility related courses.

Q. What is the purpose of your testimony?

A. I am testifying on behalf of EnergyNorth in support of its request for an increase to distribution revenues, including its request for approval of step adjustments to recover the revenue requirement associated with non-growth related capital additions placed in service after the test year. I also address certain issues related to the implementation of decoupling and other ratemaking impacts that depress earnings and have created financial pressures on the Company and contributed to its need to seek rate relief.

My testimony also describes the Company's request for approval of a property tax recovery mechanism, consistent with RSA 72:8-d and -e, to capture the impact of annual property tax increases that are beyond the Company's control.

In addition, I provide testimony to demonstrate the Company's compliance with the matters identified by the Commission in the February 28, 2020, secretarial letter in Docket No. DG 19-161, which was a rate case filing by EnergyNorth that was ultimately withdrawn. My testimony addresses each of these items, including and in addition to matters from Docket No. DG 17-048, EnergyNorth's prior rate case; Docket No. DG 15-362, the docket wherein EnergyNorth received approval to expand its franchise area to the towns of Pelham and Windham; and Docket No. DG 17-035, the proceeding wherein Liberty was granted approval of a special contract with the New Hampshire Department of Administrative Services ("NHDAS"). I will describe how the Company has complied with the requirements from the various orders and secretarial letter issued in these dockets.

I also briefly discuss several regulatory matters involving due dates for certain rate and other filings, the examination and review of which would serve all parties well in terms of process improvements and possible workload reduction and efficiency gains.

Lastly, I describe an upcoming customer service initiative of the Company to switch its account payment services provider, which will involve migration of current payment options through Liberty's Interactive Voice Response ("IVR") system and its website.

II. REASONS FOR RATE CASE FILING

Q. What are the main factors that led to the Company's filing of this rate case?

A. The major factors leading to this rate case filing are the lag on recovery for capital investments and increases in costs such as property taxes. These factors are described in more detail later in my testimony.

In addition to these factors, there are financial impacts related to the implementation of decoupling that have negatively impacted the Company. The decoupling impacts arose from an increase in use per customer since the 2016 test year in the prior rate case, as well as the February 2017 reclassification of 1,598 commercial and industrial customers to different rate classes based on a review of their usage. Because that reclassification happened after the test year, it was not reflected in the Docket No. DG 17-048 rate case billing determinants used to establish the revenue per customer ("RPC") amounts established as part of the decoupling mechanism. Each rate class has a different RPC amount each month. The customer reclassification changed the results that would have otherwise occurred in the class specific RPC amounts determined in the rate case. In addition, as part of its decision in Docket No. DG 17-048, the Commission adopted a revenue adjustment originally proposed by Staff based on the year-end customer count of EnergyNorth, rather than the average number of customers during the test year and using average revenues by customer class. Consequently, following the implementation of decoupling, the year-end customer count adjustment significantly overstated the estimated number of new customers and thus overstated the amount of estimated annual revenue associated with those customers. The Company did not actually receive this revenue because those customers did not exist, so the Company experienced a detrimental financial impact due to the operation of the decoupling mechanism.

Q. Would you please explain this impact in more detail?

A. The revenue adjustment was performed in a simplified manner, but the results of that adjustment were found to vary significantly from the determination of revenues to be received from customers under the Company's decoupling structure that uses monthly RPC amounts that vary by class. Due to the significant variations in monthly RPC amounts, the simplified methodology in the year-end customer count adjustment overstated the amount of revenue to be received from new customers. This had the effect of decreasing the amount of necessary distribution revenue increase in the prior rate case, which, in turn, lowered the RPC amounts calculated in that case. The longer the situation exists, the more the Company's revenues will be lower than they should be. In Order No. 26,122, the Commission recognized that a reset of the test year revenues would be necessary and directed that the next test year to be used in a rate case be no later than a twelve-month period ending December 31, 2020, so that such a reset could occur.

Q. Was termination of the Cast Iron/Bare Steel Replacement Program also a factor that led to this rate case filing?

A. Yes. With the termination of the accelerated recovery mechanism that was previously available as part of the Cast Iron/Bare Steel Replacement ("CIBS") program, the Company needs to have an alternative method to obtain timely recovery of the costs involved with the replacement of leak-prone pipe on its distribution system. As described in the joint testimony of Company witnesses Brian Frost, Robert Mostone, and Heather Tebbetts, the Company is proposing an initial step adjustment for certain capital investments made during calendar year 2020, including the replacement of leak-prone pipe. This proposal is consistent with the recommendation made by Staff in Docket No. DG 19-054 with respect to termination of the CIBS program.[1] In that docket, the Commission agreed with Staff and stated:

> We encourage Liberty to seek recovery of 2019 CIBS spending through its anticipated general rate filing rather than a CIBS FY 2020 filing. Recovery of 2019 CIBS spending through a general rate filing would be administratively efficient and recovery would commence at approximately the same time as provided for under the CIBS settlement agreement if a general rate case is filed by mid-year 2020.[2]

As described later in my testimony, the Company is also proposing step adjustments to recover capital expenditures through 2022.

---

2 Order No. 26,266 at 7.

Given all of these factors described above, the Company found it necessary to file this rate case to avoid a prolonged period of continued detrimental financial impacts and to better position the Company to effectively and efficiently provide safe and reliable service to its customers going forward.

III. REQUEST FOR STEP ADJUSTMENTS

Q. What is the largest source of downward pressure on a utility's earnings between rate cases?

A. The largest negative impact on a utility's earnings between rate cases is the regulatory lag between the time capital investments are made and the time that recovery of the revenue requirement associated with those capital investments begins, particularly when those investments are considered non-revenue producing or non-growth related. The revenue requirement includes a return on and of (*i.e.*, depreciation expense) the investment as well as associated costs, such as property taxes.

Q. Please demonstrate the impact of regulatory lag on a utility's earnings.

A. This can best be demonstrated by way of example. Assume a utility places $40,000,000 of non-growth related capital investments into service in a given year with no mechanism for rate recovery related to those investments. As a rule of thumb, the revenue requirement for utility capital investments can be roughly estimated by multiplying the capital investments by 15 percent, which provides for such items as depreciation, property taxes, and the impact of deferred taxes. For that $40,000,000 of non-growth related capital investments, the associated revenue requirement would be approximately

$6,000,000. Therefore, all else being equal, those investments in a utility's plant and equipment would reduce earnings by $6,000,000. That reduction to earnings occurs each year there is no method for rate recovery, such as in the years between test years. This is the primary reason that utilities investing in their system and replacing existing infrastructure need to file frequent rate cases.

Applying this concept to EnergyNorth, and as described in the joint testimony of Messrs. Frost and Mostone and Ms. Tebbetts, EnergyNorth made significant capital investments that were placed in service during 2018 and 2019 for which there has been no cost recovery. These investments are a primary reason for the filing of this request for an increase in distribution revenues.

Q. Please describe more specifically how the current regulatory structure for EnergyNorth impacts its earnings during the time interval between rate cases.

A. Since Liberty Utilities' acquisition of EnergyNorth in mid-2012, EnergyNorth has had to file distribution rate cases approximately every three years -- in 2014, 2017, and now in 2020.[3] The 2014 and 2017 rate cases resulted in permanent rate increases based on historic test years, each accompanied by a step increase for plant placed in service during the year following the test year (*e.g.*, for Docket No. DG 17-048, the test year was 2016 and the step increase covered plant investments in 2017). This timing creates a lag in recovery for plant investments outside the test years and not covered by step increases. In addition, EnergyNorth historically was allowed annual recovery of investments made

[3] As noted, the Company also filed a rate case in 2019 that was subsequently withdrawn.

as part of its CIBS program. However, annual recovery through the CIBS program ceased as of March 31, 2020, which was the end of the most recent CIBS year, based on a decision by the Commission in Docket No. DG 19-054. As a result, investments placed in service after 2017 that were outside of the CIBS program have not been allowed for cost recovery, and this has negatively impacted the Company's earnings.

Q. You mentioned property taxes as one of the cost items included in the revenue requirement associated with new plant investments. Have property taxes increased on previously existing plant investments?

A. Yes. Property taxes are the primary funding source for municipal budgets, and for many municipalities utility property comprises a large portion of their tax base. Utility property taxes are also a significant funding source for the State of New Hampshire. As a result, even if no new capital investments are made, utilities often see their property tax bills increase.

Q. Have EnergyNorth's property taxes increased since its last rate case?

A. Yes. The Company's prior rate case in Docket No. DG 17-048 had a 2016 test year and the property tax expense in that rate case was $9.3 million. For the test year in this case, the twelve months ended December 31, 2019, the total property tax expense was $12.4 million, which is an increase of $3.1 million, or 33 percent.

Q. Was EnergyNorth granted a step adjustment for plant investments placed in service after the last rate case that provided recovery for additional property taxes?

A. Yes. As part of Docket No. DG 17-048, the Commission approved a step adjustment for plant placed in service during calendar year 2017, and the Company was also allowed annual adjustments related to CIBS plant placed in service through March 31, 2020. However, the total amount of property tax recovery provided in those rate adjustments totaled only approximately $1.15 million, leaving an additional increase of approximately $1.95 million for which there has not been any recovery to date. As compared to the amount of the Company's request in this proceeding for a temporary distribution revenue increase, property taxes alone account for a significant portion of the earnings shortfall.

Q. Based on these facts, what is the Company requesting in its multi-year rate plan proposal?

A. The Company is requesting approval of a multi-year rate plan that includes a provision for step adjustments related to plant investments through 2022, along with a separate mechanism addressing changes in property taxes. As explained above, plant investments placed in service in the years outside of test years, particularly non-growth related capital investments, have a significant impact on EnergyNorth's earnings, as do uncontrollable increases in property taxes. Absent an alternative means of cost recovery, these costs end up causing frequent distribution rate case filings, which is administratively inefficient and costly for customers. Specifically, rate cases place significant demands on Company resources, as well as those of the Commission, its Staff, the Office of the Consumer Advocate ("OCA"), and other affected parties. Each rate case requires substantial costs to be incurred by the Company, Staff, and the OCA to prepare, review, and prosecute the case, and these costs are ultimately borne by EnergyNorth's customers. Thus, the step adjustment approach, coupled with the proposed property tax mechanism, is a reasonable method to allow for more timely recovery of assets placed in service after the test year without the need for a full rate case, and would enable the Company to potentially lengthen the time between rate cases and have a reasonable opportunity to earn a reasonable rate of return. A multi-year plan that includes a provision for step adjustments related to plant investments, along with addressing changes in property taxes, would be a step in the right direction. This would allow the Company to focus on operating the business while also reducing rate case expenses being incurred on a frequent basis.

Q. Is the Company's multi-year rate plan proposal limited solely to providing for step increases?

A. No. Although step increases would be a necessary component of a multi-year plan for at least 2020 through 2022 capital investments, the Company is open to exploring other alternatives such as performance based ratemaking mechanisms, a program similar to National Grid's Gas Infrastructure, Safety, and Reliability Plan that is in place in Rhode Island, or other possible methodologies. The Company looks forward to having discussions with the Staff and the OCA to explore alternative approaches.

Q. Have there been any other developments related to property taxes that would support approval for a rate mechanism for property taxes?

A. Yes. On June 21, 2019, the Governor signed HB 700, which established a methodology for valuing utility distribution assets for property tax purposes, codified as RSA 72:8-d and -e. Part of that law established a new methodology for assessing utility property, and a five-year phase-in period to fully transition to that new methodology. The first property tax year of the phase-in period is the tax year beginning April 1, 2020.

The law also requires the Commission to establish by order a rate recovery mechanism for the property taxes paid by a public utility. Thus, the Company's proposal for a property tax recovery mechanism is supported by the recent law.

Q. To date, has the Commission initiated any actions to develop a rate recovery mechanism for property taxes?

A. To the Company's knowledge, no, it has not.

Q. Does the law require the rate recovery mechanism to be the same for all utilities?

A. No. The law states as follows:

> **72:8-e Recovery of Taxes by Electric, Gas and Water Utility Companies**. For the implementation period of the valuation of utility company assets under RSA 72:8-d, VI and terminating with the property tax year effective April 1, 2024, the public utility commission shall by order establish a rate recovery mechanism for any public utility owning property that meets the definition of utility company assets under RSA 72:8-d, I. Such rate recovery mechanism shall either:

> I. Adjust annually to recover all property taxes paid by each such utility on such utility company assets based upon the methodology set forth in of RSA 72:8-d; or
>
> II. Be established in an alternative manner acceptable to both the utility and the public utility commission.

Q. Taking into account the last sentence quoted above, does the Company have a proposed mechanism to capture the changes in property taxes that it will experience pursuant to RSA 72:8-d?

A. Yes. As the Company has assets in many communities, and understanding that the law is new and requires changes to valuation methodologies previously used by those municipalities, it is likely there will be challenges over the first couple of years of implementation that will have to be worked through as the communities and Liberty understand the full effects of the new law and make sure it is applied appropriately. As an initial data point, many municipalities did not change the property valuations on their June 2020 tax bills, even though those bills are for the first property tax year impacted by the law. Given the likelihood of inconsistent treatment and timing of the property tax adjustments among the municipalities, it is imperative that any recovery mechanism be simple to administer for all involved. With that in mind, the Company proposes a full property tax recovery mechanism that each year compares the most recent municipal and state property tax bills to the amount currently collected in distribution rates. Such a mechanism would be simple to implement, administer, and verify, and would be consistent with the letter and spirit of the cost recovery contemplated in the law.

Q. Would the Company's proposed property tax mechanism cover all property taxes paid by the Company and not just the property that is considered "utility company assets" pursuant to RSA 72:8-d?

A. Yes.

Q. Why is it reasonable to include certain assets beyond "utility company assets" in such a mechanism?

A. To begin, recall that Liberty does not profit off property taxes; they are simply a pass-through cost. In addition, "utility company assets"[4] encompass the vast majority of the Company's taxable property, so the inclusion of non-"utility company assets" is a relatively insignificant item, particularly since the valuation of those assets is not subject to the changes prescribed in RSA 72:8-d. It is possible, however, that the taxation of non-"utility company assets" may be increased as municipalities deal with changes to their operating budgets and revenues resulting from the property tax law. Thus, inclusion of the non-"utility company assets," which are included in the Company's rate base, in the property tax mechanism would be appropriate to capture any such unintended consequences as they occur.

[4] "Utility company assets" as defined in RSA 72:8-d are: "For a gas company providing gas service to retail customers: distribution pipes, fittings, meters, pressure reducing stations, buildings, contributions in aid of construction (CIAC), construction works in progress (CWIP), and land rights including use of the public rights of way, easements on private land owned by third parties, and land owned in fee by the gas company."

Q. What are some examples of assets that are not encompassed in the definition of "utility company assets" for purposes of the valuation provisions of RSA 72:8-d and -e?

A. Examples of such assets are transmission plant, production plant, and general plant such as office buildings.

Q. Would a deferral account need to be established with respect to the property tax mechanism?

A. Yes. A deferral account would be necessary to capture the increases and decreases that may occur as the property tax year progresses, and to capture the recoveries and timing differences between tax billing periods, the start of recovery, and timing of collections.

Q. Does the Company have a proposed implementation date for the property tax mechanism?

A. Ideally, the effective date would occur soon after the Company receives its second tax bills of the property tax year in 2020, taking into consideration any adjustments by municipalities dating back to the April 1, 2020, which was the effective date of this new law. Those bills are expected to be received during the fourth quarter of 2020. However, as this mechanism is being proposed as part of this rate case, the Company proposes that the adjustment for the first property tax year of April 1, 2020, through March 31, 2021, take effect coincident with the August 1, 2021, implementation date of permanent rates at the conclusion of this proceeding. The effective date for subsequent property tax years could then be moved earlier in those calendar years.

IV. FOLLOW-UP ITEMS FROM PRIOR DOCKETS

Q. Does the Company's rate case filing address all of the directives of the Commission from prior dockets?

A. Yes. In its February 28, 2020, secretarial letter in Docket No. DG 19-161, the Commission included a list of items it required the Company to address in this rate case filing. The letter summarized the following requirements from prior dockets:

1. Analysis comparing revenue requirement versus anticipated revenue from Pelham customers per Docket No. DG 15-362;
2. From Docket No. DG 17-048:
    a. An analysis of the depreciation reserve imbalance;
    b. Information necessary to permit the Commission to evaluate the impact of decoupling;
    c. An updated analysis similar to Exhibit 46 in that docket regarding the Company's investment in the iNATGAS facility;
    d. A reduction to the proposed revenue requirement by 50 percent of any revenue shortfall for the first phase of the Keene CNG/LNG conversion;
3. Adjustments to the revenue requirement for items such as the year-end customer count versus the average customer account, vacancies, and severance pay;
4. Updated indirect gas costs; [5]
5. An identification and explanation of all non-supply costs to be recovered through the Keene Cost of Gas; and

---

[5] The Company notes that, contrary to testimony from Staff during the January 10, 2020, prehearing conference in Docket No. DG 19-161, each EnergyNorth rate case filed subsequent to Liberty ownership has included an updated analysis of indirect gas costs as part of Functional Cost of Service Studies that were filed in each case. However, due to the particular circumstances of each case and how they were resolved, the indirect gas costs remained static, notwithstanding the fact that the Company did provide updated analyses of the costs.

6. If applicable, supporting information for the use of a test year other than a calendar year test year (*note: this item is not applicable to the current filing because the test year for this filing is calendar year 2019*).

The Company's filing presents the information necessary to address each of these directives, along with related requirements from Docket No. DG 15-362, Docket No. DG 17-035, and Docket No. DG 17-048. This section of my testimony describes how the Company has complied with the requirements from the various orders and secretarial letter issued in these dockets.

Q. Have you included an attachment that identifies the various requirements from those dockets and where the Company is addressing them in the rate case filing?

A. Yes. Attachment SEM-1 presents a list of the various requirements along with a reference to the Company's testimonies and attachments where the pertinent information is located.

Q. Please describe the follow-up information provided in the Company's filing with respect to Docket No. DG 15-362, the Windham and Pelham franchise docket.

A. As discussed in that docket, the Company is serving customers in Pelham via a newly constructed take station on the Concord Lateral that is owned by Tennessee Gas Pipeline. Customers in Pelham are served under Managed Expansion Area rates in order to help pay the cost of the take station. In Docket No. DG 15-362, the Commission approved a settlement agreement that, in part, included a "risk sharing" mechanism whereby, as applicable to this rate case filing, the Company is required to prepare a discounted cash flow ("DCF") analysis that compares the revenue requirement of the take station with the anticipated annual revenue from new Pelham customers. If there is a shortage in the average anticipated annual revenue over a three-year period following the date of implementation of permanent rates, as compared to the average annual revenue requirement over the same three-year period, the Company is required to absorb one-half of that shortfall.

Q. When was the Pelham take station placed into service?

A. It was placed into service on January 29, 2018.

Q. What is the proposed implementation date for permanent rates?

A. The proposed implementation date for permanent rates in this case is August 1, 2021.

Q. In accordance with the settlement agreement in Docket No. DG 15-362, what is considered as "anticipated revenue?"

A. The settlement agreement in that docket defines "anticipated revenue" as follows: "For purposes of this risk sharing section, anticipated revenue will include committed revenue plus Estimated Annual Margin as defined in EnergyNorth's main extension provision in its tariff."

Q. Has the required analysis been prepared?

A. Yes. Attachment SEM-2 presents the required analysis. As shown in Attachment SEM-2, the calculated average annual shortfall is approximately $129,165, with one-half of that amount being $64,583.

Q. Will this information be updated as the case proceeds?

A. Yes. It is expected that during the course of this proceeding additional sales opportunities will materialize, thus reducing the estimated shortfall.

Q. Have the results of the analysis been incorporated into the overall revenue requirement schedules?

A. Yes. The adjustment is included on Schedule RR-EN-3-1 in the attachments to the permanent rates testimony of Company witnesses David Simek and Kenneth Sosnick.

Q. Please describe the follow-up items you are addressing from Docket No. DG 17-048, EnergyNorth's last rate case, as identified in the secretarial letter.

A. The items I discuss are as follows: (i) the status of the amortization of the depreciation reserve deficiency that was determined in that case; and (ii) various items with respect to the topic of decoupling, including information to enable the Commission to evaluate the impact of decoupling. In addition, although not noted in the secretarial letter, I also provide a description of how various software-related items were assigned to the 3-, 5-, and 10-year amortization buckets.[6]

Q. With respect to the depreciation reserve, what was required as part of the Commission's Order No. 26,122 in Docket No. DG 17-048?

A. A relatively large depreciation reserve deficiency of just over $9.9 million was determined in that docket, and the order approved its amortization over a six-year period.

---

[6] Order No. 26,156 (July 10, 2018), at 7.

As part of its order, the Commission adopted the Company's position to perform a re-examination of the reserve variance in EnergyNorth's next rate case, rather than performing a full depreciation study.

Q. Has that analysis been performed?

A. Yes. The Company engaged the services of Management Applications Consulting, Inc. ("MAC"), which is the same consulting firm that prepared the depreciation study in Docket No. DG 17-048, in order to leverage the consultant's knowledge of the proceeding as well as its existing database of Company plant information. A copy of MAC's technical report is provided as Attachment SEM-3.

Q. What were the results of that analysis?

A. As detailed in Attachment SEM-3, the results of the review were that the reserve deficiency had actually grown since the last rate case to $16.4 million. The result was not what was expected as the amortization of the $9.9 million deficiency, which began in May 2018, was expected to decrease. However, as described in the consultant's report, there are several factors that contributed to this result, including the regulatory lag between the period involved in the study (i.e., plant in service as of December 31, 2016) and the May 1, 2018, start of the amortization; the fact that during that interim period a reserve surplus from an earlier case was still being amortized which, coupled with the fact that a deficiency actually existed, increased the amount of the deficiency by approximately $3.4 million; and the Company's long-standing cost of removal estimate of 10 percent that is applied to certain capital projects that dates back to prior ownership of the Company.

Q. Did the consultant have any recommendations as to how to address the reserve deficiency going forward?

A. Yes. Although MAC recommended the Company continue to use the 10 percent proxy for the cost of removal, MAC further recommended that the Company analyze jobs of various sizes and types to ascertain whether the 10 percent proxy currently being used for cost of removal should be adjusted downward. In addition, MAC recommended that the new depreciation study including calendar year 2020 plant data be performed during 2021 to determine if the life analyses support a longer service life for any accounts.

Q. Is the Company requesting any adjustment to the depreciation reserve deficiency amortization that was approved by the Commission in Docket No. DG 17-048?

A. No. The Company has determined that the best course of action is to follow the recommendations of its consultant and perform additional analysis to determine if any internal policies need to be changed. Thus, the Company is not proposing any adjustment to the approved six-year amortization of the reserve deficiency.

Q. Next, what are the decoupling items from Docket No. DG 17-048 that you are addressing?

A. In Order No. 26,122, the Commission required EnergyNorth to file the following information in its next rate case as part of its approval of a decoupling mechanism:

1) the amount of revenue collected or passed back through this mechanism, by year;

2) an account of any measurable impacts decoupling had on Liberty's utility sponsored energy efficiency programs;

3) a detailed list of all efforts the Company made to promote its own energy efficiency programs, and to promote other energy efficiency measures such as lobbying for stricter building/energy codes;

4) an account of efforts taken to educate builders about energy efficiency;

5) a detailed list of meetings with state and local officials and associations to promote energy efficiency;

6) customer feedback resulting from decoupling as implemented through the rate design; and

7) any changes in the Company's credit rating.

In addition to those items, the Commission required the Company to demonstrate that decoupling has allowed the Company to "remain an effective champion of energy efficiency" and has unlocked its "ability to enthusiastically support energy efficiency policy goals."[7]

Q. Please discuss each of the above items.

A. With respect to item (1), revenue collected or passed back to customers pursuant to the decoupling mechanism can happen in one of two ways. First, through the operation of the Normal Weather Adjustment ("NWA") that appears on each customer's monthly bill during the November through April winter period, a refund or charge is determined based on the difference between actual degree days over the billing period versus the "normal" heating degree days over the same historic period. Since the implementation of

[7] Order No. 26,122 (Apr. 27, 2018), at 46.

decoupling on November 1, 2018, the total revenue passed back to customers for the NWA through the end of May 2020[8] was $2,413,206, with the totals by year shown in Table 1 below.

The second method by which revenue can be either collected or passed back to customers is through the Revenue Decoupling Adjustment Factor ("RDAF"). The RDAF was addressed in Docket No. DG 19-145, in which the Company's Cost of Gas and its Local Delivery Adjustment Charge ("LDAC") were reviewed. The RDAF is one component of the LDAC. The RDAF provides an annual reconciliation of allowed revenues versus actual revenues, and beginning November 1, 2019, customers began receiving a credit of approximately $7 million, which is being returned over a twelve-month period. The yearly amounts of revenue collected or passed back through the NWA and the RDAF are shown below in Table 1:

Table 1

Period	NWA	RDAF	Total
11/2018 - 12/2018	$ (995,662)		$ (995,662)
01/2019 - 12/2019	$ 50,691	$ (986,682)	$ (935,991)
01/2020 - 05/2020	$ 3,358,177	$ (4,008,376)	$ (650,199)
	$ 2,413,206	$ (4,995,058)	$ (2,581,852)

[8] The NWA is in effect during the November through April winter period. In the months beyond April there are still amounts reflecting April usage billed in May as well as very minor adjustments in other months related to cancel/rebill transactions that may be necessary for individual customer bills.

In summary, through May 31, 2020, customers as a whole have received a positive financial benefit since the inception of decoupling of approximately $2.6 million.

Regarding item (2), please refer to Attachments SEM-4 and SEM-5 for information prepared by the Company and FTI Consulting ("FTI"), respectively, that provide assessments of the measurable impacts of decoupling on the Company's energy efficiency programs as well as the Company's ability to remain an "effective champion of energy efficiency." FTI analyzed the Company's data as well as data of peer companies locally and in New England to gauge the impact decoupling has had on the Company's energy efficiency efforts. FTI reached several conclusions, as detailed in Attachment SEM-5, most notably that "it is clear that the increased revenue certainty that came with decoupling either incented it to more zealously expand its EE program, or eliminated disincentives to do so, and that savings from its EE programs increased as a result."[9] The positive conclusions by FTI stand out even more when one considers factors that may have otherwise tempered energy efficiency efforts during the time following the implementation of decoupling. First, the relatively modest NWA adjustments provided in Table 1 above, especially when considered on an individual customer basis, would not be expected on their own to have much of an impact on customer behavior with respect to the energy efficiency programs. Second, it is important to keep in mind that decoupling only impacts the distribution portion of customers' bills. Commodity prices have recently been lower than in the past, so when

[9] Attachment SEM-5, page 25 of 25.

customers assess their overall bill, lower Cost of Gas prices also affect customer behavior and the demand for energy efficiency measures. Finally, as described above, customers are currently receiving the benefit of a sizable credit through the RDAF. All of these factors working together, along with the infancy of the decoupling mechanism, make FTI's conclusions regarding the positive effects of decoupling on Liberty's energy efficiency efforts even more impressive.

EnergyNorth's activities and efforts through June 1, 2020, with respect to items (3), (4), and (5) above are summarized and detailed in Attachment SEM-6. Page 1 summarizes the total number of 2018, 2019, and 2020 activities through June 1, 2020, along with providing the total number of activities associated with requirements (3), (4), and (5). The remainder of Attachment SEM-6 is a detailed list of each activity including the date and details as to the type of activity, the audience, the market segment (e.g., residential, C&I), and other relevant information.

With respect to item (6), there has been very little customer feedback and few inquiries with respect to decoupling, with most of the inquiries occurring near the beginning of the implementation period. A list of the inquiries through June 1, 2020, is provided in Attachment SEM-7. The Company also refers the Commission to its report on the first 90 days of decoupling that was submitted to Staff on February 28, 2019, and was submitted to the Commission by Staff on March 4, 2019, as part of Docket No. DG 17-048.[10]

Lastly, with respect to item (7), through June 24, 2020, the Company has not experienced any changes to its credit rating as a result of the implementation of decoupling.

Q. What did the Commission require in Docket No. DG 17-048 with respect software classifications and amortization periods?

A. Because the creation of separate classifications of software with varying amortization periods in the DG 17-048 matter was new for EnergyNorth, the Commission required that in the next rate case Liberty clearly describe how each piece of software is assigned an average service life.[11]

Q. Please describe how various items of software are assigned to the 3-, 5-, and 10-year amortization buckets.

A. With each item of software, the subject matter experts who use the software and are familiar with its features are consulted as to the appropriate life to apply to the software. Those subject matter experts reside in various departments, such as Information Technology, Engineering, Dispatch and Control, or other areas, depending on the particular nature and use of the software. The amortization period for cloud-based hosting arrangements will be the term of the service contract. The amortization period

[10] The Company's 90-day report on decoupling can be accessed at: http://www.puc.nh.gov/Regulatory/Docketbk/2017/17-048/LETTERS-MEMOS-TARIFFS/17-048_2019-03-04_STAFF_FILING_LIBERTY_DECOUPLING_RPT.PDF

[11] Order No. 26,156 at 6 (July 10, 2018).

for other software solutions will depend on the specifics of the software and may vary between contracts. In some cases, details from a business case document will provide details supporting the useful life. Regardless of the particular circumstances, the Company's Plant Accounting department will not issue the job without having a clear direction on the appropriate useful life.

Q. Are there other follow-up items from Docket No. DG 17-048 identified in the secretarial letter that are addressed elsewhere in the Company's filing?

A. Yes. The following items are addressed elsewhere in the Company's rate case filing:

- An analysis of the Company's investment in the iNATGAS compressed natural gas facility is included in the joint testimony of Messrs. Clark and Stevens;
- Adjustments to the revenue requirement for a year-end customer count, employment vacancies, and severance pay are included in the joint testimony of Messrs. Simek and Sosnick;
- Information regarding production costs incurred by the Keene Division as well as any non-supply costs to be recovered through the Keene cost of gas are also included in the joint testimony of Messrs. Simek and Sosnick; and,
- Indirect gas costs are addressed in the testimony of Mr. Sosnick on the Functional Cost of Service Study.

Q. In summary, has the Company addressed all of the directives in the February 28, 2020, secretarial letter in Docket No. DG 19-161?

A. Yes, with one addition. Item 2(d) of the secretarial letter related to the Keene CNG/LNG conversion. The conversion of the Keene system from propane/air to CNG and LNG has not reached a phase where the concept of a revenue shortfall would come into effect. The only conversion that has happened to date is to the limited number of customers located at the Monadnock Marketplace and, consistent with Order No. 26,294,[12] no customer commitment requirement was required as part of the Commission's approval of the conversion of that limited portion of the system.

Q. Lastly, please describe the follow-up item from Docket No. DG 17-035 with respect to the special contract with the New Hampshire Department of Administrative Services.

A. As stated above, Docket No. DG 17-035 involved a special contract with NHDAS related to its need for temporary boilers in order to ensure uninterrupted service for various State of New Hampshire buildings during the interim period between Concord Steam's cessation of service and NHDAS's completion of necessary retrofitting of natural gas equipment at those locations. A requirement of that special contract proceeding was that Liberty inform the Commission about the final costs associated with the contract. The Company has provided this information in the joint testimony of Company witnesses William Clark and Mark Stevens.

---

[12] Docket No. DG 17-068, Order No. 26,294 (September 25, 2019) at 14.

Attachment SEM-1 provides a further summary of the Company's compliance with the Commission's directives.

V. <u>DUE DATES FOR RATE AND OTHER FILINGS</u>

Q. Please provide your general comments regarding due dates of rate-related and other required filings.

A. Over just the past five years, the regulatory reporting requirements of EnergyNorth and Keene have grown to where, on a combined basis, the weekly, monthly, quarterly, and annual required filings total slightly over 400 per year. That does not include other event-driven filings such as incident reports, interruptions of service, and similar filings that each year add to that total, depending on the occurrence of the relevant "events." Those reporting requirements have been established by rules, laws, Commission orders, settlement agreements, and other measures over the years, which have for the most part included due dates either in mid-month or on the last day or first day of a month. In addition to the increase in the total number of reporting requirements, an increase in the number of reports due simultaneously has also occurred. Moreover, directives from the Commission, whether by order or secretarial letter, to file supplemental information in dockets, special reports, or other documents also typically include mid-month or end of month due dates. Although the use of overlapping due dates is most likely coincidental, it creates a significant burden on the utility.

Particularly with respect to rate-related filings, the overlapping due dates also create burdens for the Commission, its Staff, and the OCA to review and analyze those filings simultaneously, recognizing that Liberty is not the only utility submitting filings at any particular time. It is important to note that many of the same Liberty personnel who are involved with filings for EnergyNorth are also involved with filings for Granite State that fall on the same due dates or otherwise overlap.

Q. Taking your above comments into account, what do you recommend?

A. Recognizing the burden that overlapping filings can cause for those on both ends of the regulatory structure, and while recognizing that some of the overlapping dates stem from laws or Commission rules, the Company recommends that a discussion take place among Liberty, Commission Staff, and the OCA to review existing reporting requirements and deadlines and determine if certain requirements (including due dates) can be revised in terms of content or frequency, and whether some may be combined or eliminated. Through such a meeting the Company is hopeful of developing reporting requirements and timelines that work well for all involved and spread the workload to allow everyone to work more efficiently, which is in everyone's best interest.

Q. Did you raise this same issue in Granite State's recently concluded rate case, Docket No. DG 19-064?

A. Yes. In that case a provision was included in the Settlement Agreement by which the Company, Staff, and the OCA would meet by a certain date to review Granite State's reporting requirements. Liberty would seek a similar agreement in this proceeding with respect to EnergyNorth's reporting requirements.

VI. CUSTOMER SERVICE INITIATIVE

Q. Please describe the planned initiative to switch the Company's payment services provider.

A. Liberty plans to change its payment services provider from Fiserv to Kubra in January 2021. As part of that change, payment options that are currently available through the Company's IVR system and website will be processed by Kubra rather than Fiserv. Associated with change of providers, the current credit card fee payment structure will be modified.

Q. Please explain the options the Company is evaluating to change the credit card fee payment structure?

A. In response to feedback from customer satisfaction surveys, the Company is exploring two different credit card fee structures. One option is to continue the current practice of requiring the customer pay a separate transaction fee for using a credit or debit card to make their bill payment. The other option is to offer the credit card payment option without a transaction fee, with the cost of the service borne by the Company and included as part of operating costs. Customers frequently express dissatisfaction with the current structure that requires a transaction fee for credit card usage, so exploring a fee free model is important to addressing customer concerns.

Q. How would this work?

A. Under the fee free model, EnergyNorth customers would be able to pay their bills by using a credit or debit card without incurring a separate transaction fee for using that payment method. This approach is consistent with customer expectations, which are changing in response to the growing availability of digital technology and a proliferation of methods to purchase and sell goods and services in an e-commerce environment. The Company's customer satisfaction surveys show that customers expect to be able to use their credit cards without incurring a separate fee, in large part because they now routinely make purchases and pay bills using these methods. In today's economy, customers rarely pay a separate transaction fee to use a credit or debit card to make payments. Consequently, requiring a transaction fee for utility payments causes a high level of dissatisfaction for customers. A fee free payment option would be a significant step in increasing customer satisfaction.

Q. Does the Company have a specific proposal at this time?

A. No. The Company believes it would be appropriate to have discussions with Staff and the OCA to examine the pros and cons of the various alternative and keep the costs of either approach reasonable for customers. If the Company were to pursue a fee free model, it is likely that customer usage of the credit card payment option would increase substantially, and has the potential to become a relatively significant cost. For this reason, the Company will not implement the program without Commission approval.

Q. Does this conclude your testimony?

A. Yes, it does.

Liberty ENNG Rate Case – Compliance Items

Docket	Compliance Requirement	Docket No. DG 20-105 Initial Filing Cross Reference
DG 19-161 2019 Rate Case	Secretarial Letter (2/28/2020) Item 1: "In Order No. 25,987 (concerning expansion of gas service in to Pelham and Windham) the Commission approved a risk sharing mechanism requiring Liberty to absorb one half of a Pelham revenue shortfall in its first rate case after commencing service, based on a comparison of the anticipated average annual revenue requirement and an updated actual average annual revenue requirement." • "Liberty must include in its initial filing of its next rate case all the information required to be filed by Order No. 25,987, including but not limited to, a revenue requirement calculation that includes an adjustment, if applicable, as outlined in the Settlement Agreement approved in that Order, and detailed supporting schedules as required by that Settlement Agreement."	• Mullen Testimony, Att. SEM-2 • Rev. Req. Schedule EN-RR-3-1
	Secretarial Letter (2/28/2020) Item 2: Consistent with Order No. 26,122, Liberty must also include in its next initial rate case filing: • an analysis of Liberty's depreciation reserve imbalance (Order No. 26, 122 at 18).	• Mullen Testimony, Att. SEM-3
	Secretarial Letter (2/28/2020) Item 2: Consistent with Order No. 26,122, Liberty must also include in its next initial rate case filing: • the information necessary to permit the Commission to evaluate the impact of decoupling (Order No. 26,122 at 46).	• Mullen Testimony • Atts. SEM-4, SEM-5, SEM-6, SEM-7
	Secretarial Letter (2/28/2020) Item 2: Consistent with Order No. 26,122, Liberty must also include in its next initial rate case filing: • an analysis of Liberty's investment in its iNATGAS facility similar to Exhibit 46 in DG 17-048, in sufficient detail, to allow the Commission to evaluate the investment and its impacts on firm customers.	• Clark/Stevens Testimony
	Secretarial Letter (2/28/2020) Item 2: "Consistent with Order No. 26,122, Liberty must also include in its next initial rate case filing: • a reduction to Liberty's proposed revenue requirement by 50 percent of any revenue shortfall for the first phase of the Keene CNG/LNG conversion.	• Mullen Testimony (project has not progressed to that point)

II-227

Docket	Compliance Requirement	Docket No. DG 20-105 Initial Filing Cross Reference
	Secretarial Letter (2/28/2020) Item 3: Order No 26, 122 also established a number of adjustments to be included in Liberty's revenue requirement calculations. In its next rate case filing, Liberty's revenue requirement calculation must include adjustments for each item specifically adopted in Order 26,122 (or an explanation as to the change in circumstance that obviates the need for specific adjustments). Those adjustments include: • Year-End Customer Count vs. Average Customer Count (Order No. 26, 122 at 1 O); • A payroll calculation that reflects a representative level of vacancies (Order No, 26, 122 at 11); and • Severance Pay (Order No. 26, 122 at 13).	• Simek/Sosnick Testimony (Perm)
	Secretarial Letter (2/28/2020) at 2: • "Liberty's next rate petition should also include in its initial filing updated indirect gas costs with supporting testimony and schedules." • "In addition, the initial filing should identify and explain all non-supply costs to be recovered through the Keene cost of gas."	• Sosnick Testimony (Functional Cost of Service Study) • Simek/Sosnick Testimony (Perm)
	Secretarial Letter (2/28/2020) at 2: "Finally, at the prehearing conference, Staff and the Office of the Consumer Advocate stated that a calendar year test year is preferable to a split-year test-year because it aligns with the Company's Annual Report to the PUC, Form F-16. The Commission found those statements persuasive and thus recommends Liberty use a calendar year in its next filed rate case. If it chooses not to do so, the Company must provide all supporting information in the format of a Form F-16 Annual Report."	• Not applicable: No split-year test year.

II-228

Docket	Compliance Requirement	Initial Filing Cross Reference
DG 17-048 2017 Rate Case	Order No. 26,122 (Apr. 27, 2018): • Depreciation – Amortization of Reserve Deficiency: "Thus, we approve a six-year amortization period of the existing test year-end balance and direct the Company to prepare and present in its next rate case, a review of the reserve imbalance, a thorough explanation of the cause of any imbalance, and a proposal for amortizing that reserve imbalance." Id. at 18.	• Mullen Testimony • Att. SEM-3
	Order No. 26, 122 (Apr. 27, 2018): • Revenue Requirement Adjustments: o Customer count. Id. at 10 o Employee vacancies. Id. at 11 o Severance pay. Id. at 13.	• Simek/Sosnick Testimony (Perm)
	Order No. 26,122 (Apr. 27, 2018): • Rate Base – iNATGAS: "Nevertheless, the plant has been built and, for purposes of the base rates set in this case, we will allow recovery of the plant up to the level of costs presented in DG 14-091 ($2,245,000) plus related O&M expense. We will re-evaluate this investment in Liberty's next rate case and may consider putting more of the investment in rate base at that time. The remedy fashioned here will put ratepayers in the position they were in when this project was approved." Id. at 31-32.	• Clark/Stevens Testimony
	Order No. 26,122 (Apr. 27, 2018): • Keene: Commission permits the consolidation of Keene Division distribution rates with those of EnergyNorth subject to conditions, including: o "Liberty must reduce its revenue requirement by 50 percent of any revenue shortfall in the first distribution rate case filed within five years following construction of each Phase and by 100 percent of any revenue shortfall in the second distribution rate case filed within the five years following the construction of each Phase." Id. at 39. o Revenue requirement to include both production and distribution costs. Id. o Direct cost of Keene system shall be recovered in rates to all distribution customers. Id. o Customer commitment requirements. Id. o Liberty to file updated DCF analyses at the in-service date of each phase and annually. Id. at 40.	• Simek/Sosnick Testimony (Perm) • Sosnick Testimony (Functional Cost of Service Study) (Not all items are applicable at this time)

II-229

Docket	Compliance Requirement	Initial Filing Cross Reference
	Order No. 26,122 (Apr. 27, 2018): • Decoupling: "Further, to assist the Commission in evaluating Liberty's decoupling, we require the Company to report in its next rate case on the following: (1) the amount of revenue collected or passed back through this mechanism, by year; (2) an account of any measurable impacts decoupling had on Liberty's utility sponsored energy efficiency programs; (3) a detailed list of all efforts the Company made to promote its own energy efficiency programs, and to promote other energy efficiency measures such as lobbying for stricter building/energy codes; (4) an account of efforts taken to educate builders about energy efficiency; (5) a detailed list of meetings with state and local officials and associations to promote energy efficiency; (6) customer feedback resulting from decoupling as implemented through the rate design; and (7) any changes in the Company's credit rating. The above list is not intended to be exhaustive. In short, we require the Company to demonstrate that decoupling has allowed the Company to "remain an effective champion of energy efficiency" and has unlocked its "ability to enthusiastically support energy efficiency policy goals.'" Id. at 46.	• Mullen Testimony • Atts. SEM-4, SEM-5, SEM-6, SEM-7
	Order No. 26,122 (Apr. 27, 2018): • Test Year: Liberty shall file its next distribution rate case using a test year ending no later than December 31, 2020, and that rate case shall include a report on the effects of decoupling as detailed in the order. Id. at 56.	• Mullen Testimony
	Order No. 26,156 (July 10, 2018): • As suggested by Staff, we require that Liberty, in its next rate case, clearly explain how each piece of software is assigned an A[verage]S[ervice]L[ife]. Id. at 7	• Mullen Testimony

II-230

Docket	Compliance Requirement	Initial Filing Cross Reference
DG 17-068 Keene Declaratory Ruling re CNG/LNG	Order No. 26,274 (July 26, 2019) (order on affirming/clarifying declaratory ruling): • "We note that Puc 503.04(a) requires gas utilities to 'provide certain services to its customers when service conditions such as change in pressure or composition of gas affect or would affect efficiency of operation or adjustment of appliances.' Puc 503.04(b) further requires that if any such change occurs, the 'utility shall, without undue delay and without charge, inspect the appliances of its customers and, if necessary, readjust those appliances for the new conditions.' Based on the Staff Assessment, it appears that these provisions will apply to the Keene system conversion, and we direct Liberty to address these rules when it seeks to recover Keene conversion costs from ratepayers." Id. at 11. • "In addition, in accordance with the directives set forth in Order No. 26,122, Liberty must provide updated discounted cash flows (DCFs) based on detailed engineering plans and customer commitments that will produce at least 50% of the revenue requirement associated with the new facilities prior to the initiation of construction of each conversion phase." Id. at 13.	• Not applicable at this time.
	Order No. 26,294 (Sept. 25, 2019) (order on rehearing): • "We clarify that before initiation of construction for each phase of the Keene system conversion/expansion, Order No. 26,122 requires Liberty to file a detailed report of its business plan. The business plan shall include all conversion/expansion project costs, as well as detailed projected cost estimates for all conversion/expansion projects to be included in the revenue requirement analysis required as part of the risk-sharing mechanism. The business plan must be supported by updated DCF analyses based on detailed engineering plans and customer commitments that will produce at least 50 percent of the revenue requirement associated with the new facilities. As established in DG 17-048, such DCF analyses are the first step in gaining approval for each phase of the conversion/expansion and will be used to demonstrate that Liberty's New Hampshire ratepayers are not burdened with unfair or unwarranted costs." Id. at 14.	• Not applicable at this time

II-231

Docket	Compliance Requirement	Initial Filing Cross Reference
DG 17-035 NHDAS Special Contract	Order No. 26,018 (May 15, 2017), at 4: Liberty shall "notify the Commission if its costs related to this special contract exceed $2,725,000, and if a contract amendment is necessary and denied, an explanation of the Company's plans in light of the denial, and the expected impact on boiler operations, cost, and cost recovery."	• Clark/Stevens Testimony

Docket	Compliance Requirement	Initial Filing Cross Reference
DG 15-362 Franchise Approval in Pelham and Windham	Order No. 25,987 (Feb. 8, 2017), at 4 (Settlement Agreement Condition #4): "Liberty would recover the costs incurred to construct a take station off of the TGP Concord Lateral in Pelham through its distribution rates as part of a rate case. These costs would be amortized over 10 years, including a pre-tax return, based on the Commission-approved capital structure and cost of capital for Liberty."	• Mullen Testimony • Att. SEM-1 • Rev. Req. Schedules EN-RR-3-1
	Order No. 25,987 (Feb. 8, 2017), at 4 (Settlement Agreement Condition #5): "As a 'risk-sharing' provision Liberty would reduce its revenue deficiency in any rate case filed within five years of the in-service date of Phase 1 of the Pelham build-out as follows (as demonstrated in Appendix B of the Settlement Agreement): . . . a. In the first rate case any revenue deficiency between the anticipated average annual revenue from Pelham customers over the three years following implementation of permanent rates, and the average annual revenue requirement over the same period of the Pelham construction costs and amortization of the Pelham TGP take station, **would be reduced by one half**. If a second rate case is filed within the five year period, the amount of the reduction to the revenue deficiency **would be the full difference between** the anticipated Pelham revenue requirement and projected revenues. . . . b. For purposes of the risk-sharing provision, costs would include actual direct capital costs to date, the Pelham take station amortization expense, and projected direct capital costs for system reinforcement and customer growth to serve Pelham. . . . c. For purposes of the risk-sharing provision, anticipated revenue would include committed revenue plus Estimated Annual Margin as defined in Liberty's main extension provision in its tariff. . . . d. The risk-sharing provision would terminate if average annual revenue exceeds average annual revenue requirement. e. Liberty would file annual updated Pelham and Windham Discounted Cash Flow ("DCF") analyses in January of each year following the first full year of commencement of service until the projects achieve a positive annual return, but for no less than three years, and for no more than five years (as demonstrated in Appendix C of the Settlement Agreement). . . ."	• Mullen Testimony

MEMO

DATE: July 20, 2020
TO: Steve Mullen, Liberty Utilities
FROM: Paul Normand and Marcy Stefan
SUBJECT: Review of Reserve Variance Deficiency for Liberty Depreciable Gas Plant

At Liberty's request, MAC has reviewed the growth in the Company's plant as it relates to depreciable plant with the goal of quantifying the change in reserve imbalances since the Company's last depreciation study. In evaluating the change in plant balances as ordered in the last rate case, this creates a very complicated process of identifying any change by specific plant account. Since the 2016 period of time, many plant balances have been reclassified to comply with the New Hampshire Public Utility Commission's Staff audit, and we have derived the following detail comparisons by category with which to quantify the growth in the reserve imbalance:

<u>TABLE 1</u>

TABLE 2

Historical Cost of Removal

DATE	$ COST OF REMOVAL	ACCUMULATED $ COST OF REMOVAL
@12/31/2012	573.53	573.53
@12/31/2013	1,502,866.45	1,503,439.98
@12/31/2014	1,604,008.61	3,107,448.59
@12/31/2015	1,504,536.59	4,611,985.18
@12/31/2016	1,736,434.75	6,348,419.93
@12/31/2017	2,527,346.53	8,866,047.53
@12/31/2018	2,843,715.44	11,709,762.97
@12/31/2019	3,738,897.19	15,448,660.16

Note: The Cost of Removal relates to the following work types:
1. Relay Main
2. Main Replacement
3. Relay service
4. Service Relocation
5. Service Replacement

Two key aspects of the Company's reserve variance growth are with respect to the replacement/retirement of large quantities of mains and services and the potential change in average service life (ASL) of depreciable assets. The first key element relating to ASL has to do with the potential increase to the life once new additions are factored into any life analyses. Based on experience and the Company's historical growth data, we would expect that a new study would derive longer service lives for both mains and services which would impact the resulting reserve variance. The second key element recognized annually is the cost of removal portion of the Company's plant replacement activities. It is this portion of costs that the Company has historically been estimating as a blanket 10% of investments in major plant accounts. In understanding this process, large growth in plant investments which has been occurring for many years, especially for key plant accounts related to mains and services, results in large amounts of unrecovered dollars being identified but not recovered in the short term.

Historically, we have observed that some utilities had periodically used a flat 10% estimate for cost of removal as a proxy to the more detailed and laborious efforts required to quantify these amounts which are primarily labor related. In the last ten years, the rapid increase in plant replacement/retirement requirements had, in many cases, resulted in a more detailed review of these costs (COR) which has resulted in being modified to reflect a much lower 3 to 5% range of costs to new plant investments. The cost areas typically considered are with respect to digging a trench, cutting and purging pipe, capping, resurfacing and flaggers/police. Again, the growth in

DATE: July 20, 2020
TO: Steve Mullen, Liberty Utilities
FROM: Paul Normand and Marcy Stefan
SUBJECT: Review of Reserve Variance Deficiency for Liberty Depreciable Gas Plant

these costs has been a direct result of a much higher frequency of retirement/replacement occurring for gas plant.

Based on our review of the available data (Tables 1 and 2), we offer the following recommendations to consider for the future plant activities of the Company's depreciable plant accounts:

1. Continue to record and document the Company's 10% COR by plant account.
2. In order to evaluate the current level of COR, a detailed effort coordinated between engineering (field) and accounting be undertaken for all major plant activity with respect to identifying/estimating activities relating solely to COR (plant and labor associated with activities). This should consider various types of projects where one can balance small and large projects to achieve an outcome to compare with the current 10% estimated level.
3. Once in place, consider maintaining this process going forwards to ensure that the new proposed levels are supportable.
4. The efforts surrounding the application of Items 1 – 3, above, should be undertaken as soon as possible such that the results will be available to influence the Company's next depreciation study.
5. Recommend that a new depreciation study be undertaken with the calendar year 2020 data included to ascertain if the life analyses support a longer average service life for any accounts. This should be prepared in early 2021 to provide you with immediate information as to the possible impact along with the technical support to possibly suspend the current allowed annual recovery of the shortfall.

Liberty Utilities, NH
ENNG – Impacts of Decoupling on Energy Efficiency
As of 6/1/2020

Summary
Attached is a detailed inventory of specific marketing and promotion activities performed in 2018, 2019, and year-to-date in 2020 for the Company's natural gas energy efficiency programs. Activities are differentiated between advertisements, events, and training sessions performed, and further classified as relating to, (a) the promotion of stricter building energy codes in the state, (b) the education activities to builders, and/or (c) the engagement with state and local officials and associations to promote energy efficiency.

In summary, the Company more than doubled its volume of marketing and promotion activities between 2018 and 2019, performing 240 documented tactics in 2019 as compared to 99 in 2018. The Company increased its engagement with state and local officials and associations by 150%, and increased its education activities to builders by 88%. Specific tactics the Company deployed to promote stricter building energy codes in the state increased 64%, including where the Company expressed public support and lobbied for the full adoption of the 2015 IECC standards. In 2020, the Company is on pace to exceed its 2018 activity levels again and come close to matching if not exceeding certain 2019 activity levels, despite the market implementation challenges posed by COVID-19.

In terms of general promotion of the Company's energy efficiency programs, of noteworthy recognition is the Company's implementation of a broad-based, multi-channel mass-media campaign launched in April 2019. The campaign is a natural gas-focused energy efficiency advertising effort utilizing monthly Cable TV commercials and traditional and online radio spots, bus-wrappings, billboard advertisements, and social media marketing. This was a first-of-its kind energy efficiency marketing campaign from any of the NH utilities, which the Company is continuing to deploy on a monthly basis in 2020.

In terms of any measurable impacts decoupling has had on the results of the Company's sponsored energy efficiency programs, the Company increased its lifetime MMBtu savings achievements by 26% in 2019 compared to its 2018 savings achievements, while only increasing its program expenditure levels by 8% between 2019 and 2018.

Lastly, the Company completed a survey of its residential customers in April 2020 to measure the level of energy efficiency program awareness. As part of the survey findings, the Company found that nearly three in four customers (73%) are aware that the Company offers energy efficiency programs to help customers reduce their energy costs, which is significantly higher than the awareness level recently measured as part of the Company's annual customer satisfaction survey completed in the fall of 2019, where energy efficiency program awareness was found to be 64%. The Company had last measured customer awareness of its energy efficiency programs in its 2016 annual customer satisfaction survey, where program awareness was measured to be 57%.

FTI CONSULTING

JULY 31, 2020

EVALUATION OF THE EFFECTS OF REVENUE DECOUPLING ON ENERGY EFFICIENCY PROGRAM ACHIEVEMENT

Liberty Utilities

EXPERTS WITH IMPACT™

1. Introduction and Summary

The Power & Utilities practice at FTI Consulting Inc. ("FTI") has been retained by Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty ("Liberty" or the "Company") to evaluate linkages between rate decoupling and outcomes for utility-sponsored Energy Efficiency ("EE") programs. Specifically, FTI was asked to analyze changes in the behaviors of gas utilities that are generally similar to Liberty in terms of size and geography attributable to the implementation of rate decoupling and, to the extent that such changes were identified, attempt to measure the effects.

The context for our inquiry is the rate case with which this report is filed. In Liberty's most recent completed rate proceeding, the New Hampshire Public Utilities Commission (the "Commission") authorized it to implement New Hampshire's first revenue decoupling program, which includes a mechanism to adjust rates for differences between the revenue target contemplated in the Company's most recent base-rate case and actual sales revenues. By accounting for this difference, the revenue decoupling mechanism is designed to eliminate revenue risks that arise from increasing EE penetration, in addition to changes in weather and other variables.[1] When the Commission approved the implementation of this mechanism through the rate settlement in the Company's most recent base-rate proceeding, the Commission directed Liberty to report on the effectiveness of the mechanism in achieving the desired outcome, when the Company next requested a change in distribution rates.[2] This report supports fulfillment of that requirement and provides additional information to the Commission

[1] Order No. 26, 122 at p. 1. Docket No. DG-19-161.
[2] Ibid., p. 46.

and intervenors regarding the effectiveness of the Company's decoupling program in advancing EE achievement.

Our evaluation included two main avenues of inquiry. *First*, we sought to determine whether the Company's behavior regarding its EE programs changed after November 1, 2018. One stated objective of decoupling the Company's rates was the elimination of disincentives to participate in EE programs. If that objective was achieved, we expected to find evidence of greater advocacy for those programs. To determine whether this was the case, we reviewed data regarding the Company's outreach and marketing efforts before and after decoupling took effect and also data showing savings from EE programs in those two periods.

Second, we sought to isolate evidence indicating a relationship between decoupling and EE achievement through a comparative analysis of similar utilities. Here, our thesis was that, if revenue decoupling is positively correlated to EE achievement, we would find evidence of that relationship for utility companies that operate in different jurisdictions, under different management, and which decoupled their rates at different times. To undertake this part of our analysis we reviewed EE data for a number of gas utilities, and one electric utility, throughout New England.

Through this investigation, we found that there is significant evidence that revenue decoupling and EE achievement are linked. Data for Liberty shows that its behavior changed once the Commission approved its request to decouple its rates from its revenues and that significant savings from its EE programs was a direct result. We also found similar outcomes for utilities all over New England, for whom gains in EE program savings coincided with the decoupling of rates.

In the final analysis, we conclude that the Commission's approval of Liberty's request to decouple its rates from its revenues in 2018 has provided measurable support for the Company's subsequent gains in energy efficiency and that decoupling is likely to do so moving forward.

The remainder of this report is organized as follows. Section 2 provides a brief overview of utility decoupling, the Commission's approval of revenue decoupling for Liberty, and the Company's EE program. Section 3 describes the increases in the Company's activity levels we observed after November 2018 and the increases in savings from EE programs that Liberty subsequently achieved. In Section 4, we describe the comparative analyses we conducted of other utilities in New England who have implemented decoupling in roughly the last ten years and our conclusion that there has been a demonstrable increase in spending on EE programs, EE savings, or both, for most of those utilities that coincides with the implementation of decoupling. Lastly, in Section 5, we summarize our findings.

2. Revenue Decoupling

Revenue decoupling is a regulatory mechanism that first appeared in 1978 in the state of California to provide relief to natural gas utilities from reduced revenues due to natural gas supply constraints.[3] Since that time, many states have adopted decoupling measures for its electric and/or natural gas utilities through individual rate cases.

In recent years, decoupling has become more common as a growing number of state regulators and policymakers focus attention on reducing energy usage and greenhouse gas emissions. Traditional

3 Department of Energy (2010, July). *Natural Gas Revenue Decoupling Regulation: Impacts on Industry.* U.S. Department of Energy. Retrieved from: https://www1.eere.energy.gov/manufacturing/states/pdfs/nat-gas-revenue-decoupling-final.pdf

ratemaking may incent utilities to seek to increase profits by increasing sales. Simultaneously, utilities may have a financial disincentive to pursue investments and programs, like EE, that tend to reduce sales and revenues.[4] As a result, tensions can arise between policy objectives and utilities' financial outcomes. By "decoupling" revenues from sales, which is often accomplished through some adjustment mechanism that allows the utility to achieve a fixed amount of revenue, expressed on either an overall or on a per-customer basis, that tension can be resolved. With revenues decoupled from sales, utilities can support EE and related programs without putting its revenues at risk.

In April 2018, the Commission authorized Liberty to implement what is known as "full" decoupling in November 2018.[5] Specifically, Liberty is allowed to recover a fixed amount of revenue per customer, regardless of how its throughput changes for any reason.[6] Alternatives to full decoupling include partial decoupling, which allows a utility to recover some but not all of the difference between authorized and actual revenues, and limited decoupling, which provides for recoveries of "lost" revenues attributable to throughput reductions that arise from specific measures; for example, a limited decoupling mechanism may allow a utility to recover the difference between authorized and actual revenues that result from changes to weather but not that arise from changes to economic conditions.[7]

Liberty, along with the other gas and electric utilities in New Hampshire, collaborates to provide its customers EE solutions under the "NH Saves" brand, through which they provide customers with

incentives, information, and support designed to save energy, reduce costs, and promote environmental objectives.[8] Additionally, each of the New Hampshire utilities are individually required to implement the Energy Efficiency Resource Standard ("EERS"), which was established by the Commission in 2016 and creates savings goals expressed as a function of each utility's sales.[9] The EERS additionally requires the annual filing of updates to utility-specific EE plans (the "Statewide EE Plans") through which increasingly stringent EE targets will be achieved. The 2020 Plan Update, filed in September 2019, is the most recent.

Liberty's EE offerings include separate programs for Residential and Commercial & Industrial ("C&I") customers. Residential programs include performance audits, ENERGY STAR appliance rebates, programs targeted at low-income customers, and others.[10] Building and appliance programs are also offered to C&I customers. Additionally, Liberty engages in education and policy advocacy efforts, such as, for example, advocacy before regulatory agencies for more stringent building codes. Most of Liberty's programs also include customer outreach elements, which is to say that it conducts marketing and purchases advertising to make customers aware of its EE programs and the options to create savings they have available.

3. Company Results

FTI reviewed public data regarding Liberty's EE program and data that the Company compiled internally. Both indicate that after decoupling was authorized by the Commission, Liberty spent more on EE,

conducted more outreach and achieved greater savings compared to the period prior to decoupling implementation.

Enhanced Marketing Outreach

Liberty more than doubled the volume of its marketing and promotion activities in 2019, compared to 2018. On an ongoing basis, the Company places advertisements for its EE programs; conducts trainings for professionals in the construction and/or EE industries, including, for example, the Company's participation in the Building Operator Certification program or "button-up" workshops whose purpose is to educate homeowners regarding EE opportunities; and participates in events, which include meetings with government agencies, participation in industry conferences, and running open houses and roundtable discussions.[11] Each activity is tracked individually. In 2018, there were 99 separate instances of outreach by the Company designed to promote its EE programs. In 2019, there were 240, an increase of 142%. Outreach instances are shown below by category:

Table 1. Liberty EE Outreach by Category

	Advertisement	Event	Training	Total
2018	45	25	29	99
2019	72	62	106	240
YoY Change	60%	148%	266%	142%

Liberty also tracks the primary objective of each outreach activity. Primary objectives include the Company's promotion of enhanced building standards, which it seeks to achieve through advertisement and participation in industry events; engagement with state and local officials regarding EE and the

[11] Building Operator Certification (2016, January). *BOC Offered in New Hampshire!* Retrieved from: https://www.theboc.info/boc-offered-in-new-hampshire/

Company's EE program, and others.[12] Table 2 shows the change in the frequency of outreach for each type of objective between 2018 and 2019. Note that the totals exceed those reported in Table 1 since some instances of outreach had multiple objectives.

Table 2. Liberty EE Outreach by Objective

	2018	2019	Increase
Promotion of enhanced building codes	11	18	64%
Education activities with builders	16	30	88%
Engagement with state and local officials	22	55	150%
Other activities	66	161	144%

One of the most impactful approaches to outreach regarding its EE programs that the Company has taken has been a broad-based, multi-channel mass-media campaign launched in April 2019. The campaign includes television and radio commercials, online content, "bus-wrappings", billboard advertising, and social media marketing. The program, which is still ongoing, is the first of its kind in New Hampshire. Customer awareness is one of the key metrics that the Company uses to evaluate the effectiveness of its marketing efforts. Those data indicate that the measures described above have yielded benefits. In April 2020, the Company conducted a survey and determined that 73% of its customers were aware of its EE programs and their potential to help reduce energy costs. In mid-2019, awareness had been considerably lower, 64%, and in 2016, the most recent previous survey, awareness was only 57%.

[12] Much of the Company's 2019 efforts were devoted to advocating for full adoption of the 2015 International Energy Conservation Code ("2015 IECC"), which was adopted, with amendments, by the New Hampshire State Building Code Review Board in September 2019. See https://www.puc.nh.gov/EnergyCodes/energypg.htm

Savings in Recent Years

Available data indicate that the Company's EE savings following decoupling have been significant. Overall, the Company increased the savings achieved by the EE program, measured in lifetime MMBtu savings, by 26% in 2019 compared to its 2018 savings achievements, while only increasing its program costs by 8% over the same period. Savings were achieved in most of Liberty's rate classes (and in all of its largest classes).

Using weather-normalized sales data that Liberty provided, FTI calculated normal use per bill for each rate class for the twelve-month period beginning each November (referred to below as a "decoupling year"). To account for long-run trends, normal use per bill for the annual periods of November 1st through the subsequent October 31st were calculated for each of the five decoupling years that end with October 2019. Results are summarized below.

Table 3. Liberty Usage by Customer Group (average dth/bill)

Normal Usage Per Bill by Class	Nov14-Oct15	Nov15-Oct16	Nov16-Oct17	Nov17-Oct18	Nov18-Oct19
R-1	212	216	218	213	196
R-3 & R-4	752	726	738	748	747
G-41, G-42 & G-43	45,209	44,417	46,009	43,002	40,831
G-51 & G-52	16,745	16,210	17,664	17,715	17,453

To compile these data, we grouped customers by rate class with other, similar classes and calculated average consumption per bill (dth) for each aggregation. In some instances, rate classes with a very small number of customers were excluded.[13] The results indicate a decreasing consumption across classes. Large reductions were observed for the C&I high-winter-use group (rate classes G-41, G-42 &

[13] This includes, for example, the G-53 and G-54 industrial customer rate classes.

G-43) and residential non-heating group (R-1). The results for the residential heating group (R-3 & R-4) indicate smaller declines, expressed on a percentage basis, but represent a sizeable portion of the Company's customers.[14] In each instance, the red line indicates the implementation of decoupling.

Figure 1. Change in Annual Consumption, Residential Non-Heating Group

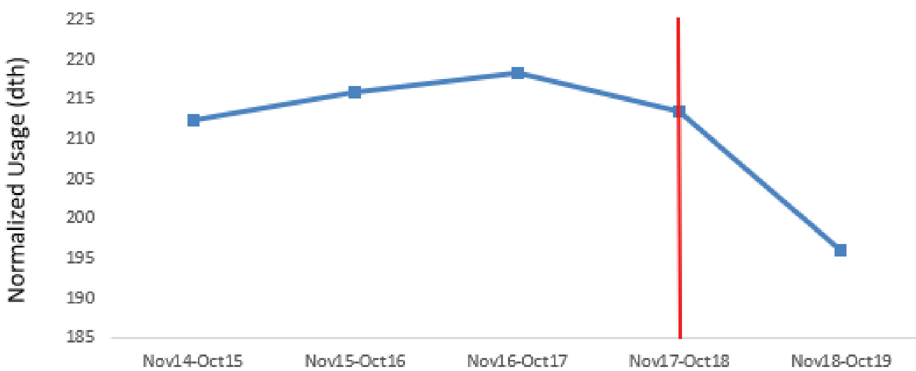

Figure 2. Change in Annual Consumption, Residential Heating Group

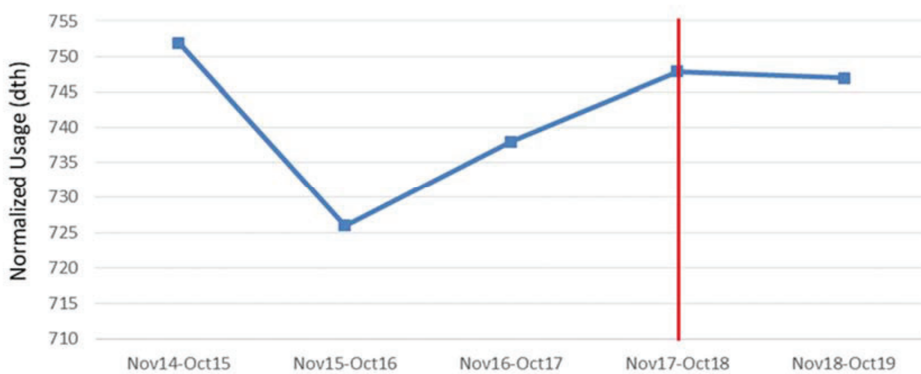

The low-winter-usage C&I group (G-51 & G-52) had a significant reduction in usage per bill as well. Although caution should be taken in inferring too much from such a limited sample size, the consistency

---

[14] As of October 2019, the R-3 rate class (75,307 customers) and the R-4 rate class (5,667 customers) combined for a total of 80,974 customers, or 83% of Liberty's 97,348 total customers.

of these data suggest a change in customer behavior that may have coincided with the implementation of decoupling and the changes in Liberty's outreach efforts described above which, as we describe below, is consistent with our other findings. Year over year changes for each aggregation are shown below.

Figure 3. Change in Annual Consumption, C&I High-Winter-Use Group

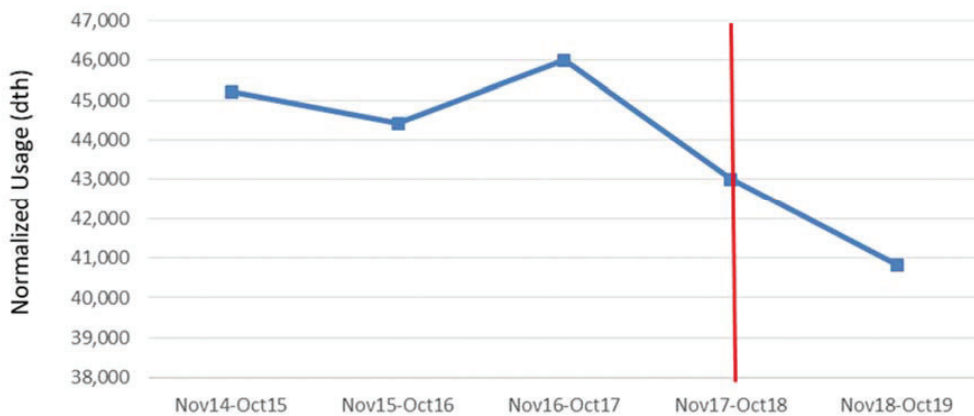

Figure 4. Change in Annual Consumption, C&I Low-Winter-Use Group

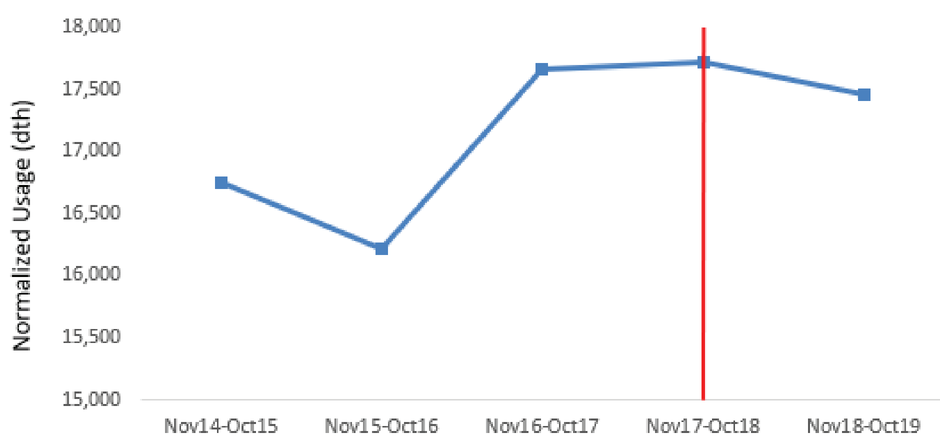
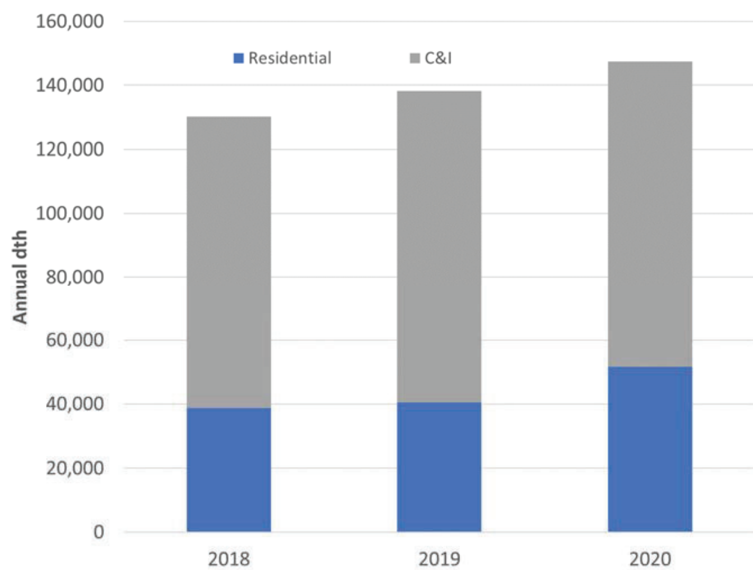


Moving forward, Liberty's EE achievement is expected to remain strong, particularly in the residential segment. FTI has reviewed data from the last Statewide EE Plans filed with the Commission in DE 17-136. Those data indicate expectations of continued strong growth in savings. Below, Liberty's EE targets for annual and lifetime savings approved each year by the Commission are reported for the three years ending in 2020.[15,16]

Figure 5. Liberty Energy Efficiency Plan, Annual Savings by Customer Class, 2018-2020



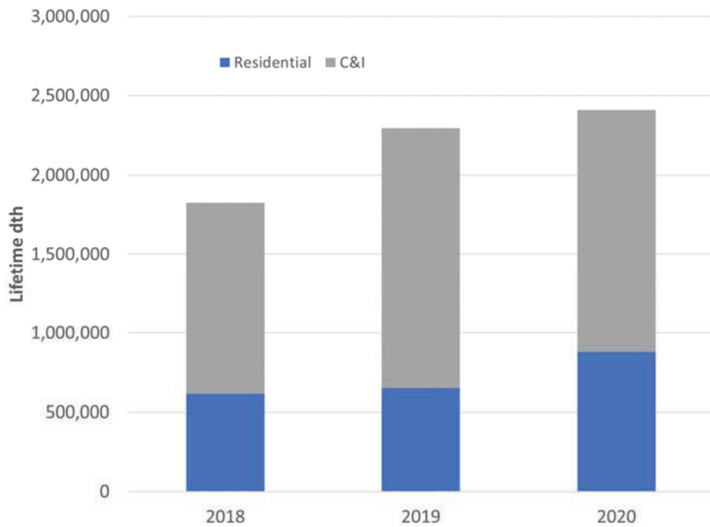
Notably, although C&I gains drove growth in savings from 2018 to 2019, benefits from the residential sector are expected to provide the basis for most of the expansion of the EE program in 2020. Planned residential savings for 2020, expressed on an annual and lifetime basis, are expected to increase by roughly 28% and 35%, respectively, compared to 2019.

---

15 Order No. 26, 323. Docket No. DE 17-136.

16 No attempt has been made to adjust or evaluate the reasonableness of the approved objectives for 2020 given the COVID-19 pandemic, ensuing economic recession, or any other factor.

Figure 6. Liberty Energy Efficiency Plan, Lifetime Savings by Customer Class, 2018-2020



One driver of those gains is expansion of the Company's ENERGY STAR Homes program, a package of incentives it offers to customers seeking to achieve the ENERGY STAR qualification, which requires independent verification that the home is 15% more efficient than currently effective state requirements.[17,18] From 2019 to 2020, acceleration of the ENERGY STAR Homes program is expected to result in an increase in annual savings of roughly 10,000 dth, meaning that the measure accounts for much of the growth shown above.[19]

[17] Liberty Utilities (2020). *Building a Home: ENERGY STAR Homes.* Retrieved from: https://libertyutilities.com/residential/smart-energy-use/natural-gas/building-a-home.html

[18] The combination of the Company's participation in the ENERGY STAR program and its advocacy for increasingly stringent building codes has the potential for compounding benefits. For example, passage of the 2015 IECC means that greater savings will be required to achieve the ENERGY STAR qualification, all else equal.

[19] See Attachment I4 of the 2020 Energy Efficiency Plan.

4. Comparative Analysis

In an effort to isolate the impacts of decoupling in these results, FTI compared the effect of decoupling on EE achievement on utilities in other jurisdictions. To do so, we compiled a group of utilities that were generally similar in certain ways to Liberty (and dissimilar in other significant ways) and reviewed data they reported to their regulators to determine how the introduction of decoupling affected their ability to generate energy savings through their EE programs. Our starting point was the universe of gas utilities in New England, of which there are twenty-four, according to the Northeast Gas Association.[20]

Of these, we eliminated the municipal utilities, including Holyoke Gas & Electric, Norwich Public Utilities, and others, as well as the companies that are either considerably larger than Liberty, such as National Grid Massachusetts, or much smaller, including Fitchburg Gas and Electric Light Co. and all of the Maine Local Distribution Companies ("LDCs"). Utilities that do not have revenue decoupling, such as Vermont Gas Services, were not considered, nor were companies such as Columbia Gas of Massachusetts ("CMA") or Liberty's Massachusetts affiliate, which decoupled its rates long enough ago that data regarding EE achievement was not sufficiently available to conduct the before and after comparisons we describe below.[21] Because Maine shares a number of important similarities with New Hampshire, and due to the lack of suitable LDCs from that state to include in our proxy group, we chose to include one electric company from Maine, Central Maine Power ("CMP"), in our analysis.

20 Northeast Gas Association. *Northeast Gas Providers – Links to Individual Company Safety Pages.* Retrieved from: https://www.northeastgas.org/nat_gas_providers.php

21 In all cases here and in the remainder of this section we adopted the convention to refer to each LDC by its current name regardless of what its name was when any event of note took place. For example, CMA was Bay State Gas at the time it first implemented decoupling.

The five utilities that comprise the proxy group are shown in Table 4. For each, the most recently available customer count is reported as well as the date on which its rates were decoupled and the docket in which the state regulator of relevance first approved decoupling.

Table 4. Proxy Group Utilities

	State	Type	Customers	Decoupling Implemented	Decoupling Docket
Connecticut Natural Gas ("CNG")	CT	Gas	177,000	Jan-14	13-06-08
Southern Connecticut Gas ("SCG")	CT	Gas	197,000	Jan-18	17-05-42
Berkshire Gas ("Berkshire")	MA	Gas	40,000	Feb-19	18-40
National Grid Rhode Island ("NGrid RI")	RI	Gas	272,000	Apr-11	4206
CMP	ME	Electric	600,000	Sep-14	2013-00168

As described in the remainder of this section, for each company we found a positive correlation between decoupling and EE achievement based on the observation that each achieved more savings from their EE programs after implementing decoupling than they did before. Moreover, we find that the change in regime is fairly evident in all cases. The clear difference in achievement pre- and post-decoupling, combined with the fact that the same change in trend was apparent regardless of where or when decoupling was implemented, creates compelling evidence of a causal relationship.

Connecticut

Public Act No. 07-242 (2007) required the Public Utilities Regulatory Authority ("PURA") of Connecticut to implement decoupling for each of the state's gas and electric utilities in the next rate case following the measure's passage. PURA first approved CNG's decoupling program in 2014 while SCG's mechanism was put into place in 2018. The CNG and SCG mechanisms are generally similar. Both are full decoupling mechanisms that reconcile rates on a dollars-per-customer basis and include weather normalization. Charges or refunds are allocated on a class-by-class basis and differentials between budgets and earned revenues are reconciled through the decoupling mechanism only if the difference is greater than $1 million. Minor differences exist regarding the treatment of customers added to the system between rate cases, but otherwise most of the same provisions are used for the two companies.

EE achievement in Connecticut is generally high. In addition to revenue decoupling, statutes also provide an opportunity for both gas and electric companies to earn incentive payments if EE targets are met or exceeded.[22]

CNG and SCG, along with the electric utilities in Connecticut, serve as administrators for the statewide EE plan, one responsibility of which is to develop three-year Conservation & Load Management Plans ("C&LM Plans"), which are approved by PURA and the Department of Energy and Environmental Protection ("DEEP").[23] Once approved, plans are updated on an ongoing basis. The current C&LM Plan covers the period 2019-2021. The latest revision to that plan was filed with PURA and DEEP on March 1, 2020.[24] FTI relied on data from the 2019-21 C&LM Plan in order to evaluate decoupling impacts for CNG and SNG. Figure 7 shows annual savings realized by the CNG EE program beginning in 2012, two years before decoupling was implemented (and the earliest date for which data was readily available) through 2016. The red line in each figure delineates the time series to periods before and after decoupling.

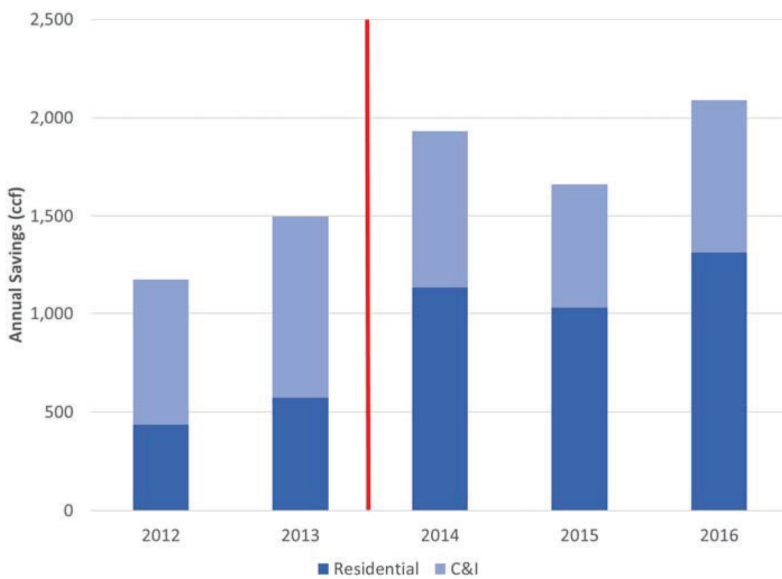
23 Energize Connecticut (2020). *Current and Approved C&LM Plans.* Retrieved from: https://www.energizect.com/connecticut-energy-efficiency-board/current-and-approved-clm-plans

24 Eversource Energy, United Illuminating, Connecticut Natural Gas Corporation, and Southern Connecticut Gas (2019, November). *2020 Plan Update to the 2019-2021 Conservation & Load Management*. Retrieved from: https://portal.ct.gov/-/media/DEEP/energy/ConserLoadMgmt/Final-2020-Plan-Update-Text-11-1-19.pdf?la=en

Based on annual savings, EE achievement increased substantially once decoupling was introduced. Average energy savings from EE programs for the first two years of this dataset (the pre-decoupling period) was 1,340 Ccf,[25] expressed on an annual basis. In the three years afterwards, the average annual savings increases 41% to 1,895 Ccf.

Figure 7. CNG Annual EE Savings, 2012-2016[26]



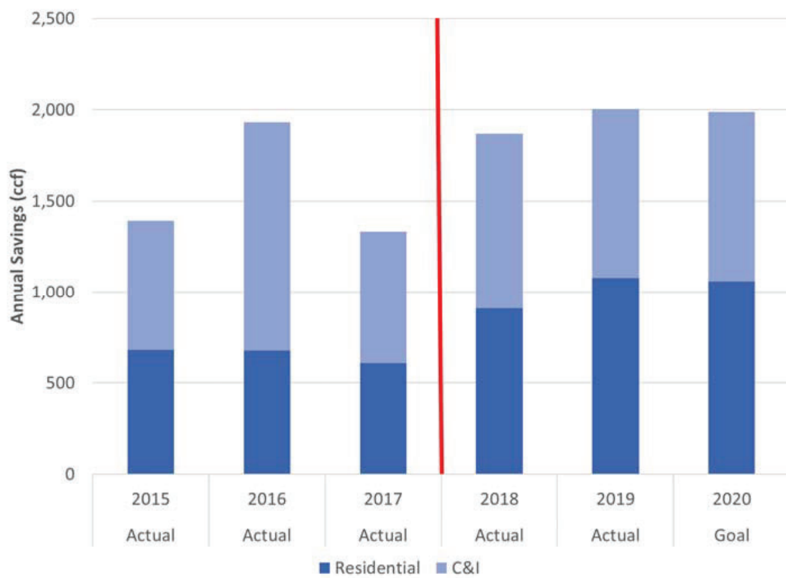
Conducting the same evaluation for SCG reveals the same pattern around the date when that utility's decoupling mechanism was approved. As shown below, for the three-year period ending in 2017, SCG's average annual EE savings was 1,551 Ccf. For the three years beginning in 2018, the year after which decoupling was implemented, annual savings increase 26% to 1,953 Ccf. Note that the 2020 goal was established in the latest C&LM Plan while data for other years report actual achievement.

---

[25] Ccf is the volumetric abbreviation for 100 cubic feet of natural gas and is the equivalent of 1.037 therms.
[26] 2019-21 C&LM Plan at p. 203.

That CNG and SCG show the same result achieved at different times is impactful. Changes to variables such as weather, economic conditions, or other factors could influence consumption levels, creating a potential "false positive" attribution of the change to the implementing of decoupling. The fact that these two companies experienced the same change in trend, in the same geography but at different times suggests a meaningful correlation rather than coincidence.

Figure 8. SCG Annual EE Savings, 2015-2020[27]



Massachusetts

Berkshire's mechanism, which was first approved by the Massachusetts Department of Public Utilities ("MADPU"), provides for full decoupling on a per-customer basis. Semi-annually, by season, Berkshire reconciles its revenues per customer to a benchmark revenue amount previously established by the

---

[27] 2019-21 C&LM Plan at p. 224.

MADPU and applies a Revenue Decoupling Adjustment Clause ("RDAC") to either recover or refund any variances. The RDAC is calculated and applied for each rate class.[28]

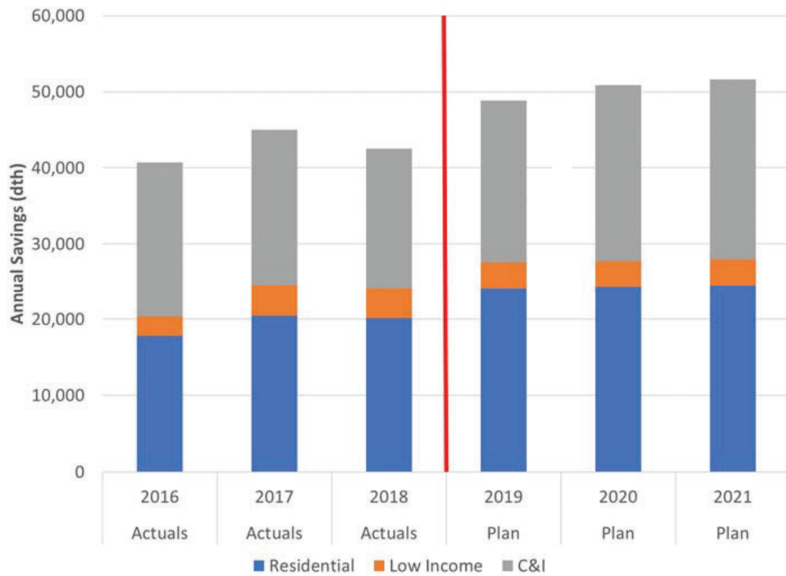
LDCs in Massachusetts are required to file EE data regarding their EE plans and program achievement regularly. Typically, they file three-year plans and separately file reports of achievement, variances between actuals and plans, and other results. Since the MADPU authorized Berkshire to implement decoupling in early 2019, FTI analyzed actual annual savings for the period 2016-2018 compared to the savings projections included in the most recent EE plan approved by the MADPU.[29]

Berkshire's EE savings show the same pattern as do those of the Connecticut utilities: a significant increase in the benefit from EE programs that coincides with the decoupling of rates and revenues. Annual savings for the three years prior to decoupling averaged 42,738 dth, as shown in Figure 10 below. The plan approved by the MADPU indicates expectation that savings will increase by about 18% to an average of 50,464 dth each year.

[28] The Berkshire Gas Company (2020, March). Tariff M.D.P.U, No. 548: *Revenue Decoupling Adjustment Clause*.

[29] Actuals for 2016-2018 were reported in Berkshire's August 1, 2016 filling in Docket No. DPU 16-121 and its current plan for 2019-2021 was filed with the DPU in Docket No. DPU 19-91 on August 1, 2019.

Figure 9. Berkshire Annual EE Savings, 2016-2021



The timing associated with these findings is important since Berkshire decoupled its rates at a different time than either of the Connecticut utilities. The fact that it experienced the same results as did those companies implies some causal correlation with the timing of the change in the rate structure.

Rhode Island

Like Connecticut, Rhode Island decoupling was enacted by statute when, in 2010, the Rhode Island legislature passed House Bill 8082, requiring the Rhode Island Public Utilities Commission ("RIPUC") to establish rates that included decoupling mechanisms in each utility's next rate case.[30] NGrid RI's mechanism was subsequently approved in Docket No. 4206 and implemented in April 2011.[31]

---

30 Rhode Island State Legislature (2010, May). *Rhode Island House Bill 8082.* LegiScan. Retrieved from: https://legiscan.com/RI/text/H8082/id/468020

31 RIPUC (2012, May). *Report and Order Re: Narragansett Electric Company d/b/a National Grid's Proposed Revenue Decoupling Mechanism.* Retrieved from: http://www.ripuc.ri.gov/eventsactions/docket/4206-NGrid-RDM-Ord20745(5-25-12).pdf

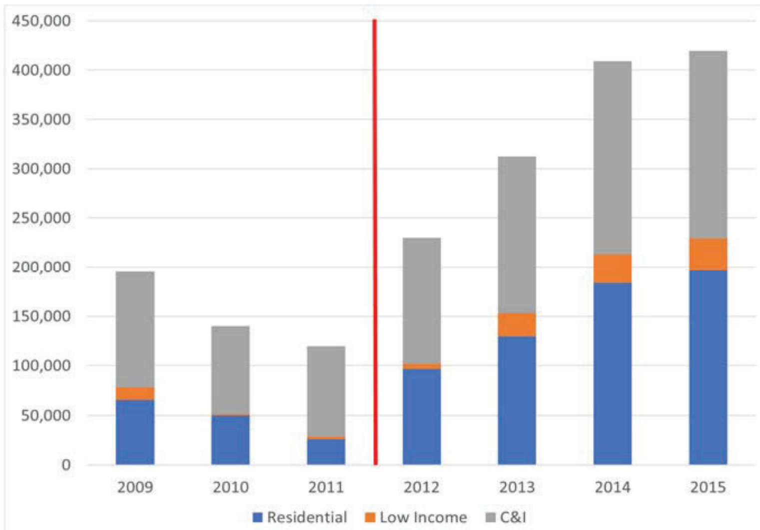
NGrid RI's mechanism provides for full decoupling based on an annual reconciliation of revenues per customer for all classes except large and extra-large C&I customers.[32] Regularly, the utility files a benchmark estimate of per-customer revenues with the RIPUC. Thereafter (assuming that the estimate is approved), variances to the benchmark are calculated and either refunded or recovered through the Revenue Decoupling Mechanism ("RDM"). Changes to the RDM have subsequently been made on an annual basis for 12-month periods from April through the following March each year.

Annually, NGrid RI files with the RIPUC a report indicating its EE achievement for the previous year. FTI reviewed the reports for each year from 2009 to 2015.[33] Among other things, those reports indicate NGrid RI's annual savings from EE programs by customer type. Annual EE savings for the period 2009-2015 are shown in Figure 10.

32 When it proposed its decoupling mechanism, NGrid RI explained that it had excluded the large and extra-large C&I classes because there were a small number of such customers and, as a result, the migration of any one customer from the class to competitive service, which is an option for certain C&I consumers in Rhode Island, could create problematic price distortions and subsidization issues. See the RIPUC's May 25, 2012 Order in Docket No. 4206, at p. 5, for additional details.

33 The reports were filed in dockets 4000 (2009), 4116 (2010), 4209 (2011), 4295 (2012), 4366 (2013), 4451 (2014), and 4527 (2015).

Figure 10. NGrid RI Annual EE Savings, 2009-2015



The data indicates that changes to EE achievement associated with decoupling is similar for NGrid RI as it is for other utilities, namely that it increases markedly at the same time that rates are decoupled from revenues. Total annual EE savings for the three years before decoupling was implemented was 151,637 MMBtu. For the three years following decoupling, the same measure increased by 109% to 317,091 MMBtu.

Maine

Decoupling was adopted in Maine in the late 1980s and early 1990s and subsequently abandoned for multiple reasons, one of the most important of which was a significant recession in the state which reduced energy consumption, causing recurring price increases.[34] Notwithstanding, the Maine Public Utilities Commission ("MEPUC") is authorized under Title 35-A to implement a decoupling mechanism,

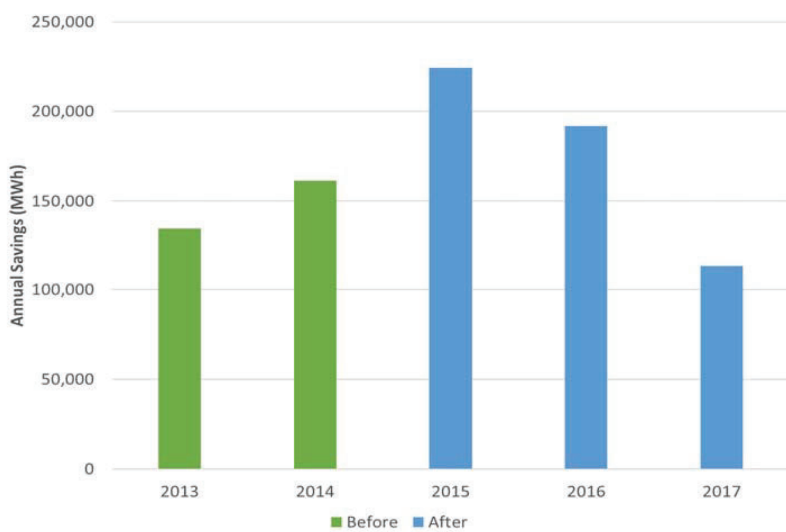
---

34 RAP, p. 47.

which it did in 2014, granting CMP a decoupling mechanism in Docket No. 2013-00168 which became effective in September 2014.[35]

EE programs in Maine are administered by the Efficiency Maine Trust ("Efficiency Maine"), an independent administrator that is overseen by the MEPUC. Each year, Efficiency Maine publishes reports that explain EE achievement, among other things. Most results are reported on a statewide basis. Because CMP accounts for roughly 80% of the electric load in Maine, FTI chose to compare statewide EE savings before and after CMP's decoupling mechanism took effect.[36] Those results are shown for the two years before decoupling became effective and the three years after, on an annual basis for each year, below in Figure 11. Efficiency Maine's reporting of data does not differentiate results by class.

Figure 11. Maine Annual EE Savings, 2013-2017



[35] Maine Legislature (2019, December) *Title 35-A: Public Utilities*. Retrieved from: http://legislature.maine.gov/statutes/35-A/title35-Ach0sec0.htmll
[36] MEPUC (2020, February). *2019 Annual Report at p. 19.*

Despite the inherent challenges of measuring the impact of decoupling at a single utility using statewide reporting, the same clear pattern emerges from this data as in other sets, namely that the implementation of decoupling coincides with significant increases in EE achievement. In this case, annual savings increased roughly 19% from the two years before decoupling to the three years after, from an average of 148.1 GWh saved to 176.5 GWh.

5. Conclusions

Our analysis of EE savings achieved by Liberty and by other New England utilities who have decoupled their revenues from sales supports at least five conclusions:

- *First*, the decoupling of rates in November 2018 changed the way Liberty does business with regard to its EE programs. The change in its effort to reach out to engage stakeholders and improve market penetration are significant and measurable.

- *Second*, Liberty's savings from EE programs increased significantly once decoupling was implemented.

- *Third,* the strong performance of Liberty's EE programs was expected to continue into 2020 as of the start of this year. If 2020 achievement is lower than expected, that result is most likely attributable to impacts from the COVID pandemic.

- *Fourth*, our analysis of EE achievement by other utilities around New England that have implemented decoupling provides further evidence of a causal relationship. Despite the fact that the companies FTI reviewed have different management and regulators, operate in different weather conditions, and implemented decoupling in different years, in each instance we found that a measurable increase in savings from EE programs coincided with the decoupling of rates.

Based on these findings, we conclude that there is compelling evidence of a causal link between revenue decoupling and the advancement of EE programs. Simply put, EE savings are greater when utility revenues are decoupled from sales. In Liberty's case, it is clear that the increased revenue certainty that came with decoupling either incented it to more zealously expand its EE program, or eliminated disincentives to do so, and that savings from its EE programs increased as a result. It is also reasonable to conclude that the Commission's re-authorization of the Company's decoupling mechanism will promote increased savings in the future.

STATE OF NEW HAMPSHIRE
BEFORE THE
PUBLIC UTILITIES COMMISSION

Docket No. DG 21-130

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty
Winter 2021/2022 Cost of Gas
Summer 2022 Cost of Gas

UPDATED DIRECT TESTIMONY

OF

DAVID B. SIMEK

AND

CATHERINE A. MCNAMARA

October 19, 2021

Liberty

THIS PAGE INTENTIONALLY LEFT BLANK

I. INTRODUCTION

Q. Please state your full name and business address.

A. (DS) My name is David B. Simek. My business address is 15 Buttrick Road, Londonderry, New Hampshire.

(CM) My name is Catherine A. McNamara. My business address is 15 Buttrick Road, Londonderry, New Hampshire.

Q. Please state by whom you are employed.

A. We are employed by Liberty Utilities Service Corp. ("LUSC"), which provides service to Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty ("EnergyNorth" or "the Company").

Q. Please describe your educational background and your business and professional experience.

A. (DS) (CM) Please see our Direct Testimony, filed September 15, 2021, for our educational backgrounds and business and professional experience.

Q. Mr. Simek and Ms. McNamara, have you previously testified in regulatory proceedings before the New Hampshire Public Utilities Commission (the "Commission")?

A. Yes, we have.

Q. What is the purpose of your testimony?

A. The purpose of our testimony is to explain the Company's updated proposed firm sales cost of gas rates for the 2021/2022 Winter (Peak) Period and the Company's proposed 2021/2022 Local Delivery Adjustment Clause, both effective November 1, 2021. Our testimony also explains the Company's updated proposed firm sales cost of gas rates for the 2022 Summer (Off-Peak) Period.

II. <u>WINTER 2021/2022 COST OF GAS FACTOR</u>

Q. What are the proposed firm Winter sales and firm transportation cost of gas rates?

A. The Company proposes a firm sales cost of gas rate of $1.1339 per therm for residential customers, $1.1341per therm for commercial/industrial high winter use customers, and $1.1324 per therm for commercial/industrial low winter use customers as shown on Proposed Second Revised Page 95 (Bates 056). The Company proposes a firm transportation cost of gas rate of $0.0002 per therm as shown on Proposed Second Revised Page 98 (Bates 058).

Q. Please explain tariff page Proposed Second Revised Page 95 (Bates 056).

A. Proposed Second Revised Page 95 contains the calculation of the 2021/2022 Winter Period Cost of Gas Rate and summarize the Company's forecast of firm gas costs and firm gas sales. As shown on Page 95, the proposed 2021/2022 Average Cost of Gas of $1.1339 per therm is derived by adding the Direct Cost of Gas Rate of $1.0843 per therm to the Indirect Cost of Gas Rate of $0.0496 per therm. The estimated total Anticipated Direct Cost of Gas, derived on Proposed Second Revised Page 95, is $94,810,891. The estimated Indirect Cost of Gas, also derived on Page 95, is $4,338,002. The Direct Cost of Gas Rate of $1.0843 and the Indirect Cost of Gas Rate of $0.0496 are determined by dividing each of these total cost figures by the projected winter period firm sales volumes of 87,443,741 therms.

To calculate the total Anticipated Direct Cost of Gas, the Company adds a list of allowable adjustments from deferred gas cost accounts to the projected demand and commodity costs for the winter period supply portfolio. These allowable adjustments, shown on Proposed Second Revised Page 96 (Bates 057), total $161,141. These adjustments are added to the Unadjusted Anticipated Cost of Gas of $94,649,751 to determine the Total Anticipated Direct Cost of Gas of $94,810,891(slightly off due to rounding).

Q. What are the components of the Unadjusted Anticipated Cost of Gas?

A. The Unadjusted Anticipated Cost of Gas shown on Proposed Second Page 96 (Bates 057) consists of the following components:

1.	Purchased Gas Demand Costs	$12,887,000
2.	Purchased Gas Commodity Costs	72,351,034
3.	Storage Demand and Capacity Costs	981,898
4.	Storage Commodity Costs	6,130,435
5.	Produced Gas Cost	2,299,384
	Total	$94,649,751

Q. What are the components of the allowable adjustments to the Cost of Gas?

A. The allowable adjustments to gas costs, listed on Proposed Second Page 96 (Bates 057), are as follows:

1.	Deferred Gas Cost Prior Period Under Collection	$1,431,639
2.	Interest	44,085

3.	Fuel Inventory Revenue Requirement	335,667
4.	Broker Revenues	(3,600)
5.	Transportation COG Revenue	(6,938)
6.	Capacity Release Margin	(1,676,512)
7.	Fixed Price Administrative Cost	36,800
	Total Adjustments	$,161,141

These allowable adjustments are standard adjustments made to the deferred gas cost balance through the operation of the Company's cost of gas adjustment clause. We discuss the factors contributing to the prior period under collection later in this testimony.

Q. How does the proposed average cost of gas rate in this filing compare to the average cost of gas rate approved by the Commission in Docket No. DG 20-141 for the 2020/2021 winter period?

A. The average cost of gas rate proposed in this filing of $1.1339 per therm is $0.5768 per therm more than the initial rate of $0.5571 per therm approved by the Commission in Order No. 26,419 (October 30, 2020) in Docket No. DG 20-141. The $0.5768 per therm increase in the rate is primarily due to a $48,513,696 increase in the Total Unadjusted Direct Cost of Gas.

Q. How does the proposed firm transportation winter cost of gas rate compare to the rate approved by the Commission for the 2020/2021 winter period?

A. The proposed firm transportation winter cost of gas rate is $0.0002 per therm. The rate approved in Docket No. DG 20-141 was $0.0001 per therm. There is a $0.0001 increase in the firm transportation rate.

Q. In the calculation of its firm transportation winter cost of gas rate, has the Company updated the estimated percentage used for pressure support purposes?

A. No. The pressure support purposes rate of 8.7% stayed the same based on the marginal cost study used for the rate design approved in Docket No. DG 20-105.

Q. Did the Company include a fuel inventory revenue requirement calculation in this filing?

A. Yes. The calculation is provided on Schedule 26 (Bates 207). The Company is proposing to collect $335,667 in fuel inventory revenue requirement consistent with the approved rate of return in Order No. 26,505 (July 30, 2021) in Docket No. DG 20-105. The impact of this amount to the overall Cost of Gas rate is $0.0038 per therm, which is determined by dividing the $335,667 by the estimated November 2021 through October 2022 COG sales volumes of 87,443,741 therms.

Q. How was the statutory tax rate of 27.08% on Schedule 26 calculated?

A. The statutory rate of 27.08% was calculated by using a 21% federal tax rate and a 7.7% tax rate for the State of New Hampshire (0.21 + 0.077 – (0.21 x 0.077) = 0.27083).

Q. How was the common equity pre-tax rate of 6.640% on Schedule 26 calculated?

A. The common equity pre-tax rate of 6.640% was calculated by dividing the 9.30% rate of return on common equity, approved in Docket No. DG 20-105, by 0.72917 (1 – 0.27083) [statutory tax rate – see previous question] and multiplied by 52.00% (equity component of the capital structure approved in DG 20-105) [0.093 / 0.72917 x 0.5200 = 0.06664].

Q. Has the bad debt percentage in this filing of 0.700% changed from the bad debt percentage calculated in the Winter 2020/2021 Cost of Gas Reconciliation?

A. Yes. The bad debt percentage of 0.70% used in this filing is the calculated rate for the period of May 2020–April 2021. The bad debt percentage that was calculated in the Winter 2020/2021 Cost of Gas Reconciliations for the period of May 2019–April 2020 was 1.1%.

Q. What was the actual weighted average firm sales cost of gas rate for the 2020/2021 winter period?

A. The weighted average cost of gas rate was $0.5100 per therm (Bates 104, line 54). This was calculated by applying the actual monthly cost of gas rates for November 2020 through April 2021 to the monthly therm usage of an average residential heating customer using 667 therms for the six winter period months.

Q. What is the current percentage used to calculate the maximum increase to the Cost of Gas rate?

A. The current percentage used to calculate the maximum allowed increase to the Cost of Gas rate is 25% for both Winter and Summer period Cost of Gas rates.

Q. Is the Company requesting an increase to the percentage used to calculate the maximum allowed Cost of Gas Rate?

A. Yes, the Company is requesting that the percentage used to calculate the maximum allowed cost of Gas rate be increased for the Summer period of May through October.

The Company is not requesting a change to the maximum allowed percentage increase applicable to the Winter period.

Q. Why is the Company asking that the percentage used to calculate the maximum allowed cost of Gas rate be increased for the summer period of May through October?

A. In the past eighteen summer months (i.e., the last three Summer periods) the Company has been at the maximum allowed rate for twelve of those months. In the summer of 2021, the Company has been at the maximum allowed rate for all six months. The under collected balance has grown to approximately $4.5M. That under collection is the beginning balance for the summer portion of this filing. In the summer of 2020, the Company's calculated Cost of Gas rate was at the maximum allowed rate for three out of the six months and the under collected balance grew to $3.5M but was primarily offset by an out of period accounting adjustment. Given these circumstances, the Company believes the 25% used to calculate the maximum allowed Cost of Gas rate is insufficient. While the 25% maximum increase was appropriate in prior years when there was a separate filing for the Summer Cost of Gas rate, once the Winter and Summer periods were combined into one filing, the amount of time between the filing and the effective date for the Summer Cost of Gas rate increased by six months, thus increasing the likelihood of the forecasted Summer Cost of Gas rate differing significantly from the market conditions during the applicable summer period. One of the reasons for having a "trigger" adjustment to the Cost of Gas rate it to try to reduce potential under collections at the end of the rate period. As shown by the size of the under collections during the recent summer periods, the 25% limit has been insufficient to serve that purpose.

Q. What percentage used to calculate the maximum allowed Summer Cost of Gas Rate is the Company asking for approval of?

A. The Company is asking for the percentage used to calculate the maximum allowed Summer Cost of Gas rate to be increased from 25% to 40%.

Q. How did the Company determine that an increase of the maximum allowed Summer Cost of Gas from 25% to 40% was appropriate?

A. The Company did an analysis of the past four years. We started with the original summer cost of gas monthly adjustment filings, removed out of period adjustments and then calculated what the four-year average increase would have been if we were able to increase the rates beyond 25%. The average increase was 47.2%. We then rounded down to 40%.

Q. Why should the Commission increase the percentage used to calculate the maximum allowed Cost of Gas rate for the Summer period?

A. When the Company reaches the maximum allowed rate, the under collected balance continues to grow. In the summer of 2021, the projected under collected balance is $4,472,186. Based on the 2022 estimated summer therms of 27,125,444, the rate for next summer will be starting with an increase of $0.1649 per therm just to recover that under collection. The Commission should approve the increased percentage used to calculate the maximum allowed Summer Cost of Gas because the only other option is the

Company would be forced to file for additional rate increase approvals which would defeat the purpose of having a single annual Cost of Gas filing

Q. Why doesn't the Company make an interim filing when the maximum allowed Cost of Gas is reached?

A. An additional filing would be an administrative burden for all parties. The primary reason for combining the winter and summer filing into one, was to reduce this administrative burden.

Q. Is the 25% used to calculate the maximum allowed Cost of Gas sufficient for the Winter period?

A. Yes, the 25% used to calculate the maximum allowed Cost of Gas increase, in the winter period, is sufficient. The volume of therms sold is approximately 40% higher than the amount of therms sold during the summer months. The same $4.5M under collection referenced above would cause an automatic increase of only $0.0519 per therm during the winter. Also, rates for the Winter Cost of Gas are calculated using more near-term market information than those for the future Summer period.

III. PRIOR WINTER PERIOD UNDER-COLLECTION

Q. Please explain the prior period under collection of $1,431,639.

A. The prior period under-collection is detailed in the 2020/2021 winter period reconciliation that was filed with the Commission on July 29, 2021. The $1,431,639 under-collection is the sum of the deferred gas cost, bad debt, and working capital over- and under-collection balances as of April 30, 2021. The under-collection was driven mainly by the lag in the timing of monthly cost of gas rate adjustments as compared to changes in the underlying costs.

IV. FIXED PRICE OPTION

Q. Has the Company established a winter period fixed price pursuant to its Fixed Price Option Program?

A. Yes. Pursuant to Order No. 24,515 in Docket No. DG 05-127, the Fixed Price Option Program ("FPO") rates are set at $0.0200 per therm higher than the initial proposed COG rate. Proposed Second Revised Page 94 (Bates 055) contains the FPO rate for the 2021/2022 winter period, which is $0.9256per therm for residential customers. This compares to the FPO rate approved for the 2020/2021 winter period of $0.5771 per therm for residential customers. This represents a $0.3485 per therm or 60.4% increase in the residential FPO rate. The total bill impact on the winter period bills for an average FPO heating customer using 667 therms is an increase of approximately $232.45 or 60.4% compared to last winter's approved FPO rate. The estimated winter period bill for an average residential heating customer opting for the FPO would be approximately $138.94(or 22.5%) lower than the bill under the proposed cost of gas rates, assuming no monthly adjustments to the COG rate during the course of the winter. Schedule 23 (Bates 204) contains the historical results of the FPO program.

V. LOCAL DELIVERY ADJUSTMENT CLAUSE ("LDAC")

Q. What are the surcharges that will be billed under the LDAC?

A. As shown on Proposed Second Revised Page 101 (Bates 061), the Company is submitting for approval an LDAC of $0.1444 per therm for the residential non-heating class and residential heating class, and $0.0878 per therm for the commercial/industrial bundled sales classes, effective November 1, 2021. The surcharges proposed to be billed under the LDAC are the Energy Efficiency Charge, the Revenue Decoupling Adjustment Factor, the Environmental Surcharge for Manufactured Gas Plant ("MGP") remediation, the Residential Gas Assistance Program charge, and the rate case expense reconciliation surcharge from Docket No. DG 20-105.

Q. Which customers are billed an LDAC?

A. All EnergyNorth customers including those in Keene are billed an LDAC charge. When calculating the LDAC charge, the November 1, 2021, through October 31, 2022, forecasted Keene therm sales of 1,405,237 are added to the EnergyNorth therm sales forecast of 181,424,635 for a total therm sales forecast of 182,829,872.

Q. Please explain the Energy Efficiency Charge.

A. The Energy Efficiency Charge is designed to recover the projected expenses associated with the Company's energy efficiency programs for the November 2021 through October 2022 period. In the calculation of the Energy Efficiency Charge, the Company has also included the projected prior period under-recovery of the Company's residential and commercial energy efficiency programs as of October 2021. As shown on Schedule 19 Energy Efficiency (Bates 132–134), the proposed Energy Efficiency charge is $0.0861 per therm for residential customers and $0.0408 per therm for commercial and industrial customers.

Q. Please explain the Revenue Decoupling Adjustment Factor ("RDAF").

A. The purpose of the RDAF is to recover or refund, on an annual basis, the difference between the Actual Base Revenue per Customer and the Benchmark Base Revenue per Customer. Schedule 19 RDAF Page 3 (Bates 130) shows the prior period difference (September 2020 through August 2021) between the proposed Actual Base Revenue per Customer and the Benchmark Base Revenue per Customer calculation of a total under-collection of $2,426,364. Schedule 19 RDAF Page 2 (Bates 129) also includes a reconciliation of the amount of prior refunds (accumulated through October 2020 and refunded November 2020 through August 2021) of $969,938 remaining to be refunded.

Q. Did the Company's original filing on September 1, 2021, filing include a schedule showing the calculation of the reconciliation of allowed and actual revenues related to what was formerly known as the Residential Low Income Assistance Program ("RLIAP")?

A. Yes. In that original filing, the Company included Schedule RDAF Page 4 which provided a calculation of a total amount of $4,024,830 which, due to a lack of clarity in the tariff which resulted in a mismatch between allowed and actual revenues associated with the R-4 rate class, had been inappropriately refunded to customers over the prior two decoupling years. Specifically, the amounts for each year were $1,932,224 for the 2019/2020 year and $2,092,605 for the 2020/2021 year. The Company's original filing had initially sought to recover the $4,024,830 over a two-year period beginning November 1, 2021. However, as discussed in various pleadings in this docket, it is clear that the issue warrants further investigation and discussion among the parties. Thus, the

Company is requesting that the issue remain in this proceeding but on a different schedule to allow for that further examination and a later hearing. Liberty notes that this request is similar to an alternative set forth by the Department of Energy in its October 14, 2021, motion in this proceeding. Consistent with the preceding discussion, the Company has retained Schedule RDAF Page 4 in this updated filing but has removed its request for recovery to begin on November 1 and the associated rate impacts from the associated rate schedules. The Company maintains its request to recover this amount, but does not object to a later effective date to allow for further review and investigation.

Q. Does the mismatch described above impact the current reconciliation period related to revenues associated with the Gas Assistance Program ("GAP")?

A. No. As a result of changes to the tariff that were approved in Docket No. DG 20-105, revenue per customer used in the allowed revenue calculations are no longer different from residential customers not categorized as GAP and, thus, the allowed and actual revenues for the R-4 customer class are in alignment.

Q. What is the proposed Gas Assistance Program charge?

A. As shown on Schedule 19 Gas Assistance (Bates 135–136), the proposed GAP charge is $0.0156 per therm. This charge is designed to recover administrative costs, revenue shortfall resulting from the GAP discount, and the prior period reconciliation adjustment relating to this program. For the 2021/2022 winter period, the Company is providing a 45% base rate and cost of gas discount, consistent with the settlement agreement approved by the Commission in Order No. 26,397 (August 27, 2020) in Docket No. DG 20-013. The proposed Residential Gas Assistance charge is designed to recover

$2,849,123, of which $2,640,884 is for the revenue shortfall resulting from 5,320 customers receiving a 45% discount off their base and cost of gas rates, and $208,239 for the prior year reconciling adjustment.

Q. In Order No. 24,824 (Feb. 29, 2008) in Docket No. DG 06-122 relating to short-term debt issues, the Company agreed to adjust its short-term debt limits each year as part of the Company's Winter Period Cost of Gas filing. Did the Company calculate the short-term debt limit for fuel and non-fuel purposes in accordance with this settlement?

A. Yes, the Company included in Schedule 24 (Bates 205) the short-term debt limit for fuel and non-fuel purposes for the 2021/2022 winter period. As shown, the short-term debt limit for fuel inventory financing for the period November 1, 2021, through October 31, 2022, is calculated to be $29,744,668 and the limit for non-fuel purposes is calculated to be $115,471,436.

Q. Has the Company updated the Environmental Surcharge (Tariff Page 95)?

A. Yes, it has. The costs submitted for recovery through the MGP remediation cost recovery mechanism, as well as the third-party recoveries, are included in the Environmental Cost Summary in Schedule 20 (Bates 138) of this filing. The environmental investigation and remediation costs that underlie these expenses are the result of efforts by the Company to respond to its legal obligations with regard to these sites, as described by Ms. Casey in her pre-filed direct testimony in this proceeding and as set forth in the MGP site summaries included in this filing under Schedule 20. The Summary included in Schedule 20 shows the remediation cost pools for the Concord Pond, Concord MGP, Manchester, Nashua, and Laconia sites, and a General Pool for costs that cannot be directly assigned to a specific site.

A summary sheet and detailed backup spreadsheets that support the 2020/2021 costs are provided in Schedule 20 of this filing. Ms. Casey's testimony describes the Company's activities with regard to all five sites.

Q. Please describe how the Company calculated the Environmental Surcharge included in this filing.

A. The proposed Manufactured Gas Plant Remediation surcharge for the period beginning November 1, 2021, and ending October 31, 2022, is $0.0155 per therm. Consistent with filings made over the past few years, this surcharge will recover a total of $2,832,222 in amortized remediation costs. The amortized actual to forecast true-up recovery costs through June 2019 of $341,389 (total amount is $1,024,167 which is amortized over three years). The $1,024,167 is the amount approved by Order No. 26,419 in Docket No. DG 20-141. Also, the actual to forecast true-up recovery cost for the period July 2020 through June 2021 is $139,028. The costs submitted for recovery are shown in the Environmental Cost Summary included in Schedule 20 of this filing.

Q. Did the Company include a Rate Case Expense (RCE) surcharge in this filing?

A. Yes. As shown on Schedule 19 RCE (Bates 126–127), the Company is proposing to collect $2,214,505 in uncollected rate case and recoupment expense consistent with Order No. 26,505 (July 30, 2021) in Docket No. DG 20-105. The RCE rate of $0.0121 per therm is determined by dividing the $2,214,505 by the estimated November 2021 through October 2022 sales volumes of 182,829,872182,829,875 therms.

Q. Has the Company also updated its Company Allowance percentage for the period November 2021 through October 2022 in accordance with Section 8 of the Company's Delivery Terms and Condition?

A. Yes, in Schedule 25 (Bates 206) the Company has recalculated its Company Allowance for the period November 2021 through October 2022. The Company calculated the Company Allowance of 1.22% based on sendout and throughput data for the twelve-month period ending June 2021. The Company proposes to apply this recalculated Company Allowance to all supplier deliveries beginning in November 2021.

VI. CUSTOMER BILL IMPACTS

Q. What are the estimated impacts of the proposed firm sales cost of gas rate and proposed LDAC surcharges on an average heating customer's winter bill as compared to the winter rates in effect last year?

A. The bill impact analysis is presented in Schedule 8 (Bates 104) of this filing. These bill impacts reflect the implementation of the increases approved in Docket No. DG 20-105 effective August 1, 2021, relating to the EnergyNorth distribution rate case. The total bill impact over the winter period for an average residential heating customer is an increase of approximately $469.43 or 55.15%. The total bill impact over the winter period for an average commercial/industrial G-41 customer is an increase of approximately $1,293.37 or 60.32% (Bates 105). Schedule 8 of this filing provides more detail of the impact of the proposed rate adjustments on heating customers.

VII. OTHER TARIFF CHANGES

Q. Is the Company updating its Delivery Terms and Conditions in the filing?

A. Yes. The Company is submitting Proposed Second Revised Page 153 (Bates 062) relating to Supplier Balancing and Peaking Demand Charges and Proposed Second Revised Page 154 (Bates 063) relating to Capacity Allocation.

Q. Please describe the changes to tariff Page 153.

A. In Proposed Second Revised Page 153 (Bates 062), the Company is updating the Peaking Demand Charge from $17.32 per MMBtu of Peak MDQ to $54.72 per MMBtu of Peak MDQ. This calculation is also presented in Schedule 21 (Bates 187–197).

Q. Please describe the changes to tariff Page 154.

A. Proposed Second Revised Page 154 updates the Capacity Allocator percentages used to allocate pipeline, storage, and local peaking capacity to high and low load factor customers under the mandatory capacity assignment requirement for firm transportation service. Schedule 22 (Bates 198–203) contains the six-page worksheet that backs up the calculations for the updated allocators.

VIII. SUMMER 2021 COST OF GAS FACTOR

Q. What are the proposed 2022 summer firm sales cost of gas rates?

A. The Company proposes a firm sales cost of gas rate of $0.5587 per therm for residential customers, $0.5593 per therm for commercial/industrial high winter use customers, and $0.5580 per therm for commercial/industrial low winter use customers as shown on Proposed Third Revised Page 92 (Bates 211).

Q. Please explain tariff pages Proposed Third Revised Page 91 and Proposed Third Revised Page 92.

A. Proposed Third Revised Page 91 (Bates 210) and Proposed Third Revised Page 92 (Bates 211) contain the calculation of the 2022 Summer Period Cost of Gas Rate and summarize the Company's forecast of firm gas sales, firm gas sendout, and gas costs. On Proposed Third Revised Page 92 (Bates 211), the 2022 Average Cost of Gas of $0.5587 per therm is derived by adding the Direct Cost of Gas Rate of $0.5539 per therm to the Indirect Cost of Gas Rate of $0.0048 per therm. The estimated total Anticipated Direct Cost of gas is $15,025,844 and the estimated Indirect Cost of Gas is $132,141. The Direct Cost of Gas Rate and the Indirect Cost of Gas Rates are determined by dividing each of these total cost figures by the projected Summer firm sales volumes of 27,125,444 therms. Proposed Third Revised Page 92 further shows that the Residential Cost of Gas Rate of $0.5587 per therm is equal to the Average Cost of Gas for all firm sales customers. It also shows the calculation of the Commercial/Industrial High Winter Use Cost of Gas Rate of $0.5593 per therm and the Commercial/Industrial Low Winter Use Cost of Gas Rate of $0.5580 per therm.

The calculation of the Anticipated Direct Cost of Gas is shown on Proposed Third Revised Page 91 (Bates 210). To derive the total Anticipated Direct Cost of Gas of $15,025,844, the Company starts with the Unadjusted Anticipated Cost of Gas of $10,330,821 and adds the Net Adjustment totaling $4,695,023.

Q. What are the components of the Unadjusted Anticipated Cost of Gas?

A. The Unadjusted Anticipated Cost of Gas consists of the following:

1. Purchased Gas Demand Costs	$3,276,842
2. Purchased Gas Supply Costs	7,053,979
3. Produced Gas Costs	4,695,023
Total Unadjusted Anticipated Cost of Gas	$15,025,844

Q. What are the components of the adjustments to the cost of gas?

A. The adjustments to gas costs, listed on Proposed Third Revised Page 91 (Bates 210), are as follows:

1. Prior Period (Over)/Under Collection	$4,472,186
2. Interest	222,837
Total Adjustments	$4,695,023

Q. How does the proposed average Residential Summer cost of gas rate in this filing compare to the initial cost of gas rate approved by the Commission for the 2021 Summer Period?

A. The cost of gas rate proposed in this filing is $0.2439 per therm higher than the initial rate approved by the Commission for the 2020 Summer Period ($0.3148 vs. $0.5587) (Schedule 8, Bates 233). This increase is due to a projected increase in supply costs and an under collection from the prior summer of $4,472,186.

Q. Does this conclude your testimony?

A. Yes, it does.

PUBLIC UTILITIES COMMISSION

Docket No. DG 21-XXX

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty
Winter 2021/2022 Cost of Gas
Summer 2022 Cost of Gas

DIRECT TESTIMONY

OF

DEBORAH M. GILBERTSON

September 1, 2021

Liberty™

THIS PAGE INTENTIONALLY LEFT BLANK

Q. Please state your name, position, and business address.

A. My name is Deborah M. Gilbertson. I am Senior Manager, Energy Procurement for Liberty Utilities Service Corp. ("LUSC"), which provides services to Liberty Utilities (EnergyNorth Natural Gas) Corp. ("Liberty" or "the Company"). My business address is 15 Buttrick Road, Londonderry, New Hampshire.

Q. Please summarize your educational background and your business and professional experience.

A. I graduated from Bentley College in Waltham, Massachusetts, in 1996 with a Bachelor of Science in Management. In 1997, I was hired by Texas Ohio Gas where I was employed as a Transportation Analyst. In 1999, I joined Reliant Energy, located in Burlington, Massachusetts, as an Operations Analyst. From 2000 to 2003, I was employed by Smart Energy as a Sr. Energy Analyst. In 2004, I joined Keyspan Energy Trading as a Sr. Resource Management Analyst and from 2008 to 2011, I was employed by National Grid as a Lead Analyst in the Project Management Office. In 2011, I was hired by LUSC as a Natural Gas Scheduler and was promoted to Manager of Retail Choice in 2012. In 2016, I was promoted to Sr. Manager of Energy Procurement. In this capacity, I provide gas procurement services to Liberty.

Q. Have you previously testified in regulatory proceedings?

A. Yes, I have testified before the New Hampshire Public Utilities Commission ("Commission") on prior occasions.

Q. What is the purpose of your testimony in this proceeding?

A. The purpose of this testimony is to summarize the gas supply and firm transportation portfolio and the forecasted sendout requirements for Liberty for the 2021/22 peak and off-peak seasons. This information is provided in significantly more detail in the schedules that the Company is including with this filing.

Q. Please describe the firm transportation contract portfolio that the Company now holds.

A. The Company currently holds firm transportation contracts on Tennessee Gas Pipeline ("Tennessee") (106,833 MMBtu/day) and Portland Natural Gas Transmission System ("PNGTS") (1,000 MMBtu/day) to provide a daily deliverability of 107,833 MMBtu/day to its citygate stations. For this upcoming plan year, and subject to Commission approval for subsequent years, the Company has contracted for an additional 40,000 MMbtu/day of upstream Tennessee capacity which increases the Company's daily deliverability to 147,833 MMBtu/day. In addition to these citygate delivery contracts, the Company also holds other transportation contracts further upstream on other pipelines that feed into the citygate delivery transportation contracts. Schedule 12, page 1, in the Company's filing is a schematic diagram of the transportation contracts, and Schedule 12, page 2, is a table listing these contracts. The transportation contracts provide delivery of natural gas from three sources as described below.

First, the Company holds firm transportation contracts to allow for delivery of up to 13,122 MMBtu/day of Canadian supply. These consist of the following:

- The Company can receive up to 4,000 MMBtu/day of firm Canadian supply from Dawn, Ontario. This supply is delivered to the Company on Company-held firm transportation contracts on Enbridge Inc. (formally Union Gas Limited), ("Enbridge"), TC Energy Corporation (formally TransCanada Pipelines Limited) ("TC Energy"), Iroquois Gas Transmission System ("Iroquois"), and Tennessee.
- The Company can receive up to 5,000 MMBtu/day of firm Canadian supply from Dawn, Ontario. This supply is delivered to the Company on Company-held firm transportation contracts on Enbridge, TC Energy, PNGTS, and Tennessee.
- The Company can receive up to 3,122 MMBtu/day of firm Canadian supply from the Canadian/New York border at Niagara Falls, NY. This supply is delivered to the Company on Company-held firm transportation contracts on Tennessee.
- The Company can receive up to 1,000 MMBtu/day of firm Canadian supply from a Company-held firm transportation contract PNGTS for delivery to its Berlin service territory.

Second, the Company holds the following firm transportation contracts to allow for delivery of up to 106,596 MMBtu/day of domestic supply from the producing and market areas within the United States.

- The Company can receive up to 21,596 MMBtu/day of firm domestic supplies from Texas and Louisiana production areas. These supplies are delivered to the Company on firm transportation contracts on Tennessee.

- The Company can receive up to 85,000[1] MMBtu/day of firm supply from Tennessee's Dracut receipt point located in Dracut, Massachusetts. This supply is delivered to the Company on three firm transportation contracts on Tennessee.

Third, the Company holds the following firm transportation contracts to allow for delivery of up to 28,115 MMBtu/day of domestic supply from underground storage fields in the New York/Pennsylvania area or the purchase of flowing supply in or downstream of Tennessee Zones 4 and 5.

- The Company can receive up to 19,076 MMBtu/day of firm domestic supplies from its Tennessee FS-MA storage contract. This contract allows for a storage inventory capacity of 1,560,391 MMBtu. These supplies are delivered to the Company on firm transportation contracts on Tennessee.
- The Company can receive up to 9,039 MMBtu/day of firm domestic supplies from its storage contracts with National Fuel Gas Supply Corporation, Honeoye Storage Corporation, and Dominion Transmission, Inc. In aggregate, these contracts allow for a storage inventory capacity of 1,019,740 MMBtu. These supplies are delivered to the Company on a firm transportation contract on Tennessee.

1 An additional 5,000 MMBtu/day of Dracut capacity is used to transport the previously described 5,000 MMBtu/day of firm Canadian supply from Dawn, Ontario via Enbridge, TC Energy, and PNGTS.

Q. Have there been any changes in the portfolio of firm transportation contracts that the Company now holds since the Company submitted its Winter 2020/2021 Cost of Gas Filing?

A. Yes, the Company has contracted for 40,000 MMbtu/day of capacity from Tennessee's Dracut receipt point. This contract has been filed with the Commission for approval in Docket to DG 21-008. Further detail and rationale for the contract is currently under review in that docket.

Q. Would you describe the source of gas supplies used with the firm transportation contracts described previously?

A. The firm transportation contracts that interconnect at the Canadian border may source firm gas supplies from both Eastern and Western Canada. The Company's domestic long-haul firm transportation contracts source firm gas supplies primarily from the U.S. Gulf Coast during the winter period and provide access to natural gas supplies in the Marcellus Shale. Supplies purchased at the Dracut receipt point, on the other hand, may originate from any number of locations including Western and Eastern Canada and liquefied natural gas ("LNG") from the Canaport LNG import terminal in New Brunswick, Canada.

Q. Will there be any changes in the portfolio of supply contracts held by the Company as compared to the portfolio of contracts that existed when the Company submitted its Winter 2020/2021 Cost of Gas Filing?

A. Yes. Typically, the Company negotiates a number of different supply contracts for delivery during the peak period. Since its 2020/2021 COG filing, the Company has issued five requests for proposals ("RFP") for supply for the upcoming winter period. The first is for a baseload Tennessee Zone 6 citygate or Dracut supply; the second is for its Canadian firm transportation capacity interconnecting with Iroquois; the third is for its Tennessee long-haul capacity from the Gulf Coast and the Zone 4 market areas; the fourth is for a Tennessee Zone 6 citygate or Dracut swing supply with a call option; and the last is for a second Tennessee Zone 6 citygate or Dracut swing supply with a call option. Each of these five RFPs for the 2021/22 peak period supply are consistent with the RFPs issued for the 2020/21 peak period with the addition of the second call option to coincide with the incremental 40,000 MMbtu/day of capacity mentioned above.

Q. Could you describe the RFP process in more detail?

A. Yes. The Company issued an RFP for a baseload Tennessee Zone 6 citygate supply priced at NYMEX plus a fixed basis as a hedge against basis price spikes. This RFP was issued in accordance with the Company's revised hedging plan, which was approved by the Commission in Order No. 25,691 in Docket No. DG 14-133. The Company received proposals for a delivered citygate supply and has selected a winning bidder.

The Company also issued an RFP for supply originating from Dawn, Ontario. The Company entered into an Asset Management Agreement ("AMA") transaction that will provide a firm baseload supply during the peak period with index-based pricing. The Company has selected a winning bidder.

For the Tennessee long-haul firm transportation from the U.S. Gulf Coast, the Company issued an RFP for an AMA transaction coupled with a delivered service during the peak period. The Company has selected a winning bidder.

Lastly, the Company issued two RFPs for a Tennessee Zone 6 citygate or Dracut supply with an option for the Company to call on the supply as needed to meet day-to-day increases in demand. The RFPs requested a six-month Dracut or delivered citygate supply with swing nomination provisions whereby it intends to release its Dracut capacity to the winning bidder as needed. The price for this supply is market area index based. The Company has selected a winning bidder.

Q. Could you provide the status of the Company's storage refill plan?

A. Yes. During the 2021 off-peak period, the Company has been injecting supplies into its underground storage fields. The Company plans to have all storage fields, with the exception of its Tennessee FS-MA storage, full by November 1, 2021; the Tennessee FS-MA field is targeted to be approximately 95 percent full by November 1, 2021. The approximate five percent unfilled portion of FS-MA storage provides a buffer which allows the Company operational flexibility to inject some of its supply into storage if needed due to weather fluctuations during the month of November. By December 1, 2021, it is the Company's plan to have all of its storage fields full.

Q. Would you describe the additional sources of gas supply available to the Company that do not require pipeline transportation capacity?

A. The Company has three additional sources of gas supply available. First, as described in the 2020/21 COG filing, the Company contracted with Constellation LNG, LLC for a combination liquid/vapor service that can be used to either refill its LNG storage tanks during the peak period and/or deliver incremental supply to its citygate for up to 7,000 MMBtu per day in total. This flexibility will allow the Company to either call on citygate delivered supply or use the liquid option to refill its LNG inventory. Although this contract will continue through the upcoming peak period, it will expire on March 31, 2022. In addition to the combination liquid/vapor service, the Company has contracted for dedicated LNG trucking in order to refill its LNG storage inventory. Since the Company's LNG storage capability is limited, having dedicated LNG trucks allows the Company to replenish inventory as it is used, provides supply security for its customers, and enables the Company to adhere to its seven-day storage inventory requirement established by Puc 506.03.

Second, the Company refilled its propane inventory including approximately 390,000 gallons of inventory at its Amherst storage facility.

Third, the Company has solicited bids for an LNG supply contract to be used as winter liquid refill only. This incremental liquid refill contract must also provide trucking of the

LNG for storage refill. By using the Constellation LNG vapor option along with a separate refill supply contract, the Company will be positioned to meet the demands of the seven-day storage inventory requirement. The Company has selected the winning bidders.

Q. Please describe the supplemental gas supply facilities available to the Company.

A. The Company owns three LNG vaporization facilities in Concord, Manchester, and Tilton that have a combined design vaporization rate of approximately 22,800 MMBtu/day, but are limited operationally by the combined workable storage capacity of approximately 12,600 MMBtu. As described previously, the Company solicited bids for additional LNG refill and associated trucking in order to utilize more vaporization capacity from its LNG facilities. The Company's LNG facilities will be refilled with liquid natural gas from the previously mentioned Constellation combination liquid/vapor service and/or the incremental LNG refill supply.

Additionally, the Company owns four propane facilities in Amherst, Manchester, Nashua, and Tilton that have historically been designated a combined design vaporization capacity of approximately 34,600 MMBtu/day and a combined workable storage capacity of approximately 122,590 MMBtu. (For more information on the propane facilities, please refer to Attachment DMG-1, which is a copy of the Company's response to CLF 1-20 in Docket No. DG 21-008 which discusses a propane study being performed by the Company to analyze and update the actual operational vaporization capacity of these facilities.)

The Company has allocated approximately 12,000 MMBtu of the Amherst propane storage capacity to its Keene Division, leaving approximately 110,700 MMBtu of combined workable storage capacity for Liberty. The Company's propane facilities were refilled during the summer of 2021 and they are ready for the 2021/22 peak period. The Company will seek to have arrangements in place for its propane trucking needs for the upcoming peak period.

Together, these LNG and propane facilities provide the Company and its customers with necessary system pressure support during peak days as well as a critical gas supply source to meet design day requirements. These facilities contribute to the Company's reliable, flexible, and least-cost resource portfolio.

Q. Ms. Gilbertson, what was the source of the projected sendout requirements and costs used in this filing?

A. As in prior cost of gas filings, the Company used projected sendout requirements and costs from its internal budgets and forecasts.

Q. Would you please describe the forecasted sendout requirements for the peak period of 2021/22?

A. Schedule 11A of the Company's filing shows the Company's forecasted sendout requirements for sales customers at 94,216,591 therms over the period November 1, 2021, to April 30, 2022, under normal weather conditions, which is up from last year's forecasted volume of 90,922,460 therms for the period November 1, 2020, to April 30, 2021. In comparison, the normalized actual sendout for firm sales customers for the

November 1, 2020, to April 30, 2021, period was 93,155,745 therms (Reconciliation Filing, Summary Page 5, 'Total Volume Weather Variance,' Column B).

Schedule 11B shows the Company's forecasted sendout requirements for sales customers of 104,530,752 therms over the period November 1, 2021, to April 30, 2022, under design weather conditions, which is up from last year's forecasted volume of 101,061,871 therms for the period November 1, 2020, to April 30, 2021. For the current peak period forecast, design weather requirements are approximately 10 percent greater than normal sendout requirements for weather that is 10 percent colder than normal.

In Schedule 11C, the Company summarizes the normal and design year sendout requirements, the seasonally available contract quantities (inclusive of assigned and Company Managed capacity), and the utilization rates of its pipeline firm transportation and storage contracts.

Schedule 11D shows the Company's forecasted design day sendout for sales customers for the upcoming 2021/22 winter period of 1,283,926 therms, which is up from last year's figure of 1,248,088 therms.

Q. Would you please describe the forecasted sendout requirements for the off-peak period of 2022?

A. Schedule 11A of the Company's filing shows the Company's forecasted sendout requirements of 22,950,820 therms over the period May 1 to October 31, 2022, under normal weather conditions, which is slightly higher than last year's forecasted volume of 22,065,798 therms over the period May 1 to October 31, 2021.

Schedule 11B shows the Company's forecasted sendout requirements of 22,928,033 therms over the period May 1 to October 31, 2022, under design weather conditions, which is higher than last year's forecasted volume of 22,175,995 therms over the period May 1 to October 31, 2021.

In Schedule 11C, the Company summarizes the normal and design off-peak sendout requirements, the seasonally available contract quantities (inclusive of assigned and Company Managed capacity), and the calculated utilization rates of its pipeline transportation and storage contracts based on the normal and design off-peak forecasts contained in Schedules 11A and 11B.

Q. Why did the Company contract for an additional 40,000 of Tennessee capacity?

A. Over the past several years the need for additional gas resources to meet the ever-increasing demand of Liberty's customers has continued to grow. The Company has presented various demand forecasts, resource requirement analyses, and waiver requests in many dockets over the years. This began with the request for approval of a Precedent Agreement ("PA") for 115,000 MMbtu/day of capacity on the proposed Northeast Energy Direct ("NED") project in 2014 which was to provide additional capacity to Liberty. The Company contracted for capacity on the NED Project to meet its projected demand growth, and the Commission approved the PA. *See* Order No. 25,822 (Oct. 2, 2015). However, Tennessee ultimately cancelled NED.

Since the cancellation of the NED project in 2016, the Company has conducted a rigorous search and analysis of capacity options to increase the deliverability of firm gas supplies and/or decrease the requirement of Puc 506.03, the On-Site Storage Requirement rules. As described above, beginning on November 1, 2017, the Company entered into an agreement with Engie/Constellation to supply 7,000 MMbtu/day of either firm vapor to the citygate or liquid natural gas to refill the Company's existing LNG facilities. That contract will expire on March 31, 2022. Although that additional capacity/supply was a much-needed supplement to the portfolio, from December 27, 2017 through January 2, 2018, the Company's service territory experienced a significant cold weather event which surpassed its historical consecutive seven-day cold snap. As a result, the Company needed to have more supplemental gas on hand to meet the increased demand attributable to the higher 7-day forecast as stipulated in Puc.506.03. In August 2019, the Company filed with the Commission a request to waive and modify the requirements of Puc 506.03. At that time, the Company knew it did not have (nor could have had) enough supplemental supply on hand for the upcoming peak season to meet the demands of the rule as written. The Commission approved the Company's request for a waiver and modifications of Puc 506.03 for three years. *See* January 5, 2018, secretarial letter in Docket No. DG 17-200. That waiver will expire in March of 2022.

With the expirations of both the Engie/Constellation agreement and the waiver of Puc 506.03, the Company is again faced with imminent concerns for capacity and supply shortfall. If approved, the contract for 40,000 MMbtu/day of incremental capacity with Tennessee will ensure that the Company will have sufficient resources on hand to meet near term design day requirements of its customers. (As mentioned above, please refer to Docket No. DG 21-008 for additional detail.)

Q. Will the Company need the entire 40,000 MMbtu/day in the first year?

A. No, the Company will release any excess capacity in the market consistent with its current cost mitigation strategy designed to reduce costs to customers.

Q. Can you comment on what is causing the dramatic increase in forward looking natural gas prices as compared to 2020/2021 peak period?

A. As with all local distribution companies across the United States, and the Northeast in particular, the Company's purchase prices for its natural gas supplies are impacted by regional, national, and global forces. According to the most recent data, NYMEX natural gas futures continue to trade at their highest summer levels in seven years. Compared to last year, for example, NYMEX on average is currently trading at approximately 30% higher than this time last year. This is largely related to fears regarding national storage levels for the coming winter. Hot summer temperatures across the nation have stymied consistent, larger injections relative to the five-year average, with last year being particularly impacted. Additionally, demand for U.S. LNG exports to international markets are robust, which reduces supply availability to U.S. markets. The consensus is that until storage across the country returns to normal levels and LNG exports level off, the higher domestic prices are likely to persist.

Q. Please provide the results of the Company's basis hedging program for the winter of 2020/21.

A. For the winter of 2020/21 the Company hedged the Tennessee Zone 6 basis through the purchase of physical supply for its baseload requirements from Dracut for the months of

December, January, and February as provided for in Docket No. DG 14-133 and approved in Order *Nisi* No. 25,691. The result of this basis hedging program showed a cost of approximately $1,500,000. Although the Company cannot predict whether the hedge program will result in a gain or loss each year, it does support the need for price stabilization against fluctuations in the market prices during peak period.

Q. Has the Company hedged the Tennessee Zone 6 basis for the winter 2021/22?

A. Yes, the Company conducted an RFP to solicit physical supply basis bids for the months of December, January, and February during the 2021/22 winter and has selected a supplier.

Q. Does this conclude your direct pre-filed testimony in this proceeding?

A. Yes, it does.

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty

DG 21-008
Petition for Approval of a Firm Transportation Agreement with
Tennessee Gas Pipeline Company, LLC

Conservation Law Foundation Data Requests - Set 1

Date Request Received: 4/9/21 Date of Response: 4/23/21
Request No. CLF 1-20 Respondent: William R. Killeen

REQUEST:

Has the Company analyzed the costs and historic record of having propane facilities performing at their design or nameplate vaporization rates? Is there a record of them not performing as designed to help meet peak demands? Are there upgrades and investments in these facilities that can be made to help them perform to design and nameplate ratings? Have such upgrades been considered as options to help meet peak day demands? Please provide any workpapers and analyses with formulas intact.

RESPONSE:

The Company's three propane production facilities directly connected to its distribution system are located in Manchester, Nashua, and Tilton. In total, they have a design, or nameplate, vaporization capacity of approximately 34,600 MMBtu/day and a combined workable storage capacity of approximately 122,590 MMBtu. Historically, the facilities have never reached their nameplate vaporization capacity primarily due to the fact that there is not sufficient natural gas flowing by these propane facilities to provide a proper blending of a propane/air mix with natural gas. The historical peak sendout from the Nashua propane plant was 9,954 Dth which occurred on February 14, 2016. The historical peak sendout from the Manchester propane plant was 9,921 Dth which occurred on February 5, 2007. The historical peak sendout for the Tilton propane plant was 1,242 Dth (the Company does not have the date on which this occurred). While the combined total historical peak vaporization capacity of these facilities was 21,117 Dth, the peak vaporization capacity for each facility occurred on different days. The combined single day peak vaporization from these facilities was 18,869 Dth which occurred on February 5, 2007.

As to whether any upgrades or investments can be made to these propane facilities, the Company recently engaged with a process control engineer to analyze the current operating controls at Manchester and Nashua to see if upgrades would allow for increased vaporization capacity. The process control engineer will take into consideration the adverse impact that propane/air injection has on high efficiency equipment. As noted in prior dockets, the Company is very concerned with customer outages and complaints associated with propane production. Due to the low tolerance of high efficiency equipment to handle the particular characteristics of propane air, customer outages and complaints have been correlated directly to when the Company is utilizing its propane facilities. As recently as March 15, 2021, the Company received significant customer complaints when it had to utilize its propane facility in Manchester to meet increased demand due to much colder than forecast temperatures.

Given the increased installation of high efficiency equipment and the adverse impact that propane/air blending has on that equipment, it is highly unlikely that the operational capacity of the Company's existing propane facilities will reach, or exceed, historical levels. Rather, it is more likely that the operational capacity of the propane facilities will decrease over time as new high efficiency equipment is added by customers.

Docket No. DG 21-XXX

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty
Winter 2021/2022 Cost of Gas
Summer 2022 Cost of Gas

DIRECT TESTIMONY

OF

MARY E. CASEY

September 1, 2021

THIS PAGE INTENTIONALLY LEFT BLANK

I. INTRODUCTION

Q. Please state your name, job title, and job description.

A. My name is Mary E. Casey. I am the Senior Manager, Environment, for Liberty Utilities Service Corp. ("LUSC"). I am responsible for overseeing the management, investigation, and remediation of manufactured gas plant (MGP) sites for Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty ("Liberty" or "the "Company"), as well as operational environmental compliance, including air and waste permitting, wetlands permitting, and protection and spill response.

Q. Please describe your educational and professional background.

A. I hold a Bachelor of Science in Chemical Engineering from Polytechnic Institute of New York, and a Master of Science in Civil/Environmental Engineering from Polytechnic University. I have been employed by LUSC since July 3, 2012, managing the investigation and remediation of Liberty's MGP sites. Prior to my employment by LUSC, I held the position of Principal Environmental Engineer for National Grid and KeySpan Energy, with responsibility for operational environmental compliance.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to discuss the status of Liberty's site investigation and remediation efforts at various MGP sites in New Hampshire, to briefly describe the MGP-related activities performed by the various contractors and consultants, to discuss the costs for which the Company is seeking rate recovery, and to describe the status of the Company's efforts to seek reimbursement for MGP-related liabilities from third parties. My testimony is intended to update the information provided by the Company in prior cost of gas proceedings. The costs associated with these investigations and remediation efforts and certain of the amounts recovered from third parties are included in the schedules and other data prepared by Mr. Simek and Ms. McNamara as part of the Local Distribution Adjustment Charge ("LDAC") portion of the Company's cost of gas filing.

II. STATUS OF INVESTIGATION AND REMEDIATION ACTIVITIES

Q. Please briefly describe the status of each of the Company's MGP sites.

A. Consistent with past practice, the description of the status of investigation and remediation efforts at each site, as well as the various efforts to recover the site investigation and remediation costs from third parties, are summarized in materials included in the Company's filing at Schedule 20.

Q. Please briefly describe the current status of the Company's remediation efforts at the Lower Liberty Hill site in Gilford and any significant events over the course of the past year at that site.

A. The project has been completed since December 2015. The site is stable, and the grass is mowed twice a year. The Notice of Activity and Use Restriction (AUR) was approved by New Hampshire Department of Environmental Services ("NHDES") and recorded at the Belknap Registry of Deeds in February 2017. The groundwater wells are monitored and sampled once a year per the Groundwater Management Permit that was obtained from NHDES in May 2017.

Q. Please briefly describe the current status of the Company's remediation work at the Manchester MGP.

A. On-site activities in the past year were minimal due to COVID-19 access limitations. Some costs were incurred relative to handling MGP-impacted media that resulted from the repair of a sink hole in within the LNG tank area. Groundwater monitoring is ongoing twice a year pursuant to the Groundwater Management Permit for this site.

Q. Please briefly describe the current status of the Company's remediation work at the Concord MGP.

A. The Company continues to move toward a remedy for the MGP-impacted "Concord Pond" site on the parcel known as Healy Park. In 2020, the City and the Company finalized an access agreement that gives Liberty access for the pre-design investigation field work, the construction of the remedy, and subsequent maintenance of the capped area after its completion. Pre-design field investigations commenced in 2021 to develop the final design of a wetland and subaqueous cap, per the Remedial Action Plan approved by NHDES. The construction of the remedy is planned to take place in late summer 2022.

In 2017, the Company received approval from NHDES on a near-bank sediment sampling program in the Merrimack River, or Monitored Natural Recovery (MNR). This program involves annual sediment sampling for contaminants and river bathymetry studies to monitor both the chemical and physical behavior of sediments that may have been impacted by coal tar wastes. There will be five annual samplings, the fourth of which was conducted in October 2020.

As for the Gas Holder site, the City and the Company jointly prepared a report in 2019 that details various use options for the Gas Holder site on the east side of the highway, including costs for various scenarios ranging from cleaning and fortifying the holder structure for public entry to demolition of the structure. In response to Liberty's communication that the gas holder needed to be demolished, as the condition of the structure raises significant safety concerns, the Concord City Council established a working group in 2020, comprised of representatives of the City Council, City Staff, Liberty, and the New Hampshire Preservation Alliance ("NHPA"), and charged with developing a plan and assigning responsibilities for stabilization and preservation of the holder house structure.

The working group discussions resulted in a plan for the NHPA to raise funds to stabilize the holder house and to manage the relevant construction, and for Liberty to seek Commission approval to contribute up to the estimated costs of demolition and remediation beneath the holder house, as the least cost option for customers. The City, the NHPA, and Liberty met with Commission Staff in February 2021 and obtained Staff's support for the plan, provided Liberty can demonstrate that the Company's contribution toward the stabilization of the holder house is less than the estimated costs of demolition and remediation that would otherwise have been incurred.

In April 2021, the City, the NHPA, and Liberty signed an MOU documenting the above understanding as the parties worked toward a formal agreement. As of the date of this testimony, the parties are near completion of a formal Emergency Stabilization License Agreement to govern the repairs to the holder house. The NHPA has substantially completed the engineering for the stabilization work and has obtained a contractor to complete the work before the end of 2021. Liberty has substantially completed the estimate to demolish the holder house and remedy any contamination, which estimate will serve as the cap of Liberty's contribution toward stabilization. Liberty is not prepared to seek recovery of the costs contributed to the stabilization of the holder house at this time because the work has not yet been performed and will likely not be complete by the time of a hearing in this docket. Liberty expects that it will seek recovery of those costs in next year's cost of gas/LDAC filing. Liberty will provide an update of this project at hearing.

Q. Please briefly describe the current status of the Company's remediation work at the Nashua MGP site.

A. In May 2019, the NHDES accepted details of a cap design for the central portion of the property, and construction was planned for 2020, in conjunction with a capital paving project for this property. However, this cap and pave project has been moved to the 2021 construction season due to the COVID-19 pandemic. The Company is presently working on obtaining State and Local permitting for this project, and construction is targeted for late summer 2021.

Q. What other MGP investigation and remediation activity has the Company undertaken in the last year?

A. No other MGP investigation and remediation activity has occurred in the last year.

III. STATUS OF INSURANCE COVERAGE LITIGATION

Q. Have there been any recent significant developments in the Company's efforts to seek contribution from its insurance carriers in the past year?

A. No. Insurance recovery efforts are complete with respect to all the Company's former MGP sites.

Q. What environmental remediation efforts do you anticipate for the remainder of 2021 and in 2022?

A. At the Manchester MGP site, the Company will continue remediation of localized areas of contamination on-site as well as working on the storm drain improvement for a deteriorated drainage pipe along the western boundary of the property. At the Concord MGP site, as described above, Liberty is working with other parties to stabilize the gas holder house to preserve its function as a cap over its footprint; Liberty will continue environmental site monitoring. For the Concord Pond site, the Company will continue to develop the final design of a wetland and subaqueous cap, with the construction of the remedy expected to occur in late summer 2022. The monitoring of near bank sediments will continue in October 2021 per the NHDES-approved Monitored Natural Recovery plan. At the Nashua MGP site, the Company is targeting later in 2021 for capping and paving to commence, now that approval of the cap design has been received. All sites are also now in the monitoring phase, so groundwater monitoring will occur at all of them under their respective Groundwater Management Permits.

Q. Does this conclude your direct testimony?

A. Yes, it does.

Peak 2021 - 2022 Winter Cost of Gas Filing

Table of Contents

Ln	Description	Reference		PK 21-22
1	**Liberty Utilities (EnergyNorth Natural Gas) Corp.**			
2	**d/b/a Liberty**			
3	**Peak 2021 - 2022 Winter Cost of Gas Filing**			
4	**Summary**			
5				PK 21-22
6		Reference		Nov - Apr
7	(a)	(b)		(c)
8				
9	**Anticipated Direct Cost of Gas**			
10	Purchased Gas:			
11	Demand Costs:	Sch. 5A, col (k), ln 46	$	12,887,000
12	Supply Costs	Sch. 6, col (i), ln 47		72,351,034
13				
14	Storage Gas:			
15	Demand, Capacity:	Sch. 5A, col (k), ln 61	$	981,898
16	Commodity Costs:	Sch. 6, col (i), ln 50		6,130,435
17				
18	Produced Gas:	Sch. 6, col (i), ln 56	$	2,299,384
19				
20	Hedge Contract (Savings)/Loss	Sch. 7, col (i), ln 34	$	-
21	Hedge Underground Storage Contract (Savings)/Loss	Sch. 16, col (e), ln 172	$	-
22				
23	**Total Unadjusted Cost of Gas**		$	94,649,751
24				
25	**Adjustments:**			
26				
27	Prior Period (Over)/Under Recovery)	Sch. 3, col (c) ln 28	$	1,431,639
28	Interest 05/01/20 - 4/30/21	Sch. 3, col (q) ln 189		44,085
29	Fuel Inventory Revenue Req	Sch. 26, col (b) ln 8		335,667
30	Refunds from Suppliers	Sch. 4, ln 26 col (c)		-
31	Broker Revenues	Sch. 4, ln 26 col (d)		(3,600)
32	Fuel Financing	Sch. 4, ln 26 col (e)		-
33	Transportation CGA Revenues	Sch. 4, ln 26 col (f)		(6,938)
34	Interruptible Sales Margin	Sch. 4, ln 26 col (g)		-
35	Capacity Release and Off System Sales Margins	Sch. 4, ln 26 col (h) + col (i)		(1,676,512)
36	Hedging Costs	Sch. 4, ln 26 col (j)		-
37	Fixed Price Option Administrative Costs	Sch. 4, ln 26 col (k)		36,800
38				
39	**Total Adjustments**		$	161,141
40				
41	**Total Anticipated Direct Costs**	lns 23 + 39	$	94,810,891
42				
43	**Anticipated Indirect Cost of Gas**			
44	**Working Capital**			
45	Total Unadjusted Anticipated Cost of Gas	Ln 23	$	94,649,751
46	Lead Lag Days / 365	DG 20-105, 25.72/ 365		0.0705
47	Prime Rate			3.25%
48	Working Capital Percentage	per GTC 18(f), ln 47 * ln 48		0.229%
49	Working Capital	ln 45 * ln 48		216,761
50	Plus: Working Capital Reconciliation	Sch. 3, col (c), ln 94		(14,859)
51				
52	**Total Working Capital Allowance**	lns 49 + 50	$	201,902
53				
54	**Bad Debt**			
55	Total Unadjusted Anticipated Cost of Gas	ln 23	$	94,649,751
56	Less Refunds	ln 30		-
57	Plus Working Capital	ln 52		201,902
58	Plus Prior Period (Over) Under Recovery	ln 27		1,431,639
59	Subtotal		$	96,283,291
60	Bad Debt Percentage	per GTC 18(f)		0.70%
61				
62	Bad Debt Allowance	ln 59 * ln 60	$	673,983
63	Prior Period Bad Debt Allowance	Sch. 3, col (c), ln 169		(223,340)
64				
65	**Total Bad Debt Allowance**	lns 62 + 63	$	450,643
66				
67	**Production and Storage Capacity**	per GTC18(f)	$	3,685,458
68				
69				
70	**Miscellaneous Overhead**	lns 69 * 72	$	-
71				
72	**Total Anticipated Indirect Cost of Gas**	lns 52 + 65 + 67 + 70	$	4,338,002
73				
74	**Total Cost of Gas**	lns 41 + 72	$	99,148,894
75				
76	**Projected Forecast Sales (Therms)**	Sch. 3, col (q), ln 52		87,443,741

WASHINGTON, D.C. 20426

FY 2021 GAS ANNUAL CHARGES
CORRECTION FOR ANNUAL CHARGES UNIT CHARGE
June 16, 2021

The annual charges unit charge (ACA) to be applied to in fiscal year 2022 for recovery of FY 2021 Current year and 2020 True-Up is **$0.0012** per Dekatherm (Dth). The new ACA surcharge will become effective October 1, 2021.

The following calculations were used to determine the FY 2021 unit charge:

2021 CURRENT:

Estimated Program Cost $73,470,000 divided by 61,333,716,267 Dth	=	0.0011978730

2020 TRUE-UP:

Debit/Credit Cost ($1,115,938) divided by 60,594,054,316 Dth	=	(0.0000184166)
TOTAL UNIT CHARGE	=	0.0011794564

If you have any questions, please contact Raven A. Rodriguez at (202)502-6276 or e-mail at Raven.Rodriguez@ferc.gov.

The NA15 Retention is 1.11% applicable to use of the Northern Access 2015 Lease. [2/3]

1/ The unit of measure for each rate component is Dth unless otherwise indicated.

2/ All rates exclusive of Transportation Fuel and Company Use Retention and Transportation LAUF Retention. The Transportation Fuel and Company Use Retention for all applicable rate schedules is 0.84% and the Transportation LAUF Retention for all applicable rate schedules is 0.53%. Transporter may from time to time identify point pair transactions where the Transportation Fuel and Company Use Retention shall be zero ("Zero Fuel Point Pair Transactions"). Zero Fuel Point Pair Transactions will be assessed the applicable Transportation LAUF Retention.

3/ Pursuant to Section 19 of the General Terms and Conditions, the ACA unit charge, as revised annually and posted on the Commission's website, will be charged in addition to the specified rate.

4/ Pursuant to Section 42 of the General Terms and Conditions, a per Dth charge of $0.0255 shall be added as a Transmission PS/GHG Surcharge, in addition to the specified rate.

ENBRIDGE GAS INC.
UNION SOUTH
TRANSPORTATION RATES

(A) Applicability

The charges under this schedule shall be applicable to a Shipper who enters into a Transportation Service Contract with Union.

Applicable Points
Dawn as a receipt point: Dawn (TCPL), Dawn (Facilities), Dawn (Tecumseh), Dawn (Vector) and Dawn (TSLE).
Dawn as a delivery point: Dawn (Facilities).

(B) Services

Transportation Service under this rate schedule shall be for transportation on Union's Dawn - Parkway facilities.

(C) Rates

The identified rates represent maximum prices for service. These rates may change periodically.
Multi-year prices may also be negotiated, which may be higher than the identified rates.

	Monthly Demand Charges (applied to daily contract demand)	Fuel and Commodity Charges			
		Union Supplied Fuel	Shipper Supplied Fuel		
	Rate/GJ	Fuel and Commodity Charge Rate/GJ	Fuel Ratio %	AND	Commodity Charge Rate/GJ
Firm Transportation (1), (5)					
Dawn to Parkway	$3.665	Monthly fuel and commodity rates shall be in accordance with schedule "C".	Monthly fuel ratios shall be in accordance with schedule "C".		
Dawn to Kirkwall	$3.110				
Kirkwall to Parkway	$0.555				
M12-X Firm Transportation					
Between Dawn, Kirkwall and Parkway	$4.530	Monthly fuel and commodity rates shall be in accordance with schedule "C".	Monthly fuel ratios shall be in accordance with schedule "C".		
Limited Firm/Interruptible Transportation (1)					
Dawn to Parkway – Maximum	$8.796	Monthly fuel and commodity rates shall be in accordance with schedule "C".	Monthly fuel ratios shall be in accordance with schedule "C".		
Dawn to Kirkwall – Maximum	$8.796				
Parkway (TCPL / EGT) to Parkway (Cons) / Lisgar (2)	n/a	n/a	0.165%		
Carbon Charge (applied to all quantities transported)					
Facility Carbon Charge		$0.003			$0.003

North Bay Junction Long Term Fixed Price (NBJ LTFP) Service

Line No.	Particulars (a)	Monthly Toll ($/GJ/Month) (b)	Daily Equivalent ($/GJ) (c)
1	NBJ LTFP	28.28750	0.9300
2	NBJ LTFP Differential Surcharge	0.00000	0.0000

Note: The toll for NBJ LTFP is inclusive of the applicable Abandonment Surcharge for FT service from Empress to North Bay Junction. The NBJ LTFP Differential Surcharge is zero provided the Abandonment Surcharge for FT service from Empress to North Bay Junction is equal or less than $6.69167/GJ/Month.

Enhanced Market Balancing Service

Line No.	Particulars (a)	Monthly Toll ($/GJ/Month) (b)	Daily Equivalent ($/GJ) (c)	Abandonment Surcharge ($/GJ/Month) (d)	Daily Equivalent Abandonment Surcharge ($/GJ) (e)
3	Union Parkway Belt to Union EDA	9.92374	0.3262	0.44408	0.0146

Delivery Pressure

Line No.	Particulars (a)	Monthly Toll ($/GJ/Month) (b)	Daily Equivalent ($/GJ) (c)
4	Average Delivery Pressure Toll	0.60833	0.0200

Note: Delivery Pressure toll applies to the following locations: Emerson 1 , Emerson 2, Union SWDA, Enbridge SWDA, Dawn Export, Niagara Falls, Iroquois, Chippawa and East Hereford. The Daily Equivalent Toll is only applicable to STS Injections, IT, Diversions and STFT.

Union Dawn Receipt Point Surcharge

Line No.	Particulars (a)	Monthly Toll ($/GJ/Month) (b)	Daily Equivalent ($/GJ) (c)
5	Union Dawn Receipt Point Surcharge	0.13135	0.0043

Short Notice Balancing (SNB) Service

Line No.	Particulars (a)	Monthly Toll ($/GJ/Month) (b)	Daily Equivalent ($/GJ) (c)
6	SNB Toll	2.97597	0.0978

Note: This SNB Toll is a representative toll for the Eastern Region.

Energy Deficient Gas Allowance (EDGA) Service

Line No.	Particulars (a)	Capacity Charge ($/GJ/D) (b)
7	Western Section	0.9982
8	Eastern Section	0.3302

Note: The EDGA Service capacity charge for the Western Section is the effective Empress to North Bay Junction FT Toll and the capacity charge for the Eastern Section is the effective Parkway to North Bay Junction FT Toll. The EDGA Service fuel charge for the Western Section includes the effective Empress to North Bay Junction monthly fuel ratio and the fuel charge for the Eastern Section includes the effective Parkway to North Bay Junction monthly fuel ratio.

Peak 2021 - 2022 Winter Cost of Gas Filing
Capacity Assignment Calculations 2020-2021
Derivation of Class Assignments and Weightings

Basic assumptions:
1 Residential class pays average seasonal gas cost rate (using MBA method to allocate costs to seasons)
2 Residual gas costs are allocated to C&I HLF and LLF classes based on MBA method
3 The MBA method allocates capacity costs based on design day demands in two pieces:
a The base use portion of the class design day demand based on base use
b The remaining portion of design day demand based on remaining design day demand
4 Base demand is composed solely of pipeline supplies
5 Remaining demand consists of a portion of pipeline and all storage and peaking supplies

Environmental Surcharge - Manufactured Gas Plants

Manufactured Gas Plants

Required Annual Environmental Increase	$2,351,805	
Second one-third of prior period under recoveries (through June 2019)	$341,389	
July 2020 - June 2021 recovery difference between actual and estimate	$139,028	
Environmental Subtotal	$2,832,222	
Overall Annual Net Increase to Rates	$2,832,222	
Estimated weather normalized firm therms billed for the twelve months ended 10/31/2022 - sales and transportation	182,829,872	therms
Surcharge per therm	$0.0155	per therm
Total Environmental Surcharge	$0.0155	

1. SITE LOCATION: 38 Bridge Street, Nashua, New Hampshire.

2. DATE SITE WAS FIRST INVESTIGATED: At the end of 1998, the New Hampshire Department of Environmental Services (NHDES) sent a "Notification of Site Listing and Request for Site Investigation" for the former Nashua Manufactured Gas Plant (MGP) to the former plant owners/operators: EnergyNorth Natural Gas, Inc. d/b/a National Grid (ENGI)[1], and Public Service Company of New Hampshire (PSNH) and its parent company, Northeast Utilities Services Company (NU). NHDES designated the site DES #199810022.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the former MGP have been identified at the site and in the adjacent Nashua River. These residuals, which include tars and oils, have been found mainly in subsurface soil at discrete locations, in groundwater, and in localized river sediments.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES:

   - Prior to the time NHDES issued its notice letter to ENGI, the US Environmental Protection Agency (EPA) was remediating contamination (asbestos) at the former Johns Manville plant located adjacent to, and downstream from the 38 Bridge Street property. In the course of that work, EPA detected what it determined to be MGP related residuals in Nashua River sediments containing asbestos. EPA sought reimbursement from ENGI and PSNH of only those incremental additional costs it incurred to dispose of sediments containing MGP related wastes in addition to asbestos. ENGI and PSNH entered into a settlement agreement with the EPA at the end of September 2000. Under the terms of the agreement, each company received a release from liability associated with the so-called Nashua River Superfund Site and contribution protection against future claims associated with that site. The settlement agreement made it clear that EPA does not contend that ENGI or PSNH contributed any asbestos to the Nashua River.

   - In response to the 1998 notice from NHDES, QST Environmental, Inc. (QST, subsequently Environmental Science and Engineering, Inc. (ESE), and later Harding ESE, Inc. (Harding ESE)), submitted a Scoping Phase Field Investigation Scope of Work to NHDES on behalf of ENGI in February 1999.

[1] In July 2012, EnergyNorth was acquired by Liberty Utilities and its legal name changed to Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty. For consistency purposes, the acronym ENGI will be used throughout this document.

- In response to comments from NHDES, QST and ENGI refined the Scope of Work for the Scoping Phase Field Investigation and resubmitted to NHDES in April 1999.

- NHDES approved the refined Scoping Phase Field Investigation Scope of Work in May 1999.

- During the summer of 1999, ENGI and QST conducted the Scoping Phase Field Investigation, collecting site background information and soil, groundwater, surface water and sediment samples from the former Nashua MGP and the adjacent Nashua River.

- ENGI and ESE submitted the Scoping Phase Field Investigation Report to NHDES in December 1999.

- NHDES provided comments to ENGI and ESE in February 2000 on the Scoping Phase Field Investigation Report and requested a Phase II Investigation Scope of Work.

- On behalf of ENGI, ESE submitted a Draft Phase II Investigation Work Plan to NHDES in April 2000.

- ENGI and ESE met with the NHDES site manager in April 2000 to discuss the Draft Phase II Investigation Work Plan.

- NHDES provided written comments on the Draft Phase II Investigation Work Plan in June 2000.

- ENGI and ESE met with NHDES in August 2000 to discuss NHDES' comments on the Phase II Work Plan.

- ENGI submitted a letter to NHDES in August 2000 discussing revisions to the Draft Phase II Investigation Work Plan in response to comments from NHDES and PSNH/NU, along with a proposed schedule for implementation of the work.

- NHDES approved the Revised Phase II Work Plan for the site at the end of August 2000.

- NHDES provided comments to ENGI and Harding ESE on the proposed schedule for Phase II Work Plan implementation in September 2000.

- ENGI submitted an addendum to the Phase II Work Plan, including a proposed approach for risk evaluation, to NHDES in November 2000.

- Subsequent to meetings and discussions throughout 2000, ENGI and PSNH reached agreement in late 2000 regarding sharing of costs for the remediation work and transfer of management of the remediation work to ENGI.

- Harding ESE implemented the Phase II Work Plan during the fall and winter of 2000/2001. Work entailed a comprehensive field program that included the advancement of river borings and collection of sediment samples as well as the installation of borings and monitoring wells on and off the property.

- NHDES provided comments on the Phase II Work Plan addendum in February 2001.

- Harding ESE responded to NHDES comments on the Phase II Work Plan addendum in March 2001.

- In May 2001, ENGI submitted to NHDES a Draft Site Conceptual Model to assist with finalization of the Phase II Work Plan Addendum and met with NHDES to discuss.

- ENGI and Harding ESE revised the Draft Site Conceptual Model and outlined supplemental field activities to be included in the Phase II Work Plan Addendum and submitted to NHDES in June 2001.

- In July 2001, ENGI and Harding ESE met with NHDES to review the Site Conceptual Model and proposed Phase II supplemental investigation activities.

- ENGI and NHDES met in August 2001 to discuss the overall site objectives.

- In September 2001, Harding ESE, on behalf of ENGI, submitted a Phase IIB Supplemental Site Investigation (SI) Scope of Work to NHDES.

- NHDES provided verbal approval for the Phase IIB Supplemental SI, and Harding ESE initiated the field program on behalf of ENGI in October 2001.

- NHDES provided written approval of the Phase IIB Supplemental SI in October 2001. A modification to the proposed scope of work relating to investigations adjacent to the gas lines was proposed and verbal approval was obtained from NHDES on November 19, 2001.

- Property owners north of the Nashua River did not provide access to install monitoring wells proposed in the Phase IIB SOW. Harding ESE completed all on-site work outlined in the Phase IIB SOW in February 2002.

- ENGI received access from PSNH to install Phase IIB monitoring wells west of the site in March 2002.

- Harding ESE installed additional groundwater monitoring wells west of the site in March and sampled all newly installed monitoring wells in April 2002. All work outlined in the Phase IIB SOW was completed except for the proposed monitoring wells north of the Nashua River where access was denied.

- The Phase II Report was submitted to NHDES in February 2003. The report was approved by NHDES in August 2003. At the time of approval, NHDES required ENGI to begin work on the Remedial Action Plan for the site, due in 2004.

- ENGI met with NHDES on November 3, 2003, to review the proposed remedial schedule, which called for the Remedial Action Plan to be submitted in July 2004, and remediation to occur in 2005. NHDES approved the schedule by letter dated December 1, 2003. In that letter they concurred with ENGI's request to divide the site into terrestrial and aquatic portions, to facilitate remediation of sediments concurrent with re-armoring of ENGI's gas mains crossing the river.

- By way of a May 5, 2004 letter, ENGI requested that NHDES waive the Remedial Action Plan (RAP) requirement for the aquatic portion of the site and allow ENGI to proceed with capping sediments in conjunction with gas main rearmoring, which was scheduled for completion in 2004. NHDES approved the request by letter dated May 14, 2004.

- ENGI held pre-application meetings with state and federal agencies (NHDES Wetlands Bureau, United States Army Corps of Engineers, United States Department of Fish and Wildlife, United States Environmental Protection Agency and National Oceanic and Atmospheric Administration) in June 2004. These meetings were held in advance of permit application submission for the capping/rearmoring project, to review the project and expedite the approval process. The application was submitted to these agencies as well as the City of Nashua on July 1, 2004. On July 6, 2004, NHDES deemed the permit application administratively complete. The hearing was closed on July 26, 2004 and the permit was issued in September 2004.

The capping and re-armoring was completed in October 2004 and the Remedial Completion Report, submitted to NHDES in January 2005, was subsequently approved.

- In October 2005, ENGI submitted the Terrestrial Remedial Action Plan to NHDES, and the document was deemed complete by NHDES in March 2006. NHDES requested supplemental information to be submitted before ENGI proceeded with remediation, and in 2007 ENGI gathered the requested data.

- In November 2007, ENGI submitted a Workplan for DNAPL Recovery Pilot Test to NHDES and the document was approved by NHDES on November 14, 2007.

- ENGI applied for three permits required for the implementation of the NHDES-approved DNAPL pilot testing activities: Nashua Conservation Commission Permit, Nashua Zoning Board of Appeals Permit and NHDES Dredge and Fill Permit. ENGI attended numerous hearings related to obtaining the permits and obtained the three permits on April 21, 2008, April 23, 2008, and May 31, 2008, respectively.

- In June 2008, ENGI installed six extraction wells for DNAPL recovery pilot testing at the site. ENGI completed the construction of the coal tar recovery system trailer (i.e., the equipment that will be used to pump, collect and temporarily store the coal tar) in December 2008. Trenching for the subsurface piping and final system installation was delayed in late 2008 due to weather. ENGI performed manual DNAPL recovery throughout 2008 and the first three quarters of 2009.

- In Spring 2009, ENGI began trenching and final system installation activities for the DNAPL recovery pilot testing. The trenching, pump installations and system electrical work were completed in July 2009. Electrical service was installed in late August 2009. The system was started up in November 2009 and has been operational since that time.

- In September 2010, ENGI submitted an Installation Summary and DNAPL Recovery Pilot test summary report to NHDES. This report recommended that DNAPL extraction activities continue. In October 2010, a work plan for an off-site groundwater investigation program to support the delineation of a Groundwater Management Zone was submitted to NHDES. This work plan was approved by NHDES in a letter dated November 5, 2010. Access negotiations and environmental permitting for the NHDES-approved investigation were completed in June 2011.

- The NHDES-approved subsurface soil and groundwater investigation program was initiated on September 26, 2011. The goal of this program was to delineate a Groundwater Management Zone for the site, and allow for the filing of a Groundwater Management Permit (GMP). Due to known asbestos in the off-site area to be investigated, ENGI submitted an “In-active Asbestos Disposal Site (ADS) Work Plan”; NHDES approved the asbestos work plan in October 2011. Soil boring and well installation work was performed between October and December 2011. An In-active ADS Site Completion Report was submitted to and accepted by NHDES on May 4, 2012. Groundwater sampling events were conducted in February and May 2012. A meeting to discuss the preliminary results of the Groundwater Management Zone (GMZ) investigation program with NHDES took place on August 16, 2012. It was agreed that two more rounds of groundwater sampling should occur before a delineation of the GMZ is considered.

- On November 27, 2012 and December 6, 2012, 8.25 feet and 10.83 feet of DNAPL appeared in MW-106, situated in the foot print of historical Holder #2. A weekly monitoring and removal plan was initiated at this time and is ongoing as of July 2013. To date, 109 gallons of DNAPL has been removed manually, in addition to the system removal discussed above.

- In January 2013, a Supplemental Investigation Report (SIR) and DNAPL Recovery System Pilot Test Progress report was submitted to NHDES reporting on additional investigation activities, including the installation of sixteen additional wells in 2011, and the May and September 2012 (second and third of three) rounds of sampling to define groundwater quality and hydrogeologic conditions at the site, so that the GMZ can be delineated. Additionally, the report includes information regarding DNAPL recovery system O&M activities and DNAPL recovery rates demonstrating that the system still effectively recovers DNAPL. A meeting with NHDES took place on March 22, 2013, to discuss these results and next steps.

- NHDES responded to the January 2013 submittal via letter dated May 21, 2013, accepting the SI Report and authorizing ENGI to proceed with the delineation of the GMZ in order to submit a Groundwater Management Permit (GMP) application, and the preparation of a revised Remedial Action Plan (RAP) for the terrestrial portion of the site. NHDES allows ENGI to utilize manual removal of DNAPL as these methods are more effective than the automated recovery system.

- ENGI responded to the NHDES letter on June 19 with a schedule targeting December 31, 2013, for submittal of the GMP application and revised RAP.

- In December 2013, ENGI submitted a request to revise the RAP. The purpose of the request was to summarize activities conducted since submittal of the 2013 Supplemental Investigation Report and to propose a revision to the approved RAP for the area on site known as “Holder # 2.”

- The RAP submitted in 2005 selected asphalt capping in the area of Holder #2. The entire area of the Holder was not designated to be capped with asphalt. At the time of the preparation of the RAP, separate phase NAPL was not considered to be present in recoverable quantities in Holder #2. In order to address what appears to be a limited area and quantity of NAPL in a monitoring well in Holder #2, continued manual NAPL recovery from two additional wells in the Holder #2 area was proposed as part of the GMP monitoring program.

- In addition to the NAPL recovery activity, the area of asphalt capping was proposed to be expanded to include all of former Holder #2. This expansion of paving will also address the asbestos contaminated material (ACM) present in this area of the site. The asphalt cap detail presented in the proposed RAP revision will be modified (as necessary) to address the relevant solid waste regulations for ACM in soil.

- On June 4, 2014, the NHDES approved of the requested RAP revision and required that a RAP Summary Report, with the necessary engineering details for the selected remedies, be provided. ENGI plans to submit this RAP Summary Report by December 31, 2014.

- The GMP Application was submitted in March 2014. The GMP proposed a list of monitoring wells and analytical methods in order to monitor the Groundwater Management Zone.

- On June 5, 2014, the NHDES approved the GMP application. This Permit was issued for a period of five years requiring the monitoring of groundwater quality, assessing and recovering any free product found, and visually inspecting the Nashua River sediment cap area. During the first year of the Permit, monitoring events will be conducted in October 2014 and April 2015, and each successive April and October. Annual summary reports are submitted to the NHDES in January of each year.

- The first groundwater monitoring annual summary report was submitted to NHDES in February 2015, and included the groundwater data from the first GMP round of sampling on October 27, 2014.

- ENGI submitted the draft Activity and Use Restriction (AUR) and RAP Engineering Design details for the cap on September 14, 2015. ENGI received comments from NHDES on December 15, 2016. NHDES altered the design to include an impermeable capping layer, and incorporation of standards in the Waste Management Bureau's Asbestos Disposal Site rules. As ENGI is planning to pave the Nashua property in 2018, the cap will be installed in conjunction with this capital project.

- In May 2017, the NHDES requested by letter that all active hazardous waste sites managed by the Hazardous Waste Remediation Bureau include sampling for Per- and Polyfluoroalkyl Substances (PFAS) in one of their groundwater sampling rounds, as part of a statewide study of these compounds. ENGI fulfilled this request during regularly scheduled sampling in 2018.

- The capping remedy was planned for 2018 in conjunction with an overall paving of the property, however a portion of the City's sewer pipe that transects the property collapsed in early February 2018 prompting the City to plan a lining upgrade to it during summer 2018. This event has caused the remedy construction to be pushed out to 2019.

- In a letter dated May 2, 2019, NHDES approved ENGI's 5-year Groundwater Management Permit (GMP) renewal application decreasing the frequency of sampling for all but two wells in the perimeter groundwater management zone. Additionally, NHDES required that a second confirmatory round of PFAS samples be taken in the 2019 GMP monitoring round.

- In the same May 2, 2019 letter, NHDES approved GZA Geoenvironmental's (GZA) proposed cap design transmitted to them on January 30, 2019. The cap design was altered to require an impermeable barrier only under "non-paved" surfaces.

- The cap installation and subsequent paving of the entire property has been pushed out to 2021, due to delays in permitting and the COVID-19 pandemic. **ENGI is still on schedule to complete this project, and has been working toward final design to be used for construction. During the 2020-21 period, ENGI has been working with the City of Nashua to assess the condition of subsurface stormwater and sewer lines, and is preparing applications for NHDES Alteration of Terrain permitting for the property paving.**

5. NEW HAMPSHIRE SITE REMEDIATION PROGRAM PHASE: All Supplemental Phase II Site Investigation Work that could be performed (based on property access) has been completed. Phase II Report was submitted to NHDES in February 2003, and approved by NHDES on August 28, 2003. Remediation of the Nashua River sediments was completed in the fall of 2004. A Remedial Action Plan (RAP) for the upland and groundwater was submitted in October 2005, and approved by NHDES in March 2006. DNAPL recovery is on-going. A Groundwater Management Permit was granted on June 5, 2014. A RAP Summary, involving the asphalt capping of the area over Holder #2 and continued groundwater monitoring, was submitted on April 2, 2015. A Monitoring Summary and Progress Report was submitted by ENGI on February 7, 2015. NHDES accepted the RAP Summary on April 10, 2015, with the provisions that ENGI submit the draft Activity and Use Restriction (AUR) and final engineering design plan for the cap by September 15, 2015. ENGI submitted the draft Activity and Use Restriction (AUR) and RAP Engineering Design details for the cap on September 14, 2015. NHDES responded to ENGI with their comments on December 15, 2016. **Design for the engineered cap remedy is complete and approved by NHDES. ENGI is in the process of obtain State and City permitting for this construction, now planned for the 2021 construction season.**

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: The Nashua Gas Light Company built the original coal gas facility in 1852 or 1853. In 1889, the Nashua Gas Light Company merged with the Nashua Electric Company to form the Nashua Light, Heat and Power Company (NHLPC). In 1914, the NLHPC merged with the Manchester Traction Light & Power Company, and PSNH acquired the facility in 1926. The MGP facility was upgraded and expanded. In 1945, PSNH divested the gas operations to Gas Service, Inc. Gas production was eliminated in 1952 when natural gas was supplied to the city via pipeline. In 1981, Gas Service, Inc. merged with Manchester Gas Company to form ENGI. ENGI currently owns the majority of the former gas plant property.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: The EPA made a claim against ENGI and PSNH related to the so-called Nashua River Asbestos Site located adjacent to the former MGP. EPA was removing asbestos from the Nashua River, when some was found to be mixed with wastes allegedly from the MGP. Without admitting any facts or liability, by agreement effective December 21, 2000, ENGI resolved EPA's claim in exchange for a payment of $387,371.46, plus interest accrued between settlement and final approval of an administrative consent order by EPA.

ENGI and PSNH have entered into a confidential Site Responsibility and Indemnity Agreement effective as of September 15, 2000, which governs the financial and decision-making responsibilities of the two companies through the remainder of site study and remediation. Under this agreement, ENGI will take the lead on site investigation and remediation.

Numerous, confidential insurance settlements have been entered into. A jury trial commenced against the London Market Insurers and Century Indemnity on November 1, 2005. On November 14, 2005, the jury returned a verdict in favor of EnergyNorth finding that the defendants were obligated to indemnify EnergyNorth for response costs incurred at the site. The Court then awarded ENGI its reasonable costs and attorneys fees to be paid by the defendants. Subsequent to the verdict, the London Market and ENGI entered into a confidential settlement. Century appealed to the First Circuit Court of Appeals in the summer of 2006. However, on the day its brief was due at the First Circuit, Century withdrew its appeal. Because the site has not yet been remediated, the jury was not asked to make a damage determination. Future proceedings will take place after the remedy has been approved by the NHDES to determine the indemnification amounts to be paid by Century. The New Hampshire Supreme Court's ruling and guidance on the proper manner in which costs are to be allocated among insurers (discussed in more detail in the Manchester MGP summary) will be used in the calculation of that figure.

Note: This summary is an overview only and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

1. SITE LOCATION: 130 Elm Street, Manchester, New Hampshire.

2. DATE SITE WAS FIRST INVESTIGATED: The New Hampshire Department of Environmental Services (NHDES) compiled a list of all former Manufactured Gas Plants (MGPs) in New Hampshire that were not already subject to a site investigation or remediation. In March of 2000, NHDES sent out notice letters to all parties it deemed responsible for the sites. EnergyNorth Natural Gas, Inc. (ENGI)[1] received a "Notification of Site Listing and Request for Site Investigation" for the former Manchester MGP from NHDES, which designated the site DES #200003011.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the former MGP have been identified at the site. These residuals, which include tars and oils, have been found mainly in subsurface soil at discrete locations and in groundwater at the former MGP, as well as in the downgradient Singer Park and river sediment.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES:

   - On behalf of ENGI, Harding ESE, Inc. (Harding ESE), submitted a Scoping Phase Field Investigation Scope of Work to NHDES in March 2000.

   - NHDES approved the Scoping Phase Field Investigation Scope of Work in June 2000.

   - During the summer and fall of 2000, ENGI and Harding ESE conducted the Scoping Phase Field Investigation, collecting site background information and soil, groundwater, surface water and sediment samples from the former Manchester MGP and the nearby Merrimack River.

   - On August 31, 2000, an underground tank containing MGP residuals was discovered at the site. As required by NHDES regulations, the tank contents were removed and disposed of subject to a permit from NHDES. Harding ESE, on behalf of ENGI, submitted a summary report to NHDES in January 2001 documenting the response action.

   - ENGI and Harding ESE submitted the Scoping Phase Field Investigation Report to NHDES in February 2001.

[1] In July 2012, EnergyNorth was acquired by Liberty Utilities and its legal name changed to Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty. For consistency purposes, the acronym ENGI will be used throughout this document.

- NHDES provided comments to ENGI and Harding ESE in April 2001 on the Scoping Phase Field Investigation Report and requested a Phase II Investigation Scope of Work.

- ENGI responded to NHDES' comments on the Scoping Phase Investigation Report and indicated that ENGI planned to solicit bids for the Phase II Scope of Work.

- In July 2001, on behalf of ENGI, Harding ESE submitted a Scope of Work to NHDES to fence the ravine near the former Manchester MGP to prevent access to impacted sediments. In October 2001, NHDES accepted ENGI's fence installation plan, but requested clarification on the fence location and signage. In correspondence dated April 3, 2002, ENGI provided proposed language to NHDES for the signs to be attached to the ravine fence. NHDES approved the ravine sign language in April 2002.

- On May 1, 2002, ENGI issued a Request for Proposals to eight environmental consultants for the Phase II Site Investigation and Risk Characterization. ENGI received six proposals for the Phase II work in June 2002.

- In June 2002, the City of Manchester approved the ravine fence location and granted access to City property to install. The work was completed in August 2002.

- URS Consultants were awarded the contract to undertake the next phase of work. A Phase II Site Investigation Scope of Work was submitted in September 2002.

- Phase II field investigations began in the fall of 2002.

- In June 2003, the City of Manchester approved a proposal to construct a minor league ballpark, retail shops, parking garage, hotel and high-rise condominium complex on the Singer Park site, in the same general areas that MGP impacts were detected in ongoing Phase II investigations. Following supplemental ravine investigations during the spring and summer of 2003, the Drainage Ravine Engineering Evaluation was submitted to NHDES in January 2004, and presented four potential remedial alternatives for the ravine, which is located on a portion of Singer Park.

- ENGI had been a regular participant in monthly Singer Park redevelopment meetings with NHDES, the City of Manchester and the various developers from April 2003 until the regular meetings ended on November 15, 2004. ENGI had attended these coordination meetings to ensure that the environmental and construction aspects of the redevelopment were being addressed concurrently and that ENGI avoided incurring costs associated with another entity's contamination.

- ENGI entered into confidential agreements with Manchester Parkside Place (the owner of the ravine property) for access and cleanup of MGP byproducts in the ravine in January 2005.

- In January 2005, ENGI submitted a Remedial Design Report to NHDES selecting excavation and off-site disposal of source material and impacted soils as the remedial alternative for the ravine. NHDES approved of this alternative via a letter dated February 7, 2005. Eleven contractors were invited to bid on the ravine remediation in January 2005. The contract was awarded to the low bidder (ENTACT) in February 2005. Remediation of the ravine began in March and was completed in July 2005. A remedial completion report was submitted to NHDES on September 2, 2005.

- ENGI submitted a Phase II Site Investigation Report to NHDES in March 2004. The report concluded that MGP impacts (including impacted soil and groundwater and separate phase coal tar) were present in the subsurface beneath the 130 Elm Street property, portions of Singer Park at depth and the Merrimack River sediment. Further investigations were recommended by ENGI to further assess the nature and extent of this contamination and a work plan proposing those investigations was submitted to NHDES in May 2004 and approved in July 2004. These supplemental investigations were completed and documented in the Supplemental Phase II Investigation Report and the Stage I Ecological Screening Report for the Merrimack River, submitted to NHDES in February and March 2005, respectively. The reports concluded that Remedial Action Plans for the upland and Merrimack River portions of the site were required. On September 15, 2005, NHDES issued a letter accepting the reports and requested ENGI prepare a Remedial Action Plan (RAP) to address impacted sediments in the Merrimack River, as well as MGP-related impacts on the upland portion of the site. Preparation of the RAPs began in August 2006.

- Additional Merrimack River investigations were completed in 2007 and the Remedial Design Report for dredging approximately 9,000 cubic yards of coal tar-impacted sediments from the river was submitted to NHDES on May 11, 2007. ENGI applied for, and was granted, a Dredge and Fill Permit for the remedial dredging from NHDES and the United States Army Corps of Engineers on May 18, 2007. Dredging of the river commenced in June 2007 and was substantially completed by the end of the year. Final site restoration activities associated with the sediment remediation were complete in May 2008. A Remedial Action Implementation Report documenting the sediment remediation activities was submitted to NHDES in May 2008.

- Certain pre-design investigations were completed on the upland portion of the site in 2008/2009. ENGI also completed interim Phase I Corrective Actions at the site, including pilot scale light non-aqueous phase liquid (LNAPL) recovery, pilot scale dense non-aqueous phase (DNAPL) recovery, and design for repair/replacement of a deteriorated portion of the site drainage system located within a known LNAPL area of the site. Limited surface soil removal activities were conducted during the summer/fall of 2008 in an area with detected Upper Concentration Limit exceedances in shallow soils.

- ENGI was issued a Groundwater Management Zone (GMZ) permit No. GWP-200003011-M-001 for the former MGP site on June 15, 2009. The permit establishes a groundwater management zone in the vicinity of the former MGP site with associated notification/groundwater monitoring requirements. Groundwater monitoring events to support this GMZ permit have been ongoing, every April and October.

- ENGI submitted an RAP for the upland portion of the site to NHDES on June 30, 2010. The remedial objectives for the site include control of mobile DNAPL, reduction in contaminant mass (where practicable), and management of residual contamination through the use of administrative controls. The recommended remedial alternative includes removal of the contents of certain subsurface structures where removal is anticipated to provide a reduction in the potential for the further release of DNAPL to the subsurface; NAPL recovery from the subsurface; construction of a barrier wall proximate to the Merrimack River to mitigate potential DNAPL migration; and use of administrative controls to address potential human exposure to residual soil and groundwater contamination. Additional investigation activities were recommended to support the preparation of Design Plans and Construction Specifications following NHDES approval of the RAP and to confirm the appropriateness of certain remedial alternatives recommended in the RAP.

- In Fall 2010, ENGI performed storm drain rehabilitation activities on a deteriorated portion of the site drainage system that is located within a known LNAPL area. This work was performed to mitigate the migration of LNAPL to the Merrimack River via the storm drain system. These activities were mainly completed in late 2010.

- In April 2011, NHDES approved of the upland RAP and requested that ENGI proceed with the additional investigation activities recommended in the June 2010 RAP. In addition, ENGI was contacted by both the developer and condominium association associated with the property directly downgradient of the site regarding potential impacts to the property, as well as the proposed remedy; ENGI met with both parties in early and mid-2011.

- After meeting with the developer of the property directly downgradient of the site at the potential location of the barrier wall regarding potential impacts to the property in September/October 2011, access was obtained to conduct certain approved pre-design off-site investigation activities as recommended in the June 2010 RAP. The off-property investigations were substantially completed in December 2011. A meeting was held with NHDES in December 2011 to discuss the results. A Remedial Design Report for the off-site property is currently being finalized.

- On-site pre-design investigation activities were conducted during the spring and summer of 2012 including: additional groundwater quality monitoring, former gas holder foundation test pit excavations, supplemental LNAPL delineation, cyanide source investigation test pit excavations, cyanide delineation and source investigation monitoring well installation, and storm drain inspection.

- Further storm drain inspections occurred during July and August 2013. The remedial design and construction specifications report was drafted including a summary of the design investigation activities and findings. The remedial design includes the monitoring and practicable recovery of NAPL at strategic on-site and off-site locations, as well as excavation of subsurface structures with concurrent source removal if encountered. The Remedial Design Report drafted, also summarizes the results of cyanide source investigation and delineation work, with further source delineation work anticipated.

- In addition to routine Groundwater Management Permit (GMP) sampling and reporting, an application for GMP renewal was also submitted to NHDES in July 2014, with the Annual Summary Report for the 2013/2014 groundwater Monitoring year. The Remedial Design Report was submitted to NHDES on December 19, 2014. On July 15, 2015, NHDES accepted the proposed remedial design with exceptions involving further remediation of historical Holder 3, and further investigation of the storm drain system beneath and downstream of the site. ENGI responded to NHDES' comments and requests on May 12, 2017.

- Per the 2010 Remedial Action Plan and the 2014 Remedial Design Report ENGI removed material from a tar separator, tar well and other subsurface structures, dug four test pits, and installed three new monitoring wells and an extraction well on-site, prior to property paving in Fall 2017. Further removals from subsurface structures were planned for 2018.

- During 2017, NHDES required active hazardous waste sites managed by the NHDES Hazardous Waste Remediation Bureau to include Per- and Polyfluoroalkyl Substances (PFAS) in one of their sampling rounds.

- In 2019, ENGI continued to address potential site impacts per the 2014 Remedial Design Report by removing approximately 9,000 gallons of contaminated liquids and sludge from a subsurface tar liquor decanter structure in the gas plant area. After removal, ENGI cleaned the structure and filled it with inert fill. **The details of these activities were reported to NHDES in the 2018/2019 Annual Summary Report dated July 24, 2019.**

- In June 2019, three extraction wells were also installed at the western boundary of the site where an existing well in that area was detecting recoverable product. These wells will be used to remove free product on an ongoing basis. Three additional groundwater monitoring wells were installed in the Holder #3 area to monitor potential impacts detected during previous test pit excavation.

- A pump-down of an existing well on the east side of the property, installed in 2017 to recover oil from a known historical oil tank impact in that area, took place in June 2019. The test succeeded to return recoverable product to the well and it will be used to remove free product on an ongoing basis.

- In addition to routine Groundwater Management Permit (GMP) sampling and reporting, an application for GMP renewal was submitted to NHDES in May 2020 with requests to reduce the frequency of sampling of two wells and adding sampling of the 6 new wells installed in 2017-18. Annual Summary Reports detailing the results of groundwater monitoring at the site continue to be submitted.

- ENGI reconstructed a water supply line near the entrance to the plant generating a substantial amount of soil that required disposal at ESMI, Loudon, NH.

- **ENGI received the renewed GMP on February 26, 2021, effective until 2026, covering the monitoring of 42 groundwater monitoring wells each April and October.**

- **A sinkhole in the LNG Area over Holder #3 was discovered in October 2020. Fill materials were excavated and the sinkhole was repaired. A new sinkhole reappeared in the same area in May 2021, and the process was repeated to**

stabilize the area. This area was historically filled with soil and debris when the old holder was decommissioned.

5. NEW HAMPSHIRE SITE REMEDIATION PHASE: Phase I Site Investigation complete. Phase II Site Investigation complete and supplemental report submitted to NHDES in February 2005. Remedial Action Plan (RAP) for the ravine submitted and approved by NHDES in 2005; remediation of ravine completed in July 2005. Remediation of the river sediment was completed in 2007. A RAP for the upland portion of the site was submitted to NHDES for review on June 30, 2010. NHDES issued its approval of the RAP for the upland portion of the site in a letter dated April 11, 2011. The Remedial Design Report summarizing the activities for addressing on-site and off-site impacts was submitted on December 19, 2014. On July 15, 2015, NHDES accepted the proposed remedial design with exceptions. ENGI addressed these concerns and implemented the remedial activities on-site and off-site in 2017.

In 2019, ENGI continued to address potential site impacts per the Remedial Design Report by removing approximately 9,000 gallons of contaminated liquids and sludge from a subsurface structure in the gas plant area, installing three extraction wells at the western boundary of the site, and installing three groundwater monitoring wells in one of the gas holder footprints. Also in 2019, needed reconstruction of a major water supply line near the entrance to the property resulted in the removal of a substantial amount of MGP-impacted soil.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: The former Manchester MGP is believed to have started producing coal gas in 1852. Gas was produced at the site by the Manchester Gas Company and its predecessors until the MGP was shut down in 1952 when natural gas was supplied to the city via pipeline. ENGI is the successor by merger to the Manchester Gas Company. ENGI continues to own and operate the 130 Elm Street property as an operations center.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: In late 2000, ENGI filed suit against UGI Utilities, Inc. in the United States District Court for the District of New Hampshire, alleging that during much of the early part of the 20th century, a predecessor to that entity "operated" the Manchester Gas Plant, as defined by the Comprehensive Environmental Response, Compensation and Liability Act (commonly referred to as "CERCLA" or "Superfund"). This claim was similar to a claim litigated and ultimately settled by the parties in the late 1990s, related to the former gas plant in Concord, NH. The case went to trial in June 2003 and was settled after 8 days of trial.

Insurance recovery efforts are complete, and confidential settlements have been entered into with all insurance company defendants. An agreement with the last remaining insurance carrier was negotiated in August 2008, under which that carrier paid ENGI's legal fees incurred in the litigation. That settlement came about after a ruling from the New Hampshire Supreme Court, in response to a question certified by the United States District Court, on allocation of coverage, and the scope and meaning of NH RSA 491:22-a, as it relates to awards of attorneys' fees. EnergyNorth Natural Gas, Inc. v. Certain Underwriters at Lloyds, 156 N.H. 333 (2007). As to allocation, the Court ruled as proposed by the carrier that insurance coverage should be allocated on a *pro rata* basis when multiple policies are triggered by an ongoing event. ENGI had argued for an "all sums" allocation approach in which the insured could choose the policy years from which to obtain indemnity. With respect to legal fees, the Court held that " [i]f the insured has obtained rulings that require the excess insurer to indemnify it, the insured has prevailed within the meaning of RSA 491:22-b, and is immediately entitled to recover its reasonable attorneys' fees and costs. Recovery of these fees and costs does not depend on whether, after all is said and done; the excess insurer actually has to pay any indemnification. The insured becomes entitled to the fees and costs once it obtains rulings that demonstrate there is coverage under the excess insurance policy." Under that finding, the insurance carrier was obligated to reimburse legal fees even if the *pro rata* allocation analysis resulted in the carrier owning no indemnity.

Note: This summary is an overview and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

1. SITE LOCATION: The former MGP was located on Messer Street in Laconia. Sometime in the early 1950s, during decommissioning of the MGP, wastes from the MGP were disposed of at a location on Liberty Hill Road in Gilford. At the time of the disposal, the property was utilized as a gravel pit, and the disposal reportedly occurred with the permission of the gravel pit owner. The property currently comprises part of a residential neighborhood.

2. DATE SITE WAS FIRST INVESTIGATED: In 1994 and 1995, Public Service Company of New Hampshire (PSNH), one of the former owners and operators of the Laconia Manufactured Gas Plant (MGP), conducted limited site investigations at the plant. In 1996, the New Hampshire Department of Environmental Services (NHDES) sent a "Notification of Site Listing and Request for Site Investigation" for the former Laconia MGP to PSNH and its parent company, Northeast Utilities Services Company (NU), and to EnergyNorth Natural Gas, Inc. (ENGI)[1], another former owner. NHDES designated the site DES #199312038. ENGI and PSNH reached a settlement, reported previously to the New Hampshire Public Utilities Commission (NHPUC), in September 1999. As a result of that settlement, PSNH has had responsibility for the MGP site remediation and interactions with NHDES.

   Per the aforementioned settlement, ENGI retained responsibility for any decommissioning-related liabilities, including off-site disposal. Therefore, in October 2004, ENGI notified NHDES of the possibility that wastes from the MGP were disposed of at a location on Liberty Hill Road sometime in the early 1950s during decommissioning of the plant. Drinking water samples were collected from two residential properties in the vicinity in December 2004, and from three additional properties in June and July 2005 by the NHDES; no MGP-related contaminants were detected. At the request of NHDES, ENGI began preliminary site investigations in July 2005 that culminated in the submission of a Site Investigation Report to NHDES in June 2006. As detailed in the report, MGP-related constituents have been detected in soil and shallow groundwater on four residential properties, and in the abutting brook. The report concluded that further investigations were necessary to determine the extent of the contamination. Additional investigation activities were completed between 2006 and 2009.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the former MGP have been identified at the Laconia MGP site and in the adjacent Winnipesaukee River. Please contact PSNH and refer to PSNH filings with NHDES for complete information on the nature and extent of site contamination at the MGP. Residual materials

[1] In July 2012, EnergyNorth was acquired by Liberty Utilities and its legal name changed to Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty. For consistency purposes, the acronym ENGI will be used throughout this document.

from the former MGP were disposed of at the Liberty Hill disposal area, and MGP-related constituents have been detected in soil and ground water.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES: Based on the settlement with PSNH that has previously been reported to the Commission, ENGI has had no further involvement with the MGP site since the summer of 1999, except with regard to the Liberty Hill disposal area. Please contact PSNH and refer to PSNH filings with NHDES for complete information on material developments and interactions with environmental authorities.

With respect to the Liberty Hill disposal area, in October 2004, ENGI notified NHDES of the possible existence of this disposal site; the site was assigned disposal site number 200411113 by NHDES. NHDES collected drinking water samples from two residential wells in the vicinity in December 2004 and from three additional residential wells in June and July 2005; no MGP-related contaminants were detected. In January 2005, NHDES requested that ENGI conduct a preliminary site investigation on the two residential properties. ENGI submitted a scope of work for the investigation to NHDES on March 2, 2005. The investigation began in July 2005 and was completed in June 2006 with the submission of the Site Investigation Report.

Additional site investigations were conducted in 2006 and summarized in the December 20, 2006, Interim Data Report #2 submitted to NHDES. Based upon the results of the investigations, remediation is required at the site. In response, a Remedial Action Plan (RAP) was submitted to NHDES on February 28, 2007. The RAP presented NHDES with several remedial alternatives to address soil and groundwater contamination at the site. The February 2007 RAP identified soil excavation (to a depth of 3 feet), construction of a containment wall and impermeable cap on the four residential properties purchased by ENGI as the recommended alternative. In September 2007, NHDES responded to the February 2007 RAP and required that ENGI evaluate additional remedial alternatives that included further soil removal. In November 2007, a RAP Addendum was submitted to NHDES. The revised RAP recommended a remedial alternative that included removal of tar-saturated soils to a depth of approximately 45 feet, construction of a containment wall and impermeable cap on the four residential properties owned by ENGI. On February 29, 2008, NHDES issued a letter to ENGI indicating that NHDES had reached a preliminary determination that the remedy recommended in the November 2007 RAP met the NHDES requirements and that a final decision would be reached following a public meeting and comment period.

On March 24, 2008, NHDES held a public comment meeting to discuss the recommended alternative and began 30-day public comment period. In April 2008, NHDES received a request to extend the public comment period closing date to May 8, 2008, to allow the Town time to provide technical comment. On June 26, 2008, NHDES issued a letter deferring its final decision on the recommended remedial alternative for the Liberty Hill site pending further data analysis following the development of a scope prepared collaboratively between the Town of Gilford and ENGI. In July and August 2008, technical representatives from ENGI, the Town of Gilford, the Liberty Hill neighborhood and NHDES met twice to discuss the comments provided to NHDES during the public comment period and discuss the scope for additional groundwater modeling activities and limited additional site data collection. The Company submitted Scopes of Work for additional data collection and groundwater modeling to NHDES in September and October 2008, respectively. The field activities were completed between November 2008 and January 2009. Modeling efforts began in late 2008 and were completed in May 2009. In March and May 2009, technical representatives from ENGI, the Town of Gilford, the Liberty Hill neighborhood and NHDES met to discuss the results of the field investigations and the modeling activities. One topic discussed with the technical team was that the modelling results indicate that low-flow pumping would need to be added to the selected remedy meet the remedial goals for the site. On June 30, 2009, NHDES issued a letter to ENGI requesting that a second RAP Addendum be prepared for the site to evaluate the technical changes (mainly the addition of low-flow pumping) to the proposed remedy that resulted from the modeling effort. ENGI submitted the second RAP Addendum to NHDES on August 17, 2009 and presented the findings at a public meeting held in Gilford on September 10, 2009. In October 2009, NHDES hired a third party consultant to review the RAP cost estimates and the results were presented in a report to NHDES in April 2010. In October 2010, NHDES issued a Preliminary Decision on RAP Addendum No. 2, in which NHDES indicated that it did not concur with ENGI's recommended remedial alternative and further recommended the complete removal of coal tar-impacted soils at the site. On January 28, 2011, ENGI submitted a comment letter to NHDES further explaining its rationale for the remedial alternative recommended in RAP Addendum No. 2. On November 2, 2011, NHDES announced a Final Decision indicating that it did not concur with ENGI's recommended remedial approach and selecting the full removal option as the remedy for the site. On December 2, 2011, ENGI filed an appeal of the NHDES Final Decision with the New Hampshire Waste Management Council. In March 2012, ENGI attended the Pre-Conference Hearing with the Council related to the appeal. Hearings on the matter were scheduled for October 18 and November 15, 2012. On July 26, 2012, the Hearing Officer granted an Assented to Motion to Continue the hearing until a date after January 3, 2013.

During the period of time the appeal was subject to the continuance, the company, the New Hampshire Department of Justice and NHDES engaged in settlement discussions on a confidential basis. At the conclusion of those negotiations, NHDES and the company agreed on a final remedy for the site, which was approved by NHDES. That approval allowed ENGI to withdraw its appeal as of December 19, 2012, and proceed with implementation of the remedy. The town of Gilford was briefed on the agreed-upon remedy concurrently with NHDES approval and ENGI's withdrawal of the appeal.

ENGI has also performed numerous other activities requested by NHDES between 2008 and 2011, including remediation of the groundwater seep area near Jewett Brook in accordance with NHDES-approved September 2008 Initial Response Action Plan; evaluation of options for providing financial assurances to NHDES for the site remediation activities; coal tar recovery; semi-annual groundwater and surface water sampling activities; and drinking water well sampling. Groundwater sampling is reported to the NHDES in semi-annual reports. In addition, ENGI developed a Liberty Hill Road site website to assist in updating interested parties.

In conjunction with the Site Investigation work, ENGI has acquired 4 properties on Liberty Hill Road to facilitate remediation activities, and eliminate any potential risk to residents associated with a significant remediation and construction project. The properties were obtained based upon arms-length negotiations, and in one instance to settle potential litigation.

The site was remediated in 2014-2015 construction seasons, and was restored to a grass field by December 2015. NHDES approved the Notice of Activity and Use Restriction (AUR) in February 2017. In May 2017, ENGI received the post-construction groundwater monitoring permit, requiring annual groundwater sampling.

5. NEW HAMPSHIRE SITE REMEDIATION PROGRAM PHASE: On December 10, 2012, ENGI submitted a Conceptual Remedial Design Report to NHDES describing the approach for full removal. NHDES approved this Conceptual RAP Addendum design on December 18, 2012, and ENGI withdrew their appeal before the New Hampshire Waste Management Council on December 19, 2012. A public meeting was held in the Town of Gilford to present the approved Conceptual Remedial Design on January 23, 2013. The pre-design investigation to confirm extent and depth of contamination commenced on February 20, 2013 and was completed first week in April 2013. A public meeting was held on September 25, 2013 to present the design to the Town. The Remedial Design Report was finalized and approved by NHDES in December 2013. Plans and Specifications were developed concurrently, and the bidding process commenced in September 2013 with a Request for

Information to ten (10) prospective contractors. On October 28, six (6) contractors were selected to participate in the bidding for the construction, with bids due back on December 6, 2013. On January 9, 2014, three (3) of the bidders were interviewed and Charter Environmental of Boston, MA (the Contractor) was selected for the project. A public meeting took place on February 12, 2014 to further explain details of the anticipated construction and to introduce the project team to the community.

The Contractor mobilized to the site and began set-up in May 2014, with the first load of soil being hauled from the site on June 6, 2014. Construction began to remove tar-impacted soil on the south side of the site in the first season, with little to no impact to the surrounding community. In 2014, approximately 65% of the impacted soil was removed for treatment. On April 8, 2015, ENGI presented the results of the first season of construction at a Gilford Town Select Board meeting, and presented expectations for the second season to the community. Starting on April 13, 2015, the north side of the site was remediated, with the removal of all tar-impacted soil completed on August 3, 2015. The entire project was completed on September 24, 2015 with 2,662 truckloads hauling 93,502 tons of tar-impacted soil removed for thermal treatment. Some additional site restoration work was needed in October 2015 and another seeding in April 2016 to repair damage to the original restoration caused by a heavy rainstorm that occurred on September 30, 2015. Throughout the course of the project there was no disruption to the neighboring community and no safety incidents, logging 26,975 safe working hours. The project was completed within budget parameters.

The only activities on this site during the past year and ongoing are mowing and groundwater and surface sampling, per the new post-remedial Groundwater Management Permit received on May 10, 2017. In May 2017, the NHDES requested by letter that all active hazardous waste sites managed by the Hazardous Waste Remediation Bureau include sampling for Per- and Polyfluoroalkyl Substances (PFAS) in one of their groundwater sampling rounds, as part of a statewide study of these compounds. ENGI fulfilled this request during regularly scheduled sampling in 2018. **ENGI continues to mow the site twice a year and sample the groundwater per the Groundwater Management Permit each September.**

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: ENGI is the successor by merger to Gas Service, Inc. (GSI). In 1945, GSI acquired the gas manufacturing assets of PSNH. The Laconia MGP, which began operating in 1894, was included in that transaction. Gas manufacturing took place at the property until 1952, when the MGP was converted to propane. Half of the property is now owned by Robert Irwin and maintained

as an open field, and the other half is owned by PSNH, which operates an electric substation on the parcel.

The Liberty Hill Road parcel on which disposal was believed to have occurred was utilized as a gravel pit at the time of the disposal. It was subdivided in May 1970, and currently constitutes part of a residential subdivision.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: ENGI and PSNH entered into a confidential settlement in 1999. Under this agreement, PSNH took the lead on the MGP site investigation and remediation and all communications with NHDES. ENGI retained responsibility for any decommissioning-related liabilities, including off-site disposal.

Insurance recovery efforts are complete with respect to the MGP, and numerous confidential settlements have been entered into. In 2003, the United States District Court certified a question to the New Hampshire Supreme Court asking what “trigger of coverage” should be applied to the insurance policies issued by Lloyds of London to ENGI’s predecessor, Gas Service, Inc. In May 2004, the Supreme Court responded that a “continuous injury-in-fact” trigger should be applied. The federal court conducted a jury trial against Lloyds of London - the only remaining defendant – in October 5, 2004. At the end of that trial the jury returned a verdict in favor of ENGI. Subsequent to the verdict, ENGI and Lloyds of London entered into a confidential settlement.

With respect to Liberty Hill, insurance carriers have been placed on notice of a potential claim, but no litigation has been initiated. The Company does not expect to pursue any insurance litigation.

Note: This summary is an overview only and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

LIBERTYUTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY

CONCORD FORMER MGP

LINE
NO.

1. SITE LOCATION: One Gas Street, Concord, New Hampshire.

2. DATE SITE WAS FIRST INVESTIGATED: EnergyNorth Natural Gas, Inc. (ENGI)[1] received a Notice Letter from the New Hampshire Department of Environmental Services (NHDES) in September 1992. The Notice related primarily to contamination identified in the pond adjacent to Exit 13 off Interstate 93, although it was broad enough to also include the former manufactured gas plant (MGP) site itself.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the historic operation of the MGP were discovered in the area of the Exit 13 pond, as the NHDOT began site preparation work for the reconfiguration of that interchange. Subsequent investigations by ENGI and others indicate that contaminants originating from the MGP on Gas Street are present in soil and groundwater between the MGP and the Merrimack River, including within the Exit 13 pond.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES:

   Concord MGP: The New Hampshire Department of Transportation (NHDOT) contacted ENGI in August 2001 and February 2002 regarding possible coal tar-related impacts in a sewer line on a parcel adjacent to the former gas plant. NHDOT is currently conducting groundwater monitoring as part of a Groundwater Management Zone Permit on this parcel. ENGI met with NHDOT and NHDES in January 2003 to review the results of its 2002 site investigation. Limited coal tar impacts were observed in groundwater and subsurface soils at select locations.

   On July 15, 2003, NHDES issued a letter to ENGI requesting submission of a schedule and scope of work for a site investigation of the MGP site by mid-September 2003. ENGI proposed a May 2005 date for submission of a Site Investigation Report for the MGP site on Gas Street to NHDES by way of a letter dated October 6, 2003. NHDES agreed to the proposed schedule in their response letter dated October 31, 2003.

[1] In July 2012, EnergyNorth was acquired by Liberty Utilities and its legal name changed to Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty. For consistency purposes, the acronym ENGI will be used throughout this document.

ENGI submitted the work plan for the MGP site investigation to NHDES on May 20, 2004. NHDES accepted the work plan on June 16, 2004. The investigation took place between September 2004 and March 2005, and the Site Investigation Report was submitted to NHDES on June 6, 2005. The report indicated that subsurface impacts are present at the MGP, and additional investigation as well as limited remediation will be required. NHDES accepted the report on August 12, 2005, and requested ENGI submit a supplemental scope of work to complete the delineation of MGP-related impacts on and off Site. The document was submitted in November 2005. Site investigation activities at and downgradient of the MGP were conducted in 2006. ENGI submitted an additional supplemental scope of work to further delineate MGP impacts on May 31, 2007 and NHDES subsequently approved the scope on June 5, 2007. ENGI bid the NHDES-approved scope of work in June 2008 and awarded the contract in late July 2008. ENGI met with NHDES at the site in August 2008 to discuss the additional supplemental site investigation activities. The field work took place during October through December 2008, during which time 8 groundwater monitoring wells were installed at 4 off-site locations. The Additional Supplemental Site Investigation Report was submitted to NHDES in September 2009. ENGI met with NHDES to discuss the report findings and strategy for moving forward in October 2009. NHDES issued an approval letter for the Supplemental Site Investigation Report on February 9, 2010. The correspondence approved the report and requested that certain additional activities be completed by ENGI. These requested activities include the following: a) preparation and submission of an Initial Response Action Work Plan to remove approximately 3,500 gallons of liquid and sludge from historic subsurface drip pots and tar wells at the MGP property on Gas Street; b) evaluation of the groundwater conditions in the vicinity of the “Tar Pond” which is depicted on a referenced NHDOT site plan; and c) evaluation of potential indoor air impacts at select locations identified during the additional SSI work.

ENGI submitted the Initial Response Work Plan to NHDES in July 2010 to remove approximately 3,500 gallons of liquid and sludge from historic subsurface drip pots. NHDES issued an approval letter for this Work Plan on August 3, 2010 and the work was completed in June 2011. In addition, ENGI submitted a Supplemental Data Collection Work Plan for the additional off-ENGI-owned property investigation activities (items b and c above) to NHDES in August 2010. NHDES approved of the Work Plan on September 16, 2010. ENGI obtained access to 4 properties in the vicinity of the site in order to conduct the supplemental investigation activities, which included soil, ground water and soil vapor sampling, along with further investigation of the brick tar sewer. ENGI submitted a revised Work Plan with revised sampling locations to NHDES in November 2011; the revision was necessary because site access was not granted by the property owners for some of the originally proposed locations. The investigation work was completed in July 2012, and summarized in a Supplement Data Collection Report that was submitted in August 2013, in preparation for submittal of the Remedial Action Plan. This Supplement Data Collection Report was accepted by NHDES on

October 24, 2013, and ENGI was authorized to prepare a RAP and Groundwater Management Permit (GMP) application. The GMP application was submitted on September 4, 2014, and the permit was received on December 1, 2014.

On June 16, 2013, wind during a thunderstorm caused a tree to fall on the northern side of the roof of the Holder House located on the former Concord MGP property. Damage to the slate roof and brick was sustained. In a letter dated February 24, 2014 NHDES stated that the holder structure "…serves as a physical barrier to prevent infiltration of precipitation into the foundation and thereby limits the amount of MGP byproducts that may be released to the environment."

On March 31, 2015, ENGI submitted a proposed Remedial Action Plan involving removal of shallow soils displaying MGP-related residual impacts, investigation and remediation of remaining known subsurface structures, capping of components of the local storm water drainage system, site capping design, and continued monitoring of groundwater on the site. NHDES approved the RAP on May 29, 2015, with the condition that roof of the brick gas holder either be restored, or the holder be razed and the soils beneath it remediated. Soil vapor monitoring; soil vapor probe installation; and remedial design investigations including subsurface structure location and inspection, shallow tar-saturated soil delineation, and site storm drain system inspections, as approved by the RAP, were performed in December 2015. A Remedial Design Report (RDR) was submitted to NHDES on March 16, 2016 summarizing the above remedial design investigations. The remediation activities, required to be completed prior to site capping, include tar-impacted material removals and plugging of the on-site drain system, took place in 2017.

In early 2016 ENGI was approached by a commercial developer who was interested in purchasing the property and repurposing the holder house structure. Several site meetings took place with the developer, and ENGI was negotiating the terms of the property's sale. If the property is transferred, the purchaser's future use design will be taken into account when the final design of the engineered cap is being developed. This site developer has not contacted ENGI since May 2017, and appears to have lost interest in the redevelopment project.

Although a developer had approached the Company during 2016 and into 2017 regarding potential purchase of the property, there has been no movement or activity on a transfer of the holder site. In 2020, further deterioration of the holder structure was observed. In addition, fencing was repaired and added to the areas around the deteriorated areas near the vestibule and the outside scaffolding where the tree fell in 2013.

In 2019, the City and the Company jointly prepared a report that details various use options for the Gas Holder site on the east side of the highway, including costs for various scenarios ranging from cleaning and fortifying the holder structure for public entry to demolition of the structure. In response to Liberty's communication that the gas holder needed to be demolished, as the condition of the structure raises significant safety concerns, the Concord City Council established a working group in 2020, comprised of representatives of the City Council, City Staff, Liberty, and the New Hampshire Preservation Alliance ("NHPA"), and charged with developing a plan and assigning responsibilities for stabilization and preservation of the holder house structure. The working group discussions resulted in a plan for the NHPA to raise funds to stabilize the holder house and to manage the relevant construction, and for Liberty to seek Commission approval to contribute up to the estimated costs of demolition and remediation beneath the holder house, as the least cost option for customers.

The City, the NHPA, and Liberty met with Commission Staff in February 2021 and obtained Staff's support for the plan, provided Liberty can demonstrate that the Company's contribution toward the stabilization of the holder house is less than the estimated costs of demolition and remediation that would otherwise have been incurred. In April 2021, the City, the NHPA, and Liberty signed an MOU documenting the above understanding as the parties worked toward a formal agreement. As of the date of this report, the parties are near completion of a formal Emergency Stabilization License Agreement to govern the repairs to the holder house. The NHPA has substantially completed the engineering for the stabilization work and has obtained a contractor to complete the work before the end of 2021. Liberty has substantially completed the estimate to demolish the holder house and remedy any contamination, which estimate will serve as the cap of Liberty's contribution toward stabilization.

On January 21, 2020, NHDES issued a renewed GMP for the site and ENGI continues to monitor wells in the groundwater monitoring system on site every June and October under this permit. ENGI requested that soil vapor monitoring be ceased and NHDES removed this requirement from the new permit. The last GMP Annual Summary Report, submitted to NHDES in February 2021, summarized the results of the 2020 GMP sampling rounds and also described various small source remediation activities undertaken on site in late 2020.

Concord Pond: ENGI has continued to monitor groundwater semi-annually at the Exit 13 pond, in May and November, as required by the Groundwater Management Zone Permit that was issued in 1999 as part of the overall remedy following the remediation of the southern end of the Exit 13 pond. The permit was renewed in 2003, 2007,2012 and 2017, and NHDES specified semiannual collection of surface water samples from the pond as an additional condition of the permit.

When the Exit 13 pond was remediated in 1999, NHDES required that the northern portion remained untouched, allowing for storm water input to the pond, with the knowledge that some contamination remained and may require remediation in the future. In 2006, NHDES requested ENGI address the residual contamination in the pond, and in response, ENGI submitted an Interim Data Collection Report and Scope of Work in May 2006, which was approved in July 2006. This Scope of Work was implemented in 2006 and the results were to be used to prepare the Remedial Action Plan (RAP) which NHDES requested be submitted by August 31, 2006. In July 2006, NHDES extended the deadline for submittal of the RAP to June 30, 2007, to allow ENGI additional time for data collection and design. ENGI submitted an Interim Data Collection Report to NHDES in September 2006, and a Conceptual Remedial Design in March 2007. On March 25, 2009, ENGI submitted a Presumptive Remedy Approval Request to NHDES, in order to allow for the design and implementation of an engineered cap without the need to prepare a RAP. On May 4, 2009, NHDES granted the Presumptive Remedy Approval, and the project moved into the remedial design phase.

The proposed remedial work is to be performed on city-owned land and within a NHDOT right-of-way; therefore ENGI is working with these parties to come to agreement on the design features, negotiate access and clarify the responsibilities of the three parties. In April 2010, ENGI met with representatives from NHDES, the City of Concord, and NHDOT to present the proposed remedy, and ENGI submitted the draft design plans to the parties in June 2010. ENGI met with the regulatory permitting agencies in October 2010. The agencies requested that ENGI modify the remedial design to include an upland cap versus a wetland cap to minimize the impacts of the project. The cap was redesigned and ENGI met with the stakeholders in December 2010. At a subsequent meeting in January 2011, the City of Concord requested that the design be further modified to relocate the City’s storm water outfall location.

ENGI met with the City in March 2011 to present the feasibility evaluation that was conducted for several alternatives, and concluded that the original design was the appropriate design. Contact was reconvened with the City in 2013, and adjustments to the original design were made to address outfall maintenance and access concerns of the City and NHDOT, respectively. The design was presented to the City on January 26, 2016. A rigorous schedule toward construction in late summer 2017 was agreed to by ENGI and the City in February 2016. The City did not meet an early deadline to determine and communicate details regarding access to their storm water system. Communication was again resumed in July 2016 by the City, however the City remained unresponsive to ENGI on implementation of the joint remedial design.

In March 2018, discussions with the new City Engineer took place and the City's engagement level has increased to come to a design solution on outfall maintenance. These discussions are frequent and ongoing.

Semiannual groundwater monitoring at the pond is ongoing, as is recovery of separate phase coal tar from a monitoring well in the vicinity of the pond. In May 2017, the NHDES requested by letter that all active hazardous waste sites managed by the Hazardous Waste Remediation Bureau include sampling for Per- and Polyfluoroalkyl Substances (PFAS) in one of their groundwater sampling rounds, as part of a statewide study of these compounds. ENGI fulfilled this request during regularly scheduled sampling in 2018.

During May 19 through May 22, 2009, ENGI implemented a NHDES-approved sediment sampling program in the Merrimack River to evaluate potential MGP-related impacts. ENGI met with NHDES in October 2009 to present the results of the sediment investigation, and submitted the sediment sampling data report to NHDES in October 2009. The investigation indicated limited site-related impacts to the shallow near-shore sediments of the Merrimack River. Based upon the results of the sediment investigation, it is unlikely that remedial actions will be necessary in the river. ENGI met with NHDES on February 20, 2013 to discuss all sampling activities to date, summarized in an SIR Addendum Report, submitted in June 2013.

In May 2016, ENGI submitted a proposed plan for monitoring the near-bank sediments to the pond area in the Merrimack River. After discussions regarding frequency, duration of the Monitored Natural Recovery (MNR) program, and methodologies to be used in determining the contaminant trending in the river sediment, NHDES approved a revised MNR Plan in a letter dated July 2017. The 5-year sampling plan began in 2017 with the first of 5 annual samplings. The second round of sediment sampling was conducted in October 2018, the third round of sediment sampling took place in October 2019**, and the fourth in October 2020**. NHDES has accepted the MNR reports submitted by ENGI summarizing the sediment sampling results.

5. NEW HAMPSHIRE SITE REMEDIATION PROGRAM PHASE:

Concord MGP: In July 2003, NHDES requested that ENGI submit a schedule and scope of work for completion of a site investigation of the MGP site. ENGI submitted the scope to NHDES in May 2004 and implemented the work between September 2004 and March 2005. The results of the investigation were documented in the Site Investigation Report, dated June 6, 2005, which was subsequently approved by NHDES. Supplemental investigation activities were performed in 2006. Additional investigation activities were performed in 2008. The additional SSI report was submitted to NHDES in September 2009. In addition, ENGI submitted the Initial Response Work Plan to NHDES in July 2010 to remove approximately 3,500 gallons of liquid and sludge from historic subsurface drip pots. NHDES issued an approval letter for this Work Plan on August 3, 2010 and the work was completed in June 2011. The Supplemental Data Collection report summarizing the investigation activities was accepted in October 2013, authorizing ENGI to prepare a RAP and GMP Application. The GMP application was submitted on September 4, 2014, and the permit was received on December 1, 2014. On March 31, 2015, ENGI submitted a proposed RAP, and NHDES approved the RAP with conditions. A Remedial Design Report, summarizing pre-design investigations, was provided to NHDES in March 2016**.**

Outstanding remedial activities including the investigation for decommissioning of the deep well (historic water supply well), closure of the "old tar separator" and a small drip pot, closure of the on-site storm drain, and removal of an area of soil containing hardened tar were completed in late 2020, and results of these activities were reported to NHDES in the 2020 Annual Summary Report submitted in February 2021 as a requirement of the GMP.

<u>Concord Pond</u>: ENGI submitted an application for a five-year Groundwater Management Zone Permit to the NHDES in April 2002 for the Exit 13 pond. The permit was renewed in October 2007, with the collection of pond surface water samples as an additional condition. Under that permit, groundwater monitoring is expected to be required for the foreseeable future. In addition, as requested by NHDES, ENGI undertook a review of remedial technologies to address the residual contamination remaining in the pond. A conceptual remedial design was submitted to NHDES in March 2007, a Presumptive Remedy Approval was granted by NHDES in May 2009, and the engineered cap design has been drafted. The work will be undertaken pending agreement between the City, NHDOT, and ENGI. ENGI met with these parties on several occasions in 2010 and 2011. The Company reinitiated discussion with the City in July 2014 regarding access to the site to implement the approved design of the wetland cap. The design was adjusted to accommodate the City's desire to simplify maintenance of the storm water system. ENGI has altered the design of the construction to provide temporary access through the wetland area and a permanent access road that does not encroach on the NHDOT right-of-way.

In 2020, ENGI obtained the access agreement from the City to the property to allow access for the wetland cap remedy construction. ENGI has commenced the pre-design investigation in 2021. ENGI is designing the wetland cap remedy and is preparing associated NHDES permit applications, with plans to construct the remedy in late summer 2021.

A renewal application for the Groundwater Management Permit was submitted on August 24, 2017, and the renewed permit was granted by NHDES on November 22, 2017. Groundwater and surface water monitoring continues under this permit every

May and November. The 5-year sediment sampling plan to monitor natural attenuation of MGP residuals in the river began in autumn 2017 and are ongoing each October.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: The Concord MGP operated from approximately 1850 to 1952, when the natural gas pipeline was extended to Concord. The plant was constructed and operated by predecessors of the Concord Gas Company, which later became known as the Concord Natural Gas Company. By virtue of a merger, ENGI acquired Concord Natural Gas. As has been reported previously by ENGI, it filed a contribution claim in the United States District Court for the District of New Hampshire against the successor to the United Gas Improvement Company. In that claim, ENGI alleged that under the federal Superfund statute, the United Gas Improvement Company exercised control over the operations of the Concord Gas Plant to the extent that the United Gas Improvement Company should be considered an "operator" under the statute. That matter was settled in 1997.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: Numerous confidential settlements with insurance carriers and with one private party have been entered into*. Insurance recovery efforts at the Concord Site are complete.*

Note: This summary is an overview only and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

* All gas transferred for storage contracts will be based on LDC's monthly WACOG
**All commodity volumes nominated will be invoiced at LDC's WACOG + fuel retention. Demand charge applicable for 6 months

Note: **All capacity will be released at maximum tariff rates. Above rates are maximum tariff rates effective 11/01/21. Because rates can change, please refer to the applicable pipeline tariff for current rates.**

Above capacity is for all customers in the EnergyNorth Service territory with the exception of Berlin, NH. Any customers behind the Berlin citygate will be allocated 100% PNGTS capacity at a demand rate of $18.2633 /dth.

Updated Schedule 10A
Page 1 of 3

2022 Summer Cost of Gas Filing
Capacity Assignment Calculations 2020-2021
Derivation of Class Assignments and Weightings

Basic assumptions:
1 Residential class pays average seasonal gas cost rate (using MBA method to allocate costs to seasons)
2 Residual gas costs are allocated to C&I HLF and LLF classes based on MBA method
3 The MBA method allocates capacity costs based on design day demands in two pieces:
a The base use portion of the class design day demand based on base use
b The remaining portion of design day demand based on remaining design day demand
4 Base demand is composed solely of pipeline supplies
5 Remaining demand consists of a portion of pipeline and all storage and peaking supplies

		Column A	**Column B**	**Column C**	**Column D**	**Column E**	**Column F**

*The Company has not changed the FPO Rate, as letters were issued prior to the market changes.

LDAC Adjustments		
Original Filing Total LDAC Rate	$ 0.1733	
Updated Filing Total LDAC Rate	$ 0.1444	$ (0.0289)
Removed the prior year decoupling adjustment		
1. Removed lines relating to the RDAF adjustment on Tab 'Pk Tab 19 RDAF Page 1'		
2. Removed tab 'Pk Tab 19 RDAF Page 4' as it was sole related to the RDAF Adjustment		
3. Renumbered Schedules to indicate 'page n of 3' instead of 'pg. n of 4'		
Updated the environmental rate calculation to exclude the Blue Chip invoice identified in the Environmental Audit.	$ 0.1444	$ -
Total LDAC Rate Change		**$ (0.0289)**
Original Filing RDAF component of the Residential LDAC Rate	$ 0.0459	
Updated Filing RDAF component of the LDAC Rate, this impacts residential only	$ 0.0152	$ (0.0307)
Removed the RDAF Adjustments		
1. Removed lines relating to the RDAF adjustment on Tab 'Pk Tab 19 RDAF Page 1'		
2. Removed tab 'Pk Tab 19 RDAF Page 4' as it was sole related to the RDAF Adjustment		
3. Renumbered Schedules to indicate 'page n of 3' instead of 'pg. n of 4'		
Total LDAC Rate Change		**$ (0.0307)**
*This change resulted in a $0.0307 reduction in the LDAC rate and the RDAF Component of the LDAC rate		
Original Filing Environmental component of the LDAC Rate	$ 0.0155	
Updated Filing Environmental component of the LDAC Rate, this impacts both Residential and Commercial	$ 0.0155	$ -
Updated the environmental rate calculation to exclude the Blue Chip invoice for $1,062 identified in the Environmental Audit.		
Total Environmental Component Rate Change		**$ -**
*This change resulted in no change in the LDAC rate and the RDAF Component of the LDAC rate		
Original Filing GAP component of the LDAC Rate	$ 0.0138	
Updated Filing GAP component of the LDAC Rate	$ 0.0156	$ 0.0018
This component changed due to the changes in COG rates		
Total GAP component Rate Change		**$ 0.0018**
*This change resulted a $0.0018 increase in the LDAC rate and the RDAF Component of the LDAC rate		
Updated the environmental rate calculation to exclude the Blue Chip invoice identified in the Environmental Audit.		
Ties to total rate change for LDAC

FEDERAL ENERGY REGULATORY COMMISSION
WASHINGTON, D.C. 20426

FY 2017 GAS ANNUAL CHARGES
CORRECTION FOR ANNUAL CHARGES UNIT CHARGE
June 26, 2018

The annual charges unit charge (ACA) to be applied to in fiscal year 2019 for recovery of FY 2018 Current year and 2017 True-Up is **$0.0013** per Dekatherm (Dth). The new ACA surcharge will become effective October 1, 2018.

The following calculations were used to determine the FY 2018 unit charge:

2018 CURRENT:

Estimated Program Cost $66,791,000 divided by 49,985,774,086 Dth	=	0.0013362002

2017 TRUE-UP:

Debit/Credit Cost ($316,993) divided by 47,717,356,257 Dth	=	(0.0000066431)
TOTAL UNIT CHARGE	=	0.0013295571

If you have any questions, please contact Raven A. Rodriguez at (202)502-6276 or e-mail at Raven.Rodriguez@ferc.gov.

1/ Transporter's Settlement dated August 18, 2016, in Docket No. RP16-301-000, which was approved by Commission order issued October 20, 2016, established new base tariff recourse rates referred to as "Settlement Rates" and a moratorium on changes to the Settlement Rates until September 1, 2020. All recourse Maximum and Minimum Rates listed on Sheet Nos. 4, 4B, 4C, and 5A are Settlement Rates subject to the moratorium.
2/ No rate cap shall apply to any capacity releases with terms of less than or equal to one year pursuant to FERC Order Nos. 712 et al.

To the extent applicable, the following adjustments apply:

ACA ADJUSTMENT:
Commodity 1/

MEASUREMENT VARIANCE/FUEL USE FACTOR:

Minimum	0.00%
Maximum (Non-Eastchester Shipper)	1.00%
Maximum (Eastchester Shipper)	4.50%
Maximum (Brookfield Shipper)	1.20%

1/ The ACA ADJUSTMENT Commoditiy rate shall be the applicable FERC ACA unit charge incorporated by reference pursuant to Section 12.2 in the General Terms and Conditions of Transporter's FERC Gas Tariff.

1/ Included in the above F&LR is the Losses component of the F&LR equal to 0.10%.
2/ For service that is rendered entirely by displacement and for gas scheduled and allocated for receipt at the Dracut, Massachusetts receipt point, Shipper shall render only the quantity of gas associated with Losses of 0.10%.
3/ The F&LR's and EPCR's listed above are applicable to FT-A, FT-BH, FT-G, FT-GS, and IT.
4/ The F&LR's and EPCR's determined pursuant to Article XXXVII of the General Terms and Conditions.

Interim Mainline 2018 Transportation Tolls and 2018 Abandonment Surcharges (TGI-003-2017)

Dawn Long Term Fixed Price

Line No.	Particulars	Monthly Toll ($/GJ/Month)	Daily Equivalent ($/GJ)
	(a)	(b)	(c)
17	For All Dawn LTFP Contract Demand except any portion subject to a reduced term for the final 24 months of such reduced term	23.42083	0.7700
18	Any portion of Contract Demand reduced in term by 12 months for months 85 through 108	26.46250	0.8700
19	Any portion of Contract Demand reduced in term by 24 months for months 73 through 96	28.89583	0.9500
20	Any portion of Contract Demand reduced in term by 36 months for months 61 through 84	30.41667	1.0000
21	Any portion of Contract Demand reduced in term by 48 months for months 49 through 72	31.63333	1.0400
22	Any portion of Contract Demand reduced in term by 60 months for months 37 through 60	31.93750	1.0500

Notes: The tolls are inclusive of Delivery Pressure Toll and Abandonment Surcharge.
The Abandonment Surcharges are the same as the Empress to Emerson 2 Abandonment Surcharges for FT service.

Enhanced Market Balancing Service

Line No.	Particulars	Monthly Toll ($/GJ/Month)	Daily Equivalent ($/GJ)	Abandonment Surcharge ($/GJ/Month)	Daily Equivalent Abandonment Surcharge ($/GJ)
	(a)	(b)	(c)	(d)	(e)
1	Union Parkway Belt to Union EDA	11.32565	0.3724	0.65092	0.0214

Delivery Pressure

Line No.	Particulars	Monthly Toll ($/GJ/Month)	Daily Equivalent ($/GJ)
	(a)	(b)	(c)
2	Average Delivery Pressure Toll	0.67038	0.0220

Note: Delivery Pressure toll applies to the following locations: Emerson 1 , Emerson 2, Union SWDA, Enbridge SWDA, Dawn Export, Niagara Falls, Iroquois, Chippawa and East Hereford.
The Daily Equivalent Toll is only applicable to STS Injections, IT, Diversions, STFT and SSS.

Union Dawn Receipt Point Surcharge

Line No.	Particulars	Monthly Toll ($/GJ/Month)	Daily Equivalent ($/GJ)
	(a)	(b)	(c)
3	Union Dawn Receipt Point Surcharge	0.14587	0.0048

Short Notice Balancing (SNB) Service

Line No.	Particulars	Monthly Toll ($/GJ/Month)	Daily Equivalent ($/GJ)
	(a)	(b)	(c)
4	SNB Toll	3.43648	0.1130

Note: This SNB Toll is a representative toll for the Eastern Region.

Energy Deficient Gas Allowance (EDGA) Service

Line No.	Particulars	Capacity Charge ($/GJ/D)
	(a)	(b)
5	Western Section	1.4886
6	Eastern Section	0.3640

Note: The EDGA Service capacity charge for the Western Section is the effective Empress to North Bay Junction FT Toll and the capacity charge for the Eastern Section is the effective Parkway to North Bay Junction FT Toll.
The EDGA Service fuel charge for the Western Section includes the effective Empress to North Bay Junction monthly fuel ratio and the fuel charge for the Eastern Section includes the effective Parkway to North Bay Junction monthly fuel ratio.

Line No.	Receipt Point	Delivery Point	FT Toll ($/GJ/Month)	Daily Equivalent FT for IT / STFT ($/GJ)	Abandonment Surcharge ($/GJ/Month)	Daily Equivalent Abandonment Surcharge ($/GJ)

TRANSPORTATION RATES

(A) Applicability

The charges under this schedule shall be applicable to a Shipper who enters into a Transportation Service Contract with Union.

Applicable Points
Dawn as a receipt point: Dawn (TCPL), Dawn (Facilities), Dawn (Tecumseh), Dawn (Vector) and Dawn (TSLE).
Dawn as a delivery point: Dawn (Facilities).

(B) Services

Transportation Service under this rate schedule shall be for transportation on Union's Dawn - Parkway facilities.

(C) Rates

The identified rates represent maximum prices for service. These rates may change periodically.
Multi-year prices may also be negotiated, which may be higher than the identified rates.

	Monthly Demand Charges (applied to daily contract demand)	Fuel and Commodity Charges			
		Union Supplied Fuel	Shipper Supplied Fuel		
		Fuel and Commodity Charge	Fuel		Commodity Charge
	Rate/GJ	Rate/GJ	Ratio %	AND	Rate/GJ

Liberty Utilities (EnergyNorth Natural Gas) Corp.

d/b/a Liberty Utilities

Peak 2018 - 2019 Winter Cost of Gas Filing
Capacity Assignment Calculations 2016-2017
Derivation of Class Assignments and Weightings

Basic assumptions:
1 Residential class pays average seasonal gas cost rate (using MBA method to allocate costs to seasons)
2 Residual gas costs are allocated to C&I HLF and LLF classes based on MBA method
3 The MBA method allocates capacity costs based on design day demands in two pieces:
a The base use portion of the class design day demand based on base use
b The remaining portion of design day demand based on remaining design day demand
4 Base demand is composed solely of pipeline supplies
5 Remaining demand consists of a portion of pipeline and all storage and peaking supplies

Peak 2018 - 2019 Winter Cost of Gas Filing

Forecast of Upcoming Winter Period
Design Day Report
2018 / 19 Heating Season
(Therms)

EnergyNorth Natural Gas, Inc.
d/b/a Liberty Utilities

Requirements	
Firm Sales	1,188,091
Interruptible Sales	0
Firm Transportation	457,618
Interruptible Transportation	0
Total Requirements	1,645,709
Resources	
Purchased Pipeline Gas	797,180
Underground Storage Gas	281,150
Propane Air Production	269,379
LNG Produced Gas	228,000
Third-Party Supply	70,000
Total Resources	1,645,709

Please refer to the ENNGI 2013 IRP filing (DG 13-313) for a complete description of the methodology and assumptions used in the derivation of this data.

Preparation of this report was supervised by:

Deborah Gilbertson
Sr. Manager, Energy Procurement

Note: Forecasted Firm Transportation volumes are for customers using utility capacity only.

Local Distribution Adjustment Charge (LDAC) increase due to Rate Case Expense and Recoupment
For LDAC effective November 1, 2018 - October 31, 2019

1	Rate Case Expense Remaining from Docket No. DG 14-180	$51,485
2	Rate Case Expense Through June 2018 in Docket No. DG 17-048	$578,477
3	Rate Case Expense for Docket No. DG 17-048 Currently Approved for $530,000	($48,477)
4	Remaining Recoupment from DG 14-180 & DG 17-048	$1,633,854
5	July 1, 2018 Balance	$2,215,339
6	Minus November 2019 & December 2019 Recoupment	($233,408)
7	Minus Estimated Recoveries from July 2018 through October 2018	($312,077)
8	Total Estimated Remaining Recovery As Of November 1, 2018	$1,669,854
9	Estimated November 2018 - October 2019 Interest	$36,303
10	Total Remaining Recovery	$1,706,158
11	Estimated November 2018 - October 2019 Sales (therms)	184,654,874
12	RCE & Recoupment rate per therm November 2018 - October 2019	$0.0092

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

1. SITE LOCATION: 38 Bridge Street, Nashua, New Hampshire.

2. DATE SITE WAS FIRST INVESTIGATED: At the end of 1998, the New Hampshire Department of Environmental Services (NHDES) sent a "Notification of Site Listing and Request for Site Investigation" for the former Nashua Manufactured Gas Plant (MGP) to the former plant owners/operators: EnergyNorth Natural Gas, Inc. d/b/a National Grid (ENGI), and Public Service Company of New Hampshire (PSNH) and its parent company, Northeast Utilities Services Company (NU). NHDES designated the site DES #199810022.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the former MGP have been identified at the site and in the adjacent Nashua River. These residuals, which include tars and oils, have been found mainly in subsurface soil at discrete locations, in groundwater, and in localized river sediments.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES:

   - Prior to the time NHDES issued its notice letter to ENGI, the US Environmental Protection Agency (EPA) was remediating contamination (asbestos) at the former Johns Manville plant located adjacent to, and downstream from the 38 Bridge Street property. In the course of that work, EPA detected what it determined to be MGP related residuals in Nashua River sediments containing asbestos. EPA sought reimbursement from ENGI and PSNH of only those incremental additional costs it incurred to dispose of sediments containing MGP related wastes in addition to asbestos. ENGI and PSNH entered into a settlement agreement with the EPA at the end of September 2000. Under the terms of the agreement, each company received a release from liability associated with the so-called Nashua River Superfund Site and contribution protection against future claims associated with that site. The settlement agreement made it clear that EPA does not contend that ENGI or PSNH contributed any asbestos to the Nashua River.

   - In response to the 1998 notice from NHDES, QST Environmental, Inc. (QST, subsequently Environmental Science and Engineering, Inc. (ESE), and later Harding ESE, Inc. (Harding ESE)), submitted a Scoping Phase Field Investigation Scope of Work to NHDES on behalf of ENGI in February 1999.

   - In response to comments from NHDES, QST and ENGI refined the Scope of Work for the Scoping Phase Field Investigation and resubmitted to NHDES in April 1999.

- NHDES approved the refined Scoping Phase Field Investigation Scope of Work in May 1999.
- During the summer of 1999, ENGI and QST conducted the Scoping Phase Field Investigation, collecting site background information and soil, groundwater, surface water and sediment samples from the former Nashua MGP and the adjacent Nashua River.
- ENGI and ESE submitted the Scoping Phase Field Investigation Report to NHDES in December 1999.
- NHDES provided comments to ENGI and ESE in February 2000 on the Scoping Phase Field Investigation Report and requested a Phase II Investigation Scope of Work.
- On behalf of ENGI, ESE submitted a Draft Phase II Investigation Work Plan to NHDES in April 2000.
- ENGI and ESE met with the NHDES site manager in April 2000 to discuss the Draft Phase II Investigation Work Plan.
- NHDES provided written comments on the Draft Phase II Investigation Work Plan in June 2000.
- ENGI and ESE met with NHDES in August 2000 to discuss NHDES' comments on the Phase II Work Plan.
- ENGI submitted a letter to NHDES in August 2000 discussing revisions to the Draft Phase II Investigation Work Plan in response to comments from NHDES and PSNH/NU, along with a proposed schedule for implementation of the work.
- NHDES approved the Revised Phase II Work Plan for the site at the end of August 2000.
- NHDES provided comments to ENGI and Harding ESE on the proposed schedule for Phase II Work Plan implementation in September 2000.
- ENGI submitted an addendum to the Phase II Work Plan, including a proposed approach for risk evaluation, to NHDES in November 2000.

- Subsequent to meetings and discussions throughout 2000, ENGI and PSNH reached agreement in late 2000 regarding sharing of costs for the remediation work and transfer of management of the remediation work to ENGI.

- Harding ESE implemented the Phase II Work Plan during the fall and winter of 2000/2001. Work entailed a comprehensive field program that included the advancement of river borings and collection of sediment samples as well as the installation of borings and monitoring wells on and off the property.

- NHDES provided comments on the Phase II Work Plan addendum in February 2001.

- Harding ESE responded to NHDES comments on the Phase II Work Plan addendum in March 2001.

- In May 2001, ENGI submitted to NHDES a Draft Site Conceptual Model to assist with finalization of the Phase II Work Plan Addendum and met with NHDES to discuss.

- ENGI and Harding ESE revised the Draft Site Conceptual Model and outlined supplemental field activities to be included in the Phase II Work Plan Addendum and submitted to NHDES in June 2001.

- In July 2001, ENGI and Harding ESE met with NHDES to review the Site Conceptual Model and proposed Phase II supplemental investigation activities.

- ENGI and NHDES met in August 2001 to discuss the overall site objectives.

- In September 2001, Harding ESE, on behalf of ENGI, submitted a Phase IIB Supplemental Site Investigation (SI) Scope of Work to NHDES.

- NHDES provided verbal approval for the Phase IIB Supplemental SI, and Harding ESE initiated the field program on behalf of ENGI in October 2001.

- NHDES provided written approval of the Phase IIB Supplemental SI in October 2001. A modification to the proposed scope of work relating to investigations adjacent to the gas lines was proposed and verbal approval was obtained from NHDES on November 19, 2001.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

- Property owners north of the Nashua River did not provide access to install monitoring wells proposed in the Phase IIB SOW. Harding ESE completed all on-site work outlined in the Phase IIB SOW in February 2002.

- ENGI received access from PSNH to install Phase IIB monitoring wells west of the site in March 2002.

- Harding ESE installed additional groundwater monitoring wells west of the site in March and sampled all newly installed monitoring wells in April 2002. All work outlined in the Phase IIB SOW was completed except for the proposed monitoring wells north of the Nashua River where access was denied.

- The Phase II Report was submitted to NHDES in February 2003. The report was approved by NHDES in August 2003. At the time of approval, NHDES required ENGI to begin work on the Remedial Action Plan for the site, due in 2004.

- ENGI met with NHDES on November 3, 2003, to review the proposed remedial schedule, which called for the Remedial Action Plan to be submitted in July 2004, and remediation to occur in 2005. NHDES approved the schedule by letter dated December 1, 2003. In that letter they concurred with ENGI's request to divide the site into terrestrial and aquatic portions, to facilitate remediation of sediments concurrent with re-armoring of ENGI's gas mains crossing the river.

- By way of a May 5, 2004 letter, ENGI requested that NHDES waive the Remedial Action Plan (RAP) requirement for the aquatic portion of the site and allow ENGI to proceed with capping sediments in conjunction with gas main rearmoring, which was scheduled for completion in 2004. NHDES approved the request by letter dated May 14, 2004.

- ENGI held pre-application meetings with state and federal agencies (NHDES Wetlands Bureau, United States Army Corps of Engineers, United States Department of Fish and Wildlife, United States Environmental Protection Agency and National Oceanic and Atmospheric Administration) in June 2004. These meetings were held in advance of permit application submission for the capping/rearmoring project, to review the project and expedite the approval process. The application was submitted to these agencies as well as the City of Nashua on July 1, 2004. On July 6, 2004, NHDES deemed the permit application administratively complete. The hearing was closed on July 26, 2004 and the permit was issued in September 2004. The capping and re-armoring was

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

completed in October 2004 and the Remedial Completion Report, submitted to NHDES in January 2005, was subsequently approved.

- In October 2005, ENGI submitted the Terrestrial Remedial Action Plan to NHDES, and the document was deemed complete by NHDES in March 2006. NHDES requested supplemental information to be submitted before ENGI proceeded with remediation, and in 2007 ENGI gathered the requested data.

- In November 2007, ENGI submitted a Workplan for DNAPL Recovery Pilot Test to NHDES and the document was approved by NHDES on November 14, 2007.

- ENGI applied for three permits required for the implementation of the NHDES-approved DNAPL pilot testing activities: Nashua Conservation Commission Permit, Nashua Zoning Board of Appeals Permit and NHDES Dredge and Fill Permit. ENGI attended numerous hearings related to obtaining the permits and obtained the three permits on April 21, 2008, April 23, 2008 and May 31, 2008, respectively.

- In June 2008, ENGI installed six extraction wells for DNAPL recovery pilot testing at the site. ENGI completed the construction of the coal tar recovery system trailer (i.e., the equipment that will be used to pump, collect and temporarily store the coal tar) in December 2008. Trenching for the subsurface piping and final system installation was delayed in late 2008 due to weather. ENGI performed manual DNAPL recovery throughout 2008 and the first three quarters of 2009.

- In Spring 2009, ENGI began trenching and final system installation activities for the DNAPL recovery pilot testing. The trenching, pump installations and system electrical work were completed in July 2009. Electrical service was installed in late August 2009. The system was started up in November 2009 and has been operational since that time.

- In September 2010, ENGI submitted an Installation Summary and DNAPL Recovery Pilot test summary report to NHDES. This report recommended that DNAPL extraction activities continue. In October 2010, a work plan for an off-site groundwater investigation program to support the delineation of a Groundwater Management Zone was submitted to NHDES. This work plan was approved by NHDES in a letter dated November 5, 2010. Access negotiations and environmental permitting for the NHDES-approved investigation were completed in June 2011.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.

NASHUA FORMER MGP

LINE
NO.

- The NHDES-approved subsurface soil and groundwater investigation program was initiated on September 26, 2011. The goal of this program was to delineate a Groundwater Management Zone for the site, and allow for the filing of a Groundwater Management Permit (GMP). Due to known asbestos in the off-site area to be investigated, ENGI submitted an "In-active Asbestos Disposal Site (ADS) Work Plan"; NHDES approved the asbestos work plan in October 2011. Soil boring and well installation work was performed between October and December 2011. An In-active ADS Site Completion Report was submitted to and accepted by NHDES on May 4, 2012. Groundwater sampling events were conducted in February and May 2012. A meeting to discuss the preliminary results of the Groundwater Management Zone (GMZ) investigation program with NHDES took place on August 16, 2012. It was agreed that two more rounds of groundwater sampling should occur before a delineation of the GMZ is considered.

- On November 27, 2012 and December 6, 2012, 8.25 feet and 10.83 feet of DNAPL appeared in MW-106, situated in the foot print of historical Holder #2. A weekly monitoring and removal plan was initiated at this time and is ongoing as of July 2013. To date, 109 gallons of DNAPL has been removed manually, in addition to the system removal discussed above.

- In January 2013, a Supplemental Investigation Report (SIR) and DNAPL Recovery System Pilot Test Progress report was submitted to NHDES reporting on additional investigation activities, including the installation of sixteen additional wells in 2011, and the May and September 2012 (second and third of three) rounds of sampling to define groundwater quality and hydrogeologic conditions at the site, so that the GMZ can be delineated. Additionally, the report includes information regarding DNAPL recovery system O&M activities and DNAPL recovery rates demonstrating that the system still effectively recovers DNAPL. A meeting with NHDES took place on March 22, 2013 to discuss these results and next steps.

- NHDES responded to the January 2013 submittal via letter dated May 21, 2013 accepting the SI Report and authorizing ENGI to proceed with the delineation of the GMZ in order to submit a Groundwater Management Permit (GMP) application, and the preparation of a revised Remedial Action Plan (RAP) for the terrestrial portion of the site.

- ENGI responded to the NHDES letter on June 19 with a schedule targeting December 31, 2013 for submittal of the GMP application and revised RAP.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

- In December 2013 ENGI submitted a request to revise the RAP. The purpose of the request was to summarize activities conducted since submittal of the 2013 Supplemental Investigation Report and to propose a revision to the approved RAP for the area on site known as "Holder # 2."

- The RAP submitted in 2005 selected asphalt capping in the area of Holder #2. The entire area of the Holder was not designated to be capped with asphalt. At the time of the preparation of the RAP, separate phase NAPL was not considered to be present in recoverable quantities in Holder #2. In order to address what appears to be a limited area and quantity of NAPL in a monitoring well in Holder #2, continued manual NAPL recovery from two additional wells in the Holder #2 area was proposed as part of the GMP monitoring program.

- In addition to the NAPL recovery activity, the area of asphalt capping was proposed to be expanded to include all of former Holder #2. This expansion of paving will also address the asbestos contaminated material (ACM) present in this area of the site. The asphalt cap detail presented in the proposed RAP revision will be modified (as necessary) to address the relevant solid waste regulations for ACM in soil.

- On June 4, 2014, the NHDES approved of the requested RAP revision and required that a RAP Summary Report, with the necessary engineering details for the selected remedies, be provided. ENGI plans to submit this RAP Summary Report by December 31, 2014.

- The GMP Application was submitted in March 2014. The GMP proposed a list of monitoring wells and analytical methods in order to monitor the Groundwater Management Zone.

- On June 5, 2014, the NHDES approved the GMP application. This Permit was issued for a period of 5 years requiring the monitoring of groundwater quality, assessing and recovering any free product found, and visually inspecting the Nashua River sediment cap area. During the first year of the Permit, monitoring events will be conducted in October 2014 and April 2015, and each successive April and October. Annual summary reports are submitted to the NHDES in January of each year.

- The first groundwater monitoring annual summary report was submitted to NHDES in February 2015, and included the groundwater data from the first GMP round of sampling on October 27, 2014.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

- ENGI submitted the draft Activity and Use Restriction (AUR) and RAP Engineering Design details for the cap on September 14, 2015. ENGI received comments from NHDES on December 15, 2016. NHDES altered the design to include an impermeable capping layer, and incorporation of standards in the Waste Management Bureau's Asbestos Disposal Site rules. As ENGI is planning to pave the Nashua property in 2018, the cap will be installed in conjunction with this capital project.

- During 2017, NHDES required active hazardous waste sites managed by the NHDES Hazardous Waste Remediation Bureau to include Per- and Polyfluoroalkyl Substances (PFAS) in one of their sampling rounds.

- The capping remedy was planned for 2018 in conjunction with an overall paving of the property, however a portion of the City's sewer pipe that transects the property collapsed in early February 2018 prompting the City to plan a lining upgrade to it during summer 2018. This event has caused the remedy construction to be pushed out to 2019.

5. NEW HAMPSHIRE SITE REMEDIATION PROGRAM PHASE: All Supplemental Phase II Site Investigation Work that could be performed (based on property access) has been completed. Phase II Report was submitted to NHDES in February 2003, and approved by NHDES on August 28, 2003. Remediation of the Nashua River sediments was completed in the fall of 2004. A Remedial Action Plan (RAP) for the upland and groundwater was submitted in October 2005, and approved by NHDES in March 2006. DNAPL recovery is on-going. A Groundwater Management Permit was granted on June 5, 2014. A RAP Summary, involving the asphalt capping of the area over Holder #2 and continued groundwater monitoring, was submitted on April 2, 2015. A Monitoring Summary and Progress Report was submitted by ENGI on February 7, 2015. NHDES accepted the RAP Summary on April 10, 2015, with the provisions that ENGI submit the draft Activity and Use Restriction (AUR) and final engineering design plan for the cap by September 15, 2015. ENGI submitted the draft Activity and Use Restriction (AUR) and RAP Engineering Design details for the cap on September 14, 2015. NHDES responded to ENGI with their comments on December 15, 2016. Design for the engineered cap remedy is progressing, and when the design is completed it will be submitted to NHDES for approval. The cap construction and site paving are now planned for 2019 construction season.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

NASHUA FORMER MGP

LINE
NO.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: The Nashua Gas Light Company built the original coal gas facility in 1852 or 1853. In 1889, the Nashua Gas Light Company merged with the Nashua Electric Company to form the Nashua Light, Heat and Power Company (NHLPC). In 1914, the NLHPC merged with the Manchester Traction Light & Power Company, and PSNH acquired the facility in 1926. The MGP facility was upgraded and expanded. In 1945, PSNH divested the gas operations to Gas Service, Inc. Gas production was eliminated in 1952 when natural gas was supplied to the city via pipeline. In 1981, Gas Service, Inc. merged with Manchester Gas Company to form ENGI. ENGI currently owns the majority of the former gas plant property.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: The EPA made a claim against ENGI and PSNH related to the so-called Nashua River Asbestos Site located adjacent to the former MGP. EPA was removing asbestos from the Nashua River, when some was found to be mixed with wastes allegedly from the MGP. Without admitting any facts or liability, by agreement effective December 21, 2000, ENGI resolved EPA's claim in exchange for a payment of $387,371.46, plus interest accrued between settlement and final approval of an administrative consent order by EPA.

ENGI and PSNH have entered into a confidential Site Responsibility and Indemnity Agreement effective as of September 15, 2000, which governs the financial and decision-making responsibilities of the two companies through the remainder of site study and remediation. Under this agreement, ENGI will take the lead on site investigation and remediation.

Numerous, confidential insurance settlements have been entered into. A jury trial commenced against the London Market Insurers and Century Indemnity on November 1, 2005. On November 14, 2005, the jury returned a verdict in favor of EnergyNorth finding that the defendants were obligated to indemnify EnergyNorth for response costs incurred at the site. The Court then awarded ENGI its reasonable costs and attorneys fees to be paid by the defendants. Subsequent to the verdict, the London Market and ENGI entered into a confidential settlement. Century appealed to the First Circuit Court of Appeals in the summer of 2006. However, on the day its brief was due at the First Circuit, Century withdrew its appeal. Because the site has not yet been remediated, the jury was not asked to make a damage determination. Future proceedings will take place after the remedy has been approved by the NHDES to determine the indemnification amounts to be paid by Century. The New Hampshire Supreme Court's ruling and guidance on the proper manner in which costs are to be allocated among insurers (discussed in more detail in the Manchester MGP summary) will be used in the calculation of that figure.

Note: This summary is an overview only and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

1. SITE LOCATION: 130 Elm Street, Manchester, New Hampshire.

2. DATE SITE WAS FIRST INVESTIGATED: The New Hampshire Department of Environmental Services (NHDES) compiled a list of all former Manufactured Gas Plants (MGPs) in New Hampshire that were not already subject to a site investigation or remediation. In March of 2000, NHDES sent out notice letters to all parties it deemed responsible for the sites. EnergyNorth Natural Gas, Inc. (ENGI) received a "Notification of Site Listing and Request for Site Investigation" for the former Manchester MGP from NHDES, which designated the site DES #200003011.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the former MGP have been identified at the site. These residuals, which include tars and oils, have been found mainly in subsurface soil at discrete locations and in groundwater at the former MGP, as well as in the downgradient Singer Park and river sediment.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES:

   - On behalf of ENGI, Harding ESE, Inc. (Harding ESE), submitted a Scoping Phase Field Investigation Scope of Work to NHDES in March 2000.

   - NHDES approved the Scoping Phase Field Investigation Scope of Work in June 2000.

   - During the summer and fall of 2000, ENGI and Harding ESE conducted the Scoping Phase Field Investigation, collecting site background information and soil, groundwater, surface water and sediment samples from the former Manchester MGP and the nearby Merrimack River.

   - On August 31, 2000, an underground tank containing MGP residuals was discovered at the site. As required by NHDES regulations, the tank contents were removed and disposed of subject to a permit from NHDES. Harding ESE, on behalf of ENGI, submitted a summary report to NHDES in January 2001 documenting the response action.

   - ENGI and Harding ESE submitted the Scoping Phase Field Investigation Report to NHDES in February 2001.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

- NHDES provided comments to ENGI and Harding ESE in April 2001 on the Scoping Phase Field Investigation Report and requested a Phase II Investigation Scope of Work.

- ENGI responded to NHDES' comments on the Scoping Phase Investigation Report and indicated that ENGI planned to solicit bids for the Phase II Scope of Work.

- In July 2001, on behalf of ENGI, Harding ESE submitted a Scope of Work to NHDES to fence the ravine near the former Manchester MGP to prevent access to impacted sediments. In October 2001, NHDES accepted ENGI's fence installation plan, but requested clarification on the fence location and signage. In correspondence dated April 3, 2002, ENGI provided proposed language to NHDES for the signs to be attached to the ravine fence. NHDES approved the ravine sign language in April 2002.

- On May 1, 2002, ENGI issued a Request for Proposals to eight environmental consultants for the Phase II Site Investigation and Risk Characterization. ENGI received six proposals for the Phase II work in June 2002.

- In June 2002, the City of Manchester approved the ravine fence location and granted access to City property to install. The work was completed in August 2002.

- URS Consultants were awarded the contract to undertake the next phase of work. A Phase II Site Investigation Scope of Work was submitted in September 2002.

- Phase II field investigations began in the fall of 2002.

- In June 2003, the City of Manchester approved a proposal to construct a minor league ballpark, retail shops, parking garage, hotel and high-rise condominium complex on the Singer Park site, in the same general areas that MGP impacts were detected in ongoing Phase II investigations. Following supplemental ravine investigations during the spring and summer of 2003, the Drainage Ravine Engineering Evaluation was submitted to NHDES in January 2004, and presented four potential remedial alternatives for the ravine, which is located on a portion of Singer Park.

- ENGI had been a regular participant in monthly Singer Park redevelopment meetings with NHDES, the City of Manchester and the various developers from April 2003 until the regular meetings ended on November 15, 2004. ENGI had

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

attended these coordination meetings to ensure that the environmental and construction aspects of the redevelopment were being addressed concurrently and that ENGI avoided incurring costs associated with another entity's contamination.

- ENGI entered into confidential agreements with Manchester Parkside Place (the owner of the ravine property) for access and cleanup of MGP byproducts in the ravine in January 2005.

- In January 2005, ENGI submitted a Remedial Design Report to NHDES selecting excavation and off-site disposal of source material and impacted soils as the remedial alternative for the ravine. NHDES approved of this alternative via a letter dated February 7, 2005. Eleven contractors were invited to bid on the ravine remediation in January 2005. The contract was awarded to the low bidder (ENTACT) in February 2005. Remediation of the ravine began in March and was completed in July 2005. A remedial completion report was submitted to NHDES on September 2, 2005.

- ENGI submitted a Phase II Site Investigation Report to NHDES in March 2004. The report concluded that MGP impacts (including impacted soil and groundwater and separate phase coal tar) were present in the subsurface beneath the 130 Elm Street property, portions of Singer Park at depth and the Merrimack River sediment. Further investigations were recommended by ENGI to further assess the nature and extent of this contamination and a work plan proposing those investigations was submitted to NHDES in May 2004 and approved in July 2004. These supplemental investigations were completed and documented in the Supplemental Phase II Investigation Report and the Stage I Ecological Screening Report for the Merrimack River, submitted to NHDES in February and March 2005, respectively. The reports concluded that Remedial Action Plans for the upland and Merrimack River portions of the site were required. On September 15, 2005, NHDES issued a letter accepting the reports and requested ENGI prepare a Remedial Action Plan (RAP) to address impacted sediments in the Merrimack River, as well as MGP-related impacts on the upland portion of the site. Preparation of the RAPs began in August 2006.

- Additional Merrimack River investigations were completed in 2007 and the Remedial Design Report for dredging approximately 9,000 cubic yards of coal tar-impacted sediments from the river was submitted to NHDES on May 11, 2007. ENGI applied for, and was granted, a Dredge and Fill Permit for the remedial dredging from NHDES and the United States Army Corps of Engineers on May 18, 2007. Dredging of the river commenced in June 2007 and was substantially completed by the end of the year. Final site restoration activities associated with

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

the sediment remediation were complete in May 2008. A Remedial Action Implementation Report documenting the sediment remediation activities was submitted to NHDES in May 2008.

- Certain pre-design investigations were completed on the upland portion of the site in 2008/2009. ENGI also completed interim Phase I Corrective Actions at the site, including pilot scale light non-aqueous phase liquid (LNAPL) recovery, pilot scale dense non-aqueous phase (DNAPL) recovery, and design for repair/replacement of a deteriorated portion of the site drainage system located within a known LNAPL area of the site. Limited surface soil removal activities were conducted during the summer/fall of 2008 in an area with detected Upper Concentration Limit exceedences in shallow soils.

- ENGI was issued a Groundwater Management Zone (GMZ) permit No. GWP-200003011-M-001 for the former MGP site on June 15, 2009. The permit establishes a groundwater management zone in the vicinity of the former MGP site with associated notification/groundwater monitoring requirements. Groundwater monitoring events to support this GMZ permit have been ongoing, every April and October.

- ENGI submitted an RAP for the upland portion of the site to NHDES on June 30, 2010. The remedial objectives for the site include control of mobile DNAPL, reduction in contaminant mass (where practicable), and management of residual contamination through the use of administrative controls. The recommended remedial alternative includes removal of the contents of certain subsurface structures where removal is anticipated to provide a reduction in the potential for the further release of DNAPL to the subsurface; NAPL recovery from the subsurface; construction of a barrier wall proximate to the Merrimack River to mitigate potential DNAPL migration; and use of administrative controls to address potential human exposure to residual soil and groundwater contamination. Additional investigation activities were recommended to support the preparation of Design Plans and Construction Specifications following NHDES approval of the RAP and to confirm the appropriateness of certain remedial alternatives recommended in the RAP.

- In Fall 2010, ENGI performed storm drain rehabilitation activities on a deteriorated portion of the site drainage system that is located within a known LNAPL area. This work was performed to mitigate the migration of LNAPL to the Merrimack River via the storm drain system. These activities were mainly completed in late 2010.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

- In April 2011, NHDES approved of the upland RAP and requested that ENGI proceed with the additional investigation activities recommended in the June 2010 RAP. In addition, ENGI was contacted by both the developer and condominium association associated with the property directly downgradient of the site regarding potential impacts to the property, as well as the proposed remedy; ENGI met with both parties in early and mid-2011.

- After meeting with the developer of the property directly downgradient of the site at the potential location of the barrier wall regarding potential impacts to the property in September/October 2011, access was obtained to conduct certain approved pre-design off-site investigation activities as recommended in the June 2010 RAP. The off-property investigations were substantially completed in December 2011. A meeting was held with NHDES in December 2011 to discuss the results. A Remedial Design Report for the off-site property is currently being finalized.

- On-site pre-design investigation activities were conducted during the spring and summer of 2012 including: additional groundwater quality monitoring, former gas holder foundation test pit excavations, supplemental LNAPL delineation, cyanide source investigation test pit excavations, cyanide delineation and source investigation monitoring well installation, and storm drain inspection.

- Further storm drain inspections occurred during July and August 2013. The remedial design and construction specifications report was drafted including a summary of the design investigation activities and findings. The remedial design includes the monitoring and practicable recovery of NAPL at strategic on-site and off-site locations, as well as excavation of subsurface structures with concurrent source removal if encountered. The Remedial Design Report also summarizes the results of cyanide source investigation and delineation work, with further source delineation work anticipated. In addition to routine Groundwater Management Permit (GMP) sampling and reporting, an application for GMP renewal was also submitted to NHDES during June 2014. The Remedial Design Report was submitted to NHDES on December 19, 2014. On July 15, 2015, NHDES accepted the proposed remedial design with exceptions involving further remediation of historical Holder 3, and further investigation of the storm drain system beneath and downstream of the site. ENGI responded to NHDES' comments and requests on May 12, 2017.

- ENGI removed material from a tar-separator and other subsurface structures, installed three new monitoring wells and an extraction well on-site, prior to property paving in Fall 2017. Further removals from subsurface structures are planned for 2018.

- During 2017, NHDES required active hazardous waste sites managed by the NHDES Hazardous Waste Remediation Bureau to include Per- and Polyfluoroalkyl Substances (PFAS) in one of their sampling rounds.

5. NEW HAMPSHIRE SITE REMEDIATION PHASE: Phase I Site Investigation complete. Phase II Site Investigation complete and supplemental report submitted to NHDES in February 2005. Remedial Action Plan (RAP) for the ravine submitted and approved by NHDES in 2005; remediation of ravine completed in July 2005. Remediation of the river sediment was completed in 2007. A RAP for the upland portion of the site was submitted to NHDES for review on June 30, 2010. NHDES issued its approval of the RAP for the upland portion of the site in a letter dated April 11, 2011. The Remedial Design Report summarizing the activities for addressing on-site and off-site impacts was submitted on December 19, 2014. On July 15, 2015, NHDES accepted the proposed remedial design with exceptions. ENGI addressed these concerns and implemented the remedial activities on-site and off-site in 2017.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: The former Manchester MGP is believed to have started producing coal gas in 1852. Gas was produced at the site by the Manchester Gas Company and its predecessors until the MGP was shut down in 1952 when natural gas was supplied to the city via pipeline. ENGI is the successor by merger to the Manchester Gas Company. ENGI continues to own and operate the 130 Elm Street property as an operations center.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: In late 2000, ENGI filed suit against UGI Utilities, Inc. in the United States District Court for the District of New Hampshire, alleging that during much of the early part of the 20th century, a predecessor to that entity “operated” the Manchester Gas Plant, as defined by the Comprehensive Environmental Response, Compensation and Liability Act (commonly referred to as “CERCLA” or “Superfund”). This claim was similar to a claim litigated and ultimately settled by the parties in the late 1990s, related to the former gas plant in Concord, NH. The case went to trial in June 2003 and was settled after 8 days of trial.

   Insurance recovery efforts are complete, and confidential settlements have been entered into with all insurance company defendants. An agreement with the last remaining insurance carrier was negotiated in August 2008, under which that carrier paid ENGI's attorneys fees incurred in the litigation. That settlement came about after a ruling from the New Hampshire Supreme Court, in response to a question certified by the United States

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

MANCHESTER FORMER MGP

LINE
NO.

District Court, on allocation of coverage, and the scope and meaning of NH RSA 491:22-a, as it relates to awards of attorneys fees. EnergyNorth Natural Gas, Inc. v. Certain Underwriters at Lloyds, 156 N.H. 333 (2007). As to allocation, the Court ruled as proposed by the carrier that insurance coverage should be allocated on a *pro rata* basis when multiple policies are triggered by an ongoing event. ENGI had argued for an "all sums" allocation approach in which the insured could choose the policy years from which to obtain indemnity. With respect to attorneys fees, the Court held that " [i]f the insured has obtained rulings that require the excess insurer to indemnify it, the insured has prevailed within the meaning of RSA 491:22-b, and is immediately entitled to recover its reasonable attorneys' fees and costs. Recovery of these fees and costs does not depend on whether, after all is said and done; the excess insurer actually has to pay any indemnification. The insured becomes entitled to the fees and costs once it obtains rulings that demonstrate there is coverage under the excess insurance policy." Under that finding, the insurance carrier was obligated to reimburse attorneys fees even if the *pro rata* allocation analysis resulted in the carrier owning no indemnity.

Note: This summary is an overview and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

1. SITE LOCATION: The former MGP was located on Messer Street in Laconia. Sometime in the early 1950s, during decommissioning of the MGP, wastes from the MGP were disposed of at a location on Liberty Hill Road in Gilford. At the time of the disposal, the property was utilized as a gravel pit, and the disposal reportedly occurred with the permission of the gravel pit owner. The property currently comprises part of a residential neighborhood.

2. DATE SITE WAS FIRST INVESTIGATED: In 1994 and 1995, Public Service Company of New Hampshire (PSNH), one of the former owners and operators of the Laconia Manufactured Gas Plant (MGP), conducted limited site investigations at the plant. In 1996, the New Hampshire Department of Environmental Services (NHDES) sent a "Notification of Site Listing and Request for Site Investigation" for the former Laconia MGP to PSNH and its parent company, Northeast Utilities Services Company (NU), and to EnergyNorth Natural Gas, Inc. (ENGI), another former owner. NHDES designated the site DES #199312038. ENGI and PSNH reached a settlement, reported previously to the New Hampshire Public Utilities Commission (NHPUC), in September 1999. As a result of that settlement, PSNH has had responsibility for the MGP site remediation and interactions with NHDES.

   Per the aforementioned settlement, ENGI retained responsibility for any decommissioning-related liabilities, including off-site disposal. Therefore, in October 2004, ENGI notified NHDES of the possibility that wastes from the MGP were disposed of at a location on Liberty Hill Road sometime in the early 1950s during decommissioning of the plant. Drinking water samples were collected from two residential properties in the vicinity in December 2004, and from three additional properties in June and July 2005 by the NHDES; no MGP-related contaminants were detected. At the request of NHDES, ENGI began preliminary site investigations in July 2005 that culminated in the submission of a Site Investigation Report to NHDES in June 2006. As detailed in the report, MGP-related constituents have been detected in soil and shallow groundwater on four residential properties, and in the abutting brook. The report concluded that further investigations were necessary to determine the extent of the contamination. Additional investigation activities were completed between 2006 and 2009.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the former MGP have been identified at the Laconia MGP site and in the adjacent Winnipesaukee River. Please contact PSNH and refer to PSNH filings with NHDES for complete information on the nature and extent of site contamination at the MGP. Residual materials from the former MGP were disposed of at the Liberty Hill disposal area, and MGP-related constituents have been detected in soil and ground water.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES: Based on the settlement with PSNH that has previously been reported to the Commission, ENGI has had no further involvement with the MGP site since the summer of 1999, except with regard to the Liberty Hill disposal area. Please contact PSNH and refer to PSNH filings with NHDES for complete information on material developments and interactions with environmental authorities.

With respect to the Liberty Hill disposal area, in October 2004, ENGI notified NHDES of the possible existence of this disposal site; the site was assigned disposal site number 200411113 by NHDES. NHDES collected drinking water samples from two residential wells in the vicinity in December 2004 and from three additional residential wells in June and July 2005; no MGP-related contaminants were detected. In January 2005, NHDES requested that ENGI conduct a preliminary site investigation on the two residential properties. ENGI submitted a scope of work for the investigation to NHDES on March 2, 2005. The investigation began in July 2005 and was completed in June 2006 with the submission of the Site Investigation Report.

Additional site investigations were conducted in 2006 and summarized in the December 20, 2006 Interim Data Report #2 submitted to NHDES. Based upon the results of the investigations, remediation is required at the site. In response, a Remedial Action Plan (RAP) was submitted to NHDES on February 28, 2007. The RAP presented NHDES with several remedial alternatives to address soil and groundwater contamination at the site. The February 2007 RAP identified soil excavation (to a depth of 3 feet), construction of a containment wall and impermeable cap on the four residential properties purchased by ENGI as the recommended alternative. In September 2007, NHDES responded to the February 2007 RAP and required that ENGI evaluate additional remedial alternatives that included further soil removal. In November 2007, a RAP Addendum was submitted to NHDES. The revised RAP recommended a remedial alternative that included removal of tar-saturated soils to a depth of approximately 45 feet, construction of a containment wall and impermeable cap on the four residential properties owned by ENGI. On February 29, 2008, NHDES issued a letter to ENGI indicating that NHDES had reached a preliminary determination that the remedy recommended in the November 2007 RAP met the NHDES requirements and that a final decision would be reached following a public meeting and comment period.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

On March 24, 2008, NHDES held a public comment meeting to discuss the recommended alternative and began 30-day public comment period. In April 2008, NHDES received a request to extend the public comment period closing date to May 8, 2008, to allow the Town time to provide technical comment. On June 26, 2008, NHDES issued a letter deferring its final decision on the recommended remedial alternative for the Liberty Hill site pending further data analysis following the development of a scope prepared collaboratively between the Town of Gilford and ENGI. In July and August 2008, technical representatives from ENGI, the Town of Gilford, the Liberty Hill neighborhood and NHDES met twice to discuss the comments provided to NHDES during the public comment period and discuss the scope for additional groundwater modeling activities and limited additional site data collection. The Company submitted Scopes of Work for additional data collection and groundwater modeling to NHDES in September and October 2008, respectively. The field activities were completed between November 2008 and January 2009. Modeling efforts began in late 2008 and were completed in May 2009. In March and May 2009, technical representatives from ENGI, the Town of Gilford, the Liberty Hill neighborhood and NHDES met to discuss the results of the field investigations and the modeling activities. One topic discussed with the technical team was that the modelling results indicate that low-flow pumping would need to be added to the selected remedy meet the remedial goals for the site. On June 30, 2009, NHDES issued a letter to ENGI requesting that a second RAP Addendum be prepared for the site to evaluate the technical changes (mainly the addition of low-flow pumping) to the proposed remedy that resulted from the modeling effort. ENGI submitted the second RAP Addendum to NHDES on August 17, 2009 and presented the findings at a public meeting held in Gilford on September 10, 2009. In October 2009, NHDES hired a third party consultant to review the RAP cost estimates and the results were presented in a report to NHDES in April 2010. In October 2010, NHDES issued a Preliminary Decision on RAP Addendum No. 2, in which NHDES indicated that it did not concur with ENGI's recommended remedial alternative and further recommended the complete removal of coal tar-impacted soils at the site. On January 28, 2011, ENGI submitted a comment letter to NHDES further explaining its rationale for the remedial alternative recommended in RAP Addendum No. 2. On November 2, 2011 NHDES announced a Final Decision indicating that it did not concur with ENGI's recommended remedial approach and selecting the full removal option as the remedy for the site. On December 2, 2011, ENGI filed an appeal of the NHDES Final Decision with the New Hampshire Waste Management Council. In March 2012, ENGI attended the Pre-Conference Hearing with the Council related to the appeal. Hearings on the matter were scheduled for October 18 and November 15, 2012. On July 26, 2012, the Hearing Officer granted an Assented to Motion to Continue the hearing until a date after January 3, 2013.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

During the period of time the appeal was subject to the continuance, the company, the New Hampshire Department of Justice and NHDES engaged in settlement discussions on a confidential basis. At the conclusion of those negotiations, NHDES and the company agreed on a final remedy for the site, which was approved by NHDES. That approval allowed ENGI to withdraw its appeal as of December 19, 2012, and proceed with implementation of the remedy. The town of Gilford was briefed on the agreed-upon remedy concurrently with NHDES approval and ENGI's withdrawal of the appeal.

ENGI has also performed numerous other activities requested by NHDES between 2008 and 2011, including remediation of the groundwater seep area near Jewett Brook in accordance with NHDES-approved September 2008 Initial Response Action Plan; evaluation of options for providing financial assurances to NHDES for the site remediation activities; coal tar recovery; semi-annual groundwater and surface water sampling activities; and drinking water well sampling. Groundwater sampling is reported to the NHDES in semi-annual reports. In addition, ENGI developed a Liberty Hill Road site website to assist in updating interested parties.

In conjunction with the Site Investigation work, ENGI has acquired 4 properties on Liberty Hill Road to facilitate remediation activities, and eliminate any potential risk to residents associated with a significant remediation and construction project. The properties were obtained based upon arms-length negotiations, and in one instance to settle potential litigation.

The site was remediated in 2014-2015 construction seasons, and was restored to grass field by December 2015. NHDES approved the Notice of Activity and Use Restriction (AUR) in February 2017. In May 2017, ENGI received the post-construction groundwater monitoring permit, involving annual groundwater sampling.

5. NEW HAMPSHIRE SITE REMEDIATION PROGRAM PHASE: On December 10, 2012, ENGI submitted a Conceptual Remedial Design Report to NHDES describing the approach for full removal. NHDES approved this Conceptual RAP Addendum design on December 18, 2012, and ENGI withdrew their appeal before the New Hampshire Waste Management Council on December 19, 2012. A public meeting was held in the Town of Gilford to present the approved Conceptual Remedial Design on January 23, 2013. The pre-design investigation to confirm extent and depth of contamination commenced on February 20, 2013 and was completed first week in April 2013. A public meeting was held on September 25, 2013 to present the design to the Town. The Remedial Design Report was finalized and approved by NHDES in December 2013. Plans and Specifications were developed concurrently, and the bidding process commenced in

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

September 2013 with a Request for Information to ten (10) prospective contractors. On October 28, six (6) contractors were selected to participate in the bidding for the construction, with bids due back on December 6, 2013. On January 9, 2014, three (3) of the bidders were interviewed and Charter Environmental of Boston, MA (the Contractor) was selected for the project. A public meeting took place on February 12, 2014 to further explain details of the anticipated construction and to introduce the project team to the community.

The Contractor mobilized to the site and began set-up in May 2014, with the first load of soil being hauled from the site on June 6, 2014. Construction began to remove tar-impacted soil on the south side of the site in the first season, with little to no impact to the surrounding community. In 2014, approximately 65% of the impacted soil was removed for treatment. On April 8, 2015, ENGI presented the results of the first season of construction at a Gilford Town Select Board meeting, and presented expectations for the second season to the community. Starting on April 13, 2015, the north side of the site was remediated, with the removal of all tar-impacted soil completed on August 3, 2015. The entire project was completed on September 24, 2015 with 2,662 truckloads hauling 93,502 tons of tar-impacted soil removed for thermal treatment. Some additional site restoration work was needed in October 2015 and another seeding in April 2016 to repair damage to the original restoration caused by a heavy rainstorm that occurred on September 30, 2015. Throughout the course of the project there was no disruption to the neighboring community and no safety incidents, logging 26,975 safe working hours. The project was completed within budget parameters.

The only activities on this site during the past year and ongoing are mowing and groundwater and surface sampling, per the new post-remedial Ground Water Management Permit received on May 10, 2017. During 2017, NHDES required active hazardous waste sites managed by the NHDES Hazardous Waste Remediation Bureau to include Per- and Polyfluoroalkyl Substances (PFAS) in one of their sampling rounds.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: ENGI is the successor by merger to Gas Service, Inc. (GSI). In 1945, GSI acquired the gas manufacturing assets of PSNH. The Laconia MGP, which began operating in 1894, was included in that transaction. Gas manufacturing took place at the property until 1952, when the MGP was converted to propane. Half of the property is now owned by Robert Irwin and maintained as an open field, and the other half is owned by PSNH, which operates an electric substation on the parcel.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

LACONIA FORMER MGP AND LIBERTY HILL DISPOSAL AREA

LINE
NO.

The Liberty Hill Road parcel on which disposal was believed to have occurred was utilized as a gravel pit at the time of the disposal. It was subdivided in May 1970, and currently constitutes part of a residential subdivision.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: ENGI and PSNH entered into a confidential settlement in 1999. Under this agreement, PSNH took the lead on the MGP site investigation and remediation and all communications with NHDES. ENGI retained responsibility for any decommissioning-related liabilities, including off-site disposal.

Insurance recovery efforts are complete with respect to the MGP, and numerous confidential settlements have been entered into. In 2003 the United States District Court certified a question to the New Hampshire Supreme Court asking what “trigger of coverage” should be applied to the insurance policies issued by Lloyds of London to ENGI’s predecessor, Gas Service, Inc. In May, 2004 the Supreme Court responded that a “continuous injury-in-fact” trigger should be applied. The federal court conducted a jury trial against Lloyds of London - the only remaining defendant – in October 5, 2004. At the end of that trial the jury returned a verdict in favor of ENGI. Subsequent to the verdict, ENGI and Lloyds of London entered into a confidential settlement.

With respect to Liberty Hill, insurance carriers have been placed on notice of a potential claim, but no litigation has been initiated. The Company does not expect to pursue any insurance litigation.

Note: This summary is an overview only and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

LIBERTYUTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

CONCORD FORMER MGP

LINE
NO.

1. SITE LOCATION: One Gas Street, Concord, New Hampshire.

2. DATE SITE WAS FIRST INVESTIGATED: EnergyNorth Natural Gas, Inc. (ENGI) received a Notice Letter from the New Hampshire Department of Environmental Services (NHDES) in September 1992. The Notice related primarily to contamination identified in the pond adjacent to Exit 13 off Interstate 93, although it was broad enough to also include the former manufactured gas plant (MGP) site itself.

3. NATURE AND SCOPE OF SITE CONTAMINATION: Residual materials from the historic operation of the MGP were discovered in the area of the Exit 13 pond, as the NHDOT began site preparation work for the reconfiguration of that interchange. Subsequent investigations by ENGI and others indicate that contaminants originating from the MGP on Gas Street are present in soil and groundwater between the MGP and the Merrimack River, including within the Exit 13 pond.

4. SUMMARY OF MATERIAL DEVELOPMENTS AND INTERACTIONS WITH ENVIRONMENTAL AUTHORITIES:

Concord MGP: The New Hampshire Department of Transportation (NHDOT) contacted ENGI in August 2001 and February 2002 regarding possible coal tar-related impacts in a sewer line on a parcel adjacent to the former gas plant. NHDOT is currently conducting groundwater monitoring as part of a Groundwater Management Zone Permit on this parcel. ENGI met with NHDOT and NHDES in January 2003 to review the results of its 2002 site investigation. Limited coal tar impacts were observed in groundwater and subsurface soils at select locations.

On July 15, 2003, NHDES issued a letter to ENGI requesting submission of a schedule and scope of work for a site investigation of the MGP site by mid-September 2003. ENGI proposed a May 2005 date for submission of a Site Investigation Report for the MGP site on Gas Street to NHDES by way of a letter dated October 6, 2003. NHDES agreed to the proposed schedule in their response letter dated October 31, 2003.

ENGI submitted the work plan for the MGP site investigation to NHDES on May 20, 2004. NHDES accepted the work plan on June 16, 2004. The investigation took place between September 2004 and March 2005, and the Site Investigation Report was submitted to NHDES on June 6, 2005. The report indicated that subsurface impacts are present at the MGP, and additional investigation as well as limited remediation will

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

CONCORD FORMER MGP

LINE
NO.

be required. NHDES accepted the report on August 12, 2005, and requested ENGI submit a supplemental scope of work to complete the delineation of MGP-related impacts on and off Site. The document was submitted in November 2005. Site investigation activities at and downgradient of the MGP were conducted in 2006. ENGI submitted an additional supplemental scope of work to further delineate MGP impacts on May 31, 2007 and NHDES subsequently approved the scope on June 5, 2007. ENGI bid the NHDES-approved scope of work in June 2008 and awarded the contract in late July 2008. ENGI met with NHDES at the site in August 2008 to discuss the additional supplemental site investigation activities. The field work took place during October through December 2008, during which time 8 groundwater monitoring wells were installed at 4 off-site locations. The Additional Supplemental Site Investigation Report was submitted to NHDES in September 2009. ENGI met with NHDES to discuss the report findings and strategy for moving forward in October 2009. NHDES issued an approval letter for the Supplemental Site Investigation Report on February 9, 2010. The correspondence approved the report and requested that certain additional activities be completed by ENGI. These requested activities include the following: a) preparation and submission of an Initial Response Action Work Plan to remove approximately 3,500 gallons of liquid and sludge from historic subsurface drip pots and tar wells at the MGP property on Gas Street; b) evaluation of the groundwater conditions in the vicinity of the “Tar Pond” which is depicted on a referenced NHDOT site plan; and c) evaluation of potential indoor air impacts at select locations identified during the additional SSI work.

ENGI submitted the Initial Response Work Plan to NHDES in July 2010 to remove approximately 3,500 gallons of liquid and sludge from historic subsurface drip pots. NHDES issued an approval letter for this Work Plan on August 3, 2010 and the work was completed in June 2011. In addition, ENGI submitted a Supplemental Data Collection Work Plan for the additional off-ENGI-owned property investigation activities (items b and c above) to NHDES in August 2010. NHDES approved of the Work Plan on September 16, 2010. ENGI obtained access to 4 properties in the vicinity of the site in order to conduct the supplemental investigation activities, which included soil, ground water and soil vapor sampling, along with further investigation of the brick tar sewer. ENGI submitted a revised Work Plan with revised sampling locations to NHDES in November 2011; the revision was necessary because site access was not granted by the property owners for some of the originally proposed locations. The investigation work was completed in July 2012, and summarized in a Supplement Data Collection Report that was submitted in August 2013, in preparation for submittal of the Remedial Action Plan. This Supplement Data Collection Report was accepted by NHDES on October 24, 2013, and ENGI was authorized to prepare a RAP and Groundwater Management Permit (GMP) application. The GMP application was submitted on September 4, 2014, and the permit was received on December 1, 2014.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

CONCORD FORMER MGP

LINE
NO.

On June 16, 2013, wind during a thunderstorm caused a tree to fall on the northern side of the roof of the Holder House located on the former Concord MGP property. Damage to the slate roof and brick was sustained. In a letter dated February 24, 2014 NHDES stated that the holder structure "…serves as a physical barrier to prevent infiltration of precipitation into the foundation and thereby limits the amount of MGP byproducts that may be released to the environment." ENGI has evaluated damage to the roof and structure of the holder, and will be using this information to determine whether the holder will be restored or razed.

On March 31, 2015, ENGI submitted a proposed Remedial Action Plan involving removal of shallow soils displaying MGP-related residual impacts, investigation and remediation of remaining known subsurface structures, capping of components of the local storm water drainage system, site capping design, and continued monitoring of groundwater on the site. NHDES approved the RAP on May 29, 2015, with the condition that roof of the brick gas holder either be restored, or the holder be razed and the soils beneath it remediated. Soil vapor monitoring; soil vapor probe installation; and remedial design investigations including subsurface structure location and inspection, shallow tar-saturated soil delineation, and site storm drain system inspections, as approved by the RAP, were performed in December 2015. A Remedial Design Report (RDR) was submitted to NHDES on March 16, 2016 summarizing the above remedial design investigations. The remediation activities, required to be completed prior to site capping, include tar-impacted material removals and plugging of the on-site drain system, took place in 2017.

In early 2016 ENGI was approached by a commercial developer who was interested in purchasing the property and repurposing the holder house structure. Several site meetings and productive conversations took place with the developer. If the property is transferred, the purchaser's future use design would be taken into account when the final design of the engineered cap is being developed. This site developer has not contacted ENGI since the fall of 2017, and appears to have lost interest in the redevelopment project.

<u>Concord Pond</u>: ENGI has continued to monitor groundwater semi-annually at the Exit 13 pond, in May and November, as required by the Groundwater Management Zone Permit that was issued in 1999 as part of the overall remedy following the remediation of the southern end of the Exit 13 pond. The permit was renewed in 2003, 2007 and 2012, and NHDES specified semiannual collection of surface water samples from the pond as an additional condition of the permit.

When the Exit 13 pond was remediated in 1999, NHDES required that the northern portion remained untouched, allowing for storm water input to the pond, with the knowledge that some contamination remained and may require remediation in the

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

CONCORD FORMER MGP

LINE
NO.

future. In 2006, NHDES requested ENGI address the residual contamination in the pond, and in response, ENGI submitted an Interim Data Collection Report and Scope of Work in May 2006, which was approved in July 2006. This Scope of Work was implemented in 2006 and the results were to be used to prepare the Remedial Action Plan (RAP) which NHDES requested be submitted by August 31, 2006. In July 2006, NHDES extended the deadline for submittal of the RAP to June 30, 2007, to allow ENGI additional time for data collection and design. ENGI submitted an Interim Data Collection Report to NHDES in September 2006, and a Conceptual Remedial Design in March 2007. On March 25, 2009, ENGI submitted a Presumptive Remedy Approval Request to NHDES, in order to allow for the design and implementation of an engineered cap without the need to prepare a RAP. On May 4, 2009, NHDES granted the Presumptive Remedy Approval, and the project moved into the remedial design phase.

The proposed remedial work is to be performed on city-owned land and within a NHDOT right-of-way; therefore ENGI is working with these parties to come to agreement on the design features, negotiate access and clarify the responsibilities of the three parties. In April 2010, ENGI met with representatives from NHDES, the City of Concord, and NHDOT to present the proposed remedy, and ENGI submitted the draft design plans to the parties in June 2010. ENGI met with the regulatory permitting agencies in October 2010. The agencies requested that ENGI modify the remedial design to include an upland cap versus a wetland cap to minimize the impacts of the project. The cap was redesigned and ENGI met with the stakeholders in December 2010. At a subsequent meeting in January 2011, the City of Concord requested that the design be further modified to relocate the City's storm water outfall location.

ENGI met with the City in March 2011 to present the feasibility evaluation that was conducted for several alternatives, and concluded that the original design was the appropriate design. Contact was reconvened with the City in 2013, and adjustments to the original design were made to address outfall maintenance and access concerns of the City and NHDOT, respectively. The design was presented to the City on January 26, 2016. A rigorous schedule toward construction in late summer 2017 was agreed to by ENGI and the City in February 2016. The City did not meet an early deadline to determine and communicate details regarding access to their storm water system. Communication was again resumed in July 2016 by the City, however the City remained unresponsive to ENGI on implementation of the joint remedial design.

In March 2018, discussions with the new City Engineer took place and the City's engagement level has increased to come to a design solution on outfall maintenance. These discussions are frequent and ongoing.

Semiannual groundwater monitoring at the pond is ongoing, as is recovery of separate phase coal tar from a monitoring well in the vicinity of the pond. During 2017, NHDES required active hazardous waste sites managed by the NHDES Hazardous Waste

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

CONCORD FORMER MGP

LINE
NO.

Remediation Bureau to include Per- and Polyfluoroalkyl Substances (PFAS) in one of their sampling rounds.

During May 19, 2009 through May 22, 2009, ENGI implemented a NHDES-approved sediment sampling program in the Merrimack River to evaluate potential MGP-related impacts. ENGI met with NHDES in October 2009 to present the results of the sediment investigation, and submitted the sediment sampling data report to NHDES in October 2009. The investigation indicated limited site-related impacts to the shallow near-shore sediments of the Merrimack River. Based upon the results of the sediment investigation, it is unlikely that remedial actions will be necessary in the river. ENGI met with NHDES on February 20, 2013 to discuss all sampling activities to date, summarized in an SIR Addendum Report, submitted in June 2013.

In May 2016, ENGI submitted a proposed plan for monitoring the near-bank sediments to the pond area in the Merrimack River. After discussions regarding frequency, duration of the Monitored Natural Recovery (MNR) program, and methodologies to be used in determining the contaminant trending in the river sediment, NHDES approved a revised MNR Plan in a letter dated July 2017. The 5-year sampling plan began in 2017 with the first of 5 annual samplings.

5. NEW HAMPSHIRE SITE REMEDIATION PROGRAM PHASE:

Concord MGP: In July 2003, NHDES requested that ENGI submit a schedule and scope of work for completion of a site investigation of the MGP site. ENGI submitted the scope to NHDES in May 2004 and implemented the work between September 2004 and March 2005. The results of the investigation were documented in the Site Investigation Report, dated June 6, 2005, which was subsequently approved by NHDES. Supplemental investigation activities were performed in 2006. Additional investigation activities were performed in 2008. The additional SSI report was submitted to NHDES in September 2009. In addition, ENGI submitted the Initial Response Work Plan to NHDES in July 2010 to remove approximately 3,500 gallons of liquid and sludge from historic subsurface drip pots. NHDES issued an approval letter for this Work Plan on August 3, 2010 and the work was completed in June 2011. The Supplemental Data Collection report summarizing the investigation activities was accepted in October 2013, authorizing ENGI to prepare a RAP and GMP Application. The GMP application was submitted on September 4, 2014, and the permit was received on December 1, 2014. On March 31, 2015, ENGI submitted a proposed RAP, and NHDES approved the RAP with conditions. A Remedial Design Report, summarizing pre-design investigations, is to be provided to NHDES by the end of 2015.

Concord Pond: ENGI submitted an application for a five-year Groundwater Management Zone Permit to the NHDES in April 2002 for the Exit 13 pond. The permit

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

CONCORD FORMER MGP

LINE
NO.

was renewed in October 2007, with the collection of pond surface water samples as an additional condition. Under that permit, groundwater monitoring is expected to be required for the foreseeable future. In addition, as requested by NHDES, ENGI undertook a review of remedial technologies to address the residual contamination remaining in the pond. A conceptual remedial design was submitted to NHDES in March 2007, a Presumptive Remedy Approval was granted by NHDES in May 2009, and the engineered cap design has been drafted. The work will be undertaken pending agreement between the City, NHDOT and ENGI. ENGI met with these parties on several occasions in 2010 and 2011. The Company reinitiated discussion with the City in July 2014 regarding access to the site to implement the approved design of the wetland cap. The design was adjusted to accommodate the City's desire to simplify maintenance of the storm water system, however ENGI has received no response from the City after numerous attempts to begin the implementation

A renewal application for the Groundwater Management Permit was submitted on July 20, 2012, and the renewed permit was granted by NHDES on December 11, 2012. Groundwater and surface water monitoring continues under this permit every May and November.

6. HISTORY AND CURRENT STATUS OF USE AND OWNERSHIP: The Concord MGP operated from approximately 1850 to 1952, when the natural gas pipeline was extended to Concord. The plant was constructed and operated by predecessors of the Concord Gas Company, which later became known as the Concord Natural Gas Company. By virtue of a merger, ENGI acquired Concord Natural Gas. As has been reported previously by ENGI, it filed a contribution claim in the United States District Court for the District of New Hampshire against the successor to the United Gas Improvement Company. In that claim, ENGI alleged that under the federal Superfund statute, the United Gas Improvement Company exercised control over the operations of the Concord Gas Plant to the extent that the United Gas Improvement Company should be considered an "operator" under the statute. That matter was settled in 1997.

7. LISTING AND STATUS OF INSURANCE AND 3RD PARTY LAWSUITS AND SETTLEMENTS: Numerous confidential settlements with insurance carriers and with one private party have been entered into. *Insurance recovery efforts at the Concord Site are complete.*

Note: This summary is an overview only and is not intended to be a comprehensive recitation of all relevant information relating to the site and the associated liability.

* All gas transferred for storage contracts will be based on LDC's monthly WACOG
**All commodity volumes nominated will be invoiced at LDC's WACOG + fuel retention Demand charge applicable for 6 months

Note **All capacity will be released at maximum tariff rates. Above rates are maximum tariff rates effective 11/01/18. Because rates can change, please refer to the applicable pipeline tariff for current rates.**

Above capacity is for all customers in the EnergyNorth Service territory with the exception of Berlin, NH. Any customers behind the Berlin citygate will be allocated 100% PNGTS capacity at a demand rate of $18.2633 /dth.

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP.
d/b/a LIBERTY UTILITIES

2018/2019 Winter/Summer Cost of Gas Filing

Order Approving Cost of Gas Rates and Other Charges

O R D E R   N O. 26,188

November 1, 2018

APPEARANCES: Michael J. Sheehan, Esq., for Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities; the Office of the Consumer Advocate by D. Maurice Kreis, Esq., on behalf of residential ratepayers; Lynn Fabrizio, Esq., for the Staff of the Public Utilities Commission.

In this order, the Commission approves Liberty's proposed 2018/2019 winter and summer cost of gas rates. For residential customers, the initial rate for the winter period (November 1, 2018, through April 30, 2019) will be $0.7411 per therm and the fixed-price option rate will be $0.7611 per therm. The local delivery adjustment charge rate for residential customers will be $0.0660 per therm from November 1, 2018, through October 31, 2019. The initial cost of gas rate for residential customers during the summer period (May 1through October 31, 2019) will be $0.4445 per therm. For the six months beginning November 1, a typical residential customer will see an average monthly bill of about $159 compared to $151 for last winter, and for the six months beginning May 1, 2019, an average monthly bill of $40 compared to $39 in summer 2018.

I. PROCEDURAL HISTORY

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities (Liberty or the Company) is a public utility that distributes natural gas to approximately 90,000 customers in southern and central New Hampshire and in the City of Berlin. On September 4, 2018, Liberty submitted a tariff filing for the 2018/2019 winter and summer periods that proposed adjustments to its cost of gas (COG) rates. The filing, which included direct testimony and supporting schedules, proposed changes to COG rates for firm sales customers, fixed winter COG rates under the fixed-price option (FPO), firm transportation COG rates, and local delivery adjustment charge (LDAC) rates.

On September 11, 2018, the Office of the Consumer Advocate (the OCA) notified the Commission of its participation on behalf of residential ratepayers pursuant to RSA 363:28. The Commission issued an Order of Notice on September 12, 2018. Commission Staff and the OCA conducted discovery and held a technical session with Liberty on October 8. There were no intervenors.

The Company filed a technical statement on October 5, 2018, followed by an amended technical statement on October 9, informing the Commission that "the low income portion of the energy efficiency budget was included in the residential program budget and was also included as an allocation between both residential and commercial & industrial (C&I) LDAC rates." Hearing Exhibit (Exh.) 3 at 1. The Company further stated that although the company has "followed the same process since the winter of 2014/2015, residential customers were only impacted during the winter of 2014/2015 due to the running balance of the over/under collection. Post winter 2014/2015 the additional low income costs included in the residential EE rate were substantially offset by the prior year over-collection." *Id.* Liberty noted the over-collected balance totaled $1,310,342, which was ultimately reflected within the overall LDAC rates rather than the COG rates. In its amended technical statement, Liberty proposed to use this overcollection to reduce the residential LDAC rate by \$0.0163 per therm to a new proposed rate of \$0.0673 per therm.

On October 30, the Company moved to reopen the record in order to update Exhibits 4, 6, 8, and 9. The Commission admitted the updated exhibits by Secretarial Letter on October 31. The updated exhibits correct an error in the RLIAP rate calculation. The correction reduced the proposed residential LDAC rate further to \$0.0660 per therm, and lowered the C&I LDAC rate from \$0.0772 per therm to \$0.0757 per therm.

Liberty's filing and subsequent docket entries, other than any information for which confidential treatment is requested of or granted by the Commission, are posted on the Commission's website at http://www.puc.nh.gov/Regulatory/Docketbk/2018/18-137.html.

II. COST OF GAS ADJUSTMENT MECHANISM

The COG adjustment mechanism was implemented in 1974 during a time of rapidly changing prices as a way to pass on to consumers increases and decreases in energy supply costs quickly, without having to go through extended proceedings to change delivery rates. Supply costs make up approximately half of a residential heating customer's annual bill and include commodity prices (the cost of gas), the cost to transport the gas over the pipelines, and storage costs. Liberty has little control over the price of natural gas, which is an unregulated commodity. Similarly, it has little price control over pipeline transportation rates, which are set by the Federal Energy Regulatory Commission. The COG adjustment mechanism allows the Company to pass fuel supply costs on to its customers directly and efficiently without mark-up or profit. COG rates are initially set using projected costs and sales for the upcoming winter and summer periods. Through the COG adjustment mechanism, the Company may adjust its COG rates monthly to take into account changes in the natural gas market based on actual costs to date and projected costs for the remainder of the period.

In COG proceedings, the Commission also sets the LDAC rates that allow for recovery of expenses the Commission has approved in prior dockets through a per therm surcharge to be determined and implemented in the COG proceeding. In this proceeding, those expenses include costs associated with Liberty's low-income and energy efficiency programs, an environmental surcharge for manufactured gas plant remediation, and the energy efficiency resource standard lost revenue adjustment mechanism (LRAM). The LRAM is included in the LDAC in accordance with *Energy Efficiency Resource Standard*, Order No. 25,932 (August 2, 2016), which approved the implementation of a mechanism to recover lost revenue due to the installation of energy efficiency measures.

III. POSITIONS OF THE PARTIES AND STAFF

A. Liberty

In its initial filing of September 4, Liberty proposed several rates for approval, including: winter and summer COG rates for various rate classes; annual LDAC rates for various rate classes; a fixed price option (FPO) COG rate for residential customers; and a firm transportation COG rate. Exh. 1 at 47-49, 52.

At the October 22 hearing, Liberty entered several updated exhibits primarily affecting the LDAC. The first was an updated calculation of the Rate Case Expense & Recoupment Rate (Recoupment Rate) portion of the LDAC. Exh. 5. The updated calculation indicated that the Company believes the new Recoupment Rate should decrease from the filed rate of $0.0105 per therm (Exh. 1 at 54) to the new rate of $0.0079 per therm. Liberty also entered, as Exhibit 6, an updated calculation for the Residential Low Income Assistance Program (RLIAP). The calculation added a "test year adjustment to Base Rates" of $1,820,418 to the recovery amount but did not reduce the "First Block" or "Last Block" R-3 Delivery Charge which decreased from the filed amount of $0.5631 to the updated amount of $0.5502. Exh. 7 and Updated Exh. 8.[1] The Company included an updated Energy Efficiency Charge (EEC) of $0.0287 (Updated Exh. 4) down from the filed EEC of $0.0450 for residential customers,[2] but included no further information concerning the decrease. On October 30, 2018, Liberty filed an Updated Exh. 6, which corrected the RLIAP rate calculation, along with revised schedules affected by the correction. (Updated Exh. 4, 8, and 9).

As revised, Liberty's proposed winter COG per therm rates for the various rate classes are: $0.7411 for residential, with $0.7611 for the fixed price option; $0.7403 for commercial and industrial (C&I) high winter use; and $0.7456 for C&I low winter use. Updated Exh. 8. Liberty proposed initial summer COG per therm rates of $0.4445 for residential, $0.4417 for C&I high winter use, and $0.4506 for C&I low winter use customers. *Id*. The Company also proposed an LDAC rate of $0.0660 per therm for residential customers from November 1, 2018, through October 31, 2019, and $0.0757 per therm for C&I customers for the same period. *Id*.

The following tables include the expected total bill impact based on the prior winter's and summer's average use of each customer class. Updated Exh. 9.

---

[1] The updated RLIAP rate calculation for the R-3 first block base rate (Exhibit 6, lines 2 and 10) is $0.5631 per therm, whereas the R-3 first block base rate approved in DG 17-048 and in Updated Exhibit 8 (Residential Heating – R-3) is $0.5502 per therm. Correcting the error reduces the $2.4 million program costs by $50,000; that correction will be included in the RLIAP reconciliation and reflected in next year's RLIAP rate.

[2] By approving the reduced EE component of the LDAC, the Commission is making no judgment on issues raised in the 2018-2020 New Hampshire Statewide Energy Efficiency Plan Update, filed September 14, 2018, in Docket No. DE 17-136.

Winter 2018-2019 Projected Bill Impacts

Class	2017/2018 (Actual)	2018/2019 (Projected)	Percent Change
R-3 Residential Heating	$ 905	$ 953	5%
G-42 C&I High Winter Use	$17,859	$18,438	3%
G-52 C&I Low Winter Use	$12,250	$12,594	3%

Summer 2019 Projected Bill Impacts

Class	2018 (Actual)	2019 (Projected)	Percent Change
R-3 Residential Heating	$ 232	$ 241	4%
G-42 C&I High Winter Use	$3,324	$3,642	10%
G-52 C&I Low Winter Use	$5,119	$5,605	10%

A typical residential heating customer will see an average monthly bill of about $159 per month in winter 2018/2019 compared to $151 for winter 2017/2018, and an average monthly bill of $40 in the 2019 summer period compared to $39 in the 2018 summer period. *Id.*

The Company also proposed: (1) a supplier balancing charge of $0.19 per MMBtu of daily imbalances; (2) a transportation peaking service demand charge of $20.41 per MMBtu of peak maximum daily quantity; (3) a gas allowance factor of 1.8 percent; (4) a transportation capacity allocator; (5) short-term debt limits of $19,222,230 for fuel financing, and $94,878,262 for non-fuel financing for the November 1, 2018, through October 31, 2019 period.

B. Staff

At the hearing, Staff expressed support for approval of the 2018/2019 COG and LDAC rates as amended by the technical statement filed on October 9 and as revised by the exhibits presented at the October 22 hearing.

C. OCA

The OCA stated that the proposed rate changes reflected in the Company's filing and technical statement are just and reasonable, and recommended that those changes be approved. The OCA also noted that any effort on the Company's part to make its tariffs clearer and more comprehensible would be helpful.

IV. COMMISSION ANALYSIS

The Commission has broad statutory authority to set rates in addition to "powers inherent within its broad grant" of express authority. *See Appeal of Verizon New England, Inc.*, 153 N.H. 50, 64-65 (2005) (citations omitted). The Commission applies the "just and reasonable" ratemaking standard of RSA 374:2 and RSA 378:7 when setting COG rates. Based on our review of the record in this docket, we approve the proposed, revised 2018/2019 winter and 2019 summer COG rates presented in Updated Exhibits 4 and 9 as just and reasonable. We also approve Liberty's LDAC rates as presented in Updated Exhibit 4. Since actual costs and revenues are reconciled every year, any adjustments needed as a result of further inquiry into the matters addressed in this order, including the correction to the RLIAP calculation, can be made in Liberty's COG filing for 2019/2020.

Pursuant to *EnergyNorth Natural Gas, Inc. d/b/a National Grid NH*, Order No. 24,963 (April 30, 2009), the approved non-FPO rates may be adjusted downward so far as needed and upward by no more than 25 percent, without further Commission action. *See also Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities*, Order No. 25,958 (October 26, 2016). By approving the corrected rates in Updated Exhibit 9 at the beginning of the period, the 25 percent upward limit has an appropriate starting point.

Based upon the foregoing, it is hereby

ORDERED, that Liberty's 2018/2019 winter period COG per therm rates effective for service rendered on or after November 1, 2018, and Liberty's 2019 summer season per therm rates effective May 1, 2019, are approved as set forth in this Order, as follows:

Customer Class	2018-2019 Winter COG	2018-2019 Winter Maximum COG	2018-2019 Winter FPO	2019 Summer COG	2019 Summer Maximum COG
Residential	$0.7411	$0.9264	$0.7611	$0.4445	$0.5556
C&I High Winter Use	$0.7403	$0.9254		$0.4417	$0.5521
C&I Low Winter Use	$0.7456	$0.9320		$0.4506	$0.5633

and it is

FURTHER ORDERED, that Liberty may, without further Commission action, adjust the COG rates based on the projected over- or under-collection for the period, the adjusted rate to be effective the first day of the month and not to exceed, cumulatively, a maximum rate of 25 percent above the approved rate with no limitation on reductions to the COG rates; and it is

FURTHER ORDERED, that Liberty shall provide the Commission with its monthly calculation of the projected over- or under-collection, along with the resulting revised COG rates for the subsequent month, not less than five business days prior to the first day of the subsequent month. Liberty shall include revised Calculation of the Firm Sales Cost of Gas Rate tariff pages and revised rate schedules under separate cover letter if Liberty elects to adjust COG rates, with revised tariff pages to be filed as required by N.H. Code Admin. Rules Puc 1603; and it is

FURTHER ORDERED, that the over- or under-collection shall accrue interest at the prime rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates, the rate to be adjusted monthly; and it is

FURTHER ORDERED, that Liberty's proposed LDAC per therm rates for the period November 1, 2018, through October 31, 2019, effective for service rendered on or after November 1, 2018, are $0.0660 and $0.0757 for residential and C&I customers, respectively; and it is

FURTHER ORDERED, that Liberty's proposed firm transportation winter COG rate of $0.0005 per therm for the period November 1, 2018, through April 30, 2019, is approved; and it is

FURTHER ORDERED, that Liberty's proposed supplier balancing charge of $0.19 per MMBtu of daily imbalance volumes is approved; and it is

FURTHER ORDERED, that Liberty's proposed transportation peaking service demand charge of $20.41 per MMBtu of peak maximum daily quantity is approved; and it is

FURTHER ORDERED, that Liberty's company gas allowance factor of 1.8 percent is approved; and it is

FURTHER ORDERED, that Liberty's proposed transportation capacity allocators as filed in proposed First Revised Page 148, Superseding Original Page 148 are approved; and it is

FURTHER ORDERED, that Liberty's proposed short-term debt limits of $19,222,230 for fuel financing and $94,878,262 for non-fuel financing for the period November 1, 2018, through October 31, 2019, are approved; and it is

FURTHER ORDERED, that Liberty shall promptly file properly annotated tariff pages in compliance with this order no later than 15 days from the issuance date of this order, as required by N.H. Code Admin. Rules Puc 1603; and it is

FURTHER ORDERED, that Liberty shall file its proposed notice of rate change to customers with the Director of the Consumer Services and External Affairs Division, prior to delivery to its customers.

By order of the Public Utilities Commission of New Hampshire this first day of November, 2018.

Docket No. DG 17-048

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities
Distribution Service Rate Case

DIRECT TESTIMONY

OF

DAVID B. SIMEK

April 28, 2017

THIS PAGE INTENTIONALLY LEFT BLANK

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your full name and business address.

A. My name is David B. Simek. My business address is 15 Buttrick Road, Londonderry, New Hampshire.

Q. Please state by whom you are employed and your position?

A. I am a Lead Utility Analyst for Liberty Utilities Service Corp. ("Liberty") which provides service to Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities ("EnergyNorth" or the "Company"). I am responsible for providing rate-related services for the Company.

Q. Please describe your educational background and training.

A. My educational background and qualifications are set forth in the prefiled joint testimony filed with Daniel S. Dane in support of EnergyNorth's request for a permanent increase on distribution rates.

II. PURPOSE AND OVERVIEW OF TESTIMONY

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to explain the Company's changes to its tariff as a result of this distribution rate case filing.

Q. Please describe the changes that were made.

A. Attachment DBS-TARIFF-1 contains a clean version of the proposed tariff while Attachment DBS-TARIFF-2 contains a redlined version. The following substantive changes were made to the tariff:

- the distribution rates were modified to incorporate the proposed rates contained in Attachment RATES-7 of the Simek-Therrien rate design testimony;
- the Towns of Pelham and Windham and the City of Keene were added to the Service Area of the tariff;
- a Revenue Decoupling Mechanism was added; and
- the Lost Revenue Adjustment Mechanism (LRAM) was deleted.

The last change is being made because upon implementation of the Revenue Decoupling Mechanism, there will no longer be a need for a LRAM, since the decoupling mechanism will account for changes in sales volume due to energy efficiency measures.

The Company has also made housekeeping changes to the tariff which include correcting spelling and grammatical errors, page re-numbering and formatting, header and footer formatting, and margin corrections.

Q. Have all changes made to the EnergyNorth tariff been redlined in Attachment DBS-TARIFF-2?

A. No, only substantive changes were redlined. In order to facilitate review, the housekeeping changes mentioned above were not redlined, because redlining such changes would produce a document that would have so many changes on each page, it would be unwieldy.

Q. Has the Company added the Keene Division to the EnergyNorth tariff?

A. Yes, the Keene Division has been added to the EnergyNorth tariff. All EnergyNorth distribution rates and charges including those contained in the local distribution adjustment clause (LDAC) will now be applicable to Keene customers. The Company is proposing that a separately calculated cost of gas rate continue to apply to Keene customers. Therefore, we have included a cost of gas provision for Keene customers in the tariff.

Q. Will Keene commercial customers still have the Fixed Priced Option to choose as their Winter Cost of Gas rate?

A. Yes. The Company is not proposing to change any part of Keene's current cost of gas procedures.

Q. What will happen to the existing Keene tariff?

A. The existing Keene tariff will no longer be valid once permanent rates become effective following a Commission order in this docket.

Q. Under the Delivery Terms and Conditions section of the EnergyNorth tariff is a section for a Supplier Service Agreement. Is a copy of the Agreement provided in the tariff?

A. Yes. A copy of the Supplier Service Agreement is included with this filing to rectify the current condition that although the current tariff includes references to the Supplier Service Agreement, a copy of that agreement was not previously included.

Q. Does this conclude your testimony?

A. Yes, it does.

GAS AND ELECTRIC UTILITIES

Energy Efficiency Resource Standard

Order Approving Settlement Agreement

O R D E R N O. 25,932

August 2, 2016

APPEARANCES: Matthew J. Fossum, Esq., for Public Service Company of New Hampshire d/b/a Eversource Energy; Susan S. Geiger, Esq., of Orr & Reno, P.A., for Northern Utilities, Inc., and Unitil Energy Systems, Inc.; Michael J. Sheehan, Esq., for Liberty Utilities Corp. (Granite State Electric) d/b/a Liberty Utilities, Inc., and for Liberty Utilities Corp. (EnergyNorth Natural Gas) d/b/a Liberty Utilities; Mark W. Dean, Esq., for New Hampshire Electric Cooperative; Dennis Labbe, Esq., of the New Hampshire Legal Assistance, for The Way Home; Ryan Clouthier for the New Hampshire Community Action Agencies' Southern New Hampshire Services, Inc., and the Belknap-Merrimack Counties, Inc.; Melissa Birchard, Esq., for Conservation Law Foundation NH; Laura Richardson for The Jordan Institute; Kate Epsen for the NH Sustainable Energy Association; Joseph Harrison for the Community Development Finance Association; Ellen Hawes for the Acadia Center; Tom Rooney for TRC Energy Services; Rep. Robert Backus, *pro se*; Meredith A. Hatfield, Esq., for the New Hampshire Office of Energy and Planning; Rebecca Ohler for the New Hampshire Department of Environmental Services; Donald M. Kreis, Esq., of the Office of the Consumer Advocate, on behalf of residential ratepayers; and Rorie E. Patterson, Esq., for Staff of the New Hampshire Public Utilities Commission.

In this order, the Commission approves a Settlement Agreement supported by all parties, extending the 2014-2016 Core program an additional year (through 2017) and establishing an Energy Efficiency Resource Standard (EERS). The EERS is a framework within which the Commission's energy efficiency programs shall be implemented, and the effective date for implementation is January 1, 2018. The framework consists of three-year planning periods and savings goals as well as a long-term goal of achieving all cost-effective energy efficiency. The electric and gas utilities will be administrators of the EERS programs to achieve specific statewide savings goals for the 2017 Core program and for the first three-year period of the EERS. Specific programs will be subject to Commission approval and such approval will require a demonstration that they are cost effective in subsequent proceedings before the Commission. This order also establishes a recovery mechanism to compensate the utilities for lost-revenue related to the EERS programs, and approves the performance incentives and the processes described in the Settlement Agreement for stakeholder involvement, evaluation, measurement and verification, and our oversight of the EERS programs.

I. BACKGROUND

On May 8, 2015, the Commission opened this proceeding to establish an Energy Efficiency Resource Standard. An EERS is a policy that sets specific targets or goals for energy savings, which utility companies serving New Hampshire ratepayers must meet. The Commission indicated that the EERS would include long- and short-term, energy-type-specific savings goals based on sales volumes for 2014. In addition, the Commission defined the scope of the proceeding to include consideration of funding requirements, program-cost recovery, lost-revenue recovery, performance-based incentives, program administration, evaluation, measurement, and verification (EM&V), and ways to transition from the existing energy efficiency paradigm to the EERS. The Order of Notice and subsequent docket filings, other than any information for which confidential treatment is requested of or granted by the Commission, are posted on the Commission's website at: http://puc.nh.gov/Regulatory/Docketbk/2015/15-137.html.

Until now, the Commission has implemented energy efficiency primarily through the Core programs, which has evolved in the last 15 years into a statewide system used by electric and natural gas utilities to deliver energy efficiency products and services to their customers or members.[1] Since 2001, the Systems Benefits Charge funding for Commission-regulated energy efficiency has remained at $0.0018 per kWh level. The programs have been designed to deliver as much energy efficiency savings as possible within the bounds of that funding, plus additional funding in recent years from the Regional Greenhouse Gas Initiative (RGGI) and the Independent System Operator-New England's (ISO-NE) Forward Capacity Market (FCM). Establishing an EERS presents an opportunity to set savings goals based on savings potential in addition to consideration of the funding level.

Several New Hampshire specific studies of energy efficiency potential have been conducted in the last decade, and all suggested that additional opportunities for cost-effective energy efficiency exist beyond those attained through the Core program.[2] In September 2014, the Governor's Office of Energy and Planning released a 10-year State Energy Strategy, which recognized the need for an EERS:

> In order to reduce energy costs by implementing more cost-effective efficiency programs, the State must set specific efficiency goals and metrics to measure progress. The Public Utilities Commission should open a proceeding that directs the utilities, in collaboration with other interested parties, to develop efficiency savings goals based on the efficiency potential of the State, aimed at achieving all cost effective efficiency over a reasonable time frame.

2014 New Hampshire State Energy Strategy, Executive Summary at ii.

On February 3, 2015, Commission Staff filed a report entitled "Energy Efficiency Resource Standard: A Straw Proposal for New Hampshire." Staff's report concluded a

---

[1] All of the New Hampshire electric and gas utilities except the New Hampshire Electric Cooperative (NHEC) have customers. NHEC supplies electricity to its members. Subsequent references herein to customers shall include NHEC members unless otherwise stated.
[2] *Additional Opportunities for Energy Efficiency in New Hampshire, Final Report* (January 2009), prepared for the Commission by GDS Associates Inc. (GDS), RLW Analytics, and Research Into Action; *Independent Study of Energy Policy Issues* (2011), prepared for the Commission by Vermont Energy Investment Corporation (VEIC); and *Increasing Energy Efficiency in New Hampshire: Realizing Our Potential* (November 2013), prepared by VEIC, GDS, and Jeffrey H. Taylor & Associates.

months-long endeavor to solicit and capture feedback on establishing an EERS. Staff's report included information about other jurisdictions, input from New Hampshire efficiency stakeholders, questions for additional consideration, and a series of preliminary recommendations.

On March 13, 2015, the Commission opened an investigative docket, IR 15-072, to receive written comments on several threshold recommendations within Staff's report. Written comments were submitted by numerous stakeholders including all of the electric and gas utilities (Joint Utilities),[3] the Office of the Consumer Advocate (OCA), the Governor's Office of Energy and Planning (OEP), and the Department of Environmental Services (DES). The comments reflected unanimous support for the Commission's establishment of an EERS at that time, under existing statutory authority, to advance a policy of energy efficiency as a least-cost supply resource for customers of the Joint Utilities. Some support for an EERS, however, was qualified by requests to consider the universe of EERS issues, and to engage expert assistance at the time of its development. Based on those comments and the recommendations contained in Staff's Straw Proposal report, the Commission opened this proceeding to establish an EERS and to examine the issues related to a successful launch of this important and timely policy.

II. PROCEDURAL HISTORY

The Commission named the Joint Utilities as mandatory parties, and received appearances from each. In addition, the OCA notified the Commission of its participation by statutory right on behalf of residential ratepayers. RSA 363:28, II.

---

[3] Liberty Utilities Corp. (Granite State Electric) d/b/a Liberty Utilities (Liberty) and Liberty Utilities Corp. (EnergyNorth Natural Gas) d/b/a Liberty Utilities (jointly, Liberty); Unitil Energy Systems, Inc., and Northern Utilities, Inc. (jointly, UES); Public Service Company of New Hampshire d/b/a Eversource Energy (Eversource); and NHEC. Although the order refers to NHEC as one of the Joint Utilities, we recognize that our jurisdiction over NHEC is limited by law. RSA 362:2.

Petitions to intervene were filed by DES; OEP; Conservation Law Foundation (CLF); New Hampshire Community Action Agencies' Southern New Hampshire Services, Inc., and Belknap-Merrimack Counties, Inc.(CAA); The Jordan Institute (Jordan); The Way Home (TWH); New Hampshire Sustainable Energy Association (NHSEA); the New Hampshire Community Development Finance Authority (CDFA); the New England Clean Energy Council (NECEC); TRC Energy Services (TRC); the Acadia Center (Acadia); Representative Robert A. Backus, *pro se*; Henry Herndon, *pro se*; and MCR Performance Solutions, LLC (MCR). The Commission denied Mr. Herndon's and MCR's intervention since neither party has any "rights, duties, privileges, immunities or other substantial interests that may be affected by the proceeding," and both could participate without being made a party since they have access to docketed materials on the Commission's website and may make comments at hearing or in writing pursuant to N.H. Code of Admin. Rules Puc 202.06.

The Commission held a prehearing conference on June 3, 2015, and, afterwards, the parties met in a technical session to develop a proposed procedural schedule and determine other procedural requirements for managing the docket. On June 10, 2015, Staff filed a report of the technical session and a request, on behalf of the parties, for additional time to develop the procedural schedule, which the Commission approved. The Parties and Staff met again on June 29, 2015, to develop a procedural schedule, which included multiple technical sessions each focused on a specific topic or issue identified by the Commission in its Order. The well-attended technical sessions featured presentations from the Joint Utilities as well as New England regional experts. The presentations included information about how other New England states have structured and administered their EERS programs and the Joint Utilities' experience with those programs.

Following the technical sessions, NHSEA along with CLF, Jordan, and NECEC (collectively, the Sustainable Energy Group)[4], Staff, and the Joint Utilities filed EERS proposals supported by testimony. Also, TRC and Acadia filed comments at that time. After those filings, a period of discovery occurred, and responsive testimony was filed by the OCA, the Sustainable Energy Group, and the Joint Utilities. Also, the Acadia Center and TWH filed reply comments.

Settlement negotiations followed, and, on April 27, 2016, a Settlement Agreement was filed by Staff on behalf of all parties except Rep. Backus. A hearing on the Settlement Agreement took place on May 2, 2016. At that hearing, the Settling Parties spoke strongly in favor of approving the agreement, and Rep. Backus supported those positions.

III. ORIGINAL AND SETTLEMENT POSITIONS OF THE PARTIES

The full EERS proposals and comments covered topics studied by the parties in the technical sessions as well as others, including: program administration; savings targets; funding; cost recovery; recovery of lost revenue; performance incentives; stakeholder involvement; evaluation, measurement and verification (EM&V); regulatory process; and implementation date. The parties included energy efficiency stakeholders who have participated for years in the Commission's programs and represented a broad spectrum of interests. The filings unanimously supported the creation of an EERS and featured many commonalities. Differences between the parties' original positions related primarily to the recommended savings targets, lost-revenue recovery, and the implementation date. The Settlement Agreement resolved all issues as described below.

[4] The Nature Conservancy join in this filing but was not a party to this proceeding.

A. Guiding Principles

1. Staff

Staff described several principles that should guide the EERS development. According to Staff, the EERS should build on the Commission's existing energy efficiency policy and experience with the Core programs. The EERS should respond to the recommendations in the 10-year State Energy Strategy and should be consistent with State law and industry best practices. Also, the EERS should include challenging but achievable statewide savings targets that are consistent with targets in other jurisdictions and the targets suggested in New Hampshire specific studies.

2. Joint Utilities

The guiding principles recommended by the Joint Utilities included establishing savings targets with a long-term goal of all achievable cost-effective energy efficiency within the context of available, sustainable funding; using at least a three-year, short-term planning period; considering rate impacts on customers in setting short-term goals; focusing primarily on comprehensive electric and gas programs with secondary focus on fuel neutral programs; continuing joint coordination of programs by the electric and gas utilities; driving innovation in technology, outreach, and regulation to accelerate energy efficiency gains; leveraging the private financing market; and increasing public awareness of the benefits of energy efficiency. According to the Joint Utilities, those guiding principles are consistent with the Commission's existing energy efficiency policy, which supports the award-winning, innovative, Core programs that have had a significant, positive impact on utility customers across the state. The Joint Utilities' support the creation of an EERS, because they believe an EERS will also provide significant benefits for New Hampshire utility customers.

3. The Way Home

TWH supported the guiding principle espoused by the Joint Utilities that energy efficiency programs be available to all customers, including low-income residential customers. TWH defined low income as at or below 200 percent of the federal poverty guidelines.[5] According to TWH, approximately 20 percent of New Hampshire residents are considered low income by this standard.

B. Program Administration

1. Staff

Staff discussed the use of independent third-party administrators in other jurisdictions and noted the benefits of such a structure. Staff observed, however, that the Joint Utilities have effectively administered the Core programs. Consequently, Staff recommended that the Joint Utilities administer the EERS programs at this time.

2. Joint Utilities

The Joint Utilities recommend that they administer the EERS programs based on their years of successful experience as administrator of the Core programs and their commitment to energy efficiency's success. According to the Joint Utilities, they have the knowledge, infrastructure, and relationships in place to scale up and transition the Core programs quickly to EERS programs. In support, the Joint Utilities noted their deep understanding of customer usage, their established and widespread vendor networks, their access to expertise from other jurisdictions, and the findings of several studies that customers consider utilities as trusted advisors on energy efficiency. The Joint Utilities also provided recent examples of their ability to scale up Core programs quickly and effectively beyond planned program budgets.

[5] For a household of one, 200 percent of the federal poverty guidelines is $23,450 in annual income. For a household of two, low-income eligibility is capped at a total household annual income of $31,860.

3. Sustainable Energy Group

The Sustainable Energy Group opined that the Joint Utilities are capable of serving as administrator of the EERS programs. Nonetheless, the Sustainable Energy Group recommended that the Commission consider the benefits of transitioning over time some or all of program delivery to a non-utility statewide program administrator. Competitively bidding out the entire portfolio or individual pieces of the EERS may maximize private funding and deliver savings in a manner that allows for all potential administrators, utilities, and third parties alike, to offer comprehensive, least-cost savings. According to the Sustainable Energy Group, important conditions for successful administration include the right incentives, oversight, underlying procurement and resource acquisition policies, clarity of the purpose for pursuing efficiency, consistency of policy over time, and consensus among stakeholders.

4. TRC

TRC recommended programs that leverage consumer engagement efforts from multiple sources including the Joint Utilities and third-party administrators.

5. The Way Home

TWH supported the Joint Utilities' administration of EERS programs, at least in the short term. According to TWH, with appropriate performance incentives, rate structures, and program oversight in place, the Joint Utilities should have the incentive and initiative to continue implementing robust energy efficiency programs effectively, to the mutual benefit of ratepayers, shareholders, and the natural environment of the state.

6. Settlement Agreement

The Settlement Agreement provides for the Joint Utilities' administration of the EERS programs, at least for the first three years. In addition, the Settling Parties recommend that no changes to the Joint Utilities' administrative role may be proposed prior to January 1, 2020, or be effective prior to January 1, 2021.

C. Savings Targets and Planning Periods

1. Staff

Staff proposed two sets of statewide, three-year, short-term savings targets and ten-year, "notional" long-term targets, referred to as Plan A and Plan B. Staff's targets, as well as all other parties' target recommendations, were expressed as a percent of actual 2014 kilowatt-hour (kWh) or one million British thermal units (MMBtu) sales. Staff noted that its annual year-over-year targets for gas savings were lower than its annual year-over-year electric savings targets, because the gas utilities have reached a higher level of savings historically relative to 2014 actual MMBtu usage.

Staff's Plan A sets the initial short-term cumulative targets at 1.82 percent for electric savings and 2.14 percent for gas savings over a three-year period. Both of the Plan A short-term targets are higher than current Core savings targets but lower than Plan B levels. Plan B's initial three-year cumulative targets are 2.04 percent for electric and 2.39 percent for gas. Staff estimated that using Plan B's short-term savings targets would result in cumulative kWh savings of approximately 220 million kWh by the end of the first three-year period, and lifetime kWh savings of approximately 3.1 billion kWh.[6] Staff's ten-year long-term targets for Plan A were 9.74 percent for electric and 10.20 percent for gas. Staff's long-term targets for Plan B were 14.48 percent for electric and 13.96 percent for gas. Staff referred to its long-term target as a "guidepost" and recommended that it be refined during the first three-year period of the EERS.

---

[6] Based on average life of 14.3 years – *i.e.*, cumulative kWh savings of 220 million kWh x 14.3 years average life = lifetime kWh savings of 3.146 billion kWh.

Staff asserted that both Plan A and Plan B targets are consistent with the Commission's energy efficiency policies; the State's 10-Year Energy Strategy; RSA 378:37, as well as a recent change in the Least Cost Integrated Resource Planning (IRP) law; and RSA 378:38, which requires utilities to maximize the use of cost-effective energy efficiency. Staff also stated that it developed its proposed savings targets to meet the criteria for an EERS as established by the American Council for an Energy-Efficient Economy (ACEEE), including creating a framework that promotes market stability. Further, according to Staff, its savings target recommendations are comparable to savings targets in other New England states and numerous Midwestern states, as well as to the potential savings identified in New Hampshire specific studies conducted during the last decade. Describing them as reasonable and achievable, Staff recommended the Commission's adoption of Plan B savings targets.

2. Joint Utilities

Similar to Staff, the Joint Utilities recommended a framework that includes short-term planning periods of at least three years. According to the Joint Utilities, transitioning from the Core's two-year planning period to a three-year planning period will provide more stability and continuity in program delivery, which will assist customers and other stakeholders in planning and investment decisions. The Joint Utilities contended that three-year periods would allow flexibility to adjust specific savings targets in response to changes in market conditions and to New Hampshire specific information such as results from evaluation and technical potential studies. A three-year planning period is also consistent with the EERS planning periods used in neighboring states and with the ACEEE's definition of an EERS.

Under the Joint Utilities' framework, the Commission would set annual kWh and MMBtu sales reduction targets, customized for each utility to account for different market conditions and opportunities in different service territories and for different classes of customers. The Joint Utilities cautioned against setting targets based solely on aligning New Hampshire with neighboring jurisdictions. According to the Joint Utilities, savings targets should come from demonstrated savings potential in New Hampshire, although little weight should be given to prior studies, which are outdated at this point. The Joint Utilities recommended that savings goals should only apply to regulated fuels, but savings related to unregulated fuels should be identified and tracked so that associated benefits are captured and reported. The costs to achieve the savings targets should be fully funded and, in setting the targets, the Commission should be mindful of the impacts of such funding on customers. Citing the ACEEE, the Joint Utilities argued that the EERS long-term goal should be all achievable cost-effective energy efficiency.

3. Sustainable Energy Group

The Sustainable Energy Group recommended setting explicit quantitative short-term goals, preferably expressed as a cumulative goal over a three-year term as well as measured reductions in peak demand. Short-term targets, stated the Sustainable Energy Group, allow for greater flexibility and consideration of emerging and changing technology. Specifically, the Sustainable Energy Group recommended as reasonable and achievable, cumulative short-term goals of 3.1 percent for electric savings and 2.25 percent for gas energy savings for the 2017-2019 period.[7] The Sustainable Energy Group also recommended nominal interim annual targets of 0.8 percent, 1.0 percent, and 1.3 percent for electric savings and 0.7 percent, 0.75 percent, and

[7] The Sustainable Energy Group noted that their recommended targets are based on net savings (*i.e.*, not including "free rider" participants and including "spill over" participants) and do not include savings from updated codes and standards, self-direct customers, and before-the-meter projects. A "free rider" participant is one whose savings is counted in the program but who would have made the efficiency investment even in the absence of the program. A "spill over" participant is one who made efficiency investments but who did not participate in the program and was therefore not counted. Should gross or other savings be counted, the Group recommended that the Commission set even higher savings targets.

0.8 percent for gas savings. The Sustainable Energy Group described their recommended targets as well below actual achievement and near-term goals in most New England states.

According to the Sustainable Energy Group, longer-term goals may also be appropriate and are valuable, both as aspirational metrics and to express a commitment to efficiency in the future. The changing landscape of energy and efficiency, however, suggests that these may be best expressed in qualitative terms, such as all cost-effective energy efficiency. The Sustainable Energy Group opined that such a qualitative long-term goal can be quantified based on periodic revising of what is cost-effective given conditions at the time. A goal of all cost-effective energy efficiency, the Sustainable Energy Group stated, is consistent with New Hampshire's 10-year State Energy Strategy, RSA 378:37, and the Commission's objective of ensuring just and reasonable rates. In addition, to provide the confidence that businesses need to enter the efficiency market and invest for future growth, the Sustainable Energy Group recommended that long-term goals should not be used as a ceiling or an arbitrary maximum if and when greater investments in efficiency are justified. To achieve all cost-effective energy efficiency over the long term, the Sustainable Energy Group recommended mid-term annual goals of 2 percent and 1 percent, for electric and gas, respectively, by 2021.

For electric utilities, the Sustainable Energy Group also recommended a peak demand reduction target, because peak demand growth drives electricity prices by creating the need for additional generation, transmission, and distribution capacity requirements, and by driving up wholesale energy prices. According to the Sustainable Energy Group, that target should be set at a minimum of the expected peak demand reduction from a comprehensive efficiency portfolio designed to reach the electric savings target.

The Sustainable Energy Group opined that increasing energy efficiency targets can mean lower customer bills, improved customer choice, enhanced system reliability, and increased economic activity statewide. According to the Sustainable Energy Group, those objectives are consistent with New Hampshire's Electric Utility Restructuring law, RSA 374-F:3, X, prioritizing the reduction of market barriers to investments in energy efficiency, not reducing cost-effective customer conservation, and targeting cost-effective efficiency opportunities that may otherwise be lost due to market barriers. Energy efficiency resources are particularly critical, the Sustainable Energy Group argued, given the current regional landscape of retiring generation, decreased supply diversity, and the need to meet significant environmental goals. To meet increased savings goals, the Sustainable Energy Group recommended statewide delivery of some efficiency services, which can provide consistency in program offerings and brand recognition as well as economies of scale in terms of marketing, vendor management, and other administrative needs.

4. Acadia

Acadia provided information and recommendations concerning savings targets. All New England states, according to Acadia, far exceed existing New Hampshire savings goals. For example, compared to the Core electric savings goals for 2016 of 0.68 percent, Rhode Island's electric savings goal is 2.55 percent, and compared to the Core gas savings goal for 2016 of 0.62 percent, Rhode Island's gas savings goal is 1.05 percent.

Acadia recommended that savings targets be approved on three-year cycles. Specifically, Acadia recommended ramping up New Hampshire's savings goals during the first three years of the EERS to 2.5 percent cumulative electric savings and 1.25 percent cumulative gas savings.

5. TRC

TRC recommended aggressive energy savings mandates to drive increased investments in energy efficiency. TRC suggested long-term savings targets that will lead to all cost-effective energy efficiency as well as energy savings that are on par with other New England states. TRC also provided information about the energy efficiency markets in California, New York, and New Jersey, which it described as robust and mature. TRC suggested that the Commission look to those jurisdictions for best practices to launch an EERS effectively and efficiently.

6. The Way Home

TWH agreed with the Joint Utilities' recommendation to establish specific, short-term savings goals with an ultimate savings target of all achievable cost-effective energy efficiency. TWH similarly noted that such a long-term target is consistent with New Hampshire's energy policy, which recognizes efficiency as a first-priority, least-cost resource. TWH strongly recommended that energy efficiency services to low-income residential customers, such as the Core Home Energy Assistance (HEA) program, continue. According to TWH, without such services, efficiency is not available to all customers, and the goal of achieving all cost-effective energy efficiency is undermined.

TWH supported a three-year planning cycle and cumulative targets, along with annual implementation plans and annual interim nominal targets. TWH suggested that shorter-term targets should be quantified as electric kWh and gas MMBtu annual sales reductions based on demonstrated savings potential and should apply only to regulated fuels. Energy savings from unregulated fuels, according to TWH, should be counted towards quantifying the benefits of energy efficiency measures in the cost-benefit tests by which all programs are screened.

7. Settlement Agreement

The Settlement Agreement provides deadlines for the Joint Utilities' filing of a 2017 Core plan as well as the Settling Parties' expectations for that plan, including statewide savings goals of 0.60 percent for electric savings and 0.66 percent for gas savings, using 2014 delivered sales as the baseline figure. The Settlement Agreement also defines the savings targets for the first three-year period of the EERS, 2018-2020, and describes the collaborative process by which the plan for that period shall be developed within the proposed framework. The cumulative electric savings goal is 3.1 percent of delivered 2014 kWh sales, with interim annual savings goals of 0.80 percent, 1.0 percent, and 1.3 percent. The cumulative gas savings goal is 2.25 percent of delivered MMBtu 2014 sales, with interim annual savings goals of 0.70 percent, 0.75 percent, and 0.80 percent. The Settling parties agree that future goals will be determined in the planning processes related to the second and any subsequent three-year EERS periods, with the intent of attaining the goal of achieving all cost-effective energy efficiency.

D. Costs and Funding

1. Staff

Staff recommended that the utilities recover the just, reasonable, and prudent costs incurred in developing, promoting, and delivering the EERS programs. To the extent possible, Staff also recommended allocating program spending based on class-specific sales volumes, which is consistent with long-standing Commission policy.

For the first triennium, Staff recommended funding most of the utilities' cost recovery with increases to the System Benefits Charge (SBC) and the Local Distribution Adjustment Charge (LDAC). The remaining costs, according to Staff, would be covered by existing funding from RGGI and the ISO-NE FCM. Staff observed that, recently, federal funding has been available and used to support on-bill and third-party financing options for certain Core programs, but that funding is only available for a limited period of time and its future is uncertain.

To supplement public funding, Staff recommended exploring and developing private funding options, which could include loan portfolio sales and asset-backed securitization. According to Staff, private funding supplementation is necessary to achieve all cost-effective energy efficiency, but requires market growth, as well as stability and benefits from standardization of products, processes, and the availability of accurate risk and performance data.

Staff estimated the costs of Plan B for the first triennium, including the costs of lost revenues, performance incentives, several resources for an EERS advisory board, and inflation, as approximately $108 million for electric and $32 million for gas. To recover those amounts, the SBC would need to be increased from $0.0018 per kWh to rates within the range of $0.0022 to $0.0036 per kWh, and the energy efficiency portion of the LDAC would need to be increased from $0.0291 per therm to rates within the range of $0.0340 to $0.0450 per therm. Staff estimated the monthly bill impact of the SBC increase under Plan B for the first triennium on an average residential electric customer, with monthly usage of 700 kWh per month, as an increase of $0.25 to $1.27 per month. Staff estimated the monthly bill impact of Plan B on a General Service customer using 7,000 kWh per month as an increase of $2.53 to $ 12.70 per month. Staff's calculation of SBC bill impacts alone, did not attempt to estimate any of the additional customer savings resulting from the increased energy efficiency measures. Staff did not calculate monthly bill impacts of the LDAC increases associated with Plan B, because the LDAC is utility- and customer-class specific.

2. Joint Utilities

Like Staff, the Joint Utilities recommend funding the EERS with the SBC and LDAC. According to the Joint Utilities, customers are the most reliable and practical sources for funding energy efficiency programs. As the primary beneficiaries of the energy efficiency measures installed, utility customers are more likely to participate by partially funding the programs. Because the SBC and LDAC are variable rates (*i.e.*, applied on a per kWh and per therm basis) and are set according to consumption, using them to fund the EERS will impact customers according to their usage and send an enhanced price signal for using energy more efficiently, which is consistent with the goal of an EERS.

The Joint Utilities observed that the Commission has the authority to raise the SBC or the LDAC to levels it deems just and reasonable, and, because they are already the primary methods of funding the Core programs, changes to those rates can be readily accomplished. Also, funding the EERS primarily through the SBC and LDAC is consistent with how other jurisdictions have funded their EERS programs. In addition, the Joint Utilities opined that third-party financing alone is not as stable or reliable a source of funding as the SBC and LDAC, and will not support the goal of an EERS to significantly increase energy efficiency activity.

The Joint Utilities provided examples of bill impacts to a typical residential electric customer at the current rate and rates based on two increased funding levels. With no change to the SBC, there would be no change to customer bills. Estimated savings, based on 2014 delivery sales at current SBC rate, would be between 0.36 percent and 0.48 percent. With a 50 percent increase to the SBC, from $0.0018 per kWh to $0.0027 per kWh, estimated savings would be between 0.52 percent and 0.68 percent of 2014 delivery sales, and funding would increase by nearly $10 million, increasing a typical residential customer’s bill by $0.56 per month. If the

SBC were doubled to $0.0036 per kWh, estimated savings would be between 0.67 percent and 0.87 percent of 2014 delivery sales, and the increase would provide nearly $20 million of additional funding, increasing a typical residential customer's bill by $1.13 per month. The Joint Utilities did not recommend approval of any specific savings level but stated that, regardless of the level set by the Commission, a uniform rate per kWh should apply to all electric utilities. The Joint Utilities also did not estimate the costs or bill impact of changes to the LDAC.

3. Sustainable Energy Group

According to the Sustainable Energy Group, the existing level of funding for efficiency in New Hampshire is below the amount that is economically efficient, and current funding is insufficient to achieve the Group's recommended targets. In setting funding levels, the Sustainable Energy Group recommended that the Commission address three areas of cost: the recovery of program costs; a mechanism to recover efficiency-related lost revenues; and performance incentives.

The Sustainable Energy Group argued that the utilities or program administrators should be able to collect 100 percent of actual efficiency program costs prudently expended, with any associated carrying costs, in addition to its efficiency-related lost revenues and performance incentives. To the extent practicable, the Sustainable Energy Group recommended that, to eliminate cross-subsidization across customer classes, each customer class (*i.e.*, residential, commercial, and industrial) should contribute to program costs in proportion to spending on programs for the customer class. The Sustainable Energy Group noted that the one exception to linking cost recovery to program expenditures is the low-income program budgets, which should be allocated first, with the remaining budgets allocated proportionally to remaining customer classes.

The Sustainable Energy Group recommended that all ratepayers contribute to efficiency programs, because all customers benefit from them. In terms of how funding is collected, the Sustainable Energy Group recommended that, in order to protect customers and ensure that efficiency spending is generating benefits, efficiency costs should not be included in base rates. Amortizing program implementation costs over a short period of time, however, may be an option if the utilities are allowed to recover carrying costs. The Sustainable Energy Group estimated that by saving 3.1 percent of retail energy sales, New Hampshire ratepayers will save $45 million and thousands of jobs will be created.

The Sustainable Energy Group acknowledged that rate impacts will result from the implementation of efficiency programs regardless of the source of funding, because the utility's fixed costs will be collected over lower billing units. Nonetheless, cost-effective efficiency programs result in lower total bills for ratepayers even if per unit energy rates increase. According to the Sustainable Energy Group, bill impacts do not represent increased societal or ratepayer costs, but rather a shift in the allocation and recovery of sunk fixed costs among ratepayers. Despite those shifts, the Sustainable Energy Group contends that using public funds to invest in energy efficiency results in a more rational and efficient allocation of resources and increases total net economic benefits for the state. To the extent that the Commission considers rate impacts of efficiency funding, it should do so in the larger context of comparative costs for all resource acquisition and their impacts on ratepayers, including the risk of stranded costs and other large fixed capital costs that must be amortized through rates over multiple years, if not decades.

The Sustainable Energy Group recommended that the Commission view "buying" energy efficiency as akin to paying for any prudent acquisition of an energy resource. According to the

Sustainable Energy Group, energy efficiency is widely considered the lowest cost energy resource, meaning that a unit of energy saved through efficiency is less expensive than the total lifetime cost of a unit of energy from other resources such as traditional fossil fuel generation and renewable energy sources, when compared on a consistent and fair basis. This is true, the Sustainable Energy Group argued, even when no economic value is placed on the environmental, health, and economic impacts that are not currently monetized in our economy. In addition, not increasing energy efficiency at this time could disadvantage New Hampshire utility customers in terms of mandatory, socialized regional costs of transmission and distribution expansion due to peak demand. Because other states are investing more in efficiency and distributed generation, their share of the ISO-NE peak load is decreasing and, without more efficiency in New Hampshire, its ratepayers' share of load, and the associated costs, will be proportionately higher.

The Sustainable Energy Group opined that private funding is not a replacement for public funding, in part because numerous barriers exist, including uncertainty and lack of knowledge on the part of investors, the up-front investment required from the customer, and a relatively immature market for efficiency services. According to the Sustainable Energy Group, the barriers to increased private funding may be best addressed by focusing initially on ratepayer-funded energy efficiency to build the knowledge, understanding, trust, and infrastructure that can later support private funding.

4. Acadia

Acadia recommended that the Commission fund the EERS through increases to the SBC and the LDAC. According to Acadia, private financing should not be considered a standalone funding option, because it generally will not have substantial uptake in the absence of ratepayer-funded programs, and it will not capture all cost-effective energy efficiency.

Acadia provided information about the many benefits of increased energy efficiency investment that should be considered against the impacts of associated rate increases. For example, to illustrate that energy efficiency is cheaper than other supply resources, Acadia stated that New Hampshire spent $4.5 billion on fossil fuel imports, at an average cost of $0.14 per kWh, when the average cost of energy efficiency was $0.0226 per kWh. Citing a 2009 study to demonstrate benefits enjoyed by all ratepayers regardless of participation in efficiency programs, Acadia stated that increasing efficiency investments to a level needed to capture all cost-effective electric efficiency over 15 years, or $1.4 billion, would increase economic activity by $14 billion (in 2008 dollars). Likewise, increasing gas efficiency by $219 million over 15 years would increase state economic activity by $4.1 billion. In addition, according to Acadia, all ratepayers benefit from decreases in the cost of generation, because less demand means lower prices in the regional forward capacity market and lower wholesale electricity prices.

5. TRC

TRC described the SBC, LDAC, and other existing mechanisms used to fund energy efficiency in New Hampshire as a solid foundation for structuring an EERS market. TRC's recommendations for funding, however, focused on the proceeds from RGGI auctions, most of which are not available for efficiency by statute.

6. The Way Home

TWH urged the Commission to increase public funding to the extent needed to meet the EERS targets it sets and to maintain the existing percentage allocations of program resources among customer sectors pursuant to the Core plan. According to TWH, without a commensurate increase in funding to accompany more aggressive savings goals, existing programs are put at risk.

TWH described an increase in the SBC and LDAC as the easiest and most equitable means of increasing funding to support an EERS. TWH recommended that the Commission continue its Core practice of first allocating low-income program budgets and then allocating program budgets for remaining customers. In addition, TWH recommended that the Commission consider increasing the low-income allocation above the existing 15.5 percent if private funding of efficiency is expanded under an EERS. According to TWH, allocating more public funding to low-income efficiency measures is consistent with the statutory requirement to "target cost-effective opportunities that may otherwise be lost due to market barriers." RSA 374-F:3, X.

7. Settlement Agreement

To achieve the recommended targets for the 2017 Core extension and the first three-year period of the EERS, the Settling Parties recommend that the Commission increase the SBC and LDAC. Illustrations of the estimated costs of funding the recommended savings goals associated with those periods of time are shown in attachments to the Settlement Agreement. The Settling Parties agree that the costs to fund the EERS include the costs associated with, (1) an independent expert to assist in refining the framework, planning and implementation of the EERS; (2) an independent expert to assist with the oversight and execution of EM&V activities; and, (3) independent experts to conduct the EM&V activities of the individual programs.

In addition, the Settlement Agreement provides for an increase in the minimum low-income share of the overall energy efficiency budget from 15.5 percent to 17 percent. As proposed, the increase would take effect on January 1, 2017, and remain in effect through the first three-year period of the EERS. During that time, the Settling Parties will explore additional funding sources to augment ratepayer funding.

E. Recovery of Lost Revenues

1. Staff

According to Staff, a targeted lost revenue adjustment mechanism (LRAM) or decoupling may be used to compensate utilities for lost revenues associated with energy efficiency. LRAMs limit the recovery to sales revenue lost on account of energy efficiency activity, while decoupling permits the utility to recover the difference between its actual revenues and its authorized revenue requirement no matter the reason. With an LRAM, under certain conditions, a utility may actually earn more than its authorized revenue requirement. With decoupling, the utility would refund to customers any amount that exceeds its authorized revenue requirement. Decoupling also addresses the throughput incentive that traditional ratemaking creates (*i.e.*, higher sales equals higher revenues). Because of Commission policy requiring the consideration of decoupling only within the context of a rate case, Staff recommended the adoption of an LRAM for the initial three-year period, to be replaced thereafter by a decoupling mechanism.

Staff's LRAM included several adjustments: (1) an adjustment that would allow for the recovery of lost revenues through the LRAM only above a specific threshold level to reflect historical Core energy efficiency investment; (2) an adjustment that would reduce the lost revenues recovered through the LRAM by savings associated with the retirement of measures installed in the past; and, (3) for gas utilities only, a fuel-switching adjustment that would reduce the recovery of lost revenues through the LRAM by the amount of new gas revenues associated with program participants who convert from other fuels to high-efficiency natural gas for heating. Staff also recommended that the annual recovery of lost revenues through the LRAM be capped at 0.50 percent of sales revenue and that the costs associated with the LRAM be included in the benefit/cost test used to screen energy efficiency programs. For the first three-year period of the EERS, Staff estimated that its LRAM would increase the costs of energy efficiency by approximately $2 million for the electric utilities and $0 for the gas utilities. Staff recommended recovery of lost revenues determined by the LRAM through the SBC and LDAC.

2. Joint Utilities

The Joint Utilities[8] recommended that the EERS allow for recovery of lost distribution revenues associated with energy efficiency savings, because revenue for all components of service is reduced by implementing energy efficiency measures. That reduced revenue is a consequence of the way utility distribution rates are set, based on an approved revenue requirement, designed using assumptions of a set level of customers, demand, and consumption for each rate class, and collected, in part, through a volumetric charge. Also, between rate cases, there is no reconciliation of actual revenues to the approved revenue requirement. The Joint Utilities contended that the recovery of lost revenues would restore the assumed relationship between sales levels and revenue requirements used in setting rates through historic test year ratemaking. According to the Joint Utilities, costs increase between rate cases, and the loss of sales does not necessarily equate to a similar decrease in the fixed costs used to set rates. Therefore, without recovery of energy efficiency related lost revenues, the utility collects less than its approved revenue requirement.

The Joint Utilities proposed that each recover lost distribution revenues through a Lost Base Revenue Adjustment (LBR Adjustment). The Joint Utilities proposed a formula to calculate the LBR Adjustment for future periods:

[8] For the purpose of this section, references to the Joint Utilities do not include the NHEC. NHEC does not seek recovery of lost revenues, because lost revenue mechanisms primarily address revenue recovery issues associated with distribution rate regulatory processes that apply to investor-owned utilities. Because NHEC is a deregulated, member-owned rural electric cooperative, it is not subject to the same regulation as the other electric utilities.

Total Lost Revenues = Projected Cumulative Electric Savings x Utility's Distribution Rate

Lost Revenue Rate = Total Lost Revenues / Projected Kilowatt Hours

Under their proposal, the LBR Adjustment would be a factor in setting the SBC and LDAC, and lost base revenues would be reconciled annually, when the LBR Adjustment factor is set for the upcoming period. Because each utility's lost revenues may be different, each utility's SBC or LDAC may be different. The Joint Utilities opposed, and described as confiscatory, Staff's recommendations to cap or adjust lost revenues. The Joint Utilities also opposed Staff's recommendation to include lost revenues as a cost within the cost/benefit test for the purpose of screening efficiency programs.

The Joint Utilities contended that the SBC and LDAC are transparent, efficient mechanisms that can be readily implemented to recover lost revenues (as well as to fund the costs of the EERS programs). According to the Joint Utilities, the LBR Adjustment can be established without the need for a distribution rate case and would implement lost revenue recovery coincident with implementation of savings measures. In contrast, a mechanism such as decoupling would require a distribution rate case entailing a lengthy process that requires extensive resources from each utility, Commission Staff, and interested parties. Such a case, the Joint Utilities argued, would consider more than the revenue impacts of energy efficiency in determining the revenue requirement and appropriate rate mechanisms; all aspects of the revenue requirement would come into play, including issues associated with distribution capital investments, operating and maintenance costs, and rate of return. The Joint Utilities opposed implementing decoupling, contending that an LBR Adjustment leaves a utility in the financial position contemplated by its last rate case (*i.e.*, equal to where it would have been absent efficiency activities), no better or worse, and only a lost revenue recovery mechanism isolates the effect on utility revenue of efficiency.

3. Sustainable Energy Group

The Sustainable Energy Group recommended a mechanism to permit recovery of lost revenue resulting from lower energy sales due to efficiency. According to the Sustainable Energy Group, and contrary to the Staff, lost revenue is not a cost of efficiency programs, because lost revenues would have been collected from customers even in the absence of efficiency programs. Instead, recovery of lost revenue from efficiency is simply a shift in how those authorized revenues are recovered from ratepayers.

The Sustainable Energy Group described lost revenue recovery mechanisms as designed to quantify the lost net revenue that can be recovered by the utility. To develop accurate estimates of lost revenue, the Sustainable Energy Group argued that precise evaluation, measurement, and verification are required. Best practices include independent third-party review, frequent rate cases to avoid the “pancake effect” of lost revenue recovery costs accumulating over time, and combining lost revenue recovery with performance incentives sufficient to promote increased utility investment in energy efficiency. The Sustainable Energy Group also suggested that, with an LRAM, performance incentives can be focused solely on exemplary performance. In addition, the Sustainable Energy Group noted that an LRAM allows a utility’s earnings to increase with increased sales and, consequently, it is possible for a utility with an LRAM to have sales in excess of the test year used to set rates (even with reductions from efficiency programs) and earn excess profit as well as collect lost revenues.

The Sustainable Energy Group contrasted an LRAM with decoupling, which seeks to remove the direct connection between sales and revenue, such that the utility’s fixed costs are covered regardless of total energy sales. According to the Sustainable Energy Group, decoupling generally includes a price adjustment to “true up” revenues when sales are different than those forecasted in the rate setting process. The correction of variances should take place at least annually, the Sustainable Energy Group argued, and should accrue to the utility, or credit back to the ratepayers. With decoupling, throughput is fully decoupled from revenue, meaning it accounts for all sales fluctuations not just those related to energy efficiency. The Sustainable Energy Group noted that this could translate into benefits for customers in cases where sales increase.

In the Sustainable Energy Group’s opinion, the symmetrical treatment of revenue requirement recovery using decoupling results in, along with other benefits, the potential for both customer surcharges and refunds, rather than just surcharges, and makes full decoupling preferable to an efficiency specific LRAM. Other benefits include simplifying future rate cases and reducing the volatility of utility revenues. Consequently, the Sustainable Energy Group recommended that the Commission consider moving towards full decoupling, even if LRAM is used as an interim step. Should an LRAM be implemented first, the Sustainable Energy Group opposed incorporating the cap and adjustments that Staff recommended, and the Sustainable Energy Group recommended that the LRAM be reconciled annually.

4. Acadia

Acadia recommended that the Commission establish decoupling for the Joint Utilities in their next rate cases. Under decoupling, customers would pay two charges: one for the energy they use; and the other for the costs of the distribution system used to deliver the energy. Distribution charges would be adjusted annually so that the utility does not collect more or less than it is allowed by the Commission. According to Acadia, decoupling complements performance incentives.

Acadia discussed Staff's recommendation of an LRAM for the initial three-year period, to be transitioned into decoupling. Acadia agreed with that approach but opposed Staff's retirement and fuel-switching adjustments. In addition, Acadia urged Staff to support decoupling in the next rate case for each utility.

5. The Way Home

TWH supported the Joint Utilities' general parameters for recovery of lost distribution revenue associated with higher levels of energy efficiency savings, and it supported the implementation of a lost revenue adjustment mechanism in the short term. TWH indicated it would take a position on Staff's recommendation to transition such a mechanism to decoupling, when a more comprehensive decoupling rate structure is proposed.

TWH agreed with the Sustainable Energy Group's (and the Joint Utilities') recommendation that lost net revenue recovery not be treated as a cost in the cost/benefit test used for efficiency programs. Doing so, TWH stated, might make it difficult to achieve energy efficiency savings comparable to neighboring states and could result in the low-income Home Energy Assistance program, and perhaps other efficiency programs, being mistakenly labeled as cost ineffective in the future.

TWH also agreed with the Sustainable Energy Group that the most equitable way of recovering lost revenue is through increases to the volumetric charges, not the fixed charges, on customer bills. According to TWH, increasing the fixed charges disproportionately harms low-income ratepayers least able to absorb them, and acts as a disincentive to customer conservation efforts and energy efficiency program participation.

6. Settlement Agreement

The Settling Parties recommend that the Commission implement an LRAM for effect January 1, 2017 and that the LRAM continue after implementation of the EERS. The LRAM will be designed and implemented consistent with the Joint Utilities' proposal, the details of which are summarized above. In addition, the Settlement Agreement requires total recovery through the LRAM to be capped at 110 percent of planned annual savings; savings to be adjusted to account for the actual month the measures are installed within the year of installation and for the results of EM&V studies.[9] The Settlement defines the rate used to calculate LRAM recovery (*i.e.*, the "Utility Distribution Rate" in the Joint Utilities' proposed formula) to be an average distribution rate excluding customer charges.

The Settling Parties recommend, for each utility's rate cases following the implementation of the LRAM, that the savings used to calculate the utility's lost revenue be reset to zero. They also recommend that in each utility's first rate case following the first three-year period of the EERS, the utility seek approval of a new decoupling mechanism as an alternative to the LRAM, and that the LRAM cease when the new mechanism is implemented.

F. Performance Incentives

1. Staff

Staff recommended including performance incentives (PI) in the EERS framework to incent the Joint Utilities' investment in energy efficiency. According to Staff, performance incentives place energy efficiency and supply-side investments on a relatively equal financial footing and enables utility shareholders to earn a comparable return on either investment. Staff also noted the vital role of PI in the success of the Core programs.

---

[9] The Settlement Agreement does not incorporate Staff's proposed threshold, retirement, and fuel-switching adjustments to the LRAM, or Staff's recommendation to include lost revenues as a cost for the purpose of determining the cost/benefit ratio of the 2017 Core and EERS programs.

Staff recommended 10 percent of annual budgets as an appropriate PI cap for both the electric and gas utilities. The 10 percent cap is the same as the existing Core PI cap for electric utilities, and it is 2 percent less than the existing 12 percent Core PI cap for gas utilities. Staff asserted that the PI cap for electric and gas utilities should be the same, because the Commission's energy efficiency programs are statewide. Staff further supported the reduction to the gas PI cap by considering it in relation to the PI caps in other New England states, which are all lower than 10 percent. To calculate PI, Staff recommended continuation of the existing (*i.e.*, Core program) cap on actual spending at 5 percent of budgeted spending. In addition, Staff recommended that the Commission review the PI level after the first triennium of the EERS, when it has data on the impact of the LRAM on the Joint Utilities' energy efficiency activities.

2. Joint Utilities

The Joint Utilities proposed that the Commission maintain the current Core PI mechanism and levels. Under their proposal, the Joint Utilities' performance would continue to be evaluated against both the achievement of the defined savings and the cost-effectiveness targets. The methodology would be based on actual program expenditures with threshold and maximum performance payout levels. The Joint Utilities contend that the existing mechanism is easy for stakeholders to understand, effectively tracks performance, and appropriately focuses on the primary factors that are most pertinent to rewarding performance. In response to the Order of Notice, the Joint Utilities opposed incorporating penalties into the EERS framework, contending that the failure to earn PI constitutes sufficient financial detriment.

3. Sustainable Energy Group

The Sustainable Energy Group recommended that the EERS provide performance incentives to allow the Joint Utilities a reasonable incentive to pursue exemplary performance and to make efficiency investments attractive relative to other available investment opportunities. The design of the incentive mechanism, the Sustainable Energy Group stated, should ensure that ratepayers are protected from providing excessive earnings levels beyond those necessary to create that incentive and equal footing. PI should be commensurate with the lower risk of investing in efficiency as compared to supply-side investments, and to the extent existing PI levels include compensation for lost revenues, they should be reduced.

The Sustainable Energy Group discussed several PI models used in other jurisdictions and noted that New Hampshire already uses one model for the Core programs, a performance target incentive. Regardless of the model used in the EERS, it should include clearly articulated earnings and/or penalties, based on tangible, measurable performance that is under some control of the utility or program administrator. Also, the Sustainable Energy Group recommended that the performance incentive metrics be defined in a way that achieves efficiency policy objectives and guards against perverse incentives that could lead to undesirable policy outcomes. The Sustainable Energy Group noted that incentive designs where multiple parameters can be rewarded or penalized, are one way to protect against perverse effects.

4. Acadia

Acadia described PI as essential to maximizing investment in efficiency and demand-side resources. Acadia linked decoupling with PI, suggesting that decoupling enhances the effect of PI. Acadia opposed the PI levels recommended by Staff, contending that if a lost revenue recovery mechanism is approved for the EERS, PI should be more in line with neighboring states, or between 2 percent and 8 percent.

5. The Way Home

TWH supported providing the opportunity to the Joint Utilities (or other program administrator) to earn performance incentives when the Core programs transition to an EERS, because the incorporation of a reasonable PI is consistent with the policy of treating energy efficiency as a supply resource. TWH suggested, however, that if a lost revenue recovery mechanism is implemented, the Commission may want to consider reducing the current Core levels of PI, because such a mechanism shifts risk away from the utility to the ratepayer by guaranteeing the recovery of certain revenues.

6. Settlement Agreement

The Settlement Agreement recommends PI for the Joint Utilities at a target level of 5.5 percent and a maximum level of 6.875 percent of spending. Those PI levels should be effective when the LRAM is implemented, or January 1, 2017, and should remain unchanged at least through the first three-year period of the EERS. In addition, prior to the filing of the first EERS plan, the Settling Parties would review the existing PI formula and consider the way it values achievements of low-income programs. The Settling Parties agree that any recommendations for modifications to the PI formula may be included in that filing or proposed during the Commission's review of that filing.

G. Stakeholder Involvement

1. Staff

Staff recommended the creation of a permanent EERS Advisory Council made up of a broad group of stakeholders representing a variety of interests. Staff asserted that other jurisdictions use stakeholder groups to develop consensus and energy efficiency policy recommendations. According to Staff, the Advisory Council should include representatives from the utilities, the Commission and DES, the OCA, environmental groups, customers, energy efficiency program providers, and consultants. Staff recommended that the Commission designate the existing Energy Efficiency and Sustainable Energy (EESE) Board as the Advisory Council and authorize the recovery of funds through the SBC and LDAC for its administrative and technical support. Specifically, Staff recommended the use of an independent consultant to facilitate the Advisory Council's work and expert consultants as necessary. Staff envisioned the Advisory Council's work as including annual reports on energy efficiency achievements, coordination of studies, and development of a Technical Resource Manual (TRM). The TRM, according to Staff, would include New Hampshire specific EM&V protocols and reporting forms.

2. Joint Utilities

The Joint Utilities recognized the wide range of stakeholders who work with them to plan, deliver, and evaluate the Core programs. Stakeholders include retailers, manufacturers, equipment distributors, contractors, builders, architects, engineers, trade associations, non-profit organizations, policy makers, program evaluation vendors, and customers. According to the Joint Utilities, the stakeholders' contributions are essential to the success of the programs. Under an EERS, the Joint Utilities, like Staff, recommended that the EESE Board function as an energy efficiency stakeholder board. The Joint Utilities view the roles, responsibilities, and membership of the EESE Board as very similar to the EERS stakeholder boards in other states. EESE Board membership includes energy efficiency and sustainable energy stakeholders, state policy makers, representatives of the business community, and utility program administrators.

Similar to Staff, the Joint Utilities recommended additional resources for the EESE Board in its new role as EERS advisor. Specifically, the Joint Utilities suggested the dedication and funding of an administrative employee and the engagement of specialized organizations such as Northeast Energy Efficiency Partnerships (NEEP) and Regulatory Assistance Project (RAP).

3. Sustainable Energy Group

To oversee and guide efforts to implement the requirements of an EERS, the Sustainable Energy Group also recommended an advisory body with sufficient resources and authority to ensure robust stakeholder involvement and to assist the Commission. According to the Sustainable Energy Group, Commission proceedings are too cumbersome to provide a forum where inclusive, informed discussions and decisions necessary to implement best practice energy efficiency programs can be conducted.

The Sustainable Energy Group recommended that the advisory body's membership include a wide range of stakeholders to ensure a balance of interests in efficiency oversight. Stakeholders should include all customer classes (individually represented), state environmental policy staff, Commission staff, consumer protection agencies, advocacy groups in the energy and environmental fields, and the energy efficiency industry. According to the Sustainable Energy Group, the Joint Utilities should be active participants in the advisory body but should not have voting privileges.

The Sustainable Energy Group noted that the EESE Board includes some features important to a robust advisory body (*e.g.*, diverse membership), but it currently has little authority and no staff or funding. To be effective, the EESE Board will need guidance from experts in energy efficiency planning, evaluation, program design, and implementation. In addition, because the members will likely have full-time jobs and will only serve in a voluntary capacity, administrative and technical support is needed to manage and conduct the basic operations and analysis of the group. According to the Sustainable Energy Group, some jurisdictions contract for administrative support and expert resources.

4. Acadia

Consistent with the positions of others, Acadia also recommended that the Commission supplement the adjudicative process it uses for energy efficiency with a stakeholder council or board to oversee planning and administration of statewide programs through a collaborative process. Doing so ensures that the programs enjoy a broad base of support and reduces the duration and complexity of the approval process at the Commission. Acadia stated that in other states in the Northeast, stakeholder boards may spend six months or more in a collaborative plan development process with the utilities before filing plans for approval. According to Acadia, using a stakeholder body to guide efficiency investment will also reinforce high standards for programs, because the stakeholders are end users. Acadia also recommended that the advisory body have access to expert resources to balance the utilities' access to information and expertise. The EESE Board, Acadia stated, could be transitioned into an advisory body role if adequate funding is made available for such resources.

5. The Way Home

TWH echoed the recommendation of others that the EESE Board be used as an advisor to the Commission in its implementation of an EERS. TWH also observed the EESE Board's limited statutory authority and need for resources, but suggested that those limitations may be overcome by the Commission specifically designating the EESE Board's role in its order approving the EERS.

6. Settlement Agreement

The Settlement Agreement specifically provides opportunities for the EESE Board to actively participate in the development of the EERS programs within the proposed EERS framework, and in the Commission-supervised EM&V activities under the EERS. The Settlement Agreement also recommends EESE Board access to the independent planning and EM&V oversight experts.

H. Evaluation, Measurement and Verification

1. Staff

Staff considers EM&V a vital part of a successful EERS program, for program transparency and credibility. Staff described evaluation as the performance of studies and activities aimed at determining the effects of an energy efficiency program or portfolio. Measurement and verification, according to Staff, constitutes data collection, monitoring, and analysis associated with the calculation of savings from individual projects. EM&V according to Staff, ensures that the Joint Utilities are actually meeting the savings targets and spending ratepayer funds in a just and reasonable manner, and that energy efficiency programs are cost effective. Currently, the Joint Utilities administer EM&V to monitor and manage the Core programs.

To enhance EM&V under an EERS framework, Staff recommended that funding be set aside for independent consultants and for the development of a New Hampshire technical resource manual. Staff noted recent efforts in New England to develop consistent protocols and reporting for EM&V, which could be adopted where feasible. In addition, Staff recommended that the EESE Board in its role as an EERS Advisory Council guide EM&V, and that the results of EM&V impact studies be used to update savings assumptions and program design.

2. Joint Utilities

The Joint Utilities described EM&V practices for the Core programs, which include stringent and transparent reporting regarding their achievement of planned savings, participation, and cost-effectiveness goals, verification of results, onsite inspections, independent third-party market assessments, program process and impact evaluations, and annual financial audits. According to the Joint Utilities, the existing practices hold them to high standards of accountability and verification, which includes several layers of quality control.

For an EERS with increased savings goals, the Joint Utilities, like Staff, recommended that the Commission hire an independent consultant to help guide energy efficiency evaluation activities. Accordingly, the consultant would create an implementation plan and review and adjust evaluation priorities. The Joint Utilities suggested that the consultant's review could include consideration of the Environmental Protection Agency's Clean Power Plan as well as the standardization of EM&V reporting forms.

The Joint Utilities proposed that they manage the evaluation activities under the Commission's oversight. In support of their proposal, the Joint Utilities cited their procurement and contract management capabilities, which allow them to act efficiently and cost effectively. Citing a recent example, the Joint Utilities contended that their existing relationships with EM&V consultants and colleague counterparts from among their affiliates in other states will help them coordinate evaluation activities and identify best practices, current challenges, and opportunities.

3. Sustainable Energy Group

The Sustainable Energy Group opined that the success of an EERS can only be measured by assessing the extent to which energy reduction targets are actually realized. The key concepts and requirements of EM&V, according to the Sustainable Energy Group, include rigor, transparency, and independent third-party verification, to ensure consistent and fair assessment of program performance. The Sustainable Energy Group recommended that the achievement of savings targets and earning of performance incentives be evaluated on the same basis for the sake of efficiency and fairness. In addition, the Commission and its advisory body should oversee EM&V services.

4. The Way Home

TWH generally concurred with the EM&V recommendations of other parties. In addition, TWH noted the one measurement consideration specific to low-income residential ratepayers, which is that low-income programs may fall below a benefit cost ratio of 1.0 under the Total Resource Cost test and still be approved by the Commission.

5. Settlement Agreement

The Settlement Agreement requires EM&V studies to be conducted by independent third parties retained and supervised by the Commission with the advice and participation of the Settling Parties and the EESE Board. If requested, an independent expert, separate from the independent planning expert required by the Settlement Agreement, would facilitate the Settling Parties' and the EESE Board's participation in, and provide oversight of, the EM&V study activities. One specific deliverable of the EM&V expert will be assisting with the development of a New Hampshire-specific technical resource manual by the end of the first EERS triennium.

I. Regulatory Process

1. Staff

Staff recommended leveraging the exiting Core mechanisms to transition to an EERS framework. According to Staff, the Joint Utilities, as administrators, would prepare the triennial

EERS plans in collaboration with stakeholders and the EESE Board as Advisory Council, for review and approval by the Commission. Staff also recommended annual reviews during the three-year EERS periods. Those reviews, according to Staff, should include updating savings assumptions based on the results of EM&V studies. In addition, Staff recommended continuing practices developed for the Core program, including the processes for budget transfers and carrying forward unspent funds.

2. Joint Utilities

The Joint Utilities proposed developing savings targets for the EERS through a comprehensive process that validates savings targets feasibility and provides a detailed plan for specific programs. Savings target development, however, would follow an annual determination by the Commission of the funding levels. According to the Joint Utilities, the Commission uses such a process currently to set the LDAC rate for gas utilities.

The Joint Utilities proposed that, each year of the EERS, they prepare and submit to the EESE Board a draft energy efficiency plan for its review before a final plan is filed with the Commission for approval. That process would allow collaboration between the EESE Board and the Joint Utilities in a non-adjudicative setting, which the Joint Utilities believe could result in a more efficient Commission proceeding. According to the Joint Utilities, the Commission's regulatory role of overseeing the state's energy efficiency programs would continue in its current form. The Commission would determine if the final plans submitted by the Joint Utilities are in the public interest, including the program budgets and program cost effectiveness. In addition, the Commission would continue to oversee ongoing reporting and implementation and results of the programs.

The Joint Utilities propose that each utility, except NHEC, file its own request for recovery of EERS-related lost revenues, which will vary by utility each year and that the Commission adjudicate the requests individually. According to the Joint Utilities, the LBR Adjustment process would be separate from the three-year planning process used to set savings targets and to establish specific programs to meet those goals.

3. The Way Home

TWH recommended regular review of the efficiency programs during the three-year EERS planning periods, perhaps quarterly as is currently done for the Core programs. TWH also recommended an annual planning process.

4. Settlement Agreement

The Settling Parties recommend that they work collaboratively to refine a draft plan for the first triennium of the EERS, which will be filed for Commission review and approval by September 1, 2017. An independent consultant would be hired by the Commission, with a budget not to exceed $95,000 annually, to assist in the development of the initial and subsequent EERS plans. The consultant would serve as a resource to the EESE Board and other stakeholders as requested and deemed appropriate by the Commission.

The Settlement Agreement requires the filing of annual updates during the three-year EERS plan periods, for Commission review and approval. The review process would be akin to the process currently used to review mid-period submissions in the Core dockets. Such annual update filings will serve as an opportunity to adjust programs and targets and address any other issues that may arise from changes or advancements, including evaluation results, state energy code changes, and federal standard improvements.

The Settlement Agreement and the Joint Utilities' proposal provide specific detail about the processes to be followed with regard to lost revenue recovery, including the annual setting of a rate for the next year and the reconciliation of the prior year's rate and revenue recovery. The Settlement Agreement also requires actual savings and costs to be audited by an independent third party.

J. Implementation Date

1. Staff

Staff recommended an EERS implementation date of January 1, 2017.

2. Joint Utilities

The Joint Utilities recommended that the EERS be implemented beginning January 1, 2018. According to the Joint Utilities, adequate time is needed for thorough program development and a more comprehensive stakeholder review process than is typically used for the Core programs. Under their proposal, the Joint Utilities would present a draft three-year plan to the EESE Board on April 1, 2017, and allow two months for EESE Board's review. Then, the Joint Utilities would file the final plan with the Commission by September 30, 2017, for approval by December 31, 2017. Also before implementation of the EERS, the Commission would determine the SBC and LDAC funding rates.

In the meantime, the Joint Utilities proposed to file, on or before September 30, 2016, an interim, one-year Core plan for 2017. Also by that date, the Joint Utilities would file testimony regarding the implementation of their LBR Adjustment.

3. Sustainable Energy Group

The Sustainable Energy Group did not specifically recommend an implementation date. In discussing savings targets, however, the Group referred to the first three-year period of the EERS as 2017-2019.

4. Settlement Agreement

The Settlement Agreement proposes the implementation of an EERS beginning January 1, 2018. During 2017, the Core programs will continue, and the Settling Parties, in collaboration with the EESE Board, will prepare for EERS implementation.

K. Beyond Implementation

1. Staff

Staff described energy efficiency programs and products that are available in other jurisdictions, but not New Hampshire. Staff suggested that some or all of those offerings could be used to enhance an EERS. According to Staff, the Joint Utilities could use the integrated resource planning process to identify new opportunities for energy efficiency. In addition, demand-side management and grid modernization tie well with energy efficiency programs.

2. Joint Utilities

The Joint Utilities described their vision for the future of the EERS and provided examples of expanded program services, new initiatives, and innovative implementation strategies. The examples included piloting emerging technologies, offering incentives for combined heat and power projects, and incorporating the use of midstream and upstream program delivery models, which allow for energy efficiency equipment incentives at the retailer and manufacturer level.

The Joint Utilities also discussed potential sources of funding for the EERS other than the SBC and LDAC, including the Commercial Property Assessed Clean Energy (C-PACE) program. According to the Utilities, C-PACE falls under third-party financing, specifically for commercial buildings, and allows building owners to finance cash-positive energy efficiency and renewable energy projects, tying the financing to the property through a voluntary, municipal special assessment/lien. The Joint Utilities argued that C-PACE could work in combination with the programs under an EERS.

3. Sustainable Energy Group

To ensure that the benefits of peak demand reduction are realized for all ratepayers, the Sustainable Energy Group recommended that the Commission consider establishing cost-effective peak shaving demand reduction programs.

4. TRC

TRC recommended that the EERS broaden the customer base that is reached by the existing efficiency programs and provide the opportunity for all contributors to program funding to receive program benefits. TRC recommended that the EERS include hybrid programs that effectively address both electricity and fuel savings, because they introduce building owners to deeper energy savings projects.

5. OCA

The OCA recommended that all residential ratepayers participate in a single, statewide customer engagement technology platform (CETP) akin to the platform being developed by Eversource and partially funded through the Core budget. According to the OCA, a CETP is a web-based, data-diagnostic tool that utilities can use in many ways including to educate customers about energy efficiency, target marketing efforts, institute customer behavioral programs, and offer customers online self-service options. The OCA contended that the outcome of using a CETP statewide would be uniform delivery and reduced costs of efficiency services; broader customer participation in efficiency; and greater energy savings for all customers. In addition, a CETP will be needed in the future should the Commission implement programs such as net metering and time-of-use pricing.

6. The Way Home

TWH recommended that the Commission consider quantifying, for the purpose of the cost/benefit test used for efficiency programs, additional non-energy benefits or societal benefits derived from low-income efficiency programs, which are not currently accounted for under that test. According to TWH, a 2008 New Zealand study confirmed benefits such as reduced hospitalizations, and lost days of work and school, and the states of Vermont and Ohio use adders in their cost-benefit tests to quantify non-energy benefits including greater comfort, improved health, enhanced productivity, and other societal benefits.

IV. COMMISSION ANALYSIS

A. Legal Authority

RSA 4-E:1 became effective on July 24, 2013, and spurred the opening of this docket. That statute required the Governor's Office of Energy and Planning (OEP) to prepare a 10-year energy strategy for the State. RSA 4-E:1. The Legislature required the state energy strategy to include "consideration of the extent to which demand-side measures including efficiency … can cost-effectively meet the state's energy needs, and proposals to increase the use of such demand resources to reduce energy costs and increase economic benefits to the state." RSA 4-E:1, II. As detailed in Section I above, OEP prepared the 2014 New Hampshire State Energy Strategy in response to that legislative mandate. The Energy Strategy final report recommended that the

Commission open a proceeding to establish "energy efficiency savings goals based on the efficiency potential of the State, aimed at achieving all cost-effective efficiency over a reasonable time frame." 2014 New Hampshire State Energy Strategy, Executive Summary at ii.

Although RSA 4-E:1 and the 2014 New Hampshire State Energy Strategy served as catalysts for this docket, the Commission has a long history of regulating the demand-side measures of the State's electric and gas utilities. The Commission has historically regulated demand-side measures, including energy efficiency programs, pursuant to its general authority under RSA 374:3 (general supervision of all public utilities) and RSA Chapter 378 (rates and charges). In 1988, pursuant to both its general authority and its authority under the New Hampshire Limited Electric Energy Producers Act, RSA Chapter 362-A, the Commission required that electric utilities engage in least cost integrated resource planning (LCIRP). In *Public Service Company of New Hampshire, et al.*, 73 NH PUC 117 (1988), the Commission required electric utilities to "file an integrated least cost resource plan in conjunction with an updated forecast of avoided costs in order that the commission may reasonably review each utility's planning process, resultant plans, and avoided cost forecast." *Id.* at 126.

Shortly thereafter in 1990, the Legislature enacted the LCIRP statute, RSA 378:37-39, and declared least cost integrated resource planning for electric utilities to be the energy policy of the state. As originally enacted, RSA 378:37 provided that:

> The general court declares that it shall be the energy policy of this state to meet the energy needs of the citizens and businesses of the state at the lowest reasonable cost while providing for the reliability and diversity of energy sources; the protection of the safety and health of the citizens, the physical environment of the state, and the future supplies of nonrenewable resources; and consideration of the financial stability of the state's utilities.

RSA 378:37 (West 2009).

Although the LCIRP statute has always required our review of utility demand-side programs, including energy efficiency, the Legislature amended the LCIRP statute in 2014 to place a greater emphasis on evaluation of energy efficiency programs. *See* Laws of 2014 ch. 129; *compare* RSA 378:38, II (West 2009) *with* :38, II (West Supp. 2015). In the 2014 amendment, the Legislature declared it the energy policy of the state "to maximize the use of cost effective energy efficiency and other demand side resources." RSA 378:37 (West Supp. 2015). The 2014 amendment increased the emphasis on energy efficiency programs by providing that the Commission's evaluation of utility plans should be guided by certain energy policy priorities, energy efficiency being first and foremost among them. RSA 378:39 (West Supp. 2015).

In addition, the electric restructuring policy principles, enacted in 1996, guide the Commission in the exercise of its general authority over electric utilities. *See* RSA 374-F:3, X (restructured electric market required to "reduce market barriers to investments in energy efficiency and provide incentives for appropriate demand-side management and not reduce cost-effective customer conservation" and "utility sponsored energy efficiency programs should target cost-effective opportunities that may otherwise be lost due to market barriers"); RSA 374-F:4, VIII(e) (Commission authorized to approve a utility's inclusion in its distribution charge of the costs of energy efficiency "that are part of a strategy to minimize distribution costs"). Specifically, RSA 374-F:3, VI authorized the creation of a "nonbypassable and competitively neutral system benefits charge applied to the use of the distribution system" for the support of, among other things, energy efficiency programs.

The Commission has reviewed gas utility demand-side measures pursuant to its general authority since at least 1992. *See, e.g., EnergyNorth Natural Gas, Inc.*, 77 NH PUC 802 (1992);

Northern Utilities, Inc., 77 NH PUC 803 (1992); *see also Northern Utilities, Inc*., 78 NH PUC 310 (1993) (approving pilot DSM program); *EnergyNorth Natural Gas, Inc.*, 79 NH PUC 605 (1994) (same); *EnergyNorth Natural Gas, Inc. et al.*, Order No. 24,109 at 1 (December 31, 2002) (approving gas utility energy efficiency programs following gas industry restructuring). The 2014 amendment to the LCIRP statute has since made that statute's energy efficiency requirements applicable to gas utilities. *See* RSA 378:38.

While nothing prohibits electric utilities from funding energy efficiency programs through their distribution rates as approved by the Commission under its general rate making authority, *see* RSA 374-F:4, VIII(e), electric utilities fund energy efficiency measures primarily through the SBC, pursuant to the Commission's authority under RSA 374-F:3, VI. Gas utilities continue to fund energy efficiency programs primarily through the LDAC as approved by the Commission pursuant to the Commission's general supervisory and rate making authority. *See EnergyNorth Natural Gas, Inc., and Northern Utilities, Inc*., Order No. 24,109, at 9 (December 31, 2002). In addition, limited proceeds from the RGGI, pursuant to RSA 125-O:23, and the ISO-NE Forward Capacity Market, are used to fund energy efficiency. In recent years, the Commission has approved the use of third-party private financing options to fund energy efficiency measures. *See* Order No. 25,747 at 9 (describing third-party financing proposals approved by the order).

Electric and gas utility programs are currently reviewed jointly as part of the Core Energy Efficiency Program. *See Electric and Gas Utilities*, Order No. 25,747 (December 31, 2014) (approving 2015-2016 Core programs); *Electric and Gas Utilities*, Order No. 25,462 (February 1, 2013) (approving 2013-2014 Core programs); *Electric and Gas Utilities*, Order No. 25,189 (December 30, 2010) (approving the 2011-2012 Core programs and listing, at page 21, the Commission's energy efficiency orders from 2001 through 2009). As detailed in Section I, above, however, several studies have concluded that additional opportunities for cost-effective energy efficiency exist beyond those attained through the Core program. Accordingly, we opened this docket to consider ways to transition from the Core program to an EERS. The Commission's general supervisory and ratemaking authority, historic energy efficiency program management, and legislative policy pronouncements, provide an adequate legal framework for the creation and financing of the next generation of energy efficiency measures.

B. Settlement Agreement

Pursuant to RSA 541-A:31, V(a), informal disposition may be made of a contested case at any time prior to the entry of a final decision or order, by stipulation, agreed settlement, consent order, or default. We encourage parties to settle issues through negotiation and compromise because it is an opportunity for creative problem solving, allows the parties to reach a result in line with their expectations, and is often a better alternative to litigation. *Granite State Electric Co.*, Order No. 23,966 at 10 (May 8, 2002); *see* RSA 541-A:31, V(a) ("informal disposition may be made of any contested case … by stipulation [or] agreed settlement"). Even when all parties join a settlement, however, we must independently determine that the result comports with "applicable standards." *EnergyNorth Natural Gas, Inc. d/b/a National Grid NH,* Order No. 24,972 at 48 (May 29, 2009). We analyze settlements to ensure that a just and reasonable result has been reached. *Id.*; *see* N.H. Code Admin. Rules Puc 203.20(b) ("The commission shall approve a disposition of any contested case by stipulation [or] settlement … if it determines that the result is just and reasonable and serves the public interest.").

Based on the record, the terms of the Settlement Agreement appear to be consistent with applicable law, because they will reduce market barriers to investment in cost-effective energy efficiency investment, provide incentives for appropriate demand-side management, and not reduce cost-effective consumer conservation. *See Electric Utility Restructuring,* Order No. 23,574 (Nov. 1, 2000) at 10 (citing the requirements of RSA 374-F:3, X).

The record supports a finding that cost-effective energy efficiency is a lower cost resource than other energy supply.[10] In addition, over the past 14 years the Commission has used a cost effectiveness, or cost benefit, test for energy efficiency measures in the Core energy efficiency programs. The cost benefit test calculates the cost of acquiring and installing an energy efficiency measure, spread over the expected useful life of the measure, and compares that cost to the cost of the energy saved, or the energy supply avoided, over the expected useful life of the measure. Using the cost benefit test in the Core programs, the Commission has approved numerous Core energy efficiency measures where the cost of the measure is less than the cost of the avoided energy supply.

For avoided costs of supply, we rely on the *Avoided Energy Supply Costs in New England: 2015 Study* (March 27, 2015, revised April 3, 2015) prepared by TCR Group for the Avoided Energy Supply Component (AESC) Study Group (AESC 2015 study) and used in the Core programs to evaluate cost effectiveness.[11] The AESC 2015 study indicates that direct avoided retail electric costs are approximately $0.11 per kWh on a 15-year levelized basis. *See* *2016 New Hampshire Statewide Core Energy Efficiency Plan,* Docket No. DE 14-216, Hearing Exhibit 5 at 20 (December 15, 2015). For the costs of energy efficiency, we use both the utilities' and the customers' costs. The Joint Utilities calculated the utilities' costs of energy efficiency to be $0.030 per kWh saved over the life of the measure. *See* Exh. 3 Joint Utilities at

[10] *See* Exh. 2 Sustainable Energy Group at 5 and Attachment 1; Exh. 3 Joint Utilities at 32; and Exh. 5 Acadia Center at 1.
[11] The Commission takes administrative notice of this analytical tool used in the Core Docket, DE 14-216 pursuant to Puc 203.27 (a)(2) (notice of relevant portion of the record in other proceedings).

32. The customer costs are currently estimated in the Core programs as $0.02 per kWh saved over the life of the measure.[12] Based on the experience with the Core programs, even with the customer costs added to the utilities' costs of energy efficiency, the total costs of energy efficiency are less than the costs of supply. *See id.* at 22, 30, 35 and 40.

As discussed above, the Commission has consistently imposed a cost-effectiveness test before including energy efficiency measures in the Core Programs. Cost effectiveness is a statutory requirement for least cost planning. We will continue to require that all measures used to achieve an EERS meet cost-effectiveness tests. By ensuring that EERS measures are cost effective, we remain consistent with the Legislature's mandate that the Commission prioritize energy efficiency and demand-side supply resources in order to provide the lowest reasonable cost energy supply to customers, RSA 378:37 and :39, and with New Hampshire's Energy Policy, as well as the requirement to set just and reasonable rates, RSA 378:7.

The parties asserted that energy efficiency has a multitude of customer benefits, including lower utility bills now and in the future, improvements in comfort, health, and safety, more customer control and understanding of energy use, increased reliability of the grid and avoidance of new generation capacity, and job creation and reduced pollution. *See* Exh. 5 Acadia Center at 1; Exh. 2 Sustainable Energy Group, Attachment at 1; Exh. 3 Joint Utilities at 38 and 46; Exh. 4 Staff at 14; Exh. 8 Sustainable Energy Group at 8; and Exh. 11 The Way Home at 9. While those benefits have not yet been quantified by the Commission for New Hampshire, we will monitor the cost effectiveness of the energy efficiency measures installed under the EERS and will review the results of the EERS over time to determine its effect on customers.

---

[12] The estimated customer costs include kilowatt-hour savings for electric programs, and MMBtu savings – converted to kilowatt-hour-equivalent savings – for gas programs.

In addition to the cost effectiveness of the EERS measures, we must consider the impact on customers of funding the EERS through the SBC and LDAC. The Settlement quantifies the increases to the SBC for each electric utility. It also estimates the corresponding bill impacts for average users. The bill impact calculations do not take into account customer savings due to energy efficiency programs. The SBC and bill impact estimates are as follows.

- The SBC for Eversource will increase from the current rate per kWh of $0.00330 to $0.00383 in 2017, $0.00488 in 2018, $0.00631 in 2019, and $0.00850 in 2020. Exh. 1 at 22. The impact of those increases on an average residential customer using 625 kWh per month[13] will be $0.33 in 2017, $0.65 in 2018, $0.90 in 2019, and $1.37 in 2020. *Id*. The impact of those increases on an average General Service customer using 10,000 kWh per month will be $5.34 in 2017, $10.41 in 2018, $14.34 in 2019, and $21.88 in 2020. *Id*.
- The SBC for Liberty electric customers will increase from $0.00330 to $0.00381 in 2017, $0.00480 in 2018, $0.00615 in 2019, and $0.00825 in 2020. Exh. 1 at 23. The impact of those increases on an average residential customer using 625 kWh per month will be $0.32 in 2017, $0.61 in 2018, $0.85 in 2019, and $1.31 in 2020.[14] *Id*. The impact of those increases on an average Liberty General Service customer using 10,000 kWh per month will be $5.13 in 2017, $9.83 in 2018, $13.58 in 2019, and $20.94 in 2020. *Id*.
- The SBC for UES will increase from $0.00330 to $0.00384 in 2017, $0.00486 in 2018, $0.00626 in 2019, and $0.00841 in 2020. Exh. 1 at 24. The impact of those increases on an average residential customer using 625 kWh per month will be $0.34 in 2017, $0.64 in

[13] We recognize that the Settlement calculates bill impacts using 625 kWh per month for Residential customer usage and 10,000 kWh per month for General Service customer usage, and the Staff used different average usage to calculate the bill impacts in their proposal. Staff used 700 kWh per month for residential usage and 7,000 for commercial/industrial usage. *See* Exh. 4 Staff at 45-46. We note that the Joint Utilities used the same usage that we use in this order to calculate bill impacts. *See* Exh. 3 Joint Utilities Attachment 1, at 70.
[14] Settlement Electric Attachment A, revised page 7 of 10 (Bates page 23), *also* Liberty's response to Record Request 1 (July 27, 2016).

2018, $0.88 in 2019, and $1.34 in 2020. *Id*. The impact of those increases on an average UES General Service customer using 10,000 kWh per month will be $5.41 in 2017, $10.17 in 2018, $14.01 in 2019, and $21.51 in 2020. *Id*.

- The SBC for NHEC will increase slightly less than the SBC increases for the other electric utilities, because NHEC will not recover lost revenues. Specifically, NHEC's SBC will increase from $0.00330 to $0.00376 in 2017, $0.00459 in 2018, $0.00575 in 2019, and $0.00759 in 2020. Exh. 1 at 25. The impact of those increases on an average residential customer using 625 kWh per month will be $0.29 in 2017, $0.52 in 2018, $0.72 in 2019, and $1.15 in 2020. *Id*. The impact of those increases on an average NHEC General Service customer using 10,000 kWh per month will be $4.60 in 2017, $8.30 in 2018, $11.60 in 2019, and $18.40 in 2020. *Id*.

The Settlement also quantifies the increases to the LDAC by utility as follows.

- The LDAC for Liberty gas will increase from $0.0585 to $0.0643 in 2017, $0.0724 in 2018, $0.0817 in 2019, and $0.0907 in 2020. Exh. 1 at 27. The monthly impact of those increases on an average residential customer using 783 therms per month will be $0.38 for 2017, $0.53 for 2018, $0.60 for 2019, and $0.59 for 2020. *Id*. For an average Commercial and Industrial customer using 8,773 therms, the monthly impact will be $2.22 for 2017, $2.98 for 2018, $3.42 for 2019, and $3.30 for 2020. *Id*.
- The LDAC for Northern will increase from $0.0297 to $0.0347 in 2017, $0.0405 in 2018, $0.0466 in 2019, and $0.0576 in 2020. *Id*. The monthly impact of those increases on an average residential customer using 783 therms per month will be $0.33 for 2017, $0.38 for 2018, $0.40 for 2019, and $0.72 for 2020. *Id*. For an average Commercial and

Industrial customer using 8,773 therms, the monthly impact will be $0.96 for 2017, $1.13 for 2018, $1.18 for 2019, and $2.12 for 2020. *Id*.

In approving the EERS as proposed, we are mindful of and do not take lightly the short-term increases in customer rates. When considered in the context of the benefits of increased energy efficiency, participating electric and gas customers will spend less on energy usage and, in the long run, all customers will spend less on energy supply. As suggested by the parties, other benefits could result from increased energy efficiency, but our decision does not rest on that possibility. Instead, our approval of the Settlement Agreement's rate increases is based on a record developed over the course of a year following a year-long investigation by the Staff of EERS potential, both of which were contributed to by numerous experienced and knowledgeable stakeholders and experts. Also, we note in making our decision, the support of the Settlement Agreement by the diverse parties, including the Consumer Advocate, The Way Home, and others. The record and support by parties with diverse interests, along with the customer-protection measures built into the EERS framework, as described below, give us confidence that any short-term rate impacts will be outweighed by the benefits to customers, the grid, and the New Hampshire economy. In addition, we note that our approval of the Settlement Agreement is only the beginning of the EERS; the Commission will oversee the development of the specific EERS programs and their subsequent implementation to ensure that the energy efficiency programs funded by customers are indeed the least-cost resource available to the Joint Utilities' customers.

1. Program Administration

The Joint Utilities have direct relationships with their customers, who may need help and support in making efficiency investment decisions, and the Joint Utilities have direct access to customer consumption data and technical resources in New Hampshire and neighboring jurisdictions. In addition, the Joint Utilities have demonstrated a commitment to energy efficiency and have a history of award-winning management and delivery of the Core programs. They also have infrastructure and market-participant relationships in place to quickly scale up programs to meet increased savings goals. Consequently, at least for the first triennium, the Joint Utilities are a logical choice for the role of administrator within an EERS framework.

2. Savings Targets and Planning Periods

In the last decade, several New Hampshire specific studies have identified energy efficiency savings potential. Although those studies are somewhat dated,[15] based on the record, we find that they provide a reasonable sense of the achievable, cost-effective efficiency savings potential in New Hampshire, for the purpose of approving the EERS framework. *See* Exh. 4 Staff at 15; and Exh. 8 Sustainable Energy Group at 15-16. The short-term savings goals recommended by the Settlement Agreement are reasonably consistent with those studies and also fall within the range of savings recommended by the various parties in this proceeding, who represented diverse interests. In addition, setting a long-term qualitative goal of ultimately achieving all cost-effective efficiency savings as recommended by the Settlement Agreement follows the recommendations of the New Hampshire specific studies and allows flexibility to set that goal in the context of the market conditions that develop over time within the EERS structure.

Consequently, we approve the proposed EERS savings goals for the first triennium of the EERS as a percentage of 2014 statewide delivered sales: 0.80% for electric and 0.70% for gas in 2018; an additional 1.0% for electric and 0.75% for gas in 2019; and an additional 1.3% for electric and 0.80% for gas in 2020. Those statewide savings goals are cumulative and are

[15] GDS Report (January 2009) and the VEIC Report (November 2013)

intended to reach overall savings of 3.1% of electric sales and 2.25% of gas sales, relative to the baseline year of 2014, by the end of 2020. We also approve the recommendation to continue the Core programs in 2017, with adjustments to funding and savings goals as provided in the Settlement Agreement, in order to allow adequate time for careful and thoughtful planning for implementation of the first EERS triennium. Specifically, the 2017 Core-extension savings goals shall be 0.60% of 2014 statewide delivered sales for electric and 0.66% of 2014 statewide delivered sales for gas.

We agree with and approve the Settling Parties' recommendation to use three-year planning periods instead of the two-year periods used in Core. Three years is long enough to afford more stability and continuity in program delivery, which will help customers and other stakeholders plan their efficiency investments, but not so long as to limit the Commission's flexibility to adjust savings targets in response to changes in market conditions or other developments during that time Also, using three-year periods aligns the EERS with industry practice and is consistent with the planning periods used previously for the gas efficiency programs. *See, e.g.*, *Northern Utilities, Inc*., Order No. 24,630 at 7 (June 8, 2006) (order approving a three-year plan refers to the prior three year program cycle).

3. Costs and Funding

The proposed costs of achieving the short-term goals recommended by the Settlement Agreement appear to be just and reasonable as well as consistent with the recent legislative mandate to consider energy efficiency a first-priority supply resource. We take note of the Settling Parties' proposal to increase the low-income program budget. At a time of uncertainty about the future of energy supply in the New England region and consistent with legislative directive in RSA 374-F:3, V (Commission shall "enable residential customers with low incomes to manage and afford essential electricity requirements"), we find this proposal to be appropriate. Moreover, increasing low-income efficiency funding and activities should free up some of the low-income financial assistance also collected through the SBC and LDAC, because those customers' energy consumption will decrease.

While rates may increase slightly for all customers in the short-term in order to recover the costs of an EERS, customer bills will decrease when their energy consumption decreases as well as when the impact of consumption decreases are reflected in reduced grid and power procurement costs. *See, e.g.*, Exh. 2, Sustainable Energy Group Attachment at 2 and at 3-4. While the cost benefit tests ensure benefits to all customers, it is true that those who participate in efficiency programs are likely to benefit most. They will receive immediate benefits from bill reductions, improved comfort, and higher home or business value. Those advantages are in addition to the utility system benefits enjoyed by all customers. In return, however, customer participants must invest time and take full advantage of financial incentives or technical assistance, and they often must pay additional out-of-pocket expenses. Non-participating customers enjoy the benefits from load and system improvements. *See Granite State Electric Company*, Order No. 20,362, 76 NH PUC 820, 823 (1991). In addition, the efficiency programs will reduce emissions and may reduce utility revenue requirements through reduced operation and maintenance (O&M) expenses. Further, the availability of the direct benefits from participation, coupled with broad-based programs, should send a signal to all customers and encourage broad participation in the programs.

The record supports our finding that the EERS, and the energy efficiency market needed to support it, requires stable funding to grow and function optimally. *See* Exh. 3 Joint Utilities Petition at 48; and Exh. 2, Sustainable Energy Group Attachment at 2. The SBC and the LDAC are stable sources of revenue, and using ratepayer funds to achieve the public benefits of cost-effective energy efficiency is just and reasonable. Although the total funding collected under the RGGI program could cover a good portion of the incremental costs associated with EERS' increased savings goals, at this time, access to those funds for energy efficiency is limited by statute. *See* RSA 125-O:23.

Also at this time, private funding is limited and not as stable and reliable as the SBC and LDAC, and private funding alternatives have not been adequately investigated. *See* Exh. 3 Joint Utilities Petition at 6, 48, and 51-52; and Sustainable Energy Group Exh. 2, Attachment at 11-12; Exh. 5 Acadia Center at 7; and Transcript at 83-84 *see also* 2015-2016 Core Plan (DE 14-216) (includes a few new and relatively-new private financing programs). As seen in other jurisdictions, private funding increases following increased public funding of an EERS.[16] We note the Settling Parties' commitment to continue the work started in the Core programs to nurture and expand private funding options. Private funding should continue to be used to the greatest extent possible to fund the EERS programs. We will look to the plan for the first EERS triennium to describe those efforts and any new private funding proposed or under consideration for the future.

The SBC was established by the Legislature as part of electric restructuring. *See* RSA 374-F:4, VIII. The Commission has not increased the SBC since the inception of the Core programs in 2001. *Id*. Failing to increase the funding to support higher savings goals at this time not only fails to provide the Joint Utilities' customers with viable and proven options for energy

[16] Exh. 2 Sustainable Energy Group at 11 "Studies of financing programs have concluded that combining financing with traditional rebates and incentives leverages deeper savings and broader participation" (citations omitted), Exh. 4 Staff at 86. "In some markets program administrators have begun to tap secondary markets and a number of transactions have taken place representing a total volume of $400 million" and at 89 "Observers believe that when these conditions are met, lower cost capital may become available which will result in lower interest rates for customers.")

at least cost, but also fails to capture other benefits for customers. The Commission's oversight, and the requirement that all programs meet a cost-effectiveness test that projects greater benefits than costs over the life of the measures, ensures that the programs and spending of ratepayer funds are just, reasonable, and least cost. Therefore, we approve the proposal to fund the EERS through increases to the SBC and LDAC as proposed in the Settlement Agreement. We note that, when the three-year EERS plans are filed, we will review in advance and approve that spending only to the extent that it is just, reasonable, and least cost.

4. Recovery of Lost Revenues

With increased energy savings comes decreased utility revenues due to standard rate design, which recovers costs through a variable, or consumption-based, rate. The lost revenue adjustment mechanism (LRAM) recommended by the Settlement Agreement enables the Joint Utilities (except NHEC) to recover the portion of their authorized revenue requirement lost due to energy efficiency activities. The LRAM is not designed to increase the revenues recovered by the utilities, and lost revenues are not considered a cost for the purpose of the cost/benefit test used to assess efficiency programs in the Core or within the EERS. Specifically, without the LRAM, or a change in the way rates are designed today, the utilities may lose revenue that the Commission has already determined in the utility's rate case is just and reasonable for them to recover. Consequently, we approve the LRAM as proposed.

Nonetheless, we are mindful that, with an LRAM, the utilities' revenues can increase above their authorized revenue requirements from increased sales, and, for that reason and others, some parties prefer decoupling. This is because decoupling provides a reconciliation to the last-approved revenue requirement (*i.e.*, in the case of a utility collecting more revenue than its last-approved revenue requirement, the utility would be required to prospectively credit customers for any such over-collection). We note that our approval of the LRAM does not limit our subsequent consideration and approval at any time of a different lost revenue recovery mechanism, and that the Joint Utilities (except NHEC) are required to seek approval of a decoupling or other lost-revenue recovery mechanism as an alternate to the LRAM in their first distribution rate cases after the first EERS triennium, if not before.

5. Performance Incentives

The Commission has used performance incentives successfully in the Core programs to encourage utility investment in energy efficiency. In light of the addition of an LRAM, we agree with the Settling Parties' recommendation to reduce the level of performance incentives available to the Joint Utilities under an EERS. The recommended levels are sufficient to provide a reasonable incentive to pursue exemplary performance in program administration and delivery and to put efficiency investment on an equal footing with other earnings opportunities available to the Joint Utilities.

In addition, the recommended performance incentive level is less likely to provide excessive earnings and is more commensurate with the lower risk of investing in efficiency.

6. Stakeholder Involvement

Involving energy service stakeholders in the development and implementation of the EERS is important, because they are directly connected to the provision of energy and efficiency services. The active participation in the EERS of Settling Parties, who include representatives of the Joint Utilities, Commission Staff, DES, consumer advocates like the OCA and NHLA, efficiency experts and service providers, brings different knowledge, experience, and perspectives. New Hampshire is fortunate to have so many stakeholders who are invested in the success of energy efficiency and the EERS; their contributions and collaboration in this proceeding produced a more robust result. As economy wide involvement in energy efficiency measures will yield the best results, we encourage fuller participation of the New Hampshire business community going forward.

We appreciate the Joint Utilities' access to counterparts and expertise in other jurisdictions that lead the nation in the provision of energy efficiency services and encourage further interactions. To enable the well-informed contribution of the non-utility stakeholders in work required in the future to assure success of the framework we establish today, we approve the Settling Parties recommendations related to the retaining and funding of a planning consultant, an EM&V oversight consultant, and the EM&V studies consultants.

The EESE Board is a collection of diverse energy stakeholders, and its involvement in the EERS planning and implementation, as recommended by the Settling Parties, is appropriate. To fulfill that advisory role, the EESE Board requires technical resources consistent with the Settlement.

7. Evaluation, Measurement and Verification

We approve the EM&V proposals contained within the Settlement Agreement. Rigorous and transparent EM&V is essential to a successful EERS, to ensure that the efficiency programs actually achieve planned savings in a cost-effective manner. The addition of the EESE Board and additional expert resources to the EM&V proposed for the EERS will protect customers through consistent and fair assessment of program performance and cost effectiveness. Moreover, a Technical Resource Manual that meets New Hampshire needs, as proposed by the Settlement, will enable EM&V transparency, consistency, and accuracy.

8. Regulatory Process

We approve the Settling Parties' recommendations for an EERS process, including the pre-filing collaborative preparation of a plan for the first triennium with the assistance of a planning expert. We agree that such a process will likely result in a more efficient and less adversarial adjudicative proceeding following the plan's filing for Commission review and approval. An abbreviated annual plan update process during the trienniums, like the process we currently use for the Core dockets, is appropriate and will enable the stakeholders some flexibility to respond to developments in the energy efficiency market during that time.

In addition, we approve the annual process proposed for setting and reconciling the LRAM as described in the Settlement Agreement and the Joint Utilities EERS proposal. In calculating lost revenue, savings shall be adjusted to account for retirements, the actual timing of efficiency-measure installation, and the results of EM&V studies. Total lost revenues shall be capped at 110 percent of planned annual savings, audited by an independent third party, and recovered through an adjustment to the SBC or LDAC, depending on the utility.

9. Implementation Date

We approve the Settling Parties' recommendation to begin implementation of the EERS on January 1, 2018.[17] We recognize the Settling Parties' significant investment of time and resources during the last two years to reach this point in the development of an EERS framework, and we appreciate their willingness to continue their work to carefully and thoughtfully prepare a specific and detailed plan within that structure.

[17] An implementation date of January 1, 2018 for an EERS complies with the Legislative directive in HB 2 that, "[f]or the biennium ending June 30, 2017, the public utilities commission shall not expend any funding on the implementation of an energy efficiency resource standard without prior approval of the fiscal committee of the general court." N.H. Laws of 2015 ch. 276:223..

10. Beyond Implementation

We appreciate the foresight of the various parties who offered recommendations for the future of the EERS. Nonetheless, we defer any judgment on the merits until such time as specific proposals are presented for our review and approval.

Although not covered in the Settlement Agreement, Integrated Resource Plans are a critical component to the success of an EERS. IRPs are planning studies produced by electric and gas utilities to determine resource needs over a given planning period. The planning period is generally between 10 and 20 years. Methodologies used in the studies vary, but are intended to produce the least-cost, least-risk resource balance. Typically, the utility performs a number of studies as part of an IRP including a customer energy and peak demand forecast. To plan for achieving the EERS savings goals and confirm that its efficiency programs are least cost, the IRP should also include an energy efficiency market potential study and should model the inclusion of energy efficiency on a similar basis to supply-side resources or market purchases. Within six months of this order, Staff and the utilities shall meet to discuss and refine the IRP requirements.

V. CONCLUSION

Our establishment today of Energy Efficiency Resource Standards for electricity and gas is both routine and remarkable. It is routine, as we have long required our utilities to help their customers save money by using less electricity and gas. The State’s 10-year energy strategy, developed under RSA 4-E:1 and crafted with the input of consumer groups, environmental advocacy organizations, utilities, and others, also calls for increased energy efficiency throughout all sectors of the economy. The Core energy efficiency programs have given the utilities 14 years of experience with developing and implementing cost-effective programs and the EERS will build on that foundation.

At the same time, the establishment of an EERS is remarkable as it is based on the setting of savings targets, not dollars spent. It is the product of extensive investigation by Staff and collaboration between and among diverse groups of stakeholders. The framework that they developed together and that we approve in this Order will move the State forward, toward specific annual savings goals to achieve objectives set out in the 10-year State Energy Strategy consistent with Legislative directives.

Energy prices have been the subject of public discussion and debate for many years. The EERS is a significant step toward addressing the business community's concerns about remaining competitive in today's economy. The development of specific, cost-effective programs to implement this framework will require the robust participation of stakeholders, including those in the commercial and industrial sectors. Those who choose to participate in the energy efficiency programs that will be developed to meet the EERS targets will see reduced gas and electric bills, and all utility customers should see reduced costs for electric and gas supply in the long run.

We recognize that low income customers face greater hurdles to investment in energy efficiency than other customer. We have therefore approved increased funding for low income energy efficiency programs as recommended by the settling parties. We agree that these changes are appropriate in order to comply with legislative directives and to reduce energy consumption for those customers who need it most.

Based upon the foregoing, it is hereby

ORDERED, that the Settlement Agreement is approved; and it is

FURTHER ORDERED, that the Joint Utilities, except NHEC, shall include in their future IRPs an energy efficiency market potential study and shall model the inclusion of energy efficiency on a similar basis to supply-side resources or market purchases.

By order of the Public Utilities Commission of New Hampshire this second day of August, 2016.

Martin P. Honigberg Chairman	Robert R. Scott Commissioner	Kathryn M. Bailey Commissioner

Distribution Service Rate Case

REBUTTAL TESTIMONY

OF

GREGG H. THERRIEN

January 25, 2018

THIS PAGE INTENTIONALLY LEFT BLANK

TABLE OF CONTENTS

THIS PAGE INTENTIONALLY LEFT BLANK

I. INTRODUCTION

Q. Please state your name, address, and position.

A. My name is Gregg H. Therrien. I am an Assistant Vice President with Concentric Energy Advisors, 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts 01752. My professional qualifications and experience have been provided in Attachment GHT/DECPL-11 to my Direct Testimony filed April 28, 2017.

Q. Have you testified previously before the New Hampshire Public Utilities Commission ("PUC" or the "Commission")?

A. No, I have not.

Q. Did you participate in the PUC technical sessions in the instant case?

A. Yes. I participated in both the August 24, 2017, and November 1, 2017, technical sessions at the Commission's office.

Q. What is your responsibility in this proceeding?

A. In this proceeding, I am responsible for: (1) designing the Revenue Decoupling Mechanism (direct Decoupling Testimony of Gregg H. Therrien) and (2) together with Company Witness David Simek, developing the rate design (direct Joint Rate Design Testimony of David B. Simek and Gregg H. Therrien) for Liberty Utilities (EnergyNorth Natural Gas Corp.) d/b/a Liberty Utilities ("EnergyNorth" or the "Company").

II. <u>SCOPE OF REBUTTAL TESTIMONY</u>

Q. Please summarize the scope of this rebuttal testimony.

A. In this testimony, I:

1) Reaffirm why full revenue decoupling, inclusive of weather and economic adjustment, is superior to Commission Staff ("Staff") witness Mr. Iqbal's proposed weather-normalized limited Revenue Decoupling Mechanism ("RDM");
2) Respond to Mr. Iqbal's five other proposed changes to the Company's decoupling proposal;
3) Respond to the Office of Consumer Advocate's ("OCA") proposed modifications to the Company's decoupling proposal, including the proposed "real-time" adjustment;
4) Rebut the OCA's position that the RDM should be calculated on a total revenue basis rather than on a per-customer basis;
5) Rebut the OCA witness Dr. Johnson's assertions that decoupling improves earnings;
6) Rebut both Staff and OCA witnesses' recommendation for inclining block rate design and lower customer charges; and
7) Respond to Staff witness Mr. Frink's recommended changes to the Low-Income Discount Program.

Q. Please summarize your conclusions and recommendations.

A. My conclusions and recommendations are as follows:

As stated in my Direct Testimony, the decoupling rate design measures that the Company is proposing:

- Will allow the Company to remain an effective champion of energy efficiency initiatives without the financial disincentives that currently exist;
- Will comport with the State of New Hampshire's vision in its 2014 State Energy Strategy, which recognized that "[r]ealigning utility incentives to reward utilities for investing in efficiency is a necessary part of any effort to increase efficiency in New Hampshire"; [1]
- Will realize the vision crafted by the Settling Parties in the Energy Efficiency Resource Standards ("EERS") docket[2] by producing equitable ratemaking beyond the interim Lost Revenue Adjustment Mechanism ("LRAM") that fully supports the goals, and enable full acceptance of the energy savings initiatives envisioned in the Settlement Agreement; and
- Will fix a flaw in the traditional ratemaking methodology that does not allow utilities a reasonable opportunity to earn a reasonable return when customer usage is declining.

---

1 New Hampshire 10-Year State Energy Strategy, published by the New Hampshire Office of Energy & Planning September 2014. Executive Summary, page ii.

2 The "Settling Parties" as defined in the Settlement Agreement approved in Docket No. DG 15-137, dated August 2, 2016, include: Commission Staff; Liberty Utilities (Granite State Electric) Corp.; Unitil Energy Systems, Inc.; Public Service Company of New Hampshire d/b/a Eversource Energy; the New Hampshire Electric Cooperative, Inc. Liberty Utilities (EnergyNorth Natural Gas) Corp.; Northern Utilities, Inc.; the Office of the Consumer Advocate; the Department of Environmental Services; the Office of Energy and Planning (OEP); New Hampshire Community Action Association; The Way Home; the Conservation Law Foundation; The Jordan Institute; Acadia Center; the New Hampshire Sustainable Energy Association; the New England Clean Energy Council; the NH Community Development Finance Authority; and TRC Energy Services.

Further, as discussed in detail in this Rebuttal Testimony, I conclude and recommend that:

- Staff's proposed limited decoupling mechanism is not in the best interests of customers as it does not sever the relationship between sales volumes and revenues, thus limiting the effectiveness of decoupling. As a result, Staff's proposal does not maximize the benefits of decoupling envisioned in the EERS Settlement.
- 67 U.S. gas distribution companies have implemented RDMs in 29 different states; decoupling has become the mainstream regulatory framework in support of energy efficiency goals. The majority of these RDMs are constructed the same as the Company's proposal.
- The Company agrees with the OCA that a real-time RDM is better for customers in matching the impact of weather on bills, and is mutually beneficial to customers and the Company's cash flows. The Company does not, however, agree with OCA that a "Total Revenue" RDM is appropriate for EnergyNorth, because the Company has experienced dramatic growth in customers in recent years, which is forecasted to continue. Ignoring the revenue requirement associated with new customer additions is contrary to the Commission's approved natural gas expansion policy, evidenced through the approved Managed Expansion Program "MEP" and associated expansion rates.
- Inclining block delivery rates alone do not send a significant price signal to encourage conservation. This change would undermine long-standing rate design

principles such as cost causation. Further, the Commission should approve the Company's proposal to align Residential Non-Heating and Residential Heating fixed customer charges considering the significant shortfall in these rates compared to the results of the Marginal Cost Study ("MCS")[3].

- The Staff's proposal to modify the Low-Income Discount Program should be deferred. The Company respectfully requests that the Commission reject this change in the instant proceeding and open a separate generic docket to fully evaluate any change (if necessary) to this important program.

Q. How is the remainder of your testimony organized?

A. Section III of this testimony addresses decoupling issues raised by Staff and the OCA, and where appropriate, rebuts assertions made by these Parties. Section IV specifically addresses rate design issues. Section V will address Staff's recommended changes to the Low-Income Program. Finally, Section VI summarizes this rebuttal testimony.

III. DECOUPLING

A. Summary of Staff's Recommendations

Q. Please describe the six modifications to the Company's RDM proposed by Staff.

A. Staff proposed the following six modifications to the Company's RDM proposal:

1) The adjustment should be based on weather normalized revenues.

[3] In the case of Residential rates, the MCS results are approximately three times higher than current monthly customer charges.

2) The adjustment should be performed at the rate class level (instead of at the company level).

3) Expected revenue should be calculated at individual rate class level, not at combined rate class level.

4) Expansion rate customers should be included in the RDM calculation.

5) Annual RDM adjustments should be capped at +/- 2 percent.

6) No mid-period adjustment should be made; if needed, an adjustment could be made at the time of Company's next rate case.4

Q. Please summarize the Company's response to Staff's recommendations.

A. As explained in detail below, the Company strongly disagrees with Staff's recommendation that the RDM adjustments should be based on weather normalized revenues. The Company accepts Staff's recommendation Nos. 2 and 3 related to the method of calculating the RDM accrual and the RDM billing rate. The Company does not oppose Staff's recommendation No. 4 to include expansion rate customers in the RDM, with certain exceptions. EnergyNorth disagrees with Staff's proposals Nos. 5 and 6 to cap the annual RDM adjustment at +/- 2 percent and eliminate the mid-period adjustment.

---

[4] Direct Testimony of Al-Azad Iqbal ("Iqbal Testimony") dated November 30, 2017, Bates 000010.

B. Staff's Proposal to Exclude Weather Variation from the RDM

Q. Please explain why you disagree with Staff's recommendation to use weather-normalized revenues in the RDM.

A. There are four main areas of disagreement with Staff's direct testimony. First, I disagree that decoupling should be limited solely to company-funded conservation programs. Second, I will rebut the assertion that that the Company's proposal "also eliminates all risk except the risk of management efficiency." Third, I will clarify and explain that the clear majority of RDMs across the country include weather variation in the RDM true-up calculation, either by using actual revenues per customer or a separately billed Weather Normalization Adjustment ("WNA"). Fourth, I add additional context to Staff's interpretations of past Commission guidance regarding decoupling.

1. Scope of the Company's RDM proposal

Q. Do you agree with Staff's assertion that the Company's proposal "is well beyond the efficiency and conservation related sales reductions"?

A. No, I do not. Staff stated, "The Company's proposal adjusts for all impacts on revenue (e.g., the economy, energy efficiency, weather etc.) which is well beyond the efficiency and conservation related sales reductions."[5] Staff's proposal limits reconciling changes in sales related to utility-funded conservation programs only, and ignores other energy efficiency and conservation actions customers and other stakeholders take to reduce gas

5 Id., Bates 000011, lines 16 through 16.

consumption. In my direct testimony I cite five contributors to declining use per customer:

1) Utility-sponsored Energy Efficiency ("EE")/Demand-Side Management programs;
2) Customer self-funded conservation measures;
3) Improvements in appliance efficiencies and building code requirements;
4) Consumer responsiveness to increases in natural gas prices and/other economic and demographic factors; and
5) A warmer normal weather trend.[6]

Referring to the above list, items 1), 2), and 3) are unambiguously directly related to energy efficiency, and 4) customer price responsiveness, is (short term reversible) conservation-related when customers are responding to price increases. Item 5) is a clear trend that reduces customer usage. Staff's recommendations focus entirely on contributor 1).

Q. Does the OCA support a decoupling mechanism that encompasses all contributors to the variation in sales?

A. Yes. Although the testimony of Dr. Johnson recommended two modifications to the Company's proposal that I will address later in this testimony, he did not propose to eliminate the impact of weather, or any other variable that contributes to the consumption of gas volumes. In his testimony Dr. Johnson wrote:

[6] Direct Testimony of Gregg H. Therrien ("Therrien Testimony"), Bates 305.

> **Q. Is the proposed decoupling mechanism an improvement over the existing LRAM?**
> A. Yes. It does a better job of removing the disincentive for EnergyNorth to encourage energy conservation, while eliminating the bias in favor of programs and initiatives included in the LRAM.[7]

Dr. Johnson also asserted that:

> Decoupling achieves a broader, more fundamental shift in incentives, because revenues become largely impervious to improvements in energy efficiency – including improvements resulting from tightened building codes, increased appliance standards, technology improvements, heightened awareness of greenhouse gas emissions, and other factors. This broader scope is significant, because EnergyNorth can potentially influence the decisions by customers and the companies that construct new buildings concerning what insulation they install, what appliances they purchase, and what type of energy they use. Currently, EnergyNorth has an incentive to steer customers into the programs and initiatives included in the LRAM, rather than finding other ways to reduce their energy usage that are not tied to those specific programs.[8]

Dr. Johnson's assertions are instructive as to how the Company, together with supportive Commission policy, can enhance energy efficiency. In this regard, full decoupling is the means to this broader scope without penalizing the Company.

---

[7] Direct Testimony of Ben Johnson, PH.D. ("Johnson Testimony"), dated November 30, 2017, Bates 9, line 20 through Bates 10, line 1.
[8] Id., Bates 000007, lines 7-17.

2. Business Risks

Q. Please describe Staff's assertions concerning the effect that an RDM would have on EnergyNorth's business risks.

A. Staff stated, "The Commission was also concerned with the potential for risk shifting via decoupling. The Company's proposal adjusts for all impacts on revenue (e.g., the economy, energy efficiency, weather, etc.) which is well beyond the efficiency and conservation related sales reductions. It also eliminates *all risk* except the risk of management efficiency."[9] *(Emphasis added).*

Q. Does decoupling eliminate all risks except "management efficiency"?

A. No, it does not. Decoupling does not eliminate other, very real risks that gas utilities face, such as increased competition, regulatory risks, economic risks that affect the cost to serve (e.g., inflation), etc. These other exogenous risks, which are beyond the reasonable definition of "management efficiency," are not addressed through decoupling.

3. Weather Normalization and RDMs

Q. Is it common for RDMs to exclude weather from the calculation?

A. No. In fact, only three of the sixty-seven utilities with an RDM in the United States exclude the impact of weather in their RDM calculation. These include utilities in Colorado, Washington State, and Wyoming. Twenty utilities have separate WNA rate

9 Iqbal Testimony, Bates 000011 lines 13-17.

adjustments that complement their RDM, an alternative to including the impact of weather explicitly in the RDM. This is shown here:

Table 1: RDM Calculation Methodologies in the U.S.

Calculation:	Revenue Per Customer (RPC)			Total Revenue			PBR	
State	RDM using Actual Weather	RDM using normal weather and a separate WNA	RDM using normal weather and no WNA	RDM using Actual Weather	RDM using normal weather and a separate WNA	RDM using normal weather and no WNA	PBR (Includes Weather)	Total
AR	1				2			3
AZ		1						1
CA				1			3	4
CO			1					1
CT				1				1
GA							1	1
ID				1				1
IL	2			1				3
IN				2	1			3
LA					1			1
MA	6							6
MD	4			1				5
MI	1							1
MN	1			1				2
MS					1			1
NC	1			1				2
NJ		2						2
NV	1							1
NY	2	7		1	1			11
OR	1	1		1				3
RI	1							1
SC							1	1
TN		1						1
UT		1						1

VT							1	1
WA	2					1		3
WI	1							1
WY		1	1					2
Grand Total	27	14	2	11	6	1	6	67

As this table shows, almost all LDCs with an RDM also have a mechanism to reconcile for weather. Including a weather reconciliation in the RDM is the norm, not the exception.

4. Past Commission Orders

Q. What is Staff's interpretation of Commission policy regarding decoupling?

A. Staff's interpretation of Commission policy is that a limited decoupling mechanism is the Commission's preferred approach. Staff relied primarily on Docket No. DE 07-064, which pre-dates the EERS Settlement by nearly a decade, and was opened specifically to investigate energy efficiency rate mechanisms.[10] Although Docket No. DE 07-064 did discuss decoupling in the context of overall rate design, and contains high-level guidance regarding cost causation and the impact of rate design changes on certain rate classes,[11] the Order Resolving the Investigation is not a prescriptive document for implementing decoupling. Rather, the investigation set out to answer the following four questions:

1) whether existing rate treatment poses an obstacle to investment in energy efficiency;
2) whether a different rate treatment would promote such investment;
3) whether these issues should be pursued further in this docket, through utility-specific rate cases, as part of a rulemaking, or through some other procedure; and
4) whether decoupling constitutes an alternative form of regulation under RSA 374:3-a. Order No. 24,934 at 4 (January 16, 2009) ("the 2009 Order").

In the 2009 Order, the Commission concluded, "We find, therefore, that the best approach to implementing such rate mechanisms is on a company-by-company basis in the context

---

10 "On May 14, 2007, an order of notice was issued commencing this investigation into the merits of instituting, for electric utilities, appropriate rate mechanisms that would have the effect of removing obstacles to, and encouraging investment in, energy efficiency." Order No. 24,934 (January 16, 2009).

11 Iqbal Testimony, at Bates 000008.

of an examination of company specific costs and revenues inasmuch as each utility has a unique service territory and customer mix as well as company specific operating costs and rate base investment." 2009 Order at 19. Nowhere in that Order does the Commission state its preferred decoupling model. On pages 20 through 22 of the 2009 Order, the Commission did discuss "Rate Mechanism Options" including "Reconciling Rate Adjustments" (decoupling), but did not prescribe, or even suggest, that one option is superior to another. Rather, the Order states "*Regardless of the model used*, it would be appropriate to propose revenue decoupling in the context of a rate case in order to avoid single-issue ratemaking." (Emphasis added.)

Q. Did the EERS Settlement address decoupling?

A. Yes, in part. My Direct Testimony regarding decoupling described the key agreements regarding energy efficiency programs and related rate mechanisms for utilities in New Hampshire:

1) Extends the Core programs;

2) Requires implementation of a LRAM, commencing January 1, 2017 (capped at 110% of planned annual savings);

3) Contemplates the subsequent implementation of a decoupling mechanism to replace the LRAM;

4) Will implement the EERS commencing January 1, 2018;

5) Retains the Performance Incentive, with modifications;

6) Increases the low-income share of the overall energy efficiency budget; and

7) Includes other legal provisions.

The Commission approved the Settlement Agreement in Order No. 25,932 (August 2, 2016).[12]

Q. Please summarize the sections of the EERS Settlement that pertain to LRAM and decoupling.

A. Section II B. of the EERS Settlement, "Lost Revenue Adjustment Mechanism and Decoupling" codified the agreement among the Settling Parties as to when the LRAM must be implemented and when utilities may, in the context of a general rate case, propose a decoupling mechanism. The calculation of the LRAM is very explicit in the EERS Settlement – covering approximately two pages of the document. In contrast, decoupling is discussed in more general terms and consumes only one-half page in the EERS Settlement.

The EERS Settlement states:

> The Settling Parties agree that the LRAM for each utility will cease when a new decoupling mechanism, or another mechanism as an alternative to the LRAM, is implemented. The Settling Parties further agree that each of the Utilities shall seek approval of a new decoupling mechanism, or another mechanism as an alternative to the LRAM, in its next distribution rate case following the first triennium of the EERS, 20l8-2020. This provision does not, and is not intended to, prevent or preclude any of the Utilities from

12 Therrien Testimony, Bates 299.

> seeking approval of such mechanism prior to the end of the first triennium, but the Settling Parties acknowledge and agree that any utility seeking such approval shall do so in the context of a distribution rate case, consistent with the Commission's guidance in Order No. 24,934 (January 16, 2009). The Settling Parties agree that the Commission's approval of the Settlement Agreement does not in any way restrict the Commission from investigating or implementing decoupling, or another mechanism as an alternative to the LRAM, at any time.[13]

Q. Does the EERS Settlement address weather normalization or any aspect of how an RDM should be constructed?

A. No. The above excerpt is the entire content regarding decoupling in the EERS Settlement.

Q. Did the Commission approve the EERS Settlement?

A. Yes. The Commission approved the EERS Settlement in Order 25,932 (August 2, 2016) (the "2016 Order"). In the 2016 Order, the Commission first required utilities to implement an LRAM effective January 1, 2017, and recognized that some of the Settling Parties preferred decoupling. The 2016 Order states:

> We note that our approval of the LRAM does not limit our subsequent consideration and approval at any time of a different lost revenue recovery mechanism, and that the Joint Utilities (except NHEC) are required to seek approval of a decoupling or other lost-revenue recovery mechanism *as an alternate to the LRAM* in their first distribution rate cases after the first EERS triennium, if not before (*emphasis added).* [14]

13 EERS Settlement Agreement, page 5-6.
14 Order No. 25,932 (August 2, 2016), at 60.

Q. What can be concluded from the Commission's 2009 Order and 2016 Order regarding decoupling?

A. The 2016 Order clearly articulated the Commission's requirement for utilities to seek approval of something other than an LRAM. As with the 2009 Order, the Commission did not prescribe, endorse, or articulate any specific decoupling methodology, only that utilities should propose an RDM in the context of a general rate case.

C. Staff's remaining five recommended changes to the Company's proposed RDM

1. Staff Recommendations 2, 3, and 4.

Q. Please describe the second and third Staff recommendations to perform the RDM calculation at the rate class level, and the Company's response to Staff recommendations.

A. Staff's second recommendation is that the RDM adjustment should be performed at the rate class level (instead of the proposed RDM Rate Groups).[15] Staff's third recommendation is that expected RDM revenues should be calculated at the individual rate class level, not at combined rate class level.

The Company does not object to calculating the RDM adjustment (accrual) at the rate class level. Further, our understanding of Staff's testimony is that the resulting variances, at the rate class level, will be summed for the Commercial and Industrial ("C&I") classes for purposes of determining the RDM rate adjustment to be applied to customers' bills. Staff did not provide a recommendation as to whether Residential Non-Heating customers

[15] Therrien Testimony, Table 8: RDM Customer Groups, Bates 320.

should receive a separate billing rate from Residential Heating customers under his proposed modification. Staff did, however, tie its recommendation to energy efficiency program "sectors," which combines Residential Non-Heating and Heating together. Using that definition, the Company assumes Staff is suggesting only two separate RDM billing adjustments – one for Residential and one for C&I. Assuming my understanding is correct, the Company does not object to these two recommended changes.

Q. Please explain Staff's fourth recommended change to the Company's RDM Proposal.

A. Staff recommended that customers receiving service under the MEP tariffs also be subject to decoupling. Staff believes RPC for MEP customers should be included in the rate class revenue calculation after the MEP premium is separated.[16]

Q. Does the Company object to this recommendation?

A. No, it does not provided that the RDM rate for MEP customer is the same as the corresponding rate for all other customers in the class.

2. Staff Recommendations 5 and 6.

Q. Does the Company agree with Staff's fifth recommendation to change the +/- 5% cap to a +/- 2% cap?

A. No, the Company's proposed +/- 5% cap should not be changed. The Company's proposal to include weather in the RDM requires a larger cap bandwidth than +/- 2%.

[16] Iqbal Testimony, Bates 000001, lines 18-19.

Otherwise, large deferrals may occur resulting in a larger collection or refund in a subsequent period.

Q. Does the Company agree with the elimination of the mid-term adjustment?

A. No, because the Company's proposal includes the effects of weather. Staff's rationale for proposing elimination of the bi-annual adjustments in favor of a singular annual adjustment is tied to its recommendation to exclude weather from the RDM calculation. The Company continues to advocate for weather-related variances be included in the RDM. Therefore, we continue to advocate for mid-term adjustments.

D. <u>Energy Efficiency ("EE") Performance Goals</u>

Q. Please summarize Staff's recommendation regarding EE goals and decoupling.

A. Staff introduced another proposed decoupling restriction tied to obtaining EE goals. Staff proposed that, "If the Company does not meet its EE goals, there should be some restriction in decoupling adjustment because the logical conclusion is that the decoupling adjustment was attributed to something other than EE."[17] To summarize, Staff recommended that if the RDM calculation yields a charge in excess of the cap (presumably their 2% recommended cap) and EnergyNorth does not meet its EE goals, then "the Company would be required to demonstrate that its EE efforts were the primary factor in reducing its energy sales in order for any amount above the decoupling cap to be

[17] Iqbal Testimony, Bates 000013, lines 10-12.

carried forward for recovery in a subsequent year."[18] A credit calculation would not be subject to such a review.

Q. Do you agree with Staff's recommended asymmetrical cap restriction?

A. No, I do not. Limiting the decoupling calculation to exclude any sales variation "other than EE" will penalize the Company for expanding its EE efforts beyond company-funded programs. I have presented in my Direct Testimony, and in this rebuttal testimony (Section III. B. above), that decoupling is intended to completely sever the link between utility revenues and sales units. Otherwise, the signal to the Company is something less than desired – because sales volumes will still matter.

E. The Company's response to the OCA's proposed RDM modifications

1. Introduction

Q. Please summarize the major points of OCA Witness Dr. Johnson regarding decoupling.

A. Dr. Johnson, on behalf of the OCA, proposes two modifications to the Company's RDM proposal. First, he proposes a "real time" decoupling adjustment for the weather-related portion only, and 2) recommends that the RDM be calculated on a "Total Revenues" basis as opposed to RPC.

---

[18] Ibid, lines 14-17.

Q. Did the OCA make other assertions regarding decoupling?

A. Yes, he did. I will address, and rebut where appropriate, assertions made by the OCA regarding decoupling's association with Company earnings, rate base, and capital investments and depreciation. I will also address the OCA recommendation to disallow potential Computer Information System ("CIS") modification costs from rates.

2. OCA's recommended RDM changes

a. "real-time" adjustments

Q. Please summarize OCA's first recommendation regarding a "real-time" decoupling adjustment.

A. The OCA recommended that the Company separate the weather-related portion of the RDM from the remainder of the calculation. Specifically, the OCA called for a customer-by-customer calculation of the impact of weather, and bill that amount (based on the customer's actual volumetric delivery charge unit rate) in the month in which the weather variance occurred. In doing so, the OCA submitted that "it will help smooth out bill fluctuations, making cash flows smoother and more predictable for both the Company and its customers."[19] The OCA also provided examples of how this real-time adjustment would work, under both colder-than-normal and warmer-than-normal weather conditions, making the point that the real-time adjustment will match the variation in weather and provide synchronized, real-time revenue stabilization to customers and the Company.[20]

---

[19] Johnson Testimony, Bates 16, lines 9-11.
[20] Id., Bates 16-18.

Q. How would the portion of the decoupling adjustment that is not weather-related be treated?

A. The calculation of the RDM would be calculated essentially the same as proposed by the Company (I will address the OCA's "Total Revenue" recommendation later in this testimony). The total difference between Actual and Target revenues will be refunded or collected in a subsequent period. The OCA noted that this adjustment would likely be considerably smaller than an RDM that does not adjust for the weather component real-time.[21]

Q. What reservations does the Company have regarding separating the weather component of the RDM on a real-time basis?

A. "Real time" weather adjustment, referred to as a Weather Normalization Adjustment or "WNA," requires that the dollar impact of the difference between actual and normal usage be calculated for each customer bill, at the time the bill is rendered. This requires extensive programming in the billing system, and significant additional training of call center personnel charged with explaining the WNA to customers.

The OCA stated that "customers are more likely to understand and accept the mechanism if the portion that deals with weather-related fluctuations is separated from the portion that deals with energy conservation and other factors influencing usage."[22] Although I agree that matching the weather-related portion of the mechanism with the customer's bill is a

---

21 Id., Bates 15.
22 Id., Bates 19, lines 2-4.

reasonable concept, I am not convinced that it is easier to explain than an annual true-up. For example, the Company's proposed RDM results in a single billing rate adjustment to be applied each month of the applicable season. It is easy to explain that a charge occurs because last winter's weather was warmer than normal. The issue I have with real-time application is that the formula is complex and difficult to explain, and contrary to the OCA's assertions, I have experienced first-hand the difficulty in explaining this adjustment on a customer's bill. This difficulty stems from the following factors:

1) EnergyNorth has twenty billing cycles in a billing month, and they span approximately sixty days (i.e., cycle 1 customers are billed from the beginning of the prior month to the beginning of the current month, while the last billing cycle closely matches the calendar month in which it is billed). Call Center employees will need to consult the actual and normal degree days for the applicable billing cycle to explain the variances.
2) Call Center representatives will also need to understand a complex formula used to derive the actual charge that is on each customer's bill. This includes understanding base usage, heat usage, degree days, and the blended volumetric rate applied to the usage adjustment.
3) If there was a reason for the customer's bill to be adjusted (e.g., cancelled then rebilled), the complexity of the bill makes auditing of the WNA charge extremely difficult.

4) From a rate administration perspective, rate changes result in a month of pro-rated bills. The WNA adds complexity to the necessary audit of distribution rate changes.

5) Reporting requirements (both to internal utility management and to state commissions) is likely to increase and add complexity.

In contrast, the Company's proposed RDM is easy to understand, calculate, and audit, and should have minimal reporting requirements.

Q. Please describe the Company's concerns with the OCA's proposed RDM.

A. The concern with the OCA's proposal is that it is unnecessarily complex. Forty-four of the sixty-seven U.S. companies with an RDM use the more straightforward approach to including weather variances that the Company has proposed. Although twenty utilities do employ the combination of a WNA and decoupling, it is likely the result of already having a WNA in place prior to introducing decoupling. Despite its complexity, it is still superior compared to an RDM that excludes the impact of weather.

Q. Do the above concerns imply that the Company is unwilling to employ RDM with a real-time adjustment?

A. No. The OCA's proposed real-time RDM component does have benefits for both customers and the Company, and, most importantly, recognizes that all contributors to sales variation impact the efficacy of energy conservation. A real-time RDM is superior to Staff's proposal that does not include weather variation in the calculation. The OCA's proposal is a true decoupling mechanism, and the Company appreciates the OCA's understanding of, and dedication to, an RDM that truly breaks the link between utility revenues and gas usage.

Q. If a real-time RDM were implemented, how would the Company address the difficulties that you describe above?

A. If a real-time RDM were implemented, the Company would work with both the OCA and Staff to develop communications materials for customers, and to address the administrative and reporting requirements associated with a real-time RDM.

b. "Total Revenue" RDM

Q. Please describe the OCA's proposal to utilize a "Total Revenue" approach to RDM.

A. A Total Revenue approach is exactly that – total revenues are "locked in" as a result of the Commission's final determination in the rate case and these revenues then become the "Target" revenues utilized in subsequent RDM filings, comparing Actual total revenues to this Target. The primary advantage of a Total Revenue approach lies in its simplicity and predictability. Simply put, revenues do not change year-over-year. The primary disadvantage, which the OCA recognized, is that it can be a deterrent to growth. That is why more U.S. LDCs employ an RPC decoupling mechanism rather than a Total Revenue approach. LDCs are in the business of adding new customers to the distribution system, either through conversion from an alternative fuel within its existing system footprint, or from expanding the system to reach new customers. Total Revenue RDMs do not encourage growth (and, in fact, discourage growth) because revenues received from new customer additions are in effect "refunded" to existing customers through the RDM, leaving the utility to fund growth investments without incremental revenue to support those investments.

Q. Please explain why utility retention of revenues from new customers is important.

A. Most U.S. commissions, like New Hampshire, encourage their LDCs to expand, providing greater fuel choice to the residents of their respective states. Further, regulators want to protect against existing customers subsidizing uneconomical growth. New customer revenues help cover the cost of new investments without adding pressure to seek rate relief that results from a growing rate base. If these new customer revenues are not retained, but returned to existing customers through a Total Revenue RDM, then, all else being equal, the utility will seek rate relief sooner than if those revenues were retained.

Q. Does the New Hampshire Commission encourage growth?

A. Yes, it does. The Commission has approved the Managed Expansion Program ("MEP"), which also includes separate rate schedules with premium distribution rates. These premium rates help fund more aggressive system expansion than that which could otherwise be supported through standard delivery rates. The Commission recognizes that increased sales reduces the fixed costs borne by all other customers by spreading those costs over a greater volume of sales.

Q. Are there other related comments made by the OCA regarding funding of growth investment?

A. Yes. The OCA suggests depreciation between rate cases can fund growth. He wrote:

> There is no assurance that the increase in total revenues that occur under the per-customer approach is fully needed, or that the resulting revenue growth will match any corresponding increase in the revenue requirement. It is also important to keep in mind that EnergyNorth has cash flows provided by depreciation and retained earnings that can be used to support new customer additions. If its capital additions exceed depreciation, and as a result its rate base increases (rather than decreases as depreciation accumulates), it will have the opportunity to recover the associated costs after they are reviewed and approved in a rate case.[23]

Dr. Johnson's argument that depreciation is sufficient to fund growth investments is unfounded. His argument relied on system-wide depreciation and retained earnings to fund new customer investments. I agree these are sources of funds, but only depreciation, to the extent it reduces rate base, helps alleviate revenue requirement growth. Depreciation is often used to fund *non-revenue generating capital investment*, such as reliability investments (e.g., improvements to LNG facilities, gate stations, etc.), as well as ongoing capital needs (e.g., fleet vehicles, equipment, information technology, metering, etc.).

Q. Do new customer additions require incremental investment?

A. Yes, any new customer addition to the system will require at least a service line and meter. In many cases, such as MEP projects, new main is also required to serve new customers. If the OCA's recommendation to include new customer revenues in its proposed Total Revenue RDM is implemented, then the Company will incur a shortfall in revenue

[23] Id., Bates 13, lines 4-11.

requirements associated with this new investment, which may have a dampening effect on growth.

Q. Does the OCA offer a solution to this problem?

A. Yes, in part. The OCA proposed an alternative: exclude expansion customers from the RDM.[24] This is the same solution the Company proposed in its Direct Testimony.[25] If the Commission wishes to include expansion customers in the RDM, it should consider Staff's fourth RDM recommendation, which would exclude the 30% distribution rate premium revenues from the RDM calculations, but include the remaining (base level) revenues from MED customers in the RDM calculations. However, the expansion rate is only applicable to those areas where customers could not be served under standard rates (absent a high CIAC by those customers). The OCA's proposal did not address the majority of the Company's growth, which is under standard rates. Additional revenue from that growth would still be refunded to customers through the OCA's proposed RDM.

Q. Please summarize the Company's position regarding the OCA's Total Revenue RDM approach.

A. The Total Revenue approach is flawed insofar as conflicts with Commission policy to encourage natural gas expansion. For gas utilities, retaining growth-related revenues to fund the incremental investment is critical, particularly during a concerted effort to expand the system. Additionally, RPC RDMs are more common than Total Revenue RDMs (s*ee*

[24] Id, Bates 14, lines 9-19.
[25] Therrien Testimony, Bates 323, line 3 through Bates 324, line 2.

Table 1). For these reasons, the Company reiterates its preference for a revenue-per-customer RDM.

3. CIS Upgrade for Real-Time RDM

Q. Please comment on the OCA's recommendation to disallow any incremental costs associated with CIS investments necessary to implement their proposed real-time decoupling proposal.

A. It is inconsistent for the OCA to advocate for disallowance of a cost that supports the OCA's real-time RDM proposal, a cost that is not necessary to implement the Company's proposal. If the OCA's real-time RDM proposal were to be approved, the related costs should be considered legitimate business expenses and allowed for recovery. The Commission Staff audits expenses and investments made by the Company as part of rate reviews. There is no need to predetermine that the CIS changes necessary to implement a real-time RDM should be disallowed prior to the project commencing.

IV. RATE DESIGN

A. Response to Staff's Recommendations

Q. Please summarize Staff's recommended head and tail block delivery rate changes.

A. Staff recommended two changes:

1) Set the rates for both head and tail block at the same level; and

2) Allocate any decoupling adjustment to the head or tail blocks based on whether it is a surcharge or refund. Refunds would be allocated to head block and surcharges

would be collected from the tail block for the residential sector and high winter use C&I customers.[26]

Q. Please explain the Company's response to Staff's first recommendation, that head and tail blocks should be equalized.

A. Staff's proposed change does not significantly impact customers' bills to warrant objection considering the Company's decoupling and fixed customer charge rate proposals.

Q. Does the Company object to Staff's second recommendation?

A. Yes. Staff proposed an asymmetrical application of the decoupling adjustment between the head and tail block volumetric delivery rates. Justification for this proposal is two-fold. First, Staff claimed that, "It will provide a proper price signal to the customers to encourage energy conservation."[27] Second, "This approach would also benefit lower consumption households that could tend to include be lower income households with smaller homes and less energy use compared to higher income households. Low use households, on average, have relatively little or no consumption in the tail block and thus would see little or no rate increase from decoupling."[28]

Staff's proposal is unfair to higher use customers that have much of their monthly usage in the tail block. Their proposal unfairly allocates RDM under recoveries to higher use

[26] Iqbal Testimony, Bates 000016, lines 19-22.
[27] Id., Bates 000017, lines 14-15.
[28] Id., Bates 000017, lines 15-19.

customers and unfairly allocates RDM over recoveries to lower use customers. Staff's assertion that their proposal further encourages conservation through a price signal that charges a higher rate on higher consumption is unsupported.

Q. Does Staff's proposal have the potential for under-recovery?

A. Yes. Under Staff's proposal, many low use customers would presumably not pay a decoupling charge because their usage would be low enough as to not fall into the tail block. This creates the potential for a shortfall in recovery that must be deferred until the next winter season.

Q. Does Staff's proposal alleviate concerns regarding undue rate impacts to small rate classes?

A. No. Staff argued that "This addresses the stated concern of the Commission that any decoupling proposal to change the rate design needs to consider the impact on small rate classes to ensure that such classes are not unduly impacted by such changes", and "It also reduces the volatility of gas bills for low use customers."[29] Using data from my direct testimony, the highest winter period decoupling adjustment over the past five years would have been $0.0180 per therm.[30] To put this in perspective, a Low Income Residential Heating customer on the R-4 rate using 105 therms in January has a total bill of $105.46 at current rates.[31] If decoupling were in place in January 2017, this customer would have

---

30 Therrien Testimony, Bates 328, Table 10, Winter 2016-2017 rate per therm.

31 Direct Testimony of David B. Simek and Gregg H.Therrien ("Simek/Therrien Testimony"), April 28, 2017, , Attachment RATES-8, page 3 of 16 (Bates 257), line 203.

been charged an additional $1.89, which would have represented a 1.8% increase to their bill. I do not believe that a $1.89 charge would "unduly impact" low use customers or create "volatility" in their gas bills. If Staff's recommendation to eliminate the difference between head and tail block unit rates is implemented, low use customers rates would go down because current rates have a higher head block rate than the tail block. Using Staff's premise that low use customers are less likely to experience usage in the tail block, their overall bill will likely go down more than any increase from a decoupling charge.

B. <u>Response to the OCA's Recommendations</u>

Q. Please summarize your understanding of the OCA's proposed rate design.

A. The OCA seeks to reduce fixed customer charges and increase volumetric charges, particularly in the tail block.

Q. What justifications does the OCA use to rationalize reducing customer charges?

A. The OCA began its argument for lowering fixed charges not by introducing evidence to support such an action, but rather through criticizing the Company's logic for requesting increases. These criticisms include how the flow of the rate design Exhibit-5 works, which is a mathematical schedule that logically reconciles allocated class revenue requirements by first subtracting out fixed cost recovery then volumetric recovery. The OCA also makes the following criticisms and recommendations related to the Company's proposed customer charges: (1) the Company's estimate of marginal customer-related costs is flawed and therefore, the Company's proposed customer charges, which are informed by the estimated customer-related costs is also flawed; (2) greater consideration should be given to increasing volumetric rates, to advance state conservation goals, which necessarily requires lowering fixed charges; and (3) lastly, the OCA attempted to dismiss long-standing cost causation principles used in utility rate design.

Q. Are the Company's rate design workpapers biased towards increasing fixed customer charges?

A. No, the rate design workpapers are mathematical, and follow a logical sequence to prove proposed rates produce proposed revenues (i.e. "revenue proof"). The OCA asserted that "The Company made a priority to increase its customer charges (the fixed monthly rate that applies regardless of how much or how little gas the customer uses). This priority is apparent from the workpapers it used to develop the proposed rate design, and is alluded to on pages 16-17 of the joint testimony of Simek and Therrien."[32] His claim that the construct of the Company's workpapers prioritize increased customer charges is unsupported and no alternative calculation is presented.

Q. Is the Company's rate design approach consistent with past precedent?

A. Yes, the Company's recommended fixed cost rates are in line with prior proposals, which have also relied on the results of the MCS to guide its rate design recommendations. Further, as stated in the Simek/Therrien Testimony, "The proposed rates represent a balancing of the principles of appropriate rate design which include efficiency, simplicity, continuity of rates, fairness between rate classes, and corporate earning stability."[33] These

32 Johnson Testimony, Bates 24, lines 19 – 22.
33 Simek/Therrien Testimony, Bates 205.

are long-standing principles that have guided utility ratemaking for decades.[34] The OCA suggested that employing these principles undermines the Company's proposal to increase fixed charges, citing our direct testimony at page 17as follows:

> To determine the appropriate level of customer charges for each class, we considered: (1) the marginal customer costs resulting from the marginal cost study; (2) rate continuity; and (3) customer impacts.

In response to this stated approach the OCA stated, "The second and third items just mentioned did not support increasing the customer charges; rather, they ameliorated the extremely large increases that would be needed to move these rates all the way to the Company's estimate of marginal cost."[35] Interpreting this passage, it appears that Dr. Johnson believes that employing rate continuity and customer bill impacts undermines the Company's proposal. This is contrary to the rate design principles discussed above.

Q. Does the Company have any other comments regarding the efficacy of raising the tail block distribution rates?

A. Yes. First, the Company notes that the tail block currently represents approximately 3.3% of the total bill.[36] The commodity portion is 54.7%.[37] Raising the tail block rate will have only a minimal price signal compared to the price of the commodity, which is subject to change every month, and can change significantly. Second, using OCA's proposed rates,

[35] Johnson Testimony, Bates 25, lines 7-9.

[36] Using January 2016 Residential Heating (R-3) as a proxy. See Simek/Therrien Testimony Attachment RATES-8 page 2 of 16 (Bates 256), line 112/132.

[37] Ibid, line 124/132.

[38] bill impacts for larger users are considerably higher compared to the Company's proposal.

Q. Has the Commission considered cost causation when designing utility rates?

A. Yes. The Commission has not only recognized, but has been progressive in recognizing cost causation and has designed rates with this important principle in mind. The OCA referred to an American Gas Association (AGA) survey that indicates that the Company's fixed customer charges are high compared to other gas utilities. This comparison should not deter the Commission from designing rates based on cost causation principles. The costs of providing utility service are largely fixed, and having a customer charge that sends the price signal that utility service is available regardless of how much gas is consumed is appropriate. The Company's Marginal Cost Study indicates Residential class customer costs in excess of $60 per month, well above the Company's proposed monthly customer charge for rates R-1 and R-3.

Q. Should public policy considerations play a role in rate design?

A. Yes. However, the rate design principles cited above should not be ignored. If the Commission wishes to move toward more volumetrically-weighted rates, it should do so only after assessing the impact on the full range of customers' bills, and respecting the other long-standing rate design principles of rate gradualism and simplicity.

[38] Johnson Testimony, Bates 107.

V. CHANGES TO THE LOW-INCOME PROGRAM

Q. Please summarize your understanding of Staff's proposed modifications to the Residential Low-Income Assistance Program ("RLIAP").

A. Staff has proposed to modify the existing RLIAP in two phases. First, the RLIAP is proposed to be reduced from a 60% reduction in delivery-only charges to 25% of total projected gas costs. Second, in year 2 the rate would decline to 20% of projected gas costs. As is currently done, the proposed RLIAP rate should be included in the LDAC rate contained in EnergyNorth's winter COG filing, and the approved LDAC rate would be effective for November 1 through October 31, with savings to be calculated on the projected total bill for an average residential heating customer for the 12 months commencing November 1 of that year.[39] Although not specifically addressed, the Company assumes that base delivery rates in the instant case would continue to include an adjustment to the firm delivery rate classes for the projected rate year RLIAP projected dollar amount, and any differences reconciled through the COG annual filing and billed through the LDAC.

Q. Does the Company agree with this proposal?

A. The Company does not take a position with this proposal. However, the Company questions the timing of this proposal and use of the instant proceeding to review it.

[39] Direct Testimony of Stephen P. Frink, November 30, 2017 Bates 27.

Q. Please explain.

A. The Company believes that this topic is best adjudicated through a generic proceeding, which would continue past precedent established in the original pilot program in Docket No. 05-076, see Order No. 24,508 (September 1, 2005), and subsequent program revisions in Docket No. DG 06-120, see Order No. 24,669 (September 22, 2006). In addition, Staff's proposal implicates other rate components that are not part of this rate case. Further, this issue was not included in the Commission's Order of Notice in this proceeding[40] which may have precluded other interested entities from intervening in this case. For these reasons, the Company respectfully recommends that the Commission open a separate generic proceeding if this proposal is going to be considered.

Q. How would rejecting this proposal change the instant case?

A. The Company's filing in the instant case would not be changed. Further, any changes that may arise from a generic RLIAP proceeding could be implemented through the annual COG filing, and rates adjusted through the LDAC. It is not necessary to implement a change in the RLIAP in the context of a general rate case.

[40] Order No. 26,015 (May 8, 2017) "Order Suspending Proposed Tariff and Scheduling Prehearing Conference and Temporary Rate Hearing".

VI. SUMMARY

Q. Please summarize this rebuttal testimony.

A. EnergyNorth appreciates the inputs received from Staff's witness Mr. Iqbal and OCA witness Dr. Johnson regarding decoupling and rate design. However, some aspects of their respective proposals should be rejected. Specifically:

1) **Staff's recommendation to weather normalize sales prior to performing the RDM adjustment should be rejected.** Staff's decoupling proposal is nothing more than a continuation of the LRAM and does not sever the link between Company sales volumes and revenues, which undermines the potential for greater energy efficiency savings present in the Company's and in the OCA's decoupling proposals.

2) **The Company agrees with the OCA's proposal for a "real-time" RDM, but disagrees with calculating decoupling on a Total Revenue basis.** EnergyNorth is a natural gas utility in growth mode, and the incremental revenues from new customer additions should be retained between rate cases to fund growth investments. Any incremental computer enhancement costs to implement this proposal should not be rejected, as recommended by the OCA..

3) **Staff and the OCA's inclining block rate proposals should be rejected.** The Commission's long-standing practice of designing customer rates based on cost causation should not be discarded as a result of implementing the RDM. As detailed above, gas commodity charges represent the largest component of the bill

and send the most impactful price signal. Further, the Company's proposed fixed customer charges should be approved, as supported through the MCS.

4) Staff's proposal to change the RLIAP should be addressed in a properly noticed generic proceeding.

Q. Does this complete your testimony?

A. Yes, it does.

NHPUC NO. 9 - GAS

LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS) CORP. D/B/A

I. GENERAL TERMS AND CONDITIONS

1 SERVICE AREA

A. Service Area. The area authorized to be served by the Company and to which this tariff applies are the following cities and towns: Allenstown, Amherst, Auburn, Bedford, Belmont, Berlin, Boscawen, Bow, Concord, Derry, Franklin, Gilford, Goffstown, Hollis, Hooksett, Hudson, Keene, Laconia, Litchfield, Londonderry, Loudon, Manchester, Merrimack, Milford, Nashua, Northfield, Pelham, Pembroke, Sanbornton, Tilton, Windham,and part of Canterbury and Winnisquam.

2 GENERAL TERMS AND CONDITIONS

A. Filing. A copy of this tariff is on file with the New Hampshire Public Utilities Commission ("NHPUC" or the "Commission") and is open to inspection at the offices of the Company.

B. Revisions. This tariff may be revised, amended, supplemented, or otherwise changed from time to time in accordance with the rules of the Commission and such changes, when effective, shall have the same force as the original tariff.

C. Application. The tariff provisions apply to everyone lawfully receiving gas supply service and/or delivery-only service from the Company under the rates herein and receipt of gas service shall constitute the receiver a customer of the Company as the term is used herein whether service is based upon contract, agreement, accepted signed application, or otherwise.

D. Statement by Agents. No representative has the authority to modify a tariff rule or provision or to bind the Company by a promise or representation contrary thereto.

E. No Prejudice of Rights. The failure of the Company to enforce any of the terms of this tariff shall not be deemed a waiver of its right to do so.

F. Gratuities to Employees. The Company's employees are strictly forbidden to demand or accept any personal compensation or gifts for service rendered by them while working for the Company on the Company's time.

G. Advance Payments. Payments to the Company for charges provided in these rules and regulations to be borne by the customer shall be made in advance.

H. Assignment. Subject to the rules and regulations, all contracts by the Company shall be binding upon, and oblige, and continue for the benefit of, the successors and assigns, heirs, executors, and administrators of the parties hereto.

3 CHARACTER OF SERVICE

A. Gas Supply. This Tariff applies only to the supply of gas, having a thermal content of nominally 1,000 British thermal units per cubic foot at supply pressures available in the locality in which the premises to be served are situated.

B. Determination of Therms. The gas for any billing period, expressed in hundreds of cubic feet (ccf), shall be multiplied by the average Btu of the gas send out as determined below and divided by 1,000 in order to determine the number of therms consumed in the billing period. For billing purposes, gas therms shall be determined on a “dry” basis.

The Btu therm factor of the gas sendout shall be calculated for each billing cycle from the daily weighted average Btu of the natural gas delivered to the Company by its suppliers and the gas produced at the Company’s peak-shaving plants. The daily average Btu content shall be determined by appropriate gas measurement devices operated by the Company or its supplier.

C. Delivery of Gas Supply. The rates specified in this tariff are based upon the supply of service to a single customer through one delivery and metering point.

D. Use of Service at Separate Properties. The use of service at two or more separate properties will not be combined for billing purposes.

4 CUSTOMER’S INSTALLATION

A. Point of Delivery. Upon request, the Company will designate a point at which the customer shall terminate his piping for connection to the meter of the Company, but such information does not constitute an agreement or obligation on the part of the Company to furnish service.

B. Space for Meter. The customer shall provide, free of expense to the Company, a dry, warm and otherwise suitable place for the regulator or regulators, meter or meters, or other equipment of the Company which may be necessary for the fulfillment of such contracts as may be entered into with the Company.

C. Location of Meter. The space provided for the Company’s meters and equipment shall be convenient access to the Company’s employees and, as near as possible, to the point where the service supply pipe enters the customer's building. Its location shall be such that the meter connections are not concealed by plaster or sheathing and shall be otherwise acceptable to the Company.

D. Reverse Flow. The customer may be required to install check valves or other devices to prevent compressed air or other gases from entering the Company’s mains.

5 APPLICATION FOR SERVICE

A. Service Contract. Every applicant for gas service may be required to sign a contract, agreement, or other form then in use by the Company covering the special circumstances of the applicant’s use of gas and must agree to abide by the rules and regulations and standard requirements of the Company.

B. Right to Reject. The Company may reject any application for service which would involve excessive cost to supply, or which might affect the supply of service to other customers, or for other good and sufficient reasons.

C. Special Contracts. Standard contracts shall be for terms as specified in the statement of the rate, but where large or special investment is necessary for the supply of service, contracts of longer terms as specified in the rate, or with a special guarantee of revenue, or both, may be required to safeguard such investment.

D. Unauthorized Use. Unauthorized connection to the Company's gas service supply facilities, and/or the use of service obtained from the Company without authority, or by any false pretense, may be terminated by the Company without notice. The use of service without notifying the Company and without enabling the Company to read its meter will render the user liable for any amount due for service supplied to the premises from the time of the last meter reading of the Company's meter immediately preceding the user's occupancy as shown by the Company's books.

E. Managed Expansion Program. The Managed Expansion Program targets gas expansion in specific areas that have high potential for demand. Each Managed Expansion Program project includes a Main Extension. Customers under this program avoid a portion or all of a contribution in aid of construction which would otherwise be required absent the Managed Expansion Program.

6 CREDIT

A. Prior Debts. Service will not be furnished to former customers until any indebtedness to the Company for previous service has been satisfied.

B. Deposits. Before rendering or restoring service, the Company may require a deposit subject to the Commission's Rules and Regulations. (See Puc 1200 rules).

7 SERVICE AND MAIN EXTENSIONS

A. Definitions. The following are definitions of terms used in these provisions relative to main and service extensions and are applicable only in the main and service extensions provisions.

1. Service and Main Extensions. Extensions that require the construction of a new gas main and a service from that new main in order to provide requested gas service to a customer.

2. Service Extensions. Extensions from an Existing Gas Main to the point of delivery on the customer's premises.

3. Main Extension. An extension of the new gas main portion of a Service and Main Extension.

4. Existing Gas Main. A main that is installed in the street and through which gas is flowing.

5. Abnormal Costs. Abnormal Costs are service and/or main construction costs that are attributable to frost or ledge (including ditching or backfilling necessitated as a result of the presence of frost or ledge),and/or other conditions not typically encountered in service and/or main construction that are peculiar to the particular service and/or main construction concerned. Abnormal Costs are to be paid by the customer.

6. Extra Footage. The charge (contribution in aid of construction) for Extra Footage is $31.54 per foot. The charge will be updated annually by calculating the historical average cost per foot for Service Extensions, excluding overheads, for the most recent calendar year and the updated charge shall be effective April 1.

7. Estimated Annual Margin. The Estimated Annual Margin is equal to the estimated revenue to be derived from the monthly Customer Charge and delivery charge to be received from the customer for gas service utilizing the Service and Main Extension or Service Extension during the first twelve

(12) months after completion of the extension. The Estimated Annual Margin does not include revenue received by the Company for the cost of gas and local distribution adjustment factor.

8. Estimated Cost of Construction. For the purpose of determining the cost of Service and Main Extensions, Estimated Cost of Construction of mains and/or services includes the cost of labor and materials for such construction, and incidental or associated miscellaneous costs, but excluding overheads. Miscellaneous costs include, but are not limited to, meter(s), traffic control and city and town road permits and degradation fees. The customer may perform on-site trenching and backfilling in accordance with the Company's specifications, in which case the Estimated Cost of Construction will be reduced to reflect the costs avoided by the Company as a result of the customer's performance of the work.

B. Costs of Extensions. In areas where the Company is authorized to operate, subject to the Application for Service provisions of this tariff, service is available as follows:

1. Residential Service Extensions. Residential Service Extensions up to 100 feet in length will be installed at no charge to customers served under either a (i) residential heating rate; or (ii) a residential non-heating rate provided that such extension is installed during the installation of a Main Extension or during the performance of work on cast iron/bare steel main replacements; unless there are Abnormal Costs associated with such extensions, in which case the customer shall be charged for the Abnormal Costs. For residential Service Extensions in excess of 100 feet, the customer will be charged for the Extra Footage, plus any Abnormal Costs. This Section 7(B)(1) shall apply only to Service Extensions and shall not apply to Service and Main Extensions as described in Section 7(B)(3).

2. Commercial and Industrial Service Extensions. Commercial and industrial Service Extensions will be installed at no charge to the customer provided that the Estimated Annual Margin is at least one-sixth of the Estimated Cost of Construction of the Service Extension, excluding any Abnormal Costs. If the Estimated Annual Margin is less than one-sixth of the Estimated Cost of Construction, the customer will be required to pay to the Company, in advance, any amount by which the Estimated Cost of Construction of the Service Extension exceeds six times the Estimated Annual Margin. Abnormal Costs are charged separately and are not included in the Estimated Cost of Construction for the purpose of this calculation. This Section 7(B)(2) shall apply only to Service Extensions and shall not apply to Service and Main Extensions as described in Section 7(B)(3).

3. Service and Main Extensions of Less Than $1,000,000. The Company shall not commence construction on a Service and Main Extension for which the Estimated Cost of Construction is less than $1,000,000 until the sum of (i) six times the Estimated Annual Margin for all commercial and industrial customers who have committed to take service, plus (ii) eight times the Estimated Annual Margin for all residential customers who have committed to take service equals or exceeds 25% of the Estimated Cost of Construction.

   a. Residential. Residential Service and Main Extensions will be installed at no charge to the customer provided that the Estimated Annual Margin is at least one-eighth of the Estimated Cost of Construction of the Service and Main Extensions. If the Estimated Annual Margin is less than one-eighth of the Estimated Cost of Construction, the customer will be required to pay to the Company the difference between the Estimated Cost of Construction and eight times the Estimated Annual Margin, plus any Abnormal Costs.

If the Main Extension will serve more than one location, the Company will calculate the sum of the Estimated Annual Margin from all metered services and the sum of the Estimated Cost of Construction for the Main Extension and all Service Extensions to determine whether any payment will be required from the customers to be served. The Company will also include the Estimated Annual Margin and the Estimated Cost of Construction for Service Extensions for all existing premises for which the Company reasonably anticipates will take service, using the assumption that 60% of such premises will take service. If any payment is required, it will be allocated equally among all current metered services that exist as of the date that the Main Extension becomes an Existing Gas Main. Abnormal Costs associated with Main Extensions will be allocated equally among all customers, unless such costs can be attributed to specific customers.

b. Commercial and Industrial. Commercial and industrial Service and Main Extensions will be installed at no charge to the customer provided that the Estimated Annual Margin is at least one-sixth of the Estimated Cost of Construction of the Service and Main Extensions. If the Estimated Annual Margin is less than one-sixth of the cost of construction of the Service and Main Extensions, the customer will be required to pay to the Company the difference between the Estimated Cost of Construction and six times the Estimated Annual Margin, plus any Abnormal Costs.

c. If the Main Extension will serve more than one location, the Company will calculate the sum of the Estimated Annual Margin from all metered services and the sum of the Estimated Cost of Construction for the Main Extension and all Service Extensions to determine whether any payment will be required from the customers to be served. The Company will also include in such calculations the Estimated Annual Margin and the Estimated Cost of Construction for Service Extensions for all existing premises for which the Company reasonably anticipates will take service, using the assumption that 60% of such premises will take service. If any payment is required, it will be allocated among all current metered services that exist as of the date that the Main Extension becomes an Existing Gas Main based on each customer's proportional share of the Estimated Annual Margin. Abnormal Costs associated with Main Extensions will also be allocated based on each customer's proportional share of the Estimated Annual Margin, unless such costs can be attributed to specific customers, in which case the costs shall be allocated appropriately to specific customers.

d. Extensions Serving Customers in More Than One Rate Class. If the Main Extension will serve both residential and commercial or industrial customers, the Company will determine whether a contribution will be required by the customers by calculating the difference between the Estimated Cost of Construction of the Main and Service Extensions and (i) six times the Estimated Annual Margin for all commercial and industrial customers to be served, plus (ii) eight times the Estimated Annual Margin for all residential customers to be served. The Company will also include in the above calculations the Estimated Annual Margin and the Estimated Cost of Construction of Service Extensions for all existing premises for which the Company reasonably anticipates will take service. If the difference described above is positive, the customers will be required to pay to the Company such difference. The amount of payment will be allocated among all metered services that exist as of the date that the Main Extension becomes an Existing Gas Main based on each customer's proportional share of the Estimated Annual Margin. Abnormal Costs associated with Main Extensions will also be allocated based on each customer's proportional share of the Estimated Annual Margin, unless such costs can be attributed to specific customers, in which case the costs shall be allocated appropriately to specific customers.

4. Service and Main Extensions Greater Than or Equal to $1,000,000. If the cost of the Main Extension equals or exceeds $1,000,000, then in addition to the requirements specified in Section 7(B)(3), the Company will not commence construction unless a discounted cash flow analysis demonstrates a positive net present value over a 10-year period of the difference between the Estimated Annual Margin and the revenue requirement associated with the Estimated Cost of Construction.

C. Failure to Use Installed Gas Service. If a customer fails, within nine months after the date a service is installed under this Section 7, either in whole or in part, to make use of the service, the customer will reimburse the Company for all costs of constructing, removing and retiring the service less any contribution in aid of construction made by the customer for the service, which will be forfeited.

D. Easements, Etc. The Company is not required to construct extensions other than in public ways unless the customer provides, in advance and without expense or cost to the Company, all necessary permits, consents, authorizations and right-of-way easements, satisfactory to the Company, for the construction, maintenance and operation of the pipeline.

E. Shortest Distance. Services are run the shortest practical safe distance to the meter location. However, a customer may have the Company install a longer alternate service provided that the customer pays for the extra expense in advance of installation.

F. Winter Construction. Ordinarily, no new service pipes or main extensions are installed during the winter conditions (when frost is in the ground) unless the customer defrays the extra expenses.

G. Timing and Refunding of Contribution. Except as otherwise agreed by the Company under unusual circumstances, any required contribution in aid of construction will be made prior to installation by the Company of a service. To help cover the Company's expenses, damages and lost business, if substantial construction of the building or buildings for which gas service has been sought is not commenced by the earlier of (1) November 30th next following submission of the application; or (2) the date when the Company commences construction of the main and service concerned prior to withdrawal of the application, ten percent (10%) of the contribution will be forfeited to the Company and will not be returned to the customer. The balance of the contribution will be refunded if and when the application is withdrawn, or will be applied toward the new contribution if the customer submits a new application for service or subsequently commences construction of the building or buildings. A new application may be submitted at any time.

H. Reasonable Duration and Non-Discrimination. Under none of the foregoing provisions will the Company be required to install service pipes or to contract main extensions where the business to be secured may not be of reasonable duration or will tend, in any way, to constitute unreasonable discrimination.

I. Title. Title of all extensions constructed in accordance with the above shall be vested in the Company.

J. Other Requirements. The Company generally will not approve any application or, if it shall have given such approval, will not proceed or continue with main and/or service construction unless the Company is satisfied

1. That the final site plans, sub-division plans and plans and specification for building or buildings to be served by the main and/or service concerned, including plans for waste disposal, water and other associated systems and facilities, have been prepared and approved by owner;

2. That all permits, exceptions, approvals and authorizations of governmental bodies or agencies required for construction of such building or buildings and associated systems and facilities have been obtained;

3. That the customer is proceeding or plans promptly to proceed with such construction; and

4. That nothing has occurred or failed to occur which will or is likely to prevent or interfere with such construction.

8 INTRODUCTION OF SERVICE

A. Service Contract. Every applicant for gas service may be required to sign a contract, agreement, or other form then in use by the Company covering the special circumstances of his use of gas and must agree to abide by the rules and regulations and standard requirements of the Company.

B. Defective Installation. The Company may refuse to connect if, in its judgment, the customer's installation is defective, or does not comply with such reasonable requirements as may be necessary for safety, or is in violation of the Company's standard requirements.

C. Unsatisfactory Installation. The Company may refuse to connect if, in its judgment, the customer's equipment or use thereof might injuriously affect the equipment of the Company or the Company's service to other customers.

9 COMPANY EQUIPMENT ON CUSTOMER'S PREMISES

A. Meters and Regulators. The Company shall furnish and install, maintain and own, any meter or meters, regulator or regulators required in the supply of service. For certain large customers, the Company shall furnish, install and maintain, at the customer’s expense, any remote meter reading equipment to record usage for daily balancing. Such equipment shall remain the property of the Company at all times.

B. Customer's Responsibility. The customer shall be responsible for safekeeping of the Company's property while on the customer's premises. In the event of injury or destruction of any such property, the customer shall pay the costs of repairs and replacements.

C. Relocation and/or Replacement of Company Equipment. The original service connection, including piping, meters and all other necessary or incidental equipment, which remains the property of the Company, shall be installed by the Company at its expense unless otherwise expressly provided in this tariff. Subsequent relocation and/or replacement of any such equipment on private property, whether it be for one or more service connections, shall be performed by the Company at the customer's expense unless such work is done at the request of the Company and for its convenience, in which case the Company shall bear the expense.

D. Protection by Customer. The customer shall protect the equipment of the Company on his premises and shall not permit any persons, except a Company employee having a Company photo identification card or other Company identification, to break any seals upon or do any work on any meter, service supply pipe, or other equipment of the Company located on the customer's premises.

E. Tampering. In the event the Company's meter or other property is being tampered with or interfered with, the customer being supplied through such equipment shall pay the amount which the Company may estimate is due for service used but not registered on the Company's meter and for any repairs or replacements required as well as for costs of inspections, investigations, and protective installation.

F. Right of Access. The Company's identified employees shall have access to the premises of the customer at all reasonable times for the purpose of reading meters, testing, repairing, removing, or exchanging any or all equipment belonging to the Company.

G. Ownership and Removal. All equipment supplied by the Company shall remain its exclusive property and the Company shall have the right to remove the same from the premises of the customer at any time after the termination of service for whatever cause.

10 SERVICE CONTINUITY

A. Regularity of Supply. The Company will use reasonable diligence to provide a continuous, regular and uninterrupted supply of service, but should the supply be interrupted by the Company for the purpose of making repairs, changes, or improvements in any part of its system for the general good of the service or the safety of the public, or should the supply of service be interrupted or fail by reason of accident, strike, legal process, state or municipal interference, or any cause whatsoever beyond its control, the Company shall not be liable for damages, direct or inconsequential, resulting from such interruption or failure.

B. Notice of Trouble. The customer shall notify the office of the Company immediately should the service be unsatisfactory for any reason or should there be any defects, leaks, trouble, or accident affecting the supply of gas.

11 CUSTOMER'S USE OF SERVICE

A. Resale Forbidden. The customer shall not, directly or indirectly, sell, sublet, assign, or otherwise dispose of to others, gas purchased from the Company, or any part thereof, without the consent of the Company. This rule does not apply to a public utility Company purchasing gas in bulk expressly for the purpose of delivering it to others.

B. Fluctuations. Gas service must not be used in such a manner as to cause unusual fluctuations or disturbances in the Company's supply system. In the case of violation of this rule, the Company may discontinue service or require the customer to modify its installation and/or equip it with approved controlling devices.

C. Additional Load. The service supply pipe, regulators, meters, and equipment supplied by the Company for each customer have definite capacities. The customer shall notify the Company of substantial changes in service requirements or location of appliances.

12 INSPECTIONS

A. Company's Right to Inspect. The Company shall have the right, but shall not be obliged, to inspect any installation before service is introduced or at any time later and reserves the right to reject any piping or appliances not in accordance with the Company's standard requirements. However, such inspection, failure to inspect, or failure to reject shall not render the Company liable or responsible for any losses or damage resulting from defects in the installation, piping or appliances, from violation of Company rules, or from accidents which may occur upon the premises of the customer.

13 MEASUREMENT

A. Supply of Meters. The measurement of gas service shall be by meters furnished and installed by the Company. The Company will select the type and make of metering equipment and may, from time to time, change or alter the equipment. The Company's sole obligation is to supply meters that will accurately and adequately furnish records for billing purposes.

B. Special Measurements. The Company shall have the right, at its option and its own expense, to place demand meters, pressure gauges, special meters, or other instruments on the premises of any customer for the purpose of determining the adequacy of the Company's service or for making tests of all or any part of the customer's load.

14 METER TESTS

A. Meter Tests. Meters are tested according to NHPUC Rules and Regulations. (See Puc 500 rules).

B. Request Tests. The fee for a special request test is $20.00 when scheduled at the mutual convenience of the Company and the customer; otherwise the amount is $30.00. (See Puc 500 rules).

C. Customer's Bill Adjustment. Should any meter fail to register correctly, the quantity of gas consumed will be determined by the Company based on information supplied by the customer and known by the Company subject to NHPUC Rules and Regulations. (See Puc 500 rules).

15 DISCONNECTION BY THE COMPANY

A. Disconnection by the Company. The Company may disconnect its service to a customer for violation of its rules subject to NHPUC Rules and Regulations. (See Puc 1200 rules).

B. Non-Payment Shut-Off. The Company may disconnect its service on reasonable notice and remove its equipment in case of non-payment of amounts billed for gas usage.

C. Shut-Off for Cause. The Company may disconnect its service on reasonable notice if entry or access to its meter or meters is refused, obstructed, or hazardous, or for other violation of the Company's standard requirements.

D. Safety Shut-Off. The Company may disconnect without notice if the customer's installation has become dangerous or defective.

E. Defective Equipment. The Company may disconnect without notice if the customer's equipment, or use thereof, might injuriously affect the equipment of the Company or the Company's service to other customers.

F. Shut-Off for Fraud. The Company may disconnect without notice for abuse, fraud or tampering with the connections, meters or other equipment of the Company.

G. Reconnection Charge. A reconnection charge is made for reconnection of service discontinued by the Company and is payable in advance in addition to all other amounts due. The reconnection charge is made instead of the meter account charge. The amount of the reconnection charge is the same as the comparable meter account charge except when it has been necessary to dig up the service pipe or connection to effect discontinuance of service. In such cases, the reconnection charge is the price of removal and restoration of service pipe or connection.

16.1 COST OF GAS CLAUSE

A. Purpose. The purpose of this Cost of Gas Clause is to establish procedures that allowthe Company, subject to the jurisdiction of the Commission, to adjust, on a semiannual basis, its rates for firm gas sales in order to recover the costs of gas supplies, along with any taxes applicable to those supplies, pipeline and storage capacity, production capacity and storage, bad debt expense associated with purchased gas costs, and the costs of purchased gas working capital, to reflect the seasonal variation in the cost of gas, and to credit to customers receiving firm service from the Company all supplier refunds and capacity release sales.

B. Applicability. This Cost of Gas Clause ("COGC") shall be applicable to the Company and all firm gas sales made by the Company, unless otherwise designated. The application to the clause may, for good cause shown, be modified by the NHPUC. See Section 16(N), "Other Rules."

C. Cost of Firm Gas Allowable for COGC. All costs of firm gas including, but not limited to, commodity costs, taxes on commodity, demand charges, local production and storage costs, hedging related costs, other gas supply expense incurred to procure and transport supplies and commodity related bad debt expense, the gas used in Company operations, transportation fees, costs associated with buyouts of existing contracts, and purchased gas working capital may be included in the COGC. Any costs recovered through application of the COGC shall be identified and explained fully in the semiannual filings outlined in Section 16(M).

D. Effective Date of Cost of Gas Factor. The seasonal Cost of Gas Factor ("COG") shall become effective upon NHPUC approval on the first day of each season as designated by the Company. Unless otherwise notified by the NHPUC, the Company shall submit COG filings as outlined in Section 16(M) of this clause on or before the first business day in September...

E. Definitions. The following terms shall be defined in this section, unless the context requires otherwise.

1. Bad Debt Expense: The uncollectible expense attributed to the portion of the Company's revenue associated with the recovery of gas costs under this clause.

2. Capacity Release Revenues: The economic benefit derived from the sale or release of transportation and storage capacity that the Company has under contract.

3. Carrying Charges: Interest expense calculated on the average monthly balance using the *monthly* prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates, and then added to the end of month balance.

4. Correction Factor: Seasonal Adjustment necessary to align the peak day volumes used to calculate the Commercial and Industrial load factor ratios with the seasonal Commercial and Industrial High Winter and Low Winter throughput volumes applied to the cost of gas calculations.

5. Direct Gas Costs: All purchased gas costs including supplier, storage and pipeline demand and commodity costs, as well as the commodity costs for local manufactured gas (Liquid Propane Gas (“LPG”) and Liquefied Natural Gas (“LNG”)).

6. Economic Benefit: The difference between the revenues received and the marginal cost determined to serve non-core customers.

7. Inventory Finance Charges: As billed in each Winter Season for annual charges. The total shall represent an accumulation of the projected charges as calculated using the monthly average of financed inventory at the existing or anticipated financing rate through a trust or other financing vehicle.

8. Local Production and Storage Capacity Costs: The costs of providing storage service from the Company's storage facilities (*i.e.*, LNG and LPG) as determined in the Company's most recent rate proceeding.

9. Market Based Allocator (“MBA”): The method used to allocate gas costs among Commercial and Industrial Customer Classifications. These ratios are presented in Section 16(F).

10. Non-Core Commodity Costs: The commodity cost of gas assigned to non-core sales to which the COG is not applied.

11. Non-Core Sales: Sales made under non-traditional off-system sales.

12. Non-Core Sales Margins: The economic benefit derived from non-core transactions to which the COG is not applied, including non-core sales generated from the use of the Company's Gas Supply Resource portfolio.

13. Summer Commodity: The gas supplies procured by the Company to serve firm load in the Summer Season.

14. Summer Demand: The gas supply demand and transmission capacity procured by the Company to serve firm load in the Summer Season.

15. Summer Season: The calendar months May 1 through October 31.

16. Off-System Sales Margin: The economic benefit derived from the non-firm sales of natural gas supplies upstream of Company's distribution system.

17. Winter Commodity: The gas supplies procured by the Company to serve firm load in the Winter Season.

18. Winter Demand: Gas supply demand, peaking demands, storage and transmission capacity procured by the Company to service firm load in the Winter Season.

19. Winter Season: The calendar months November 1 through April 30.

20. PR Allocator: The percentage of annual capacity charges assigned to the Winter Season calculated using the Proportional Responsibility Method.

21. Purchased Gas Working Capital: The allowable working capital derived from Winter Season and Summer Season demand and commodity related costs.

F. Approved Cost. The Cost of Gas calculation utilizes information periodically established by the NHPUC. The table below lists the approved costs factors:

Variable	Description	Approved Figure
MISC	Miscellaneous Overhead	$13,170
PS	Production and Storage Capacity	$1,980,428
WCA%	Working Capital Allowance Percentage	3.91%

Bad Debt % Measurement and Reconciliation Period	COG Recovery Period	Actual Bad Debt Rate	Bad Debt allowed Recovery Rate
May 2010 – April 2011	November 2011 – October 2012	Actual	Actual
May 2011 – April 2012	November 2012 – October 2013	Greater than 2.9%	Actual less 0.4
		2.5% to 2.9%	2.5%
		Less than 2.5%	Actual
May 2012 - April 2013 and each subsequent May – April period thereafter	November 2013 - October 2014 and each subsequent November – October period thereafter	Greater than 3.3%	Actual less 0.8
		2.5% to 3.3%	2.5%
		Less than 2.5%	Actual

If the Company's actual bad debt percentage is reduced to 2.5% or less during any 12 month period, which need not be the same 12 months as the measurement periods defined above, then beginning with the reconciliation filing for the period during which this bad debt percentage was achieved the Company shall thereafter recover its actual gas supply related bad debt on a fully reconcilable basis and the percentages in the table above shall no longer apply. The actual bad debt percentage shall be calculated by dividing the Company's actual net write-offs for the relevant measurement period by its revenue for the same period.

G. Cost of Gas (COG) Calculations by Customer Class. The COG Formula shall be computed on a semiannual basis for three (3) groups of customer classes as shown on the following table. The computation will use forecasts of seasonal gas costs, carrying charges, sendout volumes, and sales volumes. Forecasts shall be based on either historical data or Company projections, but must be weather-normalized. Any projections must be documented in full with each filing.

The COG for the Residential rate classes shall represent the total system average unit cost of gas of meeting firm sales load, projected in each COG filing. The Commercial & Industrial (C&I) Low Winter (LW) and High Winter (HW) rates will be calculated in the following way: first, the demand unit cost of gas, the sum of purchased and stored gas demand costs divided by projected prorated sales, will be multiplied by the applicable load factor ratio and then multiplied by the correction factor. This adjusted demand factor will then be added to the commodity factor, adjustment factor and indirect cost of gas rate to determine the total COG rates for the C&I LW and HW rate classes. The two load factor ratios shall be derived once a year, for effect every November 1 through October 31, using the ratio of the unit capacity cost of each C&I group

DATED: April 28, 2017 ISSUED BY: /s/James M. Sweeney
James M. Sweeney
EFFECTIVE: July 1, 2017 TITLE: President

Authorized by NHPUC Order No. xx,xxx dated Month Day,Year, in Docket No. DG 17-048

to the total system unit capacity cost that is determined in the Company's submittal of its Capacity Allocators, for Capacity Assignment purposes, filed with its Winter COG, and as presented in Attachment C of the Delivery Service Terms and Conditions. The Correction Factor aligns the peak day volumes used to calculate the load factor ratios with the seasonal throughput volumes applied to the COG calculations.

GROUP	CUSTOMER CLASSES
Residential	Residential Heating and Non-Heating
Commercial and Industrial: Low Winter Use	G-51 through G-58
Commercial and Industrial: High Winter Use	G-41 through G-46

Winter Season Cost of Gas Formula (CGw)

The Winter Season COG shall be comprised of Winter Demand costs, Winter commodity costs, Winter reconciliation costs, Winter working capital reconciliation, Winter bad debt expenses, local production and storage capacity costs, and miscellaneous and A&G costs calculated at the beginning of the Winter Season according to the following formula:

$$CGw = Dw + Cw + Rw + WCRw + BDw + PS + ((MISC + Rbd) \times \frac{W{:}Sales)}{A{:}Sales}$$

Winter Demand Cost (Dw) Formula

$Dw = DEMw – NCSMw + WCwd – R1d – R2d$
and:

$NCSMw = CRRw + OSSMw + SBdw$
and:

$WCwd = (DEMw – NCSMw) \times WCA\% \times CC$
where:

CGw = The total cost of gas for the Winter Season for the Company’s firm sales customers previously defined.

BDw = Bad Debt expense for the Winter Season.

Cw = Commodity-related direct gas cost for the Winter Season.

Dw = The total Winter Demand costs.

DEMw = Demand Charges allocated to the Winter Season defined in Section 16(E).

NCSMw = The Non-Core Sales Margins equal to the sum of the Winter Season returnable Capacity Release Revenues, and Off-System Sales Margins.

WCwd = Working Capital allowable associated with demand charges allocated to the Winter Season as defined in Section 16(K).

R1d, R2d = Supplier demand-related refunds - The Supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds." See Section 16(I).

CRRw =	The returnable Capacity Release Revenues allocated to the Winter Season. See Section 16(E).
OSSMw =	The returnable Off-System Sales Margins allocated to the Winter Season. See Section 16(E).
SBdw =	Demand revenues received from Firm Stand-By Sales Service customers in the Winter Season.
WCA % =	Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 16(F) for this percentage.
CC =	Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.
Rw =	Reconciliation Costs – Winter Season deferred gas costs, Account 1920-1740 balance, inclusive of the associated Account 1920-1740 interest, as outlined in Section 16(J).
WCRw =	Working Capital reconciliation adjustment associated with Winter Gas Costs - Account 1163-1422 balance as outlined in Section 16(K).
PS =	The total dollar amount of costs associated with the local production and storage capacity gas less any production and storage capacity assignment revenues. Refer to Section 16(F) for this dollar amount.
MISC =	The total dollar amount of gas costs associated with acquisition, dispatching, Administrative and General expenses and overheads as determined in the Company's most recent rate proceeding. Refer to Section 16(F) for this dollar amount.
Rbd =	Annual Bad Debt Expense reconciliation adjustment - Account 1920-1743 balance
W:Sales =	Forecasted firm sales volumes associated with the Winter Season.
A:Sales =	Forecasted annual firm sales volumes.

Winter Season Commodity (Cw) Formula

Cw = COMw + FC + WCwc – R1c – R2c
and:

COMw = WSC – NCCCw - SBcw
and:

WCwc = (COMw + FC) × WCA% × CC
where:

COMw =	Commodity Charges allocated to the Winter Season as defined in Section 16(E).
FC =	Inventory finance charges as defined in Section 16(E).
WCwc =	Working Capital Allowable Associated with commodity charges allocated to the Winter Season as defined in Section 16(K).
R1c, R2c =	Supplier commodity-related refunds - The supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds". See Section 16(I).

WSC = Commodity charges associated with gas supply sent out in Winter Season as defined in Section 16(E).

NCCCw = Non-Core Commodity Costs incurred in the Winter Season as defined in Section 16(E).

SBcw = Winter Season commodity revenues received from Firm Stand-By Gas Supply Service sales customers.

WCA % = Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 16(F) for this percentage.

CC = Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Winter Bad Debt (BDw) Formula

BDw = BD% x (Dw + Cw + Rw + WCRw)
where:

BDw = Forecasted gas supply cost related Bad Debt Expense calculated for Winter Season.

BD% = Bad Debt percentage calculated based on a twelve month basis ending April of each year. Refer to Section 16(F) Bad Debt Allowed Recovery Rate for this percentage.

Dw = Demand related costs in the Winter Season as previously defined.

Cw = Commodity related costs in the Winter Season as previously defined.

Rw = Reconciliation Costs – Winter Season deferred gas costs as previously defined.

WCRw = Winter Season Working Capital Reconciliation adjustment as previously defined.

Residential Winter Season Cost of Gas (COGwr)

All residential firm sales customers will pay the same Cost of Gas for the Winter Season. The factor represents the total forecasted Winter Season average cost of gas rate. This factor is calculated according to the following formula:

$$COGwr = \frac{CGw}{W{:}Sales}$$

where:

CGw = The total cost of gas for the Winter Season for the Company's firm sales customers previously defined.

W:Sales = Forecasted sales volumes associated with the Winter Season.

R = Designates the Residential Heating and Residential Non-Heating customer classes.

Summer Season Cost of Gas (COG) Formula (CGs)

The Summer Season COG shall be comprised of Summer demand costs and Summer commodity costs, Summer reconciliation costs, Summer working capital reconciliation, plus a Summer bad debt charge, and a miscellaneous and A&G charge calculated at the beginning of the Summer Season according to the following formula:

$$CGs = Ds + Cs + Rs + WCRs + BDs + ((MISC + Rbd) \times \frac{S:Sales}{A:Sales})$$

Summer Demand Cost (Ds) Formula

Ds = DEMs + WCsd – Rld – R2d
and:

WCsd = DEMs × WCA% × CC
where:

A:Sales = Forecasted annual sales volumes.

BDs = Bad Debt Expense for Summer Season.

Cs = Commodity-related direct gas costs for the Summer Season.

CGs = The total cost of gas for the Summer Season for the Company's firm sales customer previously defined.

DEMs = Demand charges allocated to the Summer Season defined in Section 16(E).

MISC = The total dollar amount of gas costs associated with acquisition, dispatching, Administrative and General expenses and overheads as determined in the Company's most recent rate proceeding. Refer to Section 16(F) for this dollar amount.

R1d, R2d = Supplier refunds from pipeline demand charges - The per unit supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds." See Section 16(I).

Rs = Summer Season Reconciliation Costs - Account 1920-1741 balance, inclusive of the associated Account 1920-1741 interest, as outlined in Section 16(J).

S:Sales = Forecasted sales volumes associated with the Summer Season.

WCA % = Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 16(F) for this percentage.

CC = Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Rbd = Annual Bad Debt Expense reconciliation adjustment - Account 1920-1743 balance.

WCRs = Working Capital reconciliation adjustment associated with Summer gas costs – Account 1163-1424 as outlined in Section 16(K).

WCsd = Working Capital allowable costs associated with demand costs allocated to the Summer Season as defined in Section 16(K).

Summer Season Commodity Cost (Cs) Formula

Cs = COMs – NCCCs + WCsc – R1c – R2c
and:

WCsc = (COMs – NCCCs) × WCA% × CC
where:

COMs =	Commodity charges associated with gas supply sent out in the Summer Season as defined in Section 16(E).
WCsc =	Working Capital allowable costs associated with commodity charges allocated to the Summer Season as defined in Section 16(K).
R1c, R2c =	Supplier refunds from pipeline commodity charges - The supplier refunds associated with refund program credits derived from Account 5541-8048, “Undistributed Gas Suppliers' Refunds.”
NCCCs =	Non-core commodity costs incurred in the Summer Season as defined in Section 16(E).
WCA % =	Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 16(F) for this percentage.
CC =	Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Summer Bad Debt (BDs) Formula

BDs = BD% x (Ds + Cs + Rs + WCRs)
where:

BD% =	Bad Debt percentage calculated based on a twelve month basis ending April of each year. Refer to Section 16(F) Bad Debt Allowed Recovery Rate for this percentage.
BDs =	Forecasted gas supply related Bad Debt Expense calculated for Summer Season defined in Section 16(E).
Ds =	Demand related costs in the Summer Season as previously defined.
Cs =	Commodity related costs in the Summer Season as previously defined.
Rs =	Reconciliation Costs – Summer deferred gas costs as previously defined.
WCRs =	Summer Season Working Capital Reconciliation adjustment as previously defined.

Residential Summer Season Cost of Gas (COGsr)

All residential firm sales customers will pay the same cost of gas for the Summer Season. The factor represents the total forecasted Summer Season average cost of gas rate. This factor is calculated according to the following formula:

$$COGsr = \frac{CGs}{S{:}Sales}$$

where:

CGs = The total cost of gas for the Summer Season for the Company's firm sales customers as previously defined.

S:Sales = Forecasted sales volumes associated with the Summer Season.

R = Designates the Residential Heating and Residential Non-Heating customer classes.

Commercial and Industrial Winter and Summer Season Cost of Gas

The Commercial and Industrial customer classes Winter Season Cost of Gas will be based on the Winter Season average cost of gas components used for the Residential Winter Season Cost of Gas. A separate Winter Season Cost of Gas factor will be computed for the low winter use class, Rates G-51, G-52, G-53, G-54, G-55, G-56, G-57, and G-58 and a separate Winter Season Cost of Gas Factor will be computed for the high winter use class, Rates G-41, G-42, G-43, G-44, G-45, and G-46.

The Commercial and Industrial customer classes Summer Season Cost of Gas will be based on the Summer Season average cost of gas components used for the Residential Summer Season Cost of Gas. A separate Summer Season Cost of Gas factor will be computed for the low winter use class, Rates G-51, G-52, G-53,G-54, G-55, G-56, G-57, and G-58 and a separate Summer Season Cost of Gas factor will be computed for the high winter use class, Rates G-41, G-42, G-43, G-44, G-45, and G-46.

These Cost of Gas Factors will be computed by applying ratios to the average demand portion of the Winter and Summer Season's cost of gas unit rate times the correction factor and then adding the remaining Residential average cost of gas unit rate.

These factors are calculated according to the following formulas:

Low Winter Use (COGwl) Formula Winter Season

$COGwl = RATIOl \times CFw \times CGwd + CGwo$

Low Winter Use (COGsl) Formula Summer Season

$COGsl = RATIOl \times CFs \times CGsd + CGso$

and:

$$RATIOl = \frac{DCcl}{DDcl} \div \frac{DCc}{DDc}$$

and:

High Winter Use (COGwh) Formula Winter Season

$COGwh = RATIOh \times CFw \times CGwd + CGwo$

High Winter Use (COGsh) Formula Summer Season

COGsh = RATIOh x CFs x CGsd + CGso

and

$$RATIOh = \frac{DCch}{DDch} \div \frac{DCc}{DDc}$$

and:

$$CFw = \frac{(WL:Sales + WH\ Sales)}{(RATIOl \times WL:Sales) + (RATIOh \times WH:Sales)}$$

$$CFs = \frac{(SL:Sales + SH:Sales)}{(RATIOl \times SL:Sales) + (RATIOh \times SH:Sales)}$$

$$CGwd = \frac{Dw}{W:Sales}$$

$$CGwo = \frac{CGw - Dw}{W:Sales}$$

$$CGsd = \frac{Ds}{S:Sales}$$

$$CGso = \frac{CGs - Ds}{S:Sales}$$

DCcl = Bcl * PLrate + (DDcl – Bcl) * REMrate

DCch = Bch * PLrate + (DDch- Bch) * REMrate

PLrate = PL/ PLmdcq

$$REMrate = \frac{(DCc - (Bc*PLrate))}{DDc - Bc}$$

$$DCc = \frac{(DC \times DDc)}{DD}$$

where:

Bc = The daily base load for all the Commercial and Industrial rate classes

Bch = The daily base load for the Commercial and Industrial rate classes G-41, G-42, G-43, G-44, G-45 and G-46.

Bcl = The daily base load for the Commercial and Industrial rate classes G-51, G-52, G-53, G-54, G-55, G-56, G-57 and G-58.

CFs = Summer Season Commercial and Industrial gas cost correction factor.

CFw = Winter Season Commercial and Industrial gas cost correction factor.

CGs = The total cost of gas for the Summer Season for the Company's firm sales customers as previously defined.

CGw = The total cost of gas for the Winter Season for the Company's firm sales customers as previously defined.

DC =	The annual forecasted pipeline, storage and peaking demand charges plus the total production and storage capacity costs, as stated in Section 16(F).
DCc =	The Commercial and Industrial rate classes pro-rata share of the annual forecasted pipeline, storage, and peaking demand capacity costs.
DCch =	The Commercial and Industrial pro-rata share of the annual forecasted pipeline, storage, and peaking demand capacity costs allocated to Commercial and Industrial High Winter Use rate classes, G-41, G-42, G-43, G-44, G-45, and G-46.
DCcl =	The Commercial and Industrial pro-rata share of the annual forecasted pipeline, storage, and peaking demand capacity costs allocated to the Commercial and Industrial Low Winter Use rate classes, G-51, G-52, G-53, G-54, G-55, G-56, G-57, and G-58.
DD =	Total peak design day determinants.
DDc =	The peak design day determinants allocated for all the Commercial and Industrial rate classes.
DDch =	The peak design day determinants for the Commercial and Industrial rate classes, G-41, G-42, G-43, G-44, G-45, and G-46.
DDcl =	The peak design day determinants for the Commercial and Industrial rate classes, G-51, G-52, G-53, G-54, G-55, G-56, G-57, and G-58.
Ds =	The total Summer Demand charges as defined below.
Dw =	The total Winter Demand charges as previously defined.
PL =	The annual forecasted pipeline only demand charges
PLmdcq =	The maximum daily contract pipeline volume available to the Company.
PLrate =	The pipeline demand rate.
RATIOh =	Ratio of the average high Winter Use class Cost of Gas low load factor demand capacity costs to the total average Commercial and Industrial demand capacity costs.
RATIOl =	Ratio of the average low Winter Use class Cost of Gas high load factor demand capacity costs to the total average Commercial and Industrial demand capacity costs.
REMrate =	The weighted average demand rate for storage and peaking supplies.
S: Sales =	Forecasted sales volumes associated with the Summer Season.
SH:Sales =	Total Winter Season forecasted Commercial and Industrial high winter use sales.
SL: Sales =	Total Winter Season forecasted Commercial and Industrial low winter use sales volumes.
W:Sales =	Forecasted sales volumes associated with the Winter Season.
WH:Sales =	Total Winter Season forecasted Commercial and Industrial high winter use sales.
WL: Sales =	Total Winter Season forecasted Commercial and Industrial low winter use sales volumes.

H. Non-Core Sales Margins ("NCSM"). One hundred percent (100%) of margins from Off-System Sales and all revenues from Capacity Release will be credited to firm sales customers during the winter season through operation of the COG.

I. Gas Suppliers' Refunds. Account 5541-8048: Refunds from suppliers of gas, from upstream capacity suppliers and suppliers of product demand are credited to Account 5541-8048, "Commodity and Demand Refunds." Transfers from these accounts will reflect as a credit in the semiannual calculation of the COG to be calculated as follows:

Refund programs shall be initiated with each semiannual COG filing and shall remain in effect for a period of one year. The total dollars to be placed into a given refund program shall be net of over/under-returns from expired programs plus refunds received from suppliers since the previous program was initiated. Refunds shall be segregated by demand and commodity charges and distributed volumetrically, producing per unit refund that will return the principal amount with interest as calculated using the Company's average short-term cost of borrowing for the month to the average of the beginning and end of month balances of refunds. The Company shall track and report on all Account 5541-8048 activities as specified in Section 16(K).

J. Reconciliation Adjustments – Various Accounts.

1. The following definitions pertain to reconciliation adjustment calculations:

a. Capacity Costs Allowable per Winter Season Formula shall be:

(1) Charges associated with upstream storage transmission capacity and product demand procured by the Company to serve firm load in the Winter Season, plus a reallocation of a portion of such charges incurred in the Summer Season to serve firm load.

(2) Charges associated with peaking, downstream production and storage capacity to serve firm load dispatching costs, and other administrative and general expenses in connection with purchasing gas supplies in the Winter Season from the Company's most recent test year and allocated to firm sales service.

(3) Non-Core Sales Margins or economic benefits associated with returnable capacity release and off-system sales.

(4) Credits associated with firm Stand-by Gas Supply Service Monthly Reservation Charges, daily imbalance charges and fixed component of penalty charges billed transportation customers in the Winter peak Season.

(5) Winter Season Demand Cost carrying charges.

b. Gas Costs Allowable Per Winter Season Formula shall be:

(1) Charges associated with gas supplies, including any applicable taxes, purchased by the Company to serve firm load in the Winter Season.

(2) Credit non-core commodity costs assigned to non-core customers to which the COGC does not apply, as defined in Section 16(H) (NCCCw).

(3) Inventory finance charges (FC).

(4) Winter Season commodity cost carrying charges.

c. Capacity Costs Allowable Per Summer Season Formula shall be:

(1) Charges associated with transmission capacity and product demand procured by the Company to serve firm load in the Summer Season

(2) Credits associated with daily imbalance charges and fixed component of penalty charges billed transportation customers in the Summer Season.

(3) Summer Season demand cost carrying charges.

d. Gas Costs Allowable Per Summer Season Formula shall be:

(1) Charges associated with gas supplies, including any applicable taxes, procured by the Company to serve firm load in the Summer Season.

(2) Non-core commodity costs associated with non-core sales to which the COG is not applied, as defined in Section 16(E).

(3) Summer Season commodity cost carrying charges.

e. Costs Allowable Per Bad Debt Formula shall be:

(1) Costs associated with uncollected gas costs, incurred by the Company to serve sales load. Such costs represent the bad debt expense related to the gas supply related write-off of sales customers and will be computed by multiplying actual gas costs by the Bad Debt Allowed Recovery Rate specified in Section 16(F). The reconciliation adjustment each season will be computed as the difference between the actual supply related bad debt revenues and the actual gas costs multiplied by the actual Bad Debt Allowed Recovery Rate as specified in Section 16(F).

(2) Account 1920-1743 – Annual Bad Debt, carrying charges.

2. Calculation of the Reconciliation Adjustments: These accounts contain the accumulated difference between gas cost revenues and the actual monthly gas costs incurred by the Company. The Company shall separate Account 175 into Winter Season Gas Costs (Account 1920-1740) and Summer Season Gas Costs (Account 1920-1741), Account 1920-1740 shall contain the accumulated difference between revenues toward gas costs calculated by multiplying the Winter Season Gas Cost for each Customer Classification, (COGwr, COGwl and COGwh) times monthly firm sales volumes for each Customer Classification, and the total costs allowable per the Winter Season gas cost formula. Account 1920-1741 shall contain the accumulated difference between revenues toward gas costs calculated by multiplying the Summer Season Gas Cost for each Customer Classification, (COGsr, COGsl and COGsh) times monthly firm sales volumes for each Customer Classification, and the total gas costs allowable per the Summer Season demand formula.

Carrying Charges shall be calculated on the average monthly balance of each subaccount. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

The annual bad debt reconciliation adjustments Rbd shall be determined for use, incorporating the bad debt balances in Account 1920-1743.

The bad debt account balance contains the accumulated difference between the Bad Debt Allowed Recovery Rate for the applicable period multiplied by the actual gas costs and the actual supply related bad debt revenues for the Winter and Summer COG filings.

The Winter Season reconciliation shall be filed with the NHPUC no later than July 29 of each year.

The Summer Season reconciliation shall be filed with the NHPUC no later than January 31 of each year.

K. Working Capital Reconciliation Adjustments - Accounts 1163-1422 and 1163-1424.

1. The following definitions pertain to reconciliation adjustment calculations:

   a. Working Capital Demand Gas Costs Allowable per Winter Season Gas Formula shall be:

      (1) Charges associated with upstream storage, transmission capacity, and product demand procured by the Company to serve firm load in the Winter period, plus a reallocation of a portion of such charges incurred in the Summer Season to serve firm load.

      (2) Carrying charges.

   b. Working Capital

      (1) Charges associated with gas supplies, including any applicable taxes, purchased by the Company to serve firm load in the Winter season.

      (2) Non-core commodity costs associated with non-core sales to which the COG is not applied, as defined in Section 16(E).

      (3) Carrying charges.

   c. Working Capital Demand Gas Costs Allowable per Summer Season Gas Formula shall be:

      (1) Charges associated with upstream storage and transmission capacity procured by the Company to serve firm load in the Summer Season.

      (2) Carrying charges.

   d. Working Capital Commodity Gas Costs Allowable per Summer Season Gas Formula shall be:

      (1) Charges associated with gas supplies, including any applicable taxes, procured by the Company to serve firm load in the Summer Season.

      (2) Non-core commodity costs associated with non-core sales.

      (3) Carrying charges.

   e. The Winter and Summer Cost of Gas working capital allowances shall be calculated by applying the Working Capital Allowance Percentage (WCA%) set forth in Section 16(F).

2. Calculation of the Reconciliation Adjustments

   a. Accounts 1163-1422 and 1163-1424 contain the accumulated difference between working capital allowance revenues and the actual monthly working capital allowance cost. The actual monthly working capital allowance shall be calculated by multiplying the actual gas costs times the Working Capital Allowance Percentage (WCA%) set forth in Section 16(F), to the actual Direct Gas Costs allowable.

   b. The Winter Season working capital reconciliation adjustment (WCRw) shall be determined for use in the Winter Season Gas Cost calculations incorporating the Winter Season working

capital account 1163-1422. A Summer Season working capital reconciliation adjustment (WCRs) shall be determined for use in the Summer Season Gas Cost calculations incorporating the Summer Season working capital account 1163-1424 balance.

L. Application of COG to Bills: The Company will employ the COGs as follows: The COGs ($/therm) for each customer group for each season shall be calculated to the nearest hundredth of a cent per unit and will be applied to each customer's monthly sales volume within the corresponding customer classification. The Cost of Gas will be applied to gas consumed on or after the first day of the month in which the cost of gas becomes effective.

M. Information Required to be Filed with the NHPUC.

1. Reconciliation Adjustments: The Company shall file with the NHPUC a seasonal reconciliation of gas costs and gas cost collections containing information in support of the reconciliation calculation set out in Sections 16(J) (2) and 16(K) (2). Such information shall include the complete list of gas costs recoverable through the COGC over the previous season. This seasonal reconciliation shall be filed with the respective seasonal COG reconciliation filing, along with complete documentation of the reconciliation adjustment calculations.

   Additionally, information pertaining to the Cost of Gas shall be filed with the NHPUC in accordance with the format established by the NHPUC. Reporting requirements include filing the Company's monthly calculation of the projected over or under-collection with the NHPUC, along with notification by the Company to the NHPUC of any revised COG for the subsequent month, not less than five (5) business days prior to the first day of the subsequent month.

   The Company shall file with the NHPUC an annual reconciliation of bad debt expense and bad debt collections containing information in support of the reconciliation calculation set out in Sections 16(J) (1) and 16(J) (2). Such information shall detail the revenues collected as an allowance for bad debt, as well as the actual bad debt expense associated with gas cost recoverable through the COGC over the 12-month period ending April 30th. This annual reconciliation of bad debt expenses shall be filed with the Winter COG reconciliation filing, along with documentation.

2. Commercial and Industrial COG Ratio: The following factors will be filed annually by the Company for informational purposes. Significant changes in these factors signal the need to evaluate the COG ratios. These variables will assist in predicting significant shifting of the MBA-based escalator of gas costs and resulting changes in the COG ratios:

   a. The percentage of load migration from sales to transportation service in the Commercial and Industrial High and Low Winter Use classes.

   b. The ratio of delivered costs of winter supplies to pipeline delivered supplies.

   c. The July and August consumption for the Commercial and Industrial High and Low Winter classes as a percentage of their annual consumption.

N. Other Rules.

1. The NHPUC may, where appropriate, on petition or on its own motion, grant an exception from the provisions of this tariff, upon such terms that it may determine to be in the public interest.

2. The Company may, without further NHPUC action, adjust the approved COG upward or downward monthly based on the Company's calculation of the projected over or under-collection for the period, but the cumulative adjustments upward shall not exceed twenty-five percent (25%) of the approved COG.

3. The Company may, at any time, file with the NHPUC an amended COG.

4. The operation of the Cost of Gas Clause is subject to all powers of suspension and investigation vested in the NHPUC.

5. The Company shall file both seasonal COG filings on or before the first business day in September. The summer portion of the filing will include COG rates effective May 1 of the following year.

O. Reconciliation Adjustment Accounts.

1163-1422

Winter Season Gas Working Capital Allowance Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Winter Season gas working capital allowance revenues and Winter Season gas working capital allowance. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1163-1424

Summer Season Gas Working Capital Allowance Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Summer Season gas working capital allowance revenues and Summer Season gas working capital allowance. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1920-1740

Winter Season Gas Cost Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Winter Season gas revenues and Winter Season gas costs. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1920-1741

Summer Season Gas Cost Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Summer Season gas revenues and Summer Season gas costs. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1920-1743

Annual Bad Debt Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Annual bad debt revenues and annual bad debt costs. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

5541-8048

Commodity and Demand Refunds: This account shall be used to record the refunds from upstream commodity supplies and suppliers of product commodity and transfers of credits in the semiannual calculation of the COG as well as to record the refunds from upstream capacity supplies and suppliers of product demand and transfer of credits in the semiannual calculation of the COG. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

P. Firm Transportation Cost of Gas Charge. To permit the Company to charge its firm transportation customers with a portion of the cost of gas produced by the Company between November 1 and April 30 of each year, there is a Firm Transportation Cost of Gas Charge ("FTCG") which applies to all firm transportation billed under this tariff. This volumetric charge is to compensate firm sales customers for the increase in gas costs, through the use of supplemental liquid fuels, attributable to firm transportation customers during the Winter Period.

1. Application. The FTCG will be calculated for the Winter Period, defined as the period from November 1 through April 30. The FTCG will be applied to billings commencing with the first November revenue billing cycle

2. Purpose. The amount of the FTCG is the estimated liquid costs used for pressure support purposes multiplied by the transportation throughput as a percentage of the total system throughput for the Winter Period. The resulting amount shall be adjusted by the prior period over or under collection, if any, and shall be recovered over the estimated total transportation throughput subject to the FTCG to yield a per therm volumetric charge. The FTCG shall be computed to the nearest one hundredth cent per therm and shown separately on customers' bills. At the conclusion of the Winter Period, the Company will calculate the extent that the FTCG revenues are greater or lesser than actual unit cost. The revenue and liquid costs will be reconciled so that all liquids costs shall be collected from either firm sales or firm transportation customers.

3. Changes. The amount of the FTCG may be changed within the period whenever the unit cost materially deviates from the anticipated unit cost

4. Reporting. The Company shall submit to the New Hampshire Public Utilities Commission, on or before the first business day in September, a copy of the FTCG computation. A reconciliation of the prior period under/over collection will be submitted to the New Hampshire Public Utilities Commission no later than July 29.

Q. Fixed Price Option Program. Fixed Price Option Program. An alternative to the traditional Winter Period cost of gas pricing mechanism may be elected by a residential customer (rates R-1, R-3, R-4, R-5 or R-6) pursuant to the Company's Fixed Price Option Program (the "Program"). The Company may offer up to 50% of its weather normalized firm sales for the prior Winter Period under the Program. The cost of gas rate offered under the Program will remain fixed for all Winter Period deliveries commencing November 1 and ending April 30. The Company shall submit to the New Hampshire Public Utilities Commission on or before September 1 of each year a copy of the fixed price option computation. Once elected, customers must remain on the Program for the duration of the Winter Period, unless service is terminated. There are no maximum or minimum usage levels. No sign up fees apply.

16.2 COST OF GAS CLAUSE – KEENE DIVISION

A. Purpose. To permit the Company to charge its customers in the Keene Division with the cost of gas purchased or produced. A cost of gas rate will be applied to all firm gas billed under this tariff as calculated on the appropriate pages.

B. Application. A cost of gas rate will be calculated for the winter heating period, defined as the period from November 1 through April 30, and a cost of gas rate will be calculated for the summer period, defined as the period from May 1 through October 31.

The winter cost of gas rate will be applied to billings commencing with the first November revenue billing cycle; the summer cost of gas rate will be applied to billings commencing with the first May revenue billing cycle.

C. Calculation. The amount of the cost of gas rate is the anticipated unit cost of gas sold.

At the conclusion of each winter and summer period the Company will calculate the extent that cost of gas revenues are greater or less than actual unit costs of gas compared with the anticipated unit costs. The calculated difference (actual gas sales volumes multiplied by the difference between actual and anticipated unit costs) will be carried forward into the computation of the cost of gas rate for the corresponding winter or summer period.

Any excess revenue collected, as determined above, will earn interest as specified by the Commission.

D. Changes. The cost of gas rate may be adjusted without further Commission action based on the projected over-/under-collection of gas costs, the adjusted rate to be effective the first of the month. Any such rate adjustments may not exceed a maximum rate of 25 percent above the approved rate, but there is no limit on the amount of any rate reductions.

E. Refunds. When refunds are made to the Company by its suppliers that are applicable to increased charges collected under this provision, the Company will make appropriate refunds to its customers and as the Commission may direct.

F. Reporting. The Company shall submit to the Commission, at least 30 days prior to the effective date, the proposed winter and summer period cost of gas rate computation. Any monthly adjustments to the cost of gas rate must be filed five (5) business days prior to the first day of the subsequent month (the effective date of the new rate).

The cost of gas rate shall be computed to the nearest one hundredth cent per therm and shown on customers' bills.

G. Fixed Price Option Program. An alternative to the traditional winter period cost of gas rate mechanism may be elected by the customer pursuant to the Company's Fixed Price Option (FPO) Program. The Company may offer up to 50% of its expected firm sales for the winter period under the FPO Program. The cost of gas charge offered under the FPO Program will remain fixed for all winter period billings commencing November 1 and ending April 30 of the effective winter period. Once elected, customers must remain on the FPO Program for the duration of the winter period unless service is terminated. There are no maximum or minimum usage levels. Customers may enroll in this Program by contacting the Company between the October 1 and October 19 period immediately preceding the effective winter period.

17 LOCAL DISTRIBUTION ADJUSTMENT CLAUSE

A. Purpose. The purpose of the Local Distribution Adjustment Clause (“LDAC” or this “Clause”) is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its delivery charges in order to recover Conservation Charges (“CC”), Revenue Decoupling Adjustment Clause (“RDAC”), Winter Period Surcharges (“WPS”), Environmental Surcharges (“ES”) including the Relief Holder Surcharge (“RHS”) and the Manufactured Gas Program Surcharge (“MGP”), recover gas restructuring expenses (“GRE”), rate case expenses (“RCE”), Residential Low Income Assistance Program costs (“RLIAP”) and any other expenses the NHPUC may approve from time to time.

B. Applicability. This Clause shall be applicable in whole or part to all of the Company's firm sales service and firm delivery service customers as shown on the table below. The application of this clause may, for good cause shown, be modified by the NHPUC. See Section 17(K) "Other Rules."

Applicability	CC 17(C)	RDAC 17(C.1)	ES 17(D)	GRE 17(E)	RCE 17(F)	RLIAP 17(G)
Residential Non-Space Heating – R-1, R-5	2	2	X	N/A	2	X
Residential Space Heating – R-3, R-4, R-6, R-7	2	2	X	N/A	2	X
Small C&I – G-41, G-51, G-44, G-55	2	2	X	X	2	X
Medium C&I – G-42, G-52, G-45, G-56	2	2	X	X	2	X
Large C&I – G-43, G-53, G-54, G-46, G-57, G-58	2	2	X	X	2	X

Notes:
N/A Not applicable
X Applicable to all
1 Applicable to Non-Managed Expansion Program Customers
2 As ordered by the NHPUC

C. Conservation Charges Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Conservation Charge, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers costs and lost margins associated with its energy efficiency management programs.

2. Applicability: A conservation charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the Commission as determined in accordance with the provision of this rate schedule. Such conservation charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.

3. Calculation of Conservation Charge: The Company will properly assign expenses for forecasted conservation expenditures to the applicable rate categories for a future twelve (12) month period commencing November 1 of each year. The total of such conservation expenditures plus any prior period reconciling adjustments shall be divided by therm sales as forecasted by the Company for the same annual period and rounded to the nearest hundredth of a cent. The resulting conservation charge shall be included in the Company's Local Distribution Adjustment Charge and applied to actual therms sold or transported for the following twelve (12) month period starting November 1, and ending October 31.

4. Reporting: The Company shall submit annual reports to the Commission reconciling any difference between the actual conservation expenditures and actual revenues collected under this rate schedule. The difference whether positive or negative will be carried forward into the conservation charge for the next recovery period. Upon completion of the conservation program(s), any over or under

collection may be credited or charged to the deferred Winter Period cost of gas account, subject to Commission approval.

5. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the CC applicable to each Rate Category during the next subsequent twelve-month period commencing with the calendar month of November.

6. Reconciliation Adjustment: Account 1163-1755 shall contain the cumulative difference between the sum of the DSM expenditures incurred by the Company plus the sum of the DSM repayments and the revenues collected from customers. The Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.

C.1 Revenue Decoupling Adjustment Clause

1. Purpose: The purpose of the Revenue Decoupling Adjustment Clause ("RDAC") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on a semi-annual basis, its rates for firm gas sales and firm transportation service in order to reconcile Actual Base Revenue per Customer with Benchmark Base Revenue per Customer. The Company's Revenue Decoupling Adjustment eliminates the link between customer sales and Company revenue in order to align the interests of the Company and customers with respect to changing customer usage.

2. Effective Date: The Winter Season Revenue Decoupling Adjustment Factor ("RDAF") for the Winter Season shall be effective on the first day of each Winter Season as defined herein. The Summer Season RDAF shall become effective on the first day of each Summer Season as defined herein.

3. Applicability: The Revenue Decoupling Adjustment Factor shall apply to all of the Company's firm tariff Rate Schedules, subject to the jurisdiction of the Commission, as determined in accordance with the provisions of this RDAC.

4. Definitions: The following definitions shall apply throughout the RDAC:

   a. Actual Base Revenue per Customer is the actual revenue derived from the Company's base rates divided by the Actual Number of Customers for a given season for a Customer Class Group.

   b. Actual Number of Customers is the actual number of customers for the applicable Customer Class Group for the most recently completed Winter Season or Summer Season. Actual Number of Customers shall be calculated by summing the monthly equivalent bills for a given season for a Customer Class Group and dividing by the number of months in each Season.

   c. Customer Class is the group of all customers taking service pursuant to the same Rate Schedule.

   d. Customer Class Group is the group of Rate Schedules combined for purposes of calculating the Revenue Decoupling Adjustment amounts. The three Customer Class Groups are as follows:

(1) The Residential Non-Heating Customer Class Group (CG1) shall consist of all customers taking service pursuant to the Company's residential non-heating rate schedule R-1.

(2) The Residential Heating Customer Class Group (CG2) shall consist of all customers taking service pursuant to the Company's residential heating rate schedules R-3, and R-4.

(3) The Commercial and Industrial Customer Class Group (CG3) shall consist of all customers taking service pursuant to one of the Company's general service rate schedules, G-41, G-42, G-43, G-51, G-52, G-53 and G-54.

e. Summer Season is the continuous period from May 1 through October 31.

f. Winter Season is the continuous period from November 1 through April 30.

g. Benchmark Base Revenue per Customer is the allowed average revenue per Customer for a given season for a Customer Class Group, reflecting the base revenue from the Company's base rate case or other proceeding that results in an adjustment to base rates. The following are the Benchmark Base Revenue per Customer values as approved by the Commission in Docket No. DG 17-048:

Customer Class Group	Benchmark Base Revenue per Customer	
	Winter Season	**Summer Season**
Residential Non-Heating (CG1)	$165.77	$145.53
Residential Heating (CG2)	$433.98	$210.90
Commercial and Industrial (CG3)	$2,200.52	$894.95

5. Calculation of Revenue Decoupling Adjustment

a. Description of Revenue Decoupling Adjustment

At the conclusion of each Winter Season and Summer Season, the Company shall calculate a Decoupling Revenue Adjustment to be used to determine the RDAF for the next corresponding season.

The Revenue Decoupling Adjustment shall be determined by calculating the difference between the Actual Base Revenue per Customer and the Benchmark Base Revenue per Customer, and multiplying that difference by the Actual Number of Customers for the applicable Customer Class Group. The Revenue Decoupling Adjustment shall equal the sum of the adjustments calculated for each of the three Customer Class Groups and shall include a reconciliation component.

The total Revenue Decoupling Adjustment determined in accordance with Section 5.0 may not exceed plus or minus five percent (±5%) of total base revenues from firm Rate Classes for the most recent corresponding Winter or Summer Season. To the extent that the application of the Revenue Cap results in a Revenue Decoupling Adjustment that is less than that calculated in accordance with Section 5.0, the difference shall be deferred and included in the Revenue

Decoupling Reconciliation for recovery in the subsequent year during the corresponding Winter or Summer Season. Carrying charges shall be calculated on the average deferred balance using the prime lending rate and then added to the end-of-month balance.

b. Revenue Decoupling Adjustment Formulas

$$RD_T = \sum_{CG=1}^{CG=3} \left[\left(BRPC_{T-1}^{CG} - ARPC_{T-1}^{CG} \right) x \; ACUSTS_{T-1}^{CG} \right]$$

If
$RD < (5\% \; x \; DIST \; REV_T)$
And
$RD > (-5\% \; x \; DIST \; REV_T)$

Then
$DEF_{incm} = 0$
And:
$DEF_{rec} = Lower \; of \; (DEF_{balp}) \; or \; \left((5\% \; x \; DIST \; REV_T) - RD \right)$
And:
$DEF_{balc} = DEF_{balp} + DEF_{incm} - DEF_{rec} = DEF_{balp} - DEF_{rec}$
And:

$$RDAF = \frac{RD + RF_{rd} + DEF_{rec}}{P{:}Thru_T}$$

Else:
$DEF_{incm} = RD - (5\% \; x \; DIST \; REV_T)$
And:
$DEF_{rec} = 0$
And
$DEF_{balc} = DEF_{balp} + DEF_{incm} - DEF_{rec} = DEF_{balp} + DEF_{incm}$
And

$$RDAF = \frac{(5\% \; x \; DIST \; REV_T) + RF_{rd}}{P{:}Thru_T}$$

Where the terms in the above equation have the following meanings:

$ACUSTS_{T-1}^{CG}$: The Actual Number of Customers for the applicable Customer Class Group for the most recently completed Winter or Summer Season (T-1). Actual number of customers for each Winter or Summer Season shall be the average number monthly customers in that season, calculated by summing the number of equivalent bills in each month of the most recently completed Winter or Summer Season, and dividing by the number of months in the Season.

$ARPC^{CG}_{T-1}$:	The Actual Base Revenue Per Customer for the applicable Customer Class Group for the most recently completed Winter or Summer Season (T-1), as defined in Section 4.0. For purposes of calculating the Actual Base Revenue per Customer, base revenues for Low Income rate class R-4, shall be determined based on non-discounted rate R-3.
$BRPC^{CG}_{T-1}$:	The Benchmark Base Revenue Per Customer for the applicable Customer Class Group as determined in accordance with Section 4.0(A) for the most recently completed Winter or Summer Season (T-1).
cg	Customer Class Groups as defined in Section 4.0(D).
DEF_{bal}	The balance of the unrecovered deferrals inclusive of associated interest using the prime lending rate.
DEF_{incm}	The amount of Revenue Decoupling that must be deferred in the current year based on the difference between plus or minus five percent (+/-5%) of total distribution revenues as determined in accordance with the definition of DIST REV_T in Section 5.0(B).
DEF_{rec}	The amount of deferrals the Company may recover in the current Winter or Summer Season.
P: $Thru:_T$	Forecast Throughput Volumes inclusive of all firm tariff throughput for the Winter or Summer Season.
RD	The Revenue Decoupling adjustment to revenues.
$RDAF_T$:	The Revenue Decoupling Adjustment Factor for the Winter or Summer Season.
RF_{rd}:	Revenue Decoupling Reconciliation Adjustment as described in Section 6.0.
DIST REV_T	The Distribution revenues from all firm rate classes during the most recent Winter or Summer Season.

6. Calculation of the Reconciliation Adjustments

Account xxxx-xxxx shall contain the accumulated difference between revenues toward the Revenue Decoupling Adjustment for the Winter Season, as calculated by multiplying the Winter Season RDAF times the Winter Season firm sales and transportation throughput, and the Revenue Decoupling Adjustment allowed revenues for the Winter Season, plus carrying charges on the average monthly balance using the prime lending rate.

Account xxxx-xxxx shall contain the accumulated difference between revenues toward the Revenue Decoupling Adjustment for the Summer Season, as calculated by multiplying the Summer Season Revenue Decoupling Adjustment Clause times the Summer Season firm throughput, and the

Revenue Decoupling Adjustment allowed revenues for the Summer Season, plus carrying charges on the average monthly balance using the prime lending rate.

7. Application of the RDAC to Customer Bills

   The RDAF ($ per therm) shall be truncated at the nearest one one-hundredth of a cent per therm. The RDAF for the Winter Season will be applied usage in the next Winter Season and the RDAF for the Summer Season will be applied to usage in the next Summer Season. The RDAF will be applied to the monthly firm tariff throughput for each customer.

8. Information to be Filed with the Commission

   Information pertaining to the RDAC will be filed with the Commission ninety (90) days prior to the effective dates of the November 1 Winter Season and May 1 Summer Season RDAF. Such information shall include:

   a. the calculation of the applicable revenue decoupling revenue adjustment

   b. the calculation of the revenue decoupling reconciliation adjustment.;

   c. the calculation of annually updated Benchmark Base Revenue per Customer to be utilized in the upcoming Summer and Winter Seasons.

D. Environmental Surcharges ("ES") Allowable for LDAC.

1. Purpose: In order to recover expenditures associated with former manufactured gas Programs, there shall be an ES Rate applied to all firm volumes billed under the Company's delivery service charges.

2. Applicability: An annual ES Rate shall be calculated effective every November 1 for the annual period of November 1 through October 31. The annual ES Rate shall be filed with the Company's Winter season Cost of Gas Clause ("COG") filing and be subject to review and approval by the Commission. The annual ES Rate shall be applied to firm sales and to firm delivery throughput as a part of the LDAC. Special contract customers are exempt from the ES.

3. Costs Allowable: All approved environmental response costs associated with manufactured gas Programs may be included in the ES Rate

   The total annual charge to the Company's customers for environmental response costs during any annual ES recovery period shall not exceed five percent (5%) of the Company's total revenues from firm gas sales and delivery throughput during the preceding twelve (12) month period ending June 30. The total annual charge shall represent the ES expenditures reflected in the calculation of the ES Rate to be in effect for the upcoming twelve-month period, November 1 through October 31. If this recovery limitation results in the Company recovering less than the amount that would otherwise be recovered in a particular ES Recovery Year, then the Company would defer this unrecovered amount, with interest, calculated monthly on the average monthly balance, until the next recovery period in which this amount could be recovered without violating the 5% limitation. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

4. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the ES applicable to all firm sales and firm delivery service throughput for the subsequent twelve-month period commencing with the calendar month of November.

5. Definitions:

   Environmental Response Costs shall include all costs of investigation, testing, remediation, litigation expenses, and other liabilities relating to manufactured gas Program sites, disposal sites, or other sites onto which material may have migrated, as a result of the operating or decommissioning of New Hampshire gas manufacturing facilities. These cost shall include the costs of the closure of the Relief Holder and pond at Gas Street, Concord, NH. The ES shall also include the expenses incurred by the Company in pursuing insurance and third-party claims and any recoveries or other benefits received by the Company as a result

6. Reconciliation Adjustments: Prior to the Winter Period COG, the Company shall calculate the difference between (a) the revenues derived by multiplying firm sales and delivery throughput by the ES Rate, and (b) the historical amortized costs approved for recoveries in the prior November's Annual ES Recovery Period. Account 1920-1863 shall contain the cumulative difference and the Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

7. Calculation of the ES: The ES Rate calculated annually consists of one-seventh of actual response costs incurred by the Company in the twelve-month period ending June 30 of each year until fully amortized (over seven years). Any insurance and third-party recoveries or other benefits for the twelve month period ending June 30 shall be applied to reduce the unamortized balance, shortening the amortization period. The sum of these amounts is then divided by the Company's forecast of total firm sales and delivery throughput for the upcoming twelve months of November 1 through October 31.

8. Application of ES to Bills: The annual ES Rate shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

E. Expenses Related to Gas Restructuring.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates on an annual basis for the recovery of NHPUC-approved costs associated with the Gas Restructuring Collaborative (Docket DE 98-124).

2. Applicability: The Gas Restructuring Expenses ("GRE") shall be applied to all firm tariffed customers eligible to receive delivery service from the Company as determined in accordance with the provisions of Section 17(F) of this clause. The GRE shall be determined annually by the Company as defined below, subject to review and approved by the NHPUC as provided for in this clause.

3. GRE Allowable for LDAC: Costs associated with the Gas Restructuring Collaborative (DE 98-124), including, but not limited to, any legal, consulting, customer focus group(s) and survey(s),

customer education campaign(s), materials and advertising, subject to review and approval by the NHPUC.

4. Effective Date of GRE Charge: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the GRE applicable to all consumption of tariffed customers eligible to receive delivery service for the subsequent twelve month period commencing with the calendar month of November.

5. Definition: Gas Restructuring Initiatives are activities facilitating the development, design and implementation of unbundled services for all customers.

6. GRE Factor Formula:

$$GREF = \frac{GRE + RAGRE}{A: TPev}$$

where:

A:Tpev Forecast Annual Throughput Volumes of all tariffed customers eligible to receive firm delivery-only service from the Company.

GRE Gas Restructuring Expenses as defined in Section 17(F).05.

RA_{GRE} Gas Restructuring Expense Reconciliation Adjustment - Account 1920-1744, inclusive of the associated Account 1920-1744 interest, as outlined in Section 17(E)(7).

7. Reconciliation Adjustments: Account 1920-1744 shall contain the accumulated difference between revenues toward Gas Restructuring Expenses as calculated by multiplying the Gas Restructuring Expense Factor ("GREF") times monthly volumes of customers eligible to receive firm delivery service and Gas Restructuring expenses allowed, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates, and then added to the end-of-month balance.

8. Application of GREF to Bills: The GREF ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

9. Information to be Filed with the NHPUC: Information pertaining to the Gas Restructuring Expenses shall be filed with the NHPUC consistent with the filing requirements of all costs and revenue information included in the LDAC. An annual GREF filing shall be required on or before the first business day in September of each year. The GREF filing shall contain the calculation of the new annual GREF to become effective November 1 and shall include the updated annual Gas Restructuring Expense reconciliation balance.

F. Expenses Related to Rate Cases/Temporary Rate Reconciliation Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates for the recovery of NHPUC-approved rate case expenses and the reconciliation of temporary rates.

2. Applicability: The Rate Case Expenses/Temporary Rate Reconciliation ("RCE") shall be applied to all firm tariffed customers. The RCE will be determined by the Company, as defined below.

3. Rate Case Expenses Allowable for LDAC: The total amount of the RCE will be equal to the amount approved by the Commission.

4. Effective Date of Rate Case Expense Charge: The effective date of the RCE will be determined by the NHPUC in an individual rate proceeding.

5. Definition: The RCE includes all rate case-related expenses approved by the NHPUC. This includes legal expenses, costs for bill inserts, costs for legal notices, consulting fees processing expenses, and other approved expenses. The temporary Rate reconciliation will include the variance between the delivery revenues obtained from the rates prescribed in the temporary rate order and the delivery revenues obtained from the final rates approved by the NHPUC.

6. Rate Case Expense/Temporary Rate Reconciliation (RCE) Factor Formulas: The RCE will be calculated according to the Commission Order issued in an individual proceeding to establish details including the number of years over which the RCE shall be amortized and the allocation of recovery among rate classes. In general, the RCE Factor will be derived by dividing the annual portion of the total RCE, plus the RCE Reconciliation Adjustment, by forecast firm annual throughput.

7. Reconciliation Adjustments: Account 1930-1745 shall contain the accumulated difference between revenues toward Rate Case Expenses as calculated by multiplying the Rate Case Expense Factor ("RCEF") times the appropriate monthly volumes and Rate Case Expense allowed, plus carrying charges added to the end-of-month balance. The carrying charges shall be calculated beginning on the first month of the recovery period by applying the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates to the average monthly balance.

   At the end of the recovery period, any under or over recovery will be included in an active LDAC component, as approved by the Commission.

8. Application of RCE to Bills: The RCE ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

9. Information to be Filed with the NHPUC: Information pertaining to the RCE will be filed with the NHPUC consistent with the filing requirements of all cost and revenue information included in the LDAC. The RCE filing will contain the calculation of the new RCE and will include the updated RCE reconciliation balance.

G. Recoverable Residential Low Income Assistance Program Costs.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to recover the revenue shortfall (costs) associated with customers participating in the Residential Low Income Assistance Program ("RLIAP"). Such costs, as well as, associated administrative and marketing costs shall be recovered by applying an RLIAP rate to all firm sales and transportation service throughput.

2. Applicability: The RLIAP Rate shall be applied to all firm sales and transportation tariff customers. The RLIAP Rate shall be filed with the Company's Winter season Cost of Gas Clause filing and shall be determined annually by the Company and be subject to review and approval by the Commission.

3. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the RLIAP Rate applicable to all firm sales, delivery and transportation service throughput for the subsequent twelve-month period commencing with the calendar month of November.

4. RLIAP Costs Allowable for LDAC: The costs to be recovered through the RLIAP Rate shall comprised of the revenue shortfall calculated by forecasting the number of customers enrolled in the RLIAP and the associated volumetric billing determinants for the upcoming annual recovery period and applying those billing determinants to the difference between the regular and reduced low income residential base rates, plus administrative, marketing and startup costs. The RLIAP Rate shall be calculated by dividing the resulting costs, plus any prior period reconciling adjustment, by the forecast of annual firm sales and transportation service throughput.

5. RLIAP Factor Formula

$$RLIAPF = \frac{RLIAP + RA_{RLIAP}}{A: TPev}$$

where:

A: Tpev — Forecast Annual Throughput Volumes of all firm sales and transportation tariffed customers eligible to receive firm delivery-only service from the Company.

RLIAP — RLIAP costs comprising of the revenue shortfall associated with customer participation, plus administrative, marketing, IT and start-up costs.

RA_{RLIAP} — RLIAP Reconciliation Adjustment - Account 1169-1756, inclusive of the associated Account 1169-1756 interest, as outlined in Section 17(G)(6).

6. Reconciliation Adjustments: Prior to the Company's Winter season Cost of Gas filing, the Company will calculate the difference between (a) the revenue derived by multiplying the actual firm sales and delivery service throughput by the RLIAP Rate through October 31st, and (b) the actual costs of the program which consists of (1) the revenue shortfall calculated by applying the actual billing determinants of the RLIAP classes to the difference in the regular and reduced residential base rates in effect for the annual reconciliation period and (2) the start-up, administrative and marketing costs associated with the implementation of the program, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates. The combined costs will then be recorded in the deferred RLIAP

account 1169-1756. The Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

H. Effective Date of Local Distribution Adjustment Clause. The LDAC shall be filed annually and become effective on November 1 of each year pursuant to NHPUC approval. In order to minimize the magnitude of future reconciliation adjustments, the Company may request interim revisions to the LDAC rates, subject to review and approval of the NHPUC.

I. Local Distribution Adjustment Clause Formulas. The LDAC shall be calculated on an annual basis, by customer, by summing up the various factors included in the LDAC, where applicable.

LDAC Formula

$$LDAC^{X} = CC^{X} + RDAC^{X} + ES + GREF^{x} + RCE + RLIAP$$

and:

$$ES^{X} = RHS + MGP$$

where:

$LDAC^{X}$ =	Annualized class specific LDAC.
CC^{X} =	Annualized class specific CC or EE Charge.
$RDAC^{X}$ =	Annualized class specific RDAC.
ES =	Total firm annualized ES.
RHS =	Annualized charge to recover the costs of the closure of the Relief Holder at Gas Street, Concord, NH
MGP =	Annualized charge to cover the remediation costs related to former manufactured gas plants.
$GREF^{X}$ =	Total firm annualized class specific Gas Restructuring Expense Factor.
RCE =	Rate Case Expense Factor.
RLIAP =	Residential Low Income Assistance Program Rate

J. Application of LDAC to Bills. The component costs comprising the LDAC ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm sales and firm delivery service throughput in accordance with the table shown in Section 17(B).

K. Other Rules.

1. (1) The NHPUC may, where appropriate, on petition or on its own motion, grant an exception from the provisions of these regulations, upon such terms that it may determine to be in the public interest.

2. Such amendments may include the addition or deletion of component cost categories, subject to the review and approval of the NHPUC.

3. The Company may implement an amended LDAC with the NHPUC approval at any time.

4. The NHPUC may, at any time, require the Company to file an amended LDAC.

5. The operation of the LDAC is subject to all powers of suspension and investigation vested in the NHPUC.

L. Amendments to Uniform System of Accounts.

1920-1744 **Gas Restructuring Expense Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the recovery and actual amounts of third party incremental expenses associated with the Company's Gas Restructuring initiatives. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(E).

1163-1755 **Energy Efficiency Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the sum of DSM and/or EE Expenditures incurred by the Company plus the sum of DSM and/or EE Repayments and the revenues collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(C).

1920-1863 **Environmental Response Costs Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the revenues toward environmental response costs as calculated by multiplying the ES times monthly firm sales volumes and delivery service throughput and environmental response costs allowable per formula. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(D).

1930-1745 **Rate Case Expense/Temporary Rates Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the recovery and actual amounts of third-party incremental expenses associated with the Company's Rate Case initiatives and the difference between the final and temporary distribution rates. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(F).

1169-1756 **Residential Low Income Assistance Program Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the actual revenue derived from the actual sales and transportation service throughput multiplied by the RLIAP rate and the actual costs of the program, which consists of the revenue shortfall and all administrative and marketing costs, as outlined in the Local Distribution Adjustment Clause, 18(G).

1163-1756 **Lost Revenue Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the lost revenue of the Company and the revenue collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(C.1).

18 SUPPLY & CAPACITY SHORTAGE ALLOCATION POLICY

A. DEFINITIONS

The following are definitions of terms used in this subsection and applicable only to this subsection:

1. Residential: Service to customers which consists of direct natural gas usage in a residential dwelling for space heating, air conditioning, cooking, water heating and other residential uses

2. Commercial: Service to customers engaged primarily in the sale of goods or services including institutions and local, state and federal government agencies for uses other than those involving manufacturing or electric power generation

3. Industrial: Service to customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power

4. Large Volume: Service to large commercial and industrial customers with an annual gas load greater than 200,000 therms

5. Seasonal: Service available from April 1 to October 31 to all customers using gas to replace some other fuel or gas for air conditioning purposes

6. Firm Sales Service: Service from schedules or contracts under which seller is expressly obligated to supply and deliver specific volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened

7. Firm Transportation Service: Service from schedules or contracts under which seller is expressly obligated to deliver specific third-party volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened.

8. Plant Protection Gas: Is defined as minimum volumes required to prevent physical harm to the plant facilities or danger to plant personnel, when such protection cannot be afforded through the use of alternate fuel. This includes the protection of such material in process as would otherwise be destroyed, but shall not include deliveries required to maintain plant production. For the purpose of this definition, propane and other gaseous fuels shall not be considered alternate fuels.

9. Feedstock Gas: Is defined as natural gas used as a raw material for its chemical properties in creating an end product

10. Process Gas: Is defined as gas use for which alternate fuels are not technically feasible such as in applications requiring precise temperature controls and precise flame characteristics. For the purpose of this definition, propane and other gaseous fuels shall not be considered alternate fuels

11. Boiler Fuel: Is considered to be natural gas used as a fuel for the generation of steam or electricity including the utilization of gas turbines for the generation of electricity

12. Alternate Fuel Capabilities: Is defined as a situation where an alternate fuel could have been utilized whether or not the facilities for such use have actually been installed, provided however, where the use of natural gas is for plant protection, feedstock or process uses and the only alternate fuel is propane or other gaseous fuel, then the consumer will be treated as if he had no alternate fuel capability.

B. POLICY

In the event that, due to gas supply restrictions or capacity constraints, the Company is unable to deliver the total requirements of its firm, sales or transportation rate customers, the available volumes of gas will be allocated to the Company's firm rate customers in accordance with the provisions of this policy.

In the event that the Company, during a curtailment or interruption, requires emergency gas, and takes the gas of the customer, customer shall be compensated for such emergency gas at the customer's alternate cost of fuel as demonstrated to the reasonable satisfaction of the Company.

As curtailment becomes necessary through each succeeding category, the Company will implement full or partial curtailment of a customer, or by groups of customers, taking into consideration customer load characteristics, the Company's delivery system design and Company load characteristics in a manner which is believed to be in the best interests of customers in general.

C. PRIORITIES

Firm rate customers shall be serviced according to the following preference categories with the first and each succeeding category having preference over the succeeding categories:

1. Company use for fuel and lost and unaccounted for

2. Firm sales or transportation service for high priority residential uses including apartment buildings and other multi-unit buildings, small commercial establishments using less than 50 DT on a peak day, schools, hospitals, police protection, fire protection, sanitation facilities and correctional facilities

3. Firm sales or transportation service for essential agricultural uses, as defined by the Secretary of Agriculture, for full food and natural fiber production, process and feedstock use for fertilizer and agricultural chemicals, process and feedstock for animal feeds and food, food quality maintenance, food packaging, marketing and distribution for food related products and on farm uses

4. Firm sales or transportation service for large commercial requirements (50 DT or more on a peak day), firm industrial requirements for plant protection, feedstock and process needs and firm industrial sales up to 300 DT per day

5. Firm sales or transportation service for all industrial requirements not specified in (2), (3), (4), (6), or (7)

6. Firm sales or transportation service including the transportation for industrial requirements for boiler fuel use at less than 1,500 DT per day, but more than 300 DT per day, where alternate fuel capabilities can meet such requirements

7. Firm sales or transportation service including transportation for industrial requirements for large volume (1,500 DT or more per day) boiler fuel use where alternate fuel capabilities can meet such requirements

D. STORAGE INJECTION

Within each category, storage injection required to meet the needs of higher priorities may be given preference over all other uses within that category.

E. PENALTY

For all unauthorized volumes of gas taken by a customer, the customer shall pay the Company a penalty of five times the daily index for each therm taken. Such penalty shall be added to the regular rates in effect. The Company shall have the right, without obligation, to waive any penalty for unauthorized use of gas, if on the day when the penalty was incurred deliveries to other of the Company's customers were not adversely affected. Continued unauthorized use, at the sole discretion of the Company, may result in termination of service.

II. RATE SCHEDULES

1 RESIDENTIAL NON-HEATING RATE: CLASSIFICATION NO. R-1

Availability
This rate is available to all residential customers who do not have gas space heating equipment, who consume less than 80% of their normal usage in the six winter months of November through April and whose usage does not exceed 100 therms in any winter month. Available for use which is separately metered and billed for each dwelling unit. Availability is limited to use in locations served by the Company's mains and for which the Company's facilities are adequate.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	\$0.7176 per day or \$21.50 per 30 day month
Winter Period:	All therms per 30 day month at \$0.2446 per therm
Summer Period:	All therms per 30 day month at \$0.2446 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company’s Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is \$20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is \$30.00.

Terms and Conditions
Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a \$15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

2 RESIDENTIAL HEATING RATE:
CLASSIFCATION NO. R-3

Availability
This rate is for all residential use for those domestic customers who use gas as the principal household heating fuel. Availability is limited to use in domestic locations which are separately metered and billed and which are served by the Company's mains and for which the Company's facilities are adequate.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.8500 per day or $25.50 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.5201 per therm
	All over 100 therms per 30 day month at $0.4176 per therm
Summer Period:	First 20* therms per 30 day month at $0.5201 per therm
	All over 20 therms per 30 day month at $0.4176 per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

3 LOW INCOME RESIDENTIAL HEATING RATE: CLASSIFICATION NO. R-4

Availability

This rate is for residential use for those domestic customers who use gas as the principal household heating fuel if any member of the household qualifies for a benefit through one of the programs listed below, subject to the qualification period described under the "Terms and Conditions" of this rate. Availability is limited to use in domestic locations which are separately metered and billed and which are served by the Company's mains and for which the Company facilities are adequate.

Qualified Programs:

a. Low Income Home Energy Assistance Program (LIHEAP)
b. Electric Assistance Program (EAP)
c. Supplemental Security Income Program
d. Women, Infants and Children Program
e. Commodity Surplus Foods Program (for women, infants and children)
f. Elderly Commodity Surplus Foods Program
g. Temporary Aid to Needy Families Program
h. Housing Choice Voucher Program (also known as Section 8)
i. Head Start Program
j. Aid to the Permanently and Totally Disabled Program
k. Aid to the Needy Blind Program
l. Old Age Assistance Program
m. Food Stamps Program
n. Any successor program of a-m

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.3400 per day or $10.20 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.2080 per therm
	All over 100 therms per 30 day month at $0.1670 per therm
Summer Period:	First 20* therms per 30 day month at $0.2080 per therm
	All over 20 therms per 30 day month at $0.1670 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

<u>Cost of Gas Charge</u>
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

<u>Other Charges for Delivery Service</u>
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

<u>Meter Account Charge</u>
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

<u>Terms and Conditions</u>
For those customers qualifying for the program this rate R-4 shall apply for a one year period. On the date that the one-year period expires, eligibility for this rate shall expire unless the customer provides the Company with evidence that the customer continues to be eligible for one or more qualifying programs. When the Rate R-4 expires, the rate on each account shall revert back to the non-low income Residential Heating Rate, R-3. Customers whose eligibility for the program is based on their having qualified for LIHEAP shall be eligible for this rate retroactive to November 1 of the heating season in which they qualified. Eligibility for such customers shall expire the following October 31, subject to their re-qualifying through receipt of LIHEAP or other benefits as set forth above.

Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

4 MANAGED EXPANSION PROGRAM RESIDENTIAL NON-HEATING RATE: CLASSIFICATION NO. R-5

Availability
This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Residential Non Heating Rate R-1.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.9317 per day or $27.95 per 30 day month
Winter Period:	All therms per 30 day month at $0.3180 per therm
Summer Period:	All therms per 30 day month at $0.3180 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 74-A of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Residential Non Heating Rate R-1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

5 MANAGED EXPANSION PROGRAM RESIDENTIAL HEATING RATE: CLASSIFICATION NO. R-6

Availability
This rate is mandatory for customers taking service in a Managed Expansion Program projects area who otherwise would have qualified for Residential Heating Rate R-3.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$1.1050 per day or $33.15 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.6761 per therm
	All over 100 therms per 30 day month at $0.5429 per therm
Summer Period:	First 20* therms per 30 day month at $0.6761 per therm
	All over 20 therms per 30 day month at $0.5429 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 74-A of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Residential Non Heating Rate R-3.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

6 MANAGED EXPANSION PROGRAM LOW INCOME RESIDENTIAL HEATING RATE: CLASSIFCATION NO. R-7

Availability

This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Low Income Residential Heating Rate R-4.

Qualified Programs:

a. Low Income Home Energy Assistance Program (LIHEAP)
b. Electric Assistance Program (EAP)
c. Supplemental Security Income Program
d. Women, Infants and Children Program
e. Commodity Surplus Foods Program (for women, infants and children)
f. Elderly Commodity Surplus Foods Program
g. Temporary Aid to Needy Families Program
h. Housing Choice Voucher Program (also known as Section 8)
i. Head Start Program
j. Aid to the Permanently and Totally Disabled Program
k. Aid to the Needy Blind Program
l. Old Age Assistance Program
m. Food Stamps Program
n. Any successor program of a-m

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.4420 per day or $13.26 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.2704 per therm
	All over 100 therms per 30 day month at $0.2171 per therm
Summer Period:	First 20* therms per 30 day month at $0.2704 per therm
	All over 20 therms per 30 day month at $0.2171 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge

All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Low Income Residential Heating Rate R-4.

For those customers qualifying for the program this rate R-7 shall apply for a one year period. On the date that the one-year period expires, eligibility for this rate shall expire unless the customer provides the Company with evidence that the customer continues to be eligible for one or more qualifying programs. When the Rate R-7 expires, the rate on each account shall revert back to the non-low income Residential Heating Rate, R-6. Customers whose eligibility for the program is based on their having qualified for LIHEAP shall be eligible for this rate retroactive to November 1 of the heating season in which they qualified. Eligibility for such customers shall expire the following October 31, subject to their re-qualifying through receipt of LIHEAP or other benefits as set forth above.

Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

7 COMMERICAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, HIGH WINTER USE RATE CLASSIFCATION NO. G-41

Availability

This rate is available for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage less than or equal to 10,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$1.8537 per day or $55.61 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.5689 per therm
	All over 100 therms per 30 day month at $0.3130 per therm
Summer Period:	First 20* therms per 30 day month at $0.5689 per therm
	All over 20 therms per 30 day month at $0.3130 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

U.S. Department of Labor Standard Industry Classification Codes will determine eligibility for this tariff.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

8 COMMERCIAL/INDUSTRIAL SERVICE: MEDIUM ANNUAL USE, HIGH WINTER USE RATE
CLASSIFICATION NO. G-42

Availability
This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 10,000 therms and less than or equal to 100,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company's records and procedures.

Character of Service
Natural gas or equivalent will be supplied at a heat content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$5.3197 per day or $159.59 per 30 day month
Winter Period:	First 1000* therms per 30 day month at $0.4458 per therm
	All over 1000 therms per 30 day month at $0.2952 per therm
Summer Period:	First 400* therms per 30 day month at $0.4458 per therm
	All over 400 therms per 30 day month at $0.2952 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Dual fuel customers may be required to sign annual contracts with minimum usage requirements in order to qualify for service under this tariff. U.S. Department of Labor Standard Industry Classification Codes will determine eligibility for this tariff.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

9 COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-43

Availability

This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 100,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter:	$22.8290 per day or $684.87 per 30 day month
Winter Period:	All therms per 30 day month at $0.2684 per therm
Summer Period:	All therms per 30 day month at $0.1227 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the N Commission. The delivery charges presented above are exclusive of these charges. Refer to the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly,

daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

10 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-44

Availability
This rate is Mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-41.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Terms and Conditions
To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly, daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Commercial/Industrial Rate G-43.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

13 COMMERICAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-51

Availability

This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage less than or equal to 10,000 therms and a Winter Period usage less than 67% of annual usage as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$1.8537 per day or $55.61 per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.3460 per therm
	All over 100 therms per 30 day month at $0.2060 per therm
Summer Period:	First 100* therms per 30 day month at $0.3460 per therm
	All over 100 therms per 30 day month at $0.2060 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charges presented above are exclusive of these charges. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is made in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00

Terms and Conditions

Eligibility shall be based on the reasonable discretion of the Company and subject to verification of heating usage. U.S. Department of Labor Standard Industry Classification Code will determine eligibility for this

tariff. Dual fuel customers may be required to sign annual contracts with minimum usage requirements in order to qualify for service under this tariff.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

14 COMMERCIAL/INDUSTRIAL SERVICE: MEDIUM ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-52

Availability

This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 10,000 therms and less than or equal to 100,000 therms and a Winter Period usage less than 67% of annual usage as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter:	$5.3197 per day or $159.59 per 30 day month
Winter Period:	First 1000* therms per 30 day month at $0.2739 per therm
	All over 1000 therms per 30 day month at $0.1897 per therm
Summer Period:	First 1000* therms per 30 day month at $0.2155 per therm
	All over 1000 therms per 30 day month at $0.1192 per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause, as in effect from time to time and on file with the Commission. The delivery charge presented above is exclusive of these charges. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly, daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

15 COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, LOAD FACTOR LESS THAN 90% RATE
CLASSIFICATION NO. G-53

Availability
This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 100,000 therms, a Winter Period usage less than 67% of annual usage, and a 12 month average usage less than 90% of the average usage of December, January and February as determined by the Company's records and procedures.

Character of Service
Natural gas or equivalent will be supplied at a heat content value of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge ;

Customer Charge Per Meter:	$23.4937 per day or $704.81 per 30 day month
Winter Period:	All therms per 30 day month at $0.1741 per therm
Summer Period:	All therms per 30 day month at $0.0835 per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. Terms and Conditions
To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly, daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer

in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Commercial/Industrial Rate G-54.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

21 OUTDOOR GAS LIGHTING

Availability

This rate is available for residential outdoor gas lighting where such service is provided from the Company's existing delivery system to a standard gas light fixture or fixtures, located on the customer's premises, and when it is not feasible to meter such service along with other gas used on the premises and bill the same under the rate in effect for all other services. Service under this rate is available at those locations which were receiving service hereunder as of July 1, 2015, and which have continuously received service hereunder since that date.

Rate Per Light Per Month	$11.34

The above rates shall be adjusted to reflect the recovery of all applicable taxes.

Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a location, an account charge is incurred in addition to all other charges. The account charge is $20.00 when the visit to the location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Meters are read and bills are presented monthly.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the Commission.

Authorized by NHPUC Order No. xx,xxx dated Month Day,Year, in Docket No. DG 17-048

28 CALCULATION OF FIXED WINTER PERIOD COST OF GAS RATE – KEENE DIVISION

Period Covered:	Winter Period November 1, 2014, through April 30, 2015		
Projected Gas Sales - therms			1,076,725
Total Anticipated Cost of Propane Sendout			$1,826,090
Add:	Prior Period Deficiency Uncollected	$9,404	
	Interest	$2,382	
Deduct:	Prior Period Excess Collected	$0	
	Interest	$0	
	Prior Period Adjustments and Interest		$11,786
Total Anticipated Cost			$1,837,876
Cost of Gas Rate			
Non-Fixed Price Option Cost of Gas Rate (per therm)			$1.7069
Fixed Price Option Premium			$0.0200
Fixed Price Option Cost of Gas Rate (per therm)			$1.7269
Non-Fixed Price Option Cost of Gas Rate - Beginning Period (per therm)			$1.7069
Mid Period Adjustment - December 1, 2014			($0.2427)
Mid Period Adjustment - January 1, 2015			($0.0718)
Revised Non-Fixed Price Option Cost of Gas Rate - Effective January 1, 2015 (per therm)			$1.3924
Pursuant to tariff section 17(d), the Company may adjust the approved cost of gas rate upward on a monthly basis to the following rate:			
Maximum Cost of Gas Rate - Non-Fixed Price Option (per therm)			$2.1336

29 CALCULATION OF FIRM TRANSPORTATION COST OF GAS RATE

II. RATE SCHEDULES
Calculation of Firm Transportation Cost of Gas Rate
PERIOD COVERED: WINTER PERIOD, NOVEMBER 1, 2016 THROUGH APRIL 30, 2017
(Refer to text in Section 16(Q) Firm Transportation Cost of Gas Clause)

(Col 1)	(Col 2)		(Col 3)		(Col 4)
ANTICIPATED COST OF SUPPLEMENTAL GAS SUPPLIES:					
PROPANE	$ 283,609				
LNG	1,513,890				
TOTAL ANTICIPATED COST OF SUPPLEMENTAL GAS SUPPLIES	1,797,499				
ESTIMATED PERCENTAGE USED FOR PRESSURE SUPPORT PURPOSES	9.9%				
ESTIMATED COST OF LIQUIDS USED FOR PRESSURE SUPPORT PURPOSES	$ 177,952				
PROJECTED FIRM THROUGHPUT (THERMS):					
FIRM SALES	90,536,024		64.4%		
FIRM TRANSPORTATION SUBJECT TO FTCG	50,086,696		35.6%		
TOTAL FIRM THROUGHPUT SUBJECT TO COST OF GAS CHARGE	140,622,721		100.0%		
TRANSPORTATION SHARE OF SUPPLEMENTAL GAS SUPPLIES	35.6%	x	$ 177,952	=	$ 63,383
PRIOR (OVER) OR UNDER COLLECTION					(33,912)
NET AMOUNT TO COLLECT FROM (RETURNED TO) TRANSPORTATION CUSTOMERS					$ 29,471
PROJECTED FIRM TRANSPORTATION THROUGHPUT					50,086,696
FIRM TRANSPORTATION COST OF GAS					$0.0006

III. DELIVERY TERMS AND CONDITIONS

1 RATES AND CHARGES

1.1 The Company shall apply this tariff on a non-discriminatory and non-preferential basis to all Customers who obtain service from the Company, except as this tariff is explicitly modified by order of the NHPUC. The provisions of Part III Section 20 of this tariff will specifically apply to all entities designated by the Customer as set forth in Section 20.5 to supply Gas to a Designated Receipt Point for the Customer's account.

1.2 The Company reserves the right to impose reasonable fees and charges pursuant to the various provisions of this tariff.

1.3 In the event that the Company incurs minimum bill, inventory, transition, take or pay, imbalance, or any other charges associated with the provision of Delivery Service to Customers, the Company may impose an additional charge on the Suppliers serving said Customers as approved by the NHPUC.

2 DEFINITIONS

Adjusted Target Volume ("ATV)	The volume of Gas determined by the Company using a Consumption Algorithm and required to be nominated and delivered each Gas Day by the Supplier on behalf of Customers taking non-daily metered Delivery Service.
Aggregation Pool	One or more Customer accounts whose Gas Usage is served by the same Supplier and aggregated pursuant to Section 20.6 of this tariff for operational purposes, including but not limited to nominating, scheduling, and balancing Gas deliveries to Designated Receipt Point(s) within the associated Gas Service Area.
Annual Reassignment Date	Five (5) Business Days prior to November 1 of each year when the Company reassigns Capacity to Suppliers pursuant to Section 11.6 of this tariff.
Assignment Date	Five (5) Business Days prior to the first Gas Day of each month when the Company assigns Capacity to Suppliers pursuant to Section 11.4 of this tariff.
Authorization Number	A number unique to the Customer generated by the Company and printed on the Customer's bill that the Customer must furnish to the Supplier to enable the Supplier to obtain the Customer's Gas Usage information pursuant to Section 20.4, and to initiate or terminate Supplier Service as set forth in Section 20.5 of this tariff.
Btu	One British thermal unit; i.e., the amount of heat required to raise the temperature of one pound of water one degree Fahrenheit at sixty degrees (60°) Fahrenheit.
Business Day	Monday through Friday excluding holidays recognized by the Company. Where relevant, a Business Day shall consist of the hours during which the Company is open for business with the public. ***If any performance date referenced in this Tariff is not a Business Day, such performance shall be the next succeeding Business Day***.
Capacity	Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity as defined in this tariff.

Capacity Allocators	The estimated proportions of the Customer's Total Capacity Quantity that comprise Pipeline Capacity, Storage Withdrawal Capacity and Peaking Capacity.
Capacity Mitigation Service	The service available to Suppliers in accordance with Section 11.10.
City Gate	The interconnection between a Delivering Pipeline and the Company's distribution facilities.
Commodity	See Gas.
Company	Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities
Company Gas Allowance	The difference between the sum of all amounts of Gas received into the Company's distribution system (including Gas produced by the Company) and the sum of all amounts of Gas delivered from the Company's distribution system divided by said amount of Gas received. Such difference shall include but not be limited to Gas consumed by the Company for its own purposes, line losses, and Gas vented and lost as a result of force majeure, excluding Gas otherwise accounted for.
Company-Managed Supplies	Capacity and Supply contracts held and managed by the Company and made available to the Supplier pursuant to Section 11.9 of this tariff including Supply-sharing contracts and load-management contracts.
Consumption Algorithm	A mathematical formula used to estimate a Customer's daily consumption.
Critical Day	In accordance with Section 16 of this tariff, a day declared at any time by the Company in its reasonable discretion when unusual operating conditions may jeopardize operation of the Company's distribution system.
Customer	The recipient of Delivery Service whose Gas Usage is recorded by a meter or group of meters at a specific location and who is a customer of record of the Company.
Daily Baseload	The Customer's average usage per Gas Day that is assumed to be unrelated to weather.
Daily Index	The mid-point of the range of prices as published by Gas Daily under the heading "Daily Price Survey, Midpoint, Citygates, Tennessee/Zone 6 (delivered)" for the relevant Gas Day listed under "Flow date(s)". In the event that the Gas Daily index becomes unavailable, the Company shall apply its daily marginal cost of Gas as the basis for this calculation until such time that the NHPUC approves a suitable replacement.
Dekatherm	Ten Therms.
Delivery Point	The interconnection between the Company's facilities and the Customer's facilities.
Delivery Service	The distribution of Gas by the Company on any Gas Day from the Designated Receipt Point to the Customer's Delivery Point and related Customer services.
Design Peak Season	The forecasted Peak Season during which the Company's system experiences the highest aggregate Gas Usage.

Designated Receipt Point	For each Customer, the Company designated interconnection between a Transporting Pipeline and the Company's distribution facilities at which point, or such other point as the Company may designate from time to time for operational purposes, the Supplier will make deliveries of Gas for the Customer's account.
Designated Representative	The designated representative of the Customer, who shall be authorized to act for, and conclusively bind, the Customer regarding Delivery Service in accordance with the provisions of Section 21 of this tariff.
Gas	Natural Gas that is received by the Company from a Transporting Pipeline at the Designated Receipt Point and delivered by the Company to the Delivery Point for the Customer's account. In addition, the term shall include amounts of vaporized liquefied natural Gas and/or propane-air vapor that are introduced by the Company into its system and made available to the Customer as the equivalent of natural Gas that the Customer is otherwise entitled to have delivered by the Company.
Gas Day	A period of twenty-four (24) consecutive hours beginning at 10:00 a.m., E.T., and ending at 10:00 a.m., E.T., the next calendar day, or other such hours used by the Transporting Pipeline.
Gas Service Area	An area within the Company's distribution system as defined in Section 4 of this tariff, for the purposes of administering Capacity assignments, Nominations, balancing, imbalance trading, and Aggregation Pools.
Gas Usage	The actual quantity of Gas used by the Customer as measured by the Company's metering equipment at the Delivery Point.
Heating Degree Day	A measure used to estimate weather-sensitive Gas consumption calculated by subtracting the average temperature for each day from the number 65. Each degree day that represents a degree below 65 is considered a Heating Degree Day.
Heating Factor	The Customer's estimated weather-sensitive Gas consumption per Heating Degree Day.
MMBtu	One million Btus.
Maximum Daily Peaking	The portion of a Customer's Total Capacity Quantity identified
Quantity ("MDPQ")	and allocated as Peaking Capacity, such that the maximum daily amount of Gas that can be withdrawn from a Supplier's Peaking Service Account pursuant to Section 14 of this tariff shall be equal to the sum of the MDPQs for all Customers in that Supplier's Aggregation Pool.
Month	A calendar month of Gas Days.
Monthly Index	The average of the Daily Index numbers for all Gas Days in a Month.
NHPUC	The New Hampshire Public Utilities Commission.
Nomination	The notice given by the Supplier to the Company that specifies, in accordance with the Standard Nomination Form attached as Attachment A, an intent to deliver a quantity of Gas to the Designated Receipt Point(s) on behalf of one or more Customers, including the volume to be received, the Designated

	Receipt Point(s), the Transporting Pipeline, the delivering contract(s), the shipper, and other such non-confidential information as may be reasonably required by the Company.
Off-Peak Season	The consecutive months of May to October, inclusive.
Operational Flow Order ("OFO")	The Company's instructions to the Supplier to take such action as conditions require including, but not limited to, diverting Gas to or from the Company's distribution system pursuant to Section 16 of this tariff.
Peak Day	The forecasted Gas Day during which the Company's system experiences the highest aggregate Gas Usage.
Peak Season	The consecutive months of November to April, inclusive.
Peaking Capacity	Capacity in addition to upstream pipeline and underground storage Capacity normally used by the Company to meet daily requirements during a Design Peak Season and acquired specifically for the Peak Season.
Peaking Service	A Company-managed resource consisting of Peaking Capacity and Peaking Supply.
Peaking Service Account	An account whose balance indicates the total volumes of Peaking Service resources available to a Supplier, where the maximum balance in the account shall equal the Peaking Supply assigned to the Supplier pursuant to this tariff.
Peaking Service Rule Curve	A system of operational parameters associated with the use of the Company's Peaking Capacity including, but not limited to, indicators of the necessary levels of Peaking Supply that must be maintained in Suppliers' Peaking Service Accounts in order for the Company to meet system demands under Design Peak Season conditions. The Company will communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Peaking Service Rule Curve as identified in Section 14 of this tariff.
Peaking Supply	The aggregate amount of Supply in excess of upstream pipeline and underground storage Supply required to meet the Company's forecasted Supply needs during a Design Peak Season and acquired specifically for the Peak Season.
Peaking Supply Allocator	An allocation factor that represents the proportion of a Customer's estimated Gas Usage during the Design Peak Season that is generally served with Peaking Service supplies.
Pipeline Capacity	Transportation capacity on interstate pipeline systems normally used for deliveries of Gas to the Company's city gates, exclusive of Storage Withdrawal Capacity.
Pre-Determined Allocation	Instructions from the Supplier to the Company for the method allocation of discrepancies in confirmed Nominations among the Supplier's Aggregation Pools and/or Customers as set forth in the Supplier Service Agreement.
Rate Schedule	The schedule of rates included in this tariff.
Reference Period	A period of at least twelve (12) months for which a Customer's Gas Usage information is typically available to the Company.

Sales Service	Commodity service provided on a firm basis to a Customer who is not receiving Supplier Service, in accordance with the provisions set forth in this tariff. The provision of Sales Service shall be the responsibility of the Company and shall be provided to the Customer by the Company or its designated Supplier pursuant to law or regulation.
Seasonal Storage Capacity	Contracts for Capacity in off-system storage facilities used to accumulate and maintain Gas inventories for re-delivery to the Company's city gates normally during the Peak Season.
Storage Withdrawal Capacity	Capacity for the withdrawal of Gas inventories maintained in off-system storage facilities, as well as the Pipeline Capacity used to deliver such Gas to the Company's city gates.
Supplier	Any entity that has met the Company's requirements set forth in Section 20 of this tariff and that has been designated by a Customer to supply Gas to a Designated Receipt Point for the Customer's account; provided, however, that a Customer may act as its own Supplier in accordance with Section 5.2 of this tariff.
Supplier Service	The sale of Gas to a Customer by a Supplier.
Supplier Service Agreement	An agreement, substantially in the form set forth in Attachment A, which must be executed by the Company and a Supplier in order for the Supplier to serve Customers on the Company's system.
Supply	See Gas.
Therm	An amount of Gas having a thermal content of 100,000 Btus.
Total Capacity Quantity	The total amount of Capacity assignable to a Supplier on behalf
("TCQ")	of a Customer.
Transporting Pipeline	The interstate pipeline company that transports and delivers Gas to the Designated Receipt Point.

3 CHARACTER OF SERVICE

3.1 All rates within Part II Rate Schedule are predicated upon service to a Customer at a single Delivery Point and metering installation, except as otherwise specifically provided by a given rate. Where service is supplied to a Customer at more than one Delivery Point or metering installation, each single Delivery Point or metering installation shall be considered to be a separate Customer for purposes of applying the Rate Schedule, except when a Customer is served through multiple points of delivery or metering installations for the Company's own convenience.

3.2 The Company may refuse to supply service to loads of unusual characteristics which, in its sole reasonable judgment, might adversely affect the quality of service supplied to other Customers, the public safety or the safety of the Company's personnel. In lieu of such refusal, the Company may require a Customer to install any necessary regulating and protective equipment in accordance with the requirements and specifications of the Company.

4 GAS SERVICE AREAS AND DESIGNATED RECEIPT POINTS

4.1 There shall be 1 Gas Service Area defined for purposes of administering Capacity assignments, Nominations, balancing, imbalance trading, and Aggregation Pools pursuant to this tariff. Each such Gas Service Area shall be defined to include the municipalities listed within each such Gas Service Area, as follows:

(1) Area 1: Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities.
The area authorized to be served by the Company and to which this tariff applies are the following cities and towns: Allenstown, Amherst, Auburn, Bedford, Belmont, Berlin, Boscawen, Bow, Concord, Derry, Franklin, Gilford, Goffstown, Hollis, Hooksett, Hudson, Laconia, Litchfield, Londonderry, Loudon, Manchester, Merrimack, Milford, Nashua, Northfield, Pelahm, Pembroke, Sanbornton, Tilton, Windham, and part of Canterbury.

4.2 For each Aggregation Pool as set forth by Section 20.6, the Company will designate at least one specific interconnection between a Transporting Pipeline and the Company's distribution facilities, at which point, or such other point as the Company may designate from time to time, the Supplier will make deliveries for the Aggregation Pool. The interconnections that the Company may assign as the Customer's Designated Receipt Point for the Aggregation Pool are as follows:

(1) *Name Transporting Pipeline: Tennessee Gas Pipeline*
Names of City Gates/Meter Numbers:

Nashua/Milford	#020132
Manchester	#020133
Hooksett	#020254
Concord/Laconia	#020426
Suncook	#020451
Londonderry	#020632

(2) *Name Transporting Pipeline: Portland Natural Gas Transmission System*
Names of City Gates/Meter Number

Berlin	#020260

5 CUSTOMER REQUEST FOR SERVICE FROM COMPANY

5.1 Application for Delivery Service, Sales Service, or any other service offered by the Company to a Customer will be received by any duly authorized representative or agent of the Company.

5.2 Before any service from the Company may commence, the Customer must request such service. A Customer applying for Delivery Service only must also arrange for Supplier Service with a Supplier pursuant to Section 20. A Customer may act as its own Supplier provided it meets all of the Supplier requirements delineated in Section 20.

6 QUALITY AND CONDITION OF GAS

6.1 Gas delivered to the Company by or for the Customer shall conform, in all respects, to the Gas quality standards of the Transporting Pipeline. All Gas tendered by a Supplier at a Designated Receipt Point shall be of merchantable quality and shall be interchangeable with Gas purchased by the Company from its Suppliers. The Company reserves the right to refuse non-conforming Gas.

6.2 In no event shall the Company be obligated to accept and deliver any Gas that does not meet the quality standards of the Transporting Pipeline.

6.3 The Company reserves the right to commingle Gas tendered by a Supplier at a Designated Receipt Point with other Gas, including liquefied natural Gas and propane-air vapor.

6.4 Gas tendered by a Supplier at a Designated Receipt Point will be at a pressure sufficient to enter the Company's distribution system without requiring the Company to adjust its normal operating pressures to receive the Gas. The Company has no obligation to receive Gas at a pressure that exceeds the maximum allowable operating pressure of the Company's distribution system at the Designated Receipt Point.

7 POSSESSION OF GAS

7.1 Gas shall be deemed to be in the control and possession of the Company after such Gas is delivered to the Designated Receipt Point and until the Gas is delivered to the Customer at the Delivery Point. The Company shall not be responsible for the Gas when the Gas is not in the Company's control and possession.

7.2 The Company shall not be liable to the Supplier or the Customer for any loss arising from or out of Delivery Service, including loss of Gas in the possession of the Company or for any other cause, except for the negligence of the Company's own employees or agents.

8 COMPANY GAS ALLOWANCE

8.1 The amount of Gas tendered by the Supplier to the Designated Receipt Point will be reduced, upon delivery to the Customer's Delivery Point, by the Company Gas Allowance. The Company Gas Allowance shall be in effect from November 1 through October 31. Such adjustment shall be recalculated prior to the Company's Peak Season cost of Gas filing with the NHPUC.

9 DAILY METERED DELIVERY SERVICE

9.1 Applicability

Section 9 of this tariff shall be applicable in the following conditions:

9.1.1 All Customers whose service may be interrupted at any time during the year shall be required to take daily metered Delivery Service.

9.1.2 Any Customer, regardless of annual Gas Usage, may elect daily metered Delivery Service.

9.1.3 Customers under Rate Schedules G-43, G-46, G-53, G-54, G-57, and G-58 wishing to take Delivery Service are required to take Daily Metered Delivery Service. In addition, the Company may require a Customer to take daily metered Delivery Service if the Company determines that the daily Gas Usage characteristics of the Customer cannot be accurately modeled using the Company's Consumption Algorithm or if the volumes reasonably anticipated by the Company to be used by the Customer are of a size that may materially affect the integrity of the Company's distribution system.

9.2 Delivery Service Provided

This service provides delivery of Customer purchased Gas from the Designated Receipt Point to the Delivery Point on any Gas Day. For Customers taking Delivery Service under Rate Schedules ***G-43, G-46, G-53, G-54, G-57, and G-58*** this service provides firm, year-round delivery of Customer purchased Gas from the Designated Receipt Point to the Delivery Point.

9.3 Nominations and Scheduling of Service

9.3.1 The Supplier is responsible for nominating and delivering to the Designated Receipt Point(s) every Gas Day an amount of Gas that equals the aggregated Gas Usage of Customers in the Aggregation Pool plus the Company Gas Allowance in accordance with Section 8 of this tariff.

9.3.2 Nominations shall be communicated to the Company by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means.

9.3.3 Nominations for the first Gas Day of a Month shall be submitted to the Company no later than two (2) hours prior to the deadline for first of the Month Nominations of the Transporting Pipeline or such lesser period as determined by the Company. The Company will make available, from time to time, a schedule of Nomination due dates. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

9.3.4 The Supplier may make daily Nominations including, but not limited to, changes to existing Nominations, within a given Month no later than two (2) hours prior to the deadline for daily Nominations of the Transporting Pipeline for the Gas Day on which the Nomination is to be effective, or such lesser period as determined by the Company. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

9.3.5 The Supplier may make intra-Gas Day Nominations, including but not limited to changes to existing Nominations, within a given Gas Day no later than two (2) hours prior to the intra-Gas Day Nomination deadline for the Transporting Pipeline on which the Nomination is to be effective, or such lesser period as determined by the Company. Intra-Gas Day Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

9.3.6 Nominations will be conditionally accepted by the Company pending confirmation by the Transporting Pipeline. The Company will attempt to confirm the nominated volume with the Transporting Pipeline. In the event of a discrepancy between the volume nominated to the Company by the Supplier and the volume nominated by the Supplier to the Transporting Pipeline, the lower volume will be deemed confirmed. The Company will allocate such discrepancy based on a predetermined allocation method set forth in the Supplier Service Agreement. If no predetermined allocation method has been established prior to the event of such discrepancy, the Company will allocate the discrepancy on a pro rata basis.

9.3.7 Nominations may be rejected, at the sole reasonable discretion of the Company, if they do not satisfy the conditions for Delivery Service in effect from time to time.

9.4 Determination of Receipts

9.4.1 The quantity of Gas deemed received by the Company for the Supplier's Aggregation Pool at the Designated Receipt Point(s) will equal the volume so scheduled by the Transporting Pipeline(s).

9.4.2 The Company Gas Allowance will be assessed against receipts pursuant to Section 8 of this tariff.

9.5 Metering and Determination of Deliveries

9.5.1 The Company shall furnish and install, at the Customer's expense, telemetering equipment and any related equipment for the purpose of measuring Gas Usage at each Customer's Delivery Point. Telemetering equipment shall remain the property of the Company at all times. The Company shall require each Customer to install and maintain, at the Customer's expense, reliable telephone lines and electrical connections that meet the Company's operating requirements. The Company may require the Customer to furnish a dedicated telephone line. If the Customer fails to maintain such telephone lines and electrical connections for fourteen (14) consecutive days after notification by the Company, the Company may discontinue service to the Customer.

9.5.2 Should a Customer or a Supplier request that additional telemetering equipment or a communication device be attached to the existing telemetering equipment in addition to that provided pursuant to Section 9.5.1, the Company shall install, test, and maintain the requested telemetering equipment or communication device; provided that such telemetering equipment or communication device does not interfere with the operation of the equipment required for the Company's purposes and otherwise meet the Company's requirements. The Customer or Supplier shall provide such telemetering equipment or communication device, unless the Company elects to do so. The Customer or Supplier shall bear the cost of providing and installing the telemetering equipment, communication device, or any other related equipment, and shall have electronic access to the Customer's Gas Usage information. Upon installation, the telemetering equipment or communication device shall become the property of the Company and will be maintained by the Company. The Company shall bill the Customer or Supplier after installation.

9.5.3 The Company shall complete installation of telemetering equipment and communication devices, if reasonably possible, within sixty (60) days of receiving a written request from the Customer or Supplier provided that the Customer completes the installation of any required telephone or electrical connections within ten (10) days of such request.

9.5.4 The Company may, at its sole discretion, bill the Customer on a calendar month or cycle month basis.

9.6 Balancing

9.6.1 The Supplier must maintain a balance between daily receipts and daily Gas Usage within the following tolerances:

Off-Peak Season: The difference between the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area and the aggregated Gas Usage of Customers in the Aggregation Pool shall be within 15% of said receipts. The Supplier shall be charged 0.1 times the Daily Index for all differences not within the 15% tolerance.

Peak Season: The difference between the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area and the aggregated Gas Usage of Customers in the Aggregation Pool shall be within 10% of said receipts. The Supplier shall be charged 0.5 times the Daily Index for all differences not within the 10% tolerance.

Critical Day(s): The Company will determine if the Critical Day will be aggravated by an under-delivery or an over-delivery, and so notify the Supplier when a Critical Day is declared pursuant to Section 16.

Critical Day That Will Be Aggravated by Under-delivery.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by under-delivery shall be charged 5 times the Daily Index for the aggregated Gas Usage of Customers in the Aggregation Pool that exceeds 102% of the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by under-delivery shall be charged 0.1 times the Daily Index to the extent that the difference between the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area and the aggregated Gas Usage of Customers in the Aggregation Pool exceeds 20% of said receipts [(Receipts - Usage) > (20% x Receipts)].

Critical Day That Will Be Aggravated by Over-delivery.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by over-delivery shall be charged 0.1 times the Daily Index to the extent that the difference between the Supplier's aggregated Gas Usage of Customers in the Aggregation Pool exceeds 120% of the Supplier's aggregate actual receipts on the Transporting Pipeline to each Gas Service Area.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by over-delivery shall be charged 5 times the Daily Index to the extent that the difference between the Supplier's actual receipts on the Transporting Pipeline to each Gas Service Area and the Supplier's aggregated Gas Usage of Customers in the Aggregation Pool exceeds 2% of said receipts [(Receipts - Usage > (2% x Receipts)].

Point Specific Balancing: In the event that the Transporting Pipeline requires its customers to balance on a point-specific basis, the Supplier must balance pursuant to this Section at each Designated Receipt Point.

9.6.2 If the Supplier has an accumulated imbalance within a Month, the Supplier may nominate to reconcile such imbalance, subject to the Company's approval, which approval shall not be unreasonably withheld.

9.6.3 In addition to the charges set forth in Section 9.6.1, the Company shall flow through to the Supplier any pipeline imbalance penalty charges attributable to the Supplier.

9.6.4 If, as a result of the Company interrupting or curtailing service pursuant to Section 17 of this tariff, the Supplier incurs a daily imbalance penalty due to over delivery, the Company will waive such penalty for the First Day of the interruption or curtailment period. If the Company has issued notice of an interruption or curtailment in service and the Supplier is unable to change its Nomination, or if the Supplier's Gas has been delivered to the Designated Receipt Point, then the Company will credit such Gas against the Supplier's imbalance.

9.6.5 The Supplier will maintain a balance between receipts at the Designated Receipt Point(s) and the aggregated Gas Usage of Customers in each Aggregation Pool. If the Transporting

Pipeline posts notice on its electronic bulletin board that its customers will be required to adhere to a maximum hourly flow rate, the Supplier will be deemed to have notice that maximum hourly flows will be in effect on the Company's distribution facilities as of the same time and for the same period as maximum hourly flows are in effect on the Transporting Pipeline. The Supplier's maximum hourly flow will be established based on an allocation of even hourly flows of daily receipts of Gas scheduled in the relevant period in accordance with the applicable transportation tariff of the Transporting Pipeline. All Gas Usage in excess of the Supplier's maximum hourly flow rate shall be subject to an additional charge of 5 times the Daily Index for each Dekatherm in excess of the Supplier's maximum hourly flow. The Company will notify the Supplier of the Supplier's maximum hourly flow.

9.6.6 If, during any fifteen (15) consecutive Gas Days, the Supplier delivers an amount less than 70% of the sum of the aggregated Gas Usage of Customers in the Aggregation Pool in said Gas Days, the Company may declare the Supplier ineligible to nominate Gas for the following thirty (30) Gas Days. The Supplier shall have the opportunity to cure the imbalance with the demonstration of verifiable imbalance trades or otherwise within twenty-four (24) hours of notification by the Company. If the Supplier is declared ineligible to nominate Gas for such 30 Gas Days, the Supplier may be reinstated at the end of the 30 Gas Days, provided it posts security equal to the product of: (1) the maximum aggregate daily Gas Usage of Customers in the Aggregation Pool expressed in MMBtu and (2) $300. If, within twelve (12) months of the first offense, such Supplier is declared ineligible to nominate Gas pursuant to this Section, the Supplier will be disqualified from service under this tariff for one (1) full year from the time of the second disqualification. If the Supplier defaults on its obligations under this tariff, the Company shall have the right to use such security to satisfy the Supplier's obligations. Such security may be used by the Company to secure Gas, transportation, and storage, and to cover other related costs incurred as a result of the Supplier's default. The security may also be used to satisfy any outstanding claims that the Company may have against the Supplier including imbalance charges, cash-out charges, pipeline penalty charges, and other charges.

9.7 Cash Out

For each Aggregation Pool, the Supplier must maintain total Monthly receipts within a reasonable tolerance of total Monthly Gas Usage. Any differences between total Monthly receipts for an Aggregation Pool and the aggregated Gas Usage of Customers in the Aggregation Pool, expressed as a percentage of total Monthly receipts, will be cashed out according to the following schedule:

Imbalance Tier	Over-deliveries	Under-deliveries
0% ≤ 5%	The average of the Daily Indices for the relevant Month.	The highest average of seven consecutive Daily Indices for the relevant Month
> 5% ≤ 10%	0.85 times the above stated rate.	1.15 times the above stated rate.
> 10% ≤ 15%	0.60 times the above stated rate.	1.4 times the above stated rate.
> 15%	0.25 times the above stated rate.	1.75 times the above stated rate.

For purposes of determining the tier at which an imbalance will be cashed out, the price will apply only to volumes within a tier. For example, if there is a 7% under-delivery on a Transporting Pipeline, volumes that make up the first 5% of the imbalance are priced at the highest average of the seven (7) consecutive Daily Indices. Volumes making up the remaining 2% of the imbalance are priced at 1.15 times the average of the seven (7) consecutive Daily Indices.

10 NON-DAILY METERED DELIVERY SERVICE

10.1 Applicability

Section 10 of this tariff applies to Customers taking Delivery Service under Rate Schedules G-41, G-42, G-51, G-52 and their Suppliers.

10.2 Delivery Service Provided

This service provides firm, year-round delivery of Customer purchased Gas from the Designated Receipt Point to the Delivery Point on any Gas Day for Customers, without the requirement of recording Gas Usage at the Delivery Point on a daily basis. Daily Nominations are calculated by the Company on the basis of a Consumption Algorithm and the Supplier is obligated to deliver to the Designated Receipt Point(s) such quantities.

10.3 Nominations and Scheduling of Service

10.3.1 The Supplier is obligated to nominate and deliver the Adjusted Target Volume ("ATV"), as determined in Section 10.3.2, to the Designated Receipt Points on every Gas Day for each Aggregation Pool.

10.3.2 The Company shall determine the ATV for each Aggregation Pool of Customers taking non-daily metered Delivery Service for each Gas Day using a Consumption Algorithm. The ATV shall include the Company Gas Allowance. On each Business Day, the Company will communicate, electronically, by facsimile, or by other agreeable alternative means, the forecasted ATV to the Supplier for at least the subsequent four (4) Gas Days. The ATV in effect for any Gas Day shall be the most recent ATV for that Gas Day communicated to the Supplier by the Company. The ATV for a given Gas Day shall not be effective unless it has been communicated to the Supplier at least two (2) hours prior to the Company's Supplier Nomination deadline for that Gas Day, which shall be at least two (2) hours prior to the deadline for nominations on the Transporting Pipeline, or such lesser period as determined by the Company.

10.3.3 Nominations will be communicated to the Company electronically, by facsimile, or other agreeable alternative means.

10.3.4 Nominations for the first Day of a Month shall be submitted to the Company no later than two (2) hours prior to the deadline for first of the Month nominations of the Delivering Pipeline or such lesser period as determined by the Company. The Company will make available, from time to time, a schedule of nomination due dates. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

10.3.5 The Supplier shall provide an intra-Month nomination no later than two (2) hours prior to the deadline of the Delivering Pipeline for the next Gas Day, or such lesser period as determined by the Company. Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized for its own operations.

10.3.6 Nominations will be conditionally accepted by the Company pending confirmation by the Transporting Pipeline. The Company will attempt to confirm the nominated volume with the Transporting Pipeline. In the event of a discrepancy between the volume nominated to the Company by the Supplier and the volume nominated by the Supplier to the Transporting Pipeline, the lower volume will be deemed confirmed. The Company will allocate such discrepancy based on a predetermined allocation method set forth in the Supplier Service Agreement. If no predetermined allocation method has been established prior to the event of such discrepancy, the Company will allocate the discrepancy on a pro rata basis. The Company will not confirm any volume nominated by the Supplier in excess of the ATV.

10.3.7 In the event that the Supplier is unable to deliver a confirmed ATV Nomination, the Supplier may make intra-Gas Day Nominations relating to changes to existing Nominations within a given Gas Day no later than two (2) hours prior to the intra-Gas Day Nomination deadline for the Transporting Pipeline on which the Nomination is to be effective, or such lesser period as determined by the Company; provided, however, that the Nomination must be in conformance with the requirements of and must be permitted by the Transporting Pipeline. Intra-Gas Day Nominations on weekends, holidays, and non-business hours will be accepted by the Company on a basis consistent with that utilized by the Company for its own operations. The Company shall not adjust the ATV applied for the Gas Day.

10.3.8 Nominations may be rejected if they do not satisfy the conditions for Delivery Service in effect from time to time.

10.3.9 All quantities of Gas over-delivered or under-delivered to the Company's system in violation of an Operational Flow Order ("OFO") declared by the Company pursuant to Section 16 will be subject to the Critical Day provisions of Section 10.6.1 of this tariff, and the delivered quantity specified in the OFO will replace the ATV.

10.4 Determination of Receipts

10.4.1 The quantity of Gas deemed received by the Company for the Supplier's Aggregation Pool at the Designated Receipt Point(s) will equal the volume so scheduled by the Transporting Pipeline(s).

10.4.2 The Company Gas Allowance will be assessed against receipts pursuant to Section 8 of this tariff.

10.5 Metering and the Determination of Deliveries

The Company shall record the Customer's Gas Usage at the Delivery Point by making actual meter reads on a monthly [or bi-monthly] basis. In the event that the Customer's Gas Usage is metered on a bi-monthly basis, the Company shall make available to the Supplier estimates of the Customer's Gas Usage for each of the two billing months.

10.6 Balancing

10.6.1 Any difference between the Supplier's ATV for an Aggregation Pool and the receipts on the Transporting Pipeline to the appropriate Designated Receipt Point(s) will be cashed out by the Company according to the following:

Off-Peak Season: For receipts less than the ATV, the Supplier shall be charged 1.1 times the Daily Index for the difference. For receipts greater than the ATV, the Supplier shall be charged 0.8 times the Daily Index for the difference.

Peak Season: For receipts less than the ATV but greater than or equal to 95% of the ATV, the Supplier shall be charged 1.1 times the Daily Index for the difference. For receipts less than 95% of the ATV, the Supplier shall be charged 1.1 times the Daily Index for the first 5% difference, and the Supplier shall be charged two (2) times the Daily Index for the remaining difference. For receipts greater than the ATV, the Supplier shall be charged 0.8 times the Daily Index for the difference.

Critical Day(s) The Company will determine if the Critical Day will be aggravated by an under-delivery or an over-delivery, and so notify the Supplier when a Critical Day is declared pursuant to Section 16.

Critical Day That Will Be Aggravated by Under-delivery.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by under-delivery shall be charged five (5) times the Daily Index for the difference between the ATV and actual receipts.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by under-delivery shall be charged the following amounts for all receipts in excess of the ATV:

(a) up to 25% in excess of the ATV, the Supplier shall be charged the Daily Index for the difference.

(b) for receipts in excess of 25% above the ATV, the Supplier shall be charged 0.8 times the Daily Index for the difference.

Critical Day That Will Be Aggravated By Over-delivery.

Supplier who over-delivers. A Supplier who over-delivers on a Critical Day that will be aggravated by over-delivery shall be charged 0.4 times the Daily Index for receipts greater than the ATV.

Supplier who under-delivers. A Supplier who under-delivers on a Critical Day that will be aggravated by over-delivery shall be charged the following amounts--for receipts less than the ATV but greater than or equal to 75% of the ATV, the Supplier shall be charged the Daily Index for the first 25% difference, and the Supplier shall be charged 1.1 times the Daily Index for the remaining difference.

10.6.2 In addition to the charges set forth in Section 10.6.1, the Company shall use a daily balancing charge calculation to account for balancing costs it incurs in serving each Aggregation Pool due to differences in forecast versus actual Heating Degree Days. The daily balancing charge shall be based on the sum of the absolute values of the daily differences between the Aggregation Pool's ATV and the recalculated ATV value described in Section 10.7.1 below. Such charge shall be billed to the Supplier monthly and shall reflect the cost of resources used by the Company to balance such differences for each Gas Day of the Month. The Company shall calculate such charge annually in its Winter Season Cost of Gas filing according to a formula as set forth in Attachment B.

10.6.3 In addition to the charges set forth in Section 10.6.1, the Company shall use a daily balancing charge calculation to account for balancing costs it incurs in serving each Aggregation Pool due to differences in forecast versus actual Heating Degree Days. The daily balancing charge shall be based on the sum of the absolute values of the daily differences between the Aggregation Pool's ATV and the recalculated ATV value described in Section 10.7.1 below. Such charge shall be billed to the Supplier monthly and shall reflect the cost of resources used by the Company to balance such differences for each Gas Day of the Month. The Company shall calculate such charge annually in its Winter Season Cost of Gas filing according to a formula as set forth in Attachment B.

In the event that the Transporting Pipeline requires its customers to balance on a point-specific basis, the Supplier must balance pursuant to this Section at each Designated Receipt Point.

10.6.4 In addition to the charges set forth in Sections 10.6.1 and 10.6.2, the Company shall flow through to the Supplier any pipeline imbalance penalty charges attributable to the Supplier.

10.7 Cash Out

10.7.1 The Company shall use a daily cash out calculation to account for imbalances due to differences in forecast versus actual Heating Degree Days. Using a Consumption Algorithm, the Company will recalculate the ATV for each Aggregation Pool for each Gas Day of the Month, substituting actual Heating Degree Days for forecast Heating Degree Days. Daily recalculations shall be compared to the Aggregation Pool’s daily ATV, and the difference shall be cashed out at 100% of the Daily Index.

10.7.2 During the billing months of both June and December, the Company shall use a six-month cash-out calculation to account for differences in forecast usage versus billed Gas Usage. The Company may cash-out differences in forecast usage versus billed usage at intervals that are less than six months as provided by the Supplier Service Agreement.

(1) In the billing month of June, using the recalculated ATV values described in Section 10.7.1, the Company will compare the sum of the recalculated ATV values for each Aggregation Pool for the six-month period of November 1 through April 30 to the sum of billed usage volumes used by each Aggregation Pool for that same period. The differences shall be cashed out at 100% of the average of the Daily Index weighted by actual Heating Degree Days over the same period. The Winter period cash-out shall be calculated and provided to Suppliers within 60 days of the month ending April 30.

(2) In the billing month of December, using the recalculated ATV values described in Section 10.7.1, the Company will compare the sum of the recalculated ATV values for each Aggregation Pool for the six-month period of May 1 through October 31 to the sum of the billed usage volumes used by each Aggregation Pool for that same period. The differences shall be cashed out at 100% of the average of the Daily Index over the same period. The Off-Peak period cash-out shall be calculated and provided to Suppliers within 60 days of the month ending October 31.

10.7.3 The Company shall allow Suppliers to trade seasonal differences. Prior to the seasonal cash-out, the Company shall make available a list of Suppliers. Aggregation Pools affected by the transaction must be located within the same Gas Service Area as defined in Section 4, unless waived by the Company. All trades must be communicated to the Company within three (3) Business Days following receipt of the list.

10.7.4 If, during any fifteen (15) consecutive Gas Days, the Supplier delivers an amount less than 70% of the sum of the ATVs of the Aggregation Pool in said Gas Days, the Company may declare the Supplier ineligible to nominate Gas for the following thirty (30) Gas Days. The Supplier shall have the opportunity to cure the imbalance with the demonstration of verifiable imbalance trades or otherwise within twenty-four (24) hours of notification by the Company. If the Supplier is declared ineligible to nominate Gas for such 30 Gas Days, the Supplier may be reinstated at the end of the 30 Gas Days, provided it posts security equal to the product of: (1) the Supplier's estimated maximum aggregate daily Gas Usage of Customers in the Aggregation Pool expressed in MMBtu and (2) $300. If, within twelve (12) months of the first offense, such Supplier is declared ineligible to nominate Gas pursuant to this Section, the Supplier will be disqualified from service under this tariff for one (1) full year from the time of the second disqualification. If the Supplier defaults on its obligations under this tariff, the Company shall have the right to use such security to satisfy the Supplier's obligations. Such security may be used by the Company to secure Gas, transportation, storage, and to cover other related costs incurred as a result of the Supplier's default. The security may also be used to satisfy any outstanding claims that the Company may have against the Supplier including imbalance charges, cash-out charges, pipeline penalty charges, and other charges.

11 CAPACITY ASSIGNMENT

11.1 Applicability

Section 11 of this tariff applies to all Suppliers that have enrolled one or more Customers into one or more Aggregation Pools and shall include Customers acting as their own Supplier. The Company shall assign and the Supplier shall accept each Customer's pro-rata share of Capacity, if any, as established in accordance with this Section.

11.2 Identification of Capacity for Assignment

11.2.1 On or before September 15 of each year, the Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Capacity to be made available for assignment to Suppliers on each of twelve Assignment Dates beginning in October.

11.2.2 The Company shall identify, by Gas Service Area, the specific contracts and resources for assignment to Suppliers based on the Company's Capacity and resource plans. Such identified contracts and resources shall be used to determine the pro-rata shares of Capacity assignable to a Supplier on behalf of the Customers enrolled in its Aggregation Pool.

11.2.3 Capacity assigned by the Company may include Company-Managed Supplies that effectuate, at maximum tariff rates, the assignment of certain Capacity contracts including Canadian, Federal Energy Regulatory Commission, 15 U.S.C. § 717(c) or Section 7(c) [Part 157 of the FERC regulations (18 C.F.R. part 157)] and other contracts that are not assignable to third-parties due to governing tariffs.

11.3 Determination of Pro-Rata Shares of Capacity

11.3.1 The Company shall establish a Total Capacity Quantity ("TCQ") for each Customer taking Delivery Service. The TCQ represents the total amount of Capacity assignable to a Supplier on behalf of a Customer.

11.3.2 For a Customer receiving Sales Service on or after March 14, 2000, the TCQ shall be the Customer's estimated Gas Usage on the Peak Day as determined by the Company each October prior to the Customer's enrollment into Supplier Service. The Company shall derive such estimate using a Daily Baseload and a Heating Factor based upon the Customer's historic Gas Usage during the Reference Period, or the best estimates available to the Company should actual Gas Usage information be partially or wholly unavailable.

11.3.3 For a Customer that was either receiving Supplier Service (or the equivalent form of service at the time) on March 14, 2000, or had an executed contract for firm transportation service (i.e., the equivalent of Delivery Service) on file with the Company on or before March 14, 2000, the TCQ shall be zero.

11.3.4 A Customer that was either receiving Supplier Service (or the equivalent form of service at the time) on March 14, 2000, or had a written request on file with the Company on or before March 14, 2000 may elect for its Supplier to accept assignment of its pro-rata share of Capacity as determined by the Company in accordance with Section 11.2 and, subject to availability, as determined by the Company in its sole reasonable discretion. In order to make such election, the Customer must have submitted to the Company, on or before ten (10) days prior to the first Assignment Date prior to the original effective date of this tariff, a completed application for Capacity that is signed by both the Customer and Supplier. All assignments of Capacity made on behalf of such electing Customer shall be executed in accordance with Sections 11 and 14 of this tariff as if the Customer had been receiving Sales Service on or after March 14, 2000

11.3.5 For a new Customer taking Supplier Service as its initial service after March 14, 2000, the TCQ shall be zero except in cases where the Customer is a new Customer of record at a meter location where a former Customer of record received firm service from the Company any time during the preceding twenty-four (24) months, in which case the TCQ established by the Company for the former Customer shall become the TCQ for the new Customer. The Company may reduce said TCQ value for the new Customer, if, in its sole reasonable discretion, the Company determines that the old Customer's TCQ exceeds the new Customer's estimated future consumption on the Peak Day. In the event that Sales Service is provided at a new meter location for Gas Usage associated with new construction, the TCQ shall be zero, provided that the Customer initiates Supplier Service upon the completion of said new construction in accordance with Section 20.5 of this tariff

11.3.6 Once the Company establishes a TCQ for a Customer pursuant to this Section 11.3, it shall remain in effect for the purpose of determining the Customer's pro-rata shares of Capacity until such time that the Customer returns to Sales Service. The Company shall establish a new TCQ value for the Customer pursuant to Section 11.3.2 if the Customer again elects to take Supplier Service after returning to Sales Service, unless otherwise established herein..

11.3.7 The Company shall determine the pro-rata shares of Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity assignable to a Supplier on behalf of a Customer as the product of the Customer's TCQ times the applicable Capacity Allocators. The Capacity Allocators for each class of Customers billed under the Company's Rate Schedule shall be set forth annually in Attachment C to this tariff.

11.3.8 The Company shall determine the pro-rata share of Seasonal Storage Capacity assignable to a Supplier on behalf of a Customer consistent with the tariffs governing the associated Storage Withdrawal Capacity.

11.3.9 The Company shall determine the pro-rata shares of Peaking Supply assignable to a Supplier in accordance with Section 14 of this tariff.

11.4 Capacity Assignments

11.4.1 On each Assignment Date, the Company will assign to the Supplier the pro-rata shares of Capacity on behalf of each Customer as determined by the Company in accordance with Sections 11.2, 11.3 and 11.7.

11.4.2 The total amount of Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity assigned to the Supplier on behalf of the Customers in an Aggregation Pool shall be at least equal to the cumulative sum of the pro-rata shares of Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity for all Customers enrolled in said Aggregation Pool as of Five (5) Business Days prior to the Assignment Date.

11.4.3 Storage Withdrawal Capacity shall be subject to Operational Flow Orders that are issued by the Company pursuant to Section 16 of this tariff, in the event that the Company requires the Supplier to deliver or to store quantities of Gas for the purposes of managing system imbalances and maintaining Delivery Service. Whenever the Company assigns incremental Storage Withdrawal Capacity to the Supplier, the Company shall also assign to that Supplier additional Seasonal Storage Capacity pursuant to Section 11.8.

11.4.4 The Peaking Capacity assigned to the Supplier shall establish the Maximum Daily Peaking Quantity ("MDPQ") for the Aggregation Pool in the Supplier's Service Agreement. In the event that the Company increases a Supplier's MDPQ, the Company shall also assign to that Supplier additional Peaking Supply pursuant to Section 14.

11.4.5 The Company shall execute Capacity assignments in increments of 200 MMBtus. The Supplier shall accept an initial increment of Capacity on the first Assignment Date when the sum of the pro-rata shares of Capacity assigned to the Supplier pursuant to Section 11.4.1 exceeds 150 MMBtus. The Supplier shall accept additional increments of Capacity on the following Assignment Dates commensurate with any cumulative increase in the sum of pro-rata shares of Capacity assigned to the Supplier, as rounded to the nearest 200 MMBtus. Each increment of Capacity accepted by the Supplier shall comprise Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity in proportion to the cumulative increase of the pro-rata shares of assigned Capacity as established in accordance with Section 11.4.1. Section 11.4.2 shall not apply to a Customer that is acting as its own Supplier.

11.4.6 If a Customer is acting as its own Supplier, the Company shall assign Capacity to the Customer in an amount equal to the Customer's TCQ, as established pursuant to Section 11.3.

11.5 Release of Contracts

11.5.1 With the exception of Company-Managed Supplies and Peaking Capacity, Capacity contracts shall be released by the Company to the Supplier, at the maximum tariff rate or lesser rate paid by the Company and including all surcharges, through pre-arranged Capacity releases, pursuant to applicable laws and regulations and the terms of the governing tariffs.

11.5.2 Capacity contracts released to a Supplier on an Assignment Date shall be released for a term beginning on the first Gas Day of the Month following the Assignment Date through the expiration date of the respective capacity contract being assigned. and ending on October 31. For example, contracts assigned to a Supplier on April 25 of a given year shall be released for a term beginning on May 1 of that year and ending on October 31 of that year.

11.5.3 The Company reserves the right to adjust releases of Storage Withdrawal Capacity in the event that fifty percent (50%) or more of the total Storage Withdrawal Capacity serving a Gas Service Area has been assigned to Suppliers. Such adjustments may include, but are not limited to, the reassignment of certain Storage Withdrawal Capacity as Company-Managed Supplies in order for the Company to maintain operational control over Capacity resources associated with system balancing, and/or the retention of specific Capacity resources associated with system balancing and the implementation of a balancing charge to offset the associated costs.

11.6 Annual Reassignment of Capacity

11.6.1 On each Annual Reassignment Date, the Company shall adjust the Capacity assignments previously made to a Supplier to conform with the Company's resource and requirements plans. Such previously assigned Capacity shall be replaced by the assignment to the Supplier of the pro-rata shares of the same or similarly situated Capacity on behalf of the Customers enrolled in the Supplier's Aggregation Pools (as of the first Gas Day of the Month following the Annual Reassignment Date).

11.6.2 If the reassignment of Storage Withdrawal Capacity requires adjustments to the Seasonal Storage Capacity previously assigned to a Supplier, the Company shall reassign Seasonal Storage Capacity to such Supplier, and the Company and the Supplier shall address any associated increments and decrements to inventories in place pursuant to Section 11.8 of this tariff.

11.6.3 If the reassignment of Peaking Capacity requires adjustments to the MDPQ for the Supplier's Aggregation Pool, the Company shall reassign Peaking Supply to such Supplier, and the Company and the Supplier shall address any associated increments and decrements to supplies pursuant to Section 14 of this tariff.

11.7 Recall of Capacity

11.7.1 If the pro-rata shares of Capacity assignable to a Supplier decline because one or more of the Supplier's Customers has returned to Sales Service, the Company shall have the right, but not the obligation, to recall from the Supplier the pro-rata shares of Capacity previously assigned to the Supplier on behalf of such Customers. The decision on whether to exercise its Capacity-recall rights shall be made by the Company in its sole reasonable discretion. If the Company elects to recall Capacity from a Supplier pursuant to this Section, such recall shall be made on the Assignment Date following the effective date of the Customer's return to Sales Service. Notwithstanding the foregoing, in the following circumstances the Company shall be required to recall Capacity associated with Customers returning to Sales Service:

(a) The Supplier returning the Customers to Sales Service certifies that it is ceasing all business operations in New Hampshire;

(b) The Supplier returning the Customers to Sales Service certifies that it will no longer offer service to a particular market sector (e.g., small commercial and industrial Customers) and, therefore, once such Customers are returned to Sales Service, the Supplier is not eligible to re-enroll Customers of that type; or

(c) The Supplier demonstrates that it has provided Supplier Service to the Customer for a 12-month period, and for a period of no less than any 12-month increment, prior to the Customer's return to Sales Service.

11.7.2 If the Company elects to recall Storage Withdrawal Capacity from the Supplier pursuant to this Section, the Company shall reduce the Seasonal Storage Capacity associated with the affected Aggregation Pool in accordance with Section 11.8 of this tariff. If the Company elects to reduce the MDPQ in the Supplier Service Agreement, the Company shall reduce the Peaking Supply associated with the affected Aggregation Pool in accordance with Section 14 of this tariff.

11.7.3 In the event that a Customer in a Supplier's Aggregation Pool switches to another Supplier, the Company shall recall from the former Supplier said Customer's pro-rata shares of Capacity for reassignment to the new Supplier pursuant to Section 11.4. There shall be no change in the Customer's TCQ used to determine the Customer's pro-rata shares of Capacity for reassignment to the new Supplier. The recall of such Capacity from the Customer's former Supplier and the assignment of Capacity to the new Supplier shall be made on the Assignment Date following the effective date of the Customer's switch in Suppliers.

If the Company recalls Storage Withdrawal Capacity from the Customer's former Supplier, the Company shall reduce the Seasonal Storage Capacity associated with the affected Aggregation Pool in accordance with Section 11.8 of this tariff. If the Company reduces the MDPQ in the Customer's former Supplier's Service Agreement, the Company shall also reduce the Peaking Supply associated with the affected Aggregation Pool in accordance with Section 14 of this tariff.

11.7.4 The recall of Capacity by the Company shall entail the recall of released contracts pursuant to governing tariffs and/or the reduction in assigned quantities set forth in the Supplier Service Agreement. The recall of Capacity shall be executed in decrements of 200 MMBtus, commensurate with the cumulative reduction in the pro-rata shares of Capacity assigned to the Supplier, rounded to the nearest 200 MMBtus. Each decrement of Capacity assigned to the Supplier shall comprise Pipeline Capacity, Storage Withdrawal Capacity, and Peaking Capacity in proportion to the cumulative decrease in the pro-rata shares of Capacity recalled from the Supplier.

In the event that a Supplier is declared ineligible to nominate Gas for thirty (30) Gas Days pursuant to Sections 9.6.6 or 10.7.4 of this tariff, the Company shall have the right to recall any or all Capacity assigned to said Supplier. If the Supplier is reinstated at the end of such 30 Gas Days, the Company shall reassign Capacity to the Supplier on the next Assignment Date pursuant to Sections 11.4 and 11.5. There shall be no change in the TCQ values used to determine the Supplier's Customers' pro-rata shares of Capacity for reassignment.

11.7.5 In the event that a Supplier is disqualified from service for a one (1) full year pursuant to Sections 9.6.6 or 10.7.4 of this tariff, the Company shall have the right to recall any or all Capacity assigned to said Supplier. If the Supplier is reinstated at the end of such period, the Company shall reassign Capacity to the Supplier on the next Assignment Date pursuant to Sections 11.4 and 11.5. There shall be no change in the TCQ values used to determine the Supplier's Customers' pro rata shares of Capacity reassignments.

11.7.6 In the event that the Supplier fails to meet the applicable registration and licensing requirements established by law or regulation, fails to satisfy the requirements and practices as set forth in Section 20.3 of this tariff, fails to be and remain an approved shipper on the upstream pipelines and underground storage facilities on which the Company will assign capacity, fails to make timely payment under the assigned contracts, or fails to comply with or perform any of the obligations on its part established in this tariff or in the Supplier Service Agreement, the Company shall have the right to recall permanently any or all Capacity assigned to said Supplier. This section shall also apply to a Customer acting as its own Supplier.

11.7.7 The Supplier shall forfeit its rights to Capacity recalled by the Company pursuant to this Section. Such forfeiture shall be effected in accordance with applicable laws and regulations and the governing tariffs. In the event of Capacity forfeiture pursuant to this Section, the Supplier shall be responsible to compensate the Company for any payments due under the contracts prior to forfeiture, as well as any interest due thereon. The Company will not exercise discretion in the application of the forfeiture provisions of this Section. This section shall also apply to a Customer acting as its own Supplier.

11.8 Seasonal Storage Capacity

11.8.1 On each Assignment Date, the Company shall release Seasonal Storage Capacity to a Supplier that accepts the assignment of Storage Withdrawal Capacity pursuant to Section 11.4. The Company shall assign such Seasonal Storage Capacity consistent with the tariffs governing the release of the associated Storage Withdrawal Capacity.

11.8.2 If the Company assigns Seasonal Storage Capacity to a Supplier pursuant to Section 11.8.1 above, the Company shall transfer in-place Gas inventories to the Supplier. The quantity of inventories to be transferred from the Company to the Supplier shall be determined by multiplying the incremental Seasonal Storage Capacity assigned to the Supplier on the Assignment Date times the applicable storage inventory percentage described in Section 11.8.5. The Supplier shall be charged the Company's weighted average cost of inventories in off-system storage facilities for each Dekatherm transferred from the Company to the Supplier. The Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Company's weighted average cost of inventories, by Gas Service Area, at least two Business Days prior to each Assignment Date.

11.8.3 In the event that the Company recalls Storage Withdrawal Capacity from the Supplier pursuant to Section 11.7, the Company shall also recall Seasonal Storage Capacity from the Supplier. The Company shall determine the total Seasonal Storage Capacity to be recalled from the Supplier in accordance with the tariffs governing the Storage Withdrawal Capacity returned to the Company.

11.8.4 If the Company recalls Seasonal Storage Capacity from a Supplier pursuant to Section 11.8.3, the Supplier shall transfer in-place Gas inventories to the Company. The quantity of inventories to be transferred from the Supplier to the Company shall be determined by multiplying the decremental Seasonal Storage Capacity times the applicable storage inventory percentage described in Section 11.8.5. The Supplier shall be reimbursed at the Company's weighted average cost of inventories in off-system storage facilities as of the Assignment Date, for each Dekatherm transferred from the Supplier to the Company. The Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the Company's weighted average cost of inventories, by Gas Service Area, at least two (2) Business Days prior to each Assignment Date.

11.8.5 Seasonal storage inventory percentages shall represent the amount of Seasonal Storage Capacity in each assigned storage resource that is assumed to be filled with inventories as of the first Gas Day of the month following the Assignment Date. Each September, the Company shall communicate, by electronic means as determined by the Company or, in the event of failure of such electronic means, by facsimile or other agreeable alternative means, the storage inventory percentages for each resource that shall be applied to incremental or decremental Seasonal Storage Capacity assignments executed on each of the twelve (12) Assignment Dates beginning in October.

11.9 Company-Managed Supplies

11.9.1 The Company shall provide access to and ascribe cost responsibility for the pro-rata shares of certain Capacity contracts including Canadian, Federal Energy Regulatory Commission, 15 U.S.C. § 717(c) or Section 7(c) [Part 157 of the FERC regulations (18 C.F.R. part 157)], and other contracts that are not assignable to third-parties.

11.9.2 The Supplier's Service Agreement shall set forth the quantity of each Company-Managed Supply assigned to the Supplier pursuant to Sections 11.4 and 11.8.

11.9.3 The Company shall notify the Supplier of the conditions and/or restrictions on the use of Company-Managed Supplies pursuant to the tariffs governing the resources.

11.9.4 The Company shall invoice the Supplier for its pro-rata shares of the demand charges for Capacity contracts assigned to the Supplier as Company-Managed Supplies. The Company shall also flow through to the Supplier all costs, including Supply costs, incurred from the utilization of Company-Managed Supplies on behalf of the Supplier.

11.9.5 The Company shall nominate quantities to the Transporting Pipeline and/or other interstate pipelines and off-system storage operators on behalf of Suppliers to which the Company has assigned Company-Managed Supplies, provided that the requested Nomination conforms to the tariffs governing the resource. The Supplier shall communicate its desired Nomination quantities to the Company subject to the provisions in Sections 9.3 and 10.3 of this tariff.

11.10 Capacity Mitigation Service

11.10.1 Capacity Mitigation Service is available to Suppliers that have been assigned Capacity pursuant to Section 11 of this tariff. Such Suppliers shall have the option to take Capacity Mitigation Service from the Company for contracts that would otherwise be released to the Supplier in accordance with this tariff.

11.10.2 Within five (5) Business Days prior to the Annual Reassignment Date, the Supplier must designate those contracts that would otherwise be released to the Supplier pursuant to Section 11.5, as contracts to be managed by the Company for cost mitigation in accordance with the Company's Capacity Mitigation Service. Such designation will be effective for the period November 1 through October 31. Such notice shall be communicated in accordance with the Supplier's Service Agreement.

11.10.3 The Supplier shall pay to the Company the maximum-tariff rate or lesser rate paid by the Company, including all surcharges, for the Capacity contracts that are retained and managed by the Company. The Company shall bill the Supplier monthly for such charges.

11.10.4 The Company will market Capacity contracts designated by Suppliers for mitigation through the Capacity Mitigation Service. The Supplier shall receive a credit on its bill for Capacity Mitigation Service equal to the pro-rata share of the proceeds earned from the Company in exchange for such contract management. Such credit shall be determined on a contract-specific basis at the end of each Month and will be included in the bill sent to the Supplier in the following Month.

12 BILLING AND SECURITY DEPOSITS

12.1 The Customer shall be responsible for all charges for service furnished by the Company under the Company's applicable rates, as filed from time to time with the NHPUC, from the time service is commenced until it is terminated. The Company shall provide a single bill, reflecting unbundled charges, to Customers for Sales Service.

12.2 The Company shall offer two billing service options to Customers taking only Delivery Service: standard complete billing service and standard pass-through billing service. The Supplier shall inform the Company of the selected billing option in accordance with the provisions set forth in Section 20.5

12.2.1 Standard Complete Billing Service

The Customer shall receive a single bill from the Company for both Delivery Service and Supplier Service. The Company shall use the rates supplied by the Supplier to calculate the Supplier's portion of the single bill and integrate this billing within a single mailing to the Customer. The Company may charge a fee to the Supplier for providing this billing service as approved by the NHPUC.

The Supplier shall adhere to the Customer classes and rate structure as specified in the Company's then current Rate Schedule on file with and approved by the NHPUC. The Company shall reasonably accommodate, at the Supplier's expense, different Customer classes or rate structures as agreed to by the Company and the Supplier in the Supplier Service Agreement.

The Company shall provide an electronic file to the Supplier that will, in addition to the usage being billed, contain the calculated Supplier billing amounts for the current billing cycle. Customer revenue due the Supplier shall be transferred to the Supplier in accordance with the Supplier Service Agreement. Upon receipt of Customer payments, the Company shall provide a file for the Supplier summarizing all revenue from Supplier sales which have been received and recorded that day.

If a Customer pays the Company less than the full amount billed, the Company shall apply the payment first to Delivery Service, and if any payment remains, it shall be applied to Supplier Service.

12.2.2 Standard Pass-through Billing Service

The Customer taking Delivery Service shall receive two (2) bills: the Company shall issue one bill for Delivery Service and the Supplier shall issue a second bill for Supplier Service.

The Supplier shall be responsible for the collection of amounts due to the Supplier from the Customer. Customer payment responsibility with Suppliers shall be governed by the particular Customer/Supplier contract.

Within three (3) Business Days following the end of the Customer's billing cycle, the Company shall provide an electronic file for the Supplier that will contain the Customer's usage being billed including the current and previous meter readings.

12.2.3 The Company shall inform a Customer when Supplier Service has been initiated by a Supplier along with information on how the Customer may file a complaint regarding an unauthorized initiation of Service. This information shall be included on the first bill rendered to the Customer after such initiation.

12.2.4 A Customer acting as its own Supplier will be subject to the billing and payment requirements in Section 20.8 of this tariff.

12.2.5 Readings taken by an automated meter reading device will be considered actual readings for billing purposes.

13 SALES SERVICE

13.1 Sales Service is the Commodity service provided by the Company for Customers not electing to subscribe to Supplier Service and shall be provided by the Company, or its designated Supplier, in accordance with this tariff. Each Customer receiving Sales Service shall receive one bill from the Company reflecting delivery and Commodity charges.

13.2 A Customer receiving Sales Service on March 14, 2000 shall continue to receive Sales Service unless the Customer elects to take Supplier Service and until such time that Supplier Service is initiated for the Customer in accordance with Section 20.5 of this tariff. If the Customer terminates Supplier Service, if a Supplier terminates service to the Customer, or if the Customer's designated Supplier becomes ineligible to serve the Customer pursuant to Sections 9.6.6, 10.7.4, or 20.3 of this tariff, the Company will provide Sales Service to the Customer. Pursuant to Section 20.5 of this tariff, the Company will initiate Sales Service for the Customer and will provide Sales Service to the Customer until such time that Supplier Service is initiated for the Customer by a new Supplier.

13.3 Any Customer whose Supplier has been assigned Capacity on behalf of said Customer pursuant to Section 11 of this tariff may elect to return to Sales Service if the Customer is no longer receiving Supplier Service. If necessary, the Company will initiate Sales Service for the Customer pursuant to Section 20.5 of this tariff and will provide the Customer with Sales Service until such time that Supplier Service is initiated for the Customer by a new Supplier. The Company will provide Sales Service to said Customer up to a maximum daily level of Gas Usage not to exceed the Total Capacity Quantity ("TCQ") of recallable Capacity assigned to the Customer's former Supplier.

13.4 In the event that a Supplier that has been assigned Capacity on behalf of a Customer pursuant to Section 11 of this tariff terminates Supplier Service to the Customer, the Customer may select another Supplier. If necessary, the Company will initiate Sales Service for the Customer pursuant to Section 20.5 of this tariff and will provide the Customer with Sales Service until Supplier Service is initiated for the Customer by a new Supplier. The Company will provide Sales Service to the Customer up to a maximum daily level of Gas Usage not to exceed the TCQ of recallable Capacity assigned to the Customer's former Supplier.

13.5 In the event that a Supplier that has been assigned Capacity on behalf of a Customer pursuant to Section 11 of this tariff becomes ineligible to serve the Customer pursuant to Sections 9.6.6, 10.7.4, or 20.3 of this tariff, the Company will provide the Customer with Sales Service up to a maximum daily level of Gas Usage not to exceed the TCQ of recallable Capacity assigned to the Customer's Supplier.

13.6 The Company shall be under no obligation to provide Sales Service to a Customer at a maximum daily level in excess of the TCQ of recallable Capacity assigned to a Supplier on behalf of the Customer. The Company may elect to provide Sales Service to the Customer if, and to the extent that, adequate system Capacity and Supplies are available and upon the same terms and subject to the same conditions as any new Customer seeking to take Sales Service.

14 PEAKING SERVICE

14.1 Applicability

Section 14 of this tariff applies to all Suppliers, and to all Customers acting as their own Supplier, that have been assigned, or have elected to be assigned, Capacity on behalf of themselves or Customers in their Aggregation Pools pursuant to Section 11 of this tariff.

14.2 Character of Service

14.2.1 Peaking Service shall be provided by the Company subject to an executed Supplier Service Agreement that sets forth the Maximum Daily Peaking Quantity ("MDPQ") and the assigned Peaking Supply for each of the Supplier's Aggregation Pools.

14.2.2 The Company shall provide quantities of Gas, at the Supplier's request, from the Supplier's Peaking Service Account as established in accordance with Section 14.4. Such quantities shall be deemed delivered by the Company and received by the Company at the Designated Receipt Point(s) for the Aggregation Pool. Peaking Service shall be firm and available to the Supplier each Gas Day in accordance with the balance of the Supplier's Peaking Service Account and the parameters of the Company's Peaking Service Rule Curve.

14.3 Rates and Charges

14.3.1 The applicable rates for Peaking Service shall be established in the Company's tariff. The Supplier shall pay a peaking demand charge based on its MDPQ of assigned Peaking Capacity as billed by the Company for the Peak Season. Such unit demand charge shall be equal to the total Capacity costs and other fixed costs associated with the Company's peaking resources, excluding costs collected through Delivery rates, divided by the estimated peaking resources needed to meet the Company's total system Peak Day requirement.

14.3.2 The Supplier shall pay a Commodity charge equal to the estimated weighted average cost of peaking supplies, including fuel retention and carrying charges. The Company shall communicate electronically, by facsimile or by other agreeable alternative means the Company's estimated weighted average cost of peaking supplies by the 15th of the month preceding the next Assignment Date. The Commodity charge will be multiplied by the volumes of Peaking Service Gas nominated by the Supplier during each Month.

14.4 Peaking Supply

14.4.1 The Customer's portion of the Peaking Supply that shall be assigned to the Supplier on behalf of the Customer shall be equal to the Peaking Supply multiplied by the ratio of the Customer's MDPQ to the aggregate MDPQ of the total system.

14.4.2 On each Assignment Date, the Company shall assign Peaking Supply to a Supplier whose MDPQ has been increased pursuant to Section 11.4. If the Company assigns incremental Peaking Supply to a Supplier, the Company shall credit the balance of the Supplier's Peaking Service Account for volumes available through October 31 in accordance with the

Peaking Service Rule Curve. The amount credited to the Supplier's Peaking Service Account shall be determined by multiplying the incremental Peaking Supply by the peaking inventory percentage described in Section 14.4.5.

14.4.3 On each Assignment Date, the Company shall recall Peaking Supply from a Supplier whose MDPQ has been decreased pursuant to Section 11.7. The Company shall determine the Supplier's total Peaking Supply for recall to be equal to the difference between the cumulative total Peaking Supply assigned to the Supplier as of the previous Assignment Date and the total Peaking Supply that is assignable to the Supplier in accordance with Section 14.4.1 above.

14.4.4 If the Company recalls Peaking Supply from a Supplier pursuant to Section 14.4.3, the Company shall debit the balance of the Supplier's Peaking Service Account for volumes available through October 31 in accordance with the Peaking Service Rule Curve. The amount debited from the Supplier's Peaking Service Account shall be determined by multiplying the decremental Peaking Supply by the peaking inventory percentage described in Section 14.4.5.

14.4.5 The peaking inventory percentage shall represent the level of Peaking Supply assumed to be available to a Supplier in its Peaking Service Account as of the first Gas Day of the Month following the Assignment Date for incremental and decremental assignments of Peaking Supply. Each September, the Company shall communicate electronically, by facsimile or by other agreeable alternative means the Peaking Inventory Percentages that shall be applied to incremental or decremental Peaking Supply assignments executed on each of the twelve (12) Assignment Dates beginning in October.

14.4.6 On each Annual Reassignment Date, the Company shall reset the balance in the Supplier's Peaking Service Account to equal the total Peaking Supply assignable to the Supplier on behalf of Customers enrolled in its Aggregation Pool (as of the first Gas Day of the Month following the Annual Reassignment Date) as determined in accordance with Section 14.4.1 above.

14.5 Nomination of Peaking Service

14.5.1 The Supplier shall nominate with the Company the quantity of Peaking Supply, not in excess of the amount determined pursuant to Section 14.4.2, that the Supplier desires to be provided from its Peaking Service Account for the applicable Gas Day. For an Aggregation Pool of Customers taking daily metered Delivery Service, the notice given by the Supplier to the Company for an applicable Gas Day shall be made in accordance with Section 9.3 of this tariff. For an Aggregation Pool of Customers taking non-daily metered Delivery Service, the notice given by the Supplier to the Company for an applicable Gas Day shall be made in accordance with Section 10.3 of this tariff.

14.5.2 In response to a valid Nomination for Peaking Service, the Company shall provide the requested quantity of Gas, which shall be deemed to be delivered by the Company and received by the Company at the Designated Receipt Point(s) of the Supplier's Aggregation Pool, subject to the limitations herein. Nominated quantities shall be included in the determination of receipts at the Designated Receipt Point(s) for the Supplier's Aggregation Pool which factors into the daily balancing provisions set forth in this tariff.

14.5.3 The Company may reject a Supplier's Nomination for Peaking Service if the nominated quantity would cause the balance of the Supplier's Peaking Service Account to fall to a level that is 10% or more below the minimum allowable account balance for the Month in which the Nomination is requested, as computed in accordance with the Peaking Service Rule Curve. Under such circumstances, the Company shall require the Supplier to nominate the pipeline and/or storage resources, within the contract entitlements assigned to the Supplier under Section 11, required to maintain the Supplier's Peaking Service Account above the minimum allowable account balance described above. The balance of the Supplier's Peaking Service Account may not in any event fall below zero (0).

14.5.4 The Company shall provide Peaking Service supplies to the Supplier only when the volumes in the Peaking Service Account for the Aggregation Pool are greater than zero (0).

14.6 Peaking Service Critical Day Provisions

14.6.1 In the event that the volumes in a Supplier's Peaking Service Account for an Aggregation Pool are reduced to a level below the minimum allowable account balance as computed in accordance with the Company's Peaking Service Rule Curve, the Company may issue an OFO to such Supplier pursuant to Section 16 of this tariff.

14.6.2 In the event that the total volumes of all Peaking Service Accounts within one or more of the Company's Gas Service Areas are reduced to levels below the total minimum allowable account balances as computed in accordance with the Company's Peaking Service Rule Curve, the Company may declare a Critical Day and issue a blanket OFO pursuant to Section 16 of this tariff.

14.6.3 If, on a Critical Day, the Company projects, based on the Supplier's Nominations, that the Supplier's scheduled deliveries to the Designated Receipt Point(s) of an Aggregation Pool are less than the maximum feasible volumes for deliveries on the Transporting Pipeline, the Company may issue an OFO to the Supplier in accordance with Section 16 of this tariff.

15 DISCONTINUANCE OF SERVICE

15.1 The Company shall notify a Customer's Supplier of record that it has initiated any applicable billing and termination procedures as prescribed by the NHPUC. In the event that the Company discontinues Delivery Service to a Customer in accordance with the provisions set forth above, the Company shall provide electronic notification to the Customer's Supplier of record upon final billing to the Customer. The Company shall not be liable for any revenue loss to the Supplier as a result of any such disconnection.

16 OPERATIONAL FLOW ORDERS AND CRITICAL DAYS

16.1 In the event of a material and significant threat to the operational integrity of the Company's system, the Company may declare a Critical Day.

16.2 Circumstances constituting a threat to the operational integrity of the system that may cause the Company to declare a Critical Day shall include, but not be limited to: (1) a failure of the Company's distribution, storage, or production facilities; (2) near-maximum utilization of the Company's distribution, storage, production, and Supply resources; (3) inability to fulfill firm service obligations; and (4) issuance of an OFO or similar notice by upstream transporters.

16.3 In the event that the Company has declared a Critical Day, the Company will have the right to issue an Operational Flow Order ("OFO") in which the Company may instruct Suppliers to take such action as conditions require, including, but not limited to, diverting Gas to or from the Company's distribution system, within the contract entitlements, if any, assigned to the Supplier under Section 11 hereof. An OFO may be issued on a pipeline or point-specific basis. An OFO may be issued by the Company as a blanket order to all Suppliers or to an individual Supplier whose actions are determined by the Company to jeopardize system integrity. The Company may issue an OFO to an individual Supplier if the Company faces Gas cost exposure in excess of daily cashout or imbalance penalties as set forth in Sections 9.6, 9.7, 10.6, and 10.7 for any under-deliveries or over-deliveries caused by that Supplier.

16.4 The Company will provide the Supplier with as much notice as is reasonably practicable of the issuance and removal of a Critical Day or an OFO; under most circumstances, the Company intends to provide at least twenty-two (22) hours' notice prior to the start of the Gas Day for the issuance of the Critical Day or OFO. Notification of the issuance and removal of a Critical Day or an OFO will be made by means as established in the Supplier Service Agreement. The Supplier will be responsible for coordinating with its Customers any change to the Customer's quantity of Gas Usage. An OFO or Critical Day will remain in effect until its removal by the Company.

16.5 All quantities of Gas over-delivered or under-delivered to the Company's system in violation of an OFO will be subject to the Critical Day provisions of Sections 9.6 and 10.6 of this tariff.

17 FORCE MAJEURE AND LIMITATION OF LIABILITY

17.1 Neither the Company nor the Supplier will be liable to the other for any act, omission, or circumstance occasioned by or in consequence of any event constituting force majeure, and unless it is otherwise expressly provided herein, the obligations of the Company and the Supplier then existing hereunder will be excused during the period thereof to the extent affected by such event of force majeure, provided that reasonable diligence is exercised to overcome such event. As used herein, force majeure will mean the inability of the Company or the Supplier to fulfill its contractual or regulatory obligations: as a result of compliance by either party with an order, regulation, law, code, or operating standard imposed by a governmental authority; by reason of any act of God or public enemy; by reason of storm, flood, fire, earthquake, explosion, civil disturbance, labor dispute, or breakage or accident to machinery or pipeline (which breakage or accident is not the result of the negligence or misconduct of the party claiming force majeure); by reason of any declaration of force majeure by upstream Transporting Pipelines; or by reason of any other cause, whether the kind enumerated herein or otherwise, not within the control of the party claiming force majeure and which by the exercise of reasonable diligence such party is unable to prevent or overcome. Notwithstanding the foregoing, the Customer's and the Supplier's obligation to make any payments required under this tariff will in no case be excused by an event of force majeure. Nor will a failure to settle or prevent any labor dispute or other controversy with employees or with anyone purporting or seeking to represent employees be considered to be a matter within the control of the party claiming excuse. The party claiming force majeure will, on request, provide the other party with a written explanation thereof and of the remedy being undertaken.

17.2 The Company shall be liable only for direct damages resulting from the Company's conduct of business when the Company, its employees, or agents have acted in a negligent or intentionally wrongful manner. In no event shall the Company be liable to any party for any indirect, consequential, or special damages, whether arising in tort, contract, or otherwise, by reason of any services performed, or undertaken to be performed, or actions taken by the Company, or its agents or employees, under this tariff or in accordance with or required by law, including, without limitation, termination of the Customer's service.

17.3 If the Company is unable to render firm Delivery Service to the Customer taking such service as contemplated by this tariff as a result of force majeure and such inability continues for a period of thirty (30) Gas Days, the Customer may provide written notice to the Company of its desire to terminate Delivery Service at the expiration of thirty (30) Gas Days from the Company's receipt of such notice, but no sooner than sixty (60) Gas Days following the outset of the force majeure. If the Company has not restored Delivery Service to the Customer at the end of such notice period, the Customer's Delivery Service will terminate and both parties will be released from further performance hereunder, except for obligations to pay sums due and owing as of the date of termination.

17.4 The Company and the Supplier shall indemnify and hold the other and their respective affiliates, and the directors, officers, employees, and agents of each of them (collectively, "affiliates") harmless from and against any and all damages, costs (including attorney's fees), fines, penalties, and liabilities, in tort, contract, or otherwise (collectively, "liabilities"), resulting from claims of third parties arising, or claimed to have arisen, from the acts or omissions of either party in connection with the performance of the indemnifying party's obligations under this tariff. The Company and the Supplier shall waive recourse against the other party and its affiliates for or arising from the non-negligent performance by such other party in connection with the performance of its obligations under this tariff.

18 CURTAILMENT

18.1 Whenever the integrity of the Company's system or the Supply of the Company's Customers taking Sales Service or Delivery Service is believed to be threatened by conditions on its system or upon the systems with which it is directly or indirectly interconnected, the Company may, in its sole reasonable judgment, curtail or interrupt Gas service or reduce pressure as set out in Section 18, Supply and Capacity Shortage Allocation Policy of this tariff. Such action shall not be construed to constitute a default nor shall the Company be liable therefor in any respect. The Company will use efforts reasonable under the circumstances to overcome the cause of such curtailment, interruption, or reduction and to resume full performance.

18.2 The Company shall communicate notice of curtailment as soon as practicable to the Suppliers of affected Customers by means as specified in the Supplier Service Agreement.

18.3 The Company shall take reasonable care in providing regular and uninterrupted service to its firm Customers, but whenever the Company deems that the situation warrants any interruption or limitation in the service to be rendered, such interruption or limitation shall not constitute a breach of the contract and shall not render the Company liable for any damages suffered thereby by any person, or excuse the Customer from further fulfillment of the contract.

18.4 In any case where the Company determines in its judgment that a curtailment or interruption of firm services is necessary, the Company will curtail and/or interrupt firm Delivery Service and Sales Service Customers on a nondiscriminatory basis.

19 TAXES

19.1 In the event a tax of any kind is imposed or removed by any governmental authority on the distribution of Gas or on the gross revenues derived from the distribution of Gas at retail (exclusive, however, of taxes based on the Company's net income), the rate for service herein stated will be adjusted to reflect said tax. Similarly, the effective rate for service hereunder will be adjusted to reflect any refund of imposition of any surcharges or penalties applicable to service hereunder which are imposed or authorized by any governmental or regulatory authorities.

19.2 The Customer will be responsible for all taxes or assessments that may now or hereafter be levied with respect to the Gas or the handling or subsequent disposition thereof after its delivery to the

Delivery Point. However, if the Company is required by law to collect and/or remit such taxes, the Customer will reimburse the Company for all amounts so paid. If the Customer claims exemption from any such taxes, the Customer will provide the Company in writing its tax exemption number and other appropriate documentation. If the Company collected any taxes or assessments from the Customer and is later informed by the Customer that the Customer is exempt from such taxes, it shall be the Customer's responsibility to obtain any refund from the appropriate governmental taxing agency.

19.3 The Supplier will be responsible for all production, severance, ad valorem, or similar taxes levied on the production or transportation of the Gas before its delivery to the Designated Receipt Point. The Supplier will also be responsible for sales taxes imposed on Gas delivered for the Customer's account. However, if the Company is required by law to remit such taxes to the collecting authority, it will do so and invoice the Supplier for such taxes paid on the Supplier's behalf.

20 SUPPLIER TERMS AND CONDITIONS

20.1 Applicability

The following terms and conditions shall apply to every Supplier providing Supplier Service in the State of New Hampshire, to every Customer doing business with said Suppliers, and to Customers acting as their own Supplier.

20.2 Obligations of Parties

20.2.1 Customer

Unless otherwise agreed to by the Company and the Customer, a Customer shall select one Supplier for each account at any given time. A Customer electing Supplier Service must provide the selected Supplier with its applicable Authorization Number. A Customer may choose only a Supplier who meets the terms described in Sections 20.2.3 and 20.3 below and who meets any applicable registration requirements established by law or regulation.

20.2.2 Company

The Company shall deliver Customer purchased Gas from the Designated Receipt Point to the Delivery Point in accordance with the service selected by the Customer pursuant to this tariff and, among other things, shall:

(a) Provide Customer service and support, including call center functions, for services provided by the Company under this tariff;

(b) Respond to service interruptions, reported Gas leaks, and to other Customer safety calls;

(c) Handle connections, curtailments, and terminations for services provided by the Company under this tariff;

(d) Read meters;

(e) Submit bills to Customers for Delivery Service and if contracted by the Supplier, for Supplier Service in accordance with Section 12.2.1.

(f) Address billing inquiries for Delivery Service;

(g) Answer general questions about Delivery Service;

(h) Provide to Suppliers, on request, the data format and procedures for electronic information transfers and funds transfers;

(i) Arrange for or provide Sales Service to the Customer at the request of the Customer in accordance with the Company's tariff; and

(j) Provide information regarding, at a minimum, rate tariffs, billing cycles, Capacity assignment methods, and Consumption Algorithms.

20.2.3 Supplier

The Supplier shall act on behalf of the Customer to acquire Supplies and to deliver them to the Designated Receipt Point pursuant to the service selected by the Customer and the requirements of this tariff.

The Supplier is responsible for enrolling Customers pursuant to Section 20.5 of this tariff.

The Supplier must request, complete and sign a Supplier Service Agreement to act as a Supplier on the Company's system, satisfy the Supplier requirements and practices as set forth in Section 20.3 of this tariff, be and remain an approved shipper on the upstream pipelines and underground storage facilities on which the Company will assign Capacity, if any, under Section 11, and be and remain eligible to provide service to Customers in New Hampshire.

The Supplier is responsible for completing all transactions with the Company and for all applicable charges associated with Customer enrollment and changes in the Customer's service as set forth in Section 20.5 and Attachment B.

20.3 Supplier Requirements and Practices

20.3.1 The Company shall have the right to establish reasonable financial and non-discriminatory credit standards for qualifying Suppliers. Accordingly, in order to serve Customers on the Company's system, the Supplier shall provide the Company, on a confidential basis, with audited balance sheet and other financial statements, such as annual reports to shareholders and 10-K reports, for the previous three (3) years, as well as two (2) trade and two (2) banking references. To the extent that such annual reports to shareholders are not publicly available, the Supplier shall provide the Company with a comparable list of all corporate affiliates, parent companies, and subsidiaries. The Supplier shall also provide its most recent reports from credit reporting and bond rating agencies. The Supplier shall be subject to a credit investigation by the Company. The Company shall review the Supplier's financial position periodically.

20.3.2 The Supplier shall also confirm in the Supplier Service Agreement that:

(a) The Supplier is not operating under any chapter of bankruptcy laws and is not subject to liquidation or debt reduction procedures under state laws, such as an assignment for the benefit of creditors, or any information creditors' committee agreement.

(b) The Supplier is not aware of any change in business conditions which would cause a substantial deterioration in its financial conditions, a condition of insolvency, or the inability to exist as an ongoing business entity.

(c) The Supplier has no delinquent balances outstanding for services previously provided by the Company, and the Supplier has paid its account according to the established terms and not made deductions or withheld payment for claims not authorized by contract.

(d) No significant collection lawsuits or judgments are outstanding which would materially affect the Supplier's ability to remain solvent as a business entity.

(e) The Supplier's New Hampshire business advertising and marketing materials conform to all applicable state and federal laws and regulations.

20.3.3 In the event the Supplier has not demonstrated to the Company's satisfaction that it has met the Company's credit evaluation standards, the Company shall require the Supplier to provide one of the following at the Maximum Financial Liability as calculated below:

(a) Advance deposit;

(b) Letter of credit;

(c) Surety bond; or

(d) Financial guaranty from a parent company that meets the creditworthiness criteria.

The Company shall base the Supplier's maximum financial liability as two (2) times the highest month's aggregated Gas Usage of all Customers currently served by the Supplier at the highest Monthly Index in the preceding twenty-four (24) Months. This amount may be updated continuously, and at minimum, whenever the aggregated Gas Usage of all Customers served by the Supplier changes by more than 25%. The Supplier agrees that the Company has the right to access and apply the deposit, letter of credit, or bond to any payment of any outstanding claims that the Company may have against the Supplier, including imbalance charges, cash-out charges, pipeline penalty charges, and other amounts owed to the Company, or to secure additional Gas supplies, including payment of the costs of the Gas supplies themselves, the cost of transportation storage, and other related costs incurred in bringing those Gas supplies into the Company's system. The Supplier shall continue its obligation to maintain its financial security instrument until it has satisfied all of its outstanding claims with the Company. The Supplier's financial security as established above must be in place no later than five (5) Business Days prior to the first day of each calendar month in order for the Supplier to maintain its eligibility to provide service to Customers.

20.3.4 The Supplier shall warrant that it has or will have entered into the necessary arrangements for the purchase of Supplies which it desires the Company to transport to its Customers, and that it has or will have entered into the necessary upstream transportation arrangements for the delivery of these Gas supplies to the Designated Receipt Point.

20.3.5 The Supplier shall warrant to the Company that it has good title to or lawful possession of all Gas delivered to the Company at the Designated Receipt Point on behalf of the Supplier or the Supplier's Customers. The Supplier shall indemnify the Company and hold it harmless from all suits, actions, debts, accounts, damages, costs, losses, taxes, and expenses arising from or out of any adverse legal claims of third parties to or against said Gas.

20.3.6 The Supplier shall be responsible for making all necessary arrangements and securing all required regulatory or governmental approvals, certificates, or permits to enable Gas to be delivered to the Company's system.

20.3.7 By agreeing to provide service under this tariff, the Supplier acknowledges that adherence to any applicable law regarding unfair trade practices, truth in advertising law, or law of similar import is required. Any Supplier found by a court of competent jurisdiction to have willfully or repeatedly violated the New Hampshire Consumer Protection Act, N.H.R.S.A. Ch. 358-A; the Federal Trade Commission Telemarketing Sales Rules, 16 C.F.R. Part 310; or the regulations promulgated pursuant to the Federal Trade Commission Act, 15 U.S.C. § 45 (a) (1), may be suspended or disqualified from acting as a Supplier on the Company's system.

20.3.8 If the Supplier fails to comply with or perform any of the obligations on its part established in this tariff or in the Supplier Service Agreement (e.g., failure to deliver Gas or late payment of bills rendered or failure to execute a capacity assignment), the Company maintains the right to terminate the Supplier's eligibility to act as a Supplier on the Company's system. Written notice of such an intent to terminate the Supplier's eligibility shall be given to the Supplier, its Customers, and the NHPUC. Notification to the Supplier shall be via Registered U.S. Mail - Return Receipt Requested or other means of documented delivery. Upon issuance of such written notice, the Company shall have the right to terminate the Supplier's eligibility to act as a Supplier on the Company's system at the expiration of ten (10) Gas Days after the giving of such notice, unless within such ten (10) Gas Day period the Supplier shall remedy to the full satisfaction of the Company such failure. Termination of such Supplier eligibility for any such cause shall be a cumulative remedy as to the Company, and shall not release the Supplier from its obligation to make payment of any amount or amounts due or to become due from the Supplier to the Company under the Company's applicable tariffs. Customers whose Supplier's deliveries have been terminated will be placed on Sales Service pursuant Section 13 of this tariff.

20.4 Access to Usage History and Current Billing Information

The Supplier shall be responsible for obtaining the necessary Authorization Number from each Customer prior to requesting the Company to release the Company's historic usage information specific to that Customer to such Supplier.

The Company shall be required to provide the most recent twelve (12) months of a Customer's historic usage data to a Supplier, provided that the Supplier has received the appropriate authorization as set forth above.

20.5 Enrollment, Cancellation, and Termination of Supplier Service

20.5.1 The Supplier shall be responsible for obtaining the necessary Authorization Number from each Customer prior to initiating Supplier Service to the Customer.

20.5.2 The Supplier must provide the Company with the following minimum information in the Company's predetermined format prior to the commencement or termination of service by the Supplier pursuant to Section 20.5 of this tariff:

(a) The Customer's name and current Authorization Number;

(b) The name of the Supplier;

(c) The Customer's billing option (for commencement of service);

(d) The type of change in Supplier Service (e.g., commencement of service, termination of service, or cancellation of service due to the rescission of an agreement with the Supplier by the Customer); and

(e) Any additional information reasonably required by the Company.

The Company shall determine whether each Customer's enrollment request as provided by a Supplier is complete and accurate, and matches the Customer's account record. In the event that the enrollment request is incomplete, inaccurate, or does not match the Customer's account record, then the Company will notify the Supplier so that the Supplier can resolve any discrepancies.

20.5.3 A change in Supplier Service will normally be made on a monthly metering and billing cycle basis, with changes taking effect on the date of the Customer's next scheduled meter read. Enrollment forms must be transmitted no less than ten (10) Business Days prior to the Customer's next scheduled meter read. If more than one Supplier submits a Supplier Service transaction for a given Customer during the monthly billing cycle, the first completed transaction that is received during the cycle shall be accepted. All other transactions shall be rejected. Rejected transactions may be resubmitted after the Customer's next scheduled meter read.

20.5.4 If the Supplier submits information to the Company to terminate Supplier Service to a Customer less than ten (10) Gas Days before the next scheduled meter read, Supplier Service shall be terminated on the date of the Customer's subsequent scheduled meter read. The Company shall confirm the termination date for Supplier Service.

20.5.5 In those instances when a Customer who is receiving Supplier Service from an existing Supplier initiates such service with a new Supplier, the Company shall send the date for the Customer's change in Supplier Service to the existing Supplier. To terminate Supplier Service with a Supplier and to initiate Sales Service, a Customer shall so inform the Company and the Supplier. Supplier Service shall be terminated on the date of the Customer's next scheduled meter read provided that the Company receives notice of such termination no less than ten (10) days in advance of the next scheduled meter read. Where such notice is received by the Company in less than ten (10) days in advance of the next scheduled read, the termination shall be effective as of the date of the following scheduled read. The Company shall send the Customer's termination date for Supplier Service to the Supplier.

20.5.6 A Customer who moves within the Company's service territory shall have the opportunity to notify its existing Supplier that it seeks to continue Supplier Service with said Supplier. Upon such notification, the Supplier may enroll the Customer pursuant to the provisions set forth in this Section in order to initiate Supplier Service for the Customer at the new location. The Company shall make the necessary adjustments to the Supplier's affected Aggregation Pools, including but not limited to, changes to Designated Receipt Points, and quantities of Capacity for assignment, if any, pursuant to this tariff and the Supplier's Service Agreement with the Company. In the event that the existing Supplier does not enroll the Customer for Supplier Service at the new location, the Company shall arrange for or provide Sales Service to the Customer.

20.5.7 In those instances when a new Customer moves to the Company's service territory, the Customer's Supplier must enroll the Customer pursuant to the provisions set forth in this Section in order to initiate Supplier Service for the Customer. Otherwise, the Customer shall receive Sales Service in accordance with Section 13.

20.5.8 The Company may charge fees to the Supplier for processing the transactions described in this Section, as approved by the NHPUC. These fees are included in Attachment D.

20.6 Aggregation Pools

20.6.1 The aggregation of Customer accounts into an Aggregation Pool is limited by the Delivery Service of the respective Customers. Non-daily metered Customers subscribing to Delivery Service under Rate Schedules G-41, G-42, G-51 and G-52 must be aggregated in a separate pool from Customers subscribing to daily metered service under Rate Schedules G-43, G-53, and G-54.

20.6.2 Non-daily metered Customers taking Delivery Service pursuant to Section 10 of this tariff shall be combined by a Supplier into a single Aggregation Pool within each of the Company's designated Gas Service Areas.

20.6.3 Daily metered Customers taking Delivery Service pursuant to Section 9 of this tariff shall be combined by a Supplier into a single Aggregation Pool within each of the Company’s designated Gas Service Areas.

20.6.4 A separate Supplier account will be established for each Supplier Aggregation Pool.

20.6.5 The election of any service from the Company by the Supplier shall apply to the entire Aggregation Pool and not just an individual customer in the Aggregation Pool.

20.6.6 The Company may charge a monthly fee to the Supplier for each Aggregation Pool pursuant to Attachment B.

20.7 Imbalance Trading

20.7.1 Prior to the imposition of imbalance charges, the Supplier may engage in trading daily and monthly imbalances for the previous Month, provided that daily imbalance trades are communicated to the Company within three (3) Business Days upon the Company’s provision of information on Supplier imbalances for said Month.

20.7.2 The Company will make available a list of Suppliers by Gas Service Area making deliveries during the previous Month.

20.7.3 Aggregation Pools affected by the transaction must be located within the same Gas Service Area as defined in Section 4, unless waived by the Company.

20.7.4 Daily imbalance trades must be point-specific on those Gas Days when the Transporting Pipeline required the Company to balance on a point-specific basis.

20.8 Billing and Payment

20.8.1 By the tenth (10th) Business Day of the calendar month, the Company shall render to the Supplier a statement of the quantities delivered and amounts owed by the Supplier for the prior Month. The Company will provide Suppliers with their Customers’ consumption data based on estimated or actual meter readings at the appropriate cycle read dates for each Customer in the Aggregation Pool pursuant to Section 12 of this tariff. This data will be provided on a rolling basis as readings or estimates are made.

20.8.2 Calculation of the charges applicable to the Aggregation Pool will be based on aggregated Gas Usage and other such indicators of all Customers in the Aggregation Pool. Billing for charges applicable to an Aggregation Pool, including but not limited to imbalance charges, credits or penalties, shall be billed to the Supplier on a calendar month basis.

20.8.3 The Supplier shall have ten (10) Business Days from the date of such statement to render payment to the Company. The Supplier shall render payment by means of electronic funds transfer to the Company. The late payment rate will apply to all amounts outstanding after ten (10) days.

20.8.4 If the correctness of the Company's bill to the Supplier is questioned or disputed by the Supplier, an explanation should be promptly requested from the Company. If the bill is determined to be incorrect, the Company shall issue a corrected bill. In the event that the Supplier and the Company fail to agree on the amount of the bill, the Supplier may file a complaint with the Commission to resolve such complaint.

21 CUSTOMER DESIGNATED REPRESENTATIVE

21.1 The Customer may appoint a Designated Representative to satisfy or undertake the Customer's duties and obligations; including, but not limited to submitting and/or receiving notices, making nominations, arranging for trades of imbalances, and performing operational and administrative tasks; provided, however, that under no circumstances will the appointment of a Designated Representative relieve the Customer of the responsibility to make full and timely payment to the Company for all Delivery Service provided under this tariff.

21.2 A request by a Designated Representative to the Company that contains the Customer's Authorization Number will be deemed to be confirmation that the Customer has designated such person or entity as a Designated Representative. A Customer may appoint only one (1) Designated Representative per account.

21.3 Under any agency established hereunder, the Company shall rely upon information concerning the applicable Customer's Delivery Service that is provided by the Designated Representative. All such information shall be deemed to have been provided by the Customer. Similarly, any notice or other information provided by the Company to the Designated Representative concerning the provision of Delivery Service to such Customer shall be deemed to have been provided to the Customer. The Customer shall rely upon any information concerning Delivery Service that is provided to the Designated Representative as if that information had been provided directly to the Customer.

21.4 The Customer shall agree to indemnify the Company and hold it harmless from any liability (including reasonable legal fees and expenses) that the Company incurs as a result of the Designated Representative's negligence or willful misconduct in its performance of agency functions on the Customer's behalf.

IV. ATTACHMENTS

1 ATTACHMENT A
Supplier Service Agreement

GAS SUPPLIER SERVICE AGREEMENT

This Agreement made this **[day]** day of **[month]**, 20**[xx]**, between Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities, a New Hampshire Corporation with a principal place of business at 15 Buttrick Road, Londonderry, NH 03053 (the "Company") and **[name of supplier]**, a **[state]** company with a principal place of business at **[address]** ("Supplier"). The Company and the Supplier is also individually referred to herein as a "Party" or collectively as the "Parties."

BASIC UNDERSTANDINGS

Whereas, the Company operates as a natural gas local distribution company and provides firm transportation of third- party gas on its distribution system; and

Whereas, the Company's Tariff (the "Tariff") on file with, and approved by, the New Hampshire Public Utilities Commission (the "NHPUC") permits delivery service customers to assign their rights of nominating and scheduling delivery of gas for transportation on the Company's system to a third-party natural gas supplier; and

Whereas, Supplier seeks to nominate and schedule delivery of gas for distribution on the Company's system on behalf of one or more customers taking delivery service from the Company; and

Whereas, the Company's Tariff, Part III, Section 20.2.3, requires Supplier to enter into this Supplier Service Agreement (the "Agreement") with the Company prior to the initiation of Supplier Service, as defined therein; and

Now therefore, the Parties hereto, each in consideration of the agreement of the other, do hereby agree as follows:

I. SCOPE AND APPLICATION

1.0 This Agreement shall be subject to the Company's Tariff as on file with the NHPUC and in effect from time to time. The Company's Tariff and applicable Rate Schedules are hereby incorporated by reference as though directly set forth herein. In the event the terms of this Agreement conflict with the Company's Tariff, the Tariff shall control.

1 of 14

1.1 This Agreement is intended for use between the Company and natural gas suppliers providing service to customers on the Company's distribution system, and may not be waived, altered, amended, or modified, except as provided herein.

1.2 Exhibits A and B, attached hereto and incorporated herein by reference, include additional terms that are a part of this Agreement.

II. DEFINITIONS

2.0 Any capitalized terms used in this Agreement and not defined herein shall be as defined in the Tariff or as stated in the NHPUC's regulations.

III. TERM

3.0 This Agreement shall become effective on the date hereof (the "Effective Date") and shall continue in full force and effect from month to month unless terminated by either Party by written notice given no less than thirty (30) days prior to the desired termination date, or unless otherwise agreed by the Parties. Notwithstanding the foregoing, the Parties agree to abide by all terms of this Agreement until any transactions that are outstanding at the time of termination are completed, including, but not limited to, the payment by Supplier to the Company of any and all outstanding balances.

3.1 Notwithstanding anything to the contrary elsewhere in this Agreement or in the Company's Tariff, any Party, by written notice to the other Party (the "Breaching Party") may terminate this Agreement, in whole or in part, with respect to such Breaching Party or suspend further performance without terminating this Agreement upon the occurrence of any of the following:(a) the Breaching Party terminates or suspends doing business; (b) the Breaching Party becomes subject to any bankruptcy or insolvency proceeding under federal or state law (unless removed or dismissed within sixty (60) days from the filing thereof), or becomes insolvent, becomes subject to direct control of a transferee, receiver or similar authority, or makes an assignment for the benefit of creditors; or (c) the Breaching Party commits a material breach of any of its obligations under this Agreement or the Tariff and has not cured such breach within fifteen (15) days after receipt of a written notice from the other Party specifying the nature of such.

3.2 Consistent with the provisions of Part III, Section 20.3.8 of the Company's Tariff, the Company also maintains the right to terminate the Supplier's eligibility to act as a Supplier. on the Company's system in the event that Supplier fails to comply with or perform any of the obligations on its part established in the Tariff or in this Agreement, including but not limited to, failure to deliver gas or to make payment of amounts due to the Company.

3.3 Notwithstanding the Effective Date, Supplier acknowledges and agrees that the Company is obligated to provide services pursuant to this Agreement only upon full satisfaction, or the Company's express written waiver, of the Conditions Precedent set forth in Article IV of this Agreement.

3.4 No delay by either Party in enforcing any of its rights hereunder shall be deemed a waiver of such rights, nor shall a waiver of one default be deemed a waiver of any other or subsequent default.

3.5 The enumeration of the foregoing remedies shall not be deemed a waiver of any other remedies to which either Party is legally entitled.

IV. CONDITIONS PRECEDENT

4.0 The following requirements shall be conditions precedent to the Company's obligations hereunder:

(a) Supplier shall provide the Company with all information requested in Exhibits A and B attached hereto and incorporated herein;

(b) Pursuant to Part Ill, Section 20.3.1 of the Company's Tariff, the Company shall confirm the Supplier's creditworthiness. In the event that Supplier has not demonstrated to the Company's satisfaction that it has met the Company's credit evaluation standards, the Company will identify such deficiencies to the Supplier, and the Supplier shall provide financial assurances as required by the Company consistent with the provisions of Part III, Section 20.3.3;

(c) Pursuant to Part Ill, Section 20.2.3 of the Company's Tariff, Supplier shall register with the NHPUC and provide evidence of such to the Company on an annual basis;

(d) Pursuant to Part III, Section 20.2.3 of the Company's Tariff, Supplier shall demonstrate to the Company that it is an approved shipper on the upstream pipelines and underground storage facilities on which the Company will assign capacity;

(e) Pursuant to Part Ill, Section 12.2.1 of the Company's Tariff, where Supplier elects to utilize the Standard Complete Billing Services from the Company, Supplier shall furnish to the Company a complete schedule of its relevant rates and rate pricing options for Supplier Service in written form or in an electronic format reasonably acceptable to the Company, at Company's option, no less than ten (10) Business Days prior to initial Customer enrollment for any such rate or prior to a change in Supplier's existing rates or five (5) Business Days prior to a change in rate pricing options.

(f) Prior to Customer Enrollment, Supplier shall successfully complete testing of the business-transaction communication protocols established by the Company, which may include communication by fax or telephone, electronic transactions as specified by the Company, or any other applicable communication requirements set forth by the Company.

V. SUPPLIER CERTIFICATION

5.0 In addition to the requirements listed in Section IV of this Agreement, and pursuant to Part III, Section 20.3.2 of the Company's Tariff, the Supplier hereby affirms the following:

(a) Supplier is not operating under any chapter of bankruptcy laws and is not subject to liquidation or debt reduction procedures under state laws, such as an assignment for the benefit of creditors, or any information creditors' committee agreement.

(b) Supplier is not aware of any change in business conditions that would cause a substantial deterioration in its financial conditions, a condition of insolvency, or the inability to exist as an ongoing business entity.

(c) Supplier has no delinquent balances outstanding for services previously provided by the Company, and Supplier has paid its account according to the established

terms and not made deductions or withheld payment for claims not authorized by contract.

(d) No significant collection lawsuits or judgments are outstanding that would materially affect Supplier's ability to remain solvent as a business entity.

(e) Supplier's New Hampshire business advertising and marketing materials conform to all applicable New Hampshire state and federal laws and regulations.

5.1 Supplier shall promptly notify Company of any material change in its financial condition as it relates to Supplier's creditworthiness or solvency as a business enterprise.

5.2 In the event that the NHPUC enacts regulations whereby Supplier must register with the NHPUC, Supplier shall notify Company within twenty-four (24) hours in writing in the event that its registration as a Competitive Supplier is acted upon by the NHPUC in such a way that it materially affects Supplier's performance under this Agreement, including but not limited to suspension, revocation, modification, or non-renewal. Consistent with Part III, Section 20.3.8 of the Company's Tariff, revocation or non-renewal of Supplier's registration shall be grounds for immediate termination of this Agreement by Company.

VI. NOMINATIONS AND SCHEDULING

6.0 The Company and Supplier, pursuant to the Company's Tariff on file with the NHPUC and the terms of this Agreement, agree to exchange and act on information regarding the nomination and scheduling of gas for transportation on behalf of Supplier's customers.

6.1 Supplier acknowledges and agrees that its transportation rights under this Agreement are solely those that have been assigned to it by the Customer pursuant to the Company's Tariff. Supplier further agrees that the Company shall have no obligation to honor any nomination or scheduling request from Supplier that, in the Company's sole judgment, exceeds the scope of Supplier's assigned rights or where such nominations or requests could be reasonably refused, directly or indirectly, based on the terms of this Agreement or the Company's Tariff.

6.2 Pursuant to Part Ill, Sections 9.3.2 and 10.3.3 of the Company's Tariff, nominations will be communicated to the Company in accordance with the terms of this Agreement as set forth in Exhibit A.

6.3 In the event of a discrepancy between the volume nominated to the Company by Supplier and the volume confirmed by the Company, the discrepancy shall be allocated between and among Supplier's Aggregation Pools and/or Customers in accordance with the Pre-Determined Allocation Method set forth in Exhibit B, attached hereto. In the event that the Supplier has not provided the Company with a Pre-Determined Allocation Method, the discrepancy will be allocated consistent with the provisions of the Company's Tariff.

VII. CAPACITY ASSIGNMENTS

7.0 The Supplier's Maximum Daily Peaking Quantity ("MDPQ") may be modified during the calendar year in accordance with the provisions of Part Ill, Sections 11.0 and 14.0 of the Company's Tariff. Company will notify Supplier prior to the effective date of such changes.

7.1 Pursuant to Part III, Section 11.9.2 of the Company's Tariff, the quantity of each Company Managed Supply assigned to Supplier may be modified during the calendar year in accordance with Part III, Sections 11.4 and 11.8 of the Company's Tariff. Company will notify Supplier prior to the effective date of such changes.

7.2 In accordance with Part Ill, Sections 11.0 and 14.0 of the Company's Tariff, the quantity of Capacity assigned to Supplier may be modified during the calendar year. In addition, the Company shall have the right to adjust a Customer's total capacity quantity C'TCQ") if the Company determines that the TCQ calculation is in error or is otherwise not calculated in accordance with the provisions of Part Ill, Sections 11.3.2.

7.3 Pursuant to Part Ill, Section 11.10.2 of the Company's Tariff, Supplier shall provide notice to the Company of its designation of contracts to be managed by the Company for cost mitigation purposes by the means set forth in Exhibit 8.0.

VIII. LEFT BLANK INTENTIONALLY (RESERVED FOR FUTURE USE)

IX. BILLING AND PAYMENT

9.0 Bills, fees and charges for services provided by the Company, including, but not limited to, monthly cashouts, monthly imbalance charges, daily imbalance charges, and any other applicable charges set forth in the Tariff or in this Agreement, shall be

rendered to Supplier on a monthly basis and shall be due upon receipt of said bill, unless otherwise specified in Exhibit A.

In addition to any other right or remedy available to the Company, Supplier's failure to make payment within ten (10) days of the posting date on the bill shall result in the addition of interest on any unpaid balance calculated at the maximum monthly rate allowable by the Company's Tariff. Interest shall accrue commencing from the date said bill was posted. The posting date is the date the bill is transmitted to Supplier. The bill may also be transmitted electronically if agreed to between the Parties in Exhibit A.

9.1 The Company shall have the right to deduct any amounts owed by Supplier to the Company for such services, which are thirty (30) days or more past due, from any amounts collected in the normal course of business by the Company on the Supplier's behalf. Amounts subject to a good faith dispute will not be subject to deduction.

9.2 The Parties agree to cooperate and provide each other with necessary documentation relating to any transactions resulting hereunder, including but not limited to, applicable sales or other tax exemptions. The Parties agree that Supplier's failure to comply with the provisions of this Article IX shall constitute default of payment under the Tariff and expose Supplier to liability thereunder as well as under this Agreement.

9.3 Consistent with the provisions of Part III, Sections 20.3.1 and 20.3.3 of the Company's Tariff, Supplier shall satisfy the creditworthiness standards established by the Company. In the event the Supplier has not demonstrated satisfaction of the Company's creditworthiness standards, the Supplier shall provide, upon ten (10) days written notice from the Company, financial assurance in the form of an advance deposit, letter of credit, surety bond or financial guaranty from a parent company, as reasonably determined by the Company. The amount of any such financial assurance required by the Company shall be calculated in accordance with the provisions of Part III, Section 20.3.3 of the Company's Tariff. The Company shall review Supplier's satisfaction of the Company's creditworthiness standards every twelve (12) months during the term of this Agreement giving consideration to Supplier's payment history in the preceding twelve-month period. Upon the request of Supplier, the Company shall exercise its sole reasonable discretion to determine whether a change in the form of financial assurance is warranted. In the event that the Company requires financial assurances in the form of a deposit, such deposits shall accrue interest in accordance with the Company's Tariff. Such deposit shall be returned to Supplier within thirty (30) days of the expiration or termination of this Agreement, provided that Supplier is not in default under this Agreement. The Company may deduct from the deposit any amount payable to the Company by Supplier under this Agreement, which has not been paid by the Supplier when due, unless such non-payment relates to a documented billing dispute between Supplier and the Company. Such deduction may be taken by the Company without notice or demand of any kind and the Company may, in its sole discretion, apply such deposit against any amount then due and payable. In the event that Company applies all or any portion of such deposit, Supplier shall deposit such sums as are necessary to replenish the security deposit to its maximum amount, within ten (10) days' notice of such deduction and application.

X. REPRESENTATIONS

10.0 Each Party represents that it is and shall remain in compliance with all applicable laws, tariffs, and NHPUC regulations during the term of this Agreement.

10.1 Each person executing this Agreement for the respective Parties represents and warrants that he or she has authority to bind that Party.

10.2 Each Party represents that (a) it has the full power and authority to execute, deliver, and perform this Agreement; (b) the execution, delivery, and performance of this Agreement have been duly authorized by all necessary corporate or other action by such Party; and (c) this Agreement constitutes that Party's legal, valid and binding obligation, enforceable against such Party in accordance with its terms.

10.3 Each Party shall exercise all reasonable care, diligence and good faith in the performance of its duties pursuant to this Agreement, and carry out its duties in accordance with applicable recognized professional standards.

XI. NONDISCLOSURE

11.0 Neither Party may disclose any Confidential Information obtained pursuant to this Agreement to any third Party, including affiliates of such Party, without the express prior written consent of the other Party. As used herein, the term "Confidential Information" shall include, but not be limited to, all business, financial, and commercial information pertaining to the Parties, Customers of either or both Parties, Suppliers for either Party, personnel of either Party; any trade secrets; and other information of a similar nature; whether written or in intangible form that is marked proprietary or confidential with the appropriate owner's name.

11.1 Confidential Information shall not include information known to either Party prior to obtaining the same from the other Party, information in the public domain, or information obtained by a Party from a third party who did not, directly or indirectly, receive the same from the other Party to this Agreement or from a Party who was under an obligation of confidentiality to the other Party to this Agreement, or information developed by either Party independent of any Confidential Information. The receiving Party shall use the higher of the standard of care that the receiving Party uses to preserve its own Confidential Information or a reasonable standard of care to prevent unauthorized use or disclosure of such Confidential Information. Each receiving Party shall, upon termination of this Agreement or at any time upon the request of the disclosing Party, promptly return or destroy all Confidential Information of the disclosing Party then in its possession.

11.2 Notwithstanding the preceding, Confidential Information may be disclosed to any governmental, judicial or regulatory authority requiring such Confidential Information pursuant to any applicable law, regulation, ruling, or order, provided that: (a) such Confidential Information is submitted under any applicable provision, if any, for confidential treatment by such governmental, judicial or regulatory authority; and (b) prior to such disclosure, the other Party is given prompt notice of the disclosure requirement so that it may take whatever action it deems appropriate, including intervention in any proceeding and the seeking of any injunction to prohibit such disclosure.

11.3 No provision of this Agreement shall prohibit the Company from communicating to its Customers and prospective customers, information regarding Supplier's eligibility to conduct business on the Company's distribution system. In addition, obligations under this Article XI shall survive the termination or expiration of this Agreement.

XII. LIABILITY AND INDEMNIFICATION

12.0 The Parties acknowledge and agree that the Force Majeure provisions set forth in Part III, Section 17 of the Company's Tariff are incorporated by reference as if set forth herein.

12.1 The Parties acknowledge and agree that the liability and indemnification provisions in Part III, Section 17 of the Company's Tariff are incorporated by reference as if set forth herein.

12.2 For purposes of such liability and indemnification, however, the Parties acknowledge and agree that nothing in such Tariff prohibits one Party from impleading the other Party as a third-party defendant, whether or not one or both Parties are named as defendants in the initial claim of a third party. The third-party claim shall be stayed pending resolution of any dispute regarding liability and indemnification under this Agreement. Such resolution shall be final and binding upon the Parties only after agreement between the Parties or after entry of a final judgment, after any further appeals of a court of competent jurisdiction to which any appeal may have been taken from the determination of the arbitrator(s).

12.3 The Parties acknowledge and agree that for purposes of Part III, Section 17 the Company's Tariff, a Party seeking recovery from the other Party in connection with the performance of its obligations of the Tariff shall not be entitled to recovery where its own negligent acts or omissions contribute to or cause such damages, costs, fines, penalties or liabilities.

12.4 The Parties expressly acknowledge and agree that the dispute resolution provision in Article XIII of this Agreement shall apply to any and all disputes arising under this Article, including, without limitation, those disputes that arise as a result of either of

the Parties being named as a defendant in the primary action or being named as a third-party defendant by a defendant in the primary action.

12.5 Notwithstanding anything in this Agreement or the Tariff to the contrary, in no event shall any Party hereto be liable to any other Party hereto for indirect, consequential, punitive, special, or exemplary damages under any theory of law that is now or may in the future be in effect, including without limitation: contract, tort, N.H.R.S.A. Ch. 358-A, strict liability, or negligence.

12.6 Notwithstanding the availability of other remedies at law or in equity, either Party hereto shall be entitled to specific performance to remedy a breach of this Agreement by the other Party.

12.7 Supplier further agrees that it shall indemnify, defend and hold harmless the Company with respect to any claim, suit, damages or costs of any kind arising from any action or inaction of the Company in reliance upon the nominations, scheduling instructions or other communications from Supplier. The Parties agree that reliance on such instructions and communications shall be deemed reasonable and shall not constitute negligence.

12.8 The provisions of this Article XII shall survive the termination of this Agreement.

XIII. DISPUTE RESOLUTION

13.0 Disputes hereunder shall be reduced to writing and referred to the Parties' representatives for resolution. The Parties' representatives shall meet and make all reasonable efforts to resolve the dispute. Pending resolution, the Parties shall continue to fulfill their obligations under this Agreement in good faith, unless this Agreement has been suspended or terminated. If the Parties fail to resolve the dispute within thirty (30) days, they may mutually agree to pursue mediation or arbitration to resolve such issues.

13.1 The interpretation and performance of this Agreement shall be in accordance with and controlled by the laws of the State of New Hampshire, without regard to the doctrines governing choice of law. All disputes arising hereunder shall be brought either before the NHPUC or the state courts of the State of New Hampshire.

XIV. COMMUNICATIONS

14.0 Except as otherwise provided herein, any notices given under this Agreement shall be in writing and shall be delivered to the Company as set forth in Exhibit A, by hand or sent by (a) certified mail, return receipt requested, first class postage prepaid, (b) telecopy, or (c) a nationally recognized courier service. Notices and other communications to Supplier shall also be addressed as shown on Exhibit A. Notices given hereunder shall be deemed to have been given upon receipt or any refusal to accept; telecopied notices shall be deemed to have been given upon confirmation of their receipt.

14.1 All communications required by the Company's Tariff shall be made in accordance with the schedule listed in Exhibit A. Information on active Company fax numbers and e-mail addresses shall be posted on the Company's Internet Website at http://www.libertyutilities.com/east/gas/business_partners/index.html

XV. ENFORCEABILITY

15.0 In the event that any portion or part of this Agreement is deemed invalid, against public policy, void or otherwise unenforceable by a court of law, the validity and enforceability of the remaining portions thereof shall otherwise be fully enforceable.

15.1 No waiver by any Party of any one or more defaults by the other Party in the performance of any provision of this Agreement shall operate or be construed as a waiver of any other present or future default, whether of a like or different character. No delay by either Party in enforcing any of its rights hereunder shall be deemed a waiver of such rights.

XVI. ASSIGNMENT AND DELEGATION

16.0 Any entity that shall succeed by purchase, merger or consolidation to the assets and properties, substantially or as an entity, of either Party hereto shall be entitled to the rights and shall be subject to the obligations of its predecessor in interest under this Agreement.

16.1 Either Party may, without relieving itself of its obligations under this Agreement, assign any of its rights or obligations hereunder to an affiliated entity, but otherwise no assignment of this Agreement or any of the rights or obligations hereunder shall

be made unless there first shall have been obtained the written consent of the other Party. No assignment by Supplier shall take effect until the assignee has met the requirements of Article IV hereunder. No assignment of this Agreement shall relieve the assigning Party of any of its obligations under this Agreement until such obligations have been assumed by the assignee.

16.2 The restrictions on assignment contained herein shall not in any way prevent either Party from pledging or mortgaging its rights as security for its indebtedness.

16.3 In addition, either Party may subcontract its duties under this Agreement to a subcontractor provided that the subcontracting Party shall remain fully responsible as a principal and not as a guarantor for performance of any subcontracted duties, and shall serve as the point of contact between its subcontractor and the other Party, and the subcontractor shall meet the requirements of any applicable laws, rules, regulations, and Tariff. The assigning or subcontracting Party shall provide the other Party with thirty (30) calendar days' prior written notice of any such subcontracting or assignment, which notice shall include such information about the subcontractor as the other Party shall reasonably require.

XVII. MISCELLANEOUS

17.0 This Agreement, all Exhibits and attachments hereto and all documents referenced herein, constitute the entire agreement between the Parties and supersedes all other agreements, communications, and representations. Paragraph headings are for convenience only and are not to be construed as part of this Agreement.

17.1 Unless otherwise provided herein, no modification of, or supplement to, the terms and provisions stated in this Agreement shall be or become effective without the written consent of both Parties.

17.2 This Agreement may be executed simultaneously in two or more counterparts, each of which shall be deemed to be an original but all of which shall constitute one and the same document.

In witness whereof, the Parties have caused this Agreement to be executed by their duly authorized representatives as of the date above.

I. GENERAL TERMS AND CONDITIONS

1 SERVICE AREA

A. Service Area. The area authorized to be served by the Company and to which this tariff applies are the following cities and towns: Allenstown, Amherst, Auburn, Bedford, Belmont, Berlin, Boscawen, Bow, Concord, Derry, Franklin, Gilford, Goffstown, Hollis, Hooksett, Hudson, Keene, Laconia, Litchfield, Londonderry, Loudon, Manchester, Merrimack, Milford, Nashua, Northfield, Pelham, Pembroke, Sanbornton, Tilton, Windham, ~~-~~and part of Canterbury and Winnisquam.

2 GENERAL TERMS AND CONDITIONS

A. Filing. A copy of this tariff is on file with the New Hampshire Public Utilities Commission ("NHPUC" or the "Commission") and is open to inspection at the offices of the Company.

B. Revisions. This tariff may be revised, amended, supplemented, or otherwise changed from time to time in accordance with the rules of the ~~New Hampshire Public Utilities~~ Commission and such changes, when effective, shall have the same force as the original tariff.

C. Application. The tariff provisions apply to everyone lawfully receiving gas supply service and/or delivery-only service from the Company under the rates herein and receipt of gas service shall constitute the receiver a customer of the Company as the term is used herein whether service is based upon contract, agreement, accepted signed application, or otherwise.

D. Statement by Agents. No representative has the authority to modify a tariff rule or provision or to bind the Company by a promise or representation contrary thereto.

E. No Prejudice of Rights. The failure of the Company to enforce any of the terms of this tariff shall not be deemed a waiver of its right to do so.

F. Gratuities to Employees. The Company's employees are strictly forbidden to demand or accept any personal compensation or gifts for service rendered by them while working for the Company on the Company's time.

G. Advance Payments. Payments to the Company for charges provided in these rules and regulations to be borne by the customer shall be made in advance.

H. Assignment. Subject to the rules and regulations, all contracts by the Company shall be binding upon, and oblige, and continue for the benefit of, the successors and assigns, heirs, executors, and administrators of the parties hereto.

3 CHARACTER OF SERVICE

A. Gas Supply. This Tariff applies only to the supply of gas, having a thermal content of nominally 1,000 British thermal units per cubic foot at supply pressures available in the locality in which the premises to be served are situated.

B. Determination of Therms. The gas for any billing period, expressed in hundreds of cubic feet (ccf), shall be multiplied by the average Btu of the gas send out as determined below and divided by 1,000 in order to determine the number of therms consumed in the billing period. For billing purposes, gas therms shall be determined on a "dry" basis.

The Btu therm factor of the gas sendout shall be calculated for each billing cycle from the daily weighted average Btu of the natural gas delivered to the Company by its suppliers and the gas produced at the Company's peak-shaving plants. The daily average Btu content shall be determined by appropriate gas measurement devices operated by the Company or its supplier.

C. Delivery of Gas Supply. The rates specified in this tariff are based upon the supply of service to a single customer through one delivery and metering point.

D. Use of Service at Separate Properties. The use of service at two or more separate properties will not be combined for billing purposes.

4 CUSTOMER'S INSTALLATION

A. Point of Delivery. Upon request, the Company will designate a point at which the customer shall terminate his piping for connection to the meter of the Company, but such information does not constitute an agreement or obligation on the part of the Company to furnish service.

B. Space for Meter. The customer shall provide, free of expense to the Company, a dry, warm and otherwise suitable place for the regulator or regulators, meter or meters, or other equipment of the Company which may be necessary for the fulfillment of such contracts as may be entered into with the Company.

C. Location of Meter. The space provided for the Company's meters and equipment shall be convenient access to the Company's employees and, as near as possible, to the point where the service supply pipe enters the customer's building. Its location shall be such that the meter connections are not concealed by plaster or sheathing and shall be otherwise acceptable to the Company.

D. Reverse Flow. The customer may be required to install check valves or other devices to prevent compressed air or other gases from entering the Company's mains.

5 APPLICATION FOR SERVICE

A. Service Contract. Every applicant for gas service may be required to sign a contract, agreement, or other form then in use by the Company covering the special circumstances of ~~his~~ the applicant's use of gas and must agree to abide by the rules and regulations and standard requirements of the Company.

B. Right to Reject. The Company may reject any application for service which would involve excessive cost to supply, or which might affect the supply of service to other customers, or for other good and sufficient reasons.

C. Special Contracts. Standard contracts shall be for terms as specified in the statement of the rate, but where large or special investment is necessary for the supply of service, contracts of longer terms as specified in the rate, or with a special guarantee of revenue, or both, may be required to safeguard such investment.

D. Unauthorized Use. Unauthorized connection to the Company's gas service supply facilities, and/or the use of service obtained from the Company without authority, or by any false pretense, may be terminated by the Company without notice. The use of service without notifying the Company and without enabling ~~it~~ the Company to read its meter will render the user liable for any amount due for service supplied to the premises from the time of the last meter reading of the Company's meter immediately preceding ~~his~~ the user's occupancy as shown by the Company's books.

E. Managed Expansion Program. The Managed Expansion Program ~~T~~targetseds gas expansion in specific areas that have high potential for demand. Each Managed Expansion Program project includes a Main Extension. Customers under this program avoid a portion or all of a contribution in aid of construction which would otherwise be required absent the Managed Expansion Program.

6 CREDIT

A. Prior Debts. Service will not be furnished to former customers until any indebtedness to the Company for previous service has been satisfied.

B. Deposits. Before rendering or restoring service, the Company may require a deposit subject to the ~~New Hampshire Public Utilities~~ Commission's Rules and Regulations. (See Puc 1200 rules).

7 SERVICE AND MAIN EXTENSIONS

A. Definitions. The following are definitions of terms used in these provisions relative to main and service extensions and are applicable only in ~~such~~ the main and service extensions provisions.

1. Service and Main Extensions. Extensions that require the construction of a new gas main and a service from that new main in order to provide requested gas service to a customer.

2. Service Extensions. Extensions from an Existing Gas Main to the point of delivery on the customer's premises.

3. Main Extension. An extension of the new gas main portion of a Service and Main Extension.

4. Existing Gas Main. A main that is installed in the street and through which gas is flowing.

5. Abnormal Costs. Abnormal Costs are service and/or main construction costs that are attributable to frost or ledge (including ditching or backfilling necessitated as a result of the presence of frost or ledge),and/or other conditions not typically encountered in service and/or main construction that are peculiar to the particular service and/or main construction concerned. Abnormal Costs are to be paid by the customer.

6. Extra Footage. The charge (contribution in aid of construction) for Extra Footage is $31.54 per foot. The charge will be updated annually by calculating the historical average cost per foot for Service Extensions, excluding overheads, for the most recent calendar year and the updated charge shall be effective April 1.

7. Estimated Annual Margin. The Estimated Annual Margin is equal to the estimated revenue to be derived from the monthly Customer Charge and delivery charge to be received from the customer for gas service utilizing the Service and Main Extension or Service Extension during the first twelve

(12) months after completion of the extension. The Estimated Annual Margin does not include revenue received by the Company for the cost of gas and local distribution adjustment factor.

8. Estimated Cost of Construction. For the purpose of determining the cost of Service and Main Extensions, Estimated Cost of Construction of mains and/or services includes ~~not only~~ the cost of labor and materials for such construction, ~~but also~~ and incidental or associated miscellaneous costs ~~incidental thereto or associated therewith~~, but excluding overheads. Miscellaneous costs include, but are not limited to, meter(s), traffic control and city and town road permits and degradation fees. The customer may perform on-site trenching and backfilling in accordance with the Company's specifications, in which case the Estimated Cost of Construction will be reduced to reflect the costs avoided by the Company as a result of the customer's performance of the work.

B. Costs of Extensions. In areas where the Company is authorized to operate, subject to the Application for Service provisions of this tariff, service is available as follows:

1. Residential Service Extensions. Residential Service Extensions up to 100 feet in length will be installed at no charge to customers served under either a (i) residential heating rate; or (ii) a residential non-heating rate provided that such extension is installed during the installation of a Main Extension~~,~~ or during the performance of work on cast iron/bare steel main replacements; unless there are Abnormal Costs associated with such extensions, in which case the customer shall be charged for the Abnormal Costs. For residential Service Extensions in excess of 100 feet, the customer will be charged for the Extra Footage, plus any Abnormal Costs. This Section 7(B)(1) shall apply only to Service Extensions and shall not apply to Service and Main Extensions as described in Section 7(B)(3).

2. Commercial and Industrial Service Extensions. Commercial and industrial Service Extensions will be installed at no charge to the customer provided that the Estimated Annual Margin is at least one-sixth of the Estimated Cost of Construction of the Service Extension, excluding any Abnormal Costs. If the Estimated Annual Margin is less than one-sixth of the Estimated Cost of Construction, the customer will be required to pay to the Company, in advance, any amount by which the Estimated Cost of Construction of the Service Extension exceeds six times the Estimated Annual Margin. Abnormal Costs are charged separately and are not included in the Estimated Cost of Construction for the purpose of this calculation. This Section 7(B)(2) shall apply only to Service Extensions and shall not apply to Service and Main Extensions as described in Section 7(B)(3).

3. Service and Main Extensions of Less Than $1,000,000. The Company shall not commence construction on a Service and Main Extension for which the Estimated Cost of Construction is less than $1,000,000 until the sum of (i) six times the Estimated Annual Margin for all commercial and industrial customers who have committed to take service, plus (ii) eight times the Estimated Annual Margin for all residential customers who have committed to take service equals or exceeds 25% of the Estimated Cost of Construction.

   a. Residential. Residential Service and Main Extensions will be installed at no charge to the customer provided that the Estimated Annual Margin is at least one-eighth of the Estimated Cost of Construction of the Service and Main Extensions. If the Estimated Annual Margin is less than one-eighth of the Estimated Cost of Construction, the customer will be required to pay to the Company the difference between the Estimated Cost of Construction and eight times the Estimated Annual Margin, plus any Abnormal Costs.

If the Main Extension will serve more than one location, the Company will calculate the sum of the Estimated Annual Margin from all metered services and the sum of the Estimated Cost of Construction for the Main Extension and all Service Extensions to determine whether any payment will be required from the customers to be served. The Company will also include the Estimated Annual Margin and the Estimated Cost of Construction for Service Extensions for all existing premises for which the Company reasonably anticipates will take service, using the assumption that 60% of such premises will take service. If any payment is required, it will be allocated equally among all current metered services that exist as of the date that the Main Extension becomes an Existing Gas Main. Abnormal Costs associated with Main Extensions will be allocated equally among all customers, unless such costs can be attributed to specific customers.

b. Commercial and Industrial. Commercial and industrial Service and Main Extensions will be installed at no charge to the customer provided that the Estimated Annual Margin is at least one-sixth of the Estimated Cost of Construction of the Service and Main Extensions. If the Estimated Annual Margin is less than one-sixth of the cost of construction of the Service and Main Extensions, the customer will be required to pay to the Company the difference between the Estimated Cost of Construction and six times the Estimated Annual Margin, plus any Abnormal Costs.

c. If the Main Extension will serve more than one location, the Company will calculate the sum of the Estimated Annual Margin from all metered services and the sum of the Estimated Cost of Construction for the Main Extension and all Service Extensions to determine whether any payment will be required from the customers to be served. The Company will also include in such calculations the Estimated Annual Margin and the Estimated Cost of Construction for Service Extensions for all existing premises for which the Company reasonably anticipates will take service, using the assumption that 60% of such premises will take service. If any payment is required, it will be allocated among all current metered services that exist as of the date that the Main Extension becomes an Existing Gas Main based on each customer's proportional share of the Estimated Annual Margin. Abnormal Costs associated with Main Extensions will also be allocated based on each customer's proportional share of the Estimated Annual Margin, unless such costs can be attributed to specific customers, in which case the costs shall be allocated appropriately to specific customers.

d. Extensions Serving Customers in More Than One Rate Class. If the Main Extension will serve both residential and commercial or industrial customers, the Company will determine whether a contribution will be required by the customers by calculating the difference between the Estimated Cost of Construction of the Main and Service Extensions and (i) six times the Estimated Annual Margin for all commercial and industrial customers to be served, plus (ii) eight times the Estimated Annual Margin for all residential customers to be served. The Company will also include in the above calculations the Estimated Annual Margin and the Estimated Cost of Construction of Service Extensions for all existing premises for which the Company reasonably anticipates will take service. If the difference described above is positive, the customers will be required to pay to the Company such difference. The amount of payment will be allocated among all metered services that exist as of the date that the Main Extension becomes an Existing Gas Main based on each customer's proportional share of the Estimated Annual Margin. Abnormal Costs associated with Main Extensions will also be allocated based on each customer's proportional share of the Estimated Annual Margin, unless such costs can be attributed to specific customers, in which case the costs shall be allocated appropriately to specific customers.

4. Service and Main Extensions Greater Than or Equal to $1,000,000. If the cost of the Main Extension equals or exceeds $1,000,000, then in addition to the requirements specified in Section 7(B)(3), the Company will not commence construction unless a discounted cash flow analysis demonstrates a positive net present value over a 10-year period of the difference between the Estimated Annual Margin and the revenue requirement associated with the Estimated Cost of Construction.

C. Failure to Use Installed Gas Service. If a customer fails, within nine months after the date a service is installed under this Section 7, either in whole or in part, to make use of the service, the customer will reimburse the Company for all costs of constructing, removing and retiring the service less any contribution in aid of construction made by the customer for the service, which will be forfeited.

D. Easements, Etc. The Company is not required to construct extensions other than in public ways unless the customer provides, in advance and without expense or cost to the Company, all necessary permits, consents, authorizations and right-of-way easements, satisfactory to the Company, for the construction, maintenance and operation of the pipeline.

E. Shortest Distance. Services are run the shortest practical safe distance to the meter location. However, a customer may have the Company install a longer alternate service provided that the customer pays for the extra expense in advance of installation.

F. Winter Construction. Ordinarily, no new service pipes or main extensions are installed during the winter conditions (when frost is in the ground) unless the customer defrays the extra expenses.

G. Timing and Refunding of Contribution. Except as otherwise agreed by the Company under unusual circumstances, any required contribution in aid of construction will be made prior to installation by the Company of a service. To help cover the Company's expenses, damages and lost business, if substantial construction of the building or buildings for which gas service has been sought is not commenced by the earlier of (1) November 30th next following submission of the application; or (2) the date when the Company commences construction of the main and service concerned prior to withdrawal of the application, ten percent (10%) of the contribution will be forfeited to the Company and will not be returned to the customer. The balance of the contribution will be refunded if and when the application is withdrawn, or will be applied toward the new contribution if the customer submits a new application for service or subsequently commences construction of the building or buildings. A new application may be submitted at any time.

H. Reasonable Duration and Non-Discrimination. Under none of the foregoing provisions will the Company be required to install service pipes or to contract main extensions where the business to be secured may not be of reasonable duration or will tend, in any way, to constitute unreasonable discrimination.

I. Title. Title of all extensions constructed in accordance with the above shall be vested in the Company.

J. Other Requirements. The Company generally will not approve any application or, if it shall have given such approval, will not proceed or continue with main and/or service construction unless the Company is satisfied

1. That the final site plans, sub-division plans and plans and specification for building or buildings to be served by the main and/or service concerned, including plans for waste disposal, water and other associated systems and facilities, have been prepared and approved by owner;

2. That all permits, exceptions, approvals and authorizations of governmental bodies or agencies required for construction of such building or buildings and associated systems and facilities have been obtained;

3. That the customer is proceeding or plans promptly to proceed with such construction; and

4. That nothing has occurred or failed to occur which will or is likely to prevent or interfere with such construction.

8 INTRODUCTION OF SERVICE

A. Service Contract. Every applicant for gas service may be required to sign a contract, agreement, or other form then in use by the Company covering the special circumstances of his use of gas and must agree to abide by the rules and regulations and standard requirements of the Company.

B. Defective Installation. The Company may refuse to connect if, in its judgment, the customer's installation is defective, or does not comply with such reasonable requirements as may be necessary for safety, or is in violation of the Company's standard requirements.

C. Unsatisfactory Installation. ~~-~~ The Company may refuse to connect if, in its judgment, the customer's equipment or use thereof might injuriously affect the equipment of the Company or the Company's service to other customers.

9 COMPANY EQUIPMENT ON CUSTOMER'S PREMISES

A. Meters and Regulators. The Company shall furnish and install, maintain and own, any meter or meters, regulator or regulators required in the supply of service. For certain large customers, the Company shall furnish, install and maintain, at the customer’s expense, any remote meter reading equipment to record usage for daily balancing. Such equipment shall remain the property of the Company at all times.

B. Customer's Responsibility. The customer shall be responsible for safekeeping of the Company's property while on the customer's premises. In the event of injury or destruction of any such property, the customer shall pay the costs of repairs and replacements.

C. Relocation and/or Replacement of Company Equipment. The original service connection, including piping, meters and all other necessary or incidental equipment, which remains the property of the Company, shall be installed by the Company at its expense unless otherwise expressly provided in this tariff. Subsequent relocation and/or replacement of any such equipment on private property, whether it be for one or more service connections, shall be performed by the Company at the customer's expense unless such work is done at the request of the Company and for its convenience, in which case the Company shall bear the expense ~~thereof~~.

D. Protection by Customer. The customer shall protect the equipment of the Company on his premises and shall not permit any persons, except a Company employee having a Company photo identification card or other Company identification, to break any seals upon or do any work on any meter, service supply pipe, or other equipment of the Company located on the customer's premises.

E. Tampering. In the event the Company's meter or other property is being tampered with or interfered with, the customer being supplied through such equipment shall pay the amount which the Company may estimate is due for service used but not registered on the Company's meter and for any repairs or replacements required as well as for costs of inspections, investigations, and protective installation.

F. Right of Access. The Company's identified employees shall have access to the premises of the customer at all reasonable times for the purpose of reading meters, testing, repairing, removing, or exchanging any or all equipment belonging to the Company.

G. Ownership and Removal. All equipment supplied by the Company shall remain its exclusive property and the Company shall have the right to remove the same from the premises of the customer at any time after the termination of service for whatever cause.

10 SERVICE CONTINUITY

A. Regularity of Supply. The Company will use reasonable diligence to provide a continuous, regular and uninterrupted supply of service, but should the supply be interrupted by the Company for the purpose of making repairs, changes, or improvements in any part of its system for the general good of the service or the safety of the public, or should the supply of service be interrupted or fail by reason of accident, strike, legal process, state or municipal interference, or any cause whatsoever beyond its control, the Company shall not be liable for damages, direct or inconsequential, resulting from such interruption or failure.

B. Notice of Trouble. The customer shall notify the office of the Company immediately should the service be unsatisfactory for any reason or should there be any defects, leaks, trouble, or accident affecting the supply of gas.

11 CUSTOMER'S USE OF SERVICE

A. Resale Forbidden. The customer shall not, directly or indirectly, sell, sublet, assign, or otherwise dispose of to others, gas purchased from the Company, or any part thereof, without the consent of the Company. This rule does not apply to a public utility Company purchasing gas in bulk expressly for the purpose of delivering it to others.

B. Fluctuations. Gas service must not be used in such a manner as to cause unusual fluctuations or disturbances in the Company's supply system. In the case of violation of this rule, the Company may discontinue service or require the customer to modify ~~his~~ its installation~~,~~ and/or equip it with approved controlling devices.

C. Additional Load. The service supply pipe, regulators, meters, and equipment supplied by the Company for each customer have definite capacities. The customer shall notify the Company of substantial changes in service requirements or location of appliances.

12 INSPECTIONS

A. Company's Right to Inspect. The Company shall have the right, but shall not be obliged, to inspect any installation before service is introduced or at any time later and reserves the right to reject any piping or appliances not in accordance with the Company's standard requirements. However, such inspection, ~~or~~ failure to inspect, or failure to reject shall not render the Company liable or responsible for any losses or damage resulting from defects in the installation, piping or appliances, ~~or~~ from violation of Company rules, or from accidents which may occur upon the premises of the customer.

13 MEASUREMENT

A. Supply of Meters. The measurement of gas service shall be by meters furnished and installed by the Company. The Company will select the type and make of metering equipment and may, from time to time, change or alter the equipment. ~~its~~ The Company's sole obligation ~~being~~ is to supply meters that will accurately and adequately furnish records for billing purposes.

B. Special Measurements. The Company shall have the right, at its option and its own expense, to place demand meters, pressure gauges, special meters, or other instruments on the premises of any customer for the purpose of determining the adequacy of the Company's service or for making tests of all or any part of the customer's load.

14 METER TESTS

A. Meter Tests. Meters are tested according to NHPUC Rules and Regulations. (See Puc 500 rules).

B. Request Tests. The fee for a special request test is $20.00 when scheduled at the mutual convenience of the Company and the customer; otherwise the amount is $30.00. (See Puc 500 rules).

C. Customer's Bill Adjustment. Should any meter fail to register correctly, the quantity of gas consumed will be determined by the Company based on information supplied by the customer and known by the Company subject to NHPUC Rules and Regulations. (See Puc 500 rules).

15 DISCONNECTION BY THE COMPANY

A. Disconnection by the Company. The Company may disconnect its service to a customer for violation of its rules subject to NHPUC Rules and Regulations. (See Puc 1200 rules).

B. Non-Payment Shut-Off. The Company may disconnect its service on reasonable notice and remove its equipment in case of non-payment of amounts billed for gas usage.

C. Shut-Off for Cause. The Company may disconnect its service on reasonable notice if entry or access to its meter or meters is refused, ~~or if access thereto is~~ obstructed, or hazardous, or for other violation of the Company's standard requirements.

D. Safety Shut-Off. The Company may disconnect without notice if the customer's installation has become dangerous or defective.

E. Defective Equipment. The Company may disconnect without notice if the customer's equipment, or use thereof, might injuriously affect the equipment of the Company or the Company's service to other customers.

F. Shut-Off for Fraud. The Company may disconnect without notice for abuse, fraud or tampering with the connections, meters or other equipment of the Company.

G. Reconnection Charge. A reconnection charge is made for reconnection of service discontinued by the Company and is payable in advance in addition to all other amounts due. The reconnection charge is made instead of the meter account charge. The amount of the reconnection charge is the same as the comparable meter account charge except when it has been necessary to dig up the service pipe or connection to effect discontinuance of service. In such cases, the reconnection charge is the price of removal and restoration of service pipe or connection.

16.1 COST OF GAS CLAUSE

A. Purpose. The purpose of this Cost of Gas Clause is to establish procedures that allow ~~Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities (the "Company")~~the Company, subject to the jurisdiction of the ~~State of New Hampshire Public Utilities~~ Commission ~~("NHPUC")~~, to adjust, on a semiannual basis, its rates for firm gas sales in order to recover the costs of gas supplies, along with any taxes applicable to those supplies, pipeline and storage capacity, production capacity and storage, bad debt expense associated with purchased gas costs, and the costs of purchased gas working capital, to reflect the seasonal variation in the cost of gas, and to credit to customers receiving firm service from the Company all supplier refunds and capacity release sales.

B. Applicability. This Cost of Gas Clause ("COGC") shall be applicable to the Company and all firm gas sales made by the Company, unless otherwise designated. The application to the clause may, for good cause shown, be modified by the NHPUC. See Section 16(N), "Other Rules."

C. Cost of Firm Gas Allowable for COGC. All costs of firm gas including, but not limited to, commodity costs, taxes on commodity, demand charges, local production and storage costs, hedging related costs, other gas supply expense incurred to procure and transport supplies and commodity related bad debt expense, the gas used in Company operations, transportation fees, costs associated with buyouts of existing contracts, and purchased gas working capital may be included in the COGC. Any costs recovered through application of the COGC shall be identified and explained fully in the semiannual filings outlined in Section 16(M).

D. Effective Date of Cost of Gas Factor. The seasonal Cost of Gas Factor ("COG") shall become effective upon NHPUC approval on the first day of each season as designated by the Company. Unless otherwise notified by the NHPUC, the Company shall submit COG filings as outlined in Section 16(M) of this clause on or before the first business day in September...

E. Definitions. The following terms shall be defined in this section, unless the context requires otherwise.

1. Bad Debt Expense: The uncollectible expense attributed to the portion of the Company's revenue associated with the recovery of gas costs under this clause.

2. Capacity Release Revenues: The economic benefit derived from the sale or release of transportation and storage capacity that the Company has under contract.

3. Carrying Charges: Interest expense calculated on the average monthly balance using the *monthly* prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates, and then added to the end of month balance.

4. Correction Factor: Seasonal Adjustment necessary to align the peak day volumes used to calculate the Commercial and Industrial load factor ratios with the seasonal Commercial and Industrial High Winter and Low Winter throughput volumes applied to the cost of gas calculations.

5. Direct Gas Costs: All purchased gas costs including supplier, storage and pipeline demand and commodity costs, as well as the commodity costs for local manufactured gas (Liquid Propane Gas (“LPG”) and Liquefied Natural Gas (“LNG”)).

6. Economic Benefit: The difference between the revenues received and the marginal cost determined to serve non-core customers.

7. Inventory Finance Charges: As billed in each Winter Season for annual charges. The total shall represent an accumulation of the projected charges as calculated using the monthly average of financed inventory at the existing or anticipated financing rate through a trust or other financing vehicle.

8. Local Production and Storage Capacity Costs: The costs of providing storage service from the Company's storage facilities (*i.e.*, LNG and LPG) as determined in the Company's most recent rate proceeding.

9. Market Based Allocator (“MBA”): The method used to allocate gas costs among Commercial and Industrial Customer Classifications. These ratios are presented in Section 16(F).

10. Non-Core Commodity Costs: The commodity cost of gas assigned to non-core sales to which the COG is not applied.

11. Non-Core Sales: Sales made under non-traditional off-system sales.

12. Non-Core Sales Margins: The economic benefit derived from non-core transactions to which the COG is not applied, including non-core sales generated from the use of the Company's Gas Supply Resource portfolio.

13. Summer Commodity: The gas supplies procured by the Company to serve firm load in the Summer Season.

14. Summer Demand: The gas supply demand and transmission capacity procured by the Company to serve firm load in the Summer Season.

15. Summer Season: The calendar months May 1 through October 31.

16. Off-System Sales Margin: The economic benefit derived from the non-firm sales of natural gas supplies upstream of Company's distribution system.

17. Winter Commodity: The gas supplies procured by the Company to serve firm load in the Winter Season.

18. Winter Demand: Gas supply demand, peaking demands, storage and transmission capacity procured by the Company to service firm load in the Winter Season.

19. Winter Season: The calendar months November 1 through April 30.

20. PR Allocator: The percentage of annual capacity charges assigned to the Winter Season calculated using the Proportional Responsibility Method.

21. Purchased Gas Working Capital: The allowable working capital derived from Winter Season and Summer Season demand and commodity related costs.

F. Approved Cost. The Cost of Gas calculation utilizes information periodically established by the NHPUC. The table below lists the approved costs factors:

Variable	Description	Approved Figure
MISC	Miscellaneous Overhead	$13,170
PS	Production and Storage Capacity	$1,980,428
WCA%	Working Capital Allowance Percentage	3.91%

Bad Debt % Measurement and Reconciliation Period	COG Recovery Period	Actual Bad Debt Rate	Bad Debt allowed Recovery Rate
May 2010 – April 2011	November 2011 – October 2012	Actual	Actual
May 2011 – April 2012	November 2012 – October 2013	Greater than 2.9%	Actual less 0.4
		2.5% to 2.9%	2.5%
		Less than 2.5%	Actual
May 2012 - April 2013 and each subsequent May – April period thereafter	November 2013 - October 2014 and each subsequent November – October period thereafter	Greater than 3.3%	Actual less 0.8
		2.5% to 3.3%	2.5%
		Less than 2.5%	Actual

If the Company's actual bad debt percentage is reduced to 2.5% or less during any 12 month period, which need not be the same 12 months as the measurement periods defined above, then beginning with the reconciliation filing for the period during which this bad debt percentage was achieved the Company shall thereafter recover its actual gas supply related bad debt on a fully reconcilable basis and the percentages in the table above shall no longer apply. The actual bad debt percentage shall be calculated by dividing the Company's actual net write-offs for the relevant measurement period by its revenue for the same period.

G. Cost of Gas (COG) Calculations by Customer Class. The ~~Cost of Gas (~~COG~~)~~ Formula shall be computed on a semiannual basis for three (3) groups of customer classes as shown on the following table. The computation will use forecasts of seasonal gas costs, carrying charges, sendout volumes, and sales volumes. Forecasts shall be based on either historical data or Company projections, but must be weather-normalized. Any projections must be documented in full with each filing.

The COG for the Residential rate classes shall represent the total system average unit cost of gas of meeting firm sales load, projected in each COG filing. The Commercial & Industrial (C&I) Low Winter (LW) and High Winter (HW) rates will be calculated in the following way: first, the demand unit cost of gas, the sum of purchased and stored gas demand costs divided by projected prorated sales, will be multiplied by the applicable load factor ratio and then multiplied by the correction factor. This adjusted demand factor will then be added to the commodity factor, adjustment factor and indirect cost of gas rate to determine the total COG rates for the C&I LW and HW rate classes. The two load factor ratios shall be derived once a year, for effect every November 1 through October 31, using the ratio of the unit capacity cost of each C&I group to the total system unit capacity cost that is determined in the Company's submittal of its Capacity Allocators, for Capacity Assignment purposes, filed with its Winter COG, and as presented in Attachment C of the Delivery Service Terms and Conditions. The Correction Factor aligns the peak day volumes used to calculate the load factor ratios with the seasonal throughput volumes applied to the COG calculations.

GROUP	CUSTOMER CLASSES
Residential	Residential Heating and Non-Heating
Commercial and Industrial: Low Winter Use	G-51 through G-58
Commercial and Industrial: High Winter Use	G-41 through G-46

Winter Season Cost of Gas Formula (CGw)

The Winter Season COG shall be comprised of Winter Demand costs, Winter commodity costs, Winter reconciliation costs, Winter working capital reconciliation, Winter bad debt expenses, local production and storage capacity costs, and miscellaneous and A&G costs calculated at the beginning of the Winter Season according to the following formula:

$$CGw = Dw + Cw + Rw + WCRw + BDw + PS + ((MISC + Rbd) \times \frac{W{:}Sales)}{A{:}Sales}$$

Winter Demand Cost (Dw) Formula

Dw = DEMw – NCSMw + WCwd – R1d – R2d
and:

NCSMw = CRRw + OSSMw + SBdw
and:

WCwd = (DEMw – NCSMw) × WCA% × CC
where:

CGw = The total cost of gas for the Winter Season for the Company's firm sales customers previously defined.

BDw = Bad Debt expense for the Winter Season.

Cw = Commodity-related direct gas cost for the Winter Season.

Dw = The total Winter Demand costs.

DEMw = Demand Charges allocated to the Winter Season defined in Section 16(E).

NCSMw = The Non-Core Sales Margins equal to the sum of the Winter Season returnable Capacity Release Revenues, and Off-System Sales Margins.

WCwd = Working Capital allowable associated with demand charges allocated to the Winter Season as defined in Section 16(K).

R1d, R2d = Supplier demand-related refunds - The Supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds." See Section 16(I).

CRRw = The returnable Capacity Release Revenues allocated to the Winter Season. See Section 16(E).

OSSMw = The returnable Off-System Sales Margins allocated to the Winter Season. See Section 16(E).

SBdw = Demand revenues received from Firm Stand-By Sales Service customers in the Winter Season.

WCA % = Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 16(F) for this percentage.

CC = Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Rw = Reconciliation Costs – Winter Season deferred gas costs, Account 1920-1740 balance, inclusive of the associated Account 1920-1740 interest, as outlined in Section 16(J).

WCRw = Working Capital reconciliation adjustment associated with Winter Gas Costs - Account 1163-1422 balance as outlined in Section 16(K).

PS = The total dollar amount of costs associated with the local production and storage capacity gas less any production and storage capacity assignment revenues. ~~–~~Refer to Section 16(F) for this dollar amount.

MISC = The total dollar amount of gas costs associated with acquisition, dispatching, Administrative and General expenses and overheads as determined in the Company's most recent rate proceeding. ~~–~~Refer to Section 16(F) for this dollar amount.

Rbd = Annual Bad Debt Expense reconciliation adjustment - Account 1920-1743 balance

W:Sales = Forecasted firm sales volumes associated with the Winter Season.

A:Sales = Forecasted annual firm sales volumes.

Winter Season Commodity (Cw) Formula

Cw = COMw + FC + WCwc – R1c – R2c
and:

COMw = WSC – NCCCw - SBcw
and:

WCwc = (COMw + FC) × WCA% × CC
where:

COMw = Commodity Charges allocated to the Winter Season as defined in Section 16(E).

FC = Inventory finance charges as defined in Section 16(E).

DATED: April 28, 2017 ISSUED BY: /s/James M. Sweeney
James M. Sweeney
EFFECTIVE: July 1, 2017 TITLE: President

Authorized by NHPUC Order No. xx,xxx dated Month Day,Year, in Docket No. DG 17-048

WCwc = Working Capital Allowable Associated with commodity charges allocated to the Winter Season as defined in Section 16(K).

R1c, R2c = Supplier commodity-related refunds - The supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds". See Section 16(I).

WSC = Commodity charges associated with gas supply sent out in Winter Season as defined in Section 16(E).

NCCCw = Non-Core Commodity Costs incurred in the Winter Season as defined in Section 16(E).

SBcw = Winter Season commodity revenues received from Firm Stand-By Gas Supply Service sales customers.

WCA % = Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 16(F) for this percentage.

CC = Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Winter Bad Debt (BDw) Formula

BDw = BD% x (Dw + Cw + Rw + WCRw)
where:

BDw = Forecasted gas supply cost related Bad Debt Expense calculated for Winter Season.

BD% = Bad Debt percentage calculated based on a twelve month basis ending April of each year. Refer to Section 16(F) Bad Debt Allowed Recovery Rate for this percentage.

Dw = Demand related costs in the Winter Season as previously defined.

Cw = Commodity related costs in the Winter Season as previously defined.

Rw = Reconciliation Costs – Winter Season deferred gas costs as previously defined.

WCRw = Winter Season Working Capital Reconciliation adjustment as previously defined.

Residential Winter Season Cost of Gas (COGwr)

All residential firm sales customers will pay the same Cost of Gas for the Winter Season. The factor represents the total forecasted Winter Season average cost of gas rate. This factor is calculated according to the following formula:

$$COGwr = \frac{CGw}{W:Sales}$$

where:

CGw = The total cost of gas for the Winter Season for the Company's firm sales customers previously defined.

W:Sales = Forecasted sales volumes associated with the Winter Season.

R = Designates the Residential Heating and Residential Non-Heating customer classes.

Summer Season Cost of Gas (COG) Formula (CGs)

The Summer Season COG shall be comprised of Summer demand costs and Summer commodity costs, Summer reconciliation costs, Summer working capital reconciliation, plus a Summer bad debt charge, and a miscellaneous and A&G charge calculated at the beginning of the Summer Season according to the following formula:

$$CGs = Ds + Cs + Rs + WCRs + BDs + \left((MISC + Rbd) \times \frac{S:Sales}{A:Sales}\right)$$

Summer Demand Cost (Ds) Formula

$Ds = DEMs + WCsd – Rld – R2d$
and:

$WCsd = DEMs \times WCA\% \times CC$
where:

A:Sales = Forecasted annual sales volumes.

BDs = Bad Debt Expense for Summer Season.

Cs = Commodity-related direct gas costs for the Summer Season.

CGs = The total cost of gas for the Summer Season for the Company's firm sales customer previously defined.

DEMs = Demand charges allocated to the Summer Season defined in Section 16(E).

MISC = The total dollar amount of gas costs associated with acquisition, dispatching, Administrative and General expenses and overheads as determined in the Company's most recent rate proceeding. –Refer to Section 16(F) for this dollar amount.

R1d, R2d = Supplier refunds from pipeline demand charges - The per unit supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds." See Section 16(I).

Rs = Summer Season Reconciliation Costs - Account 1920-1741 balance, inclusive of the associated Account 1920-1741 interest, as outlined in Section 16(J).

S:Sales = Forecasted sales volumes associated with the Summer Season.

WCA % = Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 16(F) for this percentage.

CC = Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Rbd = Annual Bad Debt Expense reconciliation adjustment - Account 1920-1743 balance.

WCRs = Working Capital reconciliation adjustment associated with Summer gas costs – Account 1163-1424 as outlined in Section 16(K).

WCsd = Working Capital allowable costs associated with demand costs allocated to the Summer Season as defined in Section 16(K).

Summer Season Commodity Cost (Cs) Formula

Cs = COMs – NCCCs + WCsc – R1c – R2c
and:

WCsc = (COMs – NCCCs) × WCA% × CC
where:

COMs = Commodity charges associated with gas supply sent out in the Summer Season as defined in Section 16(E).

WCsc = Working Capital allowable costs associated with commodity charges allocated to the Summer Season as defined in Section 16(K).

R1c, R2c = Supplier refunds from pipeline commodity charges - The supplier refunds associated with refund program credits derived from Account 5541-8048, "Undistributed Gas Suppliers' Refunds."

NCCCs = Non-core commodity costs incurred in the Summer Season as defined in Section 16(E).

WCA % = Percentage of gas costs equivalent to Working Capital Allowance associated with gas costs. Refer to Section 16(F) for this percentage.

CC = Monthly interest rate as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

Summer Bad Debt (BDs) Formula

BDs = BD% x (Ds + Cs + Rs + WCRs)
where:

BD% = Bad Debt percentage calculated based on a twelve month basis ending April of each year. Refer to Section 16(F) Bad Debt Allowed Recovery Rate for this percentage.

BDs = Forecasted gas supply related Bad Debt Expense calculated for Summer Season defined in Section 16(E).

Ds = Demand related costs in the Summer Season as previously defined.

Cs = Commodity related costs in the Summer Season as previously defined.

Rs = Reconciliation Costs – Summer deferred gas costs as previously defined.

WCRs = Summer Season Working Capital Reconciliation adjustment as previously defined.

Residential Summer Season Cost of Gas (COGsr)

All residential firm sales customers will pay the same cost of gas for the Summer Season. The factor represents the total forecasted Summer Season average cost of gas rate. This factor is calculated according to the following formula:

$$COGsr = \frac{CGs}{S:Sales}$$

where:

CGs = The total cost of gas for the Summer Season for the Company's firm sales customers as previously defined.

S:Sales = Forecasted sales volumes associated with the Summer Season.

R = Designates the Residential Heating and Residential Non-Heating customer classes.

Commercial and Industrial Winter and Summer Season Cost of Gas

The Commercial and Industrial customer classes Winter Season Cost of Gas will be based on the Winter Season average cost of gas components used for the Residential Winter Season Cost of Gas. A separate Winter Season Cost of Gas factor will be computed for the low winter use class, Rates G-51, G-52, G-53, G-54, G-55, G-56, G-57, and G-58 and a separate Winter Season Cost of Gas Factor will be computed for the high winter use class, Rates G-41, G-42, G-43, G-44, G-45, and G-46.

The Commercial and Industrial customer classes Summer Season Cost of Gas will be based on the Summer Season average cost of gas components used for the Residential Summer Season Cost of Gas. A separate Summer Season Cost of Gas factor will be computed for the low winter use class, Rates G-51, G-52, G-53,G-54, G-55, G-56, G-57, and G-58 and a separate Summer Season Cost of Gas factor will be computed for the high winter use class, Rates G-41, G-42, G-43, G-44, G-45, and G-46.

These Cost of Gas Factors will be computed by applying ratios to the average demand portion of the Winter and Summer Season's cost of gas unit rate times the correction factor and then adding the remaining Residential average cost of gas unit rate.

These factors are calculated according to the following formulas:

Low Winter Use (COGwl) Formula Winter Season

COGwl = RATIOl x CFw x CGwd + CGwo

Low Winter Use (COGsl) Formula Summer Season

COGsl = RATIOl x CFs x CGsd + CGso

and:

$$RATIOl = \frac{DCcl}{DDcl} \div \frac{DCc}{DDc}$$

and:

High Winter Use (COGwh) Formula Winter Season

COGwh = RATIOh x CFw xCGwd + CGwo

High Winter Use (COGsh) Formula Summer Season

COGsh = RATIOh x CFs x CGsd + CGso
and

$$RATIOh = \frac{DCch}{DDch} \div \frac{DCc}{DDc}$$

and:

$$CFw = \frac{(WL:Sales + WH\ Sales)}{(RATIOl \times WL:Sales) + (RATIOh \times WH:Sales)}$$

$$CFs = \frac{(SL:Sales + SH:Sales)}{(RATIOl \times SL:Sales) + (RATIOh \times SH:Sales)}$$

$$CGwd = \frac{Dw}{W:Sales}$$

$$CGwo = \frac{CGw - Dw}{W:Sales}$$

$$CGsd = \frac{Ds}{S:Sales}$$

$$CGso = \frac{CGs - Ds}{S:Sales}$$

DCcl = Bcl * PLrate + (DDcl – Bcl) * REMrate

DCch = Bch * PLrate + (DDch- Bch) * REMrate

PLrate = PL/ PLmdcq

$$REMrate = \frac{(DCc - (Bc*PLrate))}{DDc - Bc}$$

$$DCc = \frac{(DC \times DDc)}{DD}$$

where:

Bc = The daily base load for all the Commercial and Industrial rate classes

Bch = The daily base load for the Commercial and Industrial rate classes G-41, G-42, G-43, G-44, G-45 and G-46.

Bcl = The daily base load for the Commercial and Industrial rate classes G-51, G-52, G-53, G-54, G-55, G-56, G-57 and G-58.

CFs = Summer Season Commercial and Industrial gas cost correction factor.

CFw = Winter Season Commercial and Industrial gas cost correction factor.

CGs = The total cost of gas for the Summer Season for the Company’s firm sales customers as previously defined.

CGw = The total cost of gas for the Winter Season for the Company’s firm sales customers as previously defined.

DC =	The annual forecasted pipeline, storage and peaking demand charges plus the total production and storage capacity costs, as stated in Section 16(F).
DCc =	The Commercial and Industrial rate classes pro-rata share of the annual forecasted pipeline, storage, and peaking demand capacity costs.
DCch =	The Commercial and Industrial pro-rata share of the annual forecasted pipeline, storage, and peaking demand capacity costs allocated to Commercial and Industrial High Winter Use rate classes, G-41, G-42, G-43, G-44, G-45, and G-46.
DCcl =	The Commercial and Industrial pro-rata share of the annual forecasted pipeline, storage, and peaking demand capacity costs allocated to the Commercial and Industrial Low Winter Use rate classes, G-51, G-52, G-53, G-54, G-55, G-56, G-57, and G-58.
DD =	Total peak design day determinants.
DDc =	The peak design day determinants allocated for all the Commercial and Industrial rate classes.
DDch =	The peak design day determinants for the Commercial and Industrial rate classes, G-41, G-42, G-43, G-44, G-45, and G-46.
DDcl =	The peak design day determinants for the Commercial and Industrial rate classes, G-51, G-52, G-53, G-54, G-55, G-56, G-57, and G-58.
Ds =	The total Summer Demand charges as defined below.
Dw =	The total Winter Demand charges as previously defined.
PL =	The annual forecasted pipeline only demand charges
PLmdcq =	The maximum daily contract pipeline volume available to the Company.
PLrate =	The pipeline demand rate.
RATIOh =	Ratio of the average high Winter Use class Cost of Gas low load factor demand capacity costs to the total average Commercial and Industrial demand capacity costs.
RATIOl =	Ratio of the average low Winter Use class Cost of Gas high load factor demand capacity costs to the total average Commercial and Industrial demand capacity costs.
REMrate =	The weighted average demand rate for storage and peaking supplies.
S: Sales =	Forecasted sales volumes associated with the Summer Season.
SH:Sales =	Total Winter Season forecasted Commercial and Industrial high winter use sales.
SL: Sales =	Total Winter Season forecasted Commercial and Industrial low winter use sales volumes.
W:Sales =	Forecasted sales volumes associated with the Winter Season.
WH:Sales =	Total Winter Season forecasted Commercial and Industrial high winter use sales.
WL: Sales =	Total Winter Season forecasted Commercial and Industrial low winter use sales volumes.

H. Non-Core Sales Margins ("NCSM"). One hundred percent (100%) of margins from Off-System Sales and all revenues from Capacity Release will be credited to firm sales customers during the winter season through operation of the COG.

I. Gas Suppliers' Refunds. Account 5541-8048: Refunds from suppliers of gas, from upstream capacity suppliers and suppliers of product demand are credited to Account 5541-8048, "Commodity and Demand Refunds." Transfers from these accounts will reflect as a credit in the semiannual calculation of the COG to be calculated as follows:

Refund programs shall be initiated with each semiannual COG filing and shall remain in effect for a period of one year. The total dollars to be placed into a given refund program shall be net of over/under-returns from expired programs plus refunds received from suppliers since the previous program was initiated. Refunds shall be segregated by demand and commodity charges and distributed volumetrically, producing per unit refund that will return the principal amount with interest as calculated using the Company's average short-term cost of borrowing for the month to the average of the beginning and end of month balances of refunds. The Company shall track and report on all Account 5541-8048 activities as specified in Section 16(K).

J. Reconciliation Adjustments – Various Accounts.

1. The following definitions pertain to reconciliation adjustment calculations:

a. Capacity Costs Allowable per Winter Season Formula shall be:

(1) Charges associated with upstream storage transmission capacity and product demand procured by the Company to serve firm load in the Winter Season, plus a reallocation of a portion of such charges incurred in the Summer Season to serve firm load.

(2) Charges associated with peaking, downstream production and storage capacity to serve firm load dispatching costs, and other administrative and general expenses in connection with purchasing gas supplies in the Winter Season from the Company's most recent test year and allocated to firm sales service.

(3) Non-Core Sales Margins or economic benefits associated with returnable capacity release and off-system sales.

(4) Credits associated with firm Stand-by Gas Supply Service Monthly Reservation Charges, daily imbalance charges and fixed component of penalty charges billed transportation customers in the Winter peak Season.

(5) Winter Season Demand Cost carrying charges.

b. Gas Costs Allowable Per Winter Season Formula shall be:

(1) Charges associated with gas supplies, including any applicable taxes, purchased by the Company to serve firm load in the Winter Season.

(2) Credit non-core commodity costs assigned to non-core customers to which the COGC does not apply, as defined in Section 16(H) (NCCCw).

(3) Inventory finance charges (FC).

(4) Winter Season commodity cost carrying charges.

c. Capacity Costs Allowable Per Summer Season Formula shall be:

(1) Charges associated with transmission capacity and product demand procured by the Company to serve firm load in the Summer Season

(2) Credits associated with daily imbalance charges and fixed component of penalty charges billed transportation customers in the Summer Season.

(3) Summer Season demand cost carrying charges.

d. Gas Costs Allowable Per Summer Season Formula shall be:

(1) Charges associated with gas supplies, including any applicable taxes, procured by the Company to serve firm load in the Summer Season.

(2) Non-core commodity costs associated with non-core sales to which the COG is not applied, as defined in Section 16(E).

(3) Summer Season commodity cost carrying charges.

e. Costs Allowable Per Bad Debt Formula shall be:

(1) Costs associated with uncollected gas costs, incurred by the Company to serve sales load. Such costs represent the bad debt expense related to the gas supply related write-off of sales customers and will be computed by multiplying actual gas costs by the Bad Debt Allowed Recovery Rate specified in Section 16(F). The reconciliation adjustment each season will be computed as the difference between the actual supply related bad debt revenues and the actual gas costs multiplied by the actual Bad Debt Allowed Recovery Rate as specified in Section 16(F).

(2) Account 1920-1743 – Annual Bad Debt, carrying charges.

2. Calculation of the Reconciliation Adjustments: These accounts contain the accumulated difference between gas cost revenues and the actual monthly gas costs incurred by the Company. The Company shall separate Account 175 into Winter Season Gas Costs (Account 1920-1740) and Summer Season Gas Costs (Account 1920-1741), Account 1920-1740 shall contain the accumulated difference between revenues toward gas costs calculated by multiplying the Winter Season Gas Cost for each Customer Classification, (COGwr, COGwl and COGwh) times monthly firm sales volumes for each Customer Classification, and the total costs allowable per the Winter Season gas cost formula. Account 1920-1741 shall contain the accumulated difference between revenues toward gas costs calculated by multiplying the Summer Season Gas Cost for each Customer Classification, (COGsr, COGsl and COGsh) times monthly firm sales volumes for each Customer Classification, and the total gas costs allowable per the Summer Season demand formula.

Carrying Charges shall be calculated on the average monthly balance of each subaccount. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

The annual bad debt reconciliation adjustments Rbd shall be determined for use, incorporating the bad debt balances in Account 1920-1743.

The bad debt account balance contains the accumulated difference between the Bad Debt Allowed Recovery Rate for the applicable period multiplied by the actual gas costs and the actual supply related bad debt revenues for the Winter and Summer COG filings.

The Winter Season reconciliation shall be filed with the NHPUC no later than July 29 of each year.

The Summer Season reconciliation shall be filed with the NHPUC no later than January 31 of each year.

K. Working Capital Reconciliation Adjustments - Accounts 1163-1422 and 1163-1424.

1. The following definitions pertain to reconciliation adjustment calculations:

   a. Working Capital Demand Gas Costs Allowable per Winter Season Gas Formula shall be:

      (1) Charges associated with upstream storage, transmission capacity, and product demand procured by the Company to serve firm load in the Winter period, plus a reallocation of a portion of such charges incurred in the Summer Season to serve firm load.

      (2) Carrying charges.

   b. Working Capital

      (1) Charges associated with gas supplies, including any applicable taxes, purchased by the Company to serve firm load in the Winter season.

      (2) Non-core commodity costs associated with non-core sales to which the COG is not applied, as defined in Section 16(E).

      (3) Carrying charges.

   c. Working Capital Demand Gas Costs Allowable per Summer Season Gas Formula shall be:

      (1) Charges associated with upstream storage and transmission capacity procured by the Company to serve firm load in the Summer Season.

      (2) Carrying charges.

   d. Working Capital Commodity Gas Costs Allowable per Summer Season Gas Formula shall be:

      (1) Charges associated with gas supplies, including any applicable taxes, procured by the Company to serve firm load in the Summer Season.

      (2) Non-core commodity costs associated with non-core sales.

      (3) Carrying charges.

   e. The Winter and Summer Cost of Gas working capital allowances shall be calculated by applying the Working Capital Allowance Percentage (WCA%) set forth in Section 16(F).

2. Calculation of the Reconciliation Adjustments

   a. Accounts 1163-1422 and 1163-1424 contain the accumulated difference between working capital allowance revenues and the actual monthly working capital allowance cost. The actual monthly working capital allowance shall be calculated by multiplying the actual gas costs times the Working Capital Allowance Percentage (WCA%) set forth in Section 16(F), to the actual Direct Gas Costs allowable.

   b. The Winter Season working capital reconciliation adjustment (WCRw) shall be determined for use in the Winter Season Gas Cost calculations incorporating the Winter Season working

capital account 1163-1422. A Summer Season working capital reconciliation adjustment (WCRs) shall be determined for use in the Summer Season Gas Cost calculations incorporating the Summer Season working capital account 1163-1424 balance.

L. Application of COG to Bills: The Company will employ the COGs as follows: The COGs ($/therm) for each customer group for each season shall be calculated to the nearest hundredth of a cent per unit and will be applied to each customer's monthly sales volume within the corresponding customer classification. The Cost of Gas will be applied to gas consumed on or after the first day of the month in which the cost of gas becomes effective.

M. Information Required to be Filed with the NHPUC.

1. Reconciliation Adjustments: The Company shall file with the NHPUC a seasonal reconciliation of gas costs and gas cost collections containing information in support of the reconciliation calculation set out in Sections 16(J) (2) and 16(K) (2). Such information shall include the complete list of gas costs recoverable through the COGC over the previous season. This seasonal reconciliation shall be filed with the respective seasonal COG reconciliation filing, along with complete documentation of the reconciliation adjustment calculations.

   Additionally, information pertaining to the Cost of Gas shall be filed with the NHPUC in accordance with the format established by the NHPUC. Reporting requirements include filing the Company's monthly calculation of the projected over or under-collection with the NHPUC, along with notification by the Company to the NHPUC of any revised COG for the subsequent month, not less than five (5) business days prior to the first day of the subsequent month.

   The Company shall file with the NHPUC an annual reconciliation of bad debt expense and bad debt collections containing information in support of the reconciliation calculation set out in Sections 16(J) (1) and 16(J) (2). Such information shall detail the revenues collected as an allowance for bad debt, as well as the actual bad debt expense associated with gas cost recoverable through the COGC over the 12-month period ending April 30th. This annual reconciliation of bad debt expenses shall be filed with the Winter COG reconciliation filing, along with documentation.

2. Commercial and Industrial COG Ratio: The following factors will be filed annually by the Company for informational purposes. Significant changes in these factors signal the need to evaluate the COG ratios. These variables will assist in predicting significant shifting of the MBA-based escalator of gas costs and resulting changes in the COG ratios:

   a. The percentage of load migration from sales to transportation service in the Commercial and Industrial High and Low Winter Use classes.

   b. The ratio of delivered costs of winter supplies to pipeline delivered supplies.

   c. The July and August consumption for the Commercial and Industrial High and Low Winter classes as a percentage of their annual consumption.

N. Other Rules.

1. The NHPUC may, where appropriate, on petition or on its own motion, grant an exception from the provisions of this tariff, upon such terms that it may determine to be in the public interest.

2. The Company may, without further NHPUC action, adjust the approved COG upward or downward monthly based on the Company's calculation of the projected over or under-collection for the period, but the cumulative adjustments upward shall not exceed twenty-five percent (25%) of the approved COG.

3. The Company may, at any time, file with the NHPUC an amended COG.

4. The operation of the Cost of Gas Clause is subject to all powers of suspension and investigation vested in the NHPUC.

5. The Company shall file both seasonal COG filings on or before the first business day in September. The summer portion of the filing will include COG rates effective May 1 of the following year.

O. Reconciliation Adjustment Accounts.

1163-1422

Winter Season Gas Working Capital Allowance Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Winter Season gas working capital allowance revenues and Winter Season gas working capital allowance. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1163-1424

Summer Season Gas Working Capital Allowance Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Summer Season gas working capital allowance revenues and Summer Season gas working capital allowance. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1920-1740

Winter Season Gas Cost Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Winter Season gas revenues and Winter Season gas costs. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1920-1741

Summer Season Gas Cost Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Summer Season gas revenues and Summer Season gas costs. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

1920-1743

Annual Bad Debt Reconciliation Adjustment for COGC: This account shall be used to record the cumulative difference between Annual bad debt revenues and annual bad debt costs. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

5541-8048

Commodity and Demand Refunds: This account shall be used to record the refunds from upstream commodity supplies and suppliers of product commodity and transfers of credits in the semiannual calculation of the COG as well as to record the refunds from upstream capacity supplies and suppliers of product demand and transfer of credits in the semiannual calculation of the COG. Entries to this account shall be determined as outlined in the Cost of Gas Clause.

P. Firm Transportation Cost of Gas Charge. To permit the Company to charge its firm transportation customers with a portion of the cost of gas produced by the Company between November 1 and April 30 of each year, there is a Firm Transportation Cost of Gas Charge ("FTCG") which applies to all firm transportation billed under this tariff. This volumetric charge is to compensate firm sales customers for the increase in gas costs, through the use of supplemental liquid fuels, attributable to firm transportation customers during the Winter Period.

1. Application. The FTCG will be calculated for the Winter Period, defined as the period from November 1 through April 30. The FTCG will be applied to billings commencing with the first November revenue billing cycle

2. Purpose. The amount of the FTCG is the estimated liquid costs used for pressure support purposes multiplied by the transportation throughput as a percentage of the total system throughput for the Winter Period. The resulting amount shall be adjusted by the prior period over or under collection, if any, and shall be recovered over the estimated total transportation throughput subject to the FTCG to yield a per therm volumetric charge. The FTCG shall be computed to the nearest one hundredth cent per therm and shown separately on customers' bills. At the conclusion of the Winter Period, the Company will calculate the extent that the FTCG revenues are greater or lesser than actual unit cost. The revenue and liquid costs will be reconciled so that all liquids costs shall be collected from either firm sales or firm transportation customers.

3. Changes. The amount of the FTCG may be changed within the period whenever the unit cost materially deviates from the anticipated unit cost

4. Reporting. The Company shall submit to the New Hampshire Public Utilities Commission, on or before the first business day in September, a copy of the FTCG computation. A reconciliation of the prior period under/over collection will be submitted to the New Hampshire Public Utilities Commission no later than July 29.

Q. Fixed Price Option Program. Fixed Price Option Program. An alternative to the traditional Winter Period cost of gas pricing mechanism may be elected by a residential customer (rates R-1, R-3, R-4, R-5 or R-6) pursuant to the Company's Fixed Price Option Program (the "Program"). The Company may offer up to 50% of its weather normalized firm sales for the prior Winter Period under the Program. The cost of gas rate offered under the Program will remain fixed for all Winter Period deliveries commencing November 1 and ending April 30. The Company shall submit to the New Hampshire Public Utilities Commission on or before September 1 of each year a copy of the fixed price option computation. Once elected, customers must remain on the Program for the duration of the Winter Period, unless service is terminated. There are no maximum or minimum usage levels. No sign up fees apply.

16.2 COST OF GAS CLAUSE – KEENE DIVISION

A. Purpose. To permit the Company to charge its customers in the Keene Division with the cost of gas purchased or produced. A cost of gas rate will be applied to all firm gas billed under this tariff as calculated on the appropriate pages.

B. Application. A cost of gas rate will be calculated for the winter heating period, defined as the period from November 1 through April 30, and a cost of gas rate will be calculated for the summer period, defined as the period from May 1 through October 31.

The winter cost of gas rate will be applied to billings commencing with the first November revenue billing cycle; the summer cost of gas rate will be applied to billings commencing with the first May revenue billing cycle.

C. Calculation. The amount of the cost of gas rate is the anticipated unit cost of gas sold.

At the conclusion of each winter and summer period the Company will calculate the extent that cost of gas revenues are greater or less than actual unit costs of gas compared with the anticipated unit costs. The calculated difference (actual gas sales volumes multiplied by the difference between actual and anticipated unit costs) will be carried forward into the computation of the cost of gas rate for the corresponding winter or summer period.

Any excess revenue collected, as determined above, will earn interest as specified by the Commission.

D. Changes. The cost of gas rate may be adjusted without further Commission action based on the projected over-/under-collection of gas costs, the adjusted rate to be effective the first of the month. Any such rate adjustments may not exceed a maximum rate of 25 percent above the approved rate, but there is no limit on the amount of any rate reductions.

E. Refunds. When refunds are made to the Company by its suppliers that are applicable to increased charges collected under this provision, the Company will make appropriate refunds to its customers and as the Commission may direct.

F. Reporting. The Company shall submit to the Commission, at least 30 days prior to the effective date, the proposed winter and summer period cost of gas rate computation. Any monthly adjustments to the cost of gas rate must be filed five (5) business days prior to the first day of the subsequent month (the effective date of the new rate).

The cost of gas rate shall be computed to the nearest one hundredth cent per therm and shown on customers' bills.

G. Fixed Price Option Program. An alternative to the traditional winter period cost of gas rate mechanism may be elected by the customer pursuant to the Company's Fixed Price Option (FPO) Program. The Company may offer up to 50% of its expected firm sales for the winter period under the FPO Program. The cost of gas charge offered under the FPO Program will remain fixed for all winter period billings commencing November 1 and ending April 30 of the effective winter period. Once elected, customers must remain on the FPO Program for the duration of the winter period unless service is terminated. There are no maximum or minimum usage levels. Customers may enroll in this Program by contacting the Company between the October 1 and October 19 period immediately preceding the effective winter period.

17 LOCAL DISTRIBUTION ADJUSTMENT CLAUSE

A. Purpose. The purpose of the Local Distribution Adjustment Clause ("LDAC" or this "Clause") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, its delivery charges in order to recover Conservation Charges ("CC"), ~~Lost Revenues Adjustment Mechanism~~ Revenue Decoupling Adjustment Clause ~~related to the Energy Efficiency Programs~~ ("~~LRAM~~RDAC"), Winter Period Surcharges ("WPS"), Environmental Surcharges ("ES") including the Relief Holder Surcharge ("RHS") and the Manufactured Gas Program Surcharge ("MGP"), recover gas restructuring expenses ("GRE"), rate case expenses ("RCE"), Residential Low Income Assistance Program costs ("RLIAP") and any other expenses the NHPUC may approve from time to time.

B. Applicability. This Clause shall be applicable in whole or part to all of the Company's firm sales service and firm delivery service customers as shown on the table below. The application of this clause may, for good cause shown, be modified by the NHPUC. See Section 17(K) "Other Rules."

Applicability	**CC 17(C)**	**~~LRAM~~RDAC 17(C.1)**	**ES 17(D)**	**GRE 17(E)**	**RCE 17(F)**	**RLIAP 17(G)**
Residential Non-Space Heating – R-1, R-5	~~1~~2	~~1~~2	X	N/A	~~1~~2	X
Residential Space Heating – R-3, R-4, R-6, R-7	2~~1~~	~~1~~2	X	N/A	~~1~~2	X
Small C&I – G-41, G-51, G-44, G-55	2~~1~~	~~1~~2	X	X	~~1~~2	X
Medium C&I – G-42, G-52, G-45, G-56	2~~1~~	~~1~~2	X	X	~~1~~2	X
Large C&I – G-43, G-53, G-54, G-46, G-57, G-58	2~~1~~	~~1~~2	X	X	~~1~~2	X

Notes:
N/A Not applicable
X Applicable to all
1 ~~As ordered by the NHPUC~~ Applicable to Non-Managed Expansion Program Customers
2 As ordered by the NHPUC

C. Conservation Charges Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Conservation Charge, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers costs and lost margins associated with its energy efficiency management programs.

2. Applicability: A conservation charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the ~~New Hampshire Public Utilities~~ Commission ~~(the "Commission")~~ as determined in accordance with the provision of this rate schedule. Such conservation charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.

3. Calculation of Conservation Charge: The Company will properly assign expenses for forecasted conservation expenditures to the applicable rate categories for a future twelve (12) month period commencing November 1 of each year. The total of such conservation expenditures plus any prior period reconciling adjustments shall be divided by therm sales as forecasted by the Company for the same annual period and rounded to the nearest hundredth of a cent. The resulting conservation charge shall be included in the Company's Local Distribution Adjustment Charge and applied to actual therms sold or transported for the following twelve (12) month period starting November 1, and ending October 31.

4. Reporting: The Company shall submit annual reports to the Commission reconciling any difference between the actual conservation expenditures and actual revenues collected under this rate schedule. The difference whether positive or negative will be carried forward into the conservation charge for the next recovery period. Upon completion of the conservation program(s), any over or under collection may be credited or charged to the deferred Winter Period cost of gas account, subject to Commission approval.

5. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the CC applicable to each Rate Category during the next subsequent twelve-month period commencing with the calendar month of November.

6. Reconciliation Adjustment: Account 1163-1755 shall contain the cumulative difference between the sum of the DSM expenditures incurred by the Company plus the sum of the DSM repayments and the revenues collected from customers. The Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.

C.1 ~~Lost Revenue Adjustment Mechanism Allowable for LDAC.~~Revenue Decoupling Adjustment Clause

1. Purpose: The purpose of the Revenue Decoupling Adjustment Clause ("RDAC") is to establish procedures that allow the Company, subject to the jurisdiction of the NHPUC, to adjust, on a semi-annual basis, its rates for firm gas sales and firm transportation service in order to reconcile Actual Base Revenue per Customer with Benchmark Base Revenue per Customer. The Company's Revenue Decoupling Adjustment eliminates the link between customer sales and Company revenue in order to align the interests of the Company and customers with respect to changing customer usage.

2. Effective Date: The Winter Season Revenue Decoupling Adjustment Factor ("RDAF") for the Winter Season shall be effective on the first day of each Winter Season as defined herein. The Summer Season RDAF shall become effective on the first day of each Summer Season as defined herein.

3. Applicability: The Revenue Decoupling Adjustment Factor shall apply to all of the Company's firm tariff Rate Schedules, subject to the jurisdiction of the Commission, as determined in accordance with the provisions of this RDAC.

4. Definitions: The following definitions shall apply throughout the RDAC:

   a. Actual Base Revenue per Customer is the actual revenue derived from the Company's base rates divided by the Actual N~~n~~umber of C~~c~~ustomers for a given season for a Customer Class Group.

   b. Actual Number of Customers is the actual number of customers for the applicable Customer Class Group for the most recently completed Winter Season or Summer Season. Actual Number of Customers shall be calculated by summing the monthly equivalent bills for ~~bills for~~ a given season for a Customer Class Group and dividing by the number of months in each Season.

c. -Customer Class is the group of all customers taking service pursuant to the same Rate Schedule.

d. Customer Class Group is the group of Rate Schedules combined for purposes of calculating the Revenue Decoupling Adjustment amounts. The three Customer Class Groups are as follows:

(1) The Residential Non-Heating Customer Class Group (CG1) shall consist of all customers taking service pursuant to the Company's residential non-heating rate schedule R-1.

(2) The Residential Heating Customer Class Group (CG2) shall consist of all customers taking service pursuant to the Company's residential heating rate schedules R-3, and R-4.

(3) The Commercial and Industrial Customer Class Group (CG3) shall consist of all customers taking service pursuant to one of the Company's general service rate schedules, G-41, G-42, G-43, G-51, G-52, G-53 and G-54.

e. Summer Season is the continuous period from May 1 through October 31.

f. Winter Season is the continuous period from November 1 through April 30.

g. Benchmark Base Revenue per Customer is the allowed average revenue per Customer for a given season for a Customer Class Group, reflecting the base revenue from the Company's base rate case or other proceeding that results in an adjustment to base rates. The following are the Benchmark Base Revenue per Customer values as approved by the Commission in Docket No. DG 17-048:

	Benchmark Base Revenue per Customer	
Customer Class Group	**Winter Season**	**Summer Season**
Residential Non-Heating (CG1)	$165.77	$145.53
Residential Heating (CG2)	$433.98	$210.90
Commercial and Industrial (CG3)	$2,200.52	$894.95

5. Calculation of Revenue Decoupling Adjustment

a. Description of Revenue Decoupling Adjustment

At the conclusion of each Winter Season and Summer Season, the Company shall calculate a Decoupling Revenue Adjustment to be used to determine the RDAF for the next corresponding season.

The Revenue Decoupling Adjustment shall be determined by calculating the difference between the A~~a~~ctual Base Revenue per Customer and the Benchmark Base Revenue per Customer, and multiplying that difference by the Actual Number of Customers for the applicable Customer Class Group. The Revenue Decoupling Adjustment shall equal the sum of the adjustments calculated for each of the three Customer Class Groups and shall include a reconciliation component.

The total Revenue Decoupling Adjustment determined in accordance with Section 5.0 may not exceed plus or minus five percent (~~±~~+/-5%) of total base revenues from firm Rate Classes for the most recent corresponding Winter or Summer Season. To the extent that the application of the Revenue Cap results in a Revenue Decoupling Adjustment that is less than that calculated in accordance with Section 5.0, the difference shall be deferred and included in the Revenue Decoupling Reconciliation for recovery in the subsequent year during the corresponding Winter or Summer Season. Carrying charges shall be calculated on the average deferred balance using the prime lending rate and then added to the end-of-month balance.

b. Revenue Decoupling Adjustment Formulas

$$RD_T = \sum_{CG=1}^{CG=3} \left[\left(BRPC_{T-1}^{CG} - ARPC_{T-1}^{CG}\right) x\ ACUSTS_{T-1}^{CG}\right]$$

If
$RD < (5\%\ x\ DIST\ REV_T)$
And
$RD > (-5\%\ x\ DIST\ REV_T)$

Then
$DEF_{incm} = 0$
And:
$DEF_{rec} = Lower\ of\ (DEF_{balp)}\ or\ \left((5\%\ x\ DIST\ REV_T) - RD\right)$
And:
$DEF_{balc} = DEF_{balp} + DEF_{incm} - DEF_{rec} = DEF_{balp} - DEF_{rec}$
And:
$$RDAF = \frac{RD + RF_{rd} + DEF_{rec}}{P: Thru_T}$$

Else:
$DEF_{incm} = RD - (5\%\ x\ DIST\ REV_T)$
And:
$DEF_{rec} = 0$
And
$DEF_{balc} = DEF_{balp} + DEF_{incm} - DEF_{rec} = DEF_{balp} + DEF_{incm}$
And
$$RDAF = \frac{(5\%\ x\ DIST\ REV_T) + RF_{rd}}{P: Thru_T}$$

Where the terms in the above equation have the following meanings:

$ACUSTS_{T-1}^{CG}$:	The A~~a~~ctual N~~n~~umber of C~~c~~ustomers for the applicable Customer Class Group for the most recently completed Winter or Summer Season (T-1). Actual number of customers for each Winter or Summer Season shall be the average number monthly customers in that season, calculated by summing the number of equivalent bills~~billed customers~~ in each month of the most recently completed Winter or Summer Season, and dividing by the number of months in the Season.
$ARPC_{T-1}^{CG}$:	The Actual Base Revenue Per Customer for the applicable Customer Class Group for the most recently completed Winter or Summer Season (T-1), as defined in Section 4.0. For purposes of calculating the Actual Base Revenue per Customer, base revenues for Low Income rate class R-4, shall be determined based on non-discounted rate R-3.
$BRPC_{T-1}^{CG}$:	The Benchmark Base Revenue Per Customer for the applicable Customer Class Group as determined in accordance with Section 4.0(A) for the most recently completed Winter or Summer Season (T-1).
cg	Customer Class Groups as defined in Section 4.0(D).
DEF_{bal}	The balance of the unrecovered deferrals inclusive of associated interest using the prime lending rate.
DEF_{incm}	The amount of Revenue Decoupling that must be deferred in the current year based on the difference between plus or minus five percent (+/-5%) of total distribution revenues as determined in accordance with the definition of DIST REV_T in Section 5.0(B).
DEF_{rec}	The amount of deferrals the Company may recover in the current Winter or Summer Season.
P: $Thru:_T$	Forecast Throughput Volumes inclusive of all firm tariff throughput for the Winter or Summer Season.
RD	The Revenue Decoupling adjustment to revenues.
$RDAF_T$:	The Revenue Decoupling Adjustment Factor for the Winter or Summer Season.
RF_{rd}:	Revenue Decoupling Reconciliation Adjustment as described in Section 6.0.
DIST REV_T	The Distribution revenues from all firm rate classes during the most recent Winter or Summer Season.

6. Calculation of the Reconciliation Adjustments

Account xxxx-xxxx shall contain the accumulated difference between revenues toward the Revenue Decoupling Adjustment for the Winter Season, as calculated by multiplying the Winter Season RDAF times the Winter Season firm sales and transportation throughput, and the Revenue Decoupling Adjustment allowed revenues for the Winter Season, plus carrying charges on the average monthly balance using the prime lending rate.

Account xxxx-xxxx shall contain the accumulated difference between revenues toward the Revenue Decoupling Adjustment for the Summer Season, as calculated by multiplying the Summer Season Revenue Decoupling Adjustment Clause times the Summer Season firm throughput, and the Revenue Decoupling Adjustment allowed revenues for the Summer Season, plus carrying charges on the average monthly balance using the prime lending rate.

7. Application of the RDAC to Customer Bills

The RDAF ($ per therm) shall be truncated at the nearest one one-hundredth of a cent per therm. The RDAF for the Winter Season will be applied usage in the next Winter Season and the RDAF for the Summer Season will be applied to usage in the next Summer Season. The RDAF will be applied to the monthly firm tariff throughput for each customer.

8. Information to be Filed with the Commission

Information pertaining to the RDAC will be filed with the Commission ninety (90) days prior to the effective dates of the November 1 Winter Season and May 1 Summer Season RDAF. Such information shall include:

a. the calculation of the applicable revenue decoupling revenue adjustment

b. the calculation of the revenue decoupling reconciliation adjustment.;

c. the calculation of annually updated Benchmark Base Revenue per Customer to be utilized in the upcoming Summer and Winter Seasons.

~~D. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to adjust, on an annual basis, the Lost Revenue Adjustment Rate, if and when applicable, to firm sales service and firm delivery service throughput in order to recover from firm customers lost revenue related to Energy Efficiency programs, pursuant to Order No. 25,932 in Docket DE 15-137, Energy Efficiency Resource Standard.~~

~~E. Applicability: A Lost Revenue Adjustment charge shall be applied to therms sold or transported by the Company subject to the jurisdiction of the New Hampshire Public Utilities Commission (the "Commission") as determined in accordance with the provision of this rate schedule. Such Lost Revenue Adjustment charge shall be determined annually by the Company, separately for the Residential Heating, and Commercial/Industrial rate categories, subject to review and approval by the Commission as provided for in this rate schedule.~~

~~F. Calculation of Lost Revenue Adjustment: The Lost Revenue Adjustment for each Rate Category will be derived by dividing the projected annual lost revenue, plus the reconciliation balance, by forecast firm annual throughput. The reconciliation balance shall reflect both actual and projected data, as necessary, through October of the prior rate period.~~

~~G. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the Lost Revenue Adjustment Rate applicable to each Rate Category during the next subsequent twelve month period commencing with the calendar month of November.~~

~~H. Reconciliation Adjustment: Account xxxx-xxxx shall contain the cumulative difference between the Lost Revenue Adjustment Rate revenues collected and actual costs, plus carrying charges. The Company shall file the reconciliation along with the COG filing on or before the first business day in September of each year.~~

~~I.~~D. Environmental Surcharges ("ES") Allowable for LDAC.

1. Purpose: In order to recover expenditures associated with former manufactured gas Programs, there shall be an ES Rate applied to all firm volumes billed under the Company's delivery service charges.

2. Applicability: An annual ES Rate shall be calculated effective every November 1 for the annual period of November 1 through October 31. The annual ES Rate shall be filed with the Company's Winter season Cost of Gas Clause ("COG") filing and be subject to review and approval by the Commission. The annual ES Rate shall be applied to firm sales and to firm delivery throughput as a part of the LDAC. Special contract customers are exempt from the ES.

3. Costs Allowable: All approved environmental response costs associated with manufactured gas Programs may be included in the ES Rate

   The total annual charge to the Company's customers for environmental response costs during any annual ES recovery period shall not exceed five percent (5%) of the Company's total revenues from firm gas sales and delivery throughput during the preceding twelve (12) month period ending June 30. The total annual charge shall represent the ES expenditures reflected in the calculation of the ES Rate to be in effect for the upcoming twelve-month period, November 1 through October 31. If this recovery limitation results in the Company recovering less than the amount that would otherwise be recovered in a particular ES Recovery Year, then the Company would defer this unrecovered amount, with interest, calculated monthly on the average monthly balance, until the next recovery period in which this amount could be recovered without violating the 5% limitation. The interest rate is to be adjusted monthly using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates.

4. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the ES applicable to all firm sales and firm delivery service throughput for the subsequent twelve-month period commencing with the calendar month of November.

5. Definitions:

   Environmental Response Costs shall include all costs of investigation, testing, remediation, litigation expenses, and other liabilities relating to manufactured gas Program sites, disposal sites, or other sites onto which material may have migrated, as a result of the operating or decommissioning of New Hampshire gas manufacturing facilities. These cost shall include the costs of the closure of the Relief Holder and pond at Gas Street, Concord, NH ~~and pond~~. The ES shall also include the expenses incurred by the Company in pursuing insurance and third-party claims and any recoveries or other benefits received by the Company as a result

6. Reconciliation Adjustments: Prior to the Winter Period COG, the Company shall calculate the difference between (a) the revenues derived by multiplying firm sales and delivery throughput by the ES Rate, and (b) the historical amortized costs approved for recoveries in the prior November's Annual ES Recovery Period. Account 1920-1863 shall contain the cumulative difference and the Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

7. Calculation of the ES: The ES Rate calculated annually consists of one-seventh of actual response costs incurred by the Company in the twelve-month period ending June 30 of each year until fully amortized (over seven years). Any insurance and third-party recoveries or other benefits for the twelve month period ending June 30 shall be applied to reduce the unamortized balance, shortening the amortization period. The sum of these amounts is then divided by the Company's forecast of total firm sales and delivery throughput for the upcoming twelve months of November 1 through October 31.

8. Application of ES to Bills: The annual ES Rate shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

~~J.~~E. Expenses Related to Gas Restructuring.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates on an annual basis for the recovery of NHPUC-approved costs associated with the Gas Restructuring Collaborative (Docket DE 98-124).

2. Applicability: The Gas Restructuring Expenses ("GRE") shall be applied to all firm tariffed customers eligible to receive delivery service from the Company as determined in accordance with the provisions of Section 17(F) of this clause. The GRE shall be determined annually by the Company as defined below, subject to review and approved by the NHPUC as provided for in this clause.

3. GRE Allowable for LDAC: Costs associated with the Gas Restructuring Collaborative (DE 98-124), including, but not limited to, any legal, consulting, customer focus group(s) and survey(s), customer education campaign(s), materials and advertising, subject to review and approval by the NHPUC.

4. Effective Date of GRE Charge: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the GRE applicable to all consumption of tariffed customers eligible to receive delivery service for the subsequent twelve month period commencing with the calendar month of November.

5. Definition: Gas Restructuring Initiatives are activities facilitating the development, design and implementation of unbundled services for all customers.

6. GRE Factor Formula:

$$GREF = \frac{GRE + RA_{GRE}}{A{:}\ TPev}$$

where:

A:Tpev Forecast Annual Throughput Volumes of all tariffed customers eligible to receive firm delivery-only service from the Company.

GRE Gas Restructuring Expenses as defined in Section 17(F).05.

RA_{GRE} Gas Restructuring Expense Reconciliation Adjustment - Account 1920-1744, inclusive of the associated Account 1920-1744 interest, as outlined in Section 17(E)(7).

7. Reconciliation Adjustments: Account 1920-1744 shall contain the accumulated difference between revenues toward Gas Restructuring Expenses as calculated by multiplying the Gas Restructuring Expense Factor ("GREF") times monthly volumes of customers eligible to receive firm delivery service and Gas Restructuring expenses allowed, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates, and then added to the end-of-month balance.

8. Application of GREF to Bills: The GREF ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

9. Information to be Filed with the NHPUC: Information pertaining to the Gas Restructuring Expenses shall be filed with the NHPUC consistent with the filing requirements of all costs and revenue information included in the LDAC. An annual GREF filing shall be required on or before the first business day in September of each year. The GREF filing shall contain the calculation of the new annual GREF to become effective November 1 and shall include the updated annual Gas Restructuring Expense reconciliation balance.

~~K.~~F. Expenses Related to Rate Cases/Temporary Rate Reconciliation Allowable for LDAC.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company to adjust its rates for the recovery of NHPUC-approved rate case expenses and the reconciliation of temporary rates.

2. Applicability: The Rate Case Expenses/Temporary Rate Reconciliation ("RCE") shall be applied to all firm tariffed customers. The RCE will be determined by the Company, as defined below.

3. Rate Case Expenses Allowable for LDAC: The total amount of the RCE will be equal to the amount approved by the Commission.

4. Effective Date of Rate Case Expense Charge: The effective date of the RCE will be determined by the NHPUC in an individual rate proceeding.

5. Definition: The RCE includes all rate case-related expenses approved by the NHPUC. This includes legal expenses, costs for bill inserts, costs for legal notices, consulting fees processing expenses, and other approved expenses. The temporary Rate reconciliation will include the variance between

the delivery revenues obtained from the rates prescribed in the temporary rate order and the delivery revenues obtained from the final rates approved by the NHPUC.

6. Rate Case Expense/Temporary Rate Reconciliation (RCE) Factor Formulas: The RCE will be calculated according to the Commission Order issued in an individual proceeding to establish details including the number of years over which the RCE shall be amortized and the allocation of recovery among rate classes. In general, the RCE Factor will be derived by dividing the annual portion of the total RCE, plus the RCE Reconciliation Adjustment, by forecast firm annual throughput.

7. Reconciliation Adjustments: Account 1930-1745 shall contain the accumulated difference between revenues toward Rate Case Expenses as calculated by multiplying the Rate Case Expense Factor ("RCEF") times the appropriate monthly volumes and Rate Case Expense allowed, plus carrying charges added to the end-of-month balance. The carrying charges shall be calculated beginning on the first month of the recovery period by applying the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates to the average monthly balance.

   At the end of the recovery period, any under or over recovery will be included in an active LDAC component, as approved by the Commission.

8. Application of RCE to Bills: The RCE ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm gas sales and firm delivery service throughput by being included in the determination of the annual LDAC, and also shall be included in the Distribution Adjustment of the Delivery Charges of each firm customer's bill.

9. Information to be Filed with the NHPUC: Information pertaining to the RCE will be filed with the NHPUC consistent with the filing requirements of all cost and revenue information included in the LDAC. The RCE filing will contain the calculation of the new RCE and will include the updated RCE reconciliation balance.

~~L.~~G. Recoverable Residential Low Income Assistance Program Costs.

1. Purpose: The purpose of this provision is to establish a procedure that allows the Company, subject to the jurisdiction of the NHPUC, to recover the revenue shortfall (costs) associated with customers participating in the Residential Low Income Assistance Program ("RLIAP"). Such costs, as well as, associated administrative and marketing costs shall be recovered by applying an RLIAP rate to all firm sales and transportation service throughput.

2. Applicability: The RLIAP Rate shall be applied to all firm sales and transportation tariff customers. The RLIAP Rate shall be filed with the Company's Winter season Cost of Gas Clause filing and shall be determined annually by the Company and be subject to review and approval by the Commission.

3. Effective Date: On or before the first business day in September of each year, the Company shall file with the NHPUC for its consideration and approval, the Company's request for a change in the RLIAP Rate applicable to all firm sales, delivery and transportation service throughput for the subsequent twelve-month period commencing with the calendar month of November.

4. RLIAP Costs Allowable for LDAC: The costs to be recovered through the RLIAP Rate shall comprised of the revenue shortfall calculated by forecasting the number of customers enrolled in

the RLIAP and the associated volumetric billing determinants for the upcoming annual recovery period and applying those billing determinants to the difference between the regular and reduced low income residential base rates, plus administrative, marketing and startup costs. The RLIAP Rate shall be calculated by dividing the resulting costs, plus any prior period reconciling adjustment, by the forecast of annual firm sales and transportation service throughput.

5. RLIAP Factor Formula

$$RLIAPF = \frac{RLIAP + RA_{RLIAP}}{A\!: TPev}$$

where:

A: Tpev — Forecast Annual Throughput Volumes of all firm sales and transportation tariffed customers eligible to receive firm delivery-only service from the Company.

RLIAP — RLIAP costs comprising of the revenue shortfall associated with customer participation, plus administrative, marketing, IT and start-up costs.

RA_{RLIAP} — RLIAP Reconciliation Adjustment - Account 1169-1756, inclusive of the associated Account 1169-1756 interest, as outlined in Section 17(G)(6).

6. Reconciliation Adjustments: Prior to the Company's Winter season Cost of Gas filing, the Company will calculate the difference between (a) the revenue derived by multiplying the actual firm sales and delivery service throughput by the RLIAP Rate through October 31st, and (b) the actual costs of the program which consists of (1) the revenue shortfall calculated by applying the actual billing determinants of the RLIAP classes to the difference in the regular and reduced residential base rates in effect for the annual reconciliation period and (2) the start-up, administrative and marketing costs associated with the implementation of the program, plus carrying charges calculated on the average monthly balance using the monthly prime lending rate, as reported by the Federal Reserve Statistical Release of Selected Interest Rates. The combined costs will then be recorded in the deferred RLIAP account 1169-1756. The Company shall file the reconciliation along with its COG filing on or before the first business day in September of each year.

~~M.~~H. Effective Date of Local Distribution Adjustment Clause. The LDAC shall be filed annually and become effective on November 1 of each year pursuant to NHPUC approval. In order to minimize the magnitude of future reconciliation adjustments, the Company may request interim revisions to the LDAC rates, subject to review and approval of the NHPUC.

~~N.~~I. Local Distribution Adjustment Clause Formulas. The LDAC shall be calculated on an annual basis, by customer, by summing up the various factors included in the LDAC, where applicable.

LDAC Formula

$$LDAC^{x} = CC^{x} + \cancel{LRAM^{x}}\ RDAC^{x} + ES + GREF^{x} + RCE + RLIAP$$

and:

$$ES^{x} = RHS + MGP$$

where:

$LDAC^{x}$ = Annualized class specific LDAC.

CC^X = Annualized class specific CC or EE Charge.

~~$LRAM^X$~~ $RDAC^X$ = Annualized class specific ~~LRAM~~RDAC.

ES = Total firm annualized ES.

RHS = Annualized charge to recover the costs of the closure of the Relief Holder at Gas Street, Concord, NH

MGP = Annualized charge to cover the remediation costs related to former manufactured gas plants.

$GREF^X$ = Total firm annualized class specific Gas Restructuring Expense Factor.

RCE = Rate Case Expense Factor.

RLIAP = Residential Low Income Assistance Program Rate

~~O.~~J. Application of LDAC to Bills. The component costs comprising the LDAC ($ per therm) shall be calculated to the nearest one one-hundredth of a cent per therm and shall be applied to the monthly firm sales and firm delivery service throughput in accordance with the table shown in Section 17(B).

~~P.~~K. Other Rules.

1. (1) The NHPUC may, where appropriate, on petition or on its own motion, grant an exception from the provisions of these regulations, upon such terms that it may determine to be in the public interest.

2. Such amendments may include the addition or deletion of component cost categories, subject to the review and approval of the NHPUC.

3. The Company may implement an amended LDAC with the NHPUC approval at any time.

4. The NHPUC may, at any time, require the Company to file an amended LDAC.

5. The operation of the LDAC is subject to all powers of suspension and investigation vested in the NHPUC.

~~Q.~~L. Amendments to Uniform System of Accounts.

1920-1744 **Gas Restructuring Expense Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the recovery and actual amounts of third party incremental expenses associated with the Company's Gas Restructuring initiatives. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(E).

1163-1755 **Energy Efficiency Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the sum of DSM and/or EE Expenditures incurred by the Company plus the sum of DSM and/or EE Repayments and the revenues collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(C).

1920-1863 **Environmental Response Costs Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the revenues toward environmental response costs as calculated by multiplying the ES times monthly firm sales volumes and delivery service throughput and environmental response costs allowable per formula. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(D).

1930-1745 **Rate Case Expense/Temporary Rates Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the recovery and actual amounts of third-party incremental expenses associated with the Company's Rate Case initiatives and the difference between the final and temporary distribution rates. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(F).

1169-1756 **Residential Low Income Assistance Program Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the actual revenue derived from the actual sales and transportation service throughput multiplied by the RLIAP rate and the actual costs of the program, which consists of the revenue shortfall and all administrative and marketing costs, as outlined in the Local Distribution Adjustment Clause, 18(G).

1163-1756 **Lost Revenue Reconciliation Adjustment:** This account shall be used to record the cumulative difference between the lost revenue of the Company and the revenue collected from customers pursuant to this clause with respect to a given Rate Category. Entries to this account shall be determined as outlined in the Local Distribution Adjustment Clause, 18(C.1).

18 SUPPLY & CAPACITY SHORTAGE ALLOCATION POLICY

A. DEFINITIONS

The following are definitions of terms used in this subsection and applicable only to this subsection:

1. Residential: Service to customers which consists of direct natural gas usage in a residential dwelling for space heating, air conditioning, cooking, water heating and other residential uses

2. Commercial: Service to customers engaged primarily in the sale of goods or services including institutions and local, state and federal government agencies for uses other than those involving manufacturing or electric power generation

3. Industrial: Service to customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power

4. Large Volume: Service to large commercial and industrial customers with an annual gas load greater than 200,000 therms

5. Seasonal: Service available from April 1 to October 31 to all customers using gas to replace some other fuel or gas for air conditioning purposes

6. Firm Sales Service: Service from schedules or contracts under which seller is expressly obligated to supply and deliver specific volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened

7. Firm Transportation Service: Service from schedules or contracts under which seller is expressly obligated to deliver specific third-party volumes within a given time period and which anticipates no interruptions, but which may permit unexpected interruption in case the supply to higher priority customers is threatened.

8. Plant Protection Gas: Is defined as minimum volumes required to prevent physical harm to the plant facilities or danger to plant personnel, when such protection cannot be afforded through the use of alternate fuel. This includes the protection of such material in process as would otherwise be destroyed, but shall not include deliveries required to maintain plant production. For the purpose of this definition, propane and other gaseous fuels shall not be considered alternate fuels.

9. Feedstock Gas: Is defined as natural gas used as a raw material for its chemical properties in creating an end product

10. Process Gas: Is defined as gas use for which alternate fuels are not technically feasible such as in applications requiring precise temperature controls and precise flame characteristics. For the purpose of this definition, propane and other gaseous fuels shall not be considered alternate fuels

11. Boiler Fuel: Is considered to be natural gas used as a fuel for the generation of steam or electricity including the utilization of gas turbines for the generation of electricity

12. Alternate Fuel Capabilities: Is defined as a situation where an alternate fuel could have been utilized whether or not the facilities for such use have actually been installed, provided however, where the use of natural gas is for plant protection, feedstock or process uses and the only alternate fuel is propane or other gaseous fuel, then the consumer will be treated as if he had no alternate fuel capability.

B. POLICY

In the event that, due to gas supply restrictions or capacity constraints, the Company is unable to deliver the total requirements of its firm, sales or transportation rate customers, the available volumes of gas will be allocated to the Company's firm rate customers in accordance with the provisions of this policy. In the event that the Company, during a curtailment or interruption, requires emergency gas, and takes the gas of the customer, customer shall be compensated for such emergency gas at the customer's alternate cost of fuel as demonstrated to the reasonable satisfaction of the Company.

As curtailment becomes necessary through each succeeding category, the Company will implement full or partial curtailment of a customer, or by groups of customers, taking into consideration customer load characteristics, the Company's delivery system design and Company load characteristics in a manner which is believed to be in the best interests of customers in general.

C. PRIORITIES

Firm rate customers shall be serviced according to the following preference categories with the first and each succeeding category having preference over the succeeding categories:

1. Company use for fuel and lost and unaccounted for

2. Firm sales or transportation service for high priority residential uses including apartment buildings and other multi-unit buildings, small commercial establishments using less than 50 DT on a peak day, schools, hospitals, police protection, fire protection, sanitation facilities and correctional facilities

3. Firm sales or transportation service for essential agricultural uses, as defined by the Secretary of Agriculture, for full food and natural fiber production, process and feedstock use for fertilizer and

agricultural chemicals, process and feedstock for animal feeds and food, food quality maintenance, food packaging, marketing and distribution for food related products and on farm uses

4. Firm sales or transportation service for large commercial requirements (50 DT or more on a peak day), firm industrial requirements for plant protection, feedstock and process needs and firm industrial sales up to 300 DT per day

5. Firm sales or transportation service for all industrial requirements not specified in (2), (3), (4), (6), or (7)

6. Firm sales or transportation service including the transportation for industrial requirements for boiler fuel use at less than 1,500 DT per day, but more than 300 DT per day, where alternate fuel capabilities can meet such requirements

7. Firm sales or transportation service including transportation for industrial requirements for large volume (1,500 DT or more per day) boiler fuel use where alternate fuel capabilities can meet such requirements

D. STORAGE INJECTION

Within each category, storage injection required to meet the needs of higher priorities may be given preference over all other uses within that category.

E. PENALTY

For all unauthorized volumes of gas taken by a customer, the customer shall pay the Company a penalty of five times the daily index for each therm taken. Such penalty shall be added to the regular rates in effect. The Company shall have the right, without obligation, to waive any penalty for unauthorized use of gas, if on the day when the penalty was incurred deliveries to other of the Company's customers were not adversely affected. Continued unauthorized use, at the sole discretion of the Company, may result in termination of service.

II. RATE SCHEDULES

1 RESIDENTIAL NON-HEATING RATE: CLASSIFICATION NO. R-1

Availability

This rate is available to all residential customers who do not have gas space heating equipment, who consume less than 80% of their normal usage in the six winter months of November through April and whose usage does not exceed 100 therms in any winter month. Available for use which is separately metered and billed for each dwelling unit. Availability is limited to use in locations served by the Company's mains and for which the Company's facilities are adequate.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.7176~~5090~~ per day or $21.50~~15.27~~ per 30 day month
Winter Period:	All therms per 30 day month at $0.2446~~018~~ per therm
Summer Period:	All therms per 30 day month at $0.2446~~018~~ per therm

~~*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.~~

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge

All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74 of this Tariff for firm rate schedules~~the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause~~ (LDAC)~~, as in effect from time to time and on file with ~~The ~~the ~~New Hampshire Public Utilities ~~Commission~~ (NHPUC)~~. The delivery charges presented above are exclusive of these charges. Refer to ~~Page 74 of this Tariff for firm rate schedules~~the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time,~~,~~ with the ~~New Hampshire Public Utilities~~ Commission.

2 RESIDENTIAL HEATING RATE:
CLASSIFCATION NO. R-3

Availability

This rate is for all residential use for those domestic customers who use gas as the principal household heating fuel. Availability is limited to use in domestic locations which are separately metered and billed and which are served by the Company's mains and for which the Company's facilities are adequate.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.8500~~7367~~ per day or $25.50~~22.10~~ per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.5201~~3495~~ per therm
	All over 100 therms per 30 day month at $0.4176~~2892~~ per therm
Summer Period:	First 20* therms per 30 day month at $0.5201~~3495~~ per therm
	All over 20 therms per 30 day month at $0.4176~~2892~~ per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge

All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74 of this Tariff for firm rate schedules~~the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities~~ Commission ~~(NHPUC)~~. The delivery charges presented above are exclusive of these charges. Refer to ~~Page 74 of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time,~~,~~ with the ~~New Hampshire Public Utilities~~ Commission.

3 LOW INCOME RESIDENTIAL HEATING RATE: CLASSIFICATION NO. R-4

Availability

This rate is for residential use for those domestic customers who use gas as the principal household heating fuel if any member of the household qualifies for a benefit through one of the programs listed below, subject to the qualification period described under the "Terms and Conditions" of this rate. Availability is limited to use in domestic locations which are separately metered and billed and which are served by the Company's mains and for which the Company facilities are adequate.

Qualified Programs:

a. Low Income Home Energy Assistance Program (LIHEAP)
b. Electric Assistance Program (EAP)
c. Supplemental Security Income Program
d. Women, Infants and Children Program
e. Commodity Surplus Foods Program (for women, infants and children)
f. Elderly Commodity Surplus Foods Program
g. Temporary Aid to Needy Families Program
h. Housing Choice Voucher Program (also known as Section 8)
i. Head Start Program
j. Aid to the Permanently and Totally Disabled Program
k. Aid to the Needy Blind Program
l. Old Age Assistance Program
m. Food Stamps Program
n. Any successor program of a-m

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.3400~~2947~~ per day or $10.20~~8.84~~ per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.2080~~1398~~ per therm
	All over 100 therms per 30 day month at $0.1670~~1156~~ per therm
Summer Period:	First 20* therms per 30 day month at $0.2080~~1398~~ per therm
	All over 20 therms per 30 day month at $0.1670~~1156~~ per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge

All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74 of this Tariff for firm rate schedules~~the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities~~ Commission ~~(NHPUC)~~. The delivery charges presented above are exclusive of these charges. Refer to ~~Page 74 of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

For those customers qualifying for the program this rate R-4 shall apply for a one year period. On the date that the one-year period expires, eligibility for this rate shall expire unless the customer provides the Company with evidence that the customer continues to be eligible for one or more qualifying programs. When the Rate R-4 expires, the rate on each account shall revert back to the non-low income Residential Heating Rate, R-3. Customers whose eligibility for the program is based on their having qualified for LIHEAP shall be eligible for this rate retroactive to November 1 of the heating season in which they qualified. Eligibility for such customers shall expire the following October 31, subject to their re-qualifying through receipt of LIHEAP or other benefits as set forth above.

Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time.~~,~~ with the ~~New Hampshire Public Utilities~~ Commission.

4 MANAGED EXPANSION PROGRAM RESIDENTIAL NON-HEATING RATE: CLASSIFICATION NO. R-5

Availability
This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Residential Non Heating Rate R-1.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$0.9317~~6617~~ per day or $27.95~~19.85~~ per 30 day month
Winter Period:	All therms per 30 day month at $0.31802~~623~~ per therm
Summer Period:	All therms per 30 day month at $0.31802~~623~~ per therm

~~*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.~~

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Cost of Gas Charge
All gas delivered under this rate is subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74-A of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with ~~The New Hampshire Public Utilities~~ the Commission ~~(NHPUC)~~. The delivery charges presented above are exclusive of these charges. Refer to Page 74-A of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Residential Non Heating Rate R-1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time~~,~~, with the ~~New Hampshire Public Utilities~~ Commission.

these charges. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Low Income Residential Heating Rate R-4.

For those customers qualifying for the program this rate R-7 shall apply for a one year period. On the date that the one-year period expires, eligibility for this rate shall expire unless the customer provides the Company with evidence that the customer continues to be eligible for one or more qualifying programs. When the Rate R-7 expires, the rate on each account shall revert back to the non-low income Residential Heating Rate, R-6. Customers whose eligibility for the program is based on their having qualified for LIHEAP shall be eligible for this rate retroactive to November 1 of the heating season in which they qualified. Eligibility for such customers shall expire the following October 31, subject to their re-qualifying through receipt of LIHEAP or other benefits as set forth above.

Eligibility shall be determined based on the reasonable discretion of the Company subject to verification of heating usage.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

7 COMMERICAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, HIGH WINTER USE RATE CLASSIFCATION NO. G-41

Availability

This rate is available for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage less than or equal to 10,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company’s records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$1.8537~~1.6120~~ per day or $55.61~~48.36~~ per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.5689~~3965~~ per therm
	All over 100 therms per 30 day month at $0.3130~~2663~~ per therm
Summer Period:	First 20* therms per 30 day month at $0.5689~~3965~~ per therm
	All over 20 therms per 30 day month at $0.3130~~2663~~ per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company’s Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities~~ Commission ~~(NHPUC)~~. A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

9 COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-43

Availability

This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage greater than 100,000 therms and a Winter Period usage greater than or equal to 67% of annual usage as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter: $22.8290~~20.7537~~ per day or $684.87~~622.61~~ per 30 day month

Winter Period: All therms per 30 day month at $0.2684~~2216~~ per therm

Summer Period: All therms per 30 day month at $0.1227~~1013~~ per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause~~ (LDAC)~~, as in effect from time to time and on file with the N~~ew Hampshire Public Utilities~~ Commission~~ (NHPUC)~~. The delivery charges presented above are exclusive of these charges. Refer to ~~Page 74 of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly,

daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

10 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-44

Availability
This rate is Mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-41.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter:	$2.4097~~0956~~ per day or $72.29~~62.87~~ per 30 day month
Winter Period:	First 100* therms per 30 day month at $0.7396~~5155~~ per therm
	All over 100 therms per 30 day month at $0.4069~~3462~~ per therm
Summer Period:	First 20* therms per 30 day month at $0.7396~~5155~~ per therm
	All over 20 therms per 30 day month at $0.4069~~3462~~ per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-42.

Character of Service
Natural gas or equivalent will be supplied at a heat content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter: $6.9157~~2868~~ per day or $207.47~~188.60~~ per 30 day month

Winter Period: First 1000* therms per 30 day month at $0.5795~~4688~~ per therm

All over 1000 therms per 30 day month at $0.3838~~3123~~ per therm

Summer Period: First 400* therms per 30 day month at $0.5795~~4688~~ per therm

All over 400 therms per 30 day month at $0.3838~~3123~~ per therm

*The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74-A of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities~~ Commission ~~(NHPUC)~~. The delivery charges presented above are exclusive of these charges. Refer to Page 74-A of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions

Dual fuel customers may be required to sign annual contracts with minimum usage requirements in order to qualify for service under this tariff. U.S. Department of Labor Standard Industry Classification Codes will determine eligibility for this tariff.

Meters are read and bills are presented monthly. ~~–~~In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Commercial/Industrial Rate G-42.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

12 MANAGED EXPANSION PROGRAM COMMERCIAL/INDUSTRIAL SERVICE: HIGH ANNUAL USE, HIGH WINTER USE RATE CLASSIFICATION NO. G-46

Availability
This rate is mandatory for customers taking service in a Managed Expansion Program project area who otherwise would have qualified for Commercial/Industrial Rate G-43.

Character of Service
Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet. Should the customer's consumption fail to meet the availability requirements for this rate, the customer's service will be transferred to the otherwise applicable tariff as described under the terms and conditions of this tariff.

Delivery Charge

Customer Charge Per Meter:$29.6777~~26.9798~~ per day or $890.33~~809.39~~ per 30 day month

Winter Period: All therms per 30 day month at $0.2684~~2881~~ per therm

Summer Period: All therms per 30 day month at $0.1595~~1317~~ per therm

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges
If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to Page 74-A of this Tariff for firm rate schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service
The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause~~ (LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities ~~Commission~~ (NHPUC)~~. The delivery charges presented above are exclusive of these charges. Refer to ~~Page 74-A of this Tariff for firm rate schedules ~~the Firm Rate Scheduleswhich present both the delivery charge and the LDAC rates.

Meter Account Charge
When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is incurred in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00.

Terms and Conditions
To be eligible for this service, a customer must sign a contract for a one year period, which contract shall include the authority for the Company to monitor the customer's continued qualification for this service. In the event that the customer fails to meet the eligibility criteria set forth in the availability section of this schedule based on a monthly evaluation employing the most recent twelve (12) month period, the Company may require that the customer be billed prospectively under an alternative rate subject to the terms of the customer's Service Agreement. The Service Agreement may contain limitations as to maximum hourly, daily, or monthly consumption, provisions for charges for excess usage, and other terms and conditions of service.

Service under each Managed Expansion Program project will have a term of ten years. Customers initiating service under this rate must take service hereunder until ten years following the date that the first customer in the particular Managed Expansion Program project takes service. Once the term of service for a particular Managed Expansion Program project expires, customers will thereafter take service under Commercial/Industrial Rate G-43.

The customer shall declare maximum seasonal demands and estimated seasonal volumes at the time application for service is made. These declarations shall be updated annually, by August 1.

Meters are read and bills are presented monthly. In the event a meter reader is unable to obtain a meter reading, an estimated bill will be rendered to the customer.

Amounts not paid prior to the due date; normally the next following meter reading date and a date not less than twenty-five (25) days from the date the bill is mailed - are subject to a late payment charge of one and one-half percent (1½%) per month on the unpaid balance - equivalent to an eighteen percent (18%) annual rate. There is a $15.00 charge for each bad check tendered for payment.

A customer must give at least four (4) days' notice before discontinuance of service and is responsible for all charges through the end of the notice period.

Service under this rate is subject to the rules and regulations and the published tariff, terms and conditions presently effective, or as filed from time to time, with the ~~New Hampshire Public Utilities~~ Commission.

13 COMMERICAL/INDUSTRIAL SERVICE: LOW ANNUAL USE, LOW WINTER USE RATE CLASSIFICATION NO. G-51

Availability

This rate is for commercial, industrial and public authority customers in locations served by the Company's mains and for which the Company's facilities are adequate. A customer receiving service under this rate must have annual usage less than or equal to 10,000 therms and a Winter Period usage less than 67% of annual usage as determined by the Company's records and procedures.

Character of Service

Natural gas or equivalent will be supplied at a thermal content of nominally one (1) therm in each one hundred (100) cubic feet.

Delivery Charge

Customer Charge Per Meter: $1.8537~~6120~~ per day or $55.61~~48.36~~ per 30 day month

Winter Period: First 100* therms per 30 day month at $0.3460~~2390~~ per therm

All over 100 therms per 30 day month at $0.2060~~1553~~ per therm

Summer Period: First 100* therms per 30 day month at $0.3460~~2390~~ per therm

All over 100 therms per 30 day month at $0.2060~~1553~~ per therm

*****The number of therms billed in the first block will be calculated by multiplying the therms in the first block of the rate by a fraction the numerator of which is the number of days in the billing period and the denominator of which is 30.

The above rates shall be adjusted to reflect the recovery of all applicable taxes. The Winter Period shall be the months of November through April inclusive. The Summer Period shall be the months of May through October inclusive.

Supplier Charges

If the customer purchases its gas from a third party, supplier charges will be as agreed upon between the customer and the third party supplier and will be billed directly by the third party supplier. If the customer does not purchase its gas from a third party, the gas supplied by the Company will be subject to a per therm cost of gas rate. The cost of gas rate is not included in the delivery charge presented above. Refer to ~~Page 74 of this Tariff for firm rate schedules~~ the Firm Rate Schedules which present both the delivery charge and cost of gas rates.

Other Charges for Delivery Service

The customer must also pay such charges and adjustments as are set forth in the Company's Local Distribution Adjustment Clause ~~(LDAC)~~, as in effect from time to time and on file with the ~~New Hampshire Public Utilities~~ Commission ~~(NHPUC)~~. The delivery charges presented above are exclusive of these charges. Refer to Page 74 of this Tariff for firm rate schedules which present both the delivery charge and the LDAC rates.

Meter Account Charge

When the Company establishes or re-establishes a gas service account for a customer at a meter location, a meter account charge is made in addition to all other charges. The meter account charge is $20.00 when the visit to the meter location is scheduled at the mutual convenience of the Company and the customer. Otherwise, the charge is $30.00
