---

Please keep the Solar Net metering the way it is and to not reduce the rate.

Not only did I count on this level of revenue/return from the present Net Metering solution in my investment for my small business in late 2021, I also am providing power to my neighbors as I proceed more than I use most days and this reduce the load on my local area of the grid. This reduces the amount of power capacity that need to be added to my local area so I am a net benefit to Evesource maintaining a static electrical distribution capacity locally.

As the market moves to ever more electrification of services in the home and office we will need a more resilient and distributed power solution. Local solar installations are part of the solution, not the problem. We should not be penalized nor have the value of our investments reduced because of the greed of others.

Thank you,

James Brooks
