---

I am strongly concerned that NH ( along with other NE states) is NOT supporting solar advances or green energy by reducing net metering compensation. If the NEM credit is again reduced, it will drastically reduce residential solar by making it financially unfeasible. I had solar installed in Aug 2023, to be more responsible for my energy use, and to help my beautiful state of NH. My family roots go back to the 1600's and my ancestors fought hard to preserve NH. ( Ex: John Weeks saving NH forests.) If the net metering credit is again reduced I would not recommend solar installation for residents. Perhaps this is exactly what the PUC wants, as it will financially benefit the utility companies once again. NH should not be all about the almighty dollar\$. I have been around long enough to see the Seabrook power plant installed and decommissioned. The protesters had visions beyond their years. My concerns are in keeping NH a beautiful place for my children and grandchildren and the future generations of the Weeks family.

Sincerely,

Karen Weeks-Chase
