To: New Hampshire Public Utility Commission:

As a resident of New Hampshire and a beneficiary of net metering, my husband and I are very much a supporter of residential solar arrays. We feel that what we don't use has been a benefit to the NH grid in that we have been able to contribute back to it. Our 18 solar panels are not a big contributor however, hundreds and hundreds of New Hampshire home owners and business owners contribute enough to make a difference on the grid.

It only makes sense to continue this partnership!

As the commission works to create a energy portfolio for the future- here in New Hampshire -I would strongly urge the continuation of net metering.

I also, oppose having NUCLEAR energy generation inserted in HB 1644. Nuclear energy is NOT a renewable and poses a threat to our environment for generations to come. Seabrook will be a nuclear waste dump for ever and a reliability on the backs of taxpayers forever. (Price-Anderson Act 1957)

New Hampshire needs to move forward on solar, wind and off shore turbine. The future for our grandchildren is a stake.

Thank you for your consideration,

Donna Baker-Hartwell
