I have been wondering why NH, recently moved to having the second highest electricity rates in the country. I finally found someone who said the the PUC required Eversource to sell off all of their energy producing plants. Now they are forced to buy energy from profit seeking owners. In otherwords, the PUC requirement incerted another layer of profit to burden the rate payers.

Now I am reading that the PUC is encouraging energy companies to invest in heat pump and green energy sources.... why would you go back to producing inefficient energy after requiring them to sell of their existing, efficient production? It all just seems self-inflicted and STUPID to put this burden of these bad decisionson the rate payers.

If this is true, you should all retire, and get out of the way so that we can have common sense thinkers fix the problems you have created.

Would love to hear the point of view on the issue from the people that created our problem.

Thank you for your time
