- 3(B) Determination of Therms. (C)
- The Btu therm factor of the gas sendout shall be calculated for each billing cycle from the daily weighted average Btu of the natural gas delivered to the Company by its suppliers and the gas produced at the Company's peak-shaving plants. The daily average Btu content shall be determined by appropriate gas measurement devices operated by the Company or its supplier. ~~In the event that the gas measurement devices operated by the Company or its supplier measure the gas on a "dry" basis the Company shall convert the measurement to a fully saturated basis by multiplying the recorded gas measurement by 0.9826 for billing purposes.~~ (D)
