Debra Howland, Executive Director
New Hampshire Public Utilities Commission
21 South Fruit Street, Suite 10
Concord, NH 03301-2429

RE: DT 11-061; DT 09-059; DT 09-113; Audit of FairPoint Metrics, Proposed Metrics for Audit

Dear Ms. Howland:

On May 6, 2011, the Commission issued Order No. 25,221 (“FairPoint Audit Order”) requiring that an audit of FairPoint’s Performance Assurance Plan (“PAP”) and the relevant Carrier-to-Carrier (“C2C”) metrics be conducted. The Commission specifically stated that the audit “...will include each of the metrics proposed in the WPP as well as additional metrics that are important to competition as may be identified by the CLECs.” (FairPoint Audit Order at 23). On May 19, 2011, Staff requested written recommendations from CLECs regarding the most critical metrics reported in the current PAP, as well as identification of those metrics currently reported which are no longer relevant or necessary.

The attached recommendations are being submitted jointly by the following CLECs: Freedom Ring Communications, LLC, d/b/a Bayring Communications (“Bayring”); CRC Communications of Maine, Inc. d/b/a OTT Communications (“OTT”); Biddeford Internet Corp., d/b/a Great Works Internet (“GWI”); National Mobile Communications Corp. d/b/a Sovernet Communications (“Sovernet”); Otel Telekom, Inc. (“Otel”); CTC Communications Corp., Lightship Telecom LLC, Choice One of New Hampshire Inc., and Conversent Communications of New Hampshire LLC (all d/b/a “One Communications Solutions of New Hampshire”¹) (collectively, the “CANNE CLECs”²).

The CANNE CLECs commend the Commission and its Staff for moving forward with this important audit and hereby submit their proposed metrics for the audit (Attachment 1), a list of the current PAP metrics that the CLECs propose be deleted (Attachment 2), and an updated listing of continuing wholesale operations problems faced by CLECs (Attachment 3).

The audit will provide the Commission, FairPoint, and the CLECs with important insights into why FairPoint cannot provide adequate wholesale services. Given the importance

¹ One Communications is now an operating subsidiary of EarthLink, Inc. and is in the process of changing its name to EarthLink Business.

² The CANNE CLECs are all members of the CLEC Association of Northern New England (“CANNE”) and intend to participate jointly in these proceedings.

of the audit, the parameters of the task must be carefully defined. The Commission noted that the audit "...is a necessary foundation for informed decisions about reasonable and appropriate wholesale business interactions between FairPoint and the CLECs following FairPoint's emergence from Chapter 11 bankruptcy" (FairPoint Audit Order at 13) and that "...an audit of the current PAP [as] a necessary step in determining the scope and nature of any future PAP." (Id. at 18) The Commission has refused to limit the scope of the audit as suggested by FairPoint and instead has recognized the importance of understanding whether FairPoint has applied the current PAP properly or if there are other weaknesses in the PAP that they must be identified and remedied as part of the development of any new or revised PAP. (Id. at 17)

As the Commission correctly noted, there are questions as to whether FairPoint's reported data is accurate or reliable. FairPoint continues to provide sub-standard service to CLECs in many critical areas that impact the ability of CLECs to compete. Indeed, FairPoint has yet to provide the level of wholesale service and quality that Verizon provided prior to cutover. This ongoing problem is evidenced by the unaudited PAP results since cutover and by other operational problems that are not currently measured or reflected in the PAP results. Attachment 3 to this letter provides an updated listing of continuing operations problems faced by CLECs in the areas of Pre-order, Ordering/Provisioning, Billing, Maintenance and Repair and Other. This attachment is an update to the report developed by the CLECs and Liberty Consulting in conjunction with the New Hampshire Public Utilities Commission during the spring of 2010. We present this update because we believe it will provide both the Commission and its auditors with additional insight to help shape the scope of the audit.

The audit design should allow the auditor complete flexibility to select metrics, data and other necessary information that might be relevant to understanding the current PAP, the proposed WPP and why FairPoint continues to fail to reach the pre-cutover levels of service and functionality in the vast majority of wholesale provisioning. In other words, although the CANNE CLECs are proposing a list of metrics to begin the audit, all of the metrics (PAP and C2C) are critical to the efficient operation of the market and should be subject to some form of review, if not full audit treatment. It is also important to note that even metrics that are not considered operationally critical or which continually fail (and thus generate penalties) may be deemed worthy of measurement because they assist the Commission, FairPoint, and the CLECs in monitoring specific areas of performance. The auditors must be allowed the flexibility to expand the scope of the audit as necessary to "drill down" and investigate any and all metrics and underlying systems and processes, if the audit is to be meaningful.

While we understand that the audit is focused on metrics, the Commission and/or the auditors should also scrutinize FairPoint's rationale for deletion of close to 80%³ of the PAP and C2C

³ *Id.* Note that the number of metrics proposed by FairPoint is not the same in all related documents. But it appears that they are proposing to delete more than 80 percent of the total metrics reported. See, also, FairPoint Testimony of Julie Canny and David Sargent in Vermont Docket No. 7506, dated May 9, 2011 at page six (6).

metrics. The proposed elimination of hundreds of metrics is remarkable both with respect to the sheer number of deletions and with respect to the impact on the quality and effectiveness of the PAP. As noted in a PowerPoint presentation provided by FairPoint during the May 26, 2011 Vermont workshop, FairPoint proposes to delete the following categories of metrics:

- UNE Platform, Line Sharing & Line Splitting reported in C2C (97 metrics)
- Industry consensus deletion (NY) (103 metrics)
- FairPoint System/Process does not exist (32 metrics)
- Metrics for products with little or no long term activity (116 metrics)
- Redundant Metrics (39 metrics)
- Metrics without standards or not measuring FairPoint (25 metrics)
- Simplification (30 metrics)

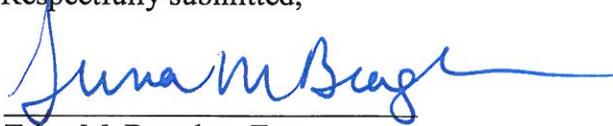

Given the decrease in the quality of wholesale services since the transition to FairPoint, it is difficult to understand how reducing the number of metrics by 80% would help FairPoint provide better service. Such a proposal is counter-intuitive and provides further support for scrutinizing FairPoint's support for deletions. The CANNE CLECs have found that FairPoint's rationales for deletions are flawed in many respects and thus we encourage the Commission and/or the auditors to verify whether FairPoint's rationales for deletions are supported.

The audit should also determine whether FairPoint is in compliance with the definition of any and all metrics being audited. In other words, instead of just investigating the metric, the underlying data and whether it is being calculated and reported properly, the auditors should also express an opinion as to FairPoint's compliance with the definition in the C2C Guidelines for the existing metric.

Finally, at page 23 of the FairPoint Audit Order the Commission encourages "...the parties to identify metrics that are obsolete or no longer relevant or useful..." The CANNE CLECs have identified more than 100 metrics that can be deleted because those metrics are related to UNE-Platform and Line Splitting or are metrics that do not measure FairPoint performance. (See Attachment 2)

Once again, the CANNE CLECs commend the Commission and its Staff for moving forward with an audit of the PAP. We stand ready to work with the Commission, its Staff, and FairPoint to develop a thoughtful, thorough, and effective audit plan. We look forward to meeting with Staff and the parties next Wednesday.

Respectfully submitted,

Attachment 3 -- Updated List of Operational Problems with FairPoint

Issue #	Topic	Issue description	2011 Update	
1	PO	Addresses	Missing addresses in the system take FairPoint as long as two week to fix. In addition to new construction situations, these missing addresses often occur at locations where there is already working service.	Improved but still an issue
2	PO	CSI	For more complex accounts and for all government accounts (local, state and federal), CSI requests don't always return the information requested. CLECs are required to follow manual CSI process to obtain this information.	Still an issue
3	PO	CSI	The data that the CLECs receive in response to a CSI often does not agree with the CSI information FairPoint's service representatives have access to. Besides the return of faulty data, there is also a parity concern with this problem.	Still an issue
4	PO	CSI	There is a lack of feature detail on the customer's account (e.g., no call forwarding detail, hunting missing or unclear, no features, no listings). FairPoint fixed the hunting problem but it has resurfaced again.	Priority issue
5	PO	CSI	Completed order data is not reflected on the CSI. FairPoint takes too long to update CSI information as a result of service order activity. FairPoint indicates that this will be done within 10 days, but that often does not happen. (See related directory listings issue in Ordering & Provisioning.)	Priority issue
6	PO	CSI	Ported TNs often reflect that they are still with FairPoint.	Still an issue
7	PO	CSI	Resale CSIs missing key information such as listing and feature information	Still an issue
8	PO	CSI	ALI codes are missing from information returned.	Improved
9	PO	CSI	CSIs are often not available.	Still an issue
10	PO	CSI	Cannot pull CSIs for analog circuits with pseudo TNs.	Still an issue
11	PO	CSI	CSIs rarely carry any CFA. If it appears, it contains only first four digits, making it hard to reconcile bill to inventory.	Still an issue
12	PO	Dark Fiber	Responses to dark fiber inquires are not timely and there is not standard acceptance criteria for dark fiber.	Not enough data to evaluate
13	PO	Dark Fiber	Cannot input trouble tickets for dark fiber.	New Issue
14	PO	Data Problems	FairPoint continues to promise to clean-up its database discrepancy problems which cause many of the CLECs' issues. Progress is questionable.	Priority issue
15	PO	Directory Listings	Cannot verify a caption listing. Inquiries time out or only return single-listing information.	Priority issue
16	PO	Directory Listings	Cannot determine what LEC owns a customer's listing.	Priority issue
17	PO	Directory Listings	Dual name ID does not work, FairPoint's response only returns a single name.	Improved but still an issue
18	PO	Directory Listings	All directory responses indicate caption listing even in cases where the account has a single line listing.	Still an issue
19	PO	Directory Listings	Caption listings will not return packet information.	Still an issue

Attachment 3 -- Updated List of Operational Problems with FairPoint

Issue #	Topic	Issue description	2011 Update	
20	PO	Directory Listings	DLI only returns a single listing even in cases where the customer has multiple listings. Often the returned listing is not the main listing.	Improved but still an issue
21	PO	Documentation	VFO documentation is poor	Improved
22	PO	Loop Qual	When a CLEC cannot obtain a loop qual by address, FairPoint's manual investigation process can take up to a week to return the requested information. With Verizon responses were returned within 48 hours.	Priority issue
23	PO	Loop Qual	Automated loop qual responses are often inaccurate (estimate about 30-35% of the time). Additionally, manual loop inquiry responses are also often inaccurate (estimate 20-25% of the time).	Priority issue
24	PO	Loop Qual	FairPoint had implemented a fix to return to CLECs information indicating that a remote terminal is in use. However, this functionality has been lost again within the past month.	Improved but still an issue
25	PO	Loop Qual	Loop lengths returned are often incorrect.	Still an issue
26	PO	Loss of Functionality	Verizon's systems gave the CLECs the ability to pull information on their CABS accounts, FairPoint does not offer this functionality. It takes 3-5 days to pull the information using the SPOC or help desk.	Still an issue
27	PO	Loss of Functionality	FairPoint does not provide the ability for the CLECs to access their own BANs for Directory Listings	Still an issue
28	PO	Loss of Functionality	CLECs cannot pull Design Layout Reports. They were able to do this with Verizon.	Still an issue
29	PO	Loss of Functionality	CSI responses no longer reflect cost information or contract lengths.	Still an issue
30	PO	Loss of Functionality	FairPoint does not provide any explanation why a loop does not qualify as Verizon did.	Improved but still an issue
31	PO	Loss of Functionality	Cannot obtain multiple TNs on a single CSI, each TN needs to be polled individually.	Improved
32	PO	Loss of Functionality	CLECs would like to have FairPoint develop a standard response for manual loop qualification inquiries, providing all of the information the CLEC requires (e.g., loop length, PARTS RT). Currently, CLECs receive a screen shot of an email response from FairPoint's engineering department.	Still an issue
33	PO	Manual Requests	Responses to manual requests are not timely.	Improved but still an issue
34	PO	Systems	Pre-ordering inquiries frequently time out before returning a response.	Still an issue
35	OP	ASR	Often get errors for incorrect CCNA when the information is correct.	No longer an issue
36	OP	CFA Change	CFA change orders are getting worked ahead of the due date, causing service outages.	No longer an issue

Attachment 3 -- Updated List of Operational Problems with FairPoint

Issue #		Topic	Issue description	2011 Update
37	OP	CLEC-to-CLEC Conversions	Resale conversions involving two CLECs result in a service outage 100% of the time. This also happens with conversions from retail to resale but not as frequently.	Improved but still an issue
38	OP	Complex Orders	All complex orders result in a JEP, requiring manual follow-up.	No longer an issue
39	OP	Directory Listing Orders	Listing orders often error as "listing does not exist" even in cases where it clearly does exist.	Still an issue
40	OP	Directory Listing Orders	Directory listing often comes back with "no existing listing" on ported TNs. This happens with both JB-V and JB-N order types.	Still an issue
41	OP	Directory Listing Orders	Cannot migrate the directory listing with a hot cut order. Request results in a "no DL to migrate" error.	Improved but still an issue
42	OP	Directory Listing Orders	Directory listings are not updated in a timely manner after receipt of the BCN. FairPoint's manual update process also takes too long. Because of continued problems with directory listing updates, CLECs are required to manually check all their DL orders after completion to verify that the updates have been made. (See related CSI issue in Pre-order.)	Still an issue
43	OP	Disconnect Orders	Orders for circuit disconnects are not worked in a timely fashion by FairPoint and are not implemented on the FOC due date. CLECs continue to be billed for service beyond the disconnect due date.	Still an issue
44	OP	Disconnects	For resale service when the BTN of a multi-line account gets ported from the reseller, FairPoint does not use one of the remaining WTNs to establish a new BTN.	New Issue
45	OP	False PCN & BCN	Order is complete on FOC date and PCN/BCN are received yet no work was done. These orders seem to flow through FairPoint's systems without getting the required work accomplished. This happens an estimated 40% of the time.	Improved but still an issue
46	OP	False PCN & BCN	Many tag-and-locate orders are needed because FairPoint is not working the original order properly. This often results in a vendor meet to resolve issues.	Priority issue
47	OP	Hot Cuts	Hot cut process has improved but it is still very manual. eWPTS-based process with Verizon was much better.	Improved but still an issue
48	OP	Hot Cuts	FairPoint is not providing timely PCNs or BCNs on hot cut orders	No longer an issue
49	OP	Intervals	Some CLECs request longer intervals because they don't trust FairPoint to make the standard interval	Still an issue for some CLECs
50	OP	Line Loss Reports	Line loss reports to the CLECs are not always accurate or not always sent. This can cause customers to be double billed.	Still an issue
51	OP	Loss of Functionality	Unable to delete a BAN listing. Must ask FairPoint to do manually.	Still an issue

Attachment 3 -- Updated List of Operational Problems with FairPoint

Issue #	Topic	Issue description	2011 Update
52	OP	Loss of Functionality Unable to determine the status of an order in the system for late or JEP orders; must rely on the SPOC or ROC.	Still an issue
53	OP	Loss of Functionality Unable to get accurate DEMARC information. Verizon used to provide this data through eWPTS.	Improved but still an issue
54	OP	Loss of Functionality For missing addresses Verizon would return a range of valid house numbers, FairPoint does not provide this functionality.	Still an issue
55	OP	Loss of Functionality Orders reject for a partial port of an account with hunting. To get around this, the end-user customer has to open a ticket with FairPoint to remove hunting. The CLEC can only request porting after the ticket closes, delaying the porting and causing the customer to be without hunting for approximately 7 or 8 business days.	Still an issue
56	OP	Manual Processing LSRs often drop out of the flow through process and nobody at FairPoint does anything about them until the CLECs bring them to FairPoint's attention.	Priority issue
57	OP	Manual Processing Orders that reject for system problems will often not be addressed by FairPoint until the CLEC open a WHD ticket on the order. CLECs do not get a reject notice; the order just sits in ACK/ACPT state.	Still an issue
58	OP	Manual Processing Manual orders often miss critical information such as circuit IDs.	Still an issue
59	OP	Missing data TNs and addresses missing from FairPoint's systems. It takes FairPoint too long to update systems once notified of these problems.	Priority issue
60	OP	Multiple FOCs CLECs receive multiple FOCs on circuit-type orders, with subsequent FOCs often changing the circuit ID or requiring a dispatch when the first FOC indicated a cut through.	Improved but still an issue
61	OP	NID Moves Provisioning plan for NID moves does not include a dispatch step, causing service outages.	Still an issue
62	OP	Order Intervals Intervals offered by FairPoint are much longer than those that were offered by Verizon. Intervals offered are longer than FairPoint's published standard intervals.	Priority issue
63	OP	Order Intervals Published interval is not being followed for disconnect orders. The orders get a FOC with the published interval due date but the orders are generally not worked on that date.	No longer an issue
64	OP	Other FairPoint's field technicians provide the CLEC's customers with inaccurate information, which typically reflects poorly on the CLECs	Improved but still an issue
65	OP	Performance Reporting FairPoint's performance reports are incorrect and misleading as a result of problems such as the false PCN/BCN issue.	Still an issue
66	OP	Process ROC will issue a JEP on an order for lack of facilities, yet order will continue to be worked by other FairPoint organizations, causing service outages. This happens often on CLEC-to-CLEC hot cuts.	Improved

Attachment 3 -- Updated List of Operational Problems with FairPoint

Issue #		Topic	Issue description	2011 Update
67	OP	Process	When orders need to be delayed due to an overload of repair problems. FairPoint cannot tell the CLECs which orders it will be delaying, preventing them from notifying their customers of the delay.	Still an issue
68	OP	Process	SPOCs do not provide timely responses to inquiries/problems. Many SPOCs do not have full systems access.	Improved but still an issue
69	OP	Process	FairPoint does not provide installation notices preventing the CLECs from giving acceptance notices.	No longer an issue
70	OP	Process	FairPoint will issue artificial completion notices so that a repair dispatch can be made to fix a problem with the physical provisioning of the order.	Still an issue for some CLECs
71	OP	Process	Number swaps - giving a number to FairPoint. The LNP group ports the number prior to the work/other steps being completed, which takes the customer out of service.	New Issue
72	OP	Process/Records	For SPUNE/SWUNE conversions performed before cutover, no record of the disconnected SA circuit exists in FairPoint's database, leading field techs to believe it is an out-of-service circuit. Techs have used these pairs for new services, resulting in loss of service on existing circuits.	No longer an issue
73	OP	Related PONS	Related PON orders are not being worked concurrently, causing service outages.	Improved but still an issue
74	OP	Related PONS	RPON orders need to be announced and SPOC needs to be instructed to "babysit" the orders all the way through the process.	Priority issue
75	OP	SUPPs	Supplemental orders receive a FOC; however, the order is worked on the original due date, often causing service outages.	Improved
76	OP	SUPPs	Same Day SUPPs on Directory orders return a response that the order has already been worked. The SPOCs have indicated that these orders are getting worked early, preventing the CLEC's an ability to SUPP the order.	Still an issue
77	OP	Systems	New Invalid reject: Starting in June 2011, CLECs see new rejects CLECs have never seen before, but CLECs were not notified of any system changes or updates.	New Issue
78	OP	Systems	When CLECs supplement an order, FairPoint continues to provide Firm Order Confirmation, Provisioning Completeness Notifier or/and Billing Completeness Notifier for the original order.	New Issue-Priority
79	OP	Systems	System fixes for one problem often cause other problems.	Still an issue
80	OP	Systems	The manual work that the CLECs must do to "baby sit" FairPoint's systems has greatly driven up the CLECs' cost of doing business.	Priority issue
81	OP	Systems	Some CLECs find it necessary to expend the resources to create daily spreadsheets for their SPOC on all outstanding orders. Manual order tracking is a huge time waster for the CLECs	Priority issue

Attachment 3 -- Updated List of Operational Problems with FairPoint

Issue #		Topic	Issue description	2011 Update
82	OP	Systems	Systems errors occur too frequently, requiring CLECs to resubmit orders. This occurs at least once per day.	Still an issue
83	OP	Systems	System error messages to the CLECs don't always reflect what the problem is that would allow the CLEC to take action to fix it.	Still an issue
84	OP	Systems	Erroneous system error "Not able to create new customer in M6," which was fixed, has returned with FairPoint's 3/18 systems "upgrade."	Improved but still an issue
85	OP	Systems	CLECs often cannot order service to a location where FairPoint has previously provisioned service.	No longer an issue
86	OP	Systems	New loop orders are often coming through as cut through. The SPOC used to work these to make sure they were dispatched, but now CLECs are being told that they "must trust the systems," which requires the CLECs to issue a tag-and-locate order after the original order completes.	Still an issue
87	OP	Systems	M6 errors prevent the rescheduling of a due date because the order is "stuck."	Improved but still an issue
88	OP	Ports	Port orders reject for hunting when none exists.	New Issue
89	OP	Ports	Port orders reject for hunt group when the entire account is porting (making the hunt group a non-issue)	New Issue - Priority
90	OP	Ports	"Customer Not Ready" jeopardies are sent on port orders. These are often sent 1-2 days before the due date. In some cases, they are sent after the due date when the number has already been ported.	New Issue
91	OP	Ports	SPOCs cannot work "complex" port issues - can only be handled by Portland office.	New Issue
92	OP	Process	A significant number of orders still require EWOC/IT tickets. Once opened, these sit with no progress (and no updates) for at least a week, often longer. ETA's on issue resolution are never provided leading to extremely frustrated customers and sometimes loss of a sale.	New Issue
93	MR	Chronic Troubles	FairPoint never provides a solution to the CLECs chronic trouble reports and instead just keeps providing short term fixes.	Still an issue
94	MR	Chronic Troubles	FairPoint has facility quality issues that are causing chronic troubles.	Still an issue
95	MR	Repair Quality	About 10-15% of the trouble reports that FairPoint closes as "no trouble found" (NTF) must be reopened. This is a higher percentage than the CLECs experienced with Verizon.	Priority issue
96	MR	Tag & Locate	The CLECs' volume of "tag and locates" through the M&R department are significantly greater than they were with Verizon. This is resulting from installation orders not being worked properly (issue also addressed in Ordering & Provisioning).	Priority issue

Attachment 3 -- Updated List of Operational Problems with FairPoint

Issue #	Topic	Issue description	2011 Update
97	BI CSRs	FairPoint does not provide the tie pair on loop records like Verizon did. On many new loop orders (2 & 4 wire), there is no information about the loop on the CSR except for the circuit ID and the Central Office - no end user name, no address, no facility.	New Issue
98	BI Disconnects	Disconnect orders are not getting worked on time or circuits are physically disconnected but CLECs continue to get billed for them. When the orders are worked FairPoint does not prorate the credits correctly. Estimate is that this is occurring 25% of the time.	Priority issue
99	BI Disconnects	Disconnects worked in January '09, prior to cutover, were not credited back to the disconnect date. FairPoint is requiring Verizon FOC from the CLECs to provide this credit. One CLEC still has 30 of these orders still in dispute with FairPoint.	Still an issue
100	BI Disconnects	Resale disconnects of complex services such as ISDN, Centrex and analog circuit with pseudo TNs are physically disconnected but billing of the circuit never stops.	Still an issue
101	BI Disconnects	For resale service when the BTN of a multi-line account gets ported from the reseller, FairPoint does not use one of the remaining WTNs to establish a new BTN but continues to bill the CLEC for the BTN that was ported away.	Still an issue
102	BI Disconnects	CLECs receive BCNs and PCNs for disconnect orders but billing of the circuit doesn't stop unless the CLEC calls the problem to FairPoint's attention.	Still an issue
103	BI Dispute Resolution	When FairPoint concurs with a dispute on a disconnect, the bill credit often does not go all the way back to the due date of the disconnect order, resulting in another dispute.	Improved but still an issue
104	BI Dispute Resolution	FairPoint has no sense of urgency in resolving disputes or locating payments received but not posted.	Priority issue
105	BI Dispute Resolution	FairPoint does not accept the bill dispute form posted on its website. FairPoint requires the CLECs to file disputes using the Verizon form. Once billing disputes are filed, FairPoint provides the CLECs with a separate form indicating the status of the claim. This multiple form process requires the CLECs to manually compare the forms to determine the status of each claim submitted. Automatic batch id's are assigned by FairPoint per each dispute form filed. However, if several claim forms are filed at once, no indication of which batch id belongs to which claim filed is provided. An email and/or call to our FP billing contact/specialist is required to get this information.	Priority issue; issues in first two sentences resolved.
106	BI DUF	DUF volumes are significantly below (estimate 20%) what they were prior to cutover.	Still an issue
107	BI Incorrect Billing	CLECs continue to get bills for accounts that belong to other CLECs.	Still an issue

Attachment 3 -- Updated List of Operational Problems with FairPoint

Issue #	Topic	Issue description	2011 Update	
108	BI	Incorrect billing	Retail customers that ported their service to a CLEC are still getting billed by FairPoint. This goes as far back as a customer who ported away from FairPoint in August '09.	Still an issue
109	BI	Incorrect billing	Accounts that are not PICed to a carrier are still getting billed by FairPoint as if the account is PIC'd to that carrier.	Still an issue
110	BI	Incorrect Billing	FairPoint bills trouble ticket/repair charges to BANs not associated with the circuit/number. (Circuit billed on one BAN and TT/Repair billed on different BAN). If trouble ticket disputed FairPoint denies as CID not billed on BAN.	New Issue
111	BI	Incorrect Billing	UNE-P usage being billed on separate BAN from UNE-P lines. UNE-P usage unable to be verified by line as usage is reported in a CABS format by switch CLLI not by number.	New Issue
112	BI	Invoice Accuracy	Resale invoices have discrepancies between the total shown on the invoice to detail billing contained within OC&C's. Starting balances to not equal ending balance of prior month and current months charges do not tabulate to the summary numbers.	New Issue-Priority
113	BI	Invoice Timeliness	Electronic invoices often are not received in a timely manner. CLECs need to call FairPoint to get electronic invoices issued or get paper copies.	Still an issue
114	BI	Loss of Functionality	FairPoint cannot provide the directory line-by-line listing bill detail that they used to get from Verizon.	Still an issue
115	BI	Loss of Functionality	FairPoint continues to provide multiple DUF files rather than a single file, preventing the CLECs from being able to easily audit the files.	Still an issue
116	BI	Loss of Functionality	Verizon website provides the CLECs the ability to review the status of its bill disputes. FairPoint does not provide this functionality.	Priority issue
117	BI	New billing	FP is still having trouble getting new services into billing in a timely manner - we continue to see back billing on a variety of invoices for service added last year and in 2009.	New Issue
118	BI	Open claims	Disputed amounts are not being exempted from late fees.	New Issue
119	BI	Payments	CLEC bill payments are often either misapplied or are not applied at all. This has been a continual problem since cutover and has not gotten any better. Occurs about 50% of the time.	Still an issue
120	BI	Posting claim amounts	When claims are received, they are not applied to the correct invoice - they are posted to current, leaving a balance due. We are assessed late fees on that old balance, necessitating another claim for that!	New Issue
121	BI	Record Accuracy	Since April we have been receiving toll on our rdud and udud files that do not belong to us. FairPoint continues to work the problem but to date is not resolved. They acknowledged they had an issue with their look up table for 7 carriers as well as numbers getting ready to port to us but have not as yet. Incident 26707 is past it's due date.	New Issue

Attachment 3 -- Updated List of Operational Problems with FairPoint

Issue #	Topic	Issue description	2011 Update	
122	BI	Record Accuracy	FairPoint is not accurately capturing the amount of traffic that the CLECs are terminating to FairPoint.	Priority issue
123	BI	Resale discount	We don't receive a resellers' discount on usage on any of our resale BANs	New Issue
124	OT	Collocation	Central Office lockouts for employees who have only been issued new FP keys (the ones made available since November 2010).	New Issue
125	OT	Line Loss Reports	Line loss reports - missing and inaccurate.	New Issue- Priority
126	OT	LVR Reports	The LVR reports supplied by FairPoint are extremely inaccurate leaving the CLECs in the dark on how their customer accounts are going to appear in the phone books.	Priority issue
127	OT	PAP Reporting	Reports are always late and there is no consistency in the reporting. Reports are also inaccurate. Some CLECs don't receive reports at all.	Still an issue
128	OT	Poles	Days to survey, days to make ready and days to license should be measured.	New Issue
129	OT	Process	SPOCs and help desk personnel are unfamiliar with directory listings processes and systems.	Improved but still an issue
130	OT	Training	Minimal training on DL available (5 min. in a 3 hr. LNP class).	Still an issue
