Subject: RE: Order of Notice, DE 10-194, Residential Renewable Energy Generation Incentive Program
Hi Diane,

I think that the State is making a mistake with its commercial funding, which will have a significant negative impact on the residential side.

I have run a few spreadsheets to show why I feel this way. Commercial solar installations are already affordable with the Federal incentives that are already in place. The fact that commercial projects can get their federal funding as a grant instead of a tax credit, and the solar installation can be depreciated is a huge benefit.

To summarize the spreadsheets.

A C&I 45KW PV system without any incentives from the state will have a respectable 13% IRR, and a payback of less than 7 years. The 25 year fixed cost of power in this case would be .05KWH, about 1/3 of today's cost. A good investment.

A C&I 45KW PV system with proposed incentives will have an IRR of 21%, a payback in less than 3 years. This 25 year cost of power will only be .016KWH. That is less than 1/10 of today's cost.

In contrast A 2.7KW PV system at current funding will have an IRR of 11%, with a payback in 8 years. With the state incentive halved, the IRR is only 7%, and payback stretched to 12 years.

The funding used in C&I installations will be exhausted after only twenty jobs. I will not add employees or expand my business to chase 20 jobs across the state.

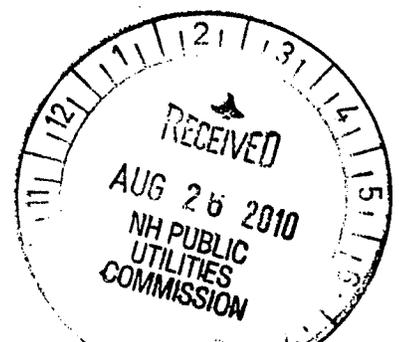

The beauty of the residential funding we currently have is that it makes solar affordable to everyone regardless of your income, and the positive impact on lower and medium income families is greater than it is on higher income families. My experience has been that because of the positive feedback that you get daily from your PV system (inverter and meter spinning backwards) customer learn how to conserve. I have installed systems to satisfy 1/2 of a customer's electric load and they have stretched that system to provide all of the load by conservation.

By lowering the incentive solar will go back to selling only to people who are well off financially, and I am not sure that every member of that group will learn the conservation lesson that is available to them.

My recommendation is to leave the incentive level where it is, remove the 5KW cap and to allow commercial in at the \$6,000.00 level.

Thank you. Please feel free to contact me if you have any questions.
