^{*} Note: From NGrid:

GSE Bill Estimates:
We re-ran the estimated bill metric for GSE and found 572 bills were estimated in October 2013. This number does change slightly as time goes by because we don't count canceled bills. When we ran the metric at the end of October it was only slightly higher at 628. Of the 572, 276 were estimated final readings (296 were not finals). Estimated finals are a normal occurrence with the auto-complete / soft-off program. We shouldn't be reporting these as they do not indicate meter reading issues. Of those that were not finals (296), 82% (243) were AMR. The only two towns with a significant percentage of 296 were Lebanon (64) and Salem (58). There are 5,789 active accounts in Lebanon which works out to only 1.0% and in Salem there are 14,188 active accounts resulting in 0.4%. In these two towns there did not appear to be any particular streets with large numbers.

If we only measured non-final estimates, the 296 would render 0.7% overall (43,836 total GSE bills in October). Thus meter reading success rate is 99.3% which is very good.

GSE Bill Exceptions:

Although the "system level" metric is slightly above the reporting threshold (.85% vs. .80%), the now available GSE specific metric is available for a full year and is at a very low 12-month average of .69%. Coincidentally the October GSE value is also .69%. There are no significant spikes in this metric for GSE across 12 months further indicating no cause for alarm.
