Subject: Docket No. DG14-380

I am writing to urge you to not to approve any applications related to the proposed pipeline that will pass through towns in southern New Hampshire. Investing anything in such a pipeline only extends our use of fossil fuels into a future that will be harmed irreparably by the climate change induced by the use of fossil fuels. Natural gas is not a bridge fuel. Please see this analysis that compares the impact of fracked methane with that of coal: <http://www.acsf.cornell.edu/Assets/ACSF/docs/attachments/Howarth-EtAl-2011.pdf>. To improve the New Hampshire economy and to lower the price of electricity in our state, we should be investing in renewable energy.

Sincerely,

Anne Huberman
