Subject: PUC Docket DG14-380

To NH PUC:

I have followed the PUC's proceedings regarding the Liberty Utilities agreement associated with the NED. As a native of the area for 64+ years I believe that the way of life in NH will only be adversely affected if the proposed NED project is approved. Liberty Utilities can obtain the requested gas from existing sources. Why should southern NH towns be forced to suffer the harm to our water supplies, air quality, health issues and property values when the NED has clearly NOT been established and other solutions are readily available?

If it looks like a duck.....

The proposed NED project will result in a PRIVATE company taking land by eminent domain for PRIVATE profit! Who is fooling who? The gas will be for the most part exported!

The potential for disaster is not just a possibility but a regular occurrence as was proven just last week in Corpus Christi Texas! The numerous accidents occurring on transmission lines across this country is appalling!

I find it absolutely incredible that my state which boasts on the website www.visitnh.gov live free and SHINE BRIGHT, live free and LAUGH, live free and TREK, to attract tourists, can support the proposed plan across southern NH and especially here in the Monadnock region which includes the Wapack trail and Rhododendron State Park among others.

I suggest what is called for is a reopening of the hearings on DG14-380. The PUC should follow the fourth motto of the tourism website "Live Free and SLOW IT DOWN"! Take the time to look closely at the immediate and long term impacts of the decision to scar southern NH and its residents forever.

Respectfully,

Dennis Gauvin
